Manufacturing (metric tons): Cement (1964), 1,075,000; gasoline (1963), 262,000; sugar (1963), 3,000; wool yarn (1963), 1,000.

Crops (metric tons): Wool (1963), 12,700 (ranks 17th among world producers); wheat (1964), 807,000; barley (1964), 618,000; dates (1963), 300,000; rice (1964), 184,000; dry beans (1962), 14,000; tobacco (1964), 10,100; sesame (1963), 8,100.

Minerals (metric tons, 1964): Crude petroleum, 459,290,000 barrels (ranks 7th among world producers); gypsum, 499,000 (world rank, 17th); salt, 40,000; natural gas (1961), 23,773,000 cubic feet.

Foreign Trade (1964): Exports, \$840,000,000 (chief export: crude petroleum, \$789,040,000); imports, \$413,000,000 (chief imports, 1963: tea, \$24,528,000; motor vehicles and parts, \$19,964,000; chemical and pharmaceutical products, \$15,932,000). Chief trading partners (1963): Britain (took 15% of exports, supplied 16% of imports); West Germany (took 10% of exports, supplied 10% of imports); Italy (took 16% of exports, supplied 3% of imports).

Transportation: Roads (1964), 12,919 miles (4,033 paved); motor vehicles (1964), 78,200 (automobiles, 53,100); railways (1963), 1,026 miles; merchant vessels (1964), 2 (12,000 gross registered tons); national airline, Iraqi Airways; principal airports—Baghdad; Basra.

Communications: Telephones (1964): 59,831; television station (1964), 1; television sets (1964), 100,000; radios (1962), 100,000; newspapers (1963), 8 (daily circulation, 85,000).

strong Nasserite. On September 15, while President Arif was attending the third Arab summit conference at Casablanca, Razzak attempted to seize control of the country, pledging immediate union with the United Arab Republic. The coup was foiled by a brother of the president, General Abdul Rahman Arif, the deputy chief of staff. A new cabinet, headed by Premier Abdul Rahman al-Bazzaz, was installed in Baghdad on September 21.

Moves Toward Arab Union. A United Political Command for the United Arab Republic and Iraq, consisting of 13 UAR and 12 Iraqi representatives, was formally constituted on Dec. 20, 1964. It met for the first time in Cairo from May 19 to 25, 1965. However, the first year of the projected two-year transition period to complete unity passed with few concrete steps taken toward the amalgamation of the two countries.

Kurdish Unrest. There was no resolution of the Kurdish rebellion which had plagued northern Iraq since 1961. In January a spokesman for the Kurdish leader, Mustafa Barzani, charged that the government was still ignoring its promise to effect Kurdish autonomy.

Nationalization Program. Following the complete nationalization of banking and insurance and the partial nationalization of industry and trade in July 1964, the government organized the socialized sector of the economy into four General Economic Establishments for banking, insurance, industry, and trade. By mid-1965 about 75% of the country's manufacturing industry (in terms of capital investment) was state operated, and about 55% of foreign commerce was controlled by the General Economic Establishment for Trade. In November, however, the Bazzaz government published a decree liquidating the centralized General Economic Establishments. The government announced that it planned no further seizures of private enterprises, and it encouraged private investment in agriculture, small-scale industry, and domestic trade.

New Development Plan. The five-year economic development plan for 1965-70, inaugurated on April 1, was designed to produce a growth of 8% per year in national income (compared with an average an-

nual growth rate of 6.5% over the previous ten years). Investment in the program was scheduled at \$2.3 billion, of which 78% was expected to come from public sources, chiefly the government's oil revenues.

Oil Agreement. Settlement was announced on June 6 of the long dispute between the government and the internationally controlled Iraq Petroleum Company over the government's expropriation in 1961 of the company's unexploited concession area and over pricing and royalty policies. The government restored 0.5% of the expropriated area and agreed to a royalty formula already accepted by the other Middle Eastern oil-producing states, under which Iraq received an additional payment of \$19 million for 1964. The Iraq Petroleum Company ended its objections to the exploitation of Iraqi oil by other foreign companies, and agreed to participate on a 25-75% profit-sharing basis with the state-owned Iraq National Oil Company in joint ventures in the expropriated concession area.

Foreign Affairs. Early in the year Baghdad gave strong support to the United Arab Republic in its efforts to mobilize the Arab world against West Germany's diplomatic recognition of Israel. On May 12, Iraq was the first of the Arab League states to formally break diplomatic relations with Bonn. Baghdad also supported Arab League projects to divert the waters of the Jordan River away from Israel and the efforts of the Palestine Liberation Organization to establish a Palestine-Arab political entity.

In general, Iraq adhered to a policy of nonalignment between the Communist states and the West in its foreign policy in 1965. In March the minister of industry paid a visit to Moscow, and on his return announced that the obstacles which had hindered the full implementation of the Iraqi-Soviet economic and technical assistance pact of 1959 had been removed. On the other hand, a number of large development contracts were awarded to American and western European firms.

IRELAND

On January 14, in Belfast, Northern Ireland, a historic meeting took place between Sean Lemass, prime minister of Ireland, and Captain Terence O'Neill, prime minister of Northern Ireland. The two men discussed the promotion of good relations and economic cooperation between north and south. This was the first such meeting since the partition of Ireland under the Anglo-Irish Treaty of 1921. The two prime ministers continued their talks in Dublin in February.

General Elections. In the general election of April 7, voters returned Lemass' Fianna Fáil party to power, with 72 seats in the Dail (house of representatives). The Fine Gael party won 47 seats; Labour, 22; and the Independents, 3. The new Dail met on April 21 and re-elected Lemass prime minister. In the Senate elections, held in May and June, the Fianna Fáil party won 31 seats; the Fine Gael, 13, the Independents, 10; and Labour, 6.

IRELAND · Information Highlights

Area: 27,135 square miles.

Population: 2,849,000 (July 1, 1964 est.).

Chief Cities (1961 census): Dublin, the capital, 537,448; Cork, 77,980; Limerick, 50,786; Dun Laoghaire, 47,792.

Government: President—Eamon de Valera (took office June 25, 1959); Prime Minister—Sean F. Lemass (took office Oct. 11, 1961). **Parliament**—Senate, 60 members; House of Representatives, 144 members; party seating 1965—Fianna Fáil, 72; Fine Gael, 47; Labour, 22; Independent, 3.

Religious Faiths: Roman Catholics, 94%; Protestants, 5%; others, 1%.

Education: Total school enrollment (1962)—673,609 (primary, 516,419; secondary, 91,705; technical, 50,110; higher, 15,375).

Finance (1964): Revenues, \$561,596,000; expenditures, \$669,256,000; public debt (1963), \$1,525,720,000; monetary unit, pound (0.3571 pound equals U.S.\$1).

Gross National Product (1964): \$2,590,000,000.

National Income (1964): \$2,086,000,000; average annual income per person, \$732.

Economic Indexes (1964): Industrial production, 160 (1958=100); agricultural production, 122 (1956-57=100); cost of living, 117 (1958=100).

Manufacturing (metric tons 1964): Cement, 973,000; processed meat (1962), 285,000; wheat flour, 237,600; sugar, 142,000; crude steel, 20,000; wool yarn, 7,800.

Crops (metric tons, 1964): Oats, 376,000 (ranks 20th among world producers); wool (1963), 11,900 (world rank, 19th); potatoes, 1,526,000; sugar beets, 693,000; barley, 551,000; wheat, 305,000.

Minerals (metric tons, 1964): Barite, 62,259 (ranks 13th among world producers); anthracite coal, 145,000 (world rank, 20th); gypsum, 228,000; copper (1962), 2,388.

Foreign Trade (1964): Exports, \$623,000,000 (chief exports, 1963: cattle, \$116,542,000; fresh beef, \$45,108,000; beer, \$19,270,000; bacon and ham, \$18,833,000); imports, \$974,000,000 (chief imports, 1963: iron and steel, \$247,520,000; coal, \$233,464,000; agricultural machinery, \$178,800,000). Chief trading partners (1963): Britain (took 72% of exports, supplied 51% of imports); United States (took 8% of exports, supplied 6% of imports); West Germany (took 3% of exports, supplied 7% of imports).

Transportation: Roads (1964): 52,287 miles (35,478 paved); motor vehicles (1964), 311,694 (automobiles, 254,494); railways (1963), 1,458 miles; merchant vessels (1964), 20 (136,000 gross registered tons); national airline, Aer Lingus (Irish International Airlines); principal airport—Dublin.

Communications: Telephones (1964): 192,558; television stations (1964), 9; television sets (1964), 300,000; radios (1964), 538,000; newspapers (1963), 7 (daily circulation, 681,000).

Economy. A substantial increase in imports in 1965, combined with a decrease in exports, produced a deficit in Ireland's balance of payments. In an effort to control its growing economic and financial difficulties, the government put restrictions on loans and installment buying.

London Meeting. On July 26, Prime Minister Lemass met in London with British Prime Minister Harold Wilson to discuss ways of strengthening Ireland's economic ties with the United Kingdom. On December 14 they signed a free trade agreement under which import duties in both countries will be gradually reduced until such duties are abolished by 1975.

Casement's Reburial. The British government repatriated the remains of Roger Casement, the Irish patriot executed by the British in August 1916 on a charge of treason. Casement's remains were secretly flown to Dublin, where they lay in state for five days. Casement's interment took place in Glasnevin Cemetery on March 1.

Yeats Centennial. Ireland celebrated the "Year of Yeats" in 1965, to commemorate the 100th anniversary of the poet's birth. Tributes were paid, and scholarly papers were read throughout the world.

ISRAEL

The principal events in Israel in 1965 were elections to the Knesset (parliament) and establishment of diplomatic relations with the government of West Germany.

Elections. Israel's political future was more uncertain in 1965 than at any time since the achievement of independence in 1948. In preparation for elections to the Knesset on November 2, two opposition parties of the political right—Herut (the old Revisionists) and a majority of the Liberals (formerly called the General Zionists)—announced in May that they would present a joint list of candidates and adopt a common platform. A few days later the ruling Mapai (Labor) party announced a similar alignment with Achdut Ha'Avoda, which is slightly farther to the political left than Mapai. The major left-wing parties competing in the November election were Mapam and the Communists, and in August the Communists split into Jewish and Arab factions.

The political realignments were further complicated by the deepening feud within Mapai itself between 78-year-old former Premier David Ben-Gurion and Premier Levi Eshkol. The dispute culminated on July 23 in Mapai's expulsion of Ben-Gurion and six of his associates. They formed a rival party, the Israel Workers' List (its Hebrew initial letters spell "Rafi").

The September 19 elections to the Histadrut (national labor federation) constituted a trial run for the Knesset elections, since two thirds of the national electorate votes in the Histadrut elections. Rafi won 12% of the votes, effecting in part a reduction of votes for the Mapai-Achdut Ha'Avoda alliance to 51% from the 72% that the two parties had secured when each ran separately in the 1959 Histadrut elections. The right-wing opposition advanced to

Education: Literacy rate (1961)—84% of population aged 14 and over. Total school enrollment (1962-63)—560,500 (primary, 440,000; secondary, 104,000; higher, 16,500).

Finance (1965 est.): Revenues, \$856,000,000; expenditures, \$1,117,000,000; monetary unit, Israeli pound (3 pounds equal U.S.\$1).

Gross National Product (1964): \$2,857,000,000.

National Income (1964): \$2,358,000,000; average annual income per person, \$952.

Economic Indexes (1964): Industrial production, 220 (1958=100); agricultural production, 225 (1956-57=100); cost of living, 136 (1958=100).

Manufacturing (metric tons, 1964): Cement, 1,030,000; gasoline (1963), 315,000; wheat flour, 242,400; crude steel, 67,000; sugar, 36,000; beer (1963), 25,300.

Crops (metric tons, 1964): Citrus fruits, 736,000 (ranks 8th among world producers); sugar beets, 256,000; wheat, 127,000; grapes, 70,000; cottonseed, 25,000; olives (1963), 17,000; figs (1963), 16,400; cotton lint, 15,000.

Minerals (metric tons, 1964): Potash, 300,000; phosphate rock, 240,000; gypsum, 109,000; agricultural peat, 54,000; salt (1963), 52,000; crude petroleum, 1,435,000 barrels; natural gas, 1,069,000,000 cubic feet.

Foreign Trade (1964): Exports, \$372,400,000 (chief exports: gem diamonds, \$135,000,000; citrus fruits, \$66,000,000); imports, \$826,200,000 (chief imports, 1963: gem diamonds, \$100,189,000; nonelectrical machinery, \$84,469,000; iron and steel, \$43,354,000). Chief trading partners (1963): U.S. (took 13% of exports, supplied 28% of imports); Britain (took 14% of exports, supplied 20% of imports); West Germany (took 11% of exports, supplied 9% of imports).

Transportation: Roads (1964), 2,384 miles (2,088 paved); motor vehicles (1964), 112,000 (automobiles, 74,000); railways (1963), 265 miles; merchant vessels (1964), 74 (504,000 gross registered tons); national airline, El Al; principal airport, Tel Aviv-Lod.

Communications: Telephones (1964): 185,358; radios (1962), 539,000; newspapers (1962), 25.

15% of the total from the 3% it had taken in 1959 (Herut not then competing), and the left-wing opposition (Mapam and the Communists) obtained 17% of the total vote.

In the Knesset elections on November 2, the Mapai-Achdut Ha'Avoda coalition won 45 of the 120 seats. The Herut-Liberal coalition won 26 seats; the National Religious party, 11; Rafi, 10; Mapam, 8; and the Independent Liberals, 5. The remaining 15 seats were scattered among 7 minor parties.

Premier Levi Eshkol had difficulty in forming a cabinet because he was unable at first to receive the support of the National Religious party and the Agudat Israel Workers' party, both members of the old coalition. It was not until Jan. 12, 1966—more than two months after the election—that Eshkol's new cabinet was sworn in. It was made up of the Mapai-Achdut Ha'Avoda combination, the National Religious party, Mapam, and the Independent Liberals. The Agudat Israel Workers' party was not represented in the cabinet, but was counted as a reliable supporter of the government.

Relations with West Germany. In the field of international affairs the most important event for Israel in 1965 was the establishment of full diplomatic relations with West Germany, which had been delayed for years because of Israeli memories of the Nazi regime. The Arab League sought to deter the exchange of ambassadors between Israel and West

Germany by threatening to break off relations with West Germany and to recognize instead the Communist regime of East Germany. The West German government, although it publicly regretted the breach with all but three of the Arab states that resulted from the action, was not intimidated.

Dr. Rolf Pauls presented his letters of credence as German ambassador in Jerusalem on August 19. His arrival was marked by hostile demonstrations less severe than expected, but which resulted, nevertheless, in injuries to six Israeli policemen and five civilians. David Asher Ben-Nathan arrived to take up his duties as Israeli ambassador in Bonn on August 24.

Relations with Arab States. In 1965 there were no clashes between Israel and the Arab states serious enough to invite recourse to the UN Security Council. As a substitute for more decisive official Arab action, a militant organization known as Al Fatah (The Conquest) launched some 17 sabotage attacks into Israel during the year. Israelis suspected that the organization was supported by the Syrian regime but operated from bases in other Arab countries as well, particularly Jordan.

The Israeli army made reprisal attacks on the Jordanian towns of Shuna, Jenin, and Qalqiliya on May 27, and on Qalqiliya and its environs on the night of September 4-5. Fifteen more Al Fatah incursions were reported during the next two months.

ISRAELI TROOPS return to base after blowing up 11 water pumps near Jordanian town of Qalqiliya on the night of Sept. 4-5, 1965. The raid was a reprisal against sabotage attacks on Israeli territory made by militant Arab organization Al Fatah (The Conquest).

Syrian tanks and artillery clashed openly with Israeli forces just north of the Sea of Galilee on August 12. Israel made a reprisal raid into Lebanon on October 28.

A scheme proposed at the Arab summit conference in September 1965 suggested countering Israel's diversion of water from the Jordan River by diverting those headwaters of the Jordan that rise in Arab territory. The plan did not mature, however, mainly because the prudent Lebanese were reluctant to become seriously involved and because the United Arab Republic, which at that time had 50,000 troops stationed in Yemen, was unable to support the proposal to the extent demanded by the Syrian regime.

Economy. While Israel's gross national product increased by 11% in 1964 compared with 1963, its balance-of-payments deficit on current account increased by 13% and the foreign trade deficit rose by 14% during the same period.

Average wages and salaries in the public services rose by 14% in 1964, and another large increase occurred in 1965 because arrangements for retroactive pay raises took effect. The government and the Histadrut were blamed for laxity on wage policy that might slow down economic expansion.

On November 3 the ancient port of Jaffa and the newer port of Tel Aviv were closed down. The country's operating ports are Haifa and Ashdod, a new port on the Mediterranean Sea coast situated 20 miles south of Tel Aviv.

ITALIAN LITERATURE

Publication of a great many books marked the 700th anniversary of Dante's birth, which was celebrated throughout Italy in 1965. Important contributions to the study of the great poet were made by the two-volume collection of papers presented at the International Congress of Dante scholars in April. Among works for the general public, Indro Montanelli's vivid and brittle *Dante e il suo secolo* won popular acclaim and became a best seller as a paperback. A new illustrated edition of the *Divina Commedia* that could be bought in cheap weekly installments at the newsstands reached a surprisingly large circulation (over 200,000 copies). These developments show that Dante is still very much alive in his native country, and they also indicate the spectacular expansion of paperbacks and the emergence of a mass readership.

Fiction. The year was fertile in significant and widely read novels. The most controversial was Alberto Moravia's *Attenzione*, an intellectual mixture of psychology, sex, and speculations on the nature of fiction. Its hero, Francesco Merighi, is a journalist who returns home after years of travel. He finds out that he has fallen in love with his stepdaughter and that his wife, from whom he was alienated for a decade, leads a double life and is a procuress. Merighi notes these discoveries, and the emotions they provoke, in a diary that he intends to use for a future novel. He soon arrives at the conclusion that the reality of life is not the reality of artistic creation, and that each novel is basically an autobiographical confession. Despite Moravia's narrative skill, *Attenzione* seems too artificial and too preoccupied with theoretical concepts; its protagonists never come to life.

Similar cerebral traits mark two other prominent novels of the year: Paolo Volponi's *La macchina mondiale*, which won the Strega Prize; and Goffredo Parise's *Il padrone*, which was awarded the Viareggio Prize. Volponi's hero, a half-educated peasant, imagines the universe as an immense machine and men as small machines. A rebel and a philosopher of sorts, he dreams of a better human society founded on reason and peace, but is crushed by the hostility of his environment and by an unhappy love. The story is often strange and abstract but is always redeemed by the author's poetic force and imagination. In *Il padrone*, a best seller, Parise portrays the morbid proprietor of a large commercial enterprise who pays lip service to liberal ideas but turns his employees into chattels. This plotless novel, obviously conceived under the strong influence of Kafka, is a satire on modern society. It is written in a sardonic style and portrays fantastic characters and uncanny episodes.

Several other novels retained the attention of critics and found large audiences. In *Gli onesti*, Bonaventura Tecchi contrasts the rigidly honest Filippo with his unscrupulous brother Renzo, but shows that virtue is valueless when not accompanied by love and tolerance. The novel is an old-fashioned realistic narrative. *La linea del Tomori*, by Manlio Cancogni, can be put in the same category. It depicts, with some lyrical charm, the childhood and adolescence of a highly sensitive individual who is later confronted with the ugliness of war and death during Mussolini's 1940-41 campaign in Greece. *Le trombe*, by Giuseppe Cassieri, is less traditional. Its protagonists are extravagant, and their adventures at the seashore are told in the sardonic manner so typical of Cassieri's work. Noteworthy also were Anna Maria Ortese's poetic *L'iguana*, Mario Pomilio's psychological and social narrative *La compromissione* (winner of the Venetian literary prize *Il Campiello*), and Ercole Patti's Sicilian tale *La cugina*.

Silone Case. Violent polemics were provoked in the Italian press by the decision of the Viareggio Prize jury to eliminate Ignazio Silone's *Uscita di sicurezza* from the competition. Silone's latest work consists of short stories and essays, including his recollections of the years when he was a member of the Communist party. The book was universally praised for its art and sincerity, and its rejection by the Viareggio judges appeared to be an act of political vengeance on the part of Communist sympathizers.

Essays. Among the numerous books of essays, *Il trucco e l'anima* by Angelo Maria Ripellino traces with absorbing interest the history of the Soviet theater in the 1920's and 1930's and the tragic fate of the great director Meyerhold. Also of great interest is *Il mito di Parigi* by the literary critic Giovanni Macchia. In *Il laboratorio*, the scientist Renzo Tomatis relates how he compared research in Italy and the United States and decided to remain in Chicago for both practical and idealistic reasons.

Poetry. Montale, Ungaretti, and Quasimodo remained in the foreground of Italian poetry, and various reprints of their old collections continued to have large circulation. The critics hailed *Gli strumenti umani* by Vittorio Sereni, a complex, at times difficult, but always perfect artist. The new works by the members of the avant-garde added little to what they have already published.

MARC SLONIM

Director, Sarah Lawrence College Foreign Studies

MONT BLANC AUTO TUNNEL between Italy and France is officially opened on July 16 by Italian President Saragat (right, standing in car) and French President de Gaulle.

ITALY

The fragile center-left coalition government of Premier Aldo Moro remained in power throughout 1965, although it was weakened in December by the resignation of Foreign Minister Amintore Fanfani. During the year, Italy continued to push the causes of European unity and international peace, while surmounting the worst effects of the economic recession of 1963-64.

POLITICAL DEVELOPMENTS

Repercussions of the parliamentary crisis of December 1964 dominated the first weeks of the new year. A protracted struggle to elect a new presi-

dent of the republic had ended on Dec. 28, 1964, when Parliament named Giuseppe Saragat for a seven-year term. During the election process, the center-left coalition—led by Christian Democrats and supported by Socialists, Social Democrats, and Republicans—had suffered severe strains. This majority bloc in Parliament had been unable to unite behind the Christian Democrats' own nominee, Giovanni Leone. It had also failed to agree on any other candidate, including left-wing Christian Democrat and former premier Fanfani, favored at one point by the Communists. On the 21st and final ballot, at least 100 Christian Democrats had refused to vote for Saragat, the coalition's compromise choice. The victory of Saragat, a right-wing Socialist, had been assured, however, by the unsought switch of Communist support.

Aftermath of the Election. The disarray of the center-left coalition led to heated debates within the four parties composing the bloc, and especially among the Christian Democrats, whose cohesion was almost destroyed. The predicament of the Christian Democrats aroused serious concern in Vatican circles. Moreover, Pietro Nenni's Italian Socialist Party (PSI) was greatly disturbed at the way in which its Christian Democratic allies had behaved during the presidential balloting.

Taking advantage of the confusion, Pietro Ingrao, leader of the left wing of the Italian Communist Party (PCI), announced on January 26 that his party hoped for an agreement with Catholic organizations and, indeed, with the Catholic masses. The answer to his bid was not long in coming. On January 31, Pope Paul VI revived the Catholic Action Society, the most strongly anti-Communist Catholic organization. This move may also have been intended as a warning to the Italian Christian Democratic Party that the church had an alternative to it if the party collaborated with the Communists. During ensuing weeks, the Vatican newspaper *L'Osservatore Romano* attacked Catholic advocates of a "dialogue" with communism. Early in March, Giorgio La Pira, the most prominent Catholic exponent of such an effort to find common viewpoints, failed to win reelection as mayor of Florence. By spring, nothing more was heard in Catholic circles of a dialogue with communism.

Meanwhile, early in February, the Christian Democrat Party National Council met. Giovanni Rumor, the middle-of-the-road party secretary general and a close political ally of Premier Moro, sought to promote harmony by persuading all factions to unite in framing a denunciation of communism. Mario Scelba and Amintore Fanfani, the respective leaders of the right-wing and left-wing factions of the Christian Democratic Party, de-

ALDO MORO, a Christian Democrat, was the youngest premier of Italy when he took office at the age of 47 on Dec. 5, 1963. He formed the first government since 1947 that included left-wing Socialists. The Vatican and Roman Catholic labor unions backed this "opening to the left," upon which Moro placed his hopes for a more equal distribution of Italy's wealth. Through political and economic crises, he has kept his center-left coalition in power for more than two years, although at the end of 1965 its future was uncertain.

Moro was born on Sept. 23, 1916, in Maglie, a town in southeastern Italy. He was graduated doctor of laws by the University of Bari in 1940 and then taught law there. After World War II, he joined the Christian Democratic party and worked his way up through party and cabinet posts to the position of party leadership, serving as secretary general in 1959-63. A staunch opponent of communism, Moro firmly supports the Atlantic alliance, improved East-West relations, and a supranational political organization for western Europe.

ITALY · Information Highlights

Area: 116,303 square miles.

Population: 52,829,000 (Sept. 30, 1965 est.).

Chief Cities (1964 est., communes): Rome, the capital, 2,455,302; Milan, 1,666,300; Naples, 1,220,639; Turin, 1,116,631.

Government: President—Giuseppe Saragat (elected Dec. 28, 1964); Premier—Aldo Moro (took office Dec. 5, 1963).

Parliament—Senate (321 members); Chamber of Deputies (630 members). Party Seating (based on Chamber of Deputies elections, 1963)—Christian Democrats, 260; Communists, 166; Socialists, 62; Liberals, 39; Social Democrats, 33; Social Movement (neo-Fascist) Party, 27; Socialists of Proletarian Unity (PSIUP), 25; others, 18.

Religious Faiths: Roman Catholics, 99.5% of population.

Education: Literacy rate (1961)—92% of population aged 6 and over. Total school enrollment (1962-63)—6,446,208 (primary, 4,041,710; secondary, 1,653,218; teacher-training, 87,114; technical-vocational, 482,776; university, 181,390).

Finance (1964): Revenues, \$8,049,000,000; expenditures, \$8,949,000,000; public debt, \$9,140,000,000; monetary unit, lira (625 lire equal U.S.\$1).

Gross National Product (1964): \$49,520,000,000.

National Income (1964): \$38,973,000,000; average annual income per person, \$765.

Economic Indexes (1964): Industrial production, 172 (1958=100); agricultural production, 118 (1956-57=100); cost of living, 124 (1958=100).

Manufacturing (metric tons, 1964): Cement, 22,840,000; crude steel, 9,793,000; wine, 6,612,000; gasoline (1963), 6,533,000; sugar, 1,030,000; meat, 781,200; olive oil, 320,000.

Crops (metric tons, 1964): Grapes, 10,243,000 (ranks 1st among world producers); wheat, 8,582,000 (world rank, 8th); sugar beets, 7,700,000 (world rank, 6th); corn, 3,929,000 (world rank, 10th); tomatoes, 2,950,000 (world rank, 2nd); olives, 1,792,000 (world rank, 1st); citrus fruits, 1,451,000 (world rank, 5th); oats, 465,000 (world rank, 16th); wool (1963), 12,500 (world rank, 18th).

Minerals (metric tons, 1964): Salt, 3,141,000 (ranks 9th among world producers); gypsum, 2,073,000 (world rank, 7th); bauxite, 236,000 (world rank, 19th); zinc, 116,499 (world rank, 9th); manganese, 47,783 (world rank, 20th); lead, 32,961 (world rank, 18th); magnesium, 5,534 (world rank, 5th).

Foreign Trade (1964): Exports, \$5,956,000,000 (chief exports, 1963: automobiles, \$248,000,000; knitted clothing, \$222,000,000; footwear, \$166,000,000; woolen fabrics, \$141,000,000); imports, \$7,231,000,000 (chief imports, 1963: crude petroleum, \$671,000,000; corn, unmilled, \$220,000,000; automobiles, \$198,000,000). Chief trading partners (1963): West Germany (took 18% of exports, supplied 17% of imports); U.S. (took 9% of exports, supplied 14% of imports); France (took 10% of exports, supplied 10% of imports); Great Britain (took 5% of exports, supplied 6% of imports).

Transportation: Roads (1964), 120,918 miles (90,689 paved); motor vehicles (1964), 4,442,434 (automobiles, 3,864,150; railways (1963), 10,328 miles; merchant vessels (1964), 591 (5,092,000 gross registered tons); state airline, Alitalia; principal airports, Rome and Milan.

Communications: Telephones (1964), 5,056,947; television stations (1964), 61; television sets (1964), 4,285,000; radios (1963), 9,564,000; newspapers (1961), 91 (daily circulation, 5,000,000).

manded positions in the party's Executive Committee as well as in the national government. Only Fanfani was to succeed in achieving both of these goals. Scelba had to content himself with obtaining a seat in the party's Executive Committee. In a further move to appease the warring factions, a promise was made that a full-dress debate of party ideology would take place at the next Christian Democratic national congress.

In mid-February the Central Committee of the Italian Socialist Party decided, after much debate, to follow the advice of its elder statesman, Vice Premier Pietro Nenni, and keep the party in the center-left coalition government. It insisted, however, upon Christian Democratic support of more dynamic programs of economic and school reform, inclusion of Communist representatives in the Italian delegations to various European parliamentary bodies, and revision of the 1929 Lateran pacts with the Vatican. The religious issue became acute when authorities banned the performance in Rome, in February, of Rolf Hochhuth's play *The Deputy*, which is critical of Pope Pius XII's attitude toward the Nazi extermination of European Jews in World War II.

In the wake of these developments within the two major parties of the governing coalition, Premier Moro reshuffled his cabinet on March 5. He appointed Fanfani to the post of foreign minister, which had been vacated when Saragat was elevated to the presidency of the republic. He also named Senator Edgardo Lami Starnuti, a Social Democrat, to the post of minister of industry and trade.

Popular Front Proposal. On April 21, Communist Party Secretary Luigi Longo launched a new proposal. Discarding the unsuccessful Ingrao line of seeking a "dialogue" with the Catholics, Longo cautiously backed instead the recommendation of Giorgio Amendola, spokesman for the party's right wing, that the Communists should seek a kind of popular front—an alliance with the various Socialist parties. Longo suggested that unification of the

working class could be achieved in two stages—first by a confederation of parties, and then by fusion.

Nenni's Italian Socialist Party delayed answering the Communists' bid until the results of Sardinia's elections of June 13-14 for a regional parliament could be analyzed. When it became apparent that the parties of the center-left coalition had either maintained or improved their position in Sardinia, the Socialist Party informed the Communists on June 25 that it was not interested in a popular front.

New Threats to the Coalition. In the autumn a new political stir occurred. Danilo Dolci, a controversial crusading investigator of Sicilian sociopolitical problems, unearthed evidence that since 1948 the Mafia in western Sicily had controlled the election to Parliament of Bernardo Mattarella, the Christian Democratic minister of foreign trade in Moro's cabinet. It seemed likely that this revelation would spark new unrest in the next PSI national congress, and might cause Vice Premier Nenni difficulty in once more persuading his party to stay in the government.

Foreign Minister Fanfani's resignation, accepted reluctantly by Premier Moro on December 29, posed a more serious threat to the government coalition and to Christian Democratic unity. Fanfani stated that his usefulness in the government had been damaged by remarks that his friend Giorgio La Pira had made in a press interview arranged by Mrs. Fanfani. The remarks, published by the rightist weekly *Borghese*, were critical of U.S. Secretary of State Dean Rusk and of Italian leaders. Earlier, Fanfani had transmitted to President Johnson possible peace overtures made by the North Vietnamese government through La Pira, who had visited Hanoi in November. The peace "feelers" had been quashed by their premature publication in the United States.

Moro was reported to believe that Fanfani, from his position outside the government, could mobilize leftist and rightist opposition behind some alternative to the center-left coalition. Fanfani's in-

clusion in the government, in March, had silenced this spokesman for the Christian Democratic left and had satisfied Socialist demands for greater left-wing representation in the government.

FOREIGN RELATIONS

Italy remained a staunch advocate of European economic and political unity in 1965, despite the roadblocks raised by President de Gaulle of France. While Italy maintained its commitment to NATO, it also made clear that it hoped to reduce tensions between East and West.

At the Council of Europe meeting in Strasbourg, France, in March, the Italian delegation took a major part in the debate that revived the goal of European political unity. The hopes for unity quickly dimmed however, when French Foreign Minister Couve de Murville made it clear in Rome on March 26-29 that such a goal was "premature."

On April 20, Premier Moro and Foreign Minister Fanfani flew to the United States for five days of talks with President Johnson and other officials. The Italians expressed "understanding" of United States policy in Vietnam.

On April 27-28, British Prime Minister Wilson conferred in Rome with Moro and Fanfani about economic cooperation and European unity. In May, Fanfani visited several Latin American states and then conferred again in Washington with United States leaders. Early in June he was in Paris for talks with de Gaulle and Couve de Murville.

In July, President Saragat made a state visit to West Germany. On July 16 he met with President de Gaulle at Courmayeur, Italy, to open the Mont Blanc highway tunnel between Italy and France. Saragat took the opportunity to reiterate Italy's desire for a more closely unified Europe. In October he made a state visit to Poland—the first to that nation by the head of a NATO country.

In September the UN General Assembly chose Foreign Minister Fanfani to serve as president for the ensuing term, so that an Italian might have the honor of presiding when Pope Paul VI made his speech there in October. (For a biographical sketch of Fanfani, see UNITED NATIONS.)

ECONOMY

After two years of economic setbacks, during which Italy had suffered a decline in exports, a serious balance-of-payments crisis, and a threat to

the stability of the lira, the situation began to improve slowly in the fall of 1964. The lira was stabilized, gold reserves were built up again, and exports were gradually enlarged.

Expansion and Development. Late in March 1965, the Executive Committee of the European Economic Community advised the Italian government to relax the economic curbs it had imposed during the period of inflationary threat, and to increase public expenditure above the 5% ceiling set in 1964. The governor of the Bank of Italy, Guido Carli, stated in his annual report (May 31, 1965) that the economy was steadily improving, but he emphasized the need for more investments, especially in the construction of housing for persons of low and medium incomes. Carli attributed part of the difficulty in promoting expansion of this economic sector to a 9.4% rise in the cost of labor during 1964.

In June 1965 the government approved the new five-year economic development plan (1965-69), which called for a 5% annual increase in national productivity. It remained to be seen how successful the government's efforts would be in the face of frequent and often protracted strikes called by the Communist-dominated labor organizations and other groups. In May and June a particularly serious blow to business was caused by a slow-down strike on the part of customs inspectors, who insisted upon unloading all trucks and railway cars at the frontiers so that meticulous checks could be made of their contents.

Problem of the South. At the end of 1965 there continued to be marked disparity between prosperous northern Italy and the retarded south, just as there was between Italy and its more affluent neighbors to the north. Efforts were being made, however, to achieve an economy of full employment that would attenuate these differences.

Through the Southern Italy Development Fund (Cassa del Mezzogiorno), the government was investing huge sums in the south. Recent developments included the opening of a very modern steel mill in Taranto and the establishment of a variety of new industries in Apulia, Naples, eastern Sicily, and Sardinia. On June 26, President Saragat signed a bill that prolonged the Southern Italy Development Fund until 1980.

Great numbers of southern Italians continued to migrate to the industrial north and to neighboring countries. Switzerland, however, imposed severe restrictions on the influx of Italian workers.

ROME'S ANCIENT COLOSSEUM provides a classical backdrop for the snow that covered the city on February 10.

IVORY COAST

Félix Houphouët-Boigny was reelected president of the Ivory Coast in 1965. His ruling Democratic party demonstrated renewed self-confidence by holding a long overdue party congress in September in preparation for the November general elections. Earlier, the government had tried and sentenced a number of political opponents.

Ivory Coast continued to follow a path of economic development which, while avoiding "African socialism," involves substantial state investments in projects supported by foreign private capital.

Elections. In the November general elections, President Houphouët-Boigny, unopposed, was reelected to a 5-year term. The new National Assembly, increased from 70 to 85 members, was

JAMAICA

The government of Prime Minister Alexander Bustamante pushed its economic development program in 1965, in an effort to combat Jamaica's problems of high unemployment and a continuing trade deficit.

Economy. The economic development program received about \$48 million of the \$180 million allocated in the budget for the fiscal year 1965-66. New light industries for the manufacture of tires, fertilizer, textiles, and other products helped raise the gross domestic product by 7.5% in 1965. However, unemployment, representing nearly 25% of the labor force, remained a serious problem.

To combat Jamaica's chronic trade deficit, caused in part by large food imports, the government tried to enlarge the food-processing industry and introduced some mechanized agricultural methods.

Caribbean Cooperation Talks. Representatives of Jamaica, Barbados, Trinidad and Tobago, and British Guiana met in Georgetown, British Guiana, in March. Plans were made for cooperative efforts to solve mutual economic and social problems.

National Labour Party Elections. Prime Minister Alexander Bustamante was reelected president of the ruling Jamaica Labour party on Nov. 28, 1965.

elected without opposition to its Democratic party candidates. Women were candidates for the first time, and three will sit in the new Assembly.

Political Opposition. In December 1964 a non-public trial of prominent politicians involved in an alleged plot to overthrow the government in August 1963 was held in Yamoussoukro. The tribunal sentenced six plotters to death, two to life imprisonment, and 19 others to shorter jail terms.

President Houphouët-Boigny negotiated a reconciliation with university students in January, after which 14 students who had been arrested for plotting against the security of the state were released.

Economy. The Ivory Coast's economy seemed to inspire confidence among outside investors in 1965. This confidence was demonstrated by the announcement of loans by the U.S. Agency for International Development and the United Nations Social and Economic Council. The Ivory Coast also received a loan of \$32 million from the European Economic Community (EEC) for growing and processing of palm kernels. This was the largest loan ever granted to an African country by the EEC.

PROTEST RALLY IN TOKYO, by 8,000 persons on February 1, calls for cancellation of scheduled visit to Japan of U.S. nuclear submarine Sea Dragon and ban on all atomic subs from Japanese ports. Sea Dragon docked at Sasebo the next day.

JAPAN

Japan continued to expand its international interests and responsibilities throughout 1965. While close relationship with the United States remained the cornerstone of the country's foreign policy, its attention during the year was centered largely in Asia and on domestic affairs.

The most significant development of the year was the signing on June 22 of an agreement to normalize relations with the Republic of Korea (South Korea) after 14 years of negotiation. Debate between the Sato government and opposition parties over ratification of the treaty remained the focal point of public interest for the rest of the year. Other major events included the visit of Prime Minister Eisaku Sato to Washington in January, ratification of International Labor Organization (ILO) Convention No. 87 in May, and the national election to the House of Councillors in July. The government's policy of "invitation diplomacy" brought about visits by a number of important international figures.

FOREIGN AFFAIRS

Cooperation with the United States in matters both of trade and diplomacy did not prevent Japan's increasing its trade with the Soviet Union and Communist China, although there was no significant change in diplomatic relations with the two countries. Relations with Nationalist China remained on a friendly basis. The treaty between Japan and South Korea was a step toward resolving inter-Asian conflicts, although sporadic demonstrations against it continued after it had been signed.

Japan and the U.S. The Japanese-U.S. relationship remained firm and mutually rewarding, based on common political systems and goals and a growing,

balanced, two-way-trade amounting in 1965 to approximately \$4.4 billion. A major achievement during the year was the successful conclusion of long-pending negotiations on an amendment to the U.S.-Japan civil aviation agreement. There was increasingly close cooperation in improving economic and welfare standards on Okinawa and elsewhere in the Ryukyu Islands, now under U.S. jurisdiction pending their return to Japanese control at an undetermined future date. Prime Minister Sato visited Okinawa on August 19-21, and stressed Japan's regard for the welfare of the Ryukyuan people, as well as the importance to Japan of U.S. military bases in the Ryukyus. (See PACIFIC ISLANDS.)

During an official visit to Washington in January, Sato conferred with President Johnson, Secretary of State Dean Rusk, and other U.S. officials. Foreign Minister Etsusaburo Shiina led a delegation of Japanese cabinet ministers to the fourth meeting of the Joint Committee on Trade and Economic Affairs, held in Washington on July 12-14. The sixth meeting of the Joint Security Consultative Committee, established under the U.S.-Japanese security treaty of 1960, was held in Tokyo on September 1.

U.S. Vice President Hubert Humphrey visited Tokyo on December 28-29, en route to Manila for the inauguration of Philippine President Marcos. Humphrey had an audience with Emperor Hirohito and talked with Prime Minister Sato, Foreign Minister Shiina, and other prominent officials. He asked the Japanese government to help bring about peace in Vietnam and urged it to give economic and medical aid to Vietnamese refugees.

Despite the Japanese government's support of U.S. policies in Asia, popular concern in Japan over the war in South Vietnam led to leftist criticism of U.S. actions, most notably the bombing of

targets in North Vietnam, and opposition to the presence of U.S. military bases in Japan. No serious incidents resulted from this criticism, however, and heightened Japanese interest in the Vietnam situation led to a more balanced view of the U.S. role in Southeast Asia. By late fall there was an increased understanding of and confidence in U.S. policies and objectives in that area. There remained, however, popular concern over the possibility of an expanded war on the Asian mainland, and there was almost universal support for a negotiated settlement of the Vietnamese conflict.

Japan and the Soviet Union. While the Japanese-Soviet trade picture improved moderately during 1965, there was no significant change in diplomatic relations. Two-way trade in 1965 amounted to approximately \$400 million. Negotiations held late in 1965 resulted in agreements to expand two-way commercial exchanges by about 10% in the next five years and to plan direct air service between Tokyo and Moscow in the summer of 1966.

Japan, Nationalist China, and Communist China. Japan continued to expand its trade with Communist China in 1965, but held to its policy of separating trade and diplomacy while maintaining its highly valued relationship with Nationalist China. The Japanese government agreed in April to provide Nationalist China with \$150 million in government loans. But it would not provide long-term financing to facilitate exports of machinery and factory equipment to Communist China, and Peking therefore canceled contracts for a \$26.5 million synthetic fiber plant and a \$3.6 million freighter. Trade with Communist China nevertheless reached a high of \$470 million in 1965.

Communist China's image in Japan was affected adversely by Peking's conduct of foreign affairs, most notably in connection with the abortive Algiers Conference, the dispute between India and Pakistan over Kashmir, and Chinese hostility toward the conservative Sato regime.

UPI

STUDENTS AND POLICE CLASH in Tokyo on June 21 during demonstration against Japanese-South Korean treaty that established diplomatic relations between the countries.

Japan and South Korea. Foreign Minister Shiina visited Seoul in February, initialing with Korean Foreign Minister Lee Tong Won a basic relations treaty calling for exchange of envoys and early trade and air transport talks. Negotiations continued through the spring on fishing rights and other disputed matters, economic aid to Korea by Japan, and the establishment of consulates. The treaty was formally signed in a nationally televised ceremony in Tokyo on June 22. The agreement opened a new and significant era in relations between the two Asian states.

The treaty was ratified by the Korean Assembly on August 13. In Japan, however, parliamentary opposition and street demonstrations by the leftist parties delayed Diet action, despite general popular acceptance of the treaty. A special Diet session was opened October 4, and debate and committee dis-

Economic Indexes (1964): Industrial production, 248 (1958=100); agricultural production, 124 (1956-57=100); cost of living, 132 (1958=100).

Manufacturing (metric tons, 1964): Gasoline (1963), 6,776,000; crude steel, 39,799,000; cement, 32,950,000; fuel briquets and packaged fuel, 4,082,000; wheat flour, 2,496,000; plastics and resins, 1,860,000; newsprint paper, 1,137,600.

Crops (metric tons, 1964): Rice, 16,989,000 (ranks 3rd among world producers); sweet potatoes and yams (1963), 6,662,000 (world rank, 1st); potatoes, 3,914,000 (world rank, 11th); barley, 1,203,000 (world rank, 16th); citrus fruit, 1,133,000 (world rank, 6th); soybeans, 240,000 (world rank, 6th); tea, 83,300 (world rank, 4th); sugar beets, 1,203,000.

Minerals (metric tons, 1964): Coal, 51,054,000 (ranks 11th among world producers); salt, 887,000 (world rank, 16th); gypsum, 753,000 (world rank, 13th); manganese, 282,975 (world rank, 10th); zinc, 215,548 (world rank, 7th); silver, 8,625,337 troy ounces (world rank, 7th); gold, 252,094 troy ounces (world rank, 10th).

Foreign Trade (1964): Exports, \$6,674,000,000 (chief exports, 1963: ships and boats, \$339,690,000; iron or steel universals, \$317,610,000; cotton fabrics, \$283,040,000; telecommunications apparatus, \$282,760,000); imports, \$7,948,000,000 (chief imports, 1963: crude and partly refined petroleum, \$789,230,000; iron ore and concentrates, \$354,310,000; greasy wool, \$348,890,000). Chief trading partners (1963): U.S. (took 28% of exports, supplied 31% of imports); Australia (took 3% of exports, supplied 8% of imports); Canada (took 2% of exports, supplied 5% of imports).

Transportation: Roads (1964), 603,718 miles (24,607 paved); motor vehicles (1964), 3,278,000 (automobiles, 1,193,000); railways (1963), 12,749 miles; merchant vessels (1964), 1,272 (9,444,000 gross registered tons); national airlines, All Nippon Airlines, Japan Airlines; principal airports, Tokyo, Osaka, Nagoya.

Communications: Telephones (1964): 10,682,492; television stations (1964), 81; television sets (1964), 16,000,000; radios (1963), 19,318,000; newspapers (1962), 160 (daily circulation, 39,877,000).

PREMIER EISAKU SATO (left) meets President Johnson in Washington on January 12 for talks on Asian problems.

cussion were carried out despite dilatory tactics by the left. Violent parliamentary and public demonstrations against the treaty continued, but both houses ratified the pact in November, and the treaty entered into force in December. (See ASIA.)

International Visitors. A number of distinguished dignitaries visited Japan during 1965. Among them were Indonesian Foreign Minister Subandrio, in February and May; British Parliamentary Undersecretary for Foreign Affairs Lord Walston, in April; Malaysian Prime Minister Tunku Abdul Rahman, in May; New Zealand Prime Minister Keith J. Holyoake, in July; and Uganda's Prime Minister Milton A. Obote, in July. Japan was host to the Ninth General Conference of the International Atomic Energy Agency in September. Soviet astronauts Andrian Nikolayev and Valentina Tereshkova (now Nikolayev's wife) visited Japan in October.

DOMESTIC AFFAIRS

Former Prime Minister Hayato Ikeda died of cancer on August 13, 11 months after illness had forced his resignation. After taking over as prime minister in November 1964, Sato strengthened his position within the ruling Liberal Democratic Party (LDP) while moving forward on a number of key domestic and foreign relations issues. In June he reorganized the cabinet he had inherited from Ikeda on relatively more conservative lines, holding over only Foreign Minister Shiina from the previous administration. Faction leader Ichiro Kono, Sato's chief rival for LDP leadership, died in July, leaving Sato at least temporarily in uncontested control of the conservative party.

Elections to the House of Councillors. Except in Tokyo, where they failed to elect any members to the House of Councillors in the July 4 elections and suffered heavy losses in the Tokyo Metropolitan Assembly election on July 23, the conservatives maintained their strength throughout the year, improving their position in some districts. As a result of the July elections, the parties were represented in the House of Councillors as follows: LDP, 140; Japan Socialist Party (JSP), 73; Komeito, 20; Democratic Socialist Party (DSP), 7; Japan Communist Party (JCP), 4; independents, 5.

Elections to the Tokyo Assembly. A major vote-buying scandal in the 120-member Tokyo Metropolitan Assembly led to the dissolution of the assembly

EISAKU SATO, elected prime minister of Japan on Nov. 9, 1964, worked hard in 1965 to make good his promise that Japan would play a larger part in world affairs as well as in Asian politics. Some of his policies, such as adoption of a treaty with South Korea, met with violent opposition, and he had to deal with an economic recession that was only partially overcome by the end of the year. He continued to maintain his pro-Western policy and to recognize Nationalist China in spite of pressure from Communist China.

Sato comes from a prominent South Honshu family. His brother Nobusuke Kishi (who had changed his name from Sato) was prime minister of Japan from 1957 to 1960. Sato received a law degree from Tokyo University in 1924, and rose to head the national railway system. In 1948 he joined the Liberal Democratic Party, and held five separate cabinet appointments before he became prime minister.

in June and the indictment of several prominent LDP members, including the speaker, Sadao Koyama. The scandal cost the LDP a sizable part of its support in the ensuing election to the assembly on July 23, and its membership in that body was reduced from 69 to 38. The JSP increased its representation from 32 to 45, becoming the leading party in the assembly. The Komeito elected all 23 of its candidates. The JCP raised its representation from 2 to 9. The DSP elected 4 members, and there was one independent.

Opposition Parties. The Democratic Socialist party held its annual convention in February, reelecting its major officers and adopting a five-year program to strengthen the party and win support for its moderate Socialist policies.

The resignation in March of aging Japan Communist Party chairman, Jotaro Kawakami, was followed by jockeying for succession between the party's moderate elements and the radical wing led by faction leader Kozo Sasaki, who was elected chairman at an extraordinary party convention in May. Sasaki attacked American "imperialism" as the "enemy of all mankind" in his acceptance speech and moved the party into a posture of vocal hostility toward the United States and militant opposition toward the Sato government. By the end of the year, the JSP had tentatively resumed cooperation with the JCP against the Korean-Japanese treaty and other Sato policies.

The Japan Communist Party continued its militant, pro-Peking policies during 1965. Despite small gains in the House of Councillors and the Tokyo Assembly elections, the party's political influence remains limited outside the radical left.

The Komeito, the political arm of the Buddhist lay organization Soka Gakkai, also made moderate gains in the House of Councillors, winning 11 seats and 13.7% of the popular vote. Its rate of gain was appreciably reduced, however, and three of its candidates were defeated, suggesting that its reputation for spectacular growth and invincibility at the polls may become increasingly difficult to maintain. (See also RELIGION—*Oriental Religions*.)

Legislation. The 48th regular session of the Diet reconvened on January 21. A record budget of 3658 billion yen (over \$10 billion) was passed on March 31. A bill ratifying ILO Convention No. 87, which provided for freedom of association and labor's right to organize, was passed on May 17, fulfilling a seven-year-old Japanese commitment to the ILO.

JAPANESE PARLIAMENT ratified treaty with South Korea after tumultuous debate. Speaker Naka Funada (center) announces its formal passage in House of Representatives on November 12.

The session, which was marked by frequent clashes between the LDP and the increasingly recalcitrant JSP, ended June 1, following a revision of the Local Autonomy Law to permit the dissolution of local assemblies. The 49th special session was convened on July 22 to provide for the supplementary budget; and the 50th special session, called on October 4, ratified the Korean-Japanese treaty in November.

Economy. Restrictive monetary measures that were applied early in 1964 to improve Japan's deteriorating balance-of-payments position were lifted in December 1964. The removal of these restraints was not sufficient, however, to overcome the sluggish and generally pessimistic atmosphere their adoption had induced in domestic business and investment circles. The economy failed to regain the forward momentum it had previously enjoyed, despite increasing exports, rising consumer demand, and mounting government expenditures. A 1965 economic growth rate of about 2.7% was anticipated, as against an annual average of over 10% during the preceding decade.

By the end of 1965, however, the recession mood was beginning to give way to cautious optimism. The Japanese government had initiated fiscal measures to stimulate economic activity, and both the stock market and the commodity market had turned upward. To cover an anticipated budget deficit, the government, in a radical departure from past practice, planned to issue government bonds.

Basically, the Japanese economy remains sound and resilient in long-term prospect. Foreign exchange reserves stood at about \$2.1 billion at the end of 1965. Exports showed a dramatic increase of 26% over 1964, while imports rose less than 2%. Japan ranks as the world's leading shipbuilder and is third in the production of iron and steel. It ranks sixth in the production of automobiles, and second only to the United States in the production of trucks. In September a Yokohama shipyard launched the world's largest tanker, the 150,000-deadweight-ton *Tokyo Maru*.

Other Events. On November 30 a second son, Aya, was born to Crown Prince Akihito and Crown Princess Michiko. He will be third in line to the throne, after his father and his elder brother Hiro.

On June 1 a gas explosion in the Yamano coal mine, 20 miles east of Fukuoka on the island of Honshu, cost the lives of 239 men. The disaster led to an investigation of the adequacy of safety measures in other mines.

The Japan National Railways claimed a world speed record on its 322-mile Tokaido line from Tokyo to Osaka. Service on the line was begun in

October 1964, and the speed of the trains was increased as the tracks settled, until it was announced in November 1965 that special trains, limited to passenger service, would break all existing speed records by making the run between Tokyo and Osaka at an average speed of 103 miles an hour, attaining a maximum speed of 126 miles an hour.

JEHOVAH'S WITNESSES

This society of Christian ministers was active in 1965 in 197 lands, operating 23,483 congregations under the direction of 92 branches. Over 171 million hours were spent in house-to-house preaching, with more than 59 million return visits to interested persons, and in conducting over 770,000 home Bible studies each week. During the year, 64,393 new members were baptized, increasing the membership to 1,109,806.

A series of "Word of Truth" assemblies was held in Dublin, Ireland, and Edinburgh, Scotland, from June 9 to 13, on the theme that the Holy Bible contains the answers to the problems facing mankind. To emphasize this theme, the society distributed over 2½ million English and Spanish copies of the Bible textbook, *Things in Which It Is Impossible for God to Lie*. The society planned to translate the book into at least 60 languages for distribution. At 41 assemblies in Europe, North America, Hawaii, and Bermuda, 506,950 persons heard the featured talk, "World Government on the Shoulder of the Prince of Peace."

Opposition to the work of the Jehovah's Witnesses continued in eastern Europe, Spain, Portugal, and some Arab countries.

The *Watchtower*, the official journal of the Jehovah's Witnesses, increased its circulation to 4,600,000 in 70 languages. The companion magazine, *Awake!*, reached a circulation peak of 4,350,000 in 26 languages.

INAUGURATION of President Johnson (left) took place in Washington, D.C., on Jan. 20, 1965. Chief Justice Earl Warren administers the oath, while Mrs. Johnson and Vice President Hubert H. Humphrey look on.

WIDE WORLD

JOHNSON, Lyndon Baines

Thirty-sixth president of the United States: b. near Stonewall, Texas, Aug. 27, 1908.

On Jan. 20, 1965, President Johnson, who had served in the office for 14 months after the assassination of John F. Kennedy, was sworn in for his first four-year term. In his inaugural address, the Texas Democrat called for a unity of purpose and "progress without strife" in a world of "rapid and fantastic change," and he promised: "I will lead and I will do the best I can."

Both success and frustration marked the year 1965 for the president. His legislative program, perhaps unequaled in its potential for social revolution, was largely approved by a cooperative Congress. But his efforts to cope with a war in Vietnam and a revolution in the Dominican Republic brought less satisfactory results. Indeed, Johnson's obligation to give increasing attention to the Vietnam crisis, which also drained off greater amounts of the country's tax monies, threatened to delay indefinitely the full implementation of the new domestic programs that he hoped would lead to a Great Society.

Dissatisfaction of many U.S. Negroes with their lot also jeopardized the president's hopes for domestic progress based on broad consensus. Johnson's vigorous efforts in behalf of the adoption and enforcement of the Voting Rights Act of 1965 removed any doubts that may have existed with respect to his commitment to secure equal rights for all Americans.

Foreign Affairs. In the face of mounting aggression by Communist insurrectionists in South Vietnam, Johnson increased the U.S. assistance to that Southeast Asian country. He repeatedly said that "We seek no wider war." In an address at Johns Hopkins University on April 7, he said that the United States was ready for "unconditional discussions" on Vietnam. But the Communists would not negotiate. The president announced on July 28 that U.S. military strength in Vietnam would increase from 75,000 to 125,000 "almost immediately," with more men to come later as needed. By year's end, approximately 180,000 U.S. troops were engaged in a brutal war against Vietcong soldiers from both North and South Vietnam.

A majority of the American people supported what Johnson described as his "carefully measured" steps in Vietnam. But the president came under a cross fire of demands from those who said that the United

States had no moral right to be in Vietnam, and from those who demanded that he escalate the war.

A revolution in the Dominican Republic also tested Johnson's mettle. On April 28, four days after an uprising began against the provisional government, Johnson rushed Marine units to the island republic, explaining that he had acted to protect the lives of Americans living there. On May 2 the president revealed a second reason for the intervention: What had begun as a democratic revolution had been "taken over and really seized and placed into the hands of a band of Communist conspirators." Evidence that such was the case was sparse, and Johnson himself later hedged on that statement. Nonetheless, U.S. troop strength in the Dominican Republic eventually surpassed 20,000 before being reduced late in the year.

Johnson later called for "new international machinery" to oppose Communist subversion in the hemisphere. Asked why he had not consulted the Organization of American States (OAS) before intervening, Johnson replied that there had not been time, but he later placed U.S. forces on the island under OAS supervision. Although critics charged that Johnson had intervened on the basis of inadequate information, he may have averted a worse bloodbath leading to a Communist regime.

Johnson had hoped to meet the leaders of the Soviet Union in 1965, but U.S.-Soviet relations deteriorated as the war in Vietnam dragged on.

On April 16 the White House announced that because of "the congressional work load" and "the situation in Vietnam," scheduled visits by Pakistani President Mohammad Ayub Khan and Indian Prime Minister Lal Bahadur Shastri had been postponed. Both India and Pakistan had criticized U.S. action in Vietnam, and the postponements miffed both countries. Ayub and Johnson finally met in Washington on December 14 and 15.

British Prime Minister Harold Wilson and West German Chancellor Ludwig Erhard also visited the White House in December. Johnson pledged to support an oil embargo imposed by Britain against its rebellious colony of Rhodesia. Erhard and Johnson postponed a decision on Germany's role in the sharing of NATO's nuclear weapons, and in effect dropped an effort to form a multilateral nuclear force.

Johnson announced on September 24 that the United States and Panama had resolved their dispute with respect to the Panama Canal Zone.

Pope Paul VI and President Johnson met in New York City on October 4. They discussed world pov-

erty, illiteracy, and disease, and pondered means by which the United States and the Roman Catholic Church could work more effectively for peace.

The Great Society. On Jan. 4, 1965, in a State of the Union speech that was exalted in tone and of seminal importance, Johnson proposed legislation that he believed would point the way to a Great Society. He said: "The Great Society asks not how much, but how good; not only how to create wealth but how to use it; not how fast we are going, but where we are headed. It proposes as the first test for a nation: the quality of its people." He said that the dreams of the people would be his guide: "A president does not shape a new and personal vision of America. He collects it from the scattered hopes of the American past."

Relying alternately on persuasion and pressure, and drawing sustenance from wide public support, Johnson pushed almost all of his "must" legislation through the heavily Democratic Congress. Education bills provided scholarships for college undergraduates, fellowships for elementary and high school teachers, grants to states for the purchase of books and other library materials, and funds for school districts in which a large number of residents were on relief. Congress approved \$1.1 billion for economic development of Appalachia, and more than doubled the funds for the anti-poverty program.

Johnson won approval for medical care under the Social Security system for most persons 65 years old and over. Congress also granted Johnson a cabinet-level Department of Housing and Urban Development. The president overrode traditional congressional reluctance to patronize the arts, and secured a bill granting scholarships in the humanities and financial aid to the visual and performing arts. Johnson's new immigration law eliminated the national origins quota system. His highway beautification program will cut federal highway funds to states that fail to control junkyards and billboards along interstate and primary highways outside specified areas.

Civil Rights. After Negro demands for voting rights had led to violence in Selma, Ala., an angered President Johnson, addressing Congress on March 15, placed his own prestige and the weight of his office behind a bill to guarantee the right to vote for all citizens. He said that the Negro's heroic struggle for equal rights had "awakened the conscience of this nation." He declared: "Their cause must be our cause, too. Because it is not just Negroes but really it is all of us who must overcome the crippling legacy of bigotry and injustice. And we shall overcome!"

Congress responded by authorizing federal voting examiners to register Negroes in areas where voter participation had dropped below specified levels. Johnson signed the law on August 6, and quickly took steps to enforce it.

The president rebuked both white and Negro extremists in 1965. When members of the Ku Klux Klan were arrested in a slaying in Alabama, Johnson called the Klan a "hooded society of bigots." After Negro rioting in Los Angeles claimed 34 lives in August, Johnson asserted that "violent, willful disregard of law" must not be used to redress unjust conditions.

The Economy. The president was a proud but nervous guardian of the continuing economic boom. His heroic efforts to cut the budget and his enunciation of familiar economic homilies helped woo businessmen. Congress granted his request for a \$4.7 billion cut in excise taxes over 3½ years. Johnson exhorted

labor and management to avoid inflationary increases in wages and prices. He intervened in September to secure a contract settlement between the United Steelworkers Union and the steel industry. In November he ordered the release of government stockpiles of aluminum and copper to avert price increases in those industries. To redress a balance of payments deficit, the president asked businessmen and bankers to cut their lending and investing abroad, and he urged tourists to see America first. His "easy money" policies were endangered when the Federal Reserve Board increased the discount rate from 4 to 4½% on December 5, as a precautionary measure against inflation.

Health. On Oct. 8, 1965, Johnson underwent a successful operation for the removal of his gallbladder and a kidney stone. From January 23 to 26, he was hospitalized with a cold aggravated by a bronchial condition. He and Vice President Humphrey made a written agreement in 1965 to transfer executive powers should the president be disabled. (See also **PRESIDENTIAL SUCCESSION.**)

Background. Johnson graduated from Southwest Texas State Teachers College in 1930 and taught school for two years. He was director in Texas of the National Youth Administration from 1935 to 1937, when he was elected to Congress. He served in the Navy in 1941 and 1942. Elected to the Senate in 1948, Johnson became Senate Democratic leader in 1953, and supported measures dealing with national defense, space exploration, and civil rights. He suffered a serious heart attack in 1955. Elected vice president in 1960, Johnson succeeded to the presidency Nov. 22, 1963, on the assassination of John F. Kennedy.

GALLBLADDER OPERATION forced president to curtail his activities. On October 9, the day after operation, he confers in the hospital with an assistant, Jake Jacobson.

JORDAN'S RULER, King Hussein (r.), talks with his brother, Prince Hassan (center), and his uncle, Prince Naef. Hassan was named heir to the throne in April.

KEYSTONE

JORDAN

Tension between Jordan and Israel increased in 1965. The most serious border raids and counter-raids since 1956 threatened to explode in open, large-scale hostilities, but a precarious peace was maintained. The government of Wasfi al-Tal, who succeeded Bahjat al-Talhouni as prime minister in February, sought to continue Jordan's recently cemented good relations with the United Arab Republic and to implement the national development program, the goal of which is to achieve an economically self-supporting nation by 1970. On April 1, King Hussein changed the line of succession to the throne by naming his 18-year-old brother, Prince Hassan, as his heir.

Jordan River Diversion. Throughout 1965 the Jordanian government collaborated in the Arab League plan to divert the waters of the Jordan River away from Israel. Preliminary work continued at the site of the Makhiba Dam on the Yarmuk River, where construction had begun in 1964. On March 14, Jordan received from the other Arab states commitments of 11 million Jordanian dinars for constructing the dam and raising the banks of the East Ghor Canal. On September 2 an Egyptian firm was awarded a contract to build the dam.

While work on the water diversion scheme moved

ahead, attempts to create an effective unified Arab military command that would be capable of operating against Israel lagged. A majority of the Arab states, including Jordan, sought to avoid an armed confrontation with Israel until they possessed a clear military superiority.

Border Raids. Early in 1965, Al Fatah, an organization of Palestine Arabs which disagrees with the cautious policies of the Arab governments and advocates more violent action against Israel, began a campaign of hit-and-run raids into Israel. Many of these originated in or moved through Jordan. Israel complained that the Jordanian government had not taken sufficiently vigorous action against the infiltrators, and, on the night of May 27, carried out a "warning raid" against the Jordanian towns of Shuneh, Jenin, and Qalqiliya. Arab forays continued, and Israel launched a second warning raid against Qalqiliya on the night of September 5. Thereafter border clashes continued intermittently, aggravating the strained relations between the two countries.

Proposals for Arab-Israeli Negotiations. In the spring, President Habib Bourguiba of Tunisia proposed negotiations between Israel and the neighboring Arab states to transform the 1949 armistice agreements into a peace settlement. His suggestions were rejected by the Arab League, the Arab refugees' Palestine Liberation Organization, and the Jordanian

JORDAN · Information Highlights

Area: 37,737 square miles.
Population: 1,935,440 (Dec. 31, 1964, est.).
Chief Cities (1961 census): Amman, the capital, 246,475; Ez Zarqa, 96,080; Jerusalem (old city), 60,488; Nablus, 45,768; Irbid, 44,685.
Government: King—Hussein; prime minister—Wasfi al-Tal (took office Feb. 13, 1965). Parliament—Council of Representatives, 60 members; Council of Notables, 40 members.
Religious Faiths: Muslims, 94% of population; Roman Catholics, 3%; others, 3%.

Education: Literacy rate (1961)—32% of population aged 15 and over. Total school enrollment (1962)—313,403 (primary, 237,425; secondary, 72,005; teacher-training, 150; technical, 2,478; higher, 1,345).

Finance (1965 est.): Revenues, \$51,968,000,000; expenditures, \$133,134,000,000; monetary unit, dinar (0.3571 dinar equals U.S.\$1).

Gross National Product (1963): \$378,728,000.

Manufacturing (metric tons, 1963): Cement (1964), 308,000; wheat flour, 98,000; gasoline, 46,000; olive oil (1964), 20,000; tobacco, 43; beer, 8,400 hectoliters.

Crops (metric tons, 1963): Tomatoes, 215,000; wheat, 76,000; olives, 39,000; figs, 18,900; lentils, 4,000.

Minerals (metric tons): Phosphate rock (1964), 378,000; salt (1964), 20,000; gypsum (1963), 8,700.

Foreign Trade (1964): Exports, \$24,000,000 (chief exports, 1963: crude fertilizers, \$4,074,000; tomatoes, \$3,186,000; watermelons, \$1,187,000; olive oil, \$952,000); imports, \$141,000,000 (chief imports, 1963: iron and steel products, \$9,943,000; refined sugar, \$8,714,000; mechanical equipment and apparatus, \$7,272,000). Chief trading partners (1963): Syria (took 17% of exports, supplied 10% of imports); Lebanon (took 19% of exports); U.S. (supplied 14% of imports).

Transportation: Roads (1964), 3,479 miles (1,522 paved); motor vehicles (1964), 16,919 (automobiles, 11,887); railways (1963), 227 miles; national airline, Jordan Airways; principal airports, Amman, Jerusalem.

Communications: Telephones (1964): 25,000; radios (1962), 63,000; newspapers (1962), 8.

government. When, on May 17, Prime Minister Levi Eshkol of Israel issued a plea for direct peace negotiations, a Jordanian government spokesman replied: "We reject in form and substance the proposals put forward by the prime minister of the occupation authority in Palestine, because our firm policy rejects the Zionist presence itself in Palestine."

The third Arab summit conference, which was held at Casablanca, Morocco, on September 13-17, was attended by King Hussein, although it was boycotted by President Bourguiba. It reiterated the solidarity of the Arab League states on the Palestine issue.

New Prime Minister. On February 13, Bahjat al-Talhouni resigned, pleading ill health. He was replaced by Wasfi al-Tal, who had served as premier between January 1962 and March 1963. Although al-Tal had been known as an opponent of Nasserite pan-Arabism, King Hussein instructed the new government to cooperate with the Arab states and to support the Arab League. On March 15 the cabinet received a vote of confidence of 46 to 5 (with 6 abstentions) in the Council of Representatives.

New Crown Prince. To assure a purely Arab succession, King Hussein on April 1 nominated his 18-year-old brother, Prince Hassan, as heir to the throne. He passed over his two infant sons by his English wife—Prince Abdullah, aged 3, and Prince Faisal, aged 18 months—as well as his 22-year-old brother, Prince Mohammed. Parliament unanimously amended the constitution to validate this change in the line of succession.

Foreign Affairs. Despite its improved relations with the nonaligned United Arab Republic, Jordan maintained its essentially Western orientation. For fiscal year 1965-66 the United States continued to support the Jordanian budget with a grant of \$32 million, and to provide both economic and technical aid and development loans to bolster the Jordanian economy. Britain provided a grant of £1.4 million and a substantial development loan. Although Jordan broke diplomatic relations with West Germany on May 13 in protest over Bonn's exchange of ambassadors with Israel, economic and commercial relations with Germany were maintained.

Economic Developments. The government's development budget for 1965-66 called for expenditures of 22.6 million Jordanian dinars, of which 4.3 million represent Jordan's contribution to the diversion of the Jordan River waters. Work began on the long-planned reconstruction of the Hejaz Railway from Ma'an in Jordan to Medina in Saudi Arabia, a joint project of Syria, Jordan, and Saudi Arabia. Negotiations were undertaken with the American-controlled Trans-Arabian Pipeline Company for the company's construction of a motor road along its pipeline. The road, to connect with a similar highway in Saudi Arabia and a motor road to Kuwait, will give Jordan direct highway access to the Persian Gulf. On Jan. 1, 1965, Jordan, together with Syria, the United Arab Republic, Iraq, and Kuwait, became a charter member of the Arab Common Market, which provides for a gradual reduction in tariffs among the member states. (See also ASIA.)

PAUL L. HANNA
Professor of Social Sciences
University of Florida

KANSAS

An unusually productive session of the Kansas Legislature put heavy emphasis on education in 1965. The federal government selected Kansas State University, at Manhattan, as the site for its new Grain Marketing Research Laboratory, and designated old Fort Scott in Bourbon County as a national historic monument.

Legislation. The legislature approved a state budget of about \$510 million for fiscal year 1966. Of this amount, 38% was allocated for aid to the state colleges and local schools. The legislature also laid the groundwork for development of a statewide system of junior colleges.

Other significant legislation established family planning centers, approved a long-range state water plan, broadened the fair employment and public accommodations law, provided a uniform commercial code, created a state arts commission, provided for regional public library systems, and established a joint council on recreation.

To pay for these expanded programs, the legislature increased the cigarette tax 2 cents per pack (to 8 cents), and the sales tax by 0.5% (to 3%). It also approved a 1% increase in each bracket of the state income tax.

The legislature redrew the Kansas congressional district boundaries in 1965. Reapportionment of the state House of Representatives, ordered by the state Supreme Court, was slated for a special session of the legislature which Gov. William Avery was expected to call early in 1966. Late in December a three-judge federal court ruled that the Kansas Senate must also be reapportioned.

Grain Marketing Research Laboratory. A new U.S. Grain Marketing Research Laboratory will be built at Kansas State University, in Manhattan. The \$3.3 million facility is Kansas' first major federal research activity. The project is for the study of agricultural policy and production, processing, and distribution of food.

"Miss America." Deborah Bryant, a 19-year-old beauty from Overland Park, won the "Miss America" title in Atlantic City on September 11. She plans to use her \$10,000 prize scholarship to study pediatrics at Kansas University.

KANSAS BEAUTY Deborah Bryant (r.) learns of her selection as Miss America for 1965 at Atlantic City on September 12, over runner-up Patricia Puckett of Mississippi.

Government: Chief Officers—governor, William H. Avery (Republican); lt. gov., John Crutcher (R); secy. of state, Paul R. Shanahan (R); atty. gen., Robert C. Londerholm (R); treas., Walter H. Peery; supt. of pub. instr., Adel F. Throckmorton; chief justice, Jay S. Parker. Legislature—(convened Jan. 12, 1965); Senate, 40 members (27 Republicans, 13 Democrats); House of Representatives, 125 members (81 R, 44 D).

Education: School enrollment (1964-65)—public elementary, 396,000 pupils (12,869 teachers); public secondary, 146,000 pupils (10,247 teachers); nonpublic schools, 58,900 pupils (1,900 teachers); college and university (fall 1964), 72,488 students. Public school expenditures (1964-65)—\$218,000,000 (\$462 per pupil); average teacher's salary, \$5,587.

Public Finance (fiscal year 1965): Revenues, \$455,557,347 (3% sales tax, \$90,367,225; motor fuel tax, \$47,453,774; federal funds, \$115,949,259). Expenditures, \$432,380,805 (education, \$157,629,199; health, welfare, and safety, \$113,256,602; highways, \$128,452,832). State debt, \$18,844,000 (fiscal year 1964).

Personal Income (1964): \$5,219,000,000; average annual income per person, \$2,346.

Public Assistance (fiscal year 1965): \$57,649,871 to 80,000 recipients (aged, \$24,334,146; dependent children, \$17,015,485).

Labor Force (employed persons, June 15, 1965): Agricultural, 142,100; nonagricultural (wage and salary earners), 686,800 (17% manufacturing, 20% trade, 18% government). Unemployed persons (June 15, 1965)—28,100.

Manufacturing (1963): Value added by manufacture, \$1,436,874,000 (transportation equipment, \$433,130,000; primary metals, \$17,109,000; nonelectrical machinery, \$92,400,000; electrical machinery, \$24,076,000; fabricated metals, \$63,582,000; food and products, \$238,511,000).

Agriculture (1964): Cash farm income, \$1,382,866,000 (livestock, \$743,707,000; crops, \$450,396,000; govt. payments, \$188,763,000). Chief crops (tons)—wheat, 6,464,000 (rank 1st among the states); hay, 4,288,000 (rank, 9th); alfalfa, 2,891,000 (rank, 9th); sorghum grain, 2,750,000 (rank, 2nd); corn for grain, 1,297,000 (rank, 17th); sugar beets, 365,000 (rank, 15th); barley, 244,000 (rank, 11th).

Mining (1964): Production value, \$513,269,000 (ranks 11th among the states). Chief minerals (tons)—salt, 930,000 (rank, 8th); lead, 1,185 (rank, 14th); crude petroleum, 106,252,000 barrels (rank, 7th); natural gas, 768,246,000—000 cubic feet (rank, 5th); bituminous coal, 1,263,000; zinc, 4,665.

Transportation: Roads (1964), 132,627 miles (88,625 paved); motor vehicles (1964), 1,336,148; railroads (1965), 12,056 miles; airports (1965), 219.

Communications (1965): Telephones, 1,010,000; television stations, 11; radio stations, 76; newspapers, 53 (daily circulation, 669,498).

Historic Sites. Fort Scott, the army post established on the Indian frontier in 1842, was designated a national historic monument in a bill signed by President Johnson on Aug. 31, 1965. The fort was prominent in Missouri-Kansas border troubles of the late 1850's, and a center of activities in the southeast Kansas region during the Civil War. Several buildings of the fort are still standing in the heart of the city of Fort Scott.

Congress also provided for additional marking of four other historic sites in Kansas—the traditional home of John Brown in Osawatimie; the Marais des Cygnes Massacre site in Linn County; and two Civil War battlefields—Baxter Springs in Cherokee County, and Mine Creek in Linn County, south of Pleasanton.

Crop Production. The 1965 Kansas crop season was the fourth best on record. Hay and soybean crops were the largest ever recorded in Kansas, and the sugar beet crop was the second largest on record. Other high yields were registered by wheat (243 million bushels), and sorghum grain (136 million bushels).

KENTUCKY

A conflict in 1965 over Kentucky's tax policy had far-reaching effects on the state's Democratic party. The state court of appeals ruled that under present laws property assessments must be made on the basis of 100% property valuation. The court's decision necessitated new legislation to fix the state's real property taxation policy. At a special session of the General Assembly in August called by Gov. Edward T. Breathitt, Jr., an open break in the state Democratic party occurred between the forces of the governor and those of Lt. Gov. Harry Lee Waterfield. The forces aligned with the governor favored the policy laid down by the court of appeals, but they also proposed possible adjustments in tax rates and assessments; those backing Waterfield favored new legislation that would carry out the mandate of the court and that would not allow liberal adjustments in assessments and levies. The governor's forces prevailed, and the way was left open for a legislative adjustment of property taxes basically in line with the policy in effect prior to the court's decision.

Elections. In the state elections in November, voters returned a Democratic majority to the General Assembly. Republicans elected a county judge and a mayor in Jefferson County and in Louisville, and a county judge in Fayette County.

Mining (1964): Production value, \$444,379,000 (ranks 15th among the states). Chief minerals (tons)—coal, 82,747,000 (rank, 3rd); fluorspar, 38,214 (rank, 2nd); lead, 858 (rank, 15th); natural gas, 77,360,000 cubic feet (rank, 13th); petroleum, 19,772,000 barrels (rank, 15th).

Transportation: Roads (1965): 69,330 miles (26,312 paved); motor vehicles (1964), 1,412,210; railroads (1964), 2,907.45 miles; airlines (1965), 8 (19 airports in 1964).

Communications (1965): Telephones, 1,013,000; television stations, 7; radio stations, 93; daily newspapers, 22 (circulation, 232,115); other newspapers, 141 (circulation, 370,087).

KENYA'S PRESIDENT Jomo Kenyatta (right) is greeted by Senate Speaker Michael Chekwe at the ceremonial opening of the new Parliament buildings in Nairobi on Nov. 2, 1965. At left is Humphrey Slade, speaker of the House of Representatives.

WIDE WORLD

The voters approved a \$175 million bond issue, which will enable Kentucky to complete its interstate highway system and to improve conditions in the state's public institutions.

Protest Against Strip Coal Mining. In June a delegation of eastern Kentucky mountaineers staged a motorcade to the capital to protest the expansion of strip coal mining on their impoverished land. Governor Breathitt later went in person to the spoil dumps in the Cumberland Mountains area to survey the damage. He promised support of new legislation to prevent further destruction of the land.

New Highway. On October 28, Governor Breathitt opened the Central Kentucky Parkway, a toll road between Elizabethtown and Versailles that connects the Western and Eastern parkways. The new toll road reduces traveling time between the eastern and western sections of the state from 8 to 10 hours.

Appalachia. The economically depressed Appalachian counties constitute a major problem for Kentucky. The problem is one of social as well as economic significance. Migration from the Appalachian counties, which continued in 1965, caused a lack both of leadership talent and of a source of labor in the area. The federal government's new anti-poverty program has had little visible effect in the area thus far. (See ANTI-POVERTY PROGRAM.)

Industry. The central and western sections of Kentucky, as well as certain portions of the eastern section, made progress during the year in industrial expansion. The progress was in line with Governor Breathitt's aims, which he outlined in his campaign for the governorship in 1963. Each year, more of the state's income comes from the industrial and service sectors of the economy, and less is derived from the agricultural sector.

Education. In 1965 the University of Kentucky celebrated the hundredth anniversary of its founding. The centennial festivities opened with an address by President Lyndon B. Johnson on February 22.

University of Kentucky

KENYA

Kenya entered 1965 as a new republic, having ended its status as a British dominion on Dec. 12, 1964, the first anniversary of its independence. President Jomo Kenyatta attempted to guide the country toward the peace and prosperity envisioned in his goal of "African socialism," but Kenya experienced internal dissension and strained relations with the Soviet Union and neighboring East African nations.

Mau Mau Amnesty. The most immediate problem the government faced was to resettle Mau Mau terrorists who remained in the forest, defying the government. Over 200 Mau Mau surrendered, but upon the termination of the two-month amnesty on January 12, government troops marched against the recalcitrant Mau Mau and killed their leader, the self-styled Field Marshal Baimungi.

Labor Unrest. In early March, Kenya was paralyzed for three days by a strike of 16,000 railway workers, who demanded an increase in the minimum wage and the dismissal of African and white officials with "colonial mentality." A sympathy strike by

Chief trading partners (1963): Britain (took 25% of exports, supplied 31% of imports); West Germany (16% of exports, 6% of imports).
Transportation:	Roads (1964), 26,051 miles (1,112 paved); motor vehicles (1964), 75,199 (automobiles, 65,511).
Communications:	Telephones (1964): 47,706; television stations (1964), 2; television sets (1964), 8,500; radios (1963), 100,000; newspapers (1963), 5 (daily circulation, 81,000).

government workers followed, and another general strike was averted only by the intervention of Tom Mboya, the minister of economic planning, who persuaded the strikers to submit their claims to an industrial court. Labor unrest continued, however, and on March 24–25, rioting erupted at Kisumu following a two-week strike by engineering workers.

President Kenyatta repeatedly criticized the labor movement, suggesting a merger of all the unions. On June 23 he banned public meetings and demonstrations by the two large labor federations and announced the formation of a government labor policy committee.

Foreign Policy. A controversy arose in Parliament over the interpretation of Kenya's nonalignment policy. In April, some legislators charged that Communist nations were attempting to sneak arms into Kenya. Although the allegations were denied by Njoroge Mungai, the minister of defense, a shipment of Soviet arms was subsequently rejected as obsolete. Relations with the Soviet Union were further strained when 29 Kenya students returned from Soviet schools complaining of discrimination, low standards of teaching, and brainwashing. Moreover, the Kenya Ministry of Education took over the direction of the Russian-sponsored Lumumba Institute in Nairobi, charging that it had become an instrument in the cold war.

In a speech on June 1, President Kenyatta rejected communism as "somebody else's nationalism." Reasserting Kenya's policy of nonalignment, he went on to say, "Kenya shall not exchange one master for a new master. . . . Let every nation in the East or West take heed of this warning."

Tanzania and Uganda, Kenya's neighbors in East Africa, both appeared to be increasingly influenced by Communist China in 1965, and their relations with Kenya reached a low ebb. On May 15, Kenya security forces intercepted a convoy of Chinese arms passing without authorization through Kenya from Tanzania to Uganda, and Prime Minister Obote of Uganda had to fly to Nairobi to explain the incident and obtain release of the weapons.

Politics. Although Kenyatta's popularity was undiminished, his rejection of Russian and Chinese communism brought charges that the state party, the Kenya African National Union (KANU), favored the West. Opposition parties had merged with KANU late in 1964, but, on June 25, 1965, Lucas Oguok announced the formation of a new Kenya Socialist Party aimed at "revolutionizing KANU."

The Economy. In 1964, Kenya's exports outside East Africa had increased 8% over the 1963 level, with coffee making the greatest gain. However, agricultural production, already in decline since the redistribution of land in small plots in the Kenya Highlands, decreased further under drought conditions in 1965. Food shortages resulted, and some importation of grain was necessary.

During the year, Kenya received pledges of aid from Britain and West Germany, amounting to about \$85 million, and the United States was considering a grant of \$36 million. With these prospects, Tom Mboya anticipated that Kenya could achieve an annual rate of economic growth of 5.2%.

KOREA

ASIA

The United States and the Soviet Union divided the homogeneous Korean nation along the 38th parallel in 1945, after the Japanese surrender brought an end to World War II. Since then, the Republic of Korea in the south has been associated with the West, and the Democratic People's Republic of Korea in the north has been ruled by Communists. The Korean War (1950–53) prevented a takeover of South Korea by North Korea, but kept the boundary dividing the two countries along the 38th parallel.

SOUTH KOREA

During 1965, the government of President Chung Hee Park sought to ease its financial difficulties by settling long-term Korean claims against Japan on the best possible terms. A Treaty on Basic Relations was signed by the South Korean and Japanese for-

KOREA-JAPAN TREATY established diplomatic ties between South Korea and its traditional enemy after 14 years of negotiations. Korea's Foreign Minister Lee Tong Wong (seated at left behind microphone) and Japan's Foreign Minister Etsusaburo Shiina sign the pact in Tokyo on June 22, 1965.

UPI

eign ministers in Tokyo on June 22. There was strong opposition to the treaty in South Korea, and 62 members of the opposition party, Minjung Dang, boycotted the session of the National Assembly at which it was ratified. The ruling Democratic Republican party secured its passage (110 to 0, with one abstention) on August 14. The ratification instruments were exchanged in Seoul on December 18.

The treaty establishes full diplomatic relations between Japan and South Korea for the first time since 1910. An accompanying economic agreement requires Japan to give the Park regime \$300 million as a grant, \$200 million in government loans, and \$100 million in private loans. The question of fishing rights also was settled.

Opposition to the Treaty. Many Koreans objected to the agreement for a number of reasons. They felt humiliated because their claim for indemnity had been settled as a "grant," and because the Park government had accepted a fraction of the amount of reparations demanded by previous governments. They feared that the floodgate had been opened to Japan's reinvasion of economic fields, including fisheries. They also believed that the accord would hinder the chances for an early unification of North and South Korea.

Demonstrations by students, religious groups, political parties, social organizations, and even some retired generals and former officials preceded and followed ratification of the treaty. On August 26 the government mobilized an army division to suppress popular protest. Colleges and universities were closed, many students and professors were black-listed, and some retired officers were accused of being "anti-government."

Even the pro-government newspaper, the *Korea Times* was provoked to comment on September 21:

NORTH KOREA · Information Highlights

Area: 46,540 square miles.

Population: 11,800,000 (mid-1964 est.).

Capital (1960 est.): Pyongyang, 653,100.

Government: Chairman of Presidium of the Supreme People's Assembly—Chou Yong Kun (took office 1957); Premier—Marshall Kim Il Sung (took office 1948). Parliament—Supreme People's Assembly, 383 members.

Education: Total school enrollment (1963-64)—2,570,000 (university, 214,000).

Finance (1964 est.): Revenues, \$2,862,000,000; expenditures, \$2,862,000,000; monetary unit, won (1.20 won equal U.S.\$1).

Manufacturing (metric tons): Cement (1964), 2,610,000; crude steel (1963), 1,220,000.

Crops (metric tons): Grains (1963), 5,000,000.

Minerals (metric tons, 1964): Anthracite coal (1963), 9,707,000 (ranks 5th among world producers); iron ore, 4,800,000 (rank, 20th); magnesite, 898,000 (rank, 4th); zinc (1963), 109,000 (rank, 9th); pyrites, 422,000; salt, 399,000; graphite, 70,000 (rank, 3rd).

Foreign Trade (1962): Chief exports: metals, 48.5% of total export value; farm products, 12.6%; minerals, 11.2%; chief imports: machines, 34.1% of total import value; fuel, 22.2%; textiles, 11.3%. Chief trading partners: USSR, 60%; Communist China, 3%.

Transportation: Railways (1964), 6,500 miles; principal airport, Pyongyang.

Communications: Radios (1961), 600,000.

"It must be admitted that professors and students are also entitled to take part in activities of a political nature outside the campus in their individual capacity, because they also are regular citizens having the right to vote."

Opposition to the Government. The Park regime experienced difficulties in 1965. The *Korea Times* stated on September 26: "The nation seems to have lost a sense of direction. . . . What can be seen immediately are . . . glaring signs of corruption, graft, profiteering, irregularities and abused power. . . ."

On May 10 and 11, Gen. Kyung Suk Chang and seven other officers were arrested for allegedly plotting to overthrow the government. The major opposition parties—the Democratic and Civil Rule—formally merged on June 14 under the name of Minjung Dang (Popular party) to challenge the overwhelming power of Park's Democratic Republican party.

To strengthen his position, President Park sought closer ties with the United States. He visited Washington, D.C., from May 16 to 27, and on August 13 he took advantage of the boycott of opposition members to push through Parliament his proposal to send a 15,000-man combat division to South Vietnam. Anti-American feeling rose along with antigovernment feeling in connection with the treaty signed with Japan.

Despite the government's claims of increases in the gross national product and exports, living conditions did not improve. Prices of food and other necessities rose faster than wage increases, and chronic unemployment continued unchecked. Economic unrest added to the feeling of general discontent among the South Korea people.

STUDENTS RIOT in Seoul on April 13 to protest government plans to "normalize" relations with Japan by treaty.

Death of Rhee. The death of exiled former President Syngman Rhee in Hawaii on July 19 ended another chapter in Korean history. Rhee was buried in South Korea on July 27. (See **NECROLOGY**.)

NORTH KOREA

North Korea declared the 1965 South Korean-Japanese treaty null and void, describing it as "inspired by American imperialism." During the year the government of Premier Kim Il Sung sought to improve Soviet-North Korean relations, which had shown strain in 1964, and proclaimed its support for the Communist movement in Vietnam.

Foreign Affairs. Soviet Premier Kosygin paid a four-day visit to North Korea, February 11-14, to strengthen friendship and cooperation between the two countries and to discuss the current international situation. A joint communiqué by Kim Il Sung and Kosygin reaffirmed Korean-Soviet solidarity under the treaty of friendship, cooperation, and mutual assistance signed in Moscow on July 6, 1961. The USSR pledged "full support to the struggle of the Korean people for unifying Korea peacefully by themselves on a democratic basis without outside

interference after the withdrawal of the U.S. troops from South Korea."

On March 26 the Kim Il Sung regime announced its decision "to render every form of material and moral assistance, including weapons, to the fraternal Vietnamese people. . . ." On April 27, two North Korean jet fighters attacked and damaged a United States reconnaissance plane over international waters of the Sea of Japan. There was speculation in the United States that the incident was related to the war in Vietnam.

Between Dec. 14, 1959, and Sept. 25, 1965, a total of some 84,000 Koreans in Japan (most of them of South Korean origin) were repatriated to North Korea. The 1965 North Korean budget provided 800,000,000 Japanese yen for educational and relief aid for Korean nationals in Japan.

National Development. North Korea claimed that its housing problem had been solved. According to the government, urban and rural dwelling construction since the end of the Korean war amounted to about 38 million square meters of floor space, with more than 2 million square meters added in 1964 alone. In addition, the government claimed that over 9,000 schools and numerous other public buildings had been built.

YONGJEUNG KIM

President, Korean Affairs Institute

KOSYGIN, Aleksei Nikolayevich

Premier of the USSR: b. St. Petersburg, Russia (now Leningrad, USSR), Feb. 20, 1904.

Kosygin completed his first year as premier of the USSR in 1965. In domestic policy he initiated economic and administrative reforms designed to provide greater freedom of action at local or plant levels. In foreign affairs Kosygin initiated talks that he hoped would lead to settlement of the Vietnamese war and of the Indian-Pakistani conflict over Kashmir. He criticized U.S. involvement in Vietnam and called on all nations to issue a ban on intervention in the affairs of other states.

KOSYGIN (center) visits Hanoi, North Vietnam, in February 1965, to discuss Vietnamese war with North Vietnamese Premier Pham Van Dong (at his right).

SOVPHOTO

Domestic Policy. In his first eight months as premier, Kosygin initiated several important economic reforms. In March he announced that the new Soviet five-year plan (1966-70) would stress production of consumer goods, particularly automobiles. In an attempt to relieve the chronic housing shortage by increasing incentives for building, Kosygin announced in April that loans to construction companies would bear the greatly reduced interest rate of 0.5%. If construction was completed ahead of schedule, the government would guarantee a reduction of 25% on the total interest for the loan.

Kosygin also announced in April a farm-recovery program that provided for large increases in the prices the government pays for produce, and that cancelled a \$2 billion debt owed by collective farms to the State Bank. Kosygin announced economic reforms that would increase the autonomy of factory managers and introduce a modified profit system.

Foreign Affairs. Kosygin's most important foreign policy initiatives involved trips to Hanoi, North Vietnam, in February 1965, and to Tashkent, USSR, in January 1966. In Hanoi, Kosygin held five days of talks with North Vietnamese leaders. He agreed to provide military and economic assistance to North Vietnam.

In Tashkent, Kosygin hosted negotiations between Indian Prime Minister Lal Bahadur Shastri and Pakistani President Mohammed Ayub Khan on Indian-Pakistani problems. Kosygin presided over the discussions and held individual talks with each of the leaders when the negotiations broke down on three separate occasions. The 9-point declaration signed by Shastri and Khan on January 10 included an agreement on mutual troop withdrawal in Kashmir and was regarded as a landmark in Indian-Pakistani relations, and as a personal triumph for Kosygin's diplomacy.

Background. After graduating from a technical institute in 1924, Kosygin worked in consumer co-operatives, and later as a foreman and director of several Leningrad factories. His political career began in 1938, when he was elected mayor of Leningrad. He quickly became involved in national politics, and in 1948 was named minister of finance. In the same year, however, Kosygin fell into disfavor and did not regain a significant position until 1959, when he became chairman of the State Planning Commission (Gosplan). He became vice premier of the USSR in 1960 and premier in 1964.

KUWAIT · Information Highlights

Area: 6,000 square miles.

Population: 468,000 (February 1965 prelim. census).

Chief City (1963 est.): Kuwait City, the capital, 250,000.

Government: Amir—Sheikh Sabah al-Salem al-Sabah (accessed 1965); prime minister—Sheikh Jaber al-Ahmad al-Jaber (took office Nov. 30, 1965). **Parliament**—National Assembly, 50 members.

Religious Faiths: Muslims, 95% of population; Christians, 5%. **Education:** Literacy rate (1961)—47% of population aged 6 and over. Total school enrollment (1962)—52,643 (primary, 34,176; secondary, 17,247; teacher-training, 274; technical, 246).

Finance (1964-65 budget): Revenues, \$574,000,000; expenditures, \$574,000,000; monetary unit, dinar (0.3571 dinar equals U.S.\$1).

Income Per Person (1965): \$3,257.

Economic Index (1964): Industrial (petroleum) production (incl. Kuwait neutral zone), 161 (1958=100).

Manufacturing: Petroleum products (1963), 10,866,000 metric tons.

Minerals (1964): Crude petroleum, 906,230,000 barrels (ranks 4th among world producers).

Foreign Trade (1964): Exports, \$1,218,000,000 (chief exports, 1963: crude petroleum, 629,158,000 barrels; refined petroleum products, 37,861,000 barrels); imports, \$322,000,000 (chief imports, 1963: mechanical transport equipment, \$29,000,000; mechanical machinery, \$19,000,000; electrical equipment, \$15,000,000). **Chief trading partners** (1963 petroleum exports and total imports): Britain (took 26% of exports, supplied 19% of imports); Japan (took 15% of exports, supplied 9% of imports); Italy (took 15% of exports, supplied 4% of imports); U.S. (took 7% of exports, supplied 20% of imports).

Transportation: Roads (1962), 500 miles (surfaced); motor vehicles (1963), 63,541 (automobiles, 45,167); merchant vessels (1964), 7 (74,000 gross registered tons); civil airline, Kuwait Airways Corps.; principal airport, Kuwait City.

Communications: Telephones (1964): 18,400; television stations (1964), 3; television sets (1964), 60,000; radios (1962), 90,000; newspapers (1960), 1 (daily circulation, 1,000).

On November 30 the new amir appointed Sheikh Jaber al-Ahmad al-Jaber, formerly the minister of finance and commerce, as prime minister. The prime minister, from the al-Jaber branch of the ruling family, is a leading contender for the throne, since members of the two branches have traditionally alternated as ruler.

Foreign Affairs. Both the Kuwait Fund for Arab Economic Development and the Kuwait government made loans and grants during 1965 to Morocco, Sudan, the United Arab Republic, Jordan, and Algeria. Several members of the National Assembly had protested granting funds directly from the government reserve to other Arab states.

Gifts by the Kuwait government in 1965 included a pledge of \$500,000 to a special fund to help cover the United Nations operating deficit, a \$50,000 grant to Columbia University in New York City for Middle Eastern studies, and \$50,000 to the Kennedy Memorial Library to be built in Cambridge, Mass.

Economy. Continued increases in oil production during 1965, ensuring an increase of royalties to the state, raised Kuwait's per capita income to \$3,257—the highest in the world.

The government granted a concession of a 49% interest in 3,600 square miles of onshore and offshore oil deposits to Hispanoil, a consortium of Spanish and other oil-refining companies. The territory had been given up by the Kuwait Oil Company in 1962.

In order to diversify its economy, Kuwait began in 1965 to build a \$35 million petrochemical fertilizer plant in Shuaibeh, 20 miles south of Kuwait City. In addition, construction was started on the third of five proposed seawater distillation plants.

KUWAIT

Sheikh Sabah al-Salem al-Sabah was sworn in as the new amir of Kuwait on Nov. 27, 1965, at a special session of the National Assembly. The new amir succeeded his elder brother, Sheikh Abdullah al-Salem al-Sabah, who had died on November 24.

DOCK WORKERS PICKET a pier in New Orleans during strike in which 60,000 members of the International Longshoremen's Association tied up shipping in Atlantic and Gulf Coast ports early in 1965. Longshoremen returned to their jobs in New Orleans in March (and in New York in February) under a 4-year contract.

UPI

LABOR

Continued economic expansion brought employment to an all-time high in 1965. The unemployment rate declined and labor shortages appeared, particularly in the skilled trades. Meanwhile, federal programs sought to develop industry in depressed areas and to provide training in marketable skills. President Johnson's legislative program continued to encourage economic growth to provide employment for the burgeoning labor force. It also sought to furnish education for unskilled workers and re-training for displaced workers.

EQUAL EMPLOYMENT OPPORTUNITY

Franklin D. Roosevelt, Jr., was named to head the five-man Equal Employment Opportunity Commission established under Title VII of the Civil Rights Act of 1964. Title VII's equal-opportunity provisions became applicable on July 1 for employers and unions with 100 or more workers or members, and for most employment agencies.

In an early ruling on job discrimination based on sex, the commission gave tentative qualified approval to continuing the practice of running "help wanted" ads under "male" or "female" headings, even if jobs can be filled by members of either sex, provided certain qualifications are stated.

COLLECTIVE BARGAINING

Job security continued to be a major focus of collective bargaining in 1965, and many unions demanded protection against the threat of replacement of workers by automated machines. Major agreements negotiated during the first nine months of the year resulted in a median increase in wage rates of 11 cents, or 4.2% (excluding fringe benefits).

Employers and unions in the construction industry revised procedures under the industry's voluntary National Joint Board for Settlement of Jurisdictional Disputes. The revisions established an appeals board and provided greater flexibility in applying criteria for decisions.

Metalworking. Bargaining in the metalworking industry centered on two aspects: attainment of "total job security," as called for at the Steelworkers 1964 convention, and the adherence of settlement terms

to the government's wage-price guidelines. A steel-price study by the Council of Economic Advisers, released in May, stated that steel productivity had increased about 3% annually in recent years. This finding was disputed by the industry, which asserted that the rise was only 2%.

A Steelworkers' agreement with a relatively small producer, Alan Wood Steel Co., guaranteed a 38-hour workweek and, in the case of workers with two or more years' service, earnings at least equal to 95% of average straight-time earnings in the last quarter of the preceding year. A 3-year contract with the Aluminum Company of America, providing a wage and fringe-benefit package valued at 50.1 cents an hour, gave full pensions after 30 years' service.

Negotiations in steel were complicated by the hotly contested election for the presidency of the union. On April 28 the negotiators agreed to a 4-month contract extension, with 11.5 cents per hour to be placed in escrow by each company. Two days later it was announced that I.W. Abel had been elected as the new union president, succeeding David J. McDonald. Abel took office on June 1, but at the end of the contract extension, negotiations remained deadlocked. Mediation efforts proved fruitless, and negotiations were moved to Washington. On August 30, an additional 8-day extension was obtained.

Under constant prodding by President Johnson, the negotiators came to an agreement six days later. The contract provided for an immediate pay increase ranging from 10 to 19 cents an hour, depending on job classification, and additional increases of 6 to 12 cents as of Aug. 1, 1967. The agreement spelled out improvements in vacations, medical benefits, life insurance coverage, and relocation pay, as well as changes in pension benefits. The Human Relations Committee, regarded by many as a key factor in labor stability in the industry, was discontinued.

Railroads. On February 7, most American railroads reached agreement with five nonoperating unions—Railroad Telegraphers, Railway Clerks, Maintenance of Way Employees, Railroad Signalmen, and Hotel and Restaurant Employees—on assuring permanent employment. A large majority of the

290,000 nonoperating employees with a stated degree of seniority will be employed permanently unless business declines more than 5%. Reductions are to be by attrition, and are not to exceed 6% a year. Five days earlier, wage increases spread over three years and improvements in vacation benefits were obtained by the Train Dispatchers, Yardmasters, and the three shopcraft unions (Machinists, Electrical Workers, and Sheet Metal Workers).

The national joint board set up by congressional order to arbitrate the railroad firemen's dispute in late 1963 was reactivated in an effort to prevent revival of the job dispute in 1966, when the arbitration law enacted in 1963 expires.

Taxicabs. Chicago and New York saw heated campaigns between Teamster locals and affiliates of the American Federation of Labor-Congress of In-

dustrial Organizations (AFL-CIO) for the right to represent taxicab drivers. In Chicago, Seafarers Local 777 retained bargaining rights for 6,000 drivers, and after a 22-day strike reached agreement with the Yellow and Checker companies on contracts providing increased commissions, reduction in work-weeks, and improved pension and welfare benefits. In New York, bargaining rights were won by an organizing committee sponsored by the New York Central Labor Council, after a 7-day strike against taxicab companies that was marred by violence.

Aerospace. The Lockheed, Douglas, and Aerojet General aerospace manufacturing firms concluded agreements with the Machinists and Auto Workers in July and early August, covering about 75,000 workers. The Machinists' settlement with Aerojet

UNEMPLOYMENT RATE

Millions

NONFARM PAYROLL EMPLOYMENT

General in Azusa, Calif., ended a 36-day strike. Each contract provided for an 8-cent-an-hour increase in each of the three years of the agreement, improved fringe benefits, and pensions about double the present rate. Income security plans differed among the companies and between the unions. Douglas became one of the first firms to supplement benefits available under Medicare.

Wage increases of 3 cents an hour in each of the three years of the contract were provided in a pact between the Machinists Union and the Boeing Company of Seattle, after a 19-day strike in which 35,000 workers were idle across the nation. The performance analysis system, a major bone of contention affecting work standards, was frozen to retain existing terms for six months so that a substitute plan could be worked out. The Boeing settlement was followed by a peaceful agreement between North American Aviation, Inc., and the United Auto Workers. The settlements, valued at about 50 cents an hour over three years, were expected to set a pattern in the aerospace industry.

Public Employees. In 1965, local government employees showed themselves increasingly willing to strike or take part in boycotts to obtain higher pay and better working conditions. In New York City, welfare workers, after a month-long strike, agreed to submit all issues to a fact-finding panel. Terms recommended by the panel and accepted by Mayor Robert F. Wagner provided salary increases, a limit on caseloads, new procedures for bargaining, and freedom for employees to choose health plans.

Longshoremen. Early in January, after New York longshoremen rejected a 4-year agreement reached in mid-December 1964 by the union and the New York Shipping Association, 60,000 Atlantic and Gulf Coast longshoremen went on strike. Two weeks later, after a determined effort by leaders of the International Longshoremen's Association (ILA) to explain the contract terms to the rank-and-file membership, New York longshoremen accepted the contract, but failure to agree on contracts in other ports held up a return to work. In mid-February the longshoremen broke their long tradition of not resuming work in any port until settlements had been reached at all ports, and agreed to return to work where contracts had been signed.

The 15,000 longshoremen who had remained on strike began returning to work on March 6, after ratification of a 4-year South Atlantic contract which provided a package settlement about equal to that reached in North Atlantic ports. For the first time

the contract set the minimum number of men for a work gang, but it did not include the guarantee of annual hours of work that had been obtained in New York.

In another attempt to promote stability in the work force, a contract signed with the Pacific Maritime Association provided that fully employed longshoremen and warehousemen must give up other paid employment or lose certification for dock work.

On October 1, as the contract between the ILA and the New York Shipping Association went into its second year, wage-fringe payments increased 38 cent per hour, and new guidelines on working procedures were issued by the Human Relations Committee established by the contract. Longshoremen in the New York port who do not report for work as ordered are now subject to penalties ranging from a written warning to discharge.

On the west coast, where new longshoremen quotas are established by joint union-management agreement, more than 9,000 men applied for 500 new jobs created in San Francisco by the war in Vietnam. The 500 men selected will supplement the regular force of 4,000 longshoremen, who have been working up to 50 hours a week. The job increase was the first in two years. Similar manpower increases are expected in other Pacific coast ports.

Maritime. Negotiations in the maritime industry were made more difficult by disagreement not only between employers and unions, but within these groups, and by the decrease of job opportunities in a declining industry. By midsummer the bargaining situation was in near chaos, with some contracts extended, some new agreements signed, and some strikes begun.

The manning of automated ships was a major issue. U.S. Maritime Administrator Nicholas B. Johnson stated that the government would pay labor subsidies on automated ships for a 32-man crew only, compared with subsidies for a 47-man crew on conventional ships.

The subsidy question was aggravated by a decision (July 13) of the Maritime Subsidy Board that disallowed reimbursement for certain wage and benefit increases negotiated in three earlier collective bargaining agreements. On July 23, Secretary of Commerce John T. Connor reversed the board's decision and established a new Maritime Wage Review Panel to study bargaining agreements and make recommendations to the board on subsidy reimbursements.

Concentrated government interest and assistance helped bring an end to summer-long strikes against the American Merchant Marine Institute (AMMI) by the Marine Engineers Beneficial Association, the American Radio Association, and the International Organization of Masters, Mates, and Pilots. Similar 4-year contracts provided for an increase of 3.2% in wages and fringe benefits, elimination of contract inequalities among seagoing unions, and improved job security. Later settlements by smaller unions with the AMMI and the Pacific Maritime Association followed the same pattern.

Settling the crucial issue of manning automated ships was left to Secretary of Labor W. Willard Wirtz and AFL-CIO President George Meany. Interim manning disputes were assigned to a panel consisting of James J. Reynolds, assistant secretary of labor; Theodore W. Kheel, New York lawyer and labor-management arbitrator; and Lane Kirkland, assistant to President Meany. In late October the panel achieved agreement between the United States Lines Company and the Marine Engineers on a manning dispute which had delayed loading of the new \$10.5 million freighter *American Resolution*.

In September the Seafarers International Union (SIU) agreed to a 3-year contract on the Atlantic and Gulf coasts with passenger, dry cargo, and tanker ship operators—primarily the unsubsidized segment of the maritime industry. The contract provided a wage increase that gave SIU members parity with National Maritime Union members.

Newspapers. Attempts to slow the advance of automation or to cushion its effects by giving job security to union members created turmoil in the newspaper industry in 1965. No real solution was in sight by the end of the year.

In Baltimore, American Newspaper Guild members returned to work on June 4 after a 47-day strike, leaving wages and union security issues to be settled by an arbitration panel. The New York *Post* obtained agreement from Bertram A. Powers of the International Typographical Union for a trial run on the use of a computer to set type. The experiment was abandoned after nine days.

The Newspaper Guild's 2,200 members at the New York *Times* went on strike on September 26, and six other members of the New York Publishers Association ceased publishing their dailies. Altogether 17,000 workers were idled. The New York *Herald Tribune* resigned from the association on September 25 and resumed publication two days later. The issues in the strike were not the usual

monetary questions, since both parties had accepted a \$12 package increase negotiated by the typographers in early April. Instead, the Guild sought protection for future employees, as well as present members, against loss of jobs due to automation. The Guild also wanted veto power over the installation of new equipment or processes, and sought to have included in its bargaining unit some 200 additional workers, including columnists, editors, and some reporters and photographers.

On October 10, members of the Guild approved a settlement on terms proposed by Theodore W. Kheel, special mediator for Mayor Wagner. The *Times* agreed to change from a company-administered pension plan to one jointly administered by the company and the Guild. The Guild won a partial union shop, with editorial employees exempted from the requirement to join. The paper agreed to give six months' notice before introducing automation equipment, to guarantee jobs of full-time employees, and to give lesser guarantees to part-time workers. The settlement included new safeguards for Guild job rights, but denied the union any veto power over automation in areas of possibly overlapping union jurisdiction. The round of bargaining ended with widespread recognition that major problems were still unsolved.

WORK STOPPAGES

During the first 10 months of 1965, work stoppages totaled approximately 20.6 million man-days, compared with 20.1 million man-days during the corresponding period in 1964. In both years, strike idleness during the first 10 months amounted to 0.19% of estimated working time. The issues of job protection against the effects of automation resulted in a variety of strikes, including those by maritime and dock workers and newspaper workers in Baltimore and New York.

Work stoppages preceded contract settlements in many industries. The stoppages included a 20-day walkout by 17,000 American Motors employees in Milwaukee and Kenosha, Wis.; a 24-day strike that halted work on nine submarines at the General Dynamics Corporation in Groton, Conn.; and a 20-day wildcat strike that affected 11,000 members of the United Mine Workers in West Virginia, Pennsylvania, and Ohio.

TRADE UNION DEVELOPMENTS

In 1965, AFL-CIO membership rose to 13.1 million workers, an increase of nearly 250,000 in a year.

I.W. ABEL takes oath as head of the United Steelworkers on July 1, 1965. Outgoing USW President David J. McDonald (l.) and AFL-CIO President George Meany watch.

Officials. Two leading trade unionists were replaced as presidents of their organizations. David J. McDonald was succeeded by I.W. Abel as president of the United Steelworkers, and James B. Carey, who had claimed re-election as president of the International Union of Electrical Workers, was succeeded by Paul Jennings after a Department of Labor examination of the ballots cast in the union election showed irregularities. Several elder statesmen of the labor movement retired from office, either voluntarily or because of age-limit requirements. Invariably, however, their successors were long-time members of the union hierarchy, and the changes in personnel did not appear to represent any change in union goals.

As the year ended, lawyers for James R. Hoffa, president of the Teamsters Union, prepared a final appeal from Hoffa's criminal conviction on a charge of jury tampering. An 8-year prison sentence for Hoffa was stayed pending outcome of the appeal.

Pensions. The United Mine Workers Welfare and Pension Fund increased pensions to \$100 a month for 69,000 retired soft-coal miners. The increased income of members of the International Ladies Garment Workers Union (ILGWU) and cost savings (made possible by the merger of 41 separate funds in 1964) enabled trustees of the ILGWU master retirement fund to increase potential pensions for most of the union's 440,000 members by 20%.

Retirements increased in the automobile industry under the liberalized pension plan which became effective September 1. Most of the increase resulted from the early retirement clause allowing full pensions for workers retiring as early as age 62.

Organizational Changes. Labor continued to merge organizations having related constituencies, and some unions changed their names to reflect their membership more accurately. The Hosiery Workers Union was dissolved on April 5, and its members were absorbed into the Textile Workers of America. New York City Lithographers Local 1, which had withdrawn from the merged Lithographers and Photoengravers Union, affiliated with the International Typographers Union. Discussions continued on mergers of the Seafarers Union with the National Maritime Union, the Boot and Shoe Workers Union with the United Shoe Workers, and the Lithographers and Photoengravers Union with the Printing Pressmen.

District 50 of the United Mine Workers, a catch-all unit with workers in industries other than mining, changed its name to International Union of District 50. The International Hod Carriers, Building and Common Laborers Union became the Laborers International Union of North America. To show broadened areas of interest, the Order of Railroad Telegraphers changed its name to the Transportation-Communication Employees Union; and the Office

Employees Union, to the Office and Professional Employees International Union.

The Association of Western Pulp and Paper Workers (independent), representing 21,000 west coast workers drawn from two AFL-CIO affiliates (the Pulp and Sulphite Workers Union and the Papermakers and Paperworkers Union), adopted a constitution and continued its organizational work.

LABOR AND THE LAW

In 1965 the U.S. Supreme Court held the Landrum-Griffin Act's ban on Communists in union office (*U.S. v. Brown*) to be unconstitutional. In another decision, the Supreme Court held that an employer has an absolute right to go out of business for any reason, but that partial termination designed to "chill" labor organization at remaining plants is an unfair labor practice (*Textile Workers Union of America v. Darlington Mfg. Co.*). (See also LAW.)

Federal Legislation. Organized labor took satisfaction from the passage of Medicare, education, and housing bills that they strongly supported. However, none of labor's three major legislative objectives even came to a vote: raising the minimum wage and expanding coverage under the Fair Labor Standards Act; improving unemployment insurance laws; and repealing the so-called right-to-work clause in Section 14(b) of the Taft-Hartley Act. Late in the congressional session, when a cloture vote to cut off Senate debate on the repeal of Section 14(b) failed to win even a simple majority, the issue was shelved until 1966. A review of the entire Taft-Hartley Act is expected in 1966.

Bonding requirements for union officers and employees under the Landrum-Griffin Act were eased, thus saving the unions some 25% in bonding fees. Congress gave 1.7 million federal classified and postal workers a 3.6% increase across the board.

In October, President Johnson set up an automotive agreement adjustment-assistance board to provide aid for workers who may suffer dislocation as a result of legislation permitting arrangements for free trade in automobiles and parts between the United States and Canada.

State Legislation. In an exceptionally active year, legislatures of 47 states and Puerto Rico enacted more than 700 laws affecting labor. Several states set standards for migrant workers' housing, transportation, and field sanitation, and a number removed the agricultural exemption from already existing labor laws. Delaware, Indiana, and Maryland adopted minimum-wage laws, bringing to 39 the number of states having such laws. Laws prohibiting racial or religious discrimination in employment practices were enacted in nine additional states (for a total of 34), and the District of Columbia adopted a similar anti-bias ordinance. Idaho, Indiana, Maine, Michigan, and North Dakota were added to the 18 states already prohibiting job discrimination because of age. Eight states and the District of Columbia joined Hawaii and Wisconsin in prohibiting discrimination because of sex.

Safety. Iowa created a new Employment Safety Commission with authority for making general safety rules. New Jersey broadened the powers of its Department of Labor and Industry and extended coverage to all places of employment. Maine authorized the correction of all hazards—instead of only specific ones—in industrial plants. Eleven states added a requirement that pupils and teachers in certain vocational education courses wear eye-protective devices.

Labor-Management Relations. Indiana's repeal of its right-to-work law leaves 19 states with such laws of general application. (In a 20th state, Louisiana, the law is applicable only to certain agricultural workers). Bargaining rights were granted to all public employees in Michigan and Delaware, to firemen in Maine and Wyoming, to firemen and policemen in Rhode Island, and to teachers in Connecticut. Michigan made the Labor Mediation Board responsible for the administration of labor relations—a function formerly left to the courts. West Virginia gave statutory authority to the state commissioner of labor to investigate and mediate labor disputes. Hawaii and Washington prohibited the use of lie detector tests as a condition of employment. Iowa and Maine prohibited the use of professional strikebreakers, and Michigan extended its prohibition to cover the importation of any strikebreakers.

NATIONAL LABOR RELATIONS BOARD

Separate units of selling, nonselling, restaurant, and clerical employees were permitted by the National Labor Relations Board (NLRB) in three cases (Allied Stores of New York, Lord & Taylor, and Arnold Constable) on unit-determination policy in retail department stores. Unions usually have found the sales force of a department store difficult to organize because it is made up largely of women working part-time on a temporary basis. The new ruling is expected to encourage unions to concentrate their efforts on nonselling groups, composed largely of men working full time.

Unions now have the same right as employers to withdraw from a multiemployer bargaining unit. Under NLRB policy, an employer can withdraw from such a unit at will, provided only that the withdrawal request is timely and unequivocal. In two cases involving Detroit newspapers, the NLRB said it could see no reason for adopting more restrictive rules to govern a union's withdrawal.

Sam Zagoria, a former officer of the American Newspaper Guild, was named to the NLRB, and Frank W. McCulloch was reappointed as board chairman.

EMPLOYMENT AND UNEMPLOYMENT

The civilian labor force totaled almost 76 million in October 1965, an increase of 1.6 million over the same month in 1964. About one third of the expansion occurred among teen-agers, although teen-age workers account for less than 10% of the labor force. Total employment increased by 2.1 million to an all-time high of 73.2 million. Again, much of the gain was among teen-agers, allaying fears of mass unemployment among this group.

In 1965 total unemployment fell while total employment increased, moving the unemployment rate down to 4.3% in October—the lowest level since August of 1957. The greatest improvements in jobless rates were among teen-agers, young men from 20 to 24 years old, and adult women. Long-term unemployment dropped to less than 1% of the labor force. The unemployment rates for nonwhites remained substantially higher than for white workers.

LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

	October 1965 (est.)	October 1964 (est.)
Total labor force.....	76,713,000	77,112,000
Civilian labor force.....	73,953,000	74,375,000
Employed.....	73,196,000	71,123,000
Agricultural.....	4,954,000	5,126,000
Nonagricultural.....	68,242,000	65,997,000
Unemployed.....	2,757,000	3,252,000

WAGES AND HOURS

The factory workweek averaged 41.2 hours in October 1965—the highest October level since 1952—and overtime hours, 3.9. Workers in manufacturing received average weekly wages of \$108.75 in that month. Average hourly earnings were a record \$2.64.

Violations of the federal wage and hour law rose 23% over the previous year, as measured by the amount of money found to be owing to workers under the Fair Labor Standards Act (FLSA). About \$74 million was owed for the fiscal year 1965, including \$156,202 in a new category—underpaid wages due women by virtue of the equal pay amendment of the act.

LAOS

The escalating war in adjacent Vietnam, which might have been expected to increase political and military difficulties for Laos in 1965, failed to do so. Indeed, the anti-Communist government of the landlocked former French colony strengthened itself. In contrast to previous years, the insurgent Communist Pathet Lao did not significantly enlarge the amount of territory it controlled.

Military Lull. Although the number of Communist North Vietnamese troops in Laos increased in the early part of the year, the existing balance of power between the rival factions in the country was not altered. Pathet Lao troops numbered approximately 20,000, and the Vietnamese units probably increased the total insurgent force to about 27,000. In addi-

tion, upwards of 1,500 Communist Chinese troops were situated in the northwest where Laos and China share a common frontier, presumably as a protecting force for Chinese road-building crews in Pathet Lao-held territory. Loyalist forces totaled about twice the combined number of Pathet Lao, Vietnamese, and Chinese forces.

It was not the superior numbers of the government forces that checked the Communists, however. The Pathet Lao did not embark on a major offensive in April, the last month of the dry season, as it has always done, largely because of the impact of the war in Vietnam. There were skirmishes and artillery exchanges between the two sides, particularly in the area around Thakhek in the Mekong River valley late in the year, but the military action was less than that in previous years.

The Royal Laotian Air Force distinguished itself by effectively attacking Communist-held areas. But much more important was the bombing of road links to Pathet Lao supply bases in North Vietnam by American jet aircraft based outside Laos. These attacks preceded the start of U.S. bombing raids on supply and infiltration routes from North to South Vietnam through Laos—the so-called Ho Chi Minh trail—in late 1965. North Vietnam was increasingly limited in its ability to support Pathet Lao operations against the Laotian government as a result of American air attacks against North Vietnamese territory.

Internal Politics. The strengthening of the Laotian government resulted partly from a showdown early in the year between the ambitious right-wing Gen. Phoumi Nosavan and military forces loyal to Premier Prince Souvanna Phouma. On the night of January 31 an unsuccessful coup d'état was staged by Phoumi Nosavan and Gen. Siho Lamphouthacoul, the young police commander who had been coleader of an abortive coup in 1964. There was sporadic fighting in Vientiane for a few days, but loyal gov-

ernment forces gained control by February 4, and the two conspirators took political refuge in Thailand.

The main effect of General Phoumi's failure and flight was to end his efforts to take over the anti-Communist political leadership, thereby strengthening the government of Souvanna Phouma. In addition, the personal paramilitary organization maintained by Siho was brought under the control of the Interior Ministry, with some units being assigned to the army.

In March, troops loyal to Phoumi seized control of Thakhek, but the rebellion was quickly quashed by government forces. A similar revolt at Pakasane in late April also was quelled.

Elections. The Laotian government felt secure enough to hold partial elections in July. It declared that the tripartite regime involving neutralist, right-wing, and Communist participation—but from which the Communists had long since withdrawn—had ended with the expiration of the mandate of the sitting National Assembly on April 24. (The coalition government was a result of agreement among the leaders of the rival Laotian factions in 1962, when the Geneva accords neutralizing the country were signed.)

A select electorate of about 20,000 persons, mainly civil servants, military and police officers, central government and local officials, and merchants, participated in the July 18 balloting. The 59-member legislature subsequently endorsed continuation of the leadership of Premier Souvanna Phouma. The Communist Pathet Lao boycotted the election and refused to participate in the government.

Economy. With the lull in the fighting and the strengthening of government prestige, the weak Laotian economy showed some signs of improvement. The currency was stabilized, and corruption reportedly was curtailed. Sisouk Na Champassak, who had succeeded General Phoumi as finance minister, and who was an able and dynamic leader of the reformist youth movement, worked effectively to uplift the economy. Sisouk's party showed strength in the July election, thereby bringing its leader to the forefront of Laotian politics.

Nevertheless, the government remained almost totally dependent on foreign aid, with American funds making up the annual deficit in the Laotian budget. United States aid in 1965 amounted to some \$50 million, excluding the military equipment that outfits all the armed forces.

Diplomacy. Premier Souvanna Phouma took the initiative on the international diplomatic scene during the year. He visited Britain, France, and India in midyear. In particular he sought British support for the reconvening of the 1954 Geneva Conference for all of onetime French Indochina (Vietnam and Cambodia as well as Laos). However, the Soviet Union, cochairman (with Britain) of that conference, was opposed to such a move.

Prince Souvanna Phouma vigorously, but futilely, sought a cease-fire and peace talks with his half-brother, Communist leader Prince Souphanouvong. Despite his inability to obtain a conciliatory response from Souphanouvong, Souvanna Phouma tried to preserve Laos' precariously maintained neutrality. In December he took a strong stand against the introduction of American ground forces in Laos to halt the supply of men and materials from North to South Vietnam over the Ho Chi Minh trail.

LATIN
AMERICA

YANKEES

GO HOME

TROUBLE IN LATIN AMERICA in 1965 centered in the Dominican Republic. After civil war broke out in April, the United States sent in troops to protect American lives and help restore order. Following the intervention, anti-American sentiment ran high, as reflected in this sign facing a U.S. soldier on patrol duty in the streets of Santo Domingo.

LATIN AMERICA

Inter-American political and economic cooperation was hampered in 1965 by U.S. military intervention in the revolution in the Dominican Republic. The intervention strengthened anti-Yankee movements and unsettled military and civilian regimes throughout Latin America. The decision of the Organization of American States (OAS) to assume collective responsibility for the action relieved the U.S. government of sole responsibility for the intervention, but the decision did little to relieve the fear among some Latin Americans that the OAS was acting as a shield for the implementation of United States policies in the Western Hemisphere.

DOMINICAN REVOLUTION

The revolt of April 24, which ended the regime of Donald Reid Cabral, was the eighth political change in the Dominican Republic since the assassination of dictator Rafael Trujillo in 1961. At first it seemed likely that a liberal military faction would restore the former president, Juan Bosch, to power. But Brig. Gen. Elías Wessín y Wessín, who had ousted and exiled Bosch in 1963 for having tolerated Communists, strongly opposed Bosch's return. Wessín felt that Communists had prompted the distribution of arms to civilians on April 26, 1965, and he so reported to U.S. Ambassador W. Tapley Bennett and to U.S. military and intelligence agents. Bennett soon indicated that he was officially neutral but that he personally favored Wessín. When rebel leaders appealed to him to help bring a halt to air raids ordered by Wessín against rebel-held areas of Santo Domingo, the ambassador instead suggested that the rebels surrender.

U.S. Intervention. The United States landed

Marines in Santo Domingo on April 28 and declared the step was necessary to save American lives. About 3,000 U.S. citizens in the city were said to have been threatened by the conflict. On May 1, President Johnson's personal representative, John Barlow Martin, confirmed earlier reports that the rebel side was Communist dominated. Within a few days there were more than 21,000 U.S. troops in the country.

During the first phase of U.S. involvement (April 24 to mid-May), Washington policy makers were strongly influenced by the overstated estimates of Communist strength made by General Wessín. A State Department white paper of May 6 identified 58 Dominican leftists (4 of them listed twice), who, it was claimed, had seized control of the revolt. The document was criticized by some observers as being skimpy and misleading. A second report, revealed on June 15, listed the activities of 77 Dominican Communists between April 24 and May 5, and asserted that two of the three Dominican Communist parties were being helped by Cuba.

President Johnson declared on May 2 that "the American nations cannot, must not, and will not permit the establishment of another Communist government in the Western Hemisphere." This "Johnson Doctrine" revived memories of the unilateral enforcement of the Monroe Doctrine under the long-since discarded Roosevelt Corollary (1904).

The organization of a broadly based non-Communist Dominican regime was the next U.S. task. Dominican Brig. Gen. Antonio Imbert Barreras was selected to lead this civilian-military junta, which was formed on May 7. Imbert expelled eight high-ranking ultraconservative military officers but failed to secure the resignation of General Wessín.

It became increasingly clear that the United States

UPI

was unable to control the junta it had helped establish. In mid-May, Imbert ordered his 2,000 troops to attack the rebel stronghold north of the security corridor that had been cut through rebel-held territory by U.S. Marines on May 3. Imbert's action was not endorsed by key U.S. officials, and American armed forces were instructed to remain neutral. U.S. Marine commanders, harassed by rebel snipers, nonetheless assisted Imbert forces in driving the rebels from the area.

It also became apparent that the Imbert junta was not broadly representative. Its chief domestic support came from the traditional ruling class—military officers, landowners, big businessmen, and bankers. U.S. Senator J. W. Fulbright, who strongly opposed U.S. intervention, characterized the Imbert junta as being a corrupt and reactionary military oligarchy. The rebels, on the other hand, had attracted the sympathy of the younger Dominican military officers, professional groups, an aroused working class, and a growing number of peasants.

During the four-month civil war (April 24–August 31) the United States spent \$67 million to ease the ravages of the conflict. It paid the salaries of Dominican civil service employees and of military personnel on the junta side (the rebels had rejected an offer of U.S. funds to pay the salaries of their own personnel). The United States distributed 400 tons of food daily, and the U.S. Agency for International Development employed 1,000 Dominicans.

U.S. Role in the Peace Settlement. Although the OAS and the United Nations also were involved in the Dominican crisis, the United States shouldered the major responsibility for reconciling the warring factions. By mid-May the United States had reappraised the strength of Communist conspirators, and a search commenced for a compromise leader who could head an interim regime that would be more broadly representative than the Imbert junta. Both the Central Intelligence Agency (CIA) and the Federal Bureau of Investigation were called upon to screen candidates. One of them, Antonio Guzmán, a large landowner who had served both the Bosch and Reid administrations, was secretly flown to Washington and was found to be acceptable as a compromise leader. A four-man mediation team, headed by President Johnson's special assistant for security affairs, McGeorge Bundy, was successful in getting both Bosch and rebel leader Col. Francisco Caamaño Deñó to support Guzmán. But General Imbert refused to relinquish power to a compromise leader. He was finally persuaded to resign (August 30) when he was warned by Commodore Francisco Rivera Caminero of the Dominican Navy to agree or be forced out of power.

Provisional Government. The Reconciliation Act of August 31 terminated one phase of the Dominican revolution, which had cost 3,000 lives (including those of 31 U.S. servicemen). A provisional regime under Héctor García-Godoy, former foreign minister in the Bosch cabinet, took office on September 3. It was entrusted with the responsibility for maintaining the tenuous truce between the warring parties and for preparing the country for elections in May 1966.

The United States accorded the new government prompt economic and military assistance. A \$20 million U.S. grant to the country was announced September 4. To reinforce a decree which abolished the autonomy of General Wessin's elite force of 1,600 troops, U.S. military and CIA agents per-

sued the general to board an American plane on September 9 for exile in Miami.

OAS Role. As early as April 27 the United States had convened a meeting of the OAS Peace Committee, but this body declared that it was not authorized to deal with the domestic disputes of its members. The United States then notified the Latin American ambassadors in Washington of its intention to intervene. On May 1 the OAS Council established a five-nation investigation committee and directed it to proceed to the Dominican Republic.

The United States convened an emergency meeting of the OAS Council on May 3, and proposed that an Inter-American Peace Force be established. On May 6 the OAS foreign ministers approved the formation of the peace force by the required minimum majority of 14-5 (Chile, Mexico, Ecuador, Peru, and Uruguay voted against, and Venezuela abstained). The legality of the action was questioned, because Article 15 of the OAS Charter prohibits collective intervention in the domestic affairs of member nations. Although the 1962 Punta del Este resolution called for collective action against Communist intervention, it was alleged that no Communist conspiracy had been proved in this case.

The Inter-American Peace Force was slow in being organized. Optimistic estimates that more than half of the Latin American countries would supply troops were unfulfilled. With the exception of democratic Costa Rica, which sent 21 policemen, countries dominated by military regimes made up the contributors. (Brazil supplied 1,200 of the 1,800 Latin-American soldiers; all but 21 of the rest came from Honduras, Nicaragua, and Paraguay. The Inter-American Peace Force was formally constituted on May 23 under the command of a Brazilian general, Hugo Penasco Alvim.

The OAS Human Rights Commission began an investigation in the Dominican Republic on June 1. It looked into charges of mistreatment of prisoners by both sides and tried to trace a growing number of persons who were reported missing. On June 27 the commission criticized the Imbert junta for refusing to cooperate with an investigation of reported maltreatment of civilian prisoners.

The several OAS political mediator groups met with varying success. The first, a five-member peace-keeping commission, resigned, claiming that the four-man Bundy commission from the United States had usurped its role. On May 20 the OAS selected its secretary general, José Antonio Mora, to replace the committee and to negotiate a cease fire. Within ten days Mora was denounced by junta and rebels alike.

A three-member Inter-American Peace Committee (United States, Brazil, El Salvador) arrived in the

SANTO DOMINGO: Dominican loyalist soldiers man a position on the outskirts of the city as they patrol for rebel soldiers during civil war in Dominican Republic.

RIO DE JANEIRO: Brazilian students march through downtown streets October 27 protesting President Branco's rule. Sign reads: "Students and workmen against dictatorship."

BUENOS AIRES: Argentine police use tear gas against Peronist and Communist demonstrators protesting government threat to control labor unions.

Dominican Republic on June 3. Headed by Ellsworth Bunker, U.S. ambassador to the OAS, the committee was charged with preparing an acceptable peace proposal. The Reconciliation Act of August 31 was the product of the committee's negotiation.

The interim regime of President García-Godoy was helped by OAS agencies. OAS economic advisers and the Human Rights Commission were sent to the country and an electoral commission was formed to supervise the 1966 elections. In the meantime, because García-Godoy was losing the confidence of Dominican military leaders, Ambassador Bunker tried to restore harmony. To forestall a revolutionary plot by rightist military chiefs, he arranged for the occupation of downtown Santo Domingo by the Inter-American Peace Force on October 25.

UN Role. The UN provided a forum for discussion of the situation in the Dominican Republic. From the outset, the role of the United States and the OAS was questioned by some members. On May 3, the Uruguayan delegate to the UN Security Council assailed the so-called Johnson Doctrine as a return to gunboat diplomacy and attacked OAS collective action. Secretary General U Thant declared that the inter-American force violated Article 53 of the UN Charter, which requires Security Council approval of proposed regional enforcement action. The United States withdrew its resolution supporting OAS authority in the Dominican crisis, rather than have it voted down. On May 22 it abstained in an otherwise unanimous vote for a resolution which ignored the OAS and stressed the Security Council's authority in calling for a cease fire.

The UN secretary general's special representative, José Antonio Mayobre of Venezuela, arrived in the Dominican Republic on May 17. Later he was joined by a military observer, Lt. Gen. Indarjit Rikhye of India. In reporting violations of the Dominican cease-fire agreements on July 16 and July 21, and the alleged infringement of human rights in the country, Mayobre severely criticized the Imbert junta forces.

Latin American Reaction. Support in Latin America for the military intervention in the Dominican Republic came from military officers, large landowners, many church leaders, and from the governments of countries dominated by these groups. Cuban Premier Fidel Castro, on the other hand, reflected the mood not only of Communists but also of some labor, professional, and intellectual groups when he referred (May 26) to the operation as an "American Holy Alliance."

Record votes in the Argentine and Chilean chambers of deputies on May 14 and June 11, respectively, condemned the operation. In the Brazilian congress, long since cleansed of subversive elements by the military regime, key leaders viewed the action as tearing up the Charter of the OAS. In his state of the union address on September 1, Mexican President Díaz Ordaz reaffirmed his country's staunch opposition to the entire Dominican venture. The Johnson administration unsuccessfully solicited the support of Teodoro Moscoso, former coordinator of the Alliance for Progress, and of Romulo Betancourt, former president of Venezuela. The former Mexican ambassador of the OAS, Luis Quintanilla, bitterly attacked collective intervention. Student-led mass demonstrations before U.S. diplomatic and business establishments took place in some Latin American capitals.

Washington's policy toward communism in the Western Hemisphere continued to aggravate anti-U.S. sentiments in Latin America. Critics of collective intervention and of U.S. support of unpopular anti-Communist governments questioned whether these policies effectively combat communism.

Intervention in the Dominican Republic had revived the vigor of Communist guerrilla activity in several Latin nations. Although Latin American governments remained fairly stable in 1965, many observers were concerned over the extent to which conservative-military regimes had gained ascendancy in the majority of Latin states.

U.S. Policy. After the Dominican intervention, the image of "Yankee imperialism"—equated with U.S. determination to prevent the spread of communism—was reinforced in July with the exposure and subsequent cancellation by the U.S. government of Project Camelot, which was designed to measure the likelihood of an armed insurgency in a developing country and to work out methods to counter it. The \$6 million project was financed by the U.S. Department of Defense and "other U.S. agencies." Anti-United States sentiments were fanned once again across Latin America by a resolution passed (by a vote of 312-20) in the U.S. House of Representatives on September 20, endorsing unilateral use of force to prevent a Communist take-over anywhere in the Americas. Latin American public opinion was further aroused on October 12 when U.S. Under Secretary of State Thomas C. Mann emphatically reiterated a hard-line policy toward communism in the Americas. He deplored popular front governments, defended U.S. policy in the Dominican Republic, and endorsed collective intervention "to protect weak and fragile states from subversive elements." The question raised by these U.S. policies, Senator Fulbright asserted on September 15, was whether, "by supporting unpopular oligarchies, we drive the rising generation of educated and patriotic young Latin Americans to an embittered and hostile form of communism like that of Fidel Castro."

On the other hand, the United States attempted to remove two sources of Latin resentment. On September 24, the U.S. and Panamanian governments announced they had agreed in principle on a new Panama Canal treaty, subject to ratifications in both countries. The United States would recognize Panamanian sovereignty over the Canal Zone, give Panama a major role in operating the canal, and provide larger revenues to Panama. In an agreement with Mexico, on March 22, the United States said it would construct a 13-mile canal to carry the salt-polluted water of an Arizona drainage project safely below a Mexican irrigation dam on the Colorado River.

Communist Activity. The United States assisted the Latin American governments in combating Communist and left-wing disturbances. In mid-July, the fifth semiannual meeting of Central American and U.S. security officers adopted a joint program to prevent their nationals from traveling to Communist countries for guerrilla training.

Among the Central American governments, the Guatemalan military regime of Col. Enrique Peralta Azurdia was the most harassed by guerrilla activity. The regime was implicated in the assassination on October 31 of the only liberal, civilian candidate for the presidency, thus raising doubts about the freedom of the March 1966 elections. In South Amer-

ica, reform-minded Peruvian President Fernando Belaúnde Terry reluctantly suspended constitutional rights while waging an effective campaign against Castro-inspired guerrillas in the Andean valleys between July and October. Only one important band of 150 Communist-oriented guerrillas remained in Colombia after 17 years of bloodshed, which had cost 200,000 lives. The conservative government of President Guillermo León Valencia, however, used student riots to justify declaring a state of siege on May 21. He then instituted unpopular inflation-curbing reforms, which won the reinstatement of U.S. economic assistance in October after a year's suspension. The oil-rich liberal regime of Venezuelan President Raúl Leoni continued to be a Communist target. On April 10 and November 5, vigilant police arrested incoming Europeans carrying U.S. currency intended to finance Communist terrorism.

Other Countries. Undemocratic regimes successfully manipulated coercive as well as persuasive measures to stay in power, while the more democratic governments frequently used nationalistic appeals to secure political stability. In Brazil, President Gen. Humberto Castelo Branco abandoned the last vestiges of democracy on October 27 by assuming virtually dictatorial powers. The military regimes of Bolivia and Ecuador used armed force to quell civil disturbances. In Honduras, Gen. Osvaldo López Arellano legalized his two-year rule by holding carefully controlled elections and was inaugurated as president on June 6. Chilean president Eduardo Frei Montalva received legislative endorsement (with Communist support) in November to "Chileanize" U.S. copper production. Chile, Mexico, and Argentina thwarted the U.S. economic embargo against Communist China by selling copper and wheat to Peking. In Argentina, the nationalistic Peronista party was successfully reincorporated into the political system after the March 14 elections.

ECONOMIC AND SOCIAL DEVELOPMENT

Latin American exports declined in 1965, but private investment increased and the two Latin American economic associations made progress in providing larger regional markets. Social achievements, meanwhile, were not keeping pace with population growth.

Trade. Increased commodity prices resulting from a prolonged industrial boom in the United States and Europe pushed Latin American exports to a record \$10 billion in 1964 (7.5% above 1963), while imports remained at \$8.5 billion. However, Latin American trade in the last 10 years had dropped from 11% to 6% of the world's total. Because falling commodity prices accompanied the slackening pace of the industrial boom late in 1964, the estimated 1965 Latin trade dropped below the previous year's.

The 25-year low in world sugar prices affected the economies of many Latin American countries. Fourteen of them depended on world market prices for 36% of their combined 1964 sugar exports, which were selling at 1.6 cents per pound in September 1965, as compared with 11 cents per pound a year earlier. The rest of the sugar was being sold in the United States at the support price of 5.6 cents per pound. U.S. legislation in 1965 that eliminated a 1-cent-per-pound sugar import fee will provide an additional \$40 million to the Latin American sugar-exporting countries. Chile's copper exports benefited from rising world prices, which increased from 32.5 to 38 cents per pound between May and October 1965.

Economic Associations. In December 1964 the Latin American Free Trade Association (LAFTA) approved a common list of freely traded products, comprising 25% of total Latin American trade. The cumbersome methods for tariff reductions and the association's limited membership (Mexico and all the South American countries except Bolivia and Venezuela) prompted four Latin experts from the OAS and the UN to recommend LAFTA's replacement by a genuine common market similar to the European Economic Community. The proposal, made on April 12, 1965, proved to be another casualty of the Dominican intervention. But LAFTA was strengthened at its November 1965 meeting by the creation of a high-level advisory committee to hasten economic integration, and by Venezuela's decision to join the association.

Outpacing LAFTA, the Central American Common Market (formed in 1960) had eliminated 95% of internal customs duties and had imposed a common external tariff on 98% of the items on regional customs classification. To equalize and stimulate growth within the market, the capitalization of the Central American Bank for Economic Integration was increased by \$42 million (of which the United States subscribed \$35 million), to a total of \$92 million.

Investment. Total U.S. private investment in Latin America amounted to \$9 billion in 1965, reflecting a 7% increase since 1961. Latin American private investment in the area stood at \$2.4 billion (up 24%). Since 1962, when there was a net drain of U.S. capital from the area, new private investments have increased each year. Several factors accounted for the mounting confidence of private investors: (1) stable regimes prepared to take stern measures against Communist activities; (2) Castro's waning influence; and (3) detailed agreements between the United States and 15 Latin countries, guaranteeing investors against losses from expropriation, currency inconvertibility, war, revolution, or insurrection. The Atlantic Community Development Group for Latin America (ADELA) began operations in 1965 by extending private investments totaling \$21.5 million. ADELA is a joint undertaking of more than 120 companies, and has an authorized capitalization of \$40 million.

The Inter-American Development Bank authorized 69 loans to Latin American countries in 1964 for economic and social development. The loan commitments totaled nearly \$300 million.

Social Development. Favored by sanitation and medical science, the annual Latin American birth rate of 3.5% was expected to increase the total population of 245 million in 1965 to 374 million by 1980. To help meet the danger of overcrowding, unemployment, slums, misery, and violence, the United States has been quietly helping Latin governments, universities, and Roman Catholic groups to undertake population studies, as had been authorized by U.S. foreign aid legislation. The Christian Democratic regime of Chile's President Frei inaugurated the first Latin birth-control program early in 1966. It provides free information and contraceptives to women who request them.

Although 25 million Latin Americans were beneficiaries of the U.S. Food for Peace program, and 14 Latin nations had undertaken land reforms, the per capita diet deficiency (based on a minimum diet established by the UN) increased from 7% in 1961 to 11% in 1965. The Alliance for Progress had constructed 1.5 million new homes in the previous four

years (the U.S. had contributed \$600 million), but Latin America will need \$40 billion for adequate housing in the next five years.

Advances in education and tax collection were more impressive. Since 1961, one million children had been provided with new classrooms, and 10 million textbooks had been made available. Illiteracy had declined from 50% to 43% of the total population. Since 1955 the number of Latin universities had grown from 160 to 196, and student enrollment had increased from 520,000 to 680,000, at an annual rate of 6%. Tax collections were 10% higher in 1964 than in 1961 as the result of reorganized tax structures and collection systems.

By 1965, experience had taught that different emphases were needed for developmental projects. Supplementing low-income housing construction were programs to encourage savings and loans societies (there were 250,000 Latin American depositors in 1965). Teacher training was more needed than new schools. Finally, the importance of rural development had come to be recognized. In addition to land reform, top priority was given to the better use of large acreage, to more extensive use of fertilizers, to new irrigation projects, and to better access to markets. LATIN AMERICAN LITERATURE

A major development of recent years is the emergence of the literary prizes of the Casa de las Américas in Havana; based on the findings of panels of judges who include some of the most distinguished literary figures of the Americas. An increasing international awareness of Latin American literature is reflected in the acknowledged influence on recent French literature of writers such as Alejo Carpentier, Jorge Luis Borges, and Julio Cortázar, as well as the serious consideration given to Borges and Miguel Angel Asturias as candidates for the Nobel Prize.

Fiction. The characteristic cosmopolitanism of the Latin American writer today is seen in the work of the Chilean diplomat Jorge Edwards, who lives in Paris. His novel *El peso de la noche*, published in 1965, portrays the failure and frustration within a wealthy family, in an atmosphere of fatalism and decay. The young Argentine Beatriz Guido, in *El incendio y las vísperas*, pursues her line of investigation of Argentine reality in a contemporary novelistic idiom. Another of the younger generation is the Mexican Vicente Leñero, who published *Estudio Q*. He made his literary appearance abruptly in 1964 with *Los albañiles*, which won the Spanish Biblioteca Breve Prize for 1963. Both novels employ modern techniques to probe the reality of apparently restrictive social groups. The Mexican dramatist Luisa Josefina Hernández added to her increasing reputation as a novelist with *La primera batalla*.

The Casa de las Américas short story prize went to the Argentine Jorge Onetti for *Cualquiercosario*, a humorous, often acid vision of the phenomena of everyday existence. The Mexican writer Carlos Fuentes turned to the short story form in *Cantar de ciegos* (1964), which again demonstrates his technical mastery.

Poetry. In recent years there has appeared a group of young poets who have a highly personal

colloquial idiom and who angrily reject modern pragmatic values. They include the virtually unknown Argentine poet Víctor García Robles, who received the Casa de las Américas award for *Oid mortales*, a torrential, almost chaotic expression of his anger. The vehemence and humor of the work do not hide some rhetorical weaknesses, but marked weaknesses and strengths are typical of the school. García Robles is an important new voice in Latin American literature.

Among established poets, Carlos Pellicer received the Mexican National Literature Prize for 1964 for the body of his work. The Venezuelan Prize for 1963-64 went to José Tadeo Arreaza Calatrava for his collected *Poesías* (1964). He is a late modernist who has written little in recent years.

Antonio de Undurraga of Chile reinterpreted the figure of Christ in his highly personal vision, *Jesús el desconocido*. Miguel Otero Silva of Venezuela fused social analysis and the traditional Hispanic preoccupation with death in *La mar que es el morir*. Carlos Medellín, a Colombian, studied the immediacy of life in the traditionally oriented *El aire y las colinas*.

Mexican poetry was well represented in 1965. *Vendimia del juglar* offers Marco Antonio Montes de Oca's dazzling imagery. *Ocupación de la palabra* is a collective volume by the very young group of poets whose first volume was *La espiga amontonada*. José Emilio Pacheco, himself a brilliant young poet, edited the anthology *Poesía mexicana del siglo XIX*.

Theater. Serious drama flourished in Latin America perhaps as never before, although almost entirely outside the realm of professional theater corresponding to Broadway. Latin American plays are frequently staged in Europe; the Cuban Theater Festival is a major event; and there are annual national festivals in virtually all Latin American nations. Uruguay held its first International Theater Festival in December 1964.

The winner of the Casa de las Américas award was the Cuban José Triana's *La noche de los asesinos*, an imaginative investigation of the nature of violence. The play combines technical experimentation with popular expression. Rodolfo Usigli of Mexico, considered by many to be Latin America's finest dramatist, offered a new play that is one of his best, *Corona de luz*. It completes the trilogy begun in 1944 with *Corona de sombra*.

The revelation of the Argentine season was Roberto Cossa, whose *Nuestro fin de semana* brilliantly peels off the superficial calm of a group of families to reveal their hysteria and frustration. Another Argentine, Osvaldo Dragún, had his *Historias para ser contadas* revived in Argentina with great success. It has also been staged throughout Europe and Latin America.

Nonfiction. Jorge Zalamea, a Colombian, received the essay prize of the Casa de las Américas for *La poesía ignorada y olvidada*, an anthological study of popular and archaic poetry. Three distinguished Colombians, Rafael Maya, Cecilia Hernández de Mendoza, and Andrés Holguín, collaborated on *Unamuno en Colombia*. Maya also published *De perfil y de presente*, essays on Colombian literature that reflect both his skill as a critic and his insights as a poet. Giovanni Previtali's *Ricardo Güiraldes, biografía y crítica* is the most complete study of the author of *Don Segundo Sombra*.

Translations. Important translations include Bernal Díaz del Castillo's '16th century chronicle, *The Discovery and Conquest of Mexico*, tr. by A.P.

Maudsley; Calixto Bustamante Carlos' 18th century *El Lazarillo, a Guide for Inexperienced Travelers Between Buenos Aires and Lima*, tr. by Walter D. Kline; Julio Cortázar's novel, *The Winners*, tr. by Elaine Kerrigan; José Donoso's novel, *Coronation*, tr. by Jocasta Goodwin; Alfonso Reyes' *Mexico in a Nutshell and Other Essays*, tr. by Charles Ramsdell; and *Modern Poetry from Spain and Latin America*, ed. and tr. by N. Braymer and L. Lowenfels.

LAW

This article reviews some of the important decisions handed down by the U.S. Supreme Court during the 1964-65 term in the areas of civil rights, business regulation, public utilities, taxation, criminal law, and labor-management relations.

Racial Discrimination. In *Heart of Atlanta Motel, Inc. v. United States* (379 U.S. 241), the Supreme Court held that section 201 of the Civil Rights Act of 1964, prohibiting racial discrimination by motels that provide lodging to transient guests, constituted a valid exercise of the federal power to regulate interstate commerce. The decision of *Katzenbach v. McClung* (379 U.S. 294) upheld section 201 in its application to restaurants, provided that a substantial portion of the food served has moved in interstate commerce.

In *Cox v. Louisiana* (379 U.S. 536), the court reversed the conviction of a civil rights leader under a Louisiana statute prohibiting "disturbing the peace." The statute, interpreted by the Supreme Court of Louisiana as intended to punish public demonstrations protesting segregation and discrimination, was held by the U.S. Supreme Court to be unconstitutionally broad and an infringement of the rights of free speech and assembly. The U.S. Supreme Court also upset the civil rights leader's conviction for violating a state statute barring the obstruction of public passages. In a separate case with the same name (379 U.S. 559), the Supreme Court held that a Louisiana statute barring demonstrations in or near courthouses, if the demonstrations were intended to obstruct justice or influence judicial officials, did not unconstitutionally infringe upon rights of free speech or assembly; but that permission given by police to conduct a demonstration across the street from the courthouse barred conviction of the demonstrator in this case. In *Hamm v. Rock Hill* (379 U.S. 306), nonfinal state trespass convictions of Negroes who had participated in sit-in demonstrations at lunch counters were vacated, on the ground that the Civil Rights Act of 1964 abated pending convictions arising out of preenactment activities.

In *Louisiana v. United States* (380 U.S. 145), the court invalidated those provisions of the Louisiana Constitution and those statutes that required prospective voters to satisfy registrars of their ability to understand and give a reasonable interpretation of any provision of the state or federal Constitution. The constitutional provisions and statutes in question violated the prohibitions against discrimination in voting because of race, found both in the 15th Amendment of the U.S. Constitution and in the

THURGOOD MARSHALL (left), sworn in as U.S. solicitor general on August 24, introduces family to the president.

THURGOOD MARSHALL became solicitor general of the United States in 1965. His office handles all federal appeals before the Supreme Court. Marshall had been a judge on the U.S. Court of Appeals for the Second Circuit (New York) since 1962. Before that, he had appeared many times before the U.S. Supreme Court as an attorney for the National Association for the Advancement of Colored People. His most famous case was *Brown v. Board of Education* (1954), in which the Supreme Court declared unconstitutional deliberate racial segregation in public schools.

Marshall was born in Baltimore, Md., on July 2, 1908. He graduated from the law school of Howard University in 1933 and was admitted to the Maryland bar that year. He has fought hard for civil rights ever since he became an attorney for the NAACP in 1936. Although known as a "tough" liberal, he is cool and informal. After the death of his first wife, Marshall married Cecilia S. Suyat in 1955. They have two sons, Thurgood and John.

Civil Rights Act of 1964. The statutes also violated the 14th Amendment. In *United States v. Mississippi* (380 U.S. 128), the court held that a complaint by the attorney general of the United States under the Civil Rights Act, challenging state laws and constitutional provisions allegedly used to keep Negroes from voting, had been erroneously dismissed by a three-judge federal court. It was ordered that the case be tried without delay.

In *McLaughlin v. Florida* (379 U.S. 184), a Florida statute banning habitual nighttime cohabitation between whites and Negroes was held to be unconstitutional because it denied the equal protection of the laws guaranteed by the 14th Amendment. The court expressly avoided passing on the validity of a Florida law banning interracial marriages. In *Swain v. Alabama* (380 U.S. 202), a state prosecutor's exercise of peremptory challenges to exclude all Negroes from a jury trying a Negro defendant in

a criminal case was held not to violate the equal protection clause. Furthermore, the court did not believe that a showing that Negroes had not served on juries in a particular county during a specified period of time gave rise to the inference of systematic discrimination on the part of the state, in the absence of sufficient showing of the prosecution's participation.

Freedom of Religion, Speech, Press, and Information. In *Freedman v. Maryland* (380 U.S. 51), the Supreme Court decided that portions of the Maryland motion picture censorship statute violated the 1st Amendment's guarantee of freedom of expression. The unconstitutional provision of the statute required that a film be submitted to censors before being shown, placed the burden of instituting judicial proceedings upon the exhibitor if the censors disapproved a film, allowed conviction of an exhibitor for showing a banned film even though no court had ever ruled on the obscenity of the film, and provided no assurance of prompt judicial determination.

United States v. Seeger (380 U.S. 163) involved claims of conscientious objectors under the Universal Military Training and Service Act, which exempts from combatant training and service those persons who, by reason of their religious training and belief, are conscientiously opposed to participation in war in any form. Construing the act's phrase "belief in a relation to a Supreme Being," the court concluded that the proper test "is whether a given belief that is sincere and meaningful occupies a place in the life of its possessor parallel to that filled by the orthodox belief in God of one who clearly qualifies for the exemption."

In *Lamont v. Postmaster General* (381 U.S. 301), the court declared invalid a provision of the Postal Service and Federal Employees Salary Act of 1962, under which the postmaster general was authorized to detain foreign mail deemed to be "Communist political propaganda." The mail could be detained until the addressee submitted a request in writing for its delivery. The provision was an unconstitutional abridgement of the addressee's rights under the 1st Amendment, which guarantees freedom of speech and press.

In *Zemel v. Rusk* (391 U.S. 1), it was held that neither the right to information, under the 1st Amendment, nor the right to travel, under the due process clause of the 5th Amendment, was violated by the refusal of the U.S. secretary of state to validate a passport for travel to Cuba. Citing a long history of "area restrictions" in the issuance of passports, the court said that the secretary "has justifiably concluded that travel to Cuba by American citizens might involve the nation in dangerous international incidents, and that the Constitution does not require him to validate passports for such travel."

Poll Tax. *Harman v. Forseus* (380 U.S. 528) was the first case decided by the Supreme Court under the 24th Amendment, which protects voters in federal elections from disfranchisement because of failure to pay a poll tax. The court invalidated a section of the Virginia Code which provided that, in order to qualify to vote in federal elections, one must either pay a poll tax or file a witnessed or notarized certificate of residence. The court reasoned that the Virginia law "imposes a material requirement solely upon those who refuse to surrender their constitutional right to vote in federal elections without paying a poll tax" and "unquestionably

erects a real obstacle to voting in federal elections for those who assert their constitutional exemption from the poll tax."

Subversive Activities. On November 15, in the second month of the 1965-66 term, the court held unenforceable a Justice Department order requiring two individuals to register as members of the Communist party under the Subversive Activities Control Act of 1950. Noting that registration would expose them to prosecution under other federal laws "in an area permeated with criminal statutes," the court upheld the individual's right to avoid possible self-incrimination by invoking the 5th Amendment of the U.S. Constitution. The opinion did not deal with another provision of the act, requiring the Communist party itself to register and list its membership.

In *Dombrowski v. Pfister* (380 U.S. 479), decided in the previous term, the court held that a Louisiana statute punishing membership in "subversive organizations" was an unconstitutional abridgement of free expression, in violation of the due process clause of the 14th Amendment, because of the overly broad definition of such organizations.

Birth Control. In *Griswold v. Connecticut* (381 U.S. 479) the Connecticut birth control statute that banned the use of contraceptives and the giving of medical advice as to their use was held to be unconstitutional on the ground that it violated a right of marital privacy emanating from the 1st, 3rd, 4th, 5th, 9th, and 14th Amendments.

Voting Residence. In *Carrington v. Rash* (380 U.S. 89), a Texas constitutional provision preventing a member of the armed forces from ever acquiring a voting residence in Texas as long as he remained in the service was held to violate the equal protection clause of the 14th Amendment. The court, in rejecting the state's argument that its voting ban was justified because of the transient nature of service in the armed forces, pointed out that there had been many cases involving persons other than military personnel where the local elections officials had determined the issue of bona fide residence.

Business Regulation. The Supreme Court held in *Federal Trade Commission v. Consolidated Foods Corp.* (380 U.S. 592) that Consolidated's acquisition of a company manufacturing dehydrated onion and garlic was a violation of section 7 of the Clayton Act if the probability of lessening competition was proved. Food processors that sold to Consolidated, a wholesale and retail grocery corporation, were found to have given their onion and garlic business to the manufacturer acquired by Consolidated, so that Consolidated would be encouraged to buy grocery products from them.

In *Atlantic Refining Co. v. Federal Trade Commission* (381 U.S. 357), the Supreme Court ruled that a large oil company was engaged in unfair competition by carrying on a campaign, under a commission agreement, to force its dealers to buy a specific tire manufacturer's products. The oil company was violating section 5 of the Federal Trade Commission Act. The court decided that the commission was justified in banning any such agreements by the oil company or the tire manufacturer. In *Federal Trade Commission v. Colgate-Palmolive Co.* (380 U.S. 374) the court found a violation of section 5 constituting a deceptive trade practice. A televised mockup test that was not identified to viewers as a mockup purported to be visible proof of a product claim. The advertising was held to be illegal even if the product claim was true.

In *United States v. Boston & Maine R.R.* (380 U.S. 157), the court found that the receipt of bribes by officials of the railroad from a railway equipment purchasing corporation did not constitute a "substantial interest in" the corporation, so as to make the criminal provisions of section 10 of the Clayton Act applicable. Construing the statutory language strictly, the court said that the words "substantial interest in" presupposed either an existing investment of some kind in the purchaser, or the creation of the purchaser by the individual defendants for their use, or a joint venture or continued course of dealings—licit or illicit—with the purchaser for profit sharing.

Transportation and Public Utilities. Three cases decided by the Supreme Court involved the jurisdiction of the Federal Power Commission. In *United Gas Improvement Co. v. Continental Oil Co.* (381 U.S. 392), the court decided that the commission had jurisdiction over sales to an interstate pipeline company of leases covering proved and substantially developed gas reserves to be sold in interstate commerce. It was held that the "production and gathering" exemption of section 1(b) of the Natural Gas Act did not deprive the commission of jurisdiction over such sales even though they occurred before production and gathering had ended.

In *California v. Lo-Vaca Gathering Co.* (379 U.S. 366), gas was delivered by a seller in Texas to an interstate natural gas pipeline company, pursuant to "restricted use" agreements which provided that the gas was not for resale but that it would be commingled with other gas being transported in the purchaser's pipeline system. As it was conceded that at least a portion of the gas would in fact be resold outside of Texas, the court held that the commission had jurisdiction over the transaction at the outset, under section 1(b) of the act.

In *Federal Power Commission v. Union Electric Co.* (381 U.S. 90), the court held that the construction of a pumped storage hydroelectric project, generating energy for interstate transmission and utilizing nonnavigable headwaters of a navigable river, would affect the "interests of interstate or foreign commerce"; and that therefore section 23(b) of the Federal Power Act required a license from the commission for such construction.

Taxation. In *Paragon Jewel Coal Company, Inc. v. Commissioner of Internal Revenue* (380 U.S. 624), the Supreme Court decided that coal mine operators who mined under contracts with the lessee of coal lands did not acquire an "economic interest" in the coal in place, and therefore were not entitled to an allowance for percentage depletion, even though they had invested time and money in developing mines and had asserted a right to mine particular areas to exhaustion. The court based its decision on *Parsons v. Smith* (359 U.S. 215), which held in 1959 that the deduction for depletion is allowed in recognition of the fact that mineral deposits are wasting assets, and that the deduction is intended as compensation to the owner for the part used in production.

In *United States v. Midland-Ross Corp.* (381 U.S. 54) and *Dixon v. United States* (381 U.S. 68), realization of original issue discount on the sale of noninterest-bearing promissory notes (which had been bought from the issuers at prices discounted below the face amounts) was held to be ordinary income, rather than capital gain, which is subject to tax at a lower rate. In *Dixon*, the court expressly rejected the contention that the commissioner of

internal revenue could not retroactively withdraw an acquiescence in a tax court decision, relied on by the taxpayer, which would have required treating the gain realized on the sale of the notes as capital gain.

On the other hand, in *Commissioner of Internal Revenue v. Brown* (380 U.S. 563), the court decided that taxpayers realized capital gain, not ordinary income, on the sale of their stock in a business corporation to a tax-exempt organization which agreed to pay for the stock within ten years out of earnings realized from the assets of the business corporation. The court disagreed with the government's argument that, because the entire risk of the transaction remained on the sellers, the transaction was not (for tax purposes) a "sale or exchange."

Construing the Life Insurance Company Income Tax Act of 1959 in *United States v. Atlas Life Insurance Co.* (381 U.S. 233), the court upheld the taxation of municipal bond interest received by the insurance company. The company had allocated the bond interest earnings between tax-exempt policyholder reserves and taxable company reserves.

In *Commissioner of Internal Revenue v. Noel's Estate* (380 U.S. 678), flight accident insurance was held to be "life insurance" for federal estate tax purposes, and therefore includable in the insured's gross estate. The court emphasized, however, that it was possible for a policyholder to divest himself of all incidents of ownership over his insurance policies by a proper gift or assignment, so as to bar their inclusion in his gross estate; but that no such transfer of the policies was made in this case.

The Supreme Court invalidated the imposition of an excise tax by the state of Idaho upon an Idaho-licensed motor fuels dealer who sold and transferred gasoline in Utah for importation into Idaho by an agency of the federal government. The tax was held, in *American Oil Co. v. Neill* (380 U.S. 451), to violate the due process clause of the 14th Amendment, because the out-of-state vendor, though licensed to do local business in Idaho, showed clearly that there were no in-state activities connected with its out-of-state sales. In *General Motors Corp. v. District of Columbia* (380 U.S. 553), the court decided that the use of sales within the District of Columbia as the sole factor for determining how much of a corporation's net income was "fairly attributable" to the district for purposes of computing the franchise tax was unauthorized by the language of the District of Columbia Income and Franchise Tax Act of 1947.

Criminal Law. In *Douglas v. Alabama* (380 U.S. 415) and *Pointer v. Texas* (380 U.S. 400), the right of an accused person "to be confronted with the witnesses against him," as guaranteed by the 6th Amendment of the U.S. Constitution, was held to be mandatory as to prosecutions in state courts. Both cases involved the use of transcripts of statements by persons other than the accused, under circumstances in which the accused was not accorded the right of cross-examination. In *Griffin v. California* (380 U.S. 609), the court decided that in a criminal prosecution in a state court the 5th Amendment's protection against self-incrimination prohibited both comment by the prosecution on the failure of the accused to testify, and instructions by the court to the jury that such silence was evidence of guilt.

In *Estes v. Texas* (381 U.S. 532), the televising of a "notorious" state criminal trial, over the objec-

tion of the defendant, was held to violate the due process clause of the 14th Amendment. The case involved a charge of swindling brought against Billie Sol Estes, who was characterized in a concurring opinion by Chief Justice Warren as "a much publicized financier."

The decisions in *Linkletter v. Walker* (381 U.S. 618) and *Angelet v. Fay* (381 U.S. 654) limited the rule of *Mapp v. Ohio* (367 U.S. 654), which in 1961 had applied the federal exclusionary rule to state convictions based on illegally seized evidence. The rule was held not to be retrospectively applicable to cases finally decided in the period prior to the *Mapp* decision.

Labor Law. In *United Mine Workers of America v. Pennington* (381 U.S. 657), the court held that a conspiracy between the union and a group of large coal companies to impose an agreed-upon wage and royalty scale upon smaller nonunion operators, regardless of their ability to pay and with the purpose of eliminating them from the industry, was not exempt from the Sherman Act, if the conspiracy was proved. However, concerted activity by the union and the large operators to influence the secretary of labor in making minimum wage determinations, and the Tennessee Valley Authority in making coal purchases, was held not to violate the antitrust laws, even though it was intended to eliminate competition.

Meat Cutters Local 189 v. Jewel Tea Co. (381 U.S. 676) also involved the impact of the antitrust laws on union activities. The court decided that a restriction of the marketing hours of food store meat departments, obtained through bona fide "arm's length" bargaining and not in combination with nonlabor groups, fell within the protection of the national labor policy and therefore was exempt from the Sherman Act.

In *Textile Workers v. Darlington Manufacturing Co.* (380 U.S. 263), the court held that if an employer closed his entire business, even if the liquidation was motivated by vindictiveness towards the union, such action would not be an unfair labor practice in violation of the Taft-Hartley Act. A partial closing, on the other hand, would be an unfair labor practice under section 8(a)(3) of the act "if motivated by a purpose to chill unionism in any of the remaining plants of the single employer and if the employer may reasonably have foreseen that such closing will likely have that effect." Since the National Labor Relations Board (NLRB) had found that the employer in question was part of a larger single enterprise controlled by the members of one family, but had not made findings as to the employer's motivation, the Supreme Court remanded the case to the court of appeals and the NLRB for further proceedings.

The Supreme Court decided, in *Fibreboard Paper Products Corp. v. National Labor Relations Board* (379 U.S. 203), that an employer's refusal to bargain over "contracting out," for legitimate business reasons, of maintenance work formerly performed by employees in a bargaining unit, violated section 8(a)(5) of the Taft-Hartley Act. That section makes it an unfair labor practice for an employer to refuse to bargain collectively with the representatives of his employees. The court also held that the NLRB could order resumption of the discontinued activities and reinstatement (with back pay) of the affected employees.

In *American Ship Building Co. v. National Labor Relations Board* (380 U.S. 300), it was held that an employer's use of a lockout, after a bargaining im-

passé had been reached, solely to bring economic pressure to bear in support of its bargaining position, did not constitute an unfair labor practice under either section 8(a)(1) or section 8(a)(3) of the Taft-Hartley Act. In *National Labor Relations Board v. Brown* (380 U.S. 278), the court similarly failed to find a violation of either of these statutory provisions. Nonstruck members of a multiemployer bargaining unit, in response to a whipsaw strike against a member able to continue operations with temporary replacements, had locked out union employees and also had continued operations with temporary replacements.

In *Railway Clerks v. Employees Association* (380 U.S. 650), the court decided (1) that ballots used by the National Mediation Board in elections conducted under the Railway Labor Act were not required to provide a space in which employees could cast a "no union" vote, (2) that the board's sufficient investigation of a representation dispute barred judicial review of its determination of the appropriate craft or class in which a representation election should be held, and (3) that the employer was not entitled to be a party to proceedings by which the board determined the appropriate unit.

In *Republic Steel Corp. v. Maddox* (379 U.S. 650), it was held that a breach-of-contract suit in a state court for severance pay allegedly owed under the terms of a collective bargaining agreement was barred where the individual employee who brought the suit had not first attempted to use the contract grievance procedure agreed upon by the employer and the union as the exclusive mode of redress.

The constitutionality of section 504 of the Landrum-Griffin Act, which makes it a crime for a member of the Communist party to serve as an officer of a labor union, was involved in *United States v. Brown* (381 U.S. 437). The court held that this provision was an unconstitutional bill of attainder, prohibited by Article I, section 9, of the Constitution of the United States.

Attorney at Law

LEBANON

The fall of the cabinet of Premier Hussein Oueini and the return to power of former Premier Rashid Karami was the major political event in Lebanon in 1965. General prosperity in the business community continued, but a shortage of money forced the government to cut expenditures on public works. Relations with Israel deteriorated.

The Cabinet Crisis. Early in 1965 the coalition cabinet of Premier Oueini, as reorganized in November 1964, was increasingly rent by dissension. On June 2, Foreign Minister Philippe Takla resigned.

Early in July the government was attacked bitterly in the Chamber of Deputies. Though Premier Oueini secured a vote of confidence on July 20, he submitted his resignation to President Charles Helou a few hours later. On July 22 the president named Karami premier. Karami, who had headed the cabinets that restored peace to the country after the civil disturbances of 1958, tried to form a "government of national union" drawn from all parties in the Chamber of Deputies. He failed, but on July 25 he announced the formation of a 10-member cabinet, composed largely of experts and technicians who were drawn entirely from outside Parliament.

Economic Developments. The Lebanese economy, heavily dependent on commerce, banking, and tourism, was generally prosperous during 1965. Late in 1964 and early in 1965, political developments in Syria, Saudi Arabia, and Kuwait caused some \$150 million to seek security in Lebanese banks. On Jan. 1, 1965, the unrealistic (and seldom used) official exchange rate of £L2.2 to the U.S. dollar was adjusted to the free market rate of £L3.08.

A new national development plan for 1965-70, considerably revised from the draft projects of 1963 and 1964, was inaugurated on May 1 with an estimated total cost of £L3 billion. Projected expenditures for public works in 1965 were cut by £L19 million, and the government indicated that extensive foreign aid would be necessary to finance the new program. On April 27 a 9.9-mile tunnel in the Litani River development project was completed. The tunnel will divert water to irrigate the western slopes of the Lebanon Mountains and to operate the 91,250-kilowatt Awali power station.

Lebanon delayed joining the Arab Common Market, established on Jan. 1, 1965, by the United Arab Republic, Syria, Jordan, Iraq, and Kuwait, pending assurances that it would not become a stepping-stone to some supranational union in which

WIDE WORLD

Lebanese sovereignty might be endangered. On May 21, Beirut signed a three-year agreement on trade and technical cooperation with the European Economic Community (EEC); Lebanon and the European states granted each other most-favored-nation treatment, and the EEC states agreed to expand and coordinate their technical aid to Lebanon.

Foreign Affairs. Tension between Lebanon and Israel increased in 1965. Al Fatah, a Palestine Arab refugee organization, conducted raids across the Israeli frontiers. Israel reported three raids, and in retaliation Israeli army units attacked two Lebanese border villages on October 28, destroying a house and three water reservoirs.

Arab states continued efforts to deny Israel use of the Jordan River. On January 22 the Lebanese parliament approved Arab League plans for a pumping station at the Wazzani springs to divert water into Syria's Baniyas River and from there into Jordan's Yarmuk River. Parliament also approved a plan to dam the upper Hasbani River and divert its waters into the Litani. The Chamber of Deputies gave the cabinet limited authority to permit troops from other Arab countries to enter Lebanon, if necessary, to protect the diversionary works against Israeli attack. On January 23, Israel warned of possible punitive action. Though work was begun on the Wazzani project, the Lebanese government evinced considerable reluctance to provoke Israel.

On March 16, rioters in Beirut and Tripoli protested West Germany's decision to exchange ambassadors with Israel. On May 13, Lebanon severed diplomatic relations with Bonn.

Early in May, President Helou paid official visits to the United Arab Republic, France, Italy, and the Vatican. In September he represented Lebanon at the third Arab summit conference in Casablanca.

LEBANON · Information Highlights

Area: 4,015 square miles.

Population: 2,250,000 (mid-1964 est.).

Chief Cities (1963 est.): Beirut, the capital, 500,000; Tripoli, 145,000.

Government: President—Charles Helou; Prime Minister—Rashid Karami; Parliament—Chamber of Deputies, 99 members; partly seating (1965, by religious apportionment): Maronite, 30; Sunni, 20; Shi'ite, 19; Greek Orthodox, 11; Greek Catholic, 6; Druse, 6; Armenian Orthodox, 4; Armenian Catholic, 1; Protestant, 1; and minorities, 1.

Religious Faiths: Christians, 50%; Muslims, 40%.

Education: Literacy rate—75% of population. Total school enrollment (1962)—358,214 (primary, 246,758; secondary, 98,461; teacher-training, 769; technical, 961; higher, 11,265).

Finance (1964 est.): Revenues, \$128,000,000; expenditures, \$155,000,000; monetary unit, Lebanese pound (3.08 pounds equal U.S.\$1.).

Economic Index: Cost of living (1963), 110 (1958=100).

Manufacturing (metric tons): Cement (1964), 897,000; gasoline (1963), 162,000; meat (1963), 59,000; olive oil (1964), 5,000; sugar (1963), 4,000; wine (1964), 4,000.

Crops (metric tons, 1964): Citrus fruits, 203,000; apples, 123,000; grapes, 100,000; wheat, 60,000; tomatoes, 42,000; dry onions, 44,000; bananas, 22,000; olives, 30,000; figs, 24,000.

Minerals (metric tons, 1964): Lime, 26,000; salt, 20,000; iron ore (1960), 8,100.

Foreign Trade (1964): Exports, \$67,900,000 (chief exports, 1962: apples, pears, quinces, \$5,200,000; dried beans, \$3,600,000; wool in lump, \$2,200,000; tobacco, \$2,100,000); imports, \$431,300,000 (chief imports, 1962: livestock, \$13,200,000; automobiles, \$10,400,000; wheat and maslin, \$10,400,000). Chief trading partners (1962): Syria (took 15% of exports, supplied 10% of imports); Britain (took 4% of exports, supplied 20% of imports); U.S. (took 5% of exports, supplied 18% of imports).

Transportation: Roads (1964), 4,350 miles (3,107 paved); motor vehicles (1964), 96,241 (automobiles, 83,957); railways (1963), 208 miles; merchant vessels (1964), 165 (849,000 gross registered tons); national airlines, Air Liban, Lebanese International Airways; Trans-Mediterranean Airways, Lebanese Air Transport; principal airport, Beirut.

Communications: Telephones (1964): 95,000; television stations (1964), 5; television sets (1964), 120,000; radios (1964), 250,000; newspapers (1962), 44.

LIBERIA

There were no major departures in 1965 from the economic and political policies that have been followed by Liberia's President William V.S. Tubman. The country was concerned with developing its iron ore deposits, and with maintaining a moderate position in African and world affairs.

Economy. An emphasis on collecting revenues, which reached a record total of nearly \$40 million in 1964, indicated that efforts to improve Liberia's economic situation were being continued. President Tubman warned the chiefs of Maryland County that they would be given heavy fines and eventually be dismissed unless rice production in the region rose rapidly. The major economic hope, however, was increased production and export of Liberia's extremely rich iron ore. Exports of ore in 1964 enabled the country to achieve its first favorable trade balance since 1961.

The flow of foreign investments to Liberia accelerated somewhat in 1965, particularly in the form of construction equipment and processing plants for minerals. The International Monetary Fund once again helped Liberia balance its external debt, and the World Bank increased the size of an earlier loan for road construction and maintenance.

On June 9 the Liberian American-Swedish Mineral Company announced plans to construct jointly a \$51.5 million iron ore washing and pelletizing plant at Buchanan. On the other hand, Liberia's only shoe factory was reported to be in the process of liquidation as the result of massive imports of shoes from China.

Politics. President Tubman, who in 1965 at the age of 70 was in the midst of his fifth four-year term, declared at the end of 1964 that it was no longer necessary to reserve senatorial seats for the lesser-developed regions of the counties. He gave as the reason the substantial progress resulting from his long-term policy of national unification.

A number of internal adjustments, indicated by changes in government personnel, took place in 1965. A.B. Cassell, the commissioner for immigration and nationalization and the deputy attorney general, was replaced. The minister of education, John Mitchell, and the minister of agriculture, Stephen Tolbert, were dismissed from office by President Tubman for "administrative reasons." They were replaced by Augustus Caine and John Cooper, respectively. The army chief of staff, Maj. Gen. Albert White, was replaced by U.S.-trained Lt. Col. George T. Washington of the Liberian National Guard.

In July, President Tubman pardoned three political opponents, Raymond Horace, Thomas Boteo, and T.W. Thompson, all of whom had been sentenced to life imprisonment in 1955 for plotting his

LIBERIA · Information Highlights

Area: 43,000 square miles.

Population: 1,066,000 (April 1965 est.).

Chief City (1962 census): Monrovia, the capital, 80,922.

Government: President—William V.S. Tubman (took office Jan. 1, 1944); Vice President—William R. Tolbert. *Legislature*—Senate, 18 members; House of Representatives, 47 members; party seating (1965), all members of the True Whig party.

Religious Faiths: Protestants, 70% of population; Roman Catholics, 1%; others, 29%.

Education: Literacy rate (1962)—9% of population aged 15 and over. Total school enrollment (1962–63)—80,321.

Finance (1963–64 est.): Revenues, \$39,000,000; expenditures, \$42,500,000; monetary unit, Liberian dollar (equals U.S.\$1).

Gross National Product (1962): \$136,000,000.

Crops (metric tons, 1963–64 crop year): Rubber, 42,600 (ranks 8th among world producers); palm kernels, 9,000.

Minerals (1964): Iron ore, 10,456,000 metric tons (ranks 12th among world producers); gem diamonds (exports), 298,000 carats (world rank, 6th); gold, 1,824 troy ounces.

Foreign Trade (1963): Exports, \$81,110,000 (chief exports, 1962: iron ore and concentrates, \$32,398,000; natural rubber and gums, \$25,662,000; uncut gem diamonds, \$3,055,000; industrial diamonds, \$1,502,000); imports, \$106,940,000 (chief imports, 1962: construction and mining machinery, \$9,345,000; railroad rails, \$5,311,000; buses and trucks, \$3,927,000). Chief trading partners (1961): U.S. (took 46% of exports, supplied 49% of imports); Netherlands (took 22% of exports, supplied 6% of imports); Britain (took 9% of exports, supplied 12% of imports).

Transportation: Roads (1964), 1,880 miles (250 paved); motor vehicles (1964), 11,250 (automobiles, 8,100); railways (1963), 210 miles; merchant vessels (1964), 1,151 (15,717,000 gross registered tons); national airline, Liberian National Airways; principal airport, Robertsfield.

Communications: Telephones (1964): 2,800; television station (1964), 1; television sets (1964), 2,000; radios (1963), 100,000; newspaper (1963), 1 (daily circulation, 3,000).

assassination. He also pardoned another politician, Frederick Keylor, who had been imprisoned in 1951 on charges of sedition. In September the Women of the National Liberian Social and Political Movement demonstrated in support of President Tubman's nomination for a sixth term.

Foreign Relations. Liberia continued to demonstrate its interest in regional African cooperation, while taking a moderate stand on most international issues. On February 17 in Monrovia, Liberian representatives met with delegates from Sierra Leone, Guinea, and Ivory Coast to discuss the possibility of creating a West African free trade area. The participating nations signed an agreement establishing the West African Interim Organization for Economic Cooperation to investigate the creation of such a free trade area. A ministerial working commission discussed the issue further in May at Freetown, Sierra Leone. The commission, on May 21 in Monrovia, elected Donald George, of Sierra Leone's Ministry of External Affairs, as administrative secretary of the organization.

President Tubman appealed to Ghana and the countries of the Conseil d'Entente (Dahomey, Ivory Coast, Upper Volta, and Niger) to resolve their conflict over the Entente's charge that Ghana serves as a refuge for seditious groups from other African nations. On Liberia's Independence Day (July 26), President Tubman urged African nations to uphold the charter of the Organization of African Unity and not to encourage subversion and coups d'état among their neighbors.

Liberia signed several international agreements in 1965. On March 5 it signed an agreement with Italy for scientific and technical aid. An air service agreement with Belgium was signed on May 2.

The U.S. Agency for International Development announced on July 8 that it was granting a \$7.2 million loan to improve Monrovia's sewerage system.

University of Chicago

ELLIOTT PHOTOS

PARAMUS (NEW JERSEY) FREE PUBLIC LIBRARY was awarded the \$5,000 Book-of-the-Month Club Library Award for 1965. The annual award, given in memory of Dorothy Canfield Fisher, honors small town libraries with outstanding programs.

LIBRARIES

Action taken by President Johnson and Congress made 1965 a banner year for American libraries. In a special message to Congress on education on January 12, the president recommended that federal grants be used for the purchase of books for school libraries, for building school libraries, for the purchase of library materials to strengthen college teaching and research, and for training school, college, and community librarians. Congress later passed several acts with provisions that followed the president's recommendations.

Federal Legislation. The Higher Education Act of 1965 was passed by Congress on October 20. Title II of the act authorized federal grants of \$70 million annually for a five-year period for college library assistance. Colleges and universities would use the money to buy books and library materials, pay the cost of courses to train students in librarianship, and establish fellowships. The Library of Congress also will receive part of the funds for a cooperative cataloging program. In addition, the act allows grants for research relating to the improvement of libraries and training in librarianship. Congress, however, did not appropriate funds to implement Title II of The Higher Education Act before it adjourned.

The Elementary and Secondary Education Act of 1965 was signed on April 11, 1965. Title II of the act recognized that teaching programs at all levels of education have become increasingly dependent on effective school library materials and services. Stressing the need for high-quality school libraries, Title II provided that school library resources, textbooks, and other printed and published instructional materials should be readily available for the use of children and teachers in all public and private schools that provide state-approved elementary and secondary education.

Although the act did not call for matching state or local funds, it required that federal funds be used to supplement state and local funds, not supplant them. State plans would determine how the money would be spent, and all funds would be administered by state authorities.

The U.S. Department of Health, Education, and Welfare Supplemental Appropriations Act included funds of \$100 million for school library resources, and of \$17 million to strengthen state education departments.

The Appalachian Regional Development Act of 1965 provided additional funds for programs operating under the Library Services and Construction Act (LSCA), the Vocational Education Act, and the Higher Education Facilities Act. Libraries receive aid under all these acts.

The Medical Library Assistance Act of 1965 authorized annual allocations totaling \$23 million to be used for building medical libraries; for traineeships, research, and development of new techniques in medical library science; for purchasing and processing books; for establishing regional libraries and branches of the National Library of Medicine; and for support of biomedical scientific publications. However, Congress did not appropriate implementing funds for the act in 1965.

Under the National Defense Education Act, as amended (Title XI), 26 colleges were enabled to offer study institutes for school librarians. All participating librarians receive stipends of \$75 per week, plus \$15 a week for eligible dependents. The institutes provide more extensive training for both librarians with degrees in library science and those with only a few hours of library education. (See also EDUCATION.)

School Libraries. The attention of educators, parents, and Congressmen was focused on school libraries in 1965. As a result, the sad state of many school libraries became apparent, and efforts were made to bring them up to the requirements of national standards. As evidence of this effort, all federal legislation of 1965 that related to schools included provisions for library materials or for training librarians.

One instance of the improvement of school library services was the increase in the number of state and local school library supervisors. Six states appointed school library supervisors for the first time in 1965, bringing the total to 41 states with such positions. With the addition of assistant supervisors, there were 74 school library supervisors at the state level. The number of local school library supervisors increased from 592 in 1963-64 to approximately 853 in 1965-66.

There was also an increase generally in the number of professional library positions. New York City alone registered an increase of 223 for the 1965-66 school year, bringing to 597 the number of library positions created there within the past four years.

Another evidence of the increased interest in school libraries included an increase in the number

of articles on the subject in the mass-media magazines and professional educational journals. In another development, the International Paper Co., in cooperation with the American Association of School Librarians, prepared a kit for the use of parent and teacher groups who wished to promote the establishment of new school libraries.

In spite of current interest, school libraries still had a long way to go to meet national standards. According to the U.S. Office of Education, school libraries in the United States had 192,200,000 volumes in 1965, but needed 223,400,000 more. Buying and processing the additional volumes would cost \$1,244 million. The Office of Education statistics also indicated that there were 25,000 public school librarians, but that 87,000 more were needed, for which \$522 million would be required annually to pay the additional salaries. Furthermore, \$106,600,000 would be needed each year to keep the book collections up to date. Under present conditions, and with current appropriations, states will not be able to bring school libraries up to the national standards within five years.

College and University Libraries. Statistics for college and university libraries for the 1963-64 school year were published by the U.S. Office of Education in 1965. The 2,140 college and university libraries in the United States had 228,000,000 volumes, and served 4,800,000 students, for an average of 47.5 volumes per student. The libraries' operating expenditures totaled \$229,000,000, or \$47.70 per student. This represented 3.5% of the total college and university budget for education and general expenditures, or 1.5% less than the recommended standard. There were 11,500 professional personnel employed, or one librarian for each 401 students. Although the number of volumes in book collections and the size of professional staffs have increased each year since 1959-60, the number of students has increased at a greater rate. As a result, the per-student figures, which represent the library's ability to give service, have decreased. Recent increases in federal spending for higher education should be reflected by an improvement in the 1966-67 statistics.

In an effort to make the vast amount of library material more readily available to researchers, a new center for documentation and information retrieval was established at the University of Minnesota. At Syracuse University's Adult Education Center, a Model Information Center was established.

Public Libraries. *Statistics of Public Libraries 1962, Part I*, published by the U.S. Office of Education

in 1965, was the first statistical study to be published for public libraries since 1955-56. The study presents data for 860 public libraries in the United States, each serving communities of 35,000 persons or more, out of a total of 7,257 public libraries. The combined population served was 117,984,000. These 860 libraries spent \$252,929,488 for operating expenses in 1962, or \$2.14 per capita, and \$18,772,249 for building sites and construction. (Of the total amount, \$225,119,650 came from local appropriations.) They added 12,864,314 volumes in 1962, making a total of 163,268,546 volumes available to their users. The total circulation of books, periodicals, and audio-visual materials was 523,959,597, or 4.44 items per capita, compared with 4.04 items per capita in 1960.

The Book-of-the-Month Club Dorothy Canfield Fisher Library Award of \$5,000 was presented to Paramus (N.J.) Public Library for its progressive library program.

War on Poverty Projects. Public libraries in many communities cooperated with local agencies to begin Project Head Start for underprivileged pre-school children. The libraries prepared book lists, furnished classroom space, and initiated storytelling and other cultural programs. Libraries also took part in the federal "war on poverty" program. For example, the Chicago Public Library prepared and distributed a packet of eight book lists, entitled "Up by the Bookstraps," to inform persons interested in the federal programs against poverty, to aid individuals working with underprivileged children, and to help the unemployed. Public libraries also worked with adults having reading difficulties by furnishing lists of adult books with simple vocabularies. Some public libraries started programs that were later taken over by social agencies.

Special Libraries. The Library of Congress, with the cooperation of the Bureau of the Budget, established a Federal Library Committee to improve coordination and planning among the research libraries of the federal government. The 18 members of the committee represent the three national libraries (the Library of Congress, the National Agricultural Library, and the National Medical Library), the executive departments, and independent federal agencies. The committee will make recommendations for utilizing the resources of federal libraries to meet the expanding need for information. The Council on Library Resources granted the committee \$10,000 to defray administration costs.

A center for the coordination of foreign manuscript copying was established in the Library of

LIBRARY/U.S.A. exhibit at the United States Pavilion of the New York World's Fair included an information center where electronic computer techniques provided instant information on 75 subjects.

Congress with the aid of a \$75,300 grant from the Council on Library Resources. The center will attempt to coordinate photocopying projects conducted in foreign libraries and archives by American institutions, thereby avoiding duplication of effort and expense.

A third building for the Library of Congress, to be named for President James Madison, was approved by Congress in 1965.

The University of Texas, Austin, announced that it will build, furnish, and equip a library to house President Johnson's papers after he leaves office. The Johnson library will be the sixth federally administered presidential library.

Library Education. In 1964 the number of graduates of accredited library schools reached a record of more than 2,500. However, as in preceding years, the number of vacancies available in libraries exceeded the number of library school graduates. Salaries ranged from \$3,600 to \$15,944, and the average salary reached a new high of \$6,145—over \$300 more than the 1963 average. (The average salary in 1964 exceeded the highest salary—\$6,000—reported in 1951.)

Recruiting persons for the library profession continued to be a major program of library associations, library schools, and librarians. The University of Wisconsin launched a program to attract adults, such as housewives and early retirees, to librarianship.

U.S. Activities. Librarians recognize that professional growth is essential if they are to keep in touch with the rapid developments in librarianship and with major changes in technology. To meet this need, 258 conferences, workshops, and short courses for continuing education were held in 1965—almost twice as many as during 1964.

The Massachusetts Institute of Technology (MIT) sponsored a planning conference of librarians, engineers, and other experts at Woods Hole, Mass., to outline a four-year program of research in preparation for MIT's Project INTREX (Information Transfer Experiments). INTREX is an effort to develop ways for dealing with the flood of published knowledge by providing, by 1970, an on-line information transfer system for large university libraries. (See also AMERICAN LIBRARY ASSOCIATION.)

The Drexel Institute of Technology offered professional tours of selected American and European libraries.

IFLA Meeting. More than 200 delegates and observers met in Helsinki, Finland, Aug. 15–20, 1965, for the 31st Conference of the International Federation of Library Associations (IFLA). The conference discussed the international and interlingual aspects of library service, covering such subjects as bilingual catalogs; library activities of international organizations, such as the International Standards Organization and UNESCO; and developments in international cooperation in the library field.

At the meeting, the USSR reported on its extensive translation and book and periodical exchange programs. The United States reported on its technical assistance to the libraries of developing countries, and on arrangements for visits by foreign librarians to the United States.

It was announced that the IFLA will sponsor a seminar on library education in Paris, May 24–26, 1966. The IFLA had 78 members and 12 associate members in 1965.

FID Conference. The International Federation for Documentation (FID) held its 31st annual con-

THE NEW YORK TIMES

SPACE PROBLEMS and financial difficulties combined to cause a backlog of 70,000 uncatalogued volumes—representing a year's work—at the New York Public Library.

ference in Washington, D.C., Oct. 7–9, 1965. The conference was followed by a week-long congress (October 10–15) on meeting the demand for scientific information. More than 900 librarians and documentalists attended the congress.

The 32nd FID conference will be at The Hague, Sept. 19–24, 1966. FID membership reached 40 in 1965 when four more national organizations joined.

UNESCO. The United Nations Educational, Scientific, and Cultural Organization (UNESCO) set up a new Department of Libraries, Documentation, and Archives to replace its Libraries Division. During 1965, UNESCO gave aid to 30 countries by sending experts, granting fellowships, or providing equipment for the development of libraries.

UNESCO contracted with IFLA to prepare bibliographies and publish an annotated edition of the findings of the International Conference on Cataloging Principles. UNESCO also arranged to cooperate with FID in preparing a directory of professional training schools and courses for archivists, research librarians, and documentalists. In addition, a manual for teaching librarianship is being prepared under UNESCO auspices.

UNESCO's most ambitious library project is in Ecuador, where experts have surveyed the library facilities and proposed a national plan for library services. The government of Ecuador, which has budgeted 20% of its federal resources to education—the highest percentage given to any government department—is firmly committed to support the program. UNESCO also assisted several countries in Africa in establishing model public libraries or school libraries that will become part of their national library systems.

West Germany. West Germany made plans in 1965 to bring groups of library leaders from the United States, Canada, Britain, and France to visit libraries in Germany as guests of the German government. Foreign delegates, likewise guests of the German government, attended library conferences in Germany. Short-term employment of foreign librarians in German libraries was also arranged.

Denmark. The Danish Public Libraries Act of 1964 went into effect in 1965. Under this law, all communities must have public library service with

NATIONAL LIBRARY OF MEDICINE

A COMPUTER-BASED SYSTEM of information storage and retrieval at the National Library of Medicine, Bethesda, Md., is the first of its kind in the United States.

a full-time, professional librarian available. Furthermore, library cards may be used in any public library in the country. Denmark's federal and local support for the library system was raised from 17 kroner per capita (\$2.46) in 1963-64, to 26 kroner per capita (\$3.76) in 1965-66. Cooperation between public and school libraries to provide library service for children is required by law in Denmark.

Canada. Public libraries in Canada do not meet Canadian Library Association standards in many areas, according to statistics released for 1963. Instead of the standards requirement of 1.5 volumes per capita, Canadian public libraries had an average of 0.88 volume per capita. Current operating expenses amounted to \$1.28 per capita, rather than the recommended \$2.00, and the ratio of professionally trained librarians was one to every 25,781 persons, as against one for every 7,500 persons, as recommended. The total payments for public libraries in 1963 were \$24,187,650. University libraries spent an average of \$69.83 per student, and school libraries spent an average of \$2.45 per pupil on books and other library materials.

USIS Libraries. The United States Information Service closed its Benjamin Franklin Library in Paris and four branches in French university towns because of congressional budget cuts. After anti-American crowds attacked the USIS library in the United Arab Republic in November 1964, President Nasser offered rent-free quarters for the library and the use of some of his own books. The Panama library, burned in 1964, was reopened in 1965.

National Library Week. The 8th annual National Library Week (NLW) was observed from April 25 to May 1, 1965, with record-breaking participation. The 9th NLW will be observed from April 17 to 23, 1966. The sponsoring groups will re-evaluate the purposes and programs of National Library Week.

U.S. Office of Education Reorganization. On July 1, 1965, as part of the reorganization of the U.S. Office of Education, the Division of Library Services and Educational Facilities became a part of the Bureau of Adult and Vocational Education. The division's Library Services Branch will continue to administer the Library Services and Construction Act and grants for the educational television program. Several new consultant positions were created to fulfill the functions established under the act.

LIBYA

The new Libyan government of Premier Hussein Mazik showed its independence in foreign affairs during 1965 by refusing to follow the example of other Arab countries in cutting relations with West Germany. On the domestic scene, elections to the National Assembly were held in May.

New Government. Hussein Mazik, former foreign minister, became the new premier of Libya on March 20 when Mahmoud Muntasser resigned because of alleged ill health. King Idris I chose Dr. Wahbi al-Buri, Libya's former delegate to the United Nations, as the new foreign minister.

Premier Mazik immediately came under fire from the Cairo press for his government's decision not to follow the Arab foreign ministers' recommendation to sever relations with West Germany if that nation should recognize Israel. After diplomatic relations between West Germany and Israel were established on May 12, Libya maintained its ties with West Germany.

Oil Sabotage. Late in May, five oil wells in a British-American oil concession area in southeastern Libya were dynamited by saboteurs. There were reports that the dynamiting was the work of Egyptian saboteurs protesting the Libyan government's refusal to follow the United Arab Republic in severing relations with West Germany. In July, three oil tanks were blown up at Marsa Brega.

LIBYA · Information Highlights

Area: 679,358 square miles.
Population: 1,559,399 (July 31, 1964 census).
Chief Cities (1964 census): Tripoli, the capital, 212,577; Benghazi, 136,641.
Government: King-Idris I (acceded 1951); Premier-Hussein Mazik (took office March 21, 1965). Parliament-Senate, 24 members (all appointed by the king); Chamber of Deputies, 91 members (elected by universal suffrage).
Religious Faiths: Muslims, 95% (est.) of population; Roman Catholics, 2.5%; others, 2.5%.
Education: Literacy rate—40% of population. Total school enrollment (1963-64)—186,530 (primary, 158,961; preparatory, 18,550; secondary, 3,279; teacher-training, 2,407; technical, 2,094; university, 1,239).
Finance (fiscal 1965): Revenues, \$204,244,000; expenditures, \$240,244,000; monetary unit, Libyan pound (0.3571 pound equals U.S.\$1).
Gross Domestic Product (1964): \$330,400,000.
Manufacturing (metric tons): Olive oil (1964-65), 18,000; wine (1962-63), 3,000.
Crops (metric tons, 1962-63 crop year): Olives (1963-64), 101,000; tomatoes (1963-64), 102,000; dates, 10,000; grapes, 6,000; figs, 3,400.
Minerals (metric tons, 1964): Crude petroleum, 315,642,000 barrels (ranks 8th among world producers); lime (1962), 17,000; salt, 12,700.
Foreign Trade (1964): Exports, \$620,000,000 (chief export: crude petroleum, \$606,000,000); imports, \$292,000,000 (chief imports, 1963: iron and steel pipes, tubes, and fittings, \$22,000,000; trucks, \$11,000,000; wheat meal and flour, \$7,000,000). Chief trading partners (1963): Britain (took 28% of exports, supplied 18% of imports); West Germany (took 25% of exports, supplied 13% of imports); Italy (took 15% of exports, supplied 21% of imports).
Transportation: Roads (1964), 11,577 miles (6,824 paved); motor vehicles (1964), 44,209 (automobiles, 28,708); railways (1963), 220 miles; civil airline, Libiavia; principal airports, Benghazi, Tripoli.
Communications: Telephones (1964): 12,128; radios (1964), 86,000; newspapers (1961), 2 (daily circulation, 8,500).

UPI PHOTOS

LIBYAN ARCHAEOLOGICAL EXPEDITION discovered a clay vessel (l.) in the desert and a cave drawing (above) in the Aka Kouss Mountains near the ancient city of Germa, Libya. The cave drawing is said to date back to 5000 B.C.

Elections. King Idris, responding to complaints of irregularities in the October 1964 elections, dissolved the Libyan House of Representatives on February 13 and set May 8 as the date for new elections. In March he decreed that the number of seats in the new House would be cut from 103 to 91. The elections on May 8 were followed by antigovernment demonstrations in Tripoli. The demonstrators charged that candidates who were considered too progressive by the government had illegally been declared defeated. King Idris, nevertheless, opened the new parliamentary session on May 22.

Troop Removals. Libya negotiated during 1965 with Britain for the latter's removal of its troops from Libyan soil. The Libyan government also pressed the United States about a decision as to when U.S. troops stationed at Wheelus Air Force Base, on the outskirts of Tripoli, would be removed. In 1964 both Britain and the United States had agreed in principle to remove their troops.

Budget. The Libyan Parliament approved a budget in June for the 1966 fiscal year which totaled \$464,428,000, more than double the budget for the previous fiscal year.

LIVESTOCK

After increasing every year from 1957 to 1964, the number of cattle and calves in the United States declined slightly in 1965. The inventory on Jan. 1, 1966, was more than one million head below the 107,152,000 head a year earlier.

Slaughter, the chief cause of the 1965 decline in inventory, increased to over 40,500,000 head, about 4% above 1964, and 15% over 1963. Live cattle imports, primarily from Canada and Mexico, exceeded 700,000, or some 150,000 over 1964. The 1965 calf crop rose by less than 1% to 43,119,000 head.

Total hog slaughter in the United States in 1965 fell an estimated 10% below the 86,419,500 killed in 1964. The spring and fall pig crops both ran smaller than a year earlier, and their total of about 80,727,000 head represented a 9% decrease.

Sheep and lamb numbers remained nearly stationary in 1965 after declining for six straight years. The inventory of about 26,500,000 head on Jan. 1, 1966, was only one fifth as large as the peak of 33,170,000 reached in 1960.

Slaughter of about 13,400,000 head of sheep and lambs in 1965 was 10% smaller than in 1964. The 1965 lamb crop of 17,606,000 declined 2%.

U.S. Poultry. Egg production in 1965 totaled slightly under 179,000,000 cases, or 1% less than in 1964. The decrease resulted from a slight reduction in the number of hens, since the average rate of egg output per hen continued to increase.

Broiler production increased for the 19th consecutive year. Production totaling 8,050,000,000 pounds of liveweight broilers was 7% larger than that produced in 1964. The 1965 turkey crop of 103,700,000 was 4% larger than a year earlier. Because of heavier slaughter weights, liveweight turkey production climbed even faster, and output was up 6% over 1964.

U.S. exports of poultry declined in 1965. From January through September, turkey exports totaled 34,447,000 pounds, up 34% from the total in the comparable period of 1964. However, broiler shipments for the first eight months totaled 54,085,000 pounds, down 34%.

World Livestock Population. The world population of cattle and buffalo in 1965 increased about 2% over 1964, from 1,067,100,000 to 1,084,200,000. The 1965 gain over the 1956-60 average was 11%.

Hog numbers in the world in early 1965 reversed the decline of a year earlier. The 1965 figure of 459,460,000 head was 6% above the early 1964 total and 7% above the 1956-60 average. This increase was a continuation of a substantial upward trend from the 1956-60 level in all areas of the world, except in Asia and North America. The marked decrease in hog numbers registered in the United States in 1964 continued in 1965.

World sheep numbers in early 1965 were estimated at 986,300,000, down slightly from each of the two previous years, but 5% above the average of 1956-60.

RAY REIMAN

President, Farm Business, Inc., Washington, D.C.

LOS ANGELES riot scene, guarded by California National Guardsmen, is deserted after three days of racial violence, arson, and looting in April. The riots took place in Watts, a predominantly Negro section of southwestern Los Angeles.

WIDE WORLD

LOS ANGELES

The worst racial violence in the city's history raged for five days in August in the Watts section, a predominantly Negro neighborhood in southwestern Los Angeles. In other developments, Mayor Samuel W. Yorty won a second term in the municipal elections in April, and the City Council approved a record budget for the fiscal year 1966.

Watts Riots. Racial violence was triggered on August 11 when a white highway patrolman stopped a Negro driver in Watts on suspicion of drunken driving. After an angry crowd gathered and police reinforcements arrived, mob rioting, looting, and burning began. Hundreds of law-enforcement officials, reinforced by over 12,000 National Guardsmen, were required to quell the disturbance, which spread through a 20-block area until it ended on August 15. Thirty-four people were killed, another 1,032 were injured, and property damage, which included the total destruction of 200 buildings, was estimated at \$40 million. Over 3,952 rioters were arrested.

On August 24, Gov. Edmund G. Brown appointed an eight-man commission, headed by John A. McCone, former director of the Central Intelligence Agency, to study the causes of the riot. The report of the commission, issued in December, called for "costly and extreme" action to improve the situation that led to the riots. The commission recom-

mended a massive reading program for schools in disadvantaged areas, a large-scale job training and placement center in the Watts area, a new mechanism for processing complaints of alleged police brutality, and greatly increased mass transit facilities to enable Negroes to commute to jobs in other parts of the city.

Municipal Elections. In the municipal elections on April 7, Mayor Samuel W. Yorty, a Democrat, handily won a second four-year term in the non-partisan, seven-candidate mayoralty race. James Roosevelt, a Democratic congressional representative, was runner-up.

Two of the mayor's opponents among members of the City Council—Mrs. Rosalind Wyman and Karl L. Rundberg—were not reelected. Their defeat aroused speculation that the long-standing feud between the mayor and the council might be at an end. Within a month after the election, however, the council defeated two of the mayor's proposals. One called for a \$50,000 study on the need for revising the city charter. The other would have placed the city's representative in the state legislature under joint control of the mayor and council, rather than under the council only, as at present.

Rapid Transit. The Southern California Rapid Transit District, which replaced the Metropolitan Transit Authority in November 1964, ran into trouble with its efforts to finance the first stages of a comprehensive public transportation system for the Los Angeles area. It failed to get legislative authorization to levy new property taxes and an in-lieu tax on autos and trucks.

Public Finance and Economy. The budget for the 1966 fiscal year called for record expenditures of \$318,623,360, up more than \$17 million from the previous fiscal year. The Los Angeles property tax rate was increased about 2 cents, from \$2.0871 to \$2.1087 per \$100 assessed valuation. The city's net funded debt on July 1 stood at \$244.5 million.

Retail sales in Los Angeles County in 1964 totaled \$11,460,450,000. In July 1965, average industrial employment in the county was 782,900, and unemployment totaled 180,200. The average gross weekly earnings in manufacturing in 1964 were \$122.29. In October 1965 the consumer price index was 112.8 (1957-59=100)—a rise of 2.8 since the previous October.

Other Developments. The Los Angeles County Art Museum was opened in April. It is the largest art museum built in the United States since the National Gallery was opened in Washington, D.C., in 1941, and the largest art museum west of the Mississippi River.

RUBBLE-STREWN STREET in Watts shows the charred debris of one of the many buildings burned during the riots.

Between November 13 and November 24, the Los Angeles area was inundated by 10 to 20 inches of rain. Flash floods and mud slides caused several deaths and extensive property damage. The storms touched off a tornado that cut through the Los Angeles County Fairgrounds on November 25.

The Los Angeles Dodgers defeated the Minnesota Twins to win baseball's 1965 World Series.

Population. By mid-1965 the city's population had reached an estimated 2,738,000, with 6,880,000 in the metropolitan area. Many of the city's problems are the outgrowth of its steady rise in population.

DR. GERALD RIGBY
Assistant Professor of Political Science
University of Southern California

LOUISIANA

With winds clocked at between 170 and 180 miles per hour, hurricane Betsy struck southeastern Louisiana on Sept. 9, 1965, causing widespread devastation. Eighty-one persons in the state died as the result of the storm, and property damage was estimated at nearly \$400 million.

A vast wall of water, pushed by the force of the winds, inundated wide areas of southeastern Louisiana, including a large segment of New Orleans.

Oceangoing vessels, pulled from their moorings, were pushed, stern-first, upstream against the current of the Mississippi River at speeds of 25 miles an hour, and thrust on the river levees.

The storm displaced thousands of persons from their homes in wide areas of southeastern Louisiana. More than 4,948,000 pounds of food was provided for emergency feeding by the U.S. Department of Agriculture. In terms of property losses, the storm was the most destructive natural disaster that took place in the United States in 1965.

Civil Rights. Louisiana's civil rights problems again attracted attention during the year. The Ku Klux Klan was active in the rural areas of the state, and Negro civil rights groups were operating in some of the cities. National interest was centered on Bogalusa, a purported stronghold of the Klan. Negro civil rights groups moved into the town at the beginning of the year to demand equal employment opportunities for Negroes and the desegregation of schools and public facilities. During the demonstrations that followed, state and local leadership was largely successful in preventing violence in the Bogalusa area.

On August 26, to maintain communication between white and Negro factions in the state, Gov. John J. McKeithen established the Louisiana Commission on Race Relations. Gen. Troy H. Middleton, president emeritus of Louisiana State University, was named chairman of the committee, and Dr. Albert W. Dent, president of Dillard University, in New Orleans, was chosen vice chairman. The 42-member committee, equally divided between white and Negro members, will act as an advisory group in areas of the state that require advice on handling racial problems.

Legislation. A total of 366 bills were introduced during the 1965 regular session of the Louisiana State Legislature. Of these bills, 166 became statutory law, and 9 were approved as proposed amendments to the state constitution. The proposed amendments will go to the voters in the state elections of November 1966. The most significant proposed amendment provides that a governor may serve two successive four-year terms, rather than only one term, as at present.

The legislature greatly broadened the authority to invest idle state funds. Also, a capital budget

LOUISIANA Information Highlights

Area: 48,523 square miles.
Population: 3,480,000 (1965 est.).
Chief Cities (1965 est.): Baton Rouge, the capital (166,000); New Orleans (655,000); Shreveport (171,000); Metairie (95,000); Lake Charles (65,000); Monroe (57,500).
Government: Chief Officers—governor, John J. McKeithen (Democrat); Lt. gov., C.C. Aycock (D); secy. of state, Wade O. Martin, Jr. (D); atty. gen., Jack P.F. Gremlillion (D); treas., A.P. Tugwell; supt. of education, William J. Dodd; chief justice, John B. Fournet. **Legislature**—Louisiana State Legislature (convened May 10, 1965); Senate, 39 members (all Democrats); House of Representatives, 105 members (103 D, 2 R).
Education: School enrollment (1964-65)—public elementary, 600,000 pupils (18,100 teachers); public secondary, 210,000 pupils (13,100 teachers); nonpublic schools, 161,800 pupils (5,080 teachers); college and university (fall 1964), 83,027 students. **Public school expenditures** (1964-65)—\$304,000,000 (\$418 per pupil); average teacher's salary, \$5,175.
Public Finance: (fiscal year 1964): Revenues, \$953,278,650 (2% sales tax, \$104,747,824; motor fuel tax, \$69,008,171; federal funds, \$292,488,528). **Expenditures**, \$968,856,039 (education, \$314,241,282; health, welfare, and safety, \$264,223,538; highways, \$208,331,989). **State debt**, \$407,164,500 (June 30, 1964).
Personal Income (1964): \$6,510,000,000; average annual income per person, \$1,877.
Public Assistance (fiscal year 1965): \$154,209,452 to 183,503 recipients (aged, \$105,905,193; dependent children, \$28,220,219).
Labor Force (employed persons, July 1965): Agricultural, 99,100; nonagricultural (wage and salary earners), 907,100 (18% manufacturing, 22% trade, 18% government). **Unemployed persons** (July 1965)—54,600.
Manufacturing (1963): Value added by manufacture, \$1,917,824,000 (transportation equipment, \$114,072,000; primary metals, \$85,966,000; nonelectrical machinery, \$37,621,000; electrical machinery, \$2,443,000; fabricated metals, \$77,674,000; food and products, \$374,536,000).
Agriculture (1964): **Cash farm income**, \$490,757,000 (livestock, \$160,433,000; crops, \$308,229,000; govt. payments, \$22,095,000). **Chief crops** (tons)—sugarcane, 7,590,000 (ranks 2nd among the states); rice, 846,000 (rank, 3rd); cotton lint, 142,800 (rank, 9th); cottonseed, 247,000 (rank, 9th); sweet potatoes, 178,500 (rank, 1st); citrus fruits, 450 (rank, 5th); hay, 626,000; corn for grain, 186,000.
Mining (1964): **Production value**, \$2,785,007,000 (ranks 2nd among the states). **Chief minerals** (tons)—salt, 6,401,000 (rank, 2nd); lime, 725,000 (rank, 7th); sulfur (Frasch process), 3,061,000 (rank, 2nd); crude petroleum, 549,698,000 barrels (rank, 2nd); natural gas, 4,175,412,000,000 cubic feet (rank, 2nd); clays, 780,000.
Fisheries (1964): **Commercial catch**, 703,584,700 pounds (\$34,684,154). **Leading species**—menhaden, 599,537,500 pounds (\$9,045,557); saltwater shrimp, 59,365,000 pounds (\$18,789,964); oysters, 11,401,100 pounds (\$2,976,152); catfish and bullheads, 7,807,800 pounds (\$1,802,275).
Transportation: **Roads** (1965), 49,831 miles (43,898 paved); motor vehicles (1964), 1,473,623; **railroads** (1963), 3,904 miles; airports, 164.
Communications: **Telephones** (1965), 1,274,700; **television stations** (1964), 12; **radio stations** (1964), 95; **newspapers** (1965), 21 (daily circulation in 1964, 771,277).

LOUISIANA Gov. John J. McKeithen (center) meets with Jonesboro Negroes demanding better educational facilities.

program was initiated along with the tightening of administrative processes through a Division of Administration directly under the governor.

Economy. A tremendous building boom took place in Louisiana during the year. More than \$1 billion worth of new chemical plants, petroleum refineries, power-generating stations, and other projects were under construction. Boom areas were situated on the Mississippi River between New Orleans and Baton Rouge, and around the port city of Lake Charles.

A shortage of labor existed, particularly in the manual skills. As of September, 97% of the labor force in the state was gainfully employed—the largest proportion at any time in the past 10 years. To meet the threat of inflation and the problems caused by the scarcity of labor, high-level conferences were held among government, industry, and labor leaders.

LUTHERAN CHURCHES

The creation of a Lutheran Council in the United States of America (LCUSA) as a cooperative agency among the four major Lutheran groups was assured in 1965. Following approval of membership in the council by the American Lutheran Church in 1964, the Lutheran Church-Missouri Synod and the Synod of Evangelical Lutheran Churches voted to participate in 1965. The fourth body, the Lutheran Church in America, is expected to join in 1966.

The LCUSA, scheduled to succeed the present National Lutheran Council in 1967, is intended to promote theological study and Christian service. The four bodies under the LCUSA banner represent more than 96% of the 8,707,273 Lutherans in the United States. Affiliated groups in Canada, with 295,696 members, have begun to form a similar agency.

In a highly significant action, the Missouri Synod authorized cooperation with other Lutheran bodies in the preparation of a joint hymnal and liturgy. It is believed that a common service book will be an effective means for promoting Lutheran unity. The Synod also approved studies looking toward changing its name and relocating its headquarters, presently in St. Louis. The Synod reelected Dr. Oliver R. Harms as president and, in line with a change from triennial to biennial conventions, voted a four-year term for this office.

The first official theological consultations ever held between Lutheran and Roman Catholic churchmen took place in July 1965. Seventeen scholars and officials of the two communions examined Lutheran and Catholic interpretations of the topic "Status of the Nicene Creed as Dogma of the Church." The consultations were the first of a series of discussions on a wide range of theological questions.

For the third successive year, Lutheran and Reformed churchmen held conversations related to the traditions of the two communions. They planned a final evaluation session in 1966. Preliminary steps were taken also for Lutheran-Orthodox talks.

On Reformation Day, observed on October 31, a three-volume *Encyclopedia of the Lutheran Church* (1965) was published. This is the most complete reference work on Lutheranism available in English. The encyclopedia includes articles on doctrine, church history, church government, Christian Edu-

cation, liturgy, religious art, missions, and welfare activities. It also contains about a thousand biographies of great Lutheran leaders of the past.

National Lutheran Council

LUXEMBOURG

Luxembourg City was the site for meetings of the European Economic Community (EEC or Common Market) from January 17 to 18 and January 28 to 30, 1966, at which France and the other five EEC members (West Germany, Italy, Belgium, the Netherlands, and Luxembourg) reached a compromise agreement on questions of political integration within the economic union (see **EUROPE**). France, which had boycotted all EEC sessions from July through December 1965, agreed to attend the January meetings only after the site was changed from EEC headquarters in Geneva to Luxembourg. Premier Pierre Werner of Luxembourg presided over the EEC Ministerial council during these negotiations.

Luxembourg was not exempt from the inflationary pressures prevalent in western Europe in 1965. The gross national product climbed only 2%, while the retail price index rose at least 3%. However, few people were concerned as wages were among the highest in Europe and the number of unemployed workers was only 10. Despite diversification attempts, steel accounted for over half of business activity.

LUXEMBOURG · Information Highlights

Area: 998 square miles.
Population: 330,000 (Dec. 31, 1964 est.).
Chief City (1963 est.): Luxembourg, the capital, 75,166.
Government: Head of State—Grand Duke Jean (acceded Nov. 12, 1964); Premier—Pierre Werner (took office Feb. 26, 1959). **Parliament**—Chamber of Deputies, 56 members; party seating (1965): Christian Social, 22; Socialist, 21; Democratic, 6; Communist, 5; Independent Popular Movement, 2.
Religious Faiths: Roman Catholics, 92% of population; others, 8%.
Education: Literacy rate—99% of population. Total school enrollment (1962-63)—40,115 (primary, 31,828; secondary, 4,561; teacher-training, 105; technical, 3,621).
Finance (1965 est.): Revenues, \$156,412,000; expenditures, \$158,236,000; monetary unit, franc (50 francs equal U.S.\$1).
Gross National Product (1963): \$550,000,000.
National Income (1964): \$480,000,000; average annual income per person, \$1,463.
Economic Indexes (1964): Industrial production (1958=100), 124; cost of living (1958=100), 108.
Manufacturing (metric tons, 1963): Crude steel (1964), 4,559,000; cement, 203,000; beer, 47,100; meat, 24,000; wine, 15,000; butter, 5,000; lumber, 58,000 cubic meters.
Crops (metric tons): Oats (1964), 43,000; grapes (1963), 21,000; rye (1964), 7,000; cabbages (1962), 1,000.
Chief Mineral (metric tons, 1964): Iron ore, 6,680,000 (ranks 14th among world producers).
Transportation: Roads (1964), 2,759 miles; motor vehicles (1964), 64,200 (automobiles, 52,500); railways (1963), 230 miles; civil airline, Luxair; principal airport, Luxembourg.

McNAMARA, Robert Strange

U.S. secretary of defense: b. San Francisco, Calif., June 9, 1916.

In view of the confrontation between the United States and world communism, and considering that the Department of Defense spends about half of the federal budget, one would expect that in 1965 the secretary of defense would exert considerable influence in national affairs. But Robert McNamara, more than merely influential, was widely regarded as the most powerful person in Washington next to the president. McNamara, pledged to preserve American military power, imposed at the same time the most rigid economies in his department. In his vigorous efforts to execute these almost contrary objectives, he was the subject of both admiration and criticism.

Vietnam. In 1963, McNamara had predicted that most U.S. military personnel would be out of Vietnam by the end of 1965. But as Communist insurrectionists increased their pressure on South Vietnam, the United States stepped up its military aid to the latter. On Feb. 18, 1965, the secretary told a House committee that the loss of South Vietnam would "greatly increase the prestige of Communist China among the nonaligned nations and strengthen the position of their following everywhere."

During a trip to Vietnam (July 16-20, 1965), McNamara heard American and Vietnamese military leaders recommend that the United States increase its aid. Before leaving Vietnam, the secretary said that the situation had deteriorated, and that the Communists had increased their forces and the number of their attacks. McNamara then conferred with President Johnson for several days, after which the president announced, on July 28, that the U.S. military forces in Vietnam would be increased sharply.

In November, McNamara went to Vietnam for the seventh time in five years. He concluded that the Communists had chosen to "raise the level of conflict" and that "it will be a long war."

The Defense Establishment. In 1965, Secretary McNamara often cited the growth of U.S. strength during his administration. Nuclear weapons had tripled, the number of combat-ready Army divisions had risen from 11 to 16, the number of tactical fighter aircraft had climbed from 1,200 to 1,600, and counterinsurgency forces had increased tenfold.

But critics complained that McNamara downgraded or ignored advice from military men. Senator J. William Fulbright said that he exerted too much influence on foreign affairs. L. Mendel Rivers, chairman of the House Armed Services Committee, favored a congressional veto over the closing of military bases, but the economy-minded McNamara shut down some more bases in 1965. Congress blocked McNamara's effort to merge the Army Reserve and the National Guard, and doubled the military pay increases which McNamara had requested. Despite congressional pleas that he defer action, McNamara announced on December 13 that he would disband 751 Army Reserve units. In 1965, missiles continued to play the major role in McNamara's defense plans, to the dismay of the proponents of manned bombers.

Background. McNamara graduated from the University of California in 1937 and from the Harvard University Graduate School of Business Administration in 1939. He taught at Harvard from 1940 to 1943, and then served with the Army Air Forces. In 1946, he joined the Ford Motor Company as a financial analyst, became general manager of the Ford Division in 1955, and company president on Nov. 9, 1960. A month later, he accepted President-elect Kennedy's invitation to become secretary of defense.

DEFENSE SECRETARY McNAMARA, at a news conference on February 7, discusses first U.S. bombing of North Vietnam after raids on American bases.

PICTORIAL PARADE

MAGAZINES

With advertising revenues at an all-time high of \$746,784,678 for the first 9 months of 1965, general and farm magazines in the United States expected a record total advertising income of over \$1 billion for the entire year. A similar total had been anticipated for 1964, but the final figure was \$996,821,818. The Publishers Information Bureau, Inc., estimated circulation in the first half of 1965 at 210,815,000, a gain of 2.6%. Advertising pages for 1965 were expected to exceed 81,000, compared with 78,300 in 1964.

Despite rising costs, net profits for the U.S. magazine business were expected to run about 4% of sales, holding closely to the higher-than-anticipated 4.3% earned in 1964.

New Ownership. Important changes in ownership and management were made in 1965. A newspaper, the Minneapolis *Star and Tribune*, bought a half-interest in *Harper's Magazine*. Dell Publishing Co. purchased 75-year old Noble & Noble, publisher of elementary and secondary school textbooks. Metro-media, Inc. (TV, radio, billboards, etc.) acquired *Diplomat*. The 75-year-old *Printers' Ink* was purchased by an employee group. *Show* was sold to *Playbill* (theater programs) and ceased publication with the May issue.

New Policies. Among major policy changes, Curtis Publishing Co., in an attempt to break even financially in 1965, instituted drastic cutbacks, including the reduction of the *Saturday Evening Post* from 45 to 26 issues per year, and made major personnel changes. The company lost about \$13.9 million in 1964. In other changes, the *New Yorker* joined the *Reader's Digest* and the *Saturday Review* in refusing to accept cigarette advertising; and a pharmaceutical manufacturer, whose products include a contraceptive, began an advertising campaign in support of planned parenthood in news and business magazines and in daily newspapers.

Business Publications. American Business Press, Inc., estimated that 1965 advertising revenue for business publications, exclusive of production costs, would exceed \$672 million. There were some 2,600 business publications in the United States in 1965 (a gain of about 30 over the previous year), with a combined circulation of about 57 million. Advertising and editorial pages were estimated at 1,200,000 and 800,000, respectively.

Canadian Developments. After five years of discussion, Canada's Parliament enacted legislation to restrict the importation of some U.S. publications, and to disallow tax deductions to Canadian advertisers in non-Canadian periodicals aimed primarily at the Canadian market. Customs tariff amendments were instituted (effective 4 issues before Jan. 1, 1966) which prohibit foreign publishers from issuing special editions, split run or regional, that have advertisements primarily directed at the Canadian market if these advertisements do not appear in identical form in all editions of the issue distributed in the country of origin. The amendments also ban any issue of a foreign publication in which more than 5% of the advertising space indicates "specific sources of availability in Canada, or specific terms or conditions relating to the sale" of a product. *Time* and *Reader's Digest* were exempt from the amendments because they publish in Canada. However, the government was considering imposing special higher postal rates for them as part of a general postal increase for second- and third-class matter.

New Publications. Nearly 60 new general and specialized magazines were scheduled for publication in 1965 or early 1966, compared with some 40 a year earlier. Among the new consumer publications were: *Accent On Leisure*; *Aspen*; *Better Living Magazine*; *Colorado*; *Contemporary*; *Dare*; *Early Years*; *Expanse*; *In-For the Girl of Today*; *One Alone*; *Photo Screen*; *Rights Reviews*; *Sportfishing*; *Status*; *The Public Interest* (sponsored by Freedom House); *Vietnam Perspectives*; and *Weekend*.

Business and other specialized ventures included: *Air Force/Space Digest International*; *American Education* (which replaced *School Life*); *American Hospital Products*; *Business Economics*; *Catering Management*; *Chemicals 26*; *Chemical Purchasing*; *Closed Circuit Television*; *Coiffure Professionnelle*; *Columbia Journal of World Business*; *Cotton*; *Electronic Communicator*; *Electronics Week*; *Hospital Physician*; *Hospital Product News*; *Hunting, Fishing & Camping*; *Industrial Electronics Digest*; *Institutional Distribution*; *Journal of Purchasing*; *Marketing Forum*; *MD's Wife*; *Medical Horizons*; *Medical Opinion & Review*; *Paper Age*; *Plastic Laminating*; *Professional Barber*; *Purchasing International*; *Salon Owner*; *Sight & Sound Retailing*; *Specialty Foods*; *Surgery Digest*; *Timebuyer*; *Training in Business & Industry*; and *Your Vacation*.

MAINE

Congressional authorization of a hydroelectric dam on the St. John River and construction of a sugar beet refinery in Aroostook County were important events in Maine in 1965.

The Dickey Project. Originally conceived as a means of stabilizing the output of power from the long-studied Passamaquoddy Bay tidal power project, the Dickey Dam on the St. John River was the only portion of the project to be approved in 1965. The dam was authorized by Congress after President Johnson rescued the project from what appeared to be certain defeat in the House. The estimated cost of the dam is \$227 million, as compared with \$896 million for the combined Passamaquoddy Bay-St. John River power project.

Sugar Beet Refinery. A sugar beet refinery at Easton was under construction in 1965 and was scheduled to become operative in the fall of 1966. The \$14.7 million plant, being built in part with federal funds, will make Maine the first New England state to grow and refine sugar in modern times. The refinery is expected to produce 37,000 tons of sugar in 1966, as well as molasses and dairy feed byproducts. Most of the beets will be grown in Aroostook County, thus broadening the base of the potato-oriented agriculture of the area.

Politics and Legislation. Faced by a Democratic Legislature, Republican Gov. John H. Reed presented a liberal legislative program which won considerable support from the Democrats. Legislation enacted included increased aid to education and a program that will force eventual consolidation of small school districts. Workmen's compensation payments were increased; the state minimum wage was raised from \$1.00 to \$1.25 an hour; and fair-employment and nondiscriminatory rental laws were passed.

To finance increased state spending, the Legisla-

WIDE WORLD

MAINE will derive hydroelectric power from the Dickey Dam to be built on the St. John River as part of a \$227 million Passamaquoddy power project.

MAINE • Information Highlights

Area: 33,215 square miles.

Population: 989,000 (1965 est.).

Chief Cities (1965 est.): Augusta, the capital (21,800); Portland (72,000); Lewiston (42,500); Bangor (39,000); Auburn (24,200); South Portland (23,200); Biddeford (18,800); Waterville (18,500).

Government: Chief Officers—governor, John H. Reed (Republican); secy. of state, Kenneth M. Curtis (Democrat); atty. gen., Richard J. Dubord (D); treas., Eben L. Elwell; comm. of educ., William T. Logan, Jr.; chief justice, Robert B. Williamson. **Legislature** (convened Jan. 6, 1965)—Senate, 34 members (29 Democrats, 5 Republicans); House of Representatives, 151 members (81 D, 70 R).

Education: School enrollment (1964-65)—public elementary, 162,000 pupils (6,330 teachers); public secondary, 57,500 pupils (2,860 teachers); nonpublic schools, 41,100 pupils (1,610 teachers); college and university (fall 1964), 18,445 students. **Public school expenditures** (1964-65)—\$77,100,000 (\$371 per pupil); average teacher's salary, \$5,200.

Public Finance (fiscal year 1964): Revenues, \$235,059,000 (4% sales tax, \$40,780,000; motor fuel tax, \$25,515,000; federal funds, \$48,155,000). Expenditures, \$223,596,000 (education, \$48,662,000; health, welfare, and safety, \$32,462,000; highways, \$60,587,000). **State debt**, \$73,521,000 (fiscal 1964).

Personal Income (1964): \$2,108,000,000; average annual income per person, \$2,132.

Public Assistance (fiscal year 1965): \$17,074,019 to 42,275 recipients (aged, \$7,004,917; dependent children, \$6,303,137).

Labor Force (employed persons, Aug. 15, 1965): Agricultural, 23,000; nonagricultural (wage and salary earners), 341,100 (37% manufacturing, 19% trade, 17% government). Unemployed persons (Aug. 15, 1965)—13,700.

Manufacturing (1963): Value added by manufacture, \$779,260,000 (transportation equipment, \$40,212,000; paper and allied products, \$229,754,000; food and products, \$109,333,000); nonelectrical machinery, \$13,320,000; electrical machinery, \$9,807,000; fabricated metals, \$15,259,000; leather and leather products, \$136,612,000; textile products, \$79,632,000; lumber and wood products, \$60,951,000).

Agriculture (1964): Cash farm income, \$232,468,000 (livestock, \$129,085,000; crops, \$100,671,000; govt. payments, \$2,712,000). Chief crops (tons)—potatoes, 1,994,000 (ranks 2nd among the states); apples, 46,800 (rank, 14th); hay, 476,000; oats, 34,000; maple syrup, 10,000 gallons.

Mining (1964): Production value, \$17,574,000 (ranks 47th among the states). Chief minerals (tons)—sand and gravel, 13,552,000; stone, 1,414,000; clays, 45,000.

Fisheries (1964): Commercial catch, 192,575,000 pounds (\$21,958,000). Leading species—ocean perch, 58,936,000 pounds (\$2,500,000); northern lobster, 21,413,000 pounds (\$14,182,000).

Transportation: Roads (1965), 21,005 miles (18,735 surfaced); motor vehicles (1964), 408,894; railroads (1965), 2,521 miles; airlines (1965), 1 (103 airports).

Communications (1965): Telephones, 371,800; television stations, 9; radio stations, 31; newspapers, 9 (daily circulation, 253,925).

ture enacted miscellaneous tax increases. (However, it was assumed that existing levies would produce additional revenue.) By late 1965 it appeared that Maine would continue to operate on a sound fiscal basis in spite of record-breaking expenditures.

Six bond issues for highways and education were approved by the voters on November 2. Three constitutional amendments also were approved.

Economic Conditions. Maine experienced its best tourist season in 1965. Employment was high in most of the state during the year, but agricultural production was hurt somewhat by the fourth consecutive year of drought.

Education. The University of Maine celebrated its 100th anniversary and selected Dr. Edwin H. Young to succeed Lloyd H. Elliott as president.

MALAGASY REPUBLIC

AFRICA ASIA

President Philibert Tsiranana received 95% of the votes in the Malagasy Republic's first popular presidential election, on March 30, 1965, and was re-elected for another seven-year term. Earlier, the president's dominant Social Democratic party had

won heavily in local elections, in which the only major upset for the Social Democrats was the election of Richard Andriamanjato, leader of the opposition Congress party, as mayor of the capital city of Tananarive. Following his victory, Tsiranana urged opposition parties to unite in order to form a strong opposition which could help to prevent a one-party state.

Trade Negotiations. In late 1964 the Malagasy Republic signed a three-year trade agreement with the Soviet Union to exchange fruits, vegetables, and minerals for manufactured goods and industrial equipment. Trade agreements also were signed with Czechoslovakia and Spain in January, and negotiations were conducted with a visiting Hungarian trade mission in June. In July, Tom Mboya, Kenya's minister of economic development and planning, and Bruce McKenzie, the Kenyan minister of agriculture, discussed with Malagasy officials the possibility of expanding trade.

African Unity. The Malagasy Republic became a member of the 14-nation Organisation Commune Africaine et Malgache (OCAM), which was formed in February 1965 within the framework of the 34-nation Organization of African Unity (OAU). The OCAM seeks to strengthen cooperation and solidarity among the member states in order to speed up their political, economic, technical, and social development. (See AFRICA.)

President Tsiranana led OCAM's opposition to the intrusion of Communist China into African affairs. The Malagasy Republic, which has more than 15,000 non-Communist Chinese residents, has diplomatic relations with Nationalist China, but does not officially recognize Communist China.

MALAWI

Major developments in Malawi in 1965 included politically inspired violence in Fort Johnston, a dispute with neighboring Tanzania over the harboring of Malawi rebels, charges of subversion against Communist China, and the effects of Rhodesia's independence.

Fort Johnston Riots. Prime Minister Hastings K. Banda successfully weathered a revolt by half of his cabinet in 1964. In 1965, opposition to his allegedly arbitrary rule was centered in Fort Johnston, where riots and mass arrests occurred in February, and order was not restored until March. The leading challenger to Banda's authority was the former minister of education, Henry M. Chipembere, who escaped from detention at his Fort Johnston home and reportedly took refuge with other exiles in Tanzania. On May 22, Prime Minister Banda announced that Chipembere had fled to the United States.

Dispute with Tanzania. Banda charged President Julius K. Nyerere of Tanzania with harboring Malawi rebels and aiding their plots to overthrow the Malawi government. On June 16, President Nyerere admitted sheltering Malawi refugees but denied aiding them in their opposition to Banda.

Charges Against Communist China. On July 6, Banda charged Communist China with supplying money and arms to Malawi rebels and providing them with subversive training. In a nationwide broadcast on October 10, he further charged Communist China with plotting to overthrow his regime in favor of Kanyama Chiume, former Malawi foreign minister living in exile in Tanzania. Banda said that Communist China had trained 80 men in China,

MALAWI YOUTHS work on a pineapple plantation near Blantyre as part of their training in the government-sponsored Back to the Land Movement. Malawi hopes to diversify its agriculture as a means of increasing its export trade.

Cuba, and Algeria to spread subversion in Malawi.

Effects of Rhodesian Independence. The Malawi government announced on November 17 that its trade agreement with Rhodesia was abrogated because of Rhodesia's declaration of independence from England. The government stated that it would impose custom duties on a wide range of Rhodesian products previously admitted into Malawi free of duty.

In December, Prime Minister Ian Smith of Rhodesia announced that henceforth Rhodesia would demand payment in U.S. or Canadian dollars or Western currency for goods it supplies to Malawi. Smith's government also announced that it would expel immigrant African laborers who become unemployed as a result of Rhodesia's falling exports. Approximately 200,000 Malawians work in Rhodesia.

Capital Relocation. Banda went ahead in 1965 with his plan to relocate the national capital 10 miles north of Lilongwe, which is 200 miles north of the present capital at Zomba. Since Lilongwe is in the nation's grain belt and lacks industrial development, one stated purpose of the proposed move is to draw economic development to the central region and provide needed employment. However, critics of Banda's plan, which will cost a minimum of \$16.8 million, suggest that the prime minister's real purpose is to have the capital nearer the sources of his own political support. Former government offices in Zomba will be used to house the University of Malawi, now situated at Blantyre, near Zomba.

Governmental Changes. After Malawi celebrated the first anniversary of its independence on July 6, Banda announced (July 20) that Malawi would become a republic within the Commonwealth of Na-

tions on July 6, 1966. His announcement was confirmed by the annual conference of the ruling Malawi Congress party on October 17, at which Banda was unanimously elected president-designate. The conference also approved the new republican constitution, which provides for a president as sole head of state but not for a vice president or premier.

Diplomatic Appointment. On May 12, Banda announced the appointment of Vincent Gondwe to replace David Rubardi as Malawi's ambassador to the United States and as permanent representative to the United Nations.

Economic Developments. Late in 1964, Banda obtained aid from Britain, the United States, and the United Nations to implement Malawi's \$126 million five-year development plan. Britain has contributed \$33.6 million to Malawi for various projects since 1964, and the United States has assigned \$500,000 for a polytechnic institution. France, West Germany, Canada, and Israel also have either given or promised aid for development projects.

New plants opened in Malawi in 1965 included a \$2.8 million sugar refinery at Nchala and a \$2.8 million textile mill in Blantyre. Construction was begun on a hydroelectric project on the Shire River, scheduled for completion in 1966.

Landlocked Malawi, whose per capita income of \$48 a year is one of the lowest in Africa, has a railway link with Mozambique on the Indian Ocean. A second rail link with Mozambique was being contemplated in August 1965, but no decision had been made by the end of the year.

MALAYSIA

The two-year-old federation of Malaysia was confronted with its gravest internal crisis in the summer of 1965, when mounting tension between the federal government in Kuala Lumpur and the constituent state of Singapore resulted in Singapore's enforced withdrawal from the federation. Relations with the federal government also were strained in the two Bornean states of Sabah and Sarawak, and considerable dissatisfaction was voiced there over Kuala Lumpur's failure to consult them on so vital a decision. After the Singapore-Malaysia split, pressures for greater autonomy or separation were felt in both Bornean states.

Meanwhile the external threat of Indonesia's policy of "confrontation" with Malaysia continued, chiefly in irritant border raids in Sabah and Sarawak. But internal problems in Indonesia, resulting from the coup and countercoup of October 1, reduced the immediate danger of that country's anti-Malaysian policy.

The Background. The roots of the Singapore-Malayan conflict were deep. At first, the original Federation of Malaya, independent since 1957, resisted the call for merger with the British colony of Singapore voiced by Singapore's governing People's Action Party (PAP). Malaya's conservative Alliance government of Prime Minister Tunku (Prince) Abdul Rahman feared the political radicalism en-

demic in Singapore and the prospect that its predominantly Chinese population would swamp the delicate Malay-Chinese racial balance at home.

In early 1961, Prince Rahman shifted his position. Fearing that the pro-Communist faction of the PAP might soon govern an independent Singapore, he endorsed a "Greater Malaysia" union in which the mixed population of the Bornean states would be drawn in to offset the Singapore Chinese. No sooner had the new state of Malaysia been proclaimed on Sept. 16, 1963, than the incipient political rivalry between the incumbent Alliance government in Kuala Lumpur and Singapore's PAP government, aggressively led by Prime Minister Lee Kuan Yew, became acute. In hastily called elections in Singapore, the PAP won a rousing endorsement.

Determined to expand its power base beyond Singapore, the PAP entered the April 1, 1964, parliamentary elections in Malaya to contest nine seats in urban constituencies with large Chinese populations. The apparent strategy was to demonstrate to Prince Rahman and his own party, the United Malays National Organization (UMNO), that the PAP had greater drawing power among Malaya's Chinese than the Malayan Chinese Association, a partner with UMNO in the multiracial Alliance coalition, and should replace it in the federal government. UMNO's leaders interpreted the PAP's challenge as an effort to make Lee Kuan Yew prime minister of Malaysia and assure Chinese political domination.

AUSTRALIA

Area: 128,430 square miles.

Population: 9,136,641 (June 30, 1964 est.), incl. Malaya, 7,810,205; Sarawak, 819,808; Sabah, 506,628.

Chief City (1963 est.): Kuala Lumpur, the capital, 316,230.

Government: Paramount Ruler—Prince Ismail Nasiruddin Shah (took office Sept. 21, 1965); Prime Minister—Prince Abdul Rahman (took office Sept. 16, 1963). Parliament—House of Representatives, 144 members; party seating, 1965: Alliance, 89; Alliance Sarawak, 18; Alliance Sabah, 16; Pan-Malayan Islamic, 9; others, 12; Senate, 60 members.

Religious Faiths: Muslims, more than 50% of population; Roman Catholics, 3%.

Education: Literacy rates—Malaya (1957), 47% of population aged 15 and over; Sabah (1960), 24%; Sarawak (1960),

22%. Total school enrollment (1963)—1,595,440 (primary, 1,320,855; secondary, 256,951; teacher-training, 653; technical, 8,411; higher, 8,570).

Finance (1964 est.): Revenues, \$380,000,000; expenditures, \$469,000,000; monetary unit, Malayan dollar (3.07 dollars equal U.S.\$1).

Gross National Product (1964): \$2,285,000,000 (Malaya only). National Income (1962): \$1,645,000,000 (Malaya only); average annual income per person, \$223.

Manufacturing (metric tons): Cement (1964), 417,000 (incl. Singapore); gasoline (1963), 323,000 (Sarawak only); meat (1963), 38,400 (Malaya only).

Crops (metric tons, incl. Singapore): Rubber (1964), 897,900 (ranks 1st among world producers); rice (1963-64), 869,000 (rank, 19th); palm kernels (1963-64), 28,000 (rank, 8th); tea (1964), 2,900 (rank, 18th).

Minerals (metric tons, 1964, incl. Singapore): Iron ore, 6,568,000 (ranks 16th among world producers); bauxite, 639,000 (rank, 13th); tin, 60,967 (rank, 1st).

Foreign Trade (1964): Exports, \$1,125,000,000 (chief exports, Malaya only: rubber, \$407,000,000; tin, \$203,000,000); imports, \$1,067,000,000 (chief imports, 1963: nonelectrical machinery, \$82,000,000; motor vehicles, \$68,000,000. Chief trading partners (1963): Singapore (took 21% of exports, supplied 14% of imports); Britain (took 8% of exports, supplied 20% of imports).

Transportation (incl. Singapore): Roads (1964), 8,313 miles (6,424 paved); motor vehicles (1964), 180,004 (automobiles, 139,248); railways (1963), 1,124 miles; airline, Malayan Airways Ltd.; principal airport, Kuala Lumpur.

Communications: Telephones (1964): 109,913; television stations (1964), 2 (incl. Singapore); television sets (1964), 17,000 (incl. Singapore); radios (1962) 387,000; newspapers (1961), 44 (daily circulation, 502,000).

UPI

TUNKU ABDUL RAHMAN, prime minister of Malaysia, took the painful step in 1965 of demanding that Singapore withdraw from the Malaysian federation. The chief architect of the multiracial federation established in 1963, Prince Rahman had concluded that Singapore's departure was necessary to prevent communal strife between ethnic Chinese and Malays. With Singapore's Chinese asserting their political role, and militant Malay nationalists demanding repressive measures against them, the moderate prime minister, caught in the middle, felt that separation was the only alternative to bloodshed.

Rahman, a son of the sultan of Kedah, was born in Kedah, Malaya, on Feb. 8, 1903. He studied at Cambridge, England, in the 1920's and returned to England to take a law degree in 1949. Entering Malayan politics in the early 1950's, he formed the multiracial Alliance party. In 1957 he was elected prime minister of the newly independent Federation of Malaya. Six years later he formed Malaysia by federating Malaya with Singapore, Sabah, and Sarawak.

MALAYSIAN SOLDIERS stand guard as Chinese villagers take a communal bath after arriving at a resettlement camp at Kuching, Sarawak, in July 1965. The government moved 8,000 Chinese into such camps to protect them from Indonesian raiders and to ward off Communist influence.

UPI

Although the PAP won only a single parliamentary seat in the April 1964 election, UMNO's fears of its encroachment did not subside. The militantly pro-Malay faction in UMNO launched fresh attacks on Prime Minister Lee's administration. Two serious Malay-Chinese communal riots occurred in Singapore during the summer of 1964.

The Crisis. Early in 1965 the PAP and other dissident parties formed the Malaysian Solidarity Convention, which pledged a multiparty "crusade" for genuine interracial unity. Government leaders, drawing attention to the heavily Chinese composition of the convention's member parties, charged that its espousal of interracial unity concealed a militant Chinese communalism.

In May, stormy parliamentary debates were provoked by the PAP's censure motion against the government for failing to include a pledge of interracial unity in the Shah's address to parliament. A procession of Alliance leaders rose to castigate the PAP's divisive tactics, and some demanded that Prime Minister Lee, who was also a deputy in the federal Parliament, leave the House. Finance Minister Tan Siew Sin flatly asserted that cooperation between Kuala Lumpur and Singapore was impossible so long as Lee headed the Singapore government. In July the Alliance government expelled Alex Josey, a long-time British correspondent in Singapore and a close adviser to Lee Kuan Yew, for "interfering in Malaysia's internal politics and disrupting its interracial harmony." The PAP's subsequent charge that the federal government was planning to arrest Lee was indignantly denied in Kuala Lumpur.

In July, Prince Rahman, after attending the Commonwealth Prime Ministers Conference in London, made his crucial decision. Upon his return he held secret conversations with Lee, and on August 9, Singapore's departure was publicly announced.

The Aftermath. Shortly thereafter, the minister for Sabah affairs, Dato Donald Stephens, resigned from the federal cabinet, calling for wider autonomy for his home state. In Sarawak the radical opposition party, the Sarawak United People's Party (SUPP), called for a plebiscite on Sarawak's continued membership in the federation. As an alternative to the Malaysian federation, SUPP proposed a North

Borneo federation to comprise Sabah and Sarawak and the British protectorate of Brunei, which had declined to join Malaysia in 1963.

Prime Minister Rahman warned that Sabah and Sarawak would not have the option of withdrawing from the federation. The presence of British defense forces, which constituted the only effective protection against Indonesia's incursions in North Borneo, probably was sufficient to induce the two states to remain in the federation for the time being. (See also ASIA; INDONESIA.)

Economy. Despite political turmoil, the Malaysian economy continues to prosper. In 1965 the gross national product grew by 8.5%, compared with 7.6% in 1964. Sustained demand for Malaysian rubber and tin accounted largely for the favorable balance of trade, estimated at over \$99 million.

In November the government announced a greatly expanded five-year development plan to commence in 1966. An anticipated 42% increase in public sector expenditures, compared with the 1961-65 plan, would require a tripling of foreign assistance.

MALDIVES ISLANDS

The Maldiv Islands, an archipelago consisting of some 2,000 islands in the Indian Ocean southwest of Ceylon, achieved independence in 1965.

Independence. A self-governing sultanate formerly under British protection, the Maldiv Islands became fully independent of Britain on July 26, 1965. An agreement signed at that time by Maldivian Prime Minister Ibrahim Nassir and British High Commissioner for Ceylon, Sir Michael Walker, replaced a 1960 treaty that had empowered Britain to act on behalf of the Maldivian government in foreign affairs. The new agreement also provided for British retention of a Royal Air Force base and other facilities on Gan Island in the southern Maldives.

Following its independence the Maldiv Islands was admitted to the United Nations on Sept. 21, 1965. The Maldivian delegation, which includes

MALDIVIAN DELEGATES were congratulated when the flag of their newly independent country was raised at the UN Plaza in New York on Oct. 12, 1965. Participants in the ceremony included (l. to r.) UN Secretary-General U Thant, British Minister of State for Foreign Affairs Lord Chalfont, and Maldivian Delegate to UN, Ahamed Hilmy Didi (center).

Ahamed Hilmy Didi as permanent representative and delegates Abdul Sattar and Ahmed Ismail, was formally welcomed into the United Nations on October 12.

Government. The government of the Maldives Islands is headed by a sultan (Amir Muhammed Farid Didi since Feb. 22, 1954), who is elected for life by the Majlis (Parliament). The sultan appoints a prime minister on the advice of the Majlis. The prime minister serves as minister of external affairs, public safety, education, finance, and public works.

The Majlis consists of 54 members, six of whom are appointed by the sultan; the remainder are elected by universal suffrage. It meets in the capital city of Malé.

People. The majority of the population in the archipelago, of which only 220 islands are inhabited, are Sunni Muslims of mixed Sinhalese, Arab, Malay, and Negro ancestry. Most of the people are engaged in fishing, the islands' principal industry.

Economy. Each year the Maldives Islands exports approximately \$400,000 worth of Maldivian fish—a mixture of bonito and tuna. Almost all the islands' trade is with Ceylon, although ambergris is sold in Bombay, India. Also exported are small quantities of coconuts, copra, coir, and tortoise shell. Malé Island is the chief commercial center.

MALI

Mali negotiated with France in 1965 to obtain French backing of its currency without jeopardizing Mali's status as a completely independent country. A team of negotiators spent several months in Paris during the first half of the year, but the two countries reached no agreement on this delicate issue. However, France continued to supply some financial

aid and technical assistance, including help to develop agriculture in the Upper Niger valley.

Economy. Increased rice and cotton production, major targets of the social and economic development plan launched in 1961, suffered a severe setback as the result of disastrous floods caused by unusually heavy rains in central Mali in August. However, through outside aid, some progress was made in the industrial sector of the development plan. The Soviet Union agreed to help build a 50,000-ton-capacity cement works; France pledged to invest in a radio receiver plant and a plastics factory in Bamako; Israel cooperated in exploiting solar energy; and Communist China committed itself to build a textile factory in Ségou.

Legislation. The National Assembly's spring session was devoted primarily to economic legislation. The laws passed aim to eliminate intermediaries from marketing agricultural produce, to strengthen consumer cooperatives, and to reduce fraud and smuggling in the agricultural markets.

Foreign Affairs. Mali signed a friendship treaty with Communist China during President Modibo Keita's lengthy trip to Asia in late 1964. The government insisted, however, that it had not abandoned its policy of nonalignment. This policy was demonstrated by Mali's continued friendly relations with France and other members of the European Economic Community. Also, after anti-American demonstrations by government-controlled labor unions in March, the minister of economic coopera-

University of Chicago

MALTA

Malta attempted to forge an independent foreign policy and to make its mark on the international scene by joining several organizations in late 1964 and during 1965.

Foreign Affairs. After it had achieved its independence on Sept. 21, 1964, Malta was admitted as a member of the United Nations on December 1.

Malta was accepted as the 18th full member of the Council of Europe by the organization's Council of Ministers and Consultative Assembly on Jan. 25, 1965. Malta will have three seats in the Council's Consultative Assembly.

On August 4, George Feldman was sworn in as

Steinkopf (PC); atty. gen., Stewart E. McLean (PC); min. of educ., George Johnson (PC); chief justice, C.C. Miller. **Legislature—Legislative Assembly** (convened Feb. 22, 1965), 57 members (36 Progressive Conservative, 13 Liberal, 7 New Democratic Party, and 1 Social Credit).
Education: School enrollment (1963–64 est.)—public elementary and secondary, 212,644 pupils (8,600 teachers); private elementary and secondary, 11,175 (559); Indian, 5,802 (236); colleges and university (1963–64), 9,114 students, all enrolled at the University of Manitoba in Winnipeg and Regina. **Public school expenditures (1963)**—\$77,668,000; average teacher's salary, \$4,437.
Public Finance (fiscal year 1965 est.): Revenues, \$146,840,000 (income tax, \$41,036,000; sales tax, \$31,240,000; federal funds, \$24,497,000). **Expenditures,** \$177,920,000 (health and social welfare, \$54,750,000; education, \$44,100,000; transportation and communications, \$27,000,000).
Personal Income (1964): \$1,721,000,000; average annual income per person, \$1,796.
Public Assistance (fiscal year 1965 est.): \$18,460,000 (aged and blind, \$4,010,000; dependents and unemployed, \$7,850,000).
Labor Force (1961 census, agricultural and manufacturing only): Agricultural, 59,924; manufacturing, 44,287.
Manufacturing (1962): Value added by manufacture, \$400,610,000 (transportation equipment, \$26,025,000; primary metals, \$91,860,000; nonelectrical machinery, \$9,731,000; electrical products, \$8,195,000; fabricated metals, \$28,780,000; food and products, \$95,330,000).
Agriculture (1964): Cash farm income, \$296,173,000 (livestock, \$127,100,000; crops, \$166,456,000; govt. payments, \$2,217,000). Chief crops (cash receipts)—wheat, \$75,151,000 (ranks 3rd among the provinces); flaxseed, \$29,311,000 (rank, 1st); barley, \$7,694,000 (rank, 3rd); potatoes, \$1,320,000 (rank, 7th).
Mining (1964 est.): Production value, \$175,041,740. Chief minerals (tons)—copper, 29,192 (ranks 4th among the provinces); zinc, 42,671 (rank, 5th); cement, 364,421 (rank, 5th); sand and gravel, 9,667,983 (rank, 5th); crude petroleum, 4,370,000 barrels (rank, 4th); gold, 55,919 troy ounces (rank, 5th).
Transportation: Roads (1962), 42,020 miles (26,643 surfaced); motor vehicles (1963), 324,806; railroads (1963), 4,860 miles; airlines (1963), 3 (17 airports).
Communications (1963): Telephones, 324,488; television stations, 5; radio stations, 13; newspapers, 6 (daily circulation, September 1964, 215,874).

with Premier Lesage of Quebec—key factors in maintaining good relations between English- and French-speaking Canadians—have helped to increase his potential as a national leader.

The 1965 legislative session failed to solve the problem of state aid to private schools. There also was continued disagreement about the future of the metropolitan system of government for Winnipeg and its suburbs—one of North America's few experiments in supergovernment for large municipal areas.

Lieutenant Governor. Richard S. Bowles succeeded Erick Willis as Manitoba's lieutenant governor.

Economy. The economy showed a steady upward trend. Government investment in conservation and industrial development, and in organizations to stimulate trade produced some growth. Personal income, retail trade, manufacturing, and mineral output increased moderately, as did public revenues and expenditures. Agriculture recovered from the \$35 million drop in farm cash income in 1964, and output rose 11% over 1963, to \$430 million. Winter unemployment was at its lowest since 1956.

MAO TSE-TUNG. See biographical sketch under CHINA.

MARINE BIOLOGY

Interest in marine biology has increased since World War II, and the year 1965 showed continued evidence of growth in the field. A number of universities have planned marine stations for the education of student marine biologists, since existing educational facilities have not been able to meet the demand. At present, training in marine biology is provided by the Marine Biological Laboratory (Woods Hole, Mass.), the Scripps Institution of Oceanography (La Jolla, Calif.), the University of Washington (Seattle), the Marine Laboratory of the University of Miami (Fla.), the Narragansett Marine Laboratory of the University of Rhode Island (Kings-ton, R.I.), and other institutions.

Food-Chain Research. Food-chain research is an important aspect of biological oceanography. The intricate balance of life in the sea is dependent on the primary production of food by marine phytoplankton, the minute free-floating plants which are the "grass" of the sea. The Institute of Marine Resources at the Scripps Institution of Oceanography and the Woods Hole Oceanographic Institution are working on this research.

Excretion in Phytoplankton. J.A. Hellebust working with R.R.L. Guillard's culture collection of marine phytoplankton, has shown that most algae excrete 3 to 6% of their photoassimilated carbon during growth, and a few species excrete as much as 10 to 25%. In the experiments, algae varied less than 30% in their relative rates of excretion when they were subjected to two different light intensities, 3,000 and 25,000 lux. Algae exposed to direct sunlight (100,000 to 120,000 lux) had very high excretion rates, probably because of cell damage by photo-oxidation. It is common to have greater photosynthetic activity at 50- to 100-foot depths in the ocean than at the surface. Glycolic acid was one of the prominent organic products excreted, amounting in four differ-

ent genera to 9 to 38% of the total carbon excretion. A few species excreted single compounds almost exclusively, such as proline, glycerol, or mannitol.

In addition to the utilization of this excreted organic matter as a source of energy and a specific nutrient for bacteria and some algae growing heterotrophically, it also may be very valuable as a chelating substance for binding trace metals in seawater. R. Johnston of the Aberdeen (Scotland) Marine Laboratory has shown by assays and mixed culture experiments that a proper supply of chelating substances is the most important factor in phytoplankton nutrition in seawater. G.E. Jones concluded that heavy metals are the most toxic factors for common coliform bacteria that enter the sea.

Uptake Measurement. Using radioactive organic compounds, R.T. Wright and J.E. Hobbie developed an interesting new way of measuring the uptake of small amounts of organic substances by planktonic microorganisms. Two mechanisms have been postulated after measurements over a range of substrate concentrations: (1) a transport system that becomes saturated at very low substrate concentrations; and (2) simple diffusion which shows a rather constant increase in velocity of uptake with increasing substrate concentration. The first mechanism is largely ascribed to bacterial populations, and the second to algal populations.

Marine Sampling. Doubts about the effectiveness of marine sampling have been confirmed by A. Fleminger and R.I. Clutter. They found that present sampling techniques do not accurately represent random distributions of planktonic animals in the sea. For example, larger nets must be used, since certain zooplankters, such as copepods and mysids, effectively avoid the present nets. Also, in the case of mysids, more are caught during darkness than during daylight hours, and, in proportion, dense populations give a higher yield than scattered populations.

Cancer Research. Sister Mary Rosarii Schmeer has shown that mice injected with a clam extract recovered from cancerous tumors 80 to 100% of the time, while untreated mice died within two weeks. C.P. Li and B. Prescott tested Sister Rosarii's extracts from clams as well as extracts prepared from abalones and oysters, and found in tests on mice that they inhibit several bacteria and viruses.

Boston University

MARINE CORPS

In Vietnam, the U.S. Marine Corps became involved in extensive combat operations in 1965 for the first time since the Korean War. The corps was authorized to increase its strength by 30,000 men, with a new 220,000-man level set for July 1966.

Vietnam. On March 8 the 9th Marine Amphibious Brigade from Okinawa landed by helicopter and surface craft at Danang, South Vietnam; it was the first major U.S. ground force sent to assist in the defense of that country. In April a battalion was established at Phu Bai, 40 miles north of Danang. In May, three battalions landed at Chu Lai, 60 miles to the south, and within a few days three squadrons of jet aircraft were operating from an airfield established there.

By midsummer, the 3rd Marine Amphibious Force in Vietnam consisted of 11 infantry battalions, 6 helicopter squadrons, 5 fixed-wing squadrons, and supporting forces totaling over 36,000 men.

MARINES man a roadblock in Santo Domingo, Dominican Republic, in May. On April 28, by order of President Johnson, the first of 4,200 Marines arrived on the island to prevent a possible Communist take-over during the war between the rebels and counterrevolutionaries.

UPI

Maj. Gen. Lewis W. Walt, commander of the force, assumed responsibility for U.S. support efforts throughout the critical northern portion (1st Corps area) of South Vietnam. In July another Marine battalion and a supporting helicopter squadron landed at Qui Nhon to provide airfield security pending the arrival of forces from Korea.

Initially, Marine activity was limited to supporting South Vietnamese armed forces and protecting the airfields at each of the four enclaves. But as their strength increased, the Marines launched hundreds of separate offensive actions ranging in size from four-man patrols and ambushes to full-scale regimental assaults against Vietcong threatening their positions. Marine commitments required relocating major units from bases in Okinawa, Japan, Hawaii, and California to Vietnam and nearby areas.

Marine forces also brought food, medical assistance, improved shelter, better education, stability, and hope to the Vietnamese people—services as important as military operations in determining the final outcome of the struggle.

Dominican Republic. On April 26 the 4th Marine Brigade, composed primarily of ground and aviation units, was ordered to the Dominican Republic to protect property and lives, assist in the evacuation of U.S. citizens, and preserve order. After more than a month of action, including sentry duty, patrolling, and enduring sniper fire, the Marines began to withdraw after the rebels and counterrevolutionaries had observed a cease-fire.

JOHN E. GREENWOOD
Major, USMC

MARRIAGE AND DIVORCE

A spurt in the marriage rate began in the spring of 1963 and gained momentum after September, when the armed forces began deferring married men from the draft. The draft deferment was a factor in the record marriage rate of 1964. During that year 1,731,000 marriages took place.

By October 1964, the spurt in the marriage rate seems to have ended, with only small increases occurring through the early months of 1965. In June 1965, marriages dropped to 14.2 per 1,000 population, as compared with 14.6 the preceding June. The all-time peak in the United States marriage rate

came at the close of World War II, when the rate was 16.4 per 1,000 (1946).

It is likely that the widespread discussion of the population explosion has been a factor in slowing down the marriage rate. Birth rates began dropping about three years ago and continued to drop in 1965. Births for the first six months of 1965 were 173,000 less than in the first six months of 1964. (See POPULATION TRENDS.)

U.S. MARRIAGE AND DIVORCE DATA: 1960-65

Year	Number of marriage licenses	Rate per 1,000 pop. ¹	Change in rate	Number of divorces	Rate per 1,000 pop.	Change in rate
1965...	1,716,000 ²	8.8	-5.4%	473,000 ³	2.4	+4.3%
1964...	1,731,000	9.3	+5.7%	446,000 ³	2.3	0.0%
1963...	1,656,590	8.8	+3.5%	431,000	2.3	+4.5%
1962...	1,580,045	8.5	0.0%	406,000	2.2	-4.3%
1961...	1,555,000	8.5	0.0%	414,000	2.3	0.0%
1960...	1,528,000	8.5	0.0%	409,000	2.3	3.3%

¹ Based on population excluding armed forces overseas. ² Estimate based on licenses issued during the first four months. ³ Estimate based on divorces in 37 states for the first four months.

A flurry of marriages occurred in late August 1965, after President Johnson announced a deadline beyond which marriage would not be grounds for deferment from military service. Whether this development substantially affected the statistical trend of marriages could not be immediately determined.

Divorce rates in the U.S. rose during the early months of 1965, after having remained the same in 1963 and 1964. Divorces totaled 446,000 in 1964 and were expected to rise as high as 473,000 in 1965, if rates for the first four months continued.

In Canada, marriages rose to an all-time high in 1964, reaching a total of 138,135 marriages, compared with 131,111 in 1963. The marriage rate per 1,000 population rose from 6.9 to 7.2—the highest rate since 1960, though well below the U.S. rate.

The Canadian divorce rate rose slightly in 1964 to 8,589 divorces, as compared with 7,686 in 1963. The rate was .447 as against .407 the preceding year. The Western provinces of Yukon, Alberta, and British Columbia had the highest rates.

MARSHALL, Thurgood. See biographical sketch under Law.

MARYLAND

Maryland had its share of reapportionment problems during 1965. In March the legislature passed a new congressional districting plan for Maryland's eight districts. However, the implementation of the plan was halted by petition, and the voters will have to approve it in a referendum in the 1966 general election.

Legislative Reapportionment. The General Assembly met in a special session in October to deal with the problem of reapportioning the state legislature as a result of the Supreme Court's "one man, one vote" ruling in 1964. Unable to decide the issue, the legislature passed two bills. One based representation on population and came closest to meeting the Supreme Court order. The other increased Senate membership and guaranteed that each county would continue to have at least one senator. Governor J. Millard Tawes signed both bills, thus leaving up to the courts the issue of constitutionality and the question as to which bill should become law.

Legislation. During its regular 70-day session, the Maryland General Assembly approved a \$767 million operating budget providing increases for health,

education, welfare, and recreation, and a \$31 million capital improvement budget, which included funds for aiding the economy of southern Maryland. It also passed an education program establishing regional community colleges and vocational schools and an expanded scholarship program.

The state's first minimum-wage bill was enacted in 1965. It set the minimum wage at \$1 an hour, but exempted a number of specific jobs. The legislature also enacted a fair-employment bill reflecting provisions of the federal Civil Rights Act of 1964.

Important bills defeated by the 1965 session (besides reapportionment) proposed a second Chesapeake Bay Bridge, revolving-credit curbs, fair-housing and public accommodation laws, and an educational television network.

Commissions. A governor's commission, named to suggest revisions in Maryland's 98-year-old constitution, recommended a constitutional convention, rather than piecemeal amendments, as the best method for bringing about constitutional revision.

A commission on state and county finance, set up to study the problem of providing additional revenue for the city of Baltimore and for Maryland's 23 counties, completed its report. The report will be the basis for the governor's financial recommendations to the General Assembly in 1966.

Education. The U.S. Office of Education announced that all of Maryland's 24 local school systems had complied with the 1964 Civil Rights Act and had qualified for federal funds. To qualify, 18 counties were required to furnish plans to make school assignments without regard to race.

Important Court Decisions. In 1965 the U.S. Supreme Court struck down Maryland's movie censorship law, ruling that its procedures posed a serious threat to freedom of expression. The invalidating feature of the Maryland statute was that it failed to guarantee a prompt judicial review of the censor's actions.

The Maryland State Court of Appeals ruled that it is unconstitutional for Maryland jurors to swear to a belief in God. The court ordered that its decision would apply retroactively only to cases in which a conviction had not yet become final.

Assistant Professor of Government and Politics
University of Maryland

MARYLAND · Information Highlights

Area: 10,577 square miles.

Population: 3,480,000 (1965 est.).

Chief Cities (1965 est.): Annapolis, the capital (27,500); Baltimore (925,000); Dundalk (85,000); Silver Spring (80,000); Bethesda (76,000); Wheaton (63,000); Towson (48,500); Parkville (47,800).

Government: Chief Officers—governor, J. Millard Tawes (Democrat); lt. gov., none; secy. of state, Lloyd L. Simpkins (D); atty. gen., Thomas B. Finan (D); treas., John A. Leutkemeyer; supt. of pub. instr., William J. Peebles; chief justice, Stedman Prescott. **Legislature**—General Assembly (convened Jan. 19, 1965); Senate, 28 members (21 Democrats, 7 Republicans); House of Delegates, 142 members (117 D, 25 R).

Education: School enrollment (1964-65)—public elementary, 438,470 pupils (15,192 teachers); public secondary, 320,405 pupils (13,812 teachers); nonpublic schools, 156,400 pupils (5,100 teachers); college and university (fall 1964), 85,027 students. **Public school expenditures** (1964-65)—\$341,559,000 (\$503 per pupil); average teacher's salary, \$6,727.

Public Finance (fiscal year 1965): Revenues, \$724,900,000 (3% sales tax, \$113,733,000; motor fuel tax, \$80,476,000; federal funds, \$106,562,000). **Expenditures**, \$721,600,000 (education, \$214,025,000; health, welfare, and safety, \$166,333,000; highways, \$179,635,000). **State debt**, \$329,651,000 (June 30, 1965).

Personal Income (1964): \$9,838,000,000; average annual income per person, \$2,867.

Public Assistance (fiscal year 1965): \$52,979,068 to 113,839 recipients (aged, \$6,445,555; dependent children, \$30,434,407).

Labor Force (employed persons, June 1965): *Agricultural*, 33,600; *nonagricultural* (wage and salary earners), 1,190,500 (22% manufacturing, 20% trade, 15% government). **Unemployed persons** (June 1965)—42,700.

Manufacturing (1963): Value added by manufacture, \$2,978,013,000 (transportation equipment, \$402,367,000; primary metals, \$515,518,000; nonelectrical machinery, \$140,569,000; electrical machinery, \$295,114,000; fabricated metals, \$156,545,000; food and products, \$401,857,000).

Agriculture (1964): **Cash farm income**, \$291,359,000 (live-stock, \$193,557,000; crops, \$92,340,000; govt. payments, \$5,462,000). **Chief crops** (tons)—corn for grain, 762,000 (ranks 20th among the states); barley, 99,300 (rank, 17th); apples, 35,500 (rank, 19th); tobacco, 19,500 (rank, 8th); rye, 13,800 (rank, 15th); peaches, 11,500 (rank, 16th); hay, 609,000.

Mining (1964): **Production value**, \$73,893,000 (ranks 36th among the states). **Chief minerals** (tons)—sand and gravel, 15,041,000; stone, 13,348,000; bituminous coal, 1,136,000; clays, 635,000; natural gas, 1,381,000,000 cubic feet.

Fisheries (1964): **Commercial catch**, 70,024,264 pounds (\$11,774,056). **Leading species**—blue crab, 25,080,680 pounds (\$2,877,011); soft clams, 8,164,332 pounds (\$1,673,911); oysters, 8,104,516 pounds (\$5,493,197); menhaden, 5,706,325 pounds (\$91,139).

Transportation: **Roads** (1965), 23,092 miles (19,442 paved); **motor vehicles** (1965), 1,446,692; **railroads** (1965), 2,000 miles; **airlines** (1965), 13 (123 airports).

Communications (1965): **Telephones**, 1,661,200; **television stations**, 7; **radio stations**, 62; **newspapers**, 12 (daily circulation in 1964, 755,550).

MASSACHUSETTS

Through much of 1965 the government of Massachusetts was embroiled in a debate about taxation. The General Court (legislature) sat throughout the year—a record in the history of the state—but failed to enact a new tax program.

Tax Debate. The tax debate centered on two points: the need for less dependence on the property tax, which is the fiscal backbone of the cities and towns, and the best means of financing the expansion of state services. Republican Gov. John A. Volpe and the Republican minority in the General Court pressed for the enactment of a 3% sales tax, while the Democratic majority favored an increase in the existing state income tax. The total amount needed was estimated at \$200 million by both Governor Volpe and Senate President Maurice A. Donahue, a Democrat and the leading advocate of an increased income tax.

Legislative Action. The General Court passed a law aimed at preventing parking-ticket fixing, set up procedures for preservation of the coastal wet-

lands, and passed four state constitutional amendments that will be voted on in a referendum in November 1966. The amendments provide for the joint election of the governor and lieutenant governor, some home rule for cities and towns, industrial development through the use of public funds, and reorganization of the executive branch by gubernatorial action subject to legislative veto.

Civil Rights. Civil rights was the focus of some activity in the state during 1965. Most of the problems centered on the Boston schools, but charges of police brutality in Springfield resulted in demonstrations there.

A commission working in the field of education found that racial imbalance in schools is harmful, and recommended legislation to outlaw such imbalance. This was done, and Massachusetts became the first state to take such action. The imbalance was most prevalent in Boston, but the commission, headed by Commissioner of Education Owen Kieran, also found some imbalanced schools in other cities, notably Springfield and New Bedford.

Corruption. Although less significant than in some previous years, corruption continued to be a focus of public concern. The Massachusetts Crime Commission, which expired on June 30, made a series of recommendations that the General Court began to

WIDE WORLD

GOVERNOR VOLPE OF MASSACHUSETTS shows bill he signed August 18 banning racial imbalance in public schools.

study. Of the cases growing out of the commission, the most significant to come to trial during the year were those of former Gov. Foster Furcolo, who was acquitted of conspiracy, and of three members of the 1959-61 Executive Council, who were convicted of charges of conspiracy and bribery. Two of the three men were still members of the council until they resigned after the trial.

Education. Much of the attention in the state was focused on the report of the Commission on Improving and Extending Educational Facilities, commonly called the Willis Commission. The Willis Report, based on a survey of all phases of education in the state, called for the complete reorganization of the Department of Education, the establishment of a new Board of Higher Education, a Board of Education with new membership, and far-reaching plans for establishing higher standards of public school education in the Commonwealth. The first three of these proposals were enacted by the General Court in June; it was assumed that implementation of the report would commit the state to greater expenditures in aid to local school systems.

The state's institutions of higher education continued to expand, both in enrollment and facilities. In 1965 the University of Massachusetts decided to build a new medical school in Worcester.

One of the most interesting experiments in higher education in the United States, the so-called Hampshire College, neared fruition when it received large endowment funds. The project has been planned by representatives of the faculties of four cooperating colleges in the Connecticut Valley: Amherst, Mount Holyoke, Smith, and the University of Massachusetts. MAURITANIA

Mauritania continued its efforts in 1965 to develop an autonomous stand on major international issues. Although President Mokhtar Ould Daddah presided over the conference that led to the birth of the Organisation Commune Africaine et Malgache (OCAM) in Nouakchott in February, he withdrew Mauritania from the association of French-speaking

African states in July because he felt it rivaled the Organization of African Unity (OAU).

Economy. For the first time since its independence in 1960, Mauritania announced that economic conditions enabled it to balance its current budget without direct subsidies from France.

The International Development Association, an affiliate of the World Bank, announced that it was lending Mauritania \$6.7 million of the \$10 million needed to build a 125-mile highway from Nouakchott, the capital, to Rosso, on the Senegalese border.

Area: 406,400 square miles.
Population: 1,000,000 (July 1, 1964 est.).
Chief Cities (1964 est.): Nouakchott, the capital, 12,500; Kaedi, 10,500.
Government: President—Mokhtar Ould Daddah (took office Aug. 20, 1961). Parliament—National Assembly, 40 members; party seating (1965)—all belonging to Parti du Peuple Mauritanien.
Religious Faiths: Muslims, 99% of population; Roman Catholics, 0.3%; others, 0.7%.
Education: Total school enrollment (1962–63)—19,257 (primary, 18,000; secondary, 1,190).
Finance (1964): Revenues, \$15,500,000; expenditures, \$16,300,000; monetary unit, CFA franc (246.85 francs equal U.S.\$1).
Gross Domestic Product (1958): \$65,000,000.
Principal Crop (metric tons, 1963–64 crop year): Dates, 10,000.
Minerals (metric tons): Iron ore (1964), 4,560,000; salt (1963), 600.
Foreign Trade (1964): Exports, \$45,800,000 (chief export: iron ore, \$43,100,000); imports, \$15,700,000 (chief imports, 1963: nonelectrical machinery, \$7,100,000; motor vehicles, \$3,700,000; rails and railroad track, \$2,100,000). Chief trading partners (1963): France (took 68% of exports, supplied 69% of imports); Congo (Brazzaville) (took 18% of exports); U.S. (supplied 12% of imports).
Transportation: Roads (1964), 3,669 miles (18 paved); motor vehicles (1964), 4,489 (automobiles, 1,532); railways (1963), (1963), 419 miles; state airline, Air-Mauritanie; principal airport, Nouakchott.
Communications: Telephones (1964): 802; radios (1963), 30,000; newspapers (1964): *Mauritanie Nouvelle*, weekly.

Elections. Officially a one-party state, Mauritania held elections in May to fill 40 seats in the National Assembly. In the absence of opposition candidates, the Mauritanian People's party, the official state party, obtained 95% of the votes; the remaining 5% abstained.

Foreign Affairs. Mauritania accepted a Chinese Communist ambassador and broke off relations with the Chinese Nationalists in September.

In January the United States appointed its first ambassador to Mauritania, Geoffrey Lewis.

MEAT INDUSTRY

In 1964, Americans ate an average of 174.8 pounds of meat per person. This record-breaking total included about 100 pounds of beef, 65 pounds of pork, 5 pounds of veal, and 4 pounds of lamb and mutton.

Meat production in the United States in 1964 rose to a record high of about 32.7 billion pounds, almost 2 billion pounds higher than in 1963. Included in the 1964 production were 18.5 billion pounds of beef (dressed weight), 12.5 billion pounds of pork, 1 billion pounds of veal, and 700 million pounds of lamb and mutton. Sales of the meat industry totaled \$14 billion in 1964, and net profits were \$166 million or slightly more than 1 cent per dollar of sales.

Meatpacking ranks as one of the nation's largest industries. More than 4,000,000 farmers and ranchers produce the livestock processed at 4,500 meatpacking and processing plants. Meat is sold at an estimated 232,000 retail outlets, supplied by about 5,000 wholesale distributors. The sale of livestock accounts for about one third of total cash income of American farmers and ranchers.

The meat industry has found many uses for animal byproducts. Hides, lard, tallow, pharmaceuticals, and other byproducts are sold in the United States and abroad, enabling the packer to recover some of the production costs that otherwise would be added to the price of meat.

HERBERT B. BAIN

*Director of Public Relations
American Meat Institute*

MEDICARE

President Lyndon Johnson signed the Social Security Amendments of 1965—the Medical Care for the Aged, or Medicare, program—on July 30, 1965, in the Truman Library at Independence, Mo. By signing the bill in the presence of former President Harry S. Truman, Johnson acknowledged the fact that Truman was the first president to propose federal health insurance under Social Security.

The program created by the Medicare bill (Public Law 89-97) is intended to bring a wide range of health and medical services within the financial reach of all Americans 65 years of age and over. Long sought by many persons concerned with the welfare of older people and hotly debated in an extended national dialogue, the Medicare Act was hailed by the president as "the most important addition [to Social Security] that has been made in three decades."

Provisions and Costs. The Medicare program contains three broad groups of provisions: (1) the basic insurance plan covering hospital care, extended care, home services, and outpatient diagnostic services; (2) a voluntary insurance program to provide payment for physicians' and surgeons' services, home health, and other services, costing each participant \$3 a month in premium payments; and (3) a measure to assist needy older people in meeting expenses not covered by the first two programs.

The provisions of the three programs become effective between July 1, 1966, and Jan. 1, 1970, depending on the time required by federal and state governments and participating agencies to develop procedures. Most provisions of the two insurance programs are to take effect July 1, 1966.

Costs of the basic program will be met from Social Security contributions of 0.35% (rising to 0.80% by 1987) of the first \$6,600 of earnings of employed workers, supplemented by general revenue appropriations for those workers not covered by Social Security. The cost of the voluntary program will be met by contributions of the insured, matched by contributions from general revenues. Costs of the assistance to the needy will be paid from general revenues of the federal and state governments.

The Basic Plan. The basic plan covers all persons aged 65 and over, except some retired employees of the federal government who are covered by other programs. It provides payment for hospital care; outpatient diagnostic services received in a hospital; posthospital home care; and posthospital extended care in a nursing home or similar facility.

Specifically, the basic plan provides for payment by the Social Security Administration of hospital care up to 90 days for each illness, except that the individual is required to pay the first \$40. The individual also pays \$10 for each day over 60 days. The plan covers the costs of semiprivate hospital room and board, operating and recovery rooms, drugs and biologicals administered in the hospital, and blood transfusions after the first 3 pints. An illness is presumed to begin when the patient enters a hospital and to end after the patient has remained out of a hospital or extended care facility for 60 consecutive days.

The basic plan also provides for 20-day periods of outpatient diagnostic services in the hospital, with the individual paying the first \$20. The patient pays 20% of any charges above \$20 during this 20-day period. When a patient has returned home after 3 or more days in a hospital, he may

PRESIDENT JOHNSON SIGNS MEDICARE BILL in presence of ex-President Truman (above) on July 30, 1965. The president looks over enrollment card of Tony Palcaoralla (below), first person to enroll in Medicare program.

receive up to 100 home calls by a visiting nurse, therapist, or other health worker, but not by a physician or housekeeper. The patient is also entitled to 20 days of posthospital extended care in a qualified nursing home or similar facility, after he has spent three or more days in a hospital. If further care is needed, the basic plan will pay all but \$5 daily for the next 80 days. The effective date of these programs is July 1, 1966, except for the posthospital extended care benefit, which becomes effective on Jan. 1, 1967.

The Voluntary Plan. The supplementary plan covers all persons aged 65 and over who pay the premium of \$3 per month—a sum that is matched by the federal government. During a calendar year, the individual pays the first \$50 of the costs of supplies and services plus 20% of the costs above \$50; the plan pays the remaining 80%. The coverage includes physicians' and surgeons' services, including surgery; consultation; home, office, and institutional calls; up to 100 home health service calls (without any requirement that the patient have had previous hospitalization), in addition to the 100 calls provided under the basic plan; diagnostic tests; X-ray or radium treatments; and other services and equipment such as surgical dressings.

Among items excluded under both plans are drugs for use outside of a hospital or extended care facility; routine physical examinations; and eyeglasses and eye examinations.

By October, about 85% of the application cards filled out and returned by those eligible to partici-

THE MEANING OF MEDICARE: Medical Care for the Aged (Medicare) became a reality in 1965. The program makes available to all Americans 65 years of age and older a wide range of health and medical services under two insurance plans:

BASIC COVERAGE

(To be financed through increased Social Security taxes)

HOSPITAL CARE

Plan provides for payment by Social Security Administration of hospital care up to 90 days for each illness, except that patient must pay first \$40, plus \$10 per day for each day over 60 days. Plan covers costs of semiprivate room, board, and drugs.

NURSING-HOME CARE

Enrollees are entitled to 20 days of posthospital care in a nursing home or similar facility, after having spent three or more days in a hospital. Plan also pays all but \$5 per day of nursing-home care for next 80 days.

HOME NURSING CARE

After three or more days in hospital, patient is entitled to as many as 100 home visits by a nurse, therapist, or other health worker in each period of illness at no extra cost.

OUTPATIENT SERVICE

Plan provides for 20-day period of outpatient diagnostic service in hospital, the individual paying the first \$20, plus 20% of any charges above \$20 during any 20-day period, and the plan paying the remaining 80% of the cost.

pate indicated a willingness to join the voluntary insurance plan. Social Security officials felt that the percentage would have been higher but for "groundless fears" of the participants that they would not be allowed to choose their own doctors.

Aid to the Needy. To take care of those unable to pay, Congress amended Title XIX of the Social Security Act to permit financially needy older people to participate fully and to have the costs shared by the federal and state governments. This part of the new program authorizes states, with partial reimbursement from the federal government, to pay for all services not covered by the Medicare insurance plans for persons who meet state eligibility requirements. States participating in the program must pay up to 40% of the cost.

Administration of Medicare. It is hoped that controls built into the program will ensure care of the highest quality and a proper utilization of facilities. Referral to hospitals, extended care facilities,

SUPPLEMENTARY COVERAGE

(Under provisions of the voluntary insurance plan, the individual pays a premium of \$3 per month, which is matched by the federal government. In a calendar year the individual pays the first \$50 of the cost of supplies and services, plus 20% of any costs above \$50; the insurance plan pays the remaining 80% of those costs.)

PHYSICIANS' CARE

Physicians' and surgeons' services, including surgery and consultations, at home, in the doctor's office, in a clinic, or in a hospital, are paid for by the voluntary insurance plan.

NURSING CARE AT HOME

Voluntary plan permits the individual to receive up to 100 visits each year by a nurse (in addition to the 100 visits provided for under the basic plan). There is no requirement that a patient have had previous hospitalization to qualify for these home nursing calls.

OTHER SERVICES

The plan pays the cost of X-rays and other diagnostic tests, radium treatments, ambulance service, and such equipment and supplies as casts, splints, and artificial limbs.

and home service programs must be certified by a physician. Hospital review panels will be required to scrutinize admissions, length of stay, and the medical necessity for services. Participating facilities must be accredited by responsible bodies and must be adequately staffed for the types of care they provide.

The Health Insurance Benefits Advisory Council, required by statute, was established late in the year, with Kermit Gordon, former U.S. budget director, as chairman. It began to advise the government on administrative policy matters and regulations. A national medical review committee will make an annual study of utilization of facilities and services and report to the secretary of health, education, and welfare. (See also OLD AGE; SOCIAL SECURITY.)

CLARK TIBBITTS

U.S. Department of Health, Education, and Welfare

MEDICINE

MEDICAL specialists in Hungary developed a radiation treatment method for cancer patients that minimizes the injury to healthy tissue. The apparatus, called a Rotacert, constantly rotates around the patient so that each dose of radiation takes a different path through healthy tissues and the site of a malignancy.

MEDICINE

Provisions for medical care in the United States were profoundly affected by social, economic, and political events in 1965. These developments may cause broad changes in traditional doctor-patient relationships.

Medical Programs in the United States. Legislation establishing the Medicare program for the elderly was enacted during the year. In addition, legislative coverage provided for new health programs for younger and older persons not covered by Social Security. Federal legislation also authorized a \$340 million, three-year program to combat heart disease, cancer, and stroke. (See also MEDICARE.)

By the end of the year, much confusion still existed concerning the implementation of these extensive and expensive programs, and temporary overcrowding of hospitals appeared to be inevitable. The American Medical Association (AMA), which fought long and vigorously against federal health care plans financed by compulsory taxation, asked its members to cooperate in implementing Medicare and became an advisory body.

Meanwhile, further increases were reported in the operating expenses of hospitals in the United States. The cost per patient per day in nonfederal, general hospitals rose 6.9% between 1963 and 1964, ranging from \$54.28 in the West to \$34.31 in the South. For all hospitals, total expenses rose al-

most 10%, to about \$12 billion. Most of the increased expense was in payroll costs. (See also HOSPITALS.)

Health insurance benefits reached a new high in the first nine months of 1965—an average of \$14.1 million per day, or about 12.1% higher than in the comparable period of 1964. Major medical insurance was becoming an increasingly important part of the overall program.

The budget of about \$8 billion for operating the U.S. Department of Health, Education, and Welfare in fiscal year 1966 included \$2.09 billion for the U.S. Public Health Service and a record \$1.18 billion for the research activities of the National Institutes of Health. The cost of the new Medicare programs in the first year of operation was estimated at \$6 billion, part of which will come from sharply increased Social Security taxes.

Medical Services in Other Countries. Government-controlled health care plans in other countries continued to have difficulties in 1965. In Great Britain, many general practitioners were discontented with both the terms and conditions of their practice under the National Health Service (NHS). By the end of the year, prolonged negotiations had led to proposals for the most radical changes in the NHS since it was founded in 1948. New arrangements were proposed in the attempt to "relate income to work load, responsibility, and expenses incurred." Allowances for overtime work and arrangements for

more regular hours also were proposed. Hospital conditions in Great Britain under the NHS were bitterly criticized.

Similar difficulties arose in France, where the cost of medical services under a social security system led to a large operating deficit, overwork of physicians, and general discontent among practitioners. The government agreed to hold negotiations for improved conditions.

In Italy, hospital physicians went on strike for a week in support of demands to provide more adequate retirement pensions.

In Mexico, the Association of Resident and Intern Physicians began a widespread protest, charging that "all Mexican doctors are underpaid because of government schemes that provide medical care through social security and other programs."

Physicians in Canada were reported to be deeply concerned over what their medical association regarded as "precipitate action" by the government in the direction of a federal medical care plan. It was stated that physicians had not been properly consulted prior to the announcement of the government's proposal.

Education. The year 1965 marked the 200th anniversary of medical education in the United States, at the University of Pennsylvania School of Medicine.

The shortage of doctors, nurses, technicians, and other paramedical personnel is one of the greatest problems in the expanding demands for medical care. Fear that staffing new government institutions would aggravate this shortage in local communities was heightened by the need to draft doctors for service in the armed forces because of the increased demands for medical care in the war in Vietnam.

The annual report of the American Medical Association's Council on Medical Education indicated there would be more medical school graduates, but a major increase is several years in the future. In 1964-65, the nation's 88 medical schools had a total enrollment of 32,428—an increase of 427 over 1963-64. The number of graduates in 1965 was 7,409, as compared with 7,336 in 1964 and 6,994 in 1961.

SKIN TUMOR of dark tissue (melanoma), implanted in a cheek pouch of a hamster, is destroyed by a laser beam. Dr. Paul McGuff of Tufts Medical School directed the research.

Fourteen new medical schools, in the planning stage or under construction, are expected to be in operation by 1970. By that date, 850 to 1,000 additional students should be provided by the new schools. Many existing schools were planning to increase their enrollments to provide perhaps 600 more students by 1970. It was reported that more than 30 other institutions have expressed interest in establishing new schools, and there is a reasonably good possibility that at least 10 will be founded. The number of applicants to medical schools, which has been increasing since 1961, reached a new high of 19,168 in 1965.

In other countries, it was reported that India hopes to build 30 new medical colleges by 1970, and that the National University of Mexico will establish a new medical school.

Nobel Prize. The 1965 Nobel Prize in medicine or physiology was awarded to three French scientists—André Lwoff, François Jacob, and Jacques Monod, who were honored for their amazingly intricate and detailed research in the rapidly developing field of molecular biology and genetics. They investigated the complex mechanism of intracellular genetic control of cell growth, metabolism, and synthesis. Their work has implications in the study of cancer because malignant growth results from faulty regulation of these processes, perhaps as a result of virus material being incorporated in the genetic structure of the cell. (See also BIOCHEMISTRY; NOBEL PRIZES.)

Cancer. Much cancer research is being conducted in accordance with the theory that malignant growth results from faulty genetic regulation of cellular processes. Bacteria exposed to bacteriophage viruses have been studied as a possible model for the roles that viruses and human cells play in the production of tumors. In the bacteria, a part of the genetic material of the virus is integrated into the genetic apparatus of the cells and replicates with it. There is evidence that various suppressors may prevent activation of the modifying viral material. If they do, the viral material is transmitted from one generation to the next without changing the cells. However, inducer factors apparently may overcome the suppressor and permit multiplication of the virus. It is believed that similar relationships may prevail when the viral tumors are induced in animals, and possibly in man. These mechanisms involve the most intricate molecular chemistry of life processes.

The interaction of genetic material from two viruses may be necessary to induce tumors. This relationship has been demonstrated in animals. Mycoplasma bacteria (pleuropneumonia-like organisms) also have been found in animal tumors and human cancers, but it is suspected that these bacteria only make the cell walls more permeable to viruses.

Several adenoviruses can cause human respiratory infections and also can cause tumors in animals, sometimes in combination with animal viruses. A vaccine against Type 3 adenovirus and other adenoviruses that cause human respiratory infections was under development, but production of the vaccine was halted after it was found that Type 3 adenovirus might produce tumors.

The search for effective anticancer drugs continues. In time, a better understanding of complex cellular chemistry may lead to new compounds. More is being learned about the use of drugs in various combinations and sequences. Improvement in treatment has been achieved by perfusing high concentrations of antitumor drugs into localized areas

of the body where malignancy is located. This technique has been particularly helpful in treating malignant melanoma, when the tumor is on a body extremity. Some success also was reported in treating several types of skin tumors by a new technique of locally applying ointments containing anticancer drugs, particularly 5-fluorouracil.

An interesting finding was the tumor-inhibiting activity of an extract of the bittersweet or woody nightshade plant (*Solanum dulcamara* L.). This plant was used in folk medicine for hundreds of years to treat warts and superficial tumors. Although it seems unlikely that the finding will influence significantly the treatment of cancer, it is true that several valuable drugs came into medical practice from folk medicine before the cause of the disease for which they were used was understood. These drugs include quinine for malaria, emetine for amebic dysentery, and digitalis for dropsy.

The link between cigarette smoking and cancer, particularly lung cancer, has been based primarily on statistical evidence that is considered incontrovertible by most authorities. New techniques have furnished further evidence that there is an unfortunate causal relationship between this common social habit and a very dangerous disease. One group of researchers reported there was a biochemical defect in the metabolism of an amino acid, tryptophan, in cigarette smokers. It was said that this defect leads to abnormal accumulation of ortho-aminophenols, which are known to have carcinogenic properties in animals. Increased amounts of these substances have been detected in the urine of patients with bladder cancer, which also occurs more frequently in heavy smokers. The increased excretion of the abnormal compounds ceased when smokers stopped using cigarettes, but reappeared when they resumed smoking.

In other experiments, dogs were subjected to cigarette smoke. Microscopic study of the lining membrane of the bronchi showed malignant and premalignant changes in the dogs. Similar results were obtained by another group of researchers, who applied tobacco-smoke condensate to the bronchial mucosa of dogs. (See also CANCER; PUBLIC HEALTH.)

Drugs. New antibiotics were presented in 1965. A new semisynthetic penicillin, cloxacillin, which can be rapidly absorbed after oral administration, was reported to be effective against a variety of infections. Cephaloridine, still under study, while closely resembling cephalothin, was reported to be superior to it. Another experimental compound, X-5079C, was shown to be of value against fungal infections, for which antibiotics are urgently needed.

Most antibiotics have little or no effect on viruses; however, there was some progress in the development of antiviral drugs. A variety of substances, ranging from extracts of clams and several plants to synthetic chemicals, were found to have some antiviral effect. Perhaps the most promising were a thiopyrimidine derivative and some adamantanamine compounds, which have helped control influenza and other viral infections in animals and tissue cultures.

Two experimental drugs for the treatment of tuberculosis received favorable reports. It is expected that capreomycin, an antibiotic, and ethambutol, a synthetic chemical, may be substituted for older drugs when a change of medication is advisable.

Dimethyl sulfoxide (DMSO) recently was hailed as a wonder drug on the basis of preliminary and largely uncontrolled tests. In controlled studies with

JULIUS H. COMROE, JR. IN SCIENTIFIC AMERICAN

HUMAN LUNG has an arterial system with branches that subdivide into capillaries as small as 10 microns in diameter. Capillaries surround 300 million air sacs in lung.

purified DMSO, the results were not as favorable as first believed, but helpful effects were reported in some types of bursitis and arthritis and in some cases of scleroderma. In November 1965, under federal drug administration (FDA) supervision, all firms voluntarily suspended trials of DMSO in humans after adverse effects on the eyes of laboratory animals had been observed. Later, continued use of DMSO was considered in circumstances where acceptance of some risk is justified by the severity of a disease, such as scleroderma.

Preliminary favorable results on scleroderma also were reported for an unrelated compound, epsilon-aminocaproic acid. It is said to have anti-inflammatory and antiallergy effects, in addition to its previously recognized antifibrinolytic effect that presumably has been useful in treating patients with hemophilia. In early clinical trials, success in treating resistant cases of rheumatoid arthritis was attributed to another new anti-inflammatory compound, 1-phenyl-5-aminotetrazole.

The new drug cholestyramine has given dramatic relief from the intolerable itching often associated with severe jaundice. The drug removes bile compounds from the intestinal tract, and a decrease of the serum cholesterol level usually follows. Clinical value of the compound for the latter effect, however, has not yet been determined.

In December 1961, thalidomide was withdrawn from the market by its German manufacturer after the serious deformity of many babies whose mothers took the medication during pregnancy. The full measure of the properties of thalidomide still is not known, and new ramifications are reported each year. Thalidomide has shown beneficial effects when used against leprosy. When the drug was used with X-ray therapy, it reportedly gave some help for terminal cancer patients. It was reported that thalidomide

prolongs the life of skin grafts in mice, presumably by suppressing immunity reactions. It is necessary to suppress such reactions when organs are grafted, but other drugs and X-rays that can provide suppression are highly toxic. The possible usefulness of thalidomide in suppressing immunity reactions will bear further investigation. (See also ALLERGIES; MENTAL HEALTH.)

Both the AMA and the FDA were active in analyzing reports of unfavorable effects of drugs, and several interim warnings and restrictions were issued. A new federal law provides for much more stringent regulation of stimulant and sedative drugs, such as amphetamines and barbiturates. Hallucinogenic drugs, such as lysergic acid diethylamide (LSD), also will be tightly controlled. Limiting the sale of morning glory seeds was advised after they were found to have effects similar to those of LSD.

It was reported that a chemical substance, magnesium pemoline, enhanced the speed of learning and the memory retention of laboratory rats. The compound appears to increase the synthesis of ribonucleic acid (RNA). Other animal experiments have indicated that RNA may be related to memory functions.

Many other new drugs were under development or were introduced in 1965. New pain-relieving compounds, new tranquilizers and sedatives, and a new diuretic appeared to hold particular promise. (See also DRUGS.)

Genetics. Perhaps the most important basic research in the medical sciences during 1965 was in the field of genetics.

It is believed that the genetic information (code) of cells is carried in deoxyribonucleic acids (DNA). Forms of ribonucleic acids (RNA) carry this information to the growth components of the cells. Specific chemical groups, called codons, which carry the code instructions for building the 20 amino acids into proteins, now have been identified in DNA. This genetic code has been found to be consistent for proteins as widely different as viruses and human hemoglobin. The most complex DNA yet discovered was obtained from the polyoma virus, which causes

tumors in some animals. (See also BIOCHEMISTRY.)

Many human disorders, such as abnormal forms of hemoglobin, are due to genetic defects. A newly recognized condition of this type, hemocystinuria, produces a variety of structural body abnormalities. A mutant gene and a defective enzyme cause the metabolic disorder. Retinoblastoma, a malignant eye tumor found in young children, has been found to be inheritable. It was reported that an associated chromosomal abnormality has been identified. (See also GENETICS.)

Heart and Circulation. The phenomenal progress in medical technology in recent years has resulted in many devices for the diagnosis and treatment of heart disease. Improvements in these devices are being made constantly; this is especially true for artificial pacemakers, which supply a stimulus for the heartbeat when the natural electrical impulse for contraction is blocked. One of the difficulties with these implanted devices is that their batteries must be renewed periodically, and thus a surgical procedure is required. A new pacemaker undergoing trial has a nickel-cadmium battery that can be recharged from outside the body by using electromagnetic induction.

More hospitals have been installing cardiac wards where the heart function of seriously ill patients is monitored constantly by electronic devices and facilities for emergency treatment are immediately available.

It has been proposed that many congenital heart defects may be due to viral infections in the mother during pregnancy. Rubella (German measles) virus and coxackie viruses in particular are suspected of having this effect. Experiments with mice suggest that lesions of the heart valves may be caused by viral infection.

The relationship of serum cholesterol levels to arteriosclerosis and coronary heart disease remains a matter of debate. During the next few years, there will be extensive trials of several drugs that are used to lower cholesterol levels. These tests will be made by the National Institutes of Health. The American Heart Association strengthened its recom-

mendation for restricting animal (saturated) fats in the diet and the "substitution wherever possible" of polyunsaturated fats. This change in diet usually leads to lower cholesterol levels. The adage, "An apple a day keeps the doctor away," received new support from reports that a plentiful dietary supply of pectin, with which apples are rich, may reduce the cholesterol level.

Anticoagulant drugs are frequently used to treat patients who have had coronary heart attacks. Unfortunately, the concurrent administration of other drugs may alter the effect of the anticlotting agent. Such possible complications of multidrug therapy are being recognized. (See also HEART DISEASE.)

Hormones. Synthesis of human insulin, an extremely complex compound, was completed in 1965. It is said to be the only complete human protein made in the laboratory thus far. Sheep and beef insulins had been synthesized, but the human form posed particularly difficult chemical problems. The synthetic product, with various alterations, will be useful chiefly for experimental purposes. The finding of insulin-like activity in extracts of the thymus gland excited considerable interest, but its significance has not been determined.

The administration of human gonadotropin hormones to infertile women resulted in multiple births in a number of cases. Stimulation of the ovaries caused them to release too many ova at or near the same time.

Resorcylic acid lactones, a new class of chemical compounds with hormone-like effects, were under investigation. It is anticipated that these compounds may have multiple medical uses.

A new understanding of a mysterious itching skin condition (neurodermatitis) resulted from the demonstration that it is associated with an abnormal concentration of norepinephrine in the affected skin area.

Infectious Diseases. The year 1965 marked the 10th anniversary of mass vaccination against polio. Injection of the early Salk vaccine largely has been supplanted by oral administration of the Sabin live-virus vaccine. In the past decade, polio has virtually disappeared in groups among which mass vaccination is practiced.

Man has not been as successful in dealing with malaria, one of his traditional enemies. Strains of falciparum malaria, which can resist the newer synthetic antimalarial drugs, have been encountered by the armed forces in Vietnam. The Army Medical Corps has alerted physicians that similar cases may appear in the civilian population after the infected servicemen return home. Heavy treatment with quinine, the oldest antimalaria remedy, has been most effective, but the drug has been in short supply as the result of unstable political conditions in areas that produce quinine.

Meningitis has been a problem in some military camps, and strains of meningococci that are resistant to usual sulfadiazine treatment have been found. Several of the newer antibiotics and massive doses of penicillin have been more effective.

An outbreak of diphtheria on the west coast during the winter of 1964-65 was attributed to inadequate immunization of the affected children. Five so-called needless deaths occurred, illustrating the necessity of maintaining protection against a serious disease after it has been brought under control.

The U.S. Public Health Service has been concerned about an increase in rabies in wild animals, particularly bats. Meanwhile, due to vaccination, rabies in dogs declined to an all-time low. In the

United States in 1965, only one death was caused by rabies.

The incidence of viral hepatitis declined somewhat during 1965, but an increase is expected in 1966. Analysis of cases in Boston indicated that deaths occurred almost exclusively in the post-transfusion type of the disease (serum hepatitis). The virus is transmitted by blood from an infected but asymptomatic donor. Massive transfusion, or "blood exchange," has been used to treat hepatitis patients who are critically ill.

The rubella (German measles) epidemic in 1964-65 was the most severe since 1935. A number of babies were born with congenital defects after their mothers had contracted or had been exposed to the disease early in pregnancy. When these babies were carefully studied, it was found that many of them were infected with the virus. In turn, doctors and nurses who attended these babies apparently contracted the disease from them. A major effort has been made to prepare a rubella vaccine, especially for expectant mothers, but no rubella vaccine was available in 1965.

Sporadic outbreaks of a relatively mild type of influenza occurred in various sections of the United States during the winter of 1964-65, and the Public Health Service predicted more widespread influenza in 1965-66. The preventive vaccine has been modified to adjust for changing strains of the viruses.

Further progress was made toward developing vaccines against common virus-caused respiratory infections. An oral vaccine for adenovirus Type 4 was found to give good protection; however, there are many other types of adenoviruses. Attempts were made to divide the adenoviruses into serologic types. Many other viruses have relationships to common colds, hence no overall vaccine has been produced.

The small pleuropneumonia-like bacteria (mycoplasma) which cause "atypical pneumonia" also can cause sore throats and respiratory illness. An experimental vaccine appeared to give considerable protection. There is some suspicion that the mycoplasma organisms may be associated with arthritis. (See also RESPIRATORY DISEASES.)

A vaccine against coccidioidomycosis, a fungus disease, is being tested. The disease occurs chiefly in the dry areas of the Southwest.

An achievement of major interest was the practical cultivation of the leprosy bacillus for the first time. Although this organism was discovered in 1874, it has been extremely resistant to culture *in vitro*. The availability of the bacillus will assist efforts to develop antileprosy drugs.

Obesity. Obesity is one of the major health problems in the United States. Nutrition experts, who have been disturbed by the popularity of fad diets for weight reduction, have emphasized the importance of a well balanced, limited-calorie diet. The problem of obesity is being studied to determine any subtle variations in the metabolism of very obese individuals.

Emphysema. There has been an alarming increase in emphysema, a chronic and severe lung condition. Long-time smoking of cigarettes appears to be an important causative factor, but air pollution also is important. More active measures for smoke abatement and control of car exhaust fumes are being taken.

Duke University Medical Center

MENTAL HEALTH

Very significant legislation affecting mental health services in the United States was passed in 1965. While the scope of mental health research during the year was broad, results were not spectacular.

International Developments. The 24th International Psychoanalytic Congress was held in Amsterdam in 1965. At the meeting, Anna Freud summarized the main topic of discussion—obsessional neuroses. This summary, as well as Dr. Freud's book, *Normality and Pathology in Childhood* (1965), significantly update psychoanalytic psychology of personality development and childhood psychopathology.

An important study of the psychiatric and behavioral problems of adolescents in Sweden points up the fact that treatment even in a well-staffed residential center does not guarantee satisfactory results. One half of the boys did well during the first year after discharge, but over a period of five or six years the number dropped to less than one quarter. Of the group of boys studied, 23% were illegitimate, and 43% had lived over half of their lives before the age of 15 with but one parent. Only 18% had been consistently with both parents before that age. The high rate of disturbed or broken homes in the background of this type of population parallels findings in the United States.

U.S. Legislation. Vast changes and innovations will result from recent legislation in the fields of health, education, and welfare, although most of the new laws affect mental health and psychiatry only indirectly. Potentially, the most important development is not that more money or new funds were appropriated for any particular field or activity, but that the lines between professional activities and governmental programs are becoming more blurred. Psychiatry in particular, and medical care in general, is more interwoven with all levels of government activity and planning, including education, the effort to combat poverty and social injustice, and urban renewal.

A new government-citizenry partnership, exemplified by government-funded statewide or regional planning groups, is emerging. These groups, which consist mostly of volunteers, are charting future mental health services as stipulated by the Mental Health Act of 1963. There also has been other legislation authorizing and financing mental health activities, notably the provision of funds for staffing community mental health centers.

Public Law 89-97, the so-called Medicare Act, and Public Law 89-239, which provides regional centers for the treatment of cancer, stroke, and heart disease, primarily will affect the care of elderly patients, including more attention to their emotional and mental problems. As an indirect result of these two laws, there will be an increased shortage of professional manpower, since the demand for professional services will increase more rapidly than the number of professionals graduating from medical, nursing, and technical schools. To help meet this problem, new funds have been appropriated for these schools.

The two new health programs also probably will affect doctor-patient relationships, since there simply will not be enough physicians, as well as nurses, social workers, and other professionals to give the traditional type of care. (The number of medical school graduates has increased by only 50% in the past 40 years, while the population has almost doubled. Moreover, the population has increased

disproportionally in the oldest and youngest age groups, which receive a disproportionate amount of medical care.) The new demands for institutional manpower must be met by increasing the number of activities performed by nonprofessionals trained on the job. This situation will reduce contact between the patient and the medical professional—a situation deplored by patients, nurses, and physicians. It is of particularly great concern to the psychiatrist, who is the medical specialist in interpersonal relationships, including doctor-patient relationships.

Research. A new discovery in the field of electroencephalography is that the brain produces "expectancy waves." These waves are negative oscillations of electrical activity in the brain after a conditional stimulus has become established. This relationship represents an element in learning, and it has potential value as an objective index of learning. A second finding concerns the refinement in distinguishing various sleep and dream stages by analyzing the electrical activity of the brain.

Two studies provided further confirmation that separation from a closely related person has a causative role in the development of illness. The studies were made at the University of Pennsylvania and Tavistock Clinic in England.

Previous studies on schizophrenia concordance in twins were further discredited by recent epidemiological findings in Sweden. Sixteen pairs of twins were studied over their life span, and no concordance for schizophrenia was found.

Suicide studies have shown that hospitalization for psychiatric reasons, whether for reasons of suicidal tendencies or not, establishes a high-risk cohort (group). The incidence of suicide by such previously hospitalized patients is four times higher for men and nine times higher for women than for the general population. The suicide rate among young people continues to increase.

Services. The extent and incidence of school phobia is an important problem. It has been established that school phobia is an indicator of risk cohorts. Although more than 90% of the children with this problem return to school and remain in school until graduation, when they are reexamined in adolescence, almost 30% are found to exhibit serious personality disorders. This finding indicates the need for preventive treatment beyond symptom relief at the time of truancy.

Family planning is being recognized increasingly as an element of public health practice and as an essential mental health principle. Birth control is a serious medical and psychiatric concern if one considers that an estimated 35,000 defective children were born to mothers affected by the rubella (measles) epidemic of 1964, and that these births could have been prevented by timely therapeutic intervention. About 10,000 of these children probably will prove to be mentally retarded.

The psychological and emotional implications of the sexual activities of young people are highlighted by two trends: the doubling of the venereal disease rate in the last five years, and the increase in the number of illegitimate pregnancies among teenagers. (See also MEDICARE; PUBLIC HEALTH.)

MERCHANT MARINE. See SHIPPING.
 MERCURY. See MINING.

METALLURGY

Metal shortages, high prices, and full-scale operations prevailed in the metallurgical industries in 1965. Mercury and silver were in particular short supply. The price of mercury more than doubled during the year, stimulating the search for new metallurgical processes and mineral deposits.

New Metals for Coins. Although the annual consumption of silver has exceeded the supply for several years, the U.S. Treasury Department has kept the price at the coinage value by selling silver from its stockpile. If selling were to continue at the present rate, the stockpile soon would be exhausted and the price of silver would soar, causing monetary chaos. To avoid this, U.S. mints in 1965 began producing dimes and quarters without silver and half dollars with reduced silver content.

The new coins are a metallurgical triumph. They are difficult to counterfeit. They have the proper size, weight, and electrical properties to actuate vending machines. The dime and quarter have copper cores (which show as a red line on the edge) sandwiched between two layers of a white cupronickel alloy (75% copper and 25% nickel). The silver content of the 50-cent piece was reduced from 90% to 40% by means of a facing alloy of 80% silver and 20% copper, bonded to a core containing 21% silver and 79% copper.

Advances in Metallurgical Technology. In 1965 two new commercial forming processes were introduced. Pratt and Whitney Aircraft announced a precision casting technique for fabricating jet engine turbine blades and vanes. It avoids grain boundaries perpendicular to the applied stress and improves high-temperature properties. The Stellite Division of Union Carbide introduced an operation for electrocladding and electroforming refractory metals. This process is adaptable to the deposition of tantalum, columbium, tungsten, molybdenum, vanadium, zirconium, chromium, and hafnium.

NEW METAL-CASTING TECHNIQUE for jet turbine blades (right) results in strong columnar grain rather than spotty grain (left) found in conventionally cast material.

PRATT & WHITNEY AIRCRAFT

Different kinds of composite materials were devised to obtain special properties. For example, nozzles which must withstand the hot blast from high-energy rocket propellants were made of a new composite material, porous tungsten infiltrated with silver. In operation the silver boils away, absorbing the heat and thereby cooling and protecting the tungsten.

Rolls Royce Ltd. increased the strength of aluminum tenfold by adding silica fibers. General Electric discovered that the adhesion between nickel and strong alumina fibers was influenced by small amounts of substances. The bond shear strength between ultra-high-purity nickel and alumina fibers, for instance, was more than doubled by the addition of 1 atomic percent of chromium.

Investigations proved that boron fiber with an elastic modulus of 60 million pounds per square inch and a specific gravity of 2.34 is a good reinforcing material. It is claimed that a boron fiber epoxy resin composite is stronger per unit weight than any other known structural material.

METHODIST CHURCH

In 1965 The Methodist Church in the United States, with 10,304,184 members, moved closer toward the proposed union with the 750,000-member Evangelical United Brethren Church. A plan is to be presented to the General Conferences of both churches at simultaneous sessions in Chicago in November 1966, and union could come by 1968.

Both The Methodist Church and the Evangelical United Brethren Church are participating in a Consultation on Church Union with four other denominations—The United Presbyterian Church in the U.S.A., the Protestant Episcopal Church, the United Church of Christ, and Christian Churches (Disciples of Christ). The outline of a possible plan of union for these denominations is scheduled to be studied and discussed at the annual meeting of the Consultation in Dallas, Texas, May 2-5, 1966.

In 1965 The Methodist Church selected its first full-time executive in ecumenical relations. He is the Rev. Dr. Robert W. Huston, general secretary of the denomination's new Commission on Ecumenical Affairs. His office is in Evanston, Ill.

While The Methodist Church in the United States was making these and other ecumenical moves, British Methodists were initiating steps toward a possible union with the Church of England.

The Methodist Church moved forward in the area of race relations, but not as spectacularly as in 1964. Within a few months in that year a third of the denomination's Central (Negro) Jurisdiction had been absorbed in integrated units. Some leaders are hopeful that the segregated jurisdiction will be eliminated with another series of actions in 1966.

In April 1965, Bishop Prince A. Taylor, Jr., of Princeton, N.J., became president of the Methodist Council of Bishops. Bishop Taylor and another Negro Bishop, James S. Thomas, now preside over predominantly white episcopal areas, and eight Negro district superintendents administer integrated districts.

Offerings by members of The Methodist Church for its worldwide activities totaled a record \$32,554,000 for the fiscal year that ended on May 31, 1965.

Plans were made in 1965 for the 11th World Methodist Conference, to be held in London, England, in August 1966. Delegates will represent an estimated 19.5 million church members and about 42.5 million Methodist adherents throughout the world.

Associate Secretary, Commission on Public
Relations and Methodist Information
The Methodist Church

MEXICO

The year 1965 in Mexico was dominated by the continued rapid growth of the economy, and the promise this growth held for further correction of social ills. The government continued to manage the economy while assuring private enterprise that it had an important role to play in the country's development. Political opposition to the governing Institutional Revolutionary Party was at a low ebb.

Economic Growth. Although the extraordinary rise of 10% in the gross national product in 1964 was not repeated in 1965, growth in the first half of the year was a most satisfactory 6%. Economic expansion was notable in some lines of manufacturing, but a drought during the first half of 1965 hurt livestock and agricultural production. Foreign trade held up well with other forms of international income again compensating for much of the commodity trade deficit. Tourism, for example, was up 16% over the first quarter of 1964. Nevertheless, the trade deficit totaled about \$272 million in the first seven months of 1965. Mexico continued to export grain in the first half of the year, but it was doubtful that this recent development would continue. No significant strikes or lock-outs occurred.

Government and the Economy. The policy of economic nationalism found further expression in

MEXICO · Information Highlights

Area: 759,529 square miles.

Population: 40,913,000 (June 30, 1965 est.).

Chief Cities (1965 est.): Mexico City, the capital, 3,192,804; Guadalajara, 1,048,351; Monterrey, 821,843; Ciudad Juárez, 385,082.

Government: President—Gustavo Díaz Ordaz. Congress—Senate, 60 members; Chamber of Deputies, 210 members; party seating (1964): Senate, Institutional Revolutionary Party (PRI), 60; Chamber of Deputies, PRI, 175, others, 35.

Religious Faiths: Roman Catholics, 94% of population; others, 6%.

Education: Literacy rate (1960)—65% of population aged 15 and over. Total school enrollment (1962)—7,196,244 (primary, 5,620,324; intermediate, 460,014; higher, 194,415; other, 921,491).

Finance (1965 est.): Revenues, \$1,376,000,000; expenditures, \$1,424,000,000; monetary unit, peso (12.50 pesos equal U.S.\$1).

Gross National Product (1964): \$17,968,000,000.

National Income (1964): \$16,240,000,000; average annual income per person, \$410.

Economic Indexes (1964): Industrial production, 159 (1958=100); agricultural production, 162 (1956-57=100); cost of living, 114 (1958=100).

Manufacturing (metric tons, 1964): Cement, 4,339,000; gasoline (1963), 3,968,000; sugar, 2,356,000; crude steel, 2,326,000; wheat flour (1962), 476,000; meat (1962), 452,000; lumber (1963), 1,043,000 cubic meters.

Crops (metric tons, 1964): Maize, 6,505,000 (ranks 5th among world producers); wheat, 2,100,000 (rank, 19th); citrus fruit, 1,316,000 (rank, 4th); cottonseed, 882,000 (rank, 6th); coffee, 159,000 (rank, 6th); cocoa beans, 24,000 (rank, 8th); potatoes, 381,000; rice, 265,000.

Minerals (metric tons, 1964): Silver, 41,943,247 troy ounces (ranks 1st among world producers); salt, 1,783,000 (rank, 13th); gypsum, 1,200,000 (rank, 8th); zinc, 244,931 (rank, 5th); manganese, 187,300 (rank, 12th); lead, 169,956 (rank, 5th); crude petroleum, 115,576,000 barrels (rank, 13th).

Foreign Trade (1964): Exports, \$1,054,000,000 (chief exports: cotton, \$170,160,000; coffee, \$95,200,000; zinc, \$42,560,000; lead, \$23,280,000); imports, \$1,493,000,000 (chief imports, 1963: nonelectrical machinery, \$231,700,000; electrical machinery, \$83,300,000; automobiles, \$78,200,000). Chief trading partners (1963): U.S. (took 61% of exports, supplied 69% of imports); Japan (took 7% of exports, supplied 2% of imports); West Germany (took 2% of exports, supplied 7% of imports).

Transportation: Roads (1964), 111,600 miles (20,962 paved); motor vehicles (1964), 1,091,254 (automobiles, 665,127); railways (1963), 14,179 miles; merchant vessels (1964), 40 (247,000 gross registered tons); national airlines, 8; principal airport, Mexico City.

Communications: Telephones (1964): 659,785; television stations (1964), 13; television sets (1964), 1,300,000; radios (1963), 6,506,000; newspapers (1963), 204 (daily circulation, 4,405,000).

1965. A Mexican group acquired a majority interest in the American Smelting and Refining Company, thus "mexicanizing" the most important foreign mining company in the country. In April the government briefly halted exports of sulfur by foreign-owned companies on the ground that reserves for domestic use were being depleted. By fall, however, at least a temporary compromise had been reached. Exports began again, and new foreign investment in sulfur was being considered.

The government closely controlled credit and prices in order to retard inflation. This policy, combined with a slowdown in public investment expenditures in the first half of 1965, led to some uneasiness among businessmen. The government explained that

GUSTAVO DÍAZ ORDAZ, president of Mexico, was inaugurated for a six-year term on Dec. 1, 1964. In his first major policy statement as president, on Sept. 1, 1965, Díaz Ordaz promised to continue development programs in housing, education, agriculture, industry, and social welfare. He said that this development would be done within a regulated economy, and that his government hoped to achieve an economic expansion of 6% a year. During the year the president frequently called agriculture Mexico's most acute problem.

Díaz Ordaz was born in Ciudad Serdán, in the state of Puebla, on March 12, 1911. He earned a law degree at the University of Puebla, and was admitted to the bar in 1937. He later taught at his alma mater, and held several state administrative and judicial posts. He served in the federal legislature between 1946 and 1952, and as secretary of the interior between 1958 and 1964. As the 1964 presidential candidate of the Institutional Revolutionary party, he received 90% of the votes.

MARC & EVELYNE BERNHEIM

HOUSING PROJECT in Mexico City, finished in 1965, has space for 60,000 persons. It surrounds the ruins of an Aztec temple (in front of the wall).

public investments had to be held down until it had paid off the overexpenditure of President Adolfo López Mateos' administration (1958-64). And on Sept. 1, 1965, President Gustavo Díaz Ordaz announced in his message to congress that public investment expenditures would be increased in the latter part of the year. The price-control program was a success, in that consumer prices rose only 1% in the first half of 1965. The government was not so successful in controlling other prices, however, and received complaints from manufacturers.

There was some criticism of the continued rise in the foreign debt, which amounted to 4.2 billion pesos on Sept. 1, 1965—up 1.4 billion from a year earlier. But the debt increase was partly offset by the rise in dollar and gold reserves, which in the year ending Aug. 31, 1965, rose \$16 million, to a total of \$553 million. Also helping the situation were record federal revenues, produced in part by a reform of the tax system that went into operation at the beginning of 1965. President Díaz Ordaz, in his message on September 1, pointed out that the foreign debt was rising less rapidly than the national wealth.

The government was formulating a six-year plan for the entire Díaz Ordaz administration. Parts of the plan had been completed by fall, including a general plan for agriculture in the period 1966-70. A National Agricultural and Livestock Bank was established on March 9, 1965, with a capitalization of 1.5 billion pesos. More ambiguous was the statement by Díaz Ordaz on September 1 that no country was self-sufficient, and that it might be profitable for Mexico to import grain under some circumstances. This jarred the pride Mexicans have taken in their new position as a grain exporter, and raised doubts about the agricultural policies of Díaz Ordaz.

In August the Ministry of Industry and Commerce announced a new investment program to develop some 370 industries with an investment of about

\$1.28 billion. (A list of 500 industries had been announced in 1962, but this was later pruned to 450.) The new program aimed at maximum use of natural and human resources, balanced industrial and agricultural development, exploitation and conservation of natural resources, decentralization of industry, import substitution, increased industrial integration, improved use of existing installations, and expansion of manufactured exports. Business investment in these industries was offered maximum government cooperation.

International Relations. Within the Organization of American States, Mexico maintained its opposition to intervention by one country in the internal affairs of another. In 1965, Mexico stated it was against a permanent inter-American armed force, as proposed by the United States after it had intervened in the Dominican Republic in April.

In the continuing controversy over Communist Cuba, the Mexican government by late summer was investigating reports of anti-Castro guerrilla training camps in Mexico, as well as the alleged operations of pro-Castro agitators.

There was a flurry of press criticism when the United States cut off, as of June 30, the distribution in Mexico of U.S. surplus stocks of food, which had been supplied for the past seven years. The United States apparently acted because Mexico had a grain surplus that permitted exports. Some Mexicans asserted, however, that the action was in retaliation for Mexico's hands-off policy with regard to the Dominican Republic.

A U.S.-Mexican dispute was resolved on March 22, when the United States agreed to construct a diversion canal to reduce the salinity of Colorado River water flowing through wheat and cotton areas in the Mexicali Valley.

ROBERT JONES SHAFER
Professor of History
Syracuse University

MICHIGAN

Michigan experienced relative prosperity, peace, and progress in 1965. Automobile production continued high, there was little labor strife, and increased state income swelled the surplus in the general fund to \$120 million. Governor George Romney and the Michigan Legislature produced a body of legislation that was generally regarded as sound and progressive.

Governor Romney's performance during the year increased his national political stature. There were no open clashes between him and the legislature, and he used his veto power and the threat of veto to good public advantage.

Economy. For the fourth successive year the automotive industry continued to register a near-record output and record earnings. By mid-May the unemployment rate had dropped to 2.6% in the state, and to 2.3% in Detroit. In July, General Motors and Ford had recalled all jobless employees and were hiring new workers. Because 1965 was not a contract year for automobile workers, there were few work stoppages.

The 73rd Legislature. The legislative session, which began in January, was forecast as a contest between Republican Governor Romney and the Democratic-controlled legislature—the first in 30 years. The record of the session was on the whole a productive one. Three primary tasks were undertaken: (1) more funds were provided for state agencies and services; (2) the state government was reorganized as required by the 1963 state Constitution (135 state agencies were consolidated into 19 principal departments); and (3) revision of the state's patchwork tax structure was considered.

According to the Constitution, the governor's budget proposals must be acted upon before any other fiscal legislation can be considered. Both houses rejected Governor Romney's proposed bills and proceeded to adopt their own programs. The final state budget was \$820.4 million, or \$140 million above that of the current year and \$32 million

over the governor's recommendation. Approximately two thirds of the increase was for education.

Of the 400 bills passed during the session, a

MICHIGAN Information Highlights

Area: 58,216 square miles.

Population: 8,269,000 (1965 est.).

Chief Cities (1965 est.): Lansing, the capital (120,500); Detroit (1,600,000); Grand Rapids (203,000); Flint (202,000); Warren (149,000); Dearborn (111,000).

Government: Chief Officers—governor, George Romney (Republican); lt. gov., William G. Milliken (R); secy. of state, James M. Hare (Democrat); atty. gen., Frank J. Kelley (D); treas., Sanford A. Brown; supt. of pub. instr. (acting), Alexander J. Kloster; chief justice, Thomas M. Kavanagh. **Legislature**—Michigan State Legislature (convened Jan. 13, 1965); Senate, 38 members (23 Democrats, 15 Republicans); House of Representatives, 110 members (73D, 37R).

Education: School enrollment (1964-65)—public elementary, 1,147,154 pupils (38,448 teachers); public secondary, 809,838 pupils (31,510 teachers); nonpublic schools, 384,700 pupils (10,350 teachers); college and university (fall 1964), 233,525 students. **Public school expenditures** (1964-65)—\$900,000,000 (\$510 per pupil); average teacher's salary, \$6,700.

Public Finance (fiscal year 1965): Revenues, \$1,691,527,803 (4% sales tax, \$536,388,749; motor fuel tax, \$176,703,731; federal funds, \$272,488,644). Expenditures, \$1,535,996,677 (education, \$637,990,222; health, welfare, and safety, \$387,577,788; highways, \$296,672,258). **State debt**, \$88,108,000 (fiscal year 1964).

Personal Income (1964): \$22,311,000,000; average annual income per person, \$2,755.

Public Assistance (fiscal year 1965): \$166,247,205 to 273,175 recipients (aged, \$55,915,288; dependent children, \$69,905,194).

Labor Force (employed persons, July 15, 1965): Agricultural, 95,900; nonagricultural (wage and salary earners), 2,921,800 (37% manufacturing, 17% trade, 12% government). **Unemployed persons** (July 15, 1965)—129,000.

Manufacturing (1963): Value added by manufacture, \$13,003,804,000 (transportation equipment, \$5,068,299,000; primary metals, \$1,143,823,000; nonelectrical machinery, \$1,758,378,000; electrical machinery, \$372,094,000; fabricated metals, \$1,024,532,000; food and products, \$737,042,000).

Agriculture (1964): Cash farm income, \$382,485,000 (livestock, \$410,343,000; crops, \$380,605,000; govt. payments, \$41,537,000). **Chief crops** (tons)—hay, 3,503,000 (ranks 12th among the states); alfalfa, 2,898,000 (rank, 7th); corn, grain, 2,851,000 (rank, 9th); sugar beets, 1,391,000 (rank, 5th); wheat, 1,178,000 (rank, 13th); oats, 510,000 (rank 8th); apples, 444,000 (rank, 3rd); grapes, 75,000 (rank, 3rd); peaches, 72,000 (rank, 2nd); rye, 29,000 (rank, 7th); cherries, 192,000; barley, 38,000.

Mining (1964): Production value, \$555,495,000 (ranks 9th among the states). **Chief minerals** (tons)—iron ore, 15,536,000 (rank, 2nd); salt, 4,345,000 (rank, 5th); lime, 1,430,000 (rank, 3rd); gypsum, 1,421,000 (rank, 2nd); copper, 69,040 (rank, 5th); crude petroleum, 15,601,000 barrels (rank, 18th).

Fisheries (1964): Commercial catch, 19,761,078 pounds (\$2,521,712). **Leading species**—lake herring, 4,713,433 pounds (\$278,209); alewives, 3,331,184 pounds (\$50,639); yellow perch, 3,255,955 pounds (\$616,526); chubs, 3,020,293 pounds (\$513,124).

Transportation: Roads (1963), 112,451 miles (92,624 paved); motor vehicles (1965), 4,243,799; railroads (1965), 11,524 track miles; airlines (1965), 15 (206 airports).

Communications: (1965): Telephones, 3,834,700; television stations, 20; radio stations, 167; newspapers, 54, (daily circulation, 2,382,451).

TORNADOES IN WESTERN MICHIGAN in April overturned a trailer, crushing two automobiles, near Kalamazoo.

number dealt with important and long-standing state needs. Thirteen new circuit judges were provided, and a new state college was created. There was an overhaul of workmen's compensation and jobless pay, and a bill setting up a state-operated claims fund to pay for injuries and damages caused by uninsured drivers of motor vehicles.

The legislature recessed in June and reconvened in September to consider tax reform. The constitution prohibits a graduated income tax, but some representatives believed that substituting a flat-rate tax would discriminate against low-income families. Since a surplus of over \$70 million was predicted for the General Fund, the legislature decided to take up the matter of new taxes later.

Reapportionment. In 1964 the electoral districts set up by the 1963 state Constitution were found to be unconstitutional, but the State Apportionment Commission could not agree on a new pattern. The State Supreme Court accepted a plan that came near the "one man, one vote" principle enunciated by the U.S. Supreme Court in 1964. However, in November 1965 this plan was found to violate the state Constitution and a new one was requested. The commission again could not agree and returned the question to the court.

Tornadoes. Early in April, tornadoes struck the western part of the state, causing 44 deaths and an estimated \$50 million in property losses.

Sports. The people of Michigan cheered Michigan State University's football team to the Big Ten championship and a trip to the Rose Bowl, where it was defeated 14-12 by the University of California, Los Angeles.

MIDDLE EAST. See ASIA.

MILITARY POLICY, U.S. See NATIONAL DEFENSE.

MILWAUKEE

Milwaukee, the largest city in Wisconsin (1965 est. pop.: city, 765,000; metropolitan area, 1,330,000), experienced in 1965 its first major civil rights issue—de facto school segregation. Other developments included the advancement of urban renewal projects and the transfer of the Milwaukee Braves baseball team to Atlanta, Ga.

Civil Rights. Civil rights groups charged that the city's system of neighborhood schools resulted in segregation. To call attention to their charge, these groups conducted sit-ins at school board meetings, held rallies and marches, and sponsored a four-day school boycott.

The Milwaukee school board denied the charge. The board did agree to allow a \$50,000 study of the city school system that was proposed by an interracial group of civic leaders called the Committee of We-Milwaukeeans. The study was to give special attention to racial questions.

In a related development, Mayor Henry W. Maier proposed a year-long war on prejudice through an educational program to be financed by a \$25,000 city appropriation.

Urban Renewal and Development. The city's Common Council approved a \$101 million, six-year program calling for eight projects concerned with the clearance, conservation, and rehabilitation of blighted areas. In part of the area to be redeveloped, construction was begun on a shopping center and apart-

AT A RALLY IN MILWAUKEE, children sing freedom songs to protest school racial imbalance. Rev. James Groppi (foreground) helped lead a Negro boycott of the schools.

ment buildings on a 62-acre east-side site. Another part of the area was bought by Milwaukee County for a Memorial Center for the Performing Arts. More than \$6,000,000 in contributions was given to finance the music hall-theater section of the center.

The Common Council also approved an 80-acre Marquette University redevelopment project, and the city's first neighborhood conservation project.

New Railroad Station. On the southern edge of the downtown section, the Milwaukee Road opened a new railroad station, which it will share with the Chicago and Northwestern Railway Company. Adjacent to the station, a new \$3,000,000 post office was being built.

Civic Center. Construction began in 1965 in the civic center on a \$13 million plaza and underground garage. In addition, a \$1 million bond issue was proposed by the city for remodeling and air conditioning the center's auditorium and arena.

The Milwaukee Braves. The Milwaukee Braves, the city's major league baseball team, played their last season in County Stadium and moved to Atlanta, Ga. Milwaukee County filed a lawsuit in federal court to stop the club from moving. In addition, a group of civic leaders formed Teams, Inc., which will look for a new team to occupy County Stadium.

Economy. In the three-county Milwaukee area, retail sales totaled \$1,605,610,000 in 1965. The 1965 consumer price index was 108.2 (1957-59=100). The value of manufactures for the area totaled \$2,318,000,000. The civilian labor force was 492,900, of whom 474,000 were employed at the end of 1964.

Finances. The city budget for 1965 was \$125,258,054; capital improvements totaled \$12,636,376; and the city's bonded debt was \$129,523,525. The tax rate was \$71.62 per \$1,000 assessed valuation.

City Hall Reporter, Milwaukee "Journal"

OPERATION BACKFILL

To prevent further damage after the soil caved in over an abandoned mine in Wilkes-Barre, Pa., the U.S. government and the Pennsylvania legislature authorized Operation Backfill. The operation works as shown in the accompanying artist's sketch. Coal mine refuse (rock and culm) is crushed, loaded on trucks, and hauled to flush hoppers, where it is sluiced down into the mine. From the boreholes the mixture is forced through pipelines and deposited in the empty mine passages, which it fills. After the water drains off, the refuse solidifies and supports the overlying rock strata. Completion of Operation Backfill will prevent future catastrophes like the one in Wilkes-Barre, where the cave-in damaged a wide area around a high school.

MINING

World production of most minerals rose to new levels in 1964, as the demand for raw materials continued to expand. This article deals with the research activities of the U.S. Bureau of Mines and with world production of minerals, under the headings: (1) Mining Research and (2) Mineral Production (including a table showing production of major minerals by countries in 1963 and 1964).

MINING RESEARCH

In 1965 the U.S. Bureau of Mines continued its researches in mining, metallurgy, and fuels technology.

Mining Projects. The bureau's efforts (conducted cooperatively with industry) to develop a technology for mining mineral deposits known to exist on ocean floors gained impetus when a third nationally known firm—Merritt-Chapman & Scott Corporation of New York City—joined the venture. Two concepts being developed in the program—a deep sea “corer” for sampling ocean-bottom deposits and a system for raising mineral sediments to the surface—were demonstrated by the Navy's Sealab II project at La Jolla, Calif. (see OCEANOGRAPHY).

The so-called moon-mining project, involving research into the basic physics of rock disintegration and the microstructure of rock-forming minerals, was furthered by a contract awarded by the National Aeronautics and Space Administration. This research explores the possibilities of extracting water, fuels, and building materials from lunar rocks, and is expected to enable moon explorers to utilize lunar resources in support of space missions.

Other developments included progress in the use of rockbolts for supporting the roofs of mines and tunnels. A hydraulic penetrometer helps to select rockbolts of the right length and design, and a pre-stressing concept makes it easier to evaluate rock-

bolt pull-tests as indicators of secure bolt anchorage. In related experiments, bonding with a quick-setting liquid polyester resin, used with steel reinforcement rods, showed promise for preventing the sloughing of rock in mine passages.

Metals and Nonmetallic Minerals. During 1965 the Bureau of Mines concentrated on recovering metals from low-grade ores and on reclaiming metals from secondary sources, such as scrap and mill byproducts and wastes. Processes were developed that may overcome the high cost of sorting the various metals found in old automobiles and other discarded items. In a laboratory-scale demonstration, controlled high-temperature incineration was shown to be effective for removing copper from scrap steel articles, making them metallurgically suitable for use in producing new steel. By means of a vacuum distillation process developed by the bureau, nickel-cadmium battery-plate scrap yielded 99% of its cadmium content as a high-purity product. In addition, nearly pure tin was recovered from a smelter surplus by-product by use of a pressure-filtration technique.

A bureau process for economically treating complex, low-grade copper ores was adopted for commercial use. Although the technical feasibility of the process had been demonstrated some time ago, further work was needed before it could be used industrially.

The bureau is conducting laboratory tests for a method of obtaining a high-purity molybdenum metal from molybdenite ore by means of a two-stage treatment; the method has definite industrial promise.

A low-cost bureau process for recovering mica flakes from a mica-bearing mineral abundant in the West was adopted commercially during 1965. It promises to result in substantial savings for Western mica consumers because it will reduce their dependence on costly sources of supply in the East. Meanwhile, the bureau stepped up research and de-

velopment work on a process that may double the West's commercial-grade reserves of the fertilizer mineral, phosphate rock. The new process permits economic extraction from ores formerly considered too low-grade for profitable mining.

The bureau evaluated the economic potential of numerous clay and shale deposits for use in making lightweight aggregate for concrete blocks, prestressed concrete products, and other building materials. Untapped deposits in Indiana and Illinois were found to have potential for commercial development.

Fuels Research. Research and development on ways to produce synthetic fuels and chemicals from plentiful supplies of coal continued. The tendency of some coals to "cake" on heating was successfully overcome in a coal-gasification pilot plant designed and operated by the bureau. Caking is essential in coals for coke ovens, but undesirable in coals to be gasified. Bureau scientists showed that high-quality carbon black, needed in making paints, inks, plastics, and tires, can be produced from coal.

Research continued on the secondary recovery of petroleum from reservoirs whose natural pressures are depleted. Bureau evaluations of water-flooding projects by which water is injected into oil-bearing formations to restore pressure and move the oil to producing wells, yielded additional information about obtaining better oil recoveries and accurately forecasting the performance of flooding operations. Bureau chemists also developed laboratory procedures for detecting traces of cesium and rubidium in oilfield brines. These ultimately may aid petroleum exploration by providing scientific clues to the geologic origin of petroleum and the waters or brines that occur with it. Through other studies, ways were found to prevent water from blocking gas production by clogging up pores in reservoir rock.

Conservation. Further important developments during 1965 include the bureau's launching of a com-

prehensive study of problems involved in the rehabilitation of surface-mined lands. The study was authorized by the Appalachian Redevelopment Act, signed by President Johnson in March 1965. The bureau also accelerated cooperative efforts to control fires in inactive coal deposits and to curb pollution of streams by acid mine water.

FRANK C. MEMMOTT
Acting Director, U.S. Bureau of Mines

MINERAL PRODUCTION

World mineral production achieved record levels again in 1964, accompanied by an even greater increase in consumption. Output figures were higher in 1964 than in 1963 for 50 of the 65 mineral categories listed by the U.S. Bureau of Mines 1965 *Minerals Yearbook*. Some 39 new records were established in the world group, and four in the free-world group. Recent production figures of the major producing countries are shown in the table on pages 452-454.

World Production. The United States led in the production of 27 of the mineral commodities for which there are reasonably complete world production totals. In output of other minerals, Australia ranked first in lead and rutile; Canada in asbestos, nickel, and zinc (mine); France in byproduct elemental sulfur; South Korea in graphite; Jamaica in bauxite; Japan in pyrites and talc; Malaysia in tin; Mexico in arsenic, fluorspar, and silver; South Africa in gem diamonds and gold; and Spain in mercury.

Communist countries ranked first in the output of 13 minerals. The Soviet Union was the leading producer of chromite, coal, high-temperature coke, corundum, iron ore, magnesite, manganese ore, peat, and platinum. Communist China led in the production of antimony and tungsten, and East Germany in low-temperature coke and fuel briquettes. However, unlike producers in the free world, Communist countries use most of

their output domestically in spite of the increase in their production.

The free world provided about 71% of the steel output in 1964; 87% of the gold; 82% of the bauxite, copper, molybdenum, crude petroleum, silver, and sulfur; 73% of the lead, nickel, tin, and zinc; 69% of the potash, pyrites, and pig iron; and 63% of the antimony, high-temperature coke, graphite, and iron ore.

Though smaller industrial centers have developed

U.S. BUREAU OF MINES

in Australia, India, South Africa, Brazil, Mexico, and a few other countries, the United States, western Europe, and Japan continue to be the chief forces in expanding the free world economy, and their requirements are the principal determinants of demand for minerals. Together the United States, Canada, Japan, and western Europe import two thirds of the free world's exports of metallic and nonmetallic minerals and mineral fuels.

United States. A record \$20.4 billion worth of metals, nonmetals, and fuels was produced in the United States in 1964—\$800 million above 1963. The unprecedented demand for minerals has greatly stimulated the development of new mines and the expansion of processing capacity. Nearly all the leading 80 mineral commodities showed an upward trend. Of the three major groups, metals rose 10% above the 1963 level, nonmetals 5%, and fuels 3%.

The United States contributed almost 26% of the world's steel production in 1964.

A strong demand for copper brought the output up 3% from 1963, to a record 1.25 million tons, and the demand for lead and zinc was so great that government inventories had to be tapped. The price of these three metals also advanced.

Gold production dropped slightly in 1964, to 1.47 million troy ounces, valued at \$51.4 million. Reflecting an improved balance-of-payments position and a lower rate of dollar-to-gold conversions, the outflow of gold from the U.S. Treasury stock was less than in 1963.

Silver output increased 4% above 1963, to 37 million ounces, valued at \$47.9 million. The Treasury stock of silver bullion declined for the sixth consecutive year as withdrawals for domestic industrial use and for coinage increased. Late in 1965 the U.S. Mint began minting half-dollars that had a silver content of 40%, as against 90% for half-dollars previously minted. (See also METALLURGY.)

MINNESOTA

Minnesota communities along the Mississippi River and its tributaries suffered their worst flooding in history during April 1965. President Lyndon Johnson declared 59 Minnesota counties disaster areas, and personally inspected flood damage in the Twin Cities on April 14. The floods caused about \$97.5 million in property damage, and created widespread demands for more flood-control programs.

Another natural disaster, a series of tornadoes, swept through ten Minnesota counties on May 6, causing \$34.5 million in property damage. The suburbs of Minneapolis were hardest hit.

The Legislative Session. Gov. Karl F. Rolvaag, of the Democrat-Farmer-Labor Party, was at odds with the conservative-controlled, Republican-oriented Legislature during most of its 120-day session. He vetoed 12 bills. His most controversial veto, that of the bill reapportioning legislative districts, was challenged as unconstitutional, but the Minnesota Supreme Court upheld the governor's power to veto reapportionment legislation. Political friction between the governor and the Legislature then brought the reapportionment issue to a standstill.

The Legislature petitioned Congress to amend the federal Constitution to allow apportionment to be based on factors other than population in one of the state's legislative houses. The Legislature also

MINNESOTA FLOODS threatened this generating plant near Minneapolis on April 13. The banks of the Minnesota River under normal conditions are outlined by the rows of trees.

doubled legislators' pay and legalized distribution of birth-control information and devices.

Economy. Employment indicators pointed to continued modest economic growth in the state. In September, nonfarm employment reached an all-time high of 1,098,000, while the unemployment rate of 2.3% was the lowest since 1956. Farm income lagged behind 1964 levels because of low prices, feed shortages, and adverse weather.

The most encouraging signs for Minnesota's future economic health were the gains in manufacturing and mining. A steady decline in mining employment on the once-affluent Iron Range was reversed in 1965, partly because of a spurt in the taconite industry. Planned investment in new taconite plants will total almost \$300 million, but it was too early to predict whether taconite development would revitalize the depressed economy of the Iron Range.

Fiscal Affairs. The Legislature approved record appropriations of \$791.3 million for the 1965-66 biennium. They included \$503.2 million for education and \$170.3 million for welfare and correctional institutions. Income taxes were raised, but a much-needed general tax reform was not attempted.

On March 29 the State Capitol Credit Union, the largest credit union in the state, was taken over by the Minnesota banking commissioner, who charged mismanagement. The union was reopened under new management on October 1.

State insurance commissioner Cyrus Magnusson, and 16 insurance executives were indicted on October 29, on charges of mail fraud and conspiracy in connection with the financial collapse of the American Allied Insurance Co. Magnusson refused to resign, but he took a leave of absence from his office pending trial.

Other Events. Mayor Arthur Naftalin of Minneapolis was elected to his third term on June 8. Vice President Hubert H. Humphrey returned to his native state on July 27 to deliver the principal address at the National Governors' Conference, meeting in Minneapolis. In St. Paul, plans for the construction of a \$25 million complex of business and office buildings were announced by the St. Paul Housing and Redevelopment Authority.

MINNESOTA · Information Highlights

Area: 84,068 square miles.

Population: 3,613,000 (1965 est.).

Chief Cities (1965 est.): St. Paul, the capital (308,000); Minneapolis (465,000); Duluth (104,000); Bloomington (65,000); St. Louis Park (50,000); Richfield (49,000); Rochester (47,000); St. Cloud (37,500).

Government: Chief Officers—governor, Karl F. Rolvaag (Democrat-Farmer-Labor); lt. gov., A.M. (Sandy) Keith (DFL); secy. of state, Joseph L. Donovan (DFL); atty. gen., Robert W. Mattson (DFL); treas., Val Bjornson; commissioner of education, Duane J. Mattheis; chief justice, Oscar R. Knutson. Legislature—(convened Jan. 5, 1965; elected without party designation); Senate, 67 members; House of Representatives, 135 members.

Education: School enrollment (1964-65)—public elementary, 463,000 pupils (17,000 teachers); public secondary, 342,000 pupils (15,625 teachers); nonpublic schools, 192,000 pupils (5,800 teachers); college and university (fall 1964), 106,097 students. Public school expenditures (1964-65)—\$395,000,000 (\$528 per pupil); average teacher's salary, \$6,460.

Public Finance (fiscal year 1965): Revenues, \$1,554,165,862 (selected and gross receipts, \$253,241,822; property tax, \$31,094,404; federal funds, \$195,826,844). Expenditures, \$1,556,008,068 (education, \$401,345,718; health, welfare, and safety, \$298,149,927; highways, \$397,545,979). Bonds and certificates outstanding, \$219,964,500 (June 30, 1965).

Personal Income (1964): \$8,364,000,000; average annual income per person, \$2,375.

Public Assistance (fiscal year 1965): \$108,317,168 to 127,315 recipients (aged, \$35,297,919; dependent children, \$30,928,085).

Labor Force (employed persons, Aug. 15, 1965): Agricultural, 283,000; nonagricultural (wage and salary earners), 1,259,200 (21% manufacturing, 21% trade, 15% government). Unemployed persons (Aug. 15, 1965)—43,300.

Manufacturing (1963): Value added by manufacture, \$2,827,660,000 (transportation equipment, \$131,497,000; primary metals, \$64,455,000; nonelectrical machinery, \$486,977,000; electrical machinery, \$224,139,000; fabricated metals, \$146,109,000; food and products, \$585,189,000).

Agriculture (1964): Cash farm income, \$1,613,854,000 (livestock, \$1,031,814,000; crops, \$460,908,000; govt. payments, \$121,132,000). Chief crops (tons)—corn for grain, 7,619,000 (ranks 4th among the states); hay, 6,771,000 (rank, 4th); alfalfa, 5,362,000 (rank, 4th); oats, 2,303,000 (rank, 1st); sugar beets, 1,328,000 (rank, 7th); wheat, 638,400 (rank, 17th); potatoes, 495,000 (rank, 8th).

Mining (1964): Production value, \$497,495,000 (rank, 13th). Chief minerals (tons)—iron ore, 55,581,000 (ranks 1st among the states); manganese ore, 189,481 (rank, 1st); sand and gravel, 35,817,000; stone, 3,588,000.

Fisheries (1963): Commercial catch, 14,759,000 pounds (\$886,000).

Transportation: Roads (1964), 124,910 miles (33,697 paved); motor vehicles (1964), 2,041,172; railroads (1965), 12,224 miles; airlines (1965), 7 (461 airports).

Communications (1964): Telephones (1965), 1,650,700; television stations, 11; radio stations, 88; newspapers, 25 (daily circulation, 1,237,014).

MISSILES

POLARIS A-3 MISSILE, with a range of 2,500 miles, is launched from a submerged submarine. By 1968, the U.S. Navy will have 28 nuclear-powered subs armed with this missile.

MISSILES

The emphasis in U.S. missile development during 1965 was clearly on tactical types useful for fighting limited wars. Although missiles for aerospace defense and strategic purposes underwent continued development, they were of no use in Vietnam despite the forays made by another strategic weapon system, the B-52 heavy bombers. The deficiency of American arms in fighting a war against guerrillas was recognized by the Department of Defense and underlined by both Congress and the nation's press. As a result, work on advanced types of tactical missiles was accelerated in 1965, although it was doubtful that any would be perfected for field use before 1967.

U.S. defense planners were unimpressed when, in November 1965, the Soviet Union announced it had a missile capable of orbiting the earth and dropping at command on any target. The general reaction was that such a weapon would be less effective than intercontinental ballistic missiles launched from the ground.

TACTICAL MISSILES

U.S. tactical missiles showed up well in development and flight tests during 1965, but the Bullpup was the only U.S. air-to-surface missile used in Southeast Asia.

War in Vietnam. The 750-pound warhead version of Bullpup, although effective against undefended targets, could not easily be brought to bear on those protected by antiaircraft weapons. The missile's visual-radio command guidance system required the delivering aircraft to make a deep dive toward its target and to stay on this path too long to be safe from concentrated enemy fire. Hawk surface-to-air missiles were emplaced in South Vietnam early in 1965 in expectation of raids by Soviet-built North Vietnamese aircraft.

The problem of using Bullpup was symptomatic of the dilemma faced by U.S. tactical air forces in 1965. If the delivering planes flew high, they were open to discovery and attack by surface-to-air missile systems that the Soviet Union had given the North Vietnamese; if the planes flew low to avoid detection by ground radar systems, antiaircraft fire was the danger.

These problems gave impetus to the Defense Department's search for missiles that could operate against guerrillas who were equipped with modern weapons. In particular, the department pressed development of air-to-surface missiles that aircraft could launch while still a safe distance away from target areas. Programs receiving serious attention included the Navy's Walleye missile system and the Air Force's SRAM (short-range attack missile).

Walleye, a 1,000-pound glide bomb with a range of several miles, is guided by a television system to target. Only initially does the pilot have to monitor the trajectory; then the missile's guidance system takes over and "homes" the weapon onto its target.

U.S. NAVY

U.S. NAVY CRUSADER JET FIGHTER, operating from an aircraft carrier of the Seventh Fleet, fires Zuni rocket at Vietcong target in South Vietnam.

Thus the aircraft does not have to stay on the target run as long as when delivering the Bullpup missile. A weakness of Walleye is that it must be delivered from an altitude in range of surface-to-air missiles.

The need for a longer stand-off range that would lessen this problem led to the concept of Condor, a highly classified air-to-surface missile for the Grumman A-6A Intruder and the General Dynamics F-111B. The Condor missile is expected to have a 40-mile range if it becomes operational.

SRAM was conceived for the Strategic Air Command, particularly for the Boeing B-52 Stratofortress, the General Dynamics B-58 Hustler, and the F-111A (Air Force version of the aircraft once known as TFX; the Navy version is F-111B). The Defense Department is also expected to use SRAM on tactical missions, just as it has used the B-52.

Soviet surface-to-air missile systems were under construction in North Vietnam in mid-April 1965. On July 24 a Soviet missile downed a McDonnell F-4C Phantom jet fighter—the first of several U.S. aircraft to be hit by Soviet SAM-2 missiles in Vietnam. Subsequently, U.S. planes destroyed several of the missile sites.

SAM-2, also known as Guideline, is similar in appearance and performance to the U.S. Army's old Nike Ajax, which was replaced by the Nike Hercules. The Soviet missile was first seen publicly in a Moscow military parade in 1957, and is the same missile that the USSR has exported to Cuba, India, Indonesia, Iraq, the United Arab Republic, and other countries. It is presumably the same weapon used to down several U.S. U-2 spy planes. SAM-2 weighs 4,000 to 5,000 pounds, carries more than 400 pounds of TNT in its warhead, and has a slant range of about 30 miles corresponding to a ceiling of 40,000 feet. A vertical launch would give the missile an 80,000-foot ceiling. Propelled by two stages—a solid booster and a liquid sustainer—the missile is 35 feet long and 2 feet in diameter; it reaches a speed of about 2,000 mph. Its guidance is probably similar to the radar command system used in Nike Ajax. In this system, the missile rides along a radar beam sent up from the ground to target.

Lance. The U.S. Army's Lance surface-to-surface missile, designed for division support, successfully passed its first flight test in mid-March 1965. Highly mobile and lightweight, this missile may eventually replace Honest John and Lacrosse and perhaps Little John. Lance has a range up to 30 miles and is the first Army missile to use prepackaged, storable liquid propellant. This means there is no need to fuel the missile on the battlefield or to worry about the temperature of the propellant. During 1965 the weapon was successfully fired from operational launchers. Lance can carry either a nuclear or high-explosive warhead.

Chaparral. This fair-weather ground-to-air version of the air-to-air Sidewinder missile passed its first guided firing tests in October 1965 at the Naval Ordnance Test Station, China Lake, Calif. Considered a low-cost, interim Army defense against helicopters and other low-flying aircraft, Chaparral is mounted on a tracked vehicle equipped with four rails, each holding a missile in a ready-to-fire condition. A gunner in the turret aims by keeping his optical sight aligned with the target. After launch, Chaparral automatically homes in on the target's heat source by means of an infrared guidance system.

Subroc. The Subroc underwater-to-underwater antisubmarine missile went a long way toward deployment on all U.S. nuclear-powered attack submarines as a result of successful test firings late in the spring of 1965. A number of the missiles launched at that time from the nuclear submarine *Plunger* in the Pacific Ocean achieved a high "on-target" score during the test series, which encompassed complete tactical ranges and depths.

Subroc, armed with a nuclear warhead and inertially guided, has a range of 25 to 30 miles. It is propelled by a solid fuel, weighs 4,000 pounds, is 21 feet long, and measures 21 inches in diameter. The weapon is designed for launch from a conventional torpedo tube using the standard torpedo ejection system. Its rocket motor ignites under water shortly after the missile leaves the tube. Streaking to the surface, the missile emerges into the atmosphere,

U.S. ARMY

U.S. ARMY'S LANCE ballistic missile, designed for division support, hits bulls-eye in first test firing in March.

where it reaches supersonic speed. At a predetermined point, the rocket motor separates from the warhead or depth bomb section, which arcs in a ballistic path toward its target. Upon reentry into the water, the bomb sinks and detonates.

Shillelagh. The Shillelagh surface-to-surface missile was chosen in 1965 as the weapon for a U.S.-West German battle tank that is being developed for the 1970's.

Mauler. In the summer of 1965, the U.S. Army cancelled the Mauler development program, which had cost about \$200 million. A Pentagon announcement gave "technical difficulties" as the reason for ending the program to develop this mobile air-defense system for front-line troops. More pointed reasons hinted at were recent improvements in the Hawk missile system and the good outlook for simpler and cheaper defense systems such as combinations of Chaparral and automatic anti-aircraft guns.

STRATEGIC MISSILES

In the first six months of 1965, the U.S. inventory of ready-to-fire ICBM's (intercontinental ballistic missiles) shrank from a high of nearly 950 to 854. The reduction was part of the ICBM modernization program announced by Secretary of Defense Robert S. McNamara at the end of 1964. By mid-1965 all 126 obsolete Atlas missiles and all 54 outmoded Titan 1's had been removed from their operational sites. In October the last of the Polaris A-1 missiles on nuclear-powered submarines were replaced with improved Polaris models.

Minuteman. In 1966, Minuteman 2 will begin replacing Minuteman 1. The program of developing, building, and installing the advanced missiles in the 800 silos occupied by the old model will cost more than \$1 billion, according to Air Force estimates. The Minuteman 2 program calls for 1,000 operational missiles. Meanwhile, on June 30, 1965, the last of the 800 Minuteman 1's was officially declared operational and was turned over to the Fifth Wing

of the Strategic Air Command (SAC) at Warren AFB, Wyo.

Minuteman 2 can hurl a one-megaton nuclear warhead 7,000 nautical miles, or 700 miles farther than Minuteman 1, with a kill capacity eight times as great. Earlier reports had credited the new missile with a range of 9,000 nautical miles. This large increase in range was subsequently sacrificed to improve the missile's inertial guidance system and payload, and therefore its kill capacity.

The development of Minuteman 1, at a cost of more than \$6 billion, had given the United States its first solid-fuel ICBM system. Minuteman 1 could react in 32 seconds and was much less costly to operate and maintain than its cryogenic liquid-fueled predecessors such as Atlas and Titan 1. In mid-1965, only Titan 2, SAC's noncryogenic liquid-fueled ICBM, remained operational to complement Minuteman.

Not daring to pause in ICBM development, the Air Force affirmed that Minuteman 2 and Titan 2 had many possible improvements in store for them. New propellants, if substituted for present Titan 2 propellants, "could double the payload capability that can be delivered from Titan silos," said Brig. Gen. H.J. Sands, Jr., commander of the Air Force Ballistic Systems Division. He explained, "We are investigating storable metallic thixotropic fuels in which the propellant is jelled to keep the metal powder in suspension—which combines some of the best properties of both solid and liquid cryogenic fuels."

Another possible improvement called for the cold launch of siloed ICBM's. A missile would simply be popped out of its hole by hot gases generated beneath the weapon. Once the missile was clear of its silo, the ICBM booster stage would ignite. This launching system is similar to the one used for Polaris missiles and was successfully demonstrated when a 160-ton "boilerplate" missile was hurled out of a Minuteman silo in a test by the Air Force Rocket Propulsion Laboratory in June 1965. The Air Force cited advantages such as no missile ignition in the silo, no exhaust ducts or silo damage, and greater utilization of silo space for missiles of much larger diameters.

Another promising technique involved frustrating an enemy's antimissile missile system by using a maneuverable reentering warhead. North American Aviation's Autonetics Division announced in August 1965 that it had received an Air Force contract to develop such a reentry vehicle for Minuteman 2.

Polaris. Operational life for the Navy's Polaris A-1 surface-to-surface missile ended in October 1965 when the nuclear submarine *Abraham Lincoln* docked at New London, Conn., for overhaul. The A-1 was the 1,200-nautical-mile member of an illustrious missile family that also includes Polaris A-2 (1,500 miles), Polaris A-3 (2,500 miles), and Poseidon (2,500 miles). Since 1960 the Navy had deployed 29 of the planned 41 Polaris-carrying nuclear submarines. The last five to carry the A-1 were fitted with the A-3 in 1965. The launching of the *Kamehameha* near the end of the year brought the number of Polaris submarines to 32 commissioned, 7 launched but not commissioned, and 2 under construction. In 1968, when all 41 are operational, 13 will be carrying the Polaris A-2 and 28 the A-3.

Poseidon. When Poseidon becomes operational, probably in 1969, it will give the Polaris submarine fleet increased flexibility both in the types of targets it can attack and the amount of damage it can

AVIATION WEEK

"BIG BROTHER," a mammoth three-stage Soviet "orbital missile" and space booster, is 115 feet long. It was first shown in 1965 Moscow May Day parade.

inflict. In announcing the program early in 1965, President Johnson said the advanced missile's effectiveness "against a hardened target will be some eight times greater than the latest version of Polaris." The cost of developing Poseidon will be about \$900 million, according to Defense Secretary McNamara. He estimated an additional \$1.2 billion for production costs and for retrofitting 19 nuclear submarines to handle the missiles.

AEROSPACE DEFENSE

U.S. defense against incoming ballistic missiles inched closer to reality in 1965 with further development of the Nike-X antimissile missile system. In favor of this weapons system was the absence of any realizable competitor. Disadvantages included its deployment cost, estimated at \$8-\$10 billion, and its point-defense character, which means that areas of the country would have to go undefended. However, no complete defense against ballistic missiles was considered possible.

Nike-X. More than \$2 billion had been invested in the Nike-X system, components of which had been under development since 1955. The system comprises the high-acceleration Sprint missile, designed to intercept warheads seconds before they are due to strike, and the Zeus missile, derived from the Nike Zeus and designed to intercept warheads during their terminal descents into target areas. The system will defend against ICBM's of the 1970's if the Defense Department approves its production.

Sprint passed its first flight test in March 1965 and "exceeded our fondest hopes," an Army spokesman said. In this test of its propulsion system and structure, the 27-foot missile roared into the sky from an above-the-ground launcher. The operational missile would be cold-launched from a hardened silo, after which its rapid-acceleration motors would ignite. During 1965 the Army was arranging for these "pop up" tests of Sprint. At the same time the service was keeping track of Hibex, an experimental vehicle expected to have an even higher rate of acceleration than Sprint. It is under advanced development by the Defense Department's Advanced Research Projects Agency.

A program to upgrade the Zeus missile was begun late in 1965 when Western Electric Co. received a \$21.5 million contract to extend Zeus' accuracy and range. The new version will be slightly longer than the present 48.3-foot model and will be heavier. Its slant range for an intercept is expected to be increased from 200 to 400 nautical miles.

U.S. MISSILE TECHNOLOGY

Guidance and propulsion continued to dominate the research work of U.S. missile developers during 1965. The quest for a solid rocket that could be pulsed was pursued with some success by Aerojet-General, Lockheed Propulsion, and other companies. Aerojet demonstrated a fully controllable, toroidal solid motor suitable for applications such as space-station docking or intercept maneuvers. These ap-

"IRON MAIDEN," a Soviet battlefield missile shown on May Day, is believed equivalent to U.S. Army's Pershing.

"LITTLE SISTER," also unveiled on May Day, is a three-stage 60-foot ICBM, similar in size to USAF Minuteman 2.

AVIATION WEEK PHOTOS

The Air Force reported a significant step forward in the program to develop a second-generation liquid booster system to compete with large solids. The service successfully tested a cluster of eight thrust chambers of 25,000 pounds thrust each, mounted around a zero-length plug nozzle to form an engine with 200,000 pounds thrust.

The first flight test of the U.S. Navy's Simplified Inertial Guidance System (SIGS) was made in August 1965 at White Sands Missile Range, N. Mex. The SIGS had been developed primarily to lower the cost of existing inertial guidance systems, possibly by 80% to 90%. The test was made by putting the SIGS aboard an Army Sergeant missile. After 20 seconds of the boost phase, the guidance system of the Sergeant failed, but the SIGS operated for an additional 11 seconds and was "perfect in all respects in all phases of the flight," the Navy said.

The U.S. experiment to prove practicable a NATO multilateral force (MLF) of 25 Polaris-equipped surface ships came to a quiet end on Dec. 1, 1965, when the guided-missile destroyer *Claude V. Ricketts* returned to the U.S. fleet. Outfitted with surface-to-air Terrier missiles, commanded by an American captain, and manned by a crew originally drawn from seven nations, the *Ricketts*, during its 14-month cruise, had failed to breathe life into the MLF concept.

Soviet Union. The USSR boasted on Nov. 7, 1965, that it had "orbital missiles whose warheads can without warning deliver their blow to an aggressor at the first or any other loop around the earth." The warheads would be launched by a 115-foot, three-stage mammoth missile, which was first shown in the May Day parade in Moscow. Top U.S. military analysts said that an orbiting warhead was far less efficient than an ICBM fired from an earthbound launcher, chiefly because of the amount of command and control equipment an orbiter must contain. Moreover, nuclear weapons in orbit are vulnerable and can be destroyed by U.S. antisatellite weapons.

Among the new Soviet missiles shown in 1965 were: (1) the new "orbital missile," also described by the Russians as the type used to launch their manned spacecraft into orbit, and nicknamed Big Brother by Western observers; (2) a smaller three-stage solid-propellant ICBM, about 60 feet long, nicknamed Little Sister and similar to Minuteman 2 in size; and (3) an ugly-looking missile carried on a tracked vehicle with hydraulic lifts to raise the missile to its launch angle; called Iron Maiden by Westerners, this missile was believed to be equivalent to the U.S. Army's surface-to-surface Pershing.

Great Britain. In an economy move, the British government announced in February 1965 that it would build only four of the five Polaris submarines originally planned. However, the announcement ended earlier speculations that the entire project would be cancelled. The vessels would be equipped with Polaris A-3's bought from the United States.

but would be fitted with British-built nuclear warheads.

France. The *Suffren*, the first frigate equipped with French-made missiles, was launched in mid May 1965 at Lorient, France. To be commissioned in 1967, the frigate was equipped with Maserca anti-aircraft and Malafon antisubmarine missiles. The *Suffren*, together with a sister ship, the *Duquesne* (under construction at Brest), will be used to escort the aircraft carriers *Clemenceau* and *Foch*.

Sweden. The Swedish air force put its 11.5-foot, 660-pound air-to-surface missile system into production during 1965. It will be used first aboard the Saab 105 jet attack aircraft, and then with the new Saab 37 Viggen multipurpose STOL (short takeoff and landing) aircraft. This solid-motor, supersonic missile was designed primarily for low-level attack.

BURNED NEGRO CHURCH at McComb, Miss., is shown in photograph exhibited at hearing held by the U.S. Civil Rights Commission in Jackson on February 17. Members of the commission (l. to r., at table) include Robert S. Rankin, Erwin N. Griswold, John Hannah (chairman), and Mrs. Frankie Muse Freeman.

WIDE WORLD

MISSISSIPPI

The collapse of barriers to the Negro's right to vote and a major effort by state leaders to gain public acceptance of national civil rights legislation were the chief political developments in Mississippi in 1965. As a result, gradual improvement in race relations was evident.

Voting Rights. Early in the year Gov. Paul B. Johnson, Jr., began a series of addresses to law-enforcement officers, municipal and county officials, and other groups in which he urged compliance with national civil rights legislation. Anticipating that Congress would pass a voting rights bill, the governor called a special session of the Legislature. Meeting from June 14 to July 10, the Legislature, upon the governor's recommendation, repealed various laws that had raised barriers to voting by Negroes. The Legislature also proposed a constitutional amendment that would eliminate the requirements that a prospective voter be of good moral character, "that he be able to interpret a section of the state constitution, and that he write an essay on the duties and obligations of a citizen. After a campaign in which most of the state's political leaders supported the amendment, the voters approved it on August 17 by a vote of 137,236 to 50,748.

After Congress passed the Voting Rights Act of 1965, federal voting registrars were sent into selected Mississippi counties. By December 31 these officials were assigned in 18 counties and had registered a total of 27,385 persons, most of them Negroes. Disputes between state and federal officials over whether names should be transferred from the federal rolls to state rolls without complying with the state literacy requirement led to lawsuits that resulted in state court action enjoining such transfers. The Department of Justice requested the U.S. Supreme Court to rule on the issue.

Other Civil Rights Developments. Gradual acceptance of the national Civil Rights Act of 1964, which barred discrimination in most places of public accommodation, was evident in 1965. On February 5 the governing board of the Mississippi Chamber of Commerce urged compliance with the law. The U.S. Civil Rights Commission held hearings in Jackson from February 10 to 20 at which state leaders

in business, education, and government appeared. When the hearings adjourned, Chairman John A. Hannah, president of Michigan State University, reported "encouraging signs of change" in Mississippi. During 1965 all state colleges and universities and most public schools took steps to comply with the law, and thereby qualified for federal support funds. Most schools also had at least token racial integration of students.

Demonstrations in Natchez drew attention to the difficulty in adjusting to racial equality. George Metcalfe, local president of the NAACP, was injured seriously in Natchez on August 27 when a bomb exploded in his automobile. Subsequent demonstrations by Negro groups demanding equality in public accommodations and a voice in government led to the use of the Mississippi National Guard to maintain order, the arrest and jailing of about 500 demonstrators, and the issuance of a federal court order protecting the rights of the demonstrators. A Negro boycott hurt Natchez merchants. On December 3, city officials and businessmen acceded to the demands of the Negroes. Late in December, Negroes launched a similar boycott in Fayette.

There were also attempted marches on the Capitol building in Jackson during the special session of the Legislature in June and July. Demonstrators protested the alleged unconstitutionality of the Legislature because of its failure to reapportion its membership. After the arrest and jailing of about 1,000 persons, this group obtained a federal court order protecting its right to march.

U.S. District Judge W. Harold Cox ruled on February 26 that Neshoba County Sheriff Lawrence A. Rainey and 16 other men had to stand trial on a misdemeanor charge of conspiring to violate a law forbidding the infliction of summary punishment without due process of law, in connection with the slaying of three civil rights workers near Philadelphia, Miss., on June 21, 1964. Cox let stand indictments against Rainey and two others for actually violating the law, but he dismissed similar indictments against the 14 other defendants.

On May 5, 1965, the U.S. Court of Appeals for the Fifth Circuit dropped criminal and civil contempt proceedings that it had instituted against former Governor Ross R. Barnett and Paul Johnson,

then lieutenant governor, for attempting in 1962 to prevent the admission of James Meredith, a Negro, to the University of Mississippi.

Politics. Three Negroes representing the Freedom Democratic party sought in 1965 to unseat three Mississippi members of the U.S. House of Representatives. Attorneys for the contesting persons tried to establish that the election of the congressmen was invalid because Negroes were excluded from the polls. The challenge was finally rejected by the House on September 17, by a vote of 228 to 143.

In municipal elections on June 9, Columbus and Hattiesburg chose Republican mayors. A third Republican was added to the state Senate from Panola County in a special election on August 31.

Economy. In 1965, for the first time, manufacturing employment exceeded agricultural employment in the state. Paper manufacturing plants are planned for Crosby and Monticello. In May a state trade mission visited a number of European countries, and in November a similar mission, headed by Governor Johnson, visited Latin American countries. Both missions, sponsored by the Mississippi Marketing Council, sought orders for state-manufactured goods.

UPI PHOTOS

HEAVY FLOODS inundated Missouri towns of Portage des Sioux (left) and Hannibal (right) in April 1965 when northern snows melted in sudden thaw and forced Mississippi River over its banks.

retained control of all major state offices and increased their majorities in the General Assembly. The Democrats hold a 123-to-40 majority over Republicans in the House of Representatives and a 23-to-11 margin in the Senate.

Despite Democratic control of both the executive and legislative branches, the year began with considerable friction between Governor Hearnes and the Democratic leaders in the legislature. Candidates supported by Governor Hearnes failed in bids for legislative leadership posts. The internal party disputes resulted in part from the bitter 1964 Democratic primary battles, in which Hearnes (then secretary of state) defeated the candidate supported by most state party leaders.

Reapportionment. The major issue facing the 1965 Missouri legislative session was reapportionment. Federal courts had ordered the reapportionment of both houses of the General Assembly and of the state's 10 federal congressional districts. Reapportionment of the federal congressional and state senatorial districts was accomplished by bipartisan commissions. Reapportionment of the State House of Representatives, however, required a constitutional amendment. The House at first rejected a proposal for reapportionment by a bipartisan commission and insisted on working out its own plan. The plan adopted was submitted to the voters in a special election on August 17. It failed to get even a simple majority.

Governor Hearnes called a special session of the legislature in November to work out a new procedure for reapportionment. This time the governor won authorization to appoint a bipartisan commission to work out a new House reapportionment scheme. The new plan will be presented to the voters in January 1966. Legislative reapportionment will give greater representation to the state's two major metropolitan areas, St. Louis and Kansas City.

Gubernatorial Succession. An amendment to the state constitution that will permit Missouri governors to serve two consecutive terms won overwhelming approval from state voters in the August 17 special election. This measure, strongly endorsed by Governor Hearnes, won support from most leaders of

both political parties, but was strongly opposed by House Speaker Thomas D. Graham.

Legislation. Despite the initial leadership struggles between governor and legislature and differences over reapportionment and gubernatorial succession, the General Assembly made an unusually strong record of accomplishments. The legislators enacted 19 of the governor's 20 major legislative proposals. The first state conflict-of-interest law was passed. Legislation prohibiting racial and religious discrimination in public accommodations and services was passed, and provisions against discrimination in employment were strengthened. These measures made Missouri one of the leading states in civil rights legislation.

MONEY

Monetary conditions in the United States and in the world remained relatively calm during 1965. (For a discussion of the stability of the international money markets, see *INTERNATIONAL FINANCE*.)

U.S. Domestic Problems. U.S. monetary authorities faced two major domestic problems—inflation and coin shortages. Above all, they wished to refrain from any action that would dampen the economic upswing that continued for the fifth year in succession—the longest continuous advance in many decades. By the end of the year, however, pressures toward inflation resulting from the Vietnam war were becoming more worrisome. For the first time since 1952, prices showed signs of increasing at a rate that would give rise to concern if it continued. At the same time, the continuing balance-of-payments difficulties limited the freedom of the authorities to act without considering the international effects of any policies they adopted to meet domestic problems.

On the whole, the situation called for somewhat restrictive policies. By the end of the year the restraints on monetary policy had resulted in interest rates rising to levels that had not occurred since the

NEW QUARTERS issued by the U.S. Treasury in 1965 save silver. They are a composite of copper and layers of alloy.

boom of the 1920's. Even at these high rates, however, businesses and individuals were willing to borrow, and banks were willing to lend—more than in any previous year—so that credit could not be regarded as scarce.

The domestic coin shortage persisted in the United States, but was not as acute as in 1964. The continued high demand for silver, both for coinage

and industrial use, has pushed up the price of the metal for several years, and it would have risen more if the U.S. Treasury had not released some of its stock for industrial use. The consequent foreseeable shortage of silver led the Treasury to make the first important change in the currency for many years. During 1965, it issued quarters as the first of a new type of coin with a copper center and cupronickel alloy surfaces. Because of their composite or "sandwich" construction, the new coins were referred to as "plywood" quarters. A new silverless dime and a new half-dollar that contains some silver were scheduled to be released in 1966. Cents, nickels, and silver dollars remained unchanged. Many problems had to be overcome so that the new coins would be of the same size and weight, and have virtually the same electrical conductivity as the old silver alloy coins, in order to activate telephones and other coin-operated devices. (See also COIN COLLECTING; METALLURGY.)

International Currencies. In 1965, Trinidad and Tobago adopted a new currency (the TT dollar); Ghana replaced the pound with the cedi, which has a new par value; Burundi adopted a par value for its franc; and the Philippine government changed the par value of its peso.

MONGOLIA

ASIA

The government of Mongolia, led by Premier Yumzhagiyn Tsendenbal, further aligned itself in 1965 with Moscow in the continuing ideological dispute between the Chinese and Soviet Communist blocs.

Soviet Visit. In February a Soviet delegation headed by Aleksandr Shelepin, a member of the Soviet Communist party Presidium, visited Mongolia. During the visit the delegation toured the South Gobi district, just across the border from the Inner Mongolian Autonomous Region of Communist China, which had been the scene of pro-Chinese Communist dissension. At the conclusion of the visit, Mongolian Premier Tsendenbal reaffirmed his government's fidelity to the Soviet Union.

In late 1964, Tsendenbal was successful in purging from the Mongolian People's Revolutionary party a faction which had attempted to break Mongolia's staunch allegiance to Moscow in favor of a more pro-Chinese orientation.

New Aid Pact. Mongolia and the Soviet Union signed a 20-year mutual assistance pact on Jan. 15, 1966. The two governments announced at the time of the signing that they were in "complete unity" in the face of Chinese threats to split the world Communist movement.

To conclude the friendship and mutual aid pact, Moscow had sent a high-ranking delegation headed by Leonid Brezhnev, first secretary of the Soviet Communist party, to the Mongolian capital of Ulan Bator. The eminence of the delegation pointed up the fact that Moscow views Mongolia, which lies be-

tween Russia and China, as a strategic ally and buffer zone in Russia's struggle with Communist China.

MONTANA

The 39th Montana Legislative Assembly convened in 1965 with Democratic majorities in both houses. Although the Republican governor and Democratic legislature exchanged political recriminations, they cooperated on many issues. The most controversial problem facing the state was that of reapportioning the legislature and the state's two congressional districts, as ordered by a federal court.

Reapportionment. After the state legislature failed to reach agreement on the reapportionment issue, a federal district court drew new boundaries for Montana's two congressional districts on July 7. The court transferred seven counties from District No. 2 to District No. 1, giving the former a population of 347,701 and the latter a population of 327,019. The newly apportioned legislature has 55 senators—a decrease of one—and 104 representatives—an increase of 10. Differences in legislative district populations now average about 4,000, whereas the former districts varied in population by as much as 78,000. The 1967 legislature may make changes in the apportionment, but the court's action generally met with wide approval.

Legislation. Legislative controversy centered on Gov. Tim Babcock's financial proposals. The first proposal would have continued the present 2-cent-

MONTANA · Information Highlights

Area: 147,138 square miles.

Population: 717,000 (1965 est.).

Chief Cities (1965 est.): Helena, the capital (22,000); Great Falls (64,500); Billings (58,000); Missoula (27,600); Butte (26,500); Bozeman (16,500); Havre (11,800); Anaconda (11,300).

Government: **Chief Officers**—governor, Tim Babcock (Republican); lt. gov., Ted James (R); secy. of state, Frank Murray (Democrat); atty. gen., Forrest H. Anderson (D); treas., Henry Anderson; supt. of pub. instr., Harriet Miller; chief justice, James T. Harrison. **Legislature**—Legislative Assembly (convened Jan. 4, 1965); Senate, 56 members (32 Democrats, 24 Republicans); House of Representatives, 94 members (56 D, 38 R).

Education: **School enrollment** (1964-65)—public elementary, 111,500 pupils (4,925 teachers); public secondary, 59,000 pupils (2,610 teachers); nonpublic schools, 23,800 pupils (850 teachers); college and university (fall 1964), 17,870 students. **Public school expenditures** (1964-65)—\$79,000,000 (\$516 per pupil); teacher's average salary, \$5,635.

Public Finance (fiscal year 1964): Revenues, \$211,397,000 (motor fuel tax, \$20,010,000; federal funds, \$70,028,000). **Expenditures**, \$205,106,000 (education, \$51,787,000; health, welfare, and safety, \$14,808,000; highways, \$74,718,000). **State debt**, \$2,982,000 (1964).

Personal Income (1964): \$1,587,000,000; average annual income per person, \$2,252.

Public Assistance (fiscal year 1965): \$14,887,615 to 18,112 recipients (aged, \$4,558,172; dependent children, \$3,081,093).

Labor Force (employed persons, July 1965): **Agricultural**, 48,400; **nonagricultural** (wage and salary earners), 217,600 (12.4% manufacturing, 23.7% trade, 24.7% government). **Unemployed persons** (July 1965)—3,100.

Manufacturing (1963): **Value added by manufacture**, \$234,783,000 (fabricated metals, \$3,185,000; food and products, \$50,238,000; lumber and wood products, \$67,294,000; petroleum and coal products, \$27,384,000).

Agriculture (1964): **Cash farm income**, \$441,606,000 (livestock, \$203,272,000; crops, \$191,078,000; govt. payments, \$47,256,000). **Chief crops** (tons)—hay, 3,384,000 (rank, 14th among the states); wheat, 2,725,000 (rank, 4th); alfalfa, 2,044,000 (rank, 13th); barley, 1,211,000 (rank, 3rd); sugar beets, 983,000 (rank, 8th); oats, 160,000 (rank, 15th); rye, 10,800.

Mining (1964): **Production value**, \$211,435,000 (rank, 24th). **Chief minerals** (tons)—lime, 136,000 (ranks 15th among the states); copper, 103,806 (rank, 3rd); zinc, 29,059 (rank, 9th); manganese, 20,264 (rank, 1st); silver, 5,290,000 tray ounces (rank, 3rd); petroleum, 30,647,000 barrels (rank, 11th).

Transportation: **Roads** (1965), 74,347 miles (10,294 paved); **motor vehicles** (1965), 417,429; **railroads** (1965), 6,707 miles; **airlines** (1965), 4 (313 airports).

Communications (1965): **Telephones**, 282,500; **television stations**, 8; **radio stations**, 34; **newspapers**, 14 (daily circulation, 206,324).

MONGOLIA · Information Highlights

Area: 592,664 square miles.

Population: 1,050,000 (mid-1964 est.).

Chief City (1962 est.): Ulan Bator, the capital, 195,300.

Government: **Chief of State**—Zhamarangiin Sambu (took office July 1954); **Premier**—Yumzhagiyn Tsendenbal (took office 1952). **Parliament**—Great People's Khural, 290 members, all belonging to the Mongolian People's Revolutionary party.

Principal Religious Faith: Lamaist Buddhism.

Education: **Literacy rate** (1956)—95% of population aged 9 to 50 years. **Total school enrollment** (1962)—153,559 (primary, 133,975; secondary and vocational, 10,400; higher, 9,184).

Finance (1962 est.): Revenues, \$339,000,000; expenditures, \$338,000,000; **monetary unit**, tugrik (4 tugrik equal U.S.\$1).

Manufacturing: Gasoline (1960), 18,000 metric tons.

Principal Crops (1965 est.): Wheat, 500,000 metric tons; timber (1963 est.), 469,900 cubic meters.

Minerals (metric tons, 1964): Bituminous coal and lignite, 708,000; Aurorite, 57,000; lime, 30,000; salt, 8,000; crude petroleum, 360,000 barrels.

Foreign Trade (1960): **Exports**, \$70,000,000 (chief exports: cattle, horses, wool, hides, meat, butter); **imports**, \$97,000,000 (chiefly consumer goods). **Chief trading partners:** USSR (took 80% of exports, supplied 60% of imports); Communist China (took 4% of exports, supplied 20% of imports).

Transportation: **Roads** (1961), 46,700 miles (5,300 motorable); **railways** (1963), 870 miles; **civil airline**, Mongolair; **principal airport**, Ulan Bator.

Communications: **Telephones** (1964), 12,234; **television stations** (1964), 1; **radios** (1963), 57,000; **newspapers** (1963), 2 (daily circulation, 92,000).

per-pack cigarette tax (originally approved to finance a veterans bonus) to provide a greatly needed public building fund. The second proposal would have imposed a straight \$5 extra assessment for every state income tax return.

Instead of following the governor's proposals, the legislature referred a 3-cent cigarette tax to the people, and raised the state income tax on a graduated basis, beginning at 10%; it also increased the corporation tax nearly 16%. A hotly debated 1% surcharge levied on out-of-state contractors was later declared unconstitutional. The funds for the construction of public buildings were provided by apportioning 5% of the state's general fund for that purpose.

Other bills passed included enabling legislation for the federal Kerr-Mills Act, which provides medical care for the aged, and a bill for a new mental health institution.

Industry. Employment was high in Montana in 1965. Industrial expansion programs included those of Anaconda Aluminum (\$20 million), Montana Power (\$15 million), and Mountain States Telephone (\$12 million). Federal expenditures included the completion, near Miles City, of a complex electronic system for detecting underground disturbances.

Construction. The \$100 million Yellowtail Dam on the Bighorn River was completed. Preliminary work began on a \$350 million dam on the Kutenai River, near Libby. The Montana Highway Commission announced that about one half of the state's 1,174 miles of highway in the interstate highway system had been built or assigned for construction.

Education. Record school enrollments continued in the state in 1965, although the growth rate was only 0.4%, as compared with an annual average of 2.2% for the past ten years.

The state university system reported an increase of 14.1% in the autumn quarter enrollment.

MERRILL G. BURLINGAME
Professor of History
Montana State University

MONTREAL

Montreal, Canada's largest city (1965 est. pop.: city, 1,200,614; metropolitan area, 2,019,509) and the world's largest inland port, continued in 1965 to prepare for the Canadian world's fair, scheduled to open in 1967. Urban renewal and development projects progressed during the year, and the city was beset by a number of strikes.

Expo '67. Montreal will be the site of the 1967 Canadian Universal and International Exposition, commonly known as Expo '67. More than 70 nations are expected to participate in the exposition. The exposition site was expanded to cover approximately 950 acres, including Île Sainte-Hélène and the completely man-made Île Notre-Dame, both in the St. Lawrence River. A bridge was built linking Mackay Pier to St. Helen's Island, and another was under construction to join St. Helen's Island and the Île Notre-Dame.

Transportation Projects. A number of other projects were completed in 1965, or will be completed before Expo '67 opens. The Montreal Island portion of the Trans-Canada Highway was completed with the opening of the Galipeault Bridge at the western end of the island. The Eastern Townships Autoroute between Montreal and Sherbrooke also was opened. (Plans call for the route to extend to the U.S. border by 1967.) Construction of the new \$200 million De-carie Expressway, linking the Trans-Canada Highway and the southwest section of Montreal, was also planned.

Work progressed rapidly on Metro, Montreal's new subway system, scheduled to open in 1967. This 15-mile line will have three separate routes: one running north to south; another, east to west; and a third, from the South Shore area to the Expo '67 site.

Urban Renewal and Development. Over the next few years, approximately 20 acres of the city will undergo a face lifting. The center of the redevelopment will be McGill College Avenue, which will become a

KEYSTONE PRESS

MONTREAL will be host to the 1967 Canadian Universal and International Exposition. The site of the fair includes Île Sainte-Hélène (left) and Île Notre-Dame (center), in the St. Lawrence River.

boulevard flanked by two 24-story towers with a plaza, shopping mall, and commercial center. The complex also will include a 15-story professional building. This multistage, \$125 million project will be undertaken jointly by the T. Eaton Company of Canada Ltd. and the First National Property Corporation, which have formed Mace Ltd. for the development.

New Buildings. The newest addition to the Montreal skyline in 1965 was the 47-story Place Victoria, which houses the Montreal and the Canadian stock exchanges. The International Business Machines building, the final section of the Place Ville-Marie, a midtown office and shopping complex, neared completion.

Strikes. Montreal was beset by a number of strikes during 1965, beginning with a strike during the New Year's holiday season by the Quebec Liquor Commission. The most crippling strikes, however, were two separate transit strikes and a postal strike. The transportation strikes in June involved the Montreal Transportation Commission, which provides transportation within the metropolitan area, and the Provincial Transport Company, which provides commuter service to the city. Both strikes lasted two weeks.

In July the city was hit by a three-week walkout by its postal employees as part of a nationwide postal strike that disrupted most of Canada's postal services. In the same month, a three-day gasoline vendors strike, which threatened to damage the city's tourist trade, was marked by violence against a few small establishments that refused to close.

Government and Finance. Montreal, with 70% of its population French speaking, is governed by Mayor Jean Drapeau and a 45-member City Council. The city's finances for the 1965 fiscal year included: revenues, \$242,702,511; expenditures, \$234,903,610; real estate and school tax rate, \$3.17 per \$100 of assessed valuation. Among business indicators, the consumer price index was 138.1 (1949=100) on July 1, 1965, and the employment index for the first nine months of 1965 was 136.1 (1949=100).

MORO, Aldo. See biographical sketch under ITALY.

MOROCCO

The street riots that broke out in Casablanca in March 1965 forced the Moroccan monarchy to act promptly to reverse the political deterioration that has characterized the last several years. On June 7, 1965, King Hassan II dissolved the coalition cabinet headed by Prime Minister Ahmed Bahnini. Bahnini had become prime minister in 1963, and was considered a close ally of the king. The new cabinet, headed by the king himself, announced that it would govern for an indefinite period of time under emergency powers.

Riots. Spontaneous rioting broke out in Casablanca on March 22, 1965. Some 25 persons were killed and several hundred injured before the demonstrations ceased three days later. The riots began among high school students when the government announced that it would cut back enrollments in advanced classes and place students over 17 in technical schools. On the second day the students were joined in their protests by nonstudents and unem-

A.F.P. FROM PICTORIAL PARADE

MOROCCO was scene of September 1965 Arab summit meeting. Attending conference were Algeria's Boumedienne (3rd from left, center), Saudi Arabia's King Faisal (in Arab robes), UAR's Nasser (center) and King Hassan II (in fez).

A. P. P. FROM PICTORIAL PARADE

MOROCCAN STUDENTS riot in Casablanca on March 23, 1965, because of resentment over government policy. During the rioting, 25 persons were killed and hundreds injured.

played adults. On the third day the Moroccan Workers Union (Union Marocaine du Travail) called a general strike, which virtually paralyzed Casablanca, in sympathy with the students. There were also sympathy demonstrations in Fez and Rabat during the three-day period.

During the riots the government instituted newspaper censorship, imposed a curfew from 9:00 P.M. to 6:00 A.M., and seized several left-wing newspapers. In the wake of the riots, the government announced that 481 persons had been arrested, including some Iraqi teachers, and had been sentenced to prison terms ranging from two weeks to two years. The government refused to submit to parliamentary demands for an investigation of the riots.

Government. After several months of fruitless discussion and bargaining with the major parties, King Hassan II decided to take over the conduct of government himself in June 1965. The five major political parties, the National Union of Popular Forces (UNFP), the Istiqlal, the Democratic Socialists, the National Front (FDIC), and the Popular Movement, were unable to reach agreement on the three-year economic plan. They had made demands for changes in the plan and for changes in the balance of political power that the king found unacceptable.

Since the formation of the Bahnini cabinet in November 1963 the role of the parties has been confused. The traditionally nationalist party, the Istiqlal party, has remained in opposition, approving the existing constitution but demanding greater delegation of power to the cabinet and the assembly.

The UNFP, which has been the chief opposition on the left, improved its relations with the king in 1965, but could find no grounds to justify its reentry into the cabinet. In a conciliatory move in July, King Hassan reprieved the death sentences of three UNFP leaders implicated in a plot to assassinate him in 1963. One of the five, Mehdi Ben Barka, was kidnapped in Paris on Oct. 29, 1965, by French counterespionage agents, allegedly under orders from Moroccan Interior Minister Gen. Mohammed Oufkir, who reportedly wanted to keep Ben Barka from returning to Morocco.

The Democratic Socialist Party (PSD), led by one-time prime minister Reda Ahmed Guedira, continued to give full support to the constitution, but was torn by internal rivalries. King Hassan dropped Guedira from the cabinet, leaving only Bahnini and Youssef Ben Abbès as representatives of the party in the cabinet. Later in the year both Bahnini and Ben Abbès resigned from the PSD because of differences on party unity.

Although he lacked party support, King Hassan pressed policies he hoped would help Morocco define her political identity. The monarchist group controlling the National Assembly passed a law forbidding the foreign-owned press in Morocco. The Ministry of Justice determined that all legal and judicial institutions must operate in Arabic. The decision had the effect of eliminating business for the large number of French lawyers and judges who work in Morocco.

Foreign Relations. Morocco's chief aims in international affairs were to raise funds for economic reconstruction and to improve relations with the Arab states. France continued to give about \$20 million in assistance, and the United States about \$10 million.

Although 14 Algerians connected with a 1963 plot to assassinate King Hassan were executed in 1965, relations with Algeria improved after the more moderate Col. Houari Boumedienne took over the government in Algiers in June 1965. King Hassan maintained good relations with Tunisia, although Tunisian President Habib Bourguiba refused to attend the Arab League conference in Casablanca in September 1965. Hassan also restored *de facto* relations with Mauritania in 1965.

Economy. In September 1965 the Moroccan government announced that the remaining 2 million acres of privately owned French land would be nationalized. About 500,000 acres of land owned by Frenchmen had been recovered in 1964.

Morocco's serious payments imbalance stemmed from the absence of any effective control on trade. To remedy that situation King Hassan decided in July 1965 to nationalize all foreign commerce, even though one of his strongest supporters, Mohammed Laghzaoui, resigned in protest.

The government's budget deficit in 1964 was about \$200 million. Drastic efforts were made to reduce government spending in 1965 by 10% from the 1964 figure.

The three-year economic plan that began in 1965 gave agriculture a major role. Completion of the plan's goals will be hindered by the fact that the government has only about \$100 million of the roughly \$600 million in foreign investment that will be necessary to carry out some projects.

20TH CENTURY-FOX

FAMILY PICTURE OF THE YEAR, *The Sound of Music*, based on Rodgers and Hammerstein's stage musical, stars Academy Award-winning actress, Julie Andrews.

MOTION PICTURES

The general run of 1965 films reflected traditional audience tastes. But because of his cinematic techniques, 1965 might well be remembered as the year of Richard Lester, a young American director working primarily in Britain. Two of his films, together with works by such directors as Sidney Lumet, Federico Fellini, and Jacques Demy, lent an experimental flavor to the year.

The Work of Richard Lester. Lester surprised everybody in 1964 with a nimble and nonsensical chase picture about and with the Beatles—*A Hard Day's Night*. In 1965 he led Britain's most famous singing group through an adventure called *Help!* In this film, Ringo Starr was pursued by vaguely Asian fanatics intent upon offering him up as a burnt sacrifice. Again United Artists, the producer of *Help!*, was able to chalk up astonishing grosses from a low-budget picture—and to receive some favorable reviews as well.

Lester then loosed upon the public a free filmic rendering of *The Knack*, a stage play. He stopped the story for split-second encounters with surveyors, shopkeepers, and sneering adult bystanders; he packed a staircase with implacable furniture; he sent his youngsters through traffic carrying a bedstead. The style was fresh; the audience was pulled along at a pellmell pace.

Other Comedies. It was japes like these, rather than heavy intercontinental comedies such as *The Great Race* and the nostalgic and more successful *Those Magnificent Men in Their Flying Machines*, that pleased alert young audiences in a time when the world's population is increasingly youthful.

The Hallelujah Trail offered a western story with comic overtones within the enormous framework of Cinerama. But more in tune with the times was *Cat Ballou*, a wild and woolly spoof of western heroics, with some fast-motion sequences thrown in for good measure. *The Loved One* was evidently intended by its director, Tony Richardson, as a successor to his earlier award-winner, *Tom Jones*, a fastmoving period comedy. Many critics found it tasteless, however—not because Evelyn Waugh's novel made fun of funeral directors, but because the film missed the real spirit of Waugh's satire.

Serious Drama. Serious and symbolic pictures from Hollywood in 1965 seemed determined to give the impression that all men are trapped in one way or another. In Stanley Kramer's *Ship of Fools*, based on Katherine Anne Porter's best-selling book, a boatload of people were trapped by their ideologies and stupidities. The film was both a critical and popular success. In William Wyler's *The Collector*, a girl was imprisoned in a cellar by a youth who hoped to make her love him. Arthur Penn's heavily symbolic *Mickey One* told of a night club entertainer's vain attempt to elude his enemies and to escape from his past. In Richard Quine's *Synanon*, a group of stock characters were gathered together in their effort to withdraw from the drug habit.

The special internal anguish of *Lord Jim*, as conceived by Joseph Conrad in his classic novel, was echoed by those critics who felt that Richard Brooks should not have tried to make a movie of the book. Critics also complained that George Stevens' production of *The Greatest Story Ever Told* lacked interest despite its photographic beauty and fidelity to the Gospels. Another important novel to become a motion picture in 1965 was *Dr. Zhivago*, by the Nobel prize-winner Boris Pasternak. It won general critical approval as directed by David Lean.

Sidney Lumet made a major bid for attention in 1965 with two films. *The Hill* dealt with unnecessary brutality in a military prison. *The Pawnbroker* concerned a German Jew who, having survived the death camp of Auschwitz, was determined to spend the rest of his life doing nothing more than survive. Both showed Lumet's desire to use a symbolic style to come to grips with serious issues, but both were flawed by melodramatic excesses. *The Pawnbroker* made use of special editing techniques, including flashbacks that were little more than flashes.

Michael Roemer, a new young director, garnered critical praise for using the simplest possible style. His *Nothing But a Man*, technically a 1964 film but not seen generally until 1965, was a straightforward study of a Negro couple striving for identity and economic independence in a Southern town. It was his first feature picture and reflected his conviction (set forth in an article in *Film Quarterly*) that the art of the film must begin with "the surfaces of

BLACK STAR

JULIE ANDREWS, after creating the role of Eliza Doolittle in *My Fair Lady* on Broadway in 1956 and playing it for more than three years in New York and London, lost the part in the film to Audrey Hepburn. With *My Fair Lady* taking most of the year's major awards, her winning the 1964 Academy Award for best actress for her performance as the nursemaid in *Mary Poppins* was slightly ironical.

Julie Andrews, who is married to costume designer Tony Walton, was born in London, England, on Oct. 1, 1935. At the age of 12 she made her stage debut at the London Hippodrome in a program of operatic arias. She played in children's pantomime for several years, then, in 1954, made her first New York appearance as Polly in *The Boy Friend*, a witty lampoon of the musical comedies of the 1920's. After her successful run in *My Fair Lady*, she opened in New York in 1960 in another musical, *Camelot*. Her other films include *The Americanization of Emily* (1963) and *The Sound of Music* (1965).

reality." Roemer also was a co-producer of the film.

From Canada, a country new to feature picture production, came a story of juvenile delinquency, *Nobody Waved Goodbye*. From Hollywood came a realistic drama of social complexities, *A Patch of Blue*, which probed the relationship of a blind white girl and a Negro. And from Britain came the sequel to the 1959 success *Room at the Top*, James Woolf's production of *Life at the Top*.

Action Films. Meanwhile, traditional films continued to be made. An unusual number of them focused on war or the threat of war. They included *The Bedford Incident*, *In Harm's Way*, and *Battle of the Bulge*. *King Rat* was set in a prison camp. *The Train* concerned a cargo of French paintings on a train commandeered by a German general, but redelivered to France by the Free French underground forces. *Von Ryan's Express* was about a trainload of war prisoners in Italy.

Other action pictures included *Young Cassidy*, *The Sons of Katie Elder*, *Major Dundee*, and *The Cincinnati Kid*. There were sagas of the Middle Ages like *Genghis Khan* and *The War Lord*. Serge Bourguignon went to Hollywood from France; his first picture was *The Reward*, a western. Germany's Bernhard Wicki made a Hollywood film, *Morituri*, which won a bigger audience after its title was changed to *The Saboteur*. From Germany also came *Apache Gold*, the first of a series of German-made westerns based on the character known to European readers as Old Shatterhand.

Spy thrillers seemed to have a special fascination

in the mid-1960's. The most successful were the Ian Fleming stories about James Bond—*Goldfinger*, released by Anglo-American producers late in 1964; a double bill of *Dr. No* and *From Russia With Love*, both re-released in 1965; and *Thunderball*, released late in 1965. In these consciously elaborate spy thrillers, the sex was cool, the action was hot, and the gadgetry was the heart of the fun, as audiences waited confidently for one more thing to blow up. In the same tradition but in a loftier style were another British thriller, *The Ipcress File*, and an American film of John Le Carré's bestselling novel, *The Spy Who Came In From the Cold*, directed by Martin Ritt.

Sex and Suspense. Two of Hollywood's traditionally popular themes, the good-bad girl and the semitragic romanticism of illicit love, found expression in the screen's new freedom to talk about sex. *The Sandpiper*, a vehicle for Richard Burton and Elizabeth Taylor, told the tale of a minister attracted by an amoral woman. In *The Yellow Rolls-Royce* various seductions took place in the back seat of an automobile with the shades pulled down. Two producers made competing films based on the life of Jean Harlow, MGM's platinum blonde sex symbol of the 1930's.

The suspense tradition was upheld satisfactorily by *The Satan Bug*, *Mirage*, *Return from the Ashes*, and *Bunny Lake is Missing*. A new genre of semi-horror pictures, many of them starring Bette Davis, continued the box office success of *Whatever Happened to Baby Jane?* They included *Hush . . . Hush*

OUTSTANDING DRAMATIC FILMS OF 1965 include (left to right) *Ship of Fools*, with Vivian Leigh and Lee Marvin; *The Pawnbroker*, with Rod Steiger (right); and *A Thousand Clowns*, with Barbara Harris and Jason Robards, Jr.

PICTORIAL PARADE

COMEDY-SPECTACULAR, *Those Magnificent Men In Their Flying Machines*, with Terry-Thomas (shown) and large international cast, is gentle satire on early days of aviation.

Sweet Charlotte and The Nanny.

Other American Films. Entertainment suitable for the entire family was provided by *The Sound of Music*, based on the Broadway musical about the Trapp family singers in Europe, and Walt Disney's *That Darn Cat*, starring Hayley Mills. Other producers offered *Clarence the Cross-Eyed Lion*, *Billie*, and *A Boy Ten Feet Tall*. *A High Wind in Jamaica* closely followed the celebrated novel by Richard Hughes. For teenagers, there was Frankie Avalon in *Ski Party* and in a series of beach pictures.

Low-budget independent productions, with few exceptions, did not win high marks. Notable attempts were *The Wild Seed*, a "young director" experiment at Universal; *Goldstein*, made by a Chicago avant-garde group; and *Harvey Middleman*, *Fireman*, the

first feature of a cartoon producer, Ernest Pintoff.

Documentaries. Documentaries, as usual, came from unexpected quarters. *The Bus*, the personal report of an accomplished cameraman, Haskell Wexler, was about a San Francisco group of civil rights marchers-on-Washington. *Dead Birds* was a compassionate study of war and mythology in New Guinea by a Harvard anthropologist and film maker, Robert Gardner. *Chronicle of a Summer*, a French report on viewpoints of the man in the street, reached the United States after five years. *China!* was a bland survey by a British reporter of social and economic change behind the bamboo curtain. *To Die in Madrid* offered a bitter memory of the Spanish Civil War. *The Story of Eleanor Roosevelt* was written by poet Archibald MacLeish.

471

NOVELS FILMED IN 1965 are (left to right) *The Collector*, with Samantha Eggar and Terence Stamp; *The Agony and the Ecstasy*, with Charlton Heston as Michelangelo; and *Doctor Zhivago*, with Geraldine Chaplin and Omar Sharif.

METRO-GOLDWYN-MAYER

KEYSTONE

REX HARRISON, winner of the 1964 Academy Award for best actor for his portrayal of Henry Higgins in *My Fair Lady*, revealed that he was not only the year's best actor but also its most gracious diplomat. On hand for the awards were both Audrey Hepburn, his co-star in the *My Fair Lady* film, and Julie Andrews, his co-star in the original stage version of *My Fair Lady*. Said Harrison as he received the award: "Deep love to—well, two fair ladies, I think."

He was born in Huyton, Lancashire, England, on March 5, 1908. The actor made his stage debut in 1924 in Liverpool, his first film in Britain in 1929, his first London stage appearance in 1930, and his New York debut in 1936. He appeared in many British and American films, including *Blithe Spirit* (1944), *The Rake's Progress* (1945), *The Reluctant Debutante* (1958), and *Cleopatra* (1962). His many stage appearances include *Anne of the Thousand Days* (1948), *The Cocktail Party* (1950), *Bell, Book and Candle* (1951), and, of course, *My Fair Lady* (1956).

European Films. European directors offered fewer contributions in 1965 than is usual. Michelangelo Antonioni was praised for his first color film, *Red Desert*. It again demonstrated Antonioni's preference for milieu over plot. In *Juliet of the Spirits*, Federico Fellini also made his first use of color. Like his larger achievement, *8½*, it was full of introspective flashbacks and inventive techniques.

From Roman Polanski, Polish director of *Knife in the Water*, came *Repulsion*, a grim study of a girl obsessed with the fear of sex. From others came cases of complete commitment to sex: Jean-Luc Godard's *The Married Woman* (France) and John Schlesinger's *Darling* (Britain). The latter won the New York film critics prize for the best picture of the year.

France produced two films of unusual beauty and freshness. *The Umbrellas of Cherbourg*, directed by Jacques Demy and released late in 1964, was a simple tale of separated lovers who finally settle down with more humdrum mates; its dialogue was entirely in song. *Life Upside Down*, a poignant story of a young man who is satisfied to descend into the security of insanity, was executed with astonishing skill by Alain Jessua, a newcomer to feature films.

Censorship. The U.S. Supreme Court made film censorship more difficult than ever in a precedent-making decision. Striking down a specific Maryland law, the court said that a state may require a movie to be censored before exhibition in a theater. But if this is done, there must be "procedural safeguards," including "a prompt final judicial decision" that the

censoring agency itself must seek in the courts. The Maryland Legislature immediately created a faster-moving censorship system.

In the state of New York, a Danish movie called *A Stranger Knocks* was the subject of a similar case. Here the U.S. Supreme Court's decision not only released the film from censorship but led the state's Court of Appeals to declare New York's 43-year-old film licensing authority invalid. Another furor was created by 491, a Swedish film seized by the U.S. Customs as obscene matter. In this instance, a federal court upheld the Customs Bureau's confiscation of the film from its distributor.

Economics. Financially, it was a good year for picture makers. Profits continued at high levels for major production companies. New theaters were beginning to be built. National General Corporation, the parent company for Fox theaters in the West and Midwest, announced plans to build 100 new theaters throughout the country, including some in suburban shopping centers. Loew's Theaters planned an equal expansion.

New Film Institute. From the White House came announcement that the federal arts and humanities program would include an American film institute. Its outlines and functions were to be defined during the coming year by a committee that included Gregory Peck, George Stevens, Sr., Elizabeth Ashley, and William Pereira.

RICHARD DYER MACCANN

Author of "Hollywood in Transition" and "Film and Society"

NOTABLE PERSONALITIES OF 1965 are (l. to r.) Julie Christie, shown with Laurence Harvey in *Darling*; Richard Burton, who plays title role in *The Spy Who Came In From the Cold*; and Sean Connery, hero of James Bond series.

OUTSTANDING MOTION PICTURES OF 1965

The following list of films released in the United States in 1965 presents a cross section of the world's best, most typical, most popular, and most widely discussed motion pictures.

- The Agony and the Ecstasy** (20th Century-Fox). Producer-director, Carol Reed; screenplay, Philip Dunne, based on Irving Stone's novel. With Charlton Heston, Rex Harrison, Diane Cilento, Harry Andrews.
- The Amorous Adventures of Moll Flanders** (Paramount). Producer, Marcel Hellman; director, Terence Young; screenplay, Denis Cannan and Roland Kibbee, based on Daniel Defoe's novel. With Kim Novak, Lilli Palmer, Richard Johnson, Angela Lansbury, Vittorio De Sica.
- Apache Gold** (Columbia). Producer, Horst Wendlandt; director, Harold Reinl; screenplay, H.G. Peterson, from a novel by Karl May. With Lex Barker, Pierre Brice, Mario Adorf.
- The Art of Love** (Universal). Producer, Carl Reiner, based on a story by Elke Sommer. With James Garner, Dick Van Dyke, Elke Sommer, Angie Dickinson, Ethel Merman.
- The Battle of the Bulge** (Warners). Producers, Milton Sperling and Philip Yordan; director, Ken Annakin. With Henry Fonda, Robert Shaw, Robert Ryan, Dana Andrews.
- Beach Blanket Bingo** (American International). Producers, James Nicholson and Samuel Z. Arkoff; director, William Asher. With Frankie Avalon, Annette Funicello.
- The Bedford Incident** (Columbia). Producers, James B. Harris and Richard Widmark; director, James B. Harris; screenplay, James Poe, based on a novel by Mark Rascovich. With Richard Widmark, Sidney Poitier, James MacArthur, Wally Cox.
- Billie** (United Artists). Producer-director, Don Weis; screenplay, Ronald Alexander, based on his play *Time of the Ginger*. With Patsy Duke, Jim Backus, Jane Greer, Billy De Wolfe.
- Boeing Boeing** (Paramount). Producer, Hal Wallis; director, John Rich; screenplay, Edward Anhalt, based on Marc Camoletti's play. With Tony Curtis, Jerry Lewis.
- A Boy Ten Feet Tall** (Paramount-Seven Arts-Bryanston). Producer, Hal Mason; director, Alexander Mackendrick. With Edward G. Robinson, Fergus McClelland, Constance Cummings.
- Buddha** (Lopt). Producer, Masaichi Nagata; director, Kenji Misumi. With Kojiro Hongo, Charito Solis, Shintaro Kutsu.
- Bunny Lake Is Missing** (Columbia). Producer-director, Otto Preminger; screenplay, John and Penelope Mortimer, based on the novel by Evelyn Piper. With Carol Lynley, Keir Dullea, Laurence Olivier, Noel Coward.
- The Bus** (Harrison). Producer-director, Haskell Wexler. A documentary about a bus trip from San Francisco to the civil rights march on Washington.
- Casanova '70** (Embassy). Producers, Joseph E. Levine and Carlo Ponti; director, Mario Monicelli. With Marcello Mastroianni, Vira Lisi, Michele Mercier, Marisa Mell.
- Cat Ballou** (Columbia). Producer, Harold Hecht; director, Elliot Silverstein; screenplay, Walter Newman and Frank R. Pierson, based on the novel by Roy Chanslor. With Jane Fonda, Lee Marvin, Michael Callan, Dwayne Hickman.
- Chinal** (Felix Greene). Producer-writer, Felix Greene; narration, Alexander Scourby. A documentary film on everyday life in Communist China.
- Chronicle of a Summer** (Pathe-Contemporary). Producers, Anatole Dauman and Philippe Lipchitz; directors, Jean Rouch and Edgar Morin. A documentary about the people of France and their attitudes toward life.
- The Cincinnati Kid** (MGM). Producer, Martin Ransohoff; director, Norman Jewison; screenplay, Ring Lardner, Jr., and Terry Southern, based on novel by Richard Jessup. With Steve McQueen, Edward G. Robinson, Ann-Margret, Karl Malden, Tuesday Weld, Rip Torn.
- Clarence, the Cross-Eyed Lion** (MGM). Producer, Ivan Tors; director, Andrew Marton. With Marshall Thompson, Betsy Drake, Richard Haydn.
- The Collector** (Columbia). Producers, Jud Kinberg and John Kohn; director, William Wyler; screenplay, Stanley Mann and John Kohn, based on the novel by John Fowles. With Terence Stamp, Samantha Eggar, Maurice Dillimore, Mona Washbourne.
- Darling** (Embassy). Producer, Joseph Janni; director, John Schlesinger. With Julie Christie, Dirk Bogarde, Lawrence Harvey, Ronald Curran.
- Dead Birds** (Peabody Museum of Harvard). Producer-director, Robert Gardner; written by Peter Matthiessen. Documentary on daily life of a New Guinea tribe.
- Dear Brigitte** (20th Century-Fox). Producer-director, Henry Koster; screenplay, Hal Kanter, based on John Hoase's novel. With James Stewart, Fabian, Glynis Johns.
- Dear Heart** (Warners). Producer, Martin Manulis; director, Delbert Mann; story and screenplay, Tad Mosel. With Glenn Ford, Geraldine Page, Angela Lansbury, Michael Anderson, Jr.
- Die, Die, My Darling** (Columbia). Producer, Hammer Films; director, Silvio Narizzano; screenplay, Richard Matheson, based on Anne Blaisdell's novel, *Nightmare*. With Tallulah Bankhead, Stephanie Powers, Peter Vaughan.
- Do Not Disturb** (20th Century-Fox). Producers, Aaron Rosenberg and Martin Malcher; director, Ralph Levy; screenplay, Mill Rosen and Richard Breen, based on William Fairchild's play. With Doris Day, Rod Taylor, Hermione Baddeley, Reginald Gardiner.
- Dr. Zhivago** (MGM). Producer, Carlo Ponti; director, David Lean; screenplay, Robert Bolt, based on the novel by Boris Pasternak. With Geraldine Chaplin, Julie Christie, Tom Courtenay, Alec Guinness, Siobhan McKenna, Ralph Richardson, Omar Sharif, Rod Steiger, Rita Tushingham.
- The Eleanor Roosevelt Story** (Landau-Unger-Allied Artists). Producer, Sidney Glazier; director, Richard Kaplan; written by Archibald MacLeish; narration by Eric Sevareid, Arc ibald MacLeish, Mrs. Francis Cole.
- The Face of Fu Manchu** (Seven Arts). Producer, Oliver Unger; director, Don Sharp; screenplay, Peter Welbeck, based on a character by Sax Rohmer. With Christopher Lee, Nigel Green, Karin Dor, James Robertson Justice.
- The Family Jewels** (Paramount). Producer-director, Jerry Lewis. With Jerry Lewis, Sebastian Cabot, Donna Butterworth.
- Fanny Hill: The Memoirs of a Woman of Pleasure** (Favorite Films). Producer, Albert Zugsmith; director, Russ Meyer; screenplay, Robert Hill, based on a novel by John Cleland. With Miriam Hopkins, Leitia Roman, Walter Giller, Alex D'Arcy.
- The Fascist** (Embassy). Producers, Isidoro Broggi and Renato Libassi; director, Luciano Salce. With Ugo Tognazzi, Georges Wilson.
- Genghis Khan** (Columbia). Producer, Irving Allen; director, Henry Levin. With Stephen Boyd, Omar Sharif, James Mason, Eli Wallach.
- Girl Happy** (MGM). Producer, Joe Pasternak; director, Boris Sagal. With Elvis Presley, Shelley Fabares, Gary Crosby.
- The Glory Guys** (United Artists). Producer, Arnold Laven; Arthur Gardner, and Jules Levy; director, Arnold Laven; screenplay, Sam Packinph, based on Hoffman Birney's novel *The Dice of God*. With Tom Tryon, Harve Presnell, Santa Berger.
- Goldstein** (Altura Films International). Producer, Zev Braun; writer-directors, Philip Kaufman and Benjamin Manaster. With Lou Gilbert, Ellen Madison, Thomas Erhart, Benito Carruthers.
- The Greatest Story Ever Told** (United Artists). Producer-director, George Stevens. With Max von Sydow, Dorothy McGuire, Robert Loggia, Claude Rains, José Ferrer.
- The Great Race** (Warners). Producer, Martin Jurov; director, Blake Edwards. With Jack Lemmon, Tony Curtis, Natalie Wood, Peter Falk, Keenan Wynn.
- The Great Spy Mission** [former title, *Operation Crossbow*] (MGM). Producer, Carlo Ponti; director, Michael Anderson. With Sophia Loren, George Peppard, Trevor Howard, John Mills, Tom Courtenay.
- The Hallelujah Trail** (United Artists). Producer-director, John Sturges; screenplay, John Gay, based on a novel by Bill Gulick. With Burt Lancaster, Lee Remick, Jim Hutton, Pamela Tiffin.
- Harlow** (Magna-Electrovision). Producers, Bill Sargent and Lee Savin; director, Alex Segal. With Carol Lynley, Efram Zimbalist, Jr., Ginger Rogers, Barry Sullivan.
- Harlow** (Paramount). Producer, Joseph E. Levine; director, Gordon Douglas; screenplay, John Michael Hayes, based on a book by Irving Shulman in collaboration with Arthur Landau. With Carroll Baker, Martin Balsam, Red Buttons, Michael Connors, Peter Lawford.
- Harvey Middleman, Fireman** (Columbia). Producers, Robert L. Lawrence and Ernest Pintoff; director-writer, Ernest Pintoff. With Hermione Gingold, Gene Troobnick, Arlene Golonka, Patricia Hart.
- Help!** (United Artists). Producer, Walter Shenson; director, Richard Lester. With the Beatles (John Lennon, Paul McCartney, Ringo Starr, George Harrison), Leo McKern, Eleanor Brown.
- A High Wind in Jamaica** (20th Century-Fox). Producer, John Croydon; director, Alexander Mackendrick; screenplay, Ronald Harwood, Denis Cannan, and Stanley Mann, based on Richard Hughes' book. With Anthony Quinn, James Coburn, Dennis Price, Gert Frobe.
- The Hill** (MGM). Producer, Kenneth Hyman; director, Sidney Lumet. With Sean Connery, Harry Andrews, Ian Bannen, Alfred Lynch.
- How To Murder Your Wife** (United Artists). Producer-writer, George Axelrod; director, Richard Quine. With Jack Lemmon, Vira Lisi, Terry-Thomas, Eddie Mayehoff, Claire Trevor.
- How To Stuff a Wild Bikini** (American International). Producers, James H. Nicholson and Samuel Z. Arkoff; director, William Asher. With Annette Funicello, Dwayne Hickman, Brian Donley, Harvey Lembeck.
- Hush** (20th Century-Fox). Producer-director, Robert Aldrich. With Bette Davis, Olivia de Havilland, Joseph Cotten, Agnes Moorehead.
- I'll Take Sweden** (United Artists). Producer, Edward Small; director, Frederick De Cordova. With Bob Hope, Tuesday Weld, Frankie Avalon, Dina Merrill, Jeremy Slate.
- In Harm's Way** (Paramount). Producer-director, Otto Preminger; screenplay, Wendell Mayes, from book by James Bassett. With John Wayne, Kirk Douglas, Patricia Neal, Tom Tryon, Paula Prentiss, Brandon DeWilde.
- The Ipcress File** (Universal). Producer, Harry Saltzman; director, Sidney J. Furie; screenplay, Bill Canaway and James Doran, from Len Deighton's novel. With Michael Caine, Nigel Green, Guy Doleman, Sue Lloyd, Gordon Jackson.
- John Goldfarb, Please Come Home** (20th Century-Fox). Producer, Steve Parker; director, J. Lee Thompson. With Shirley Maclaine, Peter Ustinov, Richard Crenna.
- Joy In the Morning** (MGM). Producer, Henry T. Weinstein; director, Alex Segal; screenplay, Sally Benson, Alfred Hayes, and Norman Lessing, based on Betty Smith's novel. With Richard Chamberlain, Yvette Mimieux, Arthur Kennedy, Oscar Homolka.

OUTSTANDING MOTION PICTURES OF 1965 (Cont.)

- Juliet of the Spirits** (Rizzoli). Producer-director, Federico Fellini. With Giulietta Masina, Sandra Milo, Sylva Koscina.
- King Rat** (Columbia). Producer, James Woolf; director, Bryan Forbes; screenplay, Bryan Forbes, based on a novel by James Clavell. With George Segal, Tom Courtenay, James Fox, Patrick O'Neal.
- The Knack . . . and How to Get It** (Woodfall-Lopert). Producer, Oscar Lowenstein; director, Richard Lester; screenplay, Charles Wood, based on play by Ann Jellicoe. With Rita Tushingham, Ray Brooks, Michael Crawford, Donald Donnelly.
- La Bohème** (Warner Brothers). Producer, Herbert von Karajan; director, Franco Zeffirelli; opera by Giacomo Puccini. With Gianni Raimondi, Mirella Freni, Rolando Panerai, Gianni Maffeo, Iva Vinco.
- Laurel & Hardy's Laughing '20's** (MGM). Producer-writer, Robert Youngson. With Stan Laurel, Oliver Hardy, Charley Chase, and others. A compilation film.
- The Leather Boys** (RLP). Producer, Raymond Stross; director, Sidney J. Furie; screenplay, Gillian Freeman, from Elliot George's novel. With Rita Tushingham, Dudley Sutton, Colin Campbell.
- Life at the Top** (Royal Films). Producer, James Woolf; director, Ted Kotcheff; screenplay, Mordecai Richler, from John Braine's novel. With Laurence Harvey and Jean Simmons.
- Life Upside Down** (Landau). Producer, Michel Peynet; director-writer, Alain Jessua. With Charles Denner, Anna Gaylor.
- Lord Jim** (Columbia). Producer-director-writer, Richard Brooks; adapted from Joseph Conrad's novel. With Peter O'Toole, James Mason, Curt Jurgens, Jack Hawkins, Eli Wallach.
- Love and Kisses** (Universal). Producer-director-writer, Ozzie Nelson. With Rick Nelson, Kristin Nelson, Jack Kelly.
- The Love Goddesses** (Rodeo-Sterling). Producer-writers, Saul J. Turell and Graeme Ferguson; narration, Carl King. With Pola Negri, Clara Bow, Mae West, Marilyn Monroe, Brigitte Bardot, and others. A compilation film.
- The Loved One** (MGM). Producers, Martin Ransohoff, John Calley, and Haskell Wexler; director, Tony Richardson; screenplay, Terry Southern and Christopher Isherwood, based on the novel by Evelyn Waugh. With Robert Morse, Jonathan Winters, Rod Steiger, Anjanette Comer, Dana Andrews, Milton Berle.
- Major Dundee** (Columbia). Producer, Jerry Bresler; director, Sam Peckinpah. With Charlton Heston, Richard Harris, Jim Hutton.
- The Married Woman** (Royal Films). Producer-director-writer, Jean-Luc Godard. With Macha Meril, Philippe Leroy, Bernard Noël, Margaret Le-Van.
- Mickey One** (Columbia). Producer-director, Arthur Penn. With Warren Beatty, Hurd Hatfield, Alexandra Stewart, Franchot Tone, Jeff Corey.
- Mister Moses** (United Artists). Producer, Frank Ross; director, Ronald Neame; screenplay, Charles Beaumont and Monia Damschewsky, based on Max Catto's novel. With Robert Mitchum, Carroll Baker.
- The Moment of Truth** (Rizzoli). Producer, Angelo Rizzoli; directors, Francesco Rosi and Antonio Cervi. With Miguel Mateo Miquelín and Linda Christian.
- Mondo Pazzo** (Rizzoli). Producers, Mario Maffei and Giorgio Cecchini; directors, Gualtiero Jacopetti and Franco Prosperi. A nonfiction film report on strange customs around the world.
- The Nanny** (20th Century-Fox). Producer, Jimmy Sangster; director, Seth Holt; screenplay, Jimmy Sangster, based on Evelyn Piper's novel. With Bette Davis, William Dix.
- Never Too Late** (Warners). Producer, Norman Lear; director, Bud Yorkin; screenplay, Sumner Long, based on his play. With Paul Ford, Connie Stevens, Maureen O'Sullivan, Jim Hutton.
- Nobody Waved Goodbye** (National Film Board of Canada). Producers, Roman Kroitor and Don Owen; director-writer, Don Owen. With Peter Kastner, Julie Biggs, Claude Rae, Charmion King.
- None But the Brave** (Warner). Producer-director, Frank Sinatra. With Frank Sinatra, Clint Walker, Tommy Sands.
- Once a Thief** (MGM). Producers, Jacques Bar, Ralph Nelson, and Fred Engel; director, Ralph Nelson. With Alain Delon, Ann-Margret, Van Heflin, Jack Palance.
- A Patch of Blue** (MGM). Producer, Pandro S. Berman; director, Guy Green. With Sidney Poitier, Elizabeth Hartman, and Shelley Winters.
- The Pawnbroker** (Landau-Steinman). Producers, Roger H. Lewis and Philip Langner; director, Sidney Lumet; screenplay, David Friedkin and Morton Fine, from a novel by Edward Lewis Wallant. With Rod Steiger, Geraldine Fitzgerald, Brock Peters, Jaime Sanchez, Thelma Oliver.
- A Rage to Live** (United Artists). Producer, Lewis J. Rachmil; director, Walter Grauman; screenplay, John T. Kelley, based on John O'Hara's novel. With Suzanne Pleshette, Bradford Dillman, Ben Gazzara.
- Rapture** (International Classics). Producer, Christian Ferry; director, John Guillermin; screenplay, Stanley Mann, from a novel by Phyllis Hastings. With Melvyn Douglas, Dean Stockwell, Patricia Gozzi, Leslie Sands.
- Red Desert** (Rizzoli). Producer, Antonio Cervi; director, Michelangelo Antonioni. With Monica Vitti, Richard Harris, Carlo Chionette, Xenia Valderi.
- Repulsion** (Royal International). Producer, Eugene Gutowski; director, Roman Polanski. With Catherine Deneuve, Ian Hendry, John Fraser, Yvonne Furneaux.
- Return From the Ashes** (United Artists). Producer-director, J. Lee Thompson; screenplay, Julius Epstein, based on a novel by Hubert Monteilhet. With Maximilian Schell, Samantha Eggar, Ingrid Thulin, Herbert Lom.
- Rotten To the Core** (Cinema V). Producer, Roy Boulting; director, John Boulting. With Anton Rodgers, Eric Sykes, Ian Bannen, Avis Bunnage.
- The Saboteur: Code Name Morituri** [former title, *Morituri*] (20th Century-Fox). Producer, Aaron Rosenberg; director, Bernhard Wicki. With Marlon Brando, Yul Brynner, Janet Margolin, Trevor Howard.
- The Sandpiper** (MGM). Producer, Martin Ransohoff; director, Vincente Minnelli. With Elizabeth Taylor, Richard Burton, Eva Marie Saint, Charles Bronson.
- The Satan Bug** (United Artists). Producer-director, John Surges; screenplay, James Clavell and Edward Anhalt, based on a novel by Ian Stuart. With George Maharis, Richard Basehart, Anne Francis, Dana Andrews.
- She** (MGM). Producer, Michael Carreras; director, Robert Day; screenplay, David T. Chantler, based on H. Rider Haggard's novel. With Ursula Andress, Peter Cushing, Bernard Cribbins, John Richardson.
- Shenandoah** (Universal). Producer, Robert Arthur; director, Andrew V. McLaglen. With James Stewart, Doug McClure, Glenn Corbett, Patrick Wayne.
- Ship of Fools** (Columbia). Producer-director, Stanley Kramer; screenplay, Abby Mann, from Katherine Anne Porter's novel. With Vivian Leigh, Simone Signoret, José Ferrer, Lee Marvin, Oskar Werner, Michael Dunn.
- Situation Hopeless—But Not Serious** (Paramount). Producer-director, Gottfried Reinhardt. With Alec Guinness, Michael Connors, Robert Redford, Anita Hofer.
- The Slender Thread** (Paramount). Producer, Stephen Alexander; director, Sydney Pollack. With Anne Bancroft, Sidney Poitier.
- The Sons of Katie Elder** (Paramount). Producer, Hal Wallis; director, Henry Hathaway. With John Wayne, Dean Martin, Martha Hyer, Earl Holliman, Michael Anderson, Jr.
- The Sound of Music** (20th Century-Fox). Producer-director, Robert Wise; screenplay, Ernest Lehman; from the stage musical by Rodgers & Hammerstein, book by Howard Lindsay and Russel Crouse. With Julie Andrews, Christopher Plummer, Eleanor Parker, Richard Haydn, Peggy Wood.
- The Spy Who Came In From the Cold** (Paramount). Producer-director, Martin Ritt; screenplay, Paul Dehn and Guy Trosper, based on John Le Carré's novel. With Richard Burton, Claire Bloom, Oskar Werner.
- A Stranger Knocks** (Trans-Lux; Flamingo Film Studio). Producer-director, Johan Jacobsen. With Birgitte Federspiel, Preben Lerdorff Rye.
- The 10th Victim** (Embassy). Producer, Joseph E. Levine; director, Elio Petri. With Marcello Mastroianni, Ursula Andress.
- That Dam Cat** (Buena Vista). Producers, Bill Walsh and Ron Miller; director, Robert Stevenson. With Hayley Mills, Dean Jones, Dorothy Provine, Roddy McDowall, Elsa Lanchester.
- 36 Hours** (MGM). Producers, William Perlberg and George Seaton; director-writer, George Seaton. With James Garner, Rod Taylor, Eva Marie Saint, Werner Peters.
- Those Magnificent Men in Their Flying Machines** (20th Century-Fox). Producer, Stan Margulies; director, Ken Annakin. With Stuart Whitman, Sarah Miles, James Fox, Alberto Sordi, Terry-Thomas.
- A Thousand Clowns** (United Artists). Producer-director, Fred Coe; screenplay, Herb Gardner, based on his play of the same name. With Jason Robards and Barbara Harris.
- Thunderball** (United Artists). Producer, Kevin McClory; director, Terence Young; screenplay, Richard Maibaum and John Hopkins, based on Ian Fleming's novel. With Sean Connery, Claudine Auger.
- To Die in Madrid** (Altura Films International). Producers, Clem Perry and Frederic Rossit; narration by Sir John Gielgud, Irene Worth. Documentary about Spanish Civil War.
- The Train** (United Artists). Producer, Jules Bricken; director, John Frankenheimer. With Burt Lancaster, Paul Scofield, Jeanne Moreau.
- Up From the Beach** (20th Century-Fox). Producer, Christian Ferry; director, Robert Parrish; screenplay, Howard Clewes, based on George Barr's novel *Epitaph For An Enemy*. With Cliff Robertson, Red Buttons, Irina Demick, Broderick Crawford.
- Viva Maria** (United Artists). Producers, Oscar Dancigers and Louis Mallo; director, Louis Mallo. With Brigitte Bardot, Jeanne Moreau.
- Von Ryan's Express** (20th Century-Fox). Producer, Saul David; director, Mark Robson; screenplay, Wendell Mayes and Joseph Landon, based on a novel by David Weisheimer. With Frank Sinatra, Trevor Howard, Brad Dexter.
- The War Lord** (Universal). Producer, Walter Seltzer; director, Franklin Schaffner; screenplay, John Collier and Millard Kaufman, based on Leslie Stevens' play *The Lovers*. With Charlton Heston, Richard Boone, Maurice Evans.
- What's New, Pussycat?** (United Artists). Producer, Charles K. Feldman; director, Clive Donner. With Peter Sellers, Peter O'Toole, Romy Schneider, Capucine, Woody Allen.
- The Wild Seed** (Universal). Producer, Albert S. Ruddy; director, Brian G. Hutton. With Michael Parks, Celia Kaye, Ross Elliott, Woodrow Chambliss.
- The Yellow Rolls-Royce** (MGM). Producer, Anatole De Gruwald; director, Anthony Asquith. With Rex Harrison, Jeanne Moreau, George C. Scott, Shirley Maclaine, Art Carney, Ingrid Bergman, Omar Sharif.
- Young Cassidy** (MGM). Producers, Robert D. Graff and Robert Emmett Ginna; director, Jack Cardiff; screenplay, John Whiting, based on Sean O'Casey's *Mirror in My House*. With Rod Taylor, Edith Evans, Michael Redgrave.

MOTOR TRANSPORTATION

Most kinds of truck transportation in the United States continued to expand during 1965, thereby contributing to the general improvement in the nation's economy. In the field of bus transport, travel volumes in 1965 remained relatively unchanged from their 1964 levels.

Trucking. The U.S. motortruck fleet in 1965 expanded by 600,000 vehicles over the previous year. Registration, excluding government-owned trucks, reached an all-time high of 13,900,000. The industry carried over 400 million ton-miles of freight in 1965—an increase for the tenth consecutive year.

Total operating revenues for the 16,000 for-hire truck lines engaged in U.S. interstate commerce rose to about \$10 billion. This figure was more than \$500 million above the annual freight revenues of all U.S. railroads. Private and for-hire trucking operators not regulated by the Interstate Commerce Commission earned additional billions of shipping dollars.

The trucking industry's impact on the economy was reflected in several ways. Trucks used more than 19.1 billion gallons of motor fuel in 1965, and the trucking industry spent more than \$7.2 billion in new equipment, parts, and accessories. The industry also provided employment for more than 8 million persons and had a payroll totaling more than \$50 billion.

In 1965, motortrucks paid an estimated \$4 billion in federal, state, and local highway use taxes, including tax levies budgeted for construction of the Interstate Defense Highway System. This figure represents about one third of total highway taxes, although trucks account for only 15.5% of all registered motor vehicles.

Bus Operations. The travel volume of intercity and local and suburban bus systems remained relatively unchanged between 1964 and 1965. However, according to the National Association of Motor Bus Owners and the American Transit Association, an increase was recorded in school bus service, which carried 14.9 million pupils daily at public expense during the 1963-64 school year. Chartered and special bus service, particularly express-package transportation, also increased in 1965.

During the past several years, the number of registered buses in the United States has increased from 2 to 4% annually, largely as a result of increases in the number of school buses. In 1964, more than 305,000 buses were registered, according to the Bureau of Public Roads of the U.S. Department of Commerce.

In 1965, a volume increase in long-distance, through-bus service on new highways and turnpikes was offset by losses in travel on short trips, where automobile competition is heavy. Intercity bus travel was expected to total just under 23 billion passenger-miles in 1965, or slightly more than in 1964. Among local and suburban bus lines, rides were provided in 1965 for more than 4.5 billion revenue passengers.

EDWARD R. MURROW, American journalist, shown here reporting the Korean War, died in Pawling, N.Y., April 27.

MURROW, Edward Roscoe

U.S. radio and television reporter: b. near Greensboro, N.C., April 25, 1908; d. Pawling, N.Y., April 27, 1965.

Edward R. Murrow's uncompromising integrity won for him the largest audience that any news commentator has ever commanded. Darkly handsome, with a sombre voice of memorable timbre, he possessed an idealism, honesty, and manner of quiet understatement that inspired a generation of young American journalists. His spirit was always in harmony with his simple American origins, and he refused to compromise in his search for the truth, either as a broadcaster to the people of the United States, or in government service, when he told America's story to the world. "America's goal is its dreams," he once said, "and the truth shall be our guide."

Early Life. Christened Egbert Roscoe Murrow, he was the son of a North Carolina tenant farmer. As a boy, he moved with his family to Blanchard, Wash. He studied speech at the State College of Washington (now Washington State University), and was elected to Phi Beta Kappa. During summer vacations, he worked on a timber gang in the Northwest, an experience that overlaid his natural Southern courtliness with a warm Western sense of humor that he often used in times of stress. While in College, he changed his first name to Edward.

Murrow's ability to write and analyze came naturally, and he received no formal training as a journalist. First inclined to education, he became president of the National Student Federation after graduation, and then assistant director of the Institute of International Education. In 1932, while traveling by train to an educational convention, he met Janet Huntington Brewster, a Mount Holyoke graduate. They were married two years later.

Reporter in Europe. In 1935 the Columbia Broadcasting System (CBS) hired Murrow as director of talks and education. He was attending a meeting in New Orleans in 1937 when CBS called to ask if he would go to Europe. His affirmative reply was the turning point in his career. In March 1938, he was in Warsaw arranging a cultural broadcast when German troops marched into Austria. He chartered a plane for \$1,000, and arrived in Vienna in time to broadcast to the United States a description of the

MUSCAT AND OMAN

CBS NEWS

"PERSON TO PERSON" TV program allowed Murrow, in the studio, to visit celebrities at home by remote pickup.

Germans goose-stepping down the Kärntnerstrasse.

When World War II seemed inevitable, Murrow set up headquarters in London as CBS European news chief. "This . . . is London" were the opening words of his memorable broadcasts, which conveyed to millions of American listeners the moods and feelings of Britons under fire during Nazi air raids on London. Murrow usually took the most risky assignments, and flew a dozen missions during the war. His son, Casey, was born in London at the end of the war.

Postwar Career. Murrow was appointed CBS vice president in charge of news operations in 1946. But 18 months later he returned to the microphones as a commentator. His evening news report began with a grave "This . . . is the news," and ended with a crisp "Good night, and good luck!"

Murrow turned to television in 1951, and his weekly program *See It Now* ran for seven years. In 1954 he challenged the views of Senator Joseph R. McCarthy, Republican of Wisconsin, in a television study of the phenomenon known as "McCarthyism." Murrow showed another side of his personality in an interview program called *Person to Person*, in which he visited the homes of celebrities by a two-way television hookup. While traveling abroad, he participated in conversations with world leaders for another television program called *Small World*.

Murrow's high-domed head, wrinkled brow, and constantly smoking cigarette became as familiar on television as his baritone voice had been on the radio. He won virtually all the radio and television awards offered in the news field, including four Peabody awards for excellence in broadcasting.

In 1961, President Kennedy named Murrow director of the United States Information Agency. Murrow later described his Washington career as the most satisfying period of his life. He believed that the best propaganda for the United States was to tell the candid truth in perspective.

Murrow underwent surgery in October 1963, and after a two-year battle, he died of lung cancer. President Johnson called him "a gallant fighter, a man who dedicated his life both as a newsmen and as a public official to the unrelenting search for truth."

LARRY LESUEUR

Voice of America, U.S. Information Agency

The independent sultanate of Muscat and Oman occupies almost the entire Arabian coast (known as the Batinah) of the Gulf of Oman, the peninsula of Rus al-Jibal at the entrance to the Persian Gulf, the eastern half of the Arabian coast (mainly in the region of Dhufar) on the Arabian Sea, and territory of undetermined extent in the interior (to which the name Oman is properly restricted). Oman is separated from the Batinah by the Hajar Mountains. The area under the sultan's control is estimated at slightly over 80,000 square miles, and the population at under 600,000. The capital is Muscat (est. pop., 6,000), but the main commercial center is nearby Matrah (est. pop., 14,000).

Government. Sa'id ibn Taymur (acceded 1932) governs the sultanate, which has been recognized as an independent state by Great Britain, the United States, and India. The earliest U.S. treaty in the Middle East was concluded in 1833 with the sultan of Muscat, who then also ruled Zanzibar. The sultan's closest ties, however, are with Britain, and British civilians and officers hold influential positions in the government and armed forces.

Political Disputes. The sultan's claim to the interior is disputed by Imam Ghalib ibn 'Ali, a theocratic leader (elected in 1953) whose predecessors had ruled Oman after 1913. In 1959 the sultan's forces under British officers drove the imam out of Oman. Setting up a government-in-exile, the imam has pressed his case as rightful ruler before the United Nations and in other international forums. The Arab states generally support the imam, while Britain is the sultan's chief defender. The discovery of oil under the sultan's auspices strengthened his grip on the disputed territory.

The Buraimi Oasis in the interior, claimed by Saudi Arabia and in part by Muscat and Oman, was divided in 1956, under British superintendence, between the sultanate and the Trucial State of Abu Dhabi.

Economy. The economy of Muscat and Oman has until recently been based almost entirely on agriculture, stock raising (especially camels), and fishing, with modest exports of dates, fruits, and fish. In 1963, oil was discovered in promising quantities in Oman by Petroleum Development (Oman) Ltd., originally a subsidiary of the Iraq Petroleum Company but owned jointly since 1960 by Shell Petroleum Ltd. and the Gulbenkian petroleum interests. In 1964, Shell announced plans for investing about \$70 million to exploit the new discovery. Steps were taken in 1965 to build a pipeline from Oman across the Hajar Mountains to the Batinah coast near Matrah. The exploitation of oil resources should accelerate economic development of the sultanate.

MUSIC

THE NEW YORK TIMES

PIANIST VLADIMIR HOROWITZ receives a standing ovation at New York City's Carnegie Hall on May 9, 1965, following his first concert in 12 years.

MUSIC

Highlights of the 1964-65 music season included pianist Vladimir Horowitz's return to the concert stage after 12 years of virtual retirement, and the end of the concert career of the great American contralto Marian Anderson. Maria Callas returned to the Metropolitan Opera for a brief engagement, and there were several noteworthy operatic debuts. The national company of the Metropolitan Opera began operations in September.

There was evidence of financial difficulty in the operation of some American symphony orchestras. The Chicago and New Orleans symphonies cancelled their seasons before arriving at satisfactory contracts and agreeing to resume operations. The general trend, however, continued to be toward longer seasons, higher pay, and more summer activity.

Financial aid during the year came from the Rockefeller Foundation, which provided for an additional week of performances by the resident orchestras of at least nine cities. In October the Ford Foundation announced the allocation of \$85 million for the use of orchestras throughout the country. Finally, the newly established National Council on the Arts approved the expenditure of \$3 million to be used in 1966 "for the support and development of the creative and performing arts." A portion of the amount was designated for the commissioning of 25 new works for symphony orchestras, and for as many as 50 grants to composers.

Concert Artists. Probably the most dramatic musical event of the 1965 season was the triumphant return to the concert stage of the pianist Vladimir Horowitz. After 12 years of self-imposed retirement from the rigors and tensions of concert playing, Horowitz on May 9 gave a recital in Carnegie Hall. Even before he had played a note, the audience accorded the 60-year-old virtuoso a standing ovation, and after he had played his final encore they refused to

leave the concert hall until the house lights had been turned on, the stage lights turned off, and the piano shut.

Carnegie Hall was also the scene of the finale of the 30-year career of the great American contralto Marian Anderson. In April she ended a long farewell tour that had begun in October 1964. Except for an occasional guest appearance, the 63-year-old singer planned to do no more concertizing.

As the first Negro singer to gain universal acceptance as a "serious" musician, she cleared the way for others of her race. As the first Negro ever to sing at the Metropolitan Opera (1955) she made it possible for other fine Negro singers to perform there and in other U.S. opera houses. Her retirement marked the end of an epoch in American music.

Orchestras in the United States. Most American symphony orchestras carried forward vigorous programs in 1965. The New York Philharmonic closed the 1964-65 winter season under a variety of guest conductors while Leonard Bernstein was on sabbatical leave. It performed a Bruckner cycle in a series of concerts spaced throughout the winter, and then undertook a busy summer schedule. In June it gave the third annual Promenade series at Philharmonic Hall under the general direction of André Kostelanetz, with Sir Malcolm Sargent conducting a Romantic Promenade and a Viennese evening, and Franz Allers leading an all-Offenbach program.

In July, Lukas Foss served as artistic director for a French-American Festival. Charles Munch conducted the music of Berlioz, Poulenc, and Ravel in several all-French programs, and Leonard Bernstein interrupted his leave to conduct three of his own scores, one of which was the world premiere of the *Chichester Psalms*. Other composers on the podium included Darius Milhaud and Aaron Copland.

In August the Philharmonic moved outdoors, presenting free concerts in the public parks of New York City for three weeks. These concerts were

financed in part by the city (\$175,000), in part by the orchestra (\$50,000), and in part by the Schlitz Brewing Company (\$50,000). Audience attendance and enthusiasm were overwhelming.

In October, Bernstein returned to the podium to begin a two-year survey of 20th century symphonic literature, to include, in honor of the Jean Sibelius centennial, all of the Sibelius symphonies. At the midway point of the first season, however, critics and audiences were lukewarm in their response.

The Chicago Symphony celebrated its 75th anniversary in the 1965-66 season by commissioning two works: one by the American composer Gunther Schuller and the other by the orchestra's own conductor, French-born Jean Martinon. The latter's *Symphonie Altitudes* received its first performance in December. The Chicago Symphony presented two other world premieres, both works of Igor Stravinsky: *Variations* and *Intrositus: T.S. Eliot in Memoriam*. Robert Craft, with the composer present, conducted the two works on April 17.

Leopold Stokowski excited the music world by presenting at Carnegie Hall on April 26 his own American Symphony Orchestra in the world premiere of the Fourth Symphony of the American composer Charles Ives (1874-1954). It had taken Stokowski roughly 10 years to piece together the various parts of the score. Many extra rehearsals and the help of two assistant conductors were required to perform this difficult work. The Rockefeller Foundation financed the project with a grant of \$7,200.

Another reconstruction of widespread interest was Mahler's 10th Symphony, performed by the Philadelphia Orchestra under Eugene Ormandy. An English musicologist, Deryck Cooke, completed the score, which was generally considered excellent. A version by Joseph Wheeler had been given some months earlier by a semiprofessional ensemble in New York.

At Tanglewood, Mass., the summer home of the Boston Symphony, the orchestra under Erich Leinsdorf made musical history in August when it presented in concert form the first uncut *Lohengrin* to be heard in the United States. Tenor Sandor Konya sang the leading role.

European orchestras visiting the United States in 1965 included the Berlin Philharmonic under Herbert von Karajan, which played a five-concert Beethoven cycle at Carnegie Hall in New York City at

the end of January. The BBC Symphony under the joint leadership of Antal Dorati and Pierre Boulez presented six concerts of 20th century music in Carnegie Hall in May, Boulez making his American debut. Also making its first trip to the United States was the Moscow Philharmonic, which toured the Eastern states in October and presented 11 concerts at Carnegie Hall. Kiril Kondrashin was the Moscow group's principal conductor; violinist David Oistrakh doubled as conductor on two occasions and Evgeni Svetlanov appeared as guest conductor twice. Soloists with the orchestra were violinists Igor and David Oistrakh; cellist Mstislav Rostropovich and his wife, soprano Galina Vishnevskaya; and pianist Van Cliburn. The entire series drew solidly packed houses; critical evaluation was warm but not ecstatic.

Opera in the United States. At the Metropolitan Opera, the 1964-65 season ended somewhat uncertainly. The first *Aida* of the season had Leontyne Price in the leading role and was the occasion for William Steinberg's debut as a Metropolitan Opera conductor. However, neither performer was a complete success. Balancing this was the spectacular performance by Birgit Nilsson in the title role in her first New York *Salome*. Other highlights were Régine Crespin's first *Tosca* at the Metropolitan; Maria Callas' much publicized return to the Metropolitan on March 10 after an absence of several seasons—also in Puccini's *Tosca*; and Crespin's first performance in New York as Sieglinde in Wagner's *Die Walküre*. Among other successful new productions was Saint-Saëns' *Samson et Dalila*, with Jess Thomas and Rita Gorr in the leading roles, and Georges Prêtre conducting.

For the first time in its history, the Metropolitan Opera took over the summer concerts at Lewisohn Stadium in New York City. Renata Tebaldi opened the series on June 21 with a program of arias. Later, the complete *La Traviata*, by Verdi, was presented in concert form, starring Anna Moffo. A high point of the series was Regina Resnik's performance of the title role in *Carmen*, which she had never sung during the regular Metropolitan season.

For its 1965-66 season—the final one in the house on 39th Street (before moving into its new quarters in Lincoln Center)—the Metropolitan scheduled only two new productions: Gounod's *Faust*, directed by the great French actor Jean-Louis Barrault; and

MARIA CALLAS takes a bow with Tito Gobbi (l.) and Franco Corelli after her triumphant return to the Metropolitan Opera in New York on March 19 in the title role of *Tosca*. The fiery soprano was dismissed from the Metropolitan in 1958 in a dispute over her singing dates.

Tchaikovsky's *The Queen of Spades*, given in English. In *Faust*, basso Cesare Siepi was outstanding as Mephistopheles; in *The Queen of Spades*, Teresa Stratas, Jon Vickers, and Regina Resnik received special praise.

Among those making auspicious fall debuts at the Metropolitan were Mirella Freni as Mimi in *La Bohème*, Renata Scottò as Cio-Cio-San in *Madama Butterfly*, and Grace Bumbry as Princess Eboli in *Don Carlo*. In November the much-heralded Bulgarian basso Nicolai Ghiaurov made his debut in *Faust*.

Perhaps the biggest operatic event of the year was the fall tour of the Metropolitan National Touring Company. After a summer's rehearsal, the unit, which was formed in 1964 and is headed by Risè Stevens and Michael Manuel, opened in Indianapolis on September 20, and then began a tour of virtually the entire United States. Four operas made up the company's first year's repertoire—Carlisle Floyd's *Susannah*, Rossini's *La Cenerentola* (in English), Bizet's *Carmen* (in English and French), and Puccini's *Madama Butterfly* (in English and Italian). The singers, most of them young and relatively unknown, were chosen for their talent and promise.

At the New York City center, world premieres in the spring and fall of 1965 included Jack Beeson's *Lizzie Borden* and Ned Rorem's *Miss Julie*. Operas having their first American or New York productions were Shostakovich's *Katerina Ismailova* (revised version) and Prokofiev's *Flaming Angel*. The Juilliard Opera Theater mounted the first American production of *Elegy for Young Lovers*, by the contemporary German composer, Hans Werner Henze.

Operatic milestones elsewhere in the United States included Kansas City's production in May of Handel's *Julius Caesar*, in which Evelyn Lear, an American soprano who has sung almost exclusively in Europe, made her first U.S. operatic appearance; Santa Fe's summer premieres of Henze's *The Stag King*, with George Shirley, and Shostakovich's *The Nose*, with John Reardon; San Francisco's West Coast premiere of Alban Berg's *Lulu*, with Evelyn Lear impressive in the lead; Dallas' production of *La Traviata*, in which the Spanish soprano Montserrat Caballé made her first appearance in a complete opera in the United States; and the Boston Opera Company's *Boris Godunov*, given in Musorgski's own scoring of 1869, with George London as Boris.

In Canada, the North American premiere of Kurt Weill and Bertolt Brecht's *The Rise and Fall of the City of Mahagonny* was given at Stratford, Ont., on July 2, as part of the program at the Shakespeare Festival.

Opera in concert form continued to flourish. In addition to Tanglewood's *Lohengrin*, there were the American premieres of Busoni's *Dr. Faustus* and Handel's *Alcina* with Joan Sutherland, presented by the American Opera Society; Donizetti's *Maria Stuarda* and Berlioz' *Benvenuto Cellini* by the Concert Opera Association; and Donizetti's *Lucrezia Borgia*, another production of the American Opera Society, with the Spanish soprano Montserrat Caballé making her first concert appearance in America.

Europe. In Britain, the celebration of Michael Tippett's 60th birthday resulted in frequent performances of his works. A broadcast of his first opera, *Midsummer Marriage*, received warm response. The high point of the season at the Royal Opera House, Covent Garden, was the first performance outside Germany of Arnold Schönberg's *Moses and Aaron*, featuring its much-publicized orgy scene. Other events at the Royal Opera House included the premiere in February of Richard Rodney Bennett's opera *The Mines of Sulphur*, which had been commissioned by the Sadler's Wells Company; and the first performance outside Russia of Prokofiev's *Flaming Angel*, which was given in New York later.

Maria Callas added to her legend. Scheduled to sing several performances of *Tosca*, she made a single appearance before Queen Elizabeth II on July 5, then cancelled the remainder of her engagement. Marie Collier successfully substituted for her. The Russian cellist Mstislav Rostropovich gave a record-breaking performance of 31 concertos in nine consecutive concerts with the London Symphony. Of major importance was the appointment of Istvan Kertesz as permanent conductor of the London Symphony Orchestra. Outside London, the most interesting events were perhaps those at the Aldeburgh Festival, where three new works of Benjamin Britten were premiered. The Glyndebourne Festival, despite a production of *Der Rosenkavalier* starring Montserrat Caballé as the Marschallin, was considered a fairly dull affair.

In Paris, the season was enlivened by riots at the performance on February 2 of *Stratégies*, a work by

FINAL "MET" SEASON at old opera house opened on Sept. 27, 1965, with a new production of Gounod's *Faust*, starring (l. to r.) Gabriella Tucci, Nicolai Gedda, Cesare Siepi, and Gladys Kriesle. The Metropolitan company is scheduled to move to its new home in New York's Lincoln Center for 1966-67 season.

LOUIS MÉLANCON

CONCERT IN CHURCH, conducted by composer Duke Ellington and featuring singer Lena Horne, is presented on Dec. 26, 1965, at New York's Fifth Avenue Presbyterian Church. The "concert of sacred music" included both jazz and traditional spirituals.

avant-gardist Yannis Xenakis. The International Rostrum of Composers, meeting in Paris on May 31-June 4, heard 80 new compositions.

In Berlin, Walter Felsenstein's production of Benjamin Britten's *Midsummer Night's Dream* at the Komische Oper proved captivating, but the real high point of the spring season was the world premiere on April 7 of Hans Werner Henze's *The Young Lord*, at the Deutsche Oper. In August the 35-year-old American conductor Lorin Maazel took over as chief conductor of the Berlin Radio Symphony Orchestra and as music director of the Deutsche Oper. The Berlin Festival, held later in the fall, gave him his first opportunity to prove himself in his new position. At the Munich Festival (July and August), Rudolf Hartmann staged Richard Strauss' *Intermezzo*.

In Austria, at the Salzburg Festival (July and August), Bulgarian basso Nicolai Ghiaurov sang his first Boris in Musorgski's *Boris Godunov*; Herbert von Karajan was again the conductor. The Vienna Festival produced Sergei Prokofiev's 40-year-old opera *The Flaming Angel*, and Hans Erich Pfitzner's 1917 opera *Palestrina*. George Szell and the Cleveland Orchestra scored a tremendous success at the festival.

The Italian scene had great variety in 1965. In Rome, the RAI (Italian Radio) aired Luigi Nono's *La fabbrica illuminata* for contralto and recorded tape, and Henze's Fifth Symphony. Also in Rome, as elsewhere in Italy, there was a rash of Rossini productions, including *The Barber of Seville* and *Otello*. In Naples, Rossini's *Zelmira* was revived for the first time since the composer's death.

Milan got off to a tempestuous start when La Scala's opening night audience booted a new production of Verdi's *La Traviata*, starring Mirella Freni and directed by Herbert von Karajan, but tempers were smoother by midseason when Rossini's *William Tell* was given for the first time in 25 years. La Scala also presented the world premiere of *Clittemestra* by the 84-year-old Ildebrando Pizzetti on May 23. La Piccola Scala on March 16 produced the world premiere of *Atomtod*, by Giacomo Manzoni.

At Florence's Maggio Musicale (May 11-June 30), Britten's *Billy Budd*, in an Italian translation, was given for the first time in Italy. In June, at Spoleto, a much heralded production of Verdi's *Otello*, under Thomas Schippers' direction, fell short of expectations. The International Festival of Contemporary Music took place in Venice on September 8-15. Goffredo Petrassi's Seventh Concerto for Orchestra was

warmly received, and the same concert included the world premiere of Gian Francesco Malipiero's Second Violin Concerto.

Scandinavia boasted at least two outstanding events. The first was Birgit Nilsson's first performance anywhere in Richard Strauss' *Elektra*, with the Royal Swedish Opera in Stockholm. The second was the celebration on May 9-15 of the Carl Nielsen centennial in Copenhagen, where Leonard Bernstein conducted a warmly received performance of Nielsen's Symphony No. 3.

Elsewhere in Europe, the Warsaw Festival encompassed 16 concerts in 10 days (September 21-29). The American-based LaSalle Quartet performed Witold Lutoslawski's First String Quartet to an overflowing house, and the Third Quartet (1924) of Alexander Zemlinsky, the teacher of Schönberg. In Budapest, a new opera by Sandor Szokolay entitled *Blood Wedding* was staged; and in Prague, the 20th "Prague Spring" (May 12-June 4) was highlighted by concerts of the Czech Philharmonic under the Rumanian conductor Sergiu Celibadache, and by performances of cellist Mstislav Rostropovich and his wife, soprano Galina Vishnevskaya. They appeared in separate and in joint recitals, with Rostropovich acting as piano accompanist in the latter.

Moscow's "Russian Winter" festival (December 5-January 5) featured a *Boris Godunov* with Ivan Petrov in the title role, a recital by pianist Sviatoslav Richter, and the world premiere of a work by Dmitri Shostakovich for bass, chorus, and orchestra entitled *The Execution of Stenka*.

In Amsterdam the first production since 1770 of Haydn's *Le pescatrici* was performed on June 26. Musicologist H.C. Robbins Landon had restored portions of the score.

Australia. Perhaps the most adventurous operatic undertaking of the year was launched in Melbourne on July 10, when Australian soprano Joan Sutherland and her conductor-husband Richard Bonyngé arrived with their own grand opera company for a three-month tour. The company mounted seven new productions, including *Semiramide*, *Lucia di Lammermoor*, *La Sonnambula*, and *Eugen Onegin*.

NARCOTICS

In spite of many dramatic arrests and seizures by federal, state, and local law-enforcement authorities in the United States in 1965, the abuse of narcotics and other psychotoxic drugs remained a serious national problem. Two encouraging advances were made during the year. The President's Advisory Commission on Narcotic and Drug Abuse recommended major changes in federal narcotic laws that shifted the emphasis from harsh punishment to rehabilitation. President Johnson asked for and received congressional action to curtail illicit traffic in barbiturates and amphetamines.

President's Advisory Commission. In March, President Johnson told the nation that the President's Advisory Commission on Narcotic and Drug Abuse recommended the enactment of a federal civil commitment statute to allow addicts accused of federal crimes to receive medical treatment instead of imprisonment. He added that illegal sales of psychotoxic drugs must be controlled. (The Food and Drug Administration estimated that half the annual production of these drugs slips into underworld channels.) He urged Congress to enact legislation to help drug abusers. At the same time, he warned that such legislation must assure protection to the general public.

The final report of the advisory commission contained 25 recommendations for legislative and administrative action. It covered illicit traffic in drugs, research into drug dependence, education of public and professional groups, and treatment and rehabilitation of the addict. On July 15, 1965, President Johnson signed into law the Drug Abuse Control Act of 1965, the first legislation to come out of the commission's recommendations.

Rehabilitation. One outstanding congressional proposal exhibited a new and enlightened federal approach to those dependent on drugs, as well as to the means of combating the criminal elements involved. This was the Narcotic Addict Rehabilitation Bill, which, if enacted into law, would permit convicted addicts considered capable of rehabilitation to receive institutional and outpatient treatment instead of a prison sentence. It would allow certain addicts facing criminal prosecution to choose civil commitment and treatment instead of facing trial. It also would ease some mandatory sentencing laws that do not permit parole, and permit more flexible treatment of youthful offenders.

International Control. The 18th World Health Assembly in Geneva recognized the fact that national efforts are not sufficient to control the use of harmful drugs. On May 20, 1965, a resolution was introduced to study the feasibility of international controls over sedatives and stimulants. Other organizations involved with the international aspects of this problem were the World Health Organization's Committee on Dependence Producing Drugs, the UN Commission on Narcotic Drugs, and the International Criminal Police Organization.

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards (NBS) of the Department of Commerce conducts a broad range of research, development, and technical service programs in the physical and engineering sciences. The purpose of these programs is to advance U.S. industrial and economic growth through the application of science and technology.

The bureau's primary work in 1965 again was concentrated on the development and improvement of standards and techniques for physical measurement. Activities in related fields included developing automatic data-processing techniques, studying radio-wave propagation, and disseminating technical information.

Measurement Methods. A significant advance in low-temperature thermometry was achieved in 1965. A new absolute temperature scale, based on the acoustical thermometer, was established for temperatures between 4° K and 14° K (-269° C and -259° C). This new scale bridges the gap between the upper limit (5° K) defined by the T₈₈ helium-4 vapor-pressure scale, and the lower limit (10° K) defined by the NBS 1955 provisional scale.

The NBS used a helium-neon laser as an interferometric light source to measure the length of a meter bar. This was the first time that the laser was used successfully to measure the length of materials. The bar length was measured to an accuracy better than one part in 10 million.

Multimillion-dollar savings in the U.S. space program were made possible by the installation of three large deadweight machines that have capacities up to 1 million pounds. These machines greatly increased the bureau's capability for precise calibration of large force-measuring devices, such as those used to measure rocket-engine thrusts.

The atomic weights of silver, chlorine, bromine, and copper were redetermined to a high precision by means of mass spectrometry. This physical technique provides a valuable check on chemical methods used to determine atomic weights. The value obtained for bromine was the only one that differed significantly from the accepted value.

Ultrapure Materials. A technique was developed to purify materials to degrees of ultrapurity never before obtained. A device is used to purify the material by melting and recrystallizing it. A single stage of purification reduces the amount of impurity in a material by a factor of 1,000. The purification device can be used to produce high-purity reference standards to evaluate industrial materials.

Data-Processing Programs. The NBS was given the responsibility to operate a central governmental data-processing facility. This facility will develop standards for automatic computers and provide technical support for other government agencies in solving data-processing problems.

To aid the Office of Emergency Planning in evaluating conditions during a national emergency, NBS developed a data-processing system called the Automatic Computer-Controlled Electronic Scanning System (ACCESS). ACCESS is a forward step in communication between man and computers. It will receive and process data from local and remote sources, and present its output in a form that is immediately intelligible to a human operator.

First units moved in during 1965 as construction neared completion. While tunneling continues, workmen (foreground) use hot-air hose to remove moisture before pouring concrete for tunnel floor.

NATIONAL DEFENSE

The most dramatic development in the area of national defense during 1965 was the increased involvement of the U.S. military forces in the war in Vietnam. A steady escalation of the war continued throughout the year. By December, U.S. bombers were carrying out almost daily raids against military targets and strategically important installations in North Vietnam, and American ground forces were engaged in bloody pitched battles with determined Vietcong rebels, who were supported by North Vietnamese troops. The Johnson administration's aim was to force the Communists to the negotiating table by means of military pressure. Bombing was suspended from Dec. 24, 1965, through Jan. 30, 1966, during a massive American effort to achieve peace.

Despite the step-up in the Vietnam fighting and the looming danger of war with Communist China, no major change was made during 1965 in the overall structure and complements of U.S. military forces. Changes made or projected in nuclear forces generally followed plans laid down in previous years. The defense budget for fiscal year 1966 showed only a small rise, but the 1967 budget was much higher.

Nuclear Armaments. The policy regarding nuclear weapons continued to be guided by two major objectives: (1) deterring a possible Communist attack on the United States or its allies by maintaining a capacity for "assured destruction" of the enemy country; and (2) limiting the damage to the U.S. economy and population in the event of a nuclear war by counterforce strikes at enemy nuclear forces and by air defense and civil defense measures.

Changes in missile capability and deployment reflected a continuing implementation of decisions made earlier as to the force required to meet the policy objectives, as well as the normal phasing-out and replacement of obsolescent weapons. By June 30, 1965, the last of 800 solid-fuel Minuteman 1 missiles were installed in underground silos and made operational. In addition, some 200 of the improved Minuteman 2 missiles were being installed as part of the planned 1,000 Minuteman 2 missiles regarded as the ultimate requirement. The administration apparently was holding to its earlier judg-

ment that the bomber will play only a marginal role in nuclear strategy after the early 1970's.

Strength of the Armed Forces. Because of the prospect of prolonged and probably increasing involvement in the Vietnam fighting, the Army's 16 divisions were being brought to full combat strength, and a recommended 17th division was in the process of formation at the end of 1965. Draft calls increased steadily during the latter months of the year, possibly presaging more dramatic increases during 1966. A "select force" of Army reserves and National Guard units—more than three divisions—was being brought to combat readiness. Also, the three Marine divisions were being strengthened and a reserve Marine division, possibly slated for active duty, was in the process of reorganization.

At the end of the year, two Army divisions, two Army brigades, and a Marine division were on combat duty in South Vietnam. In addition, the Army had five divisions and one regiment serving with NATO forces in Germany, two divisions in South Korea, half a division on police duty in the Dominican Republic, and somewhat less than one division in Hawaii. The Army's remaining 5½ divisions were stationed in the United States as a strategic reserve.

The Army's Special Forces—troops highly trained in counter guerrilla tactics—were increased from three to seven groups during the year, obviously as the result of increased requirements for the war in Vietnam. Army and Marine forces were given greater mobility and flexibility through new equipment and new tactics—a trend dramatically illustrated by the use of helicopters as short-range transport vehicles in South Vietnam. (See ARMY.)

Little change occurred in non-nuclear naval forces during the year. These forces consisted of 865 ships of various types, deployed in four fleets in the Atlantic, Mediterranean, Eastern Pacific, and Western Pacific. A nuclear-powered task force, consisting of an aircraft carrier, a guided-missile cruiser, and two guided-missile frigates, was transferred in October from the Atlantic to the Pacific as part of the Seventh Fleet, which has operated in Far Eastern seas since World War II. This fleet was heavily involved in tactical and logistic support of Army and Marine forces in South Vietnam. (See NAVY.)

The Air Force's non-nuclear forces in 1965 consisted primarily of the Tactical Air Command and the Military Airlift Command. The former consisted of 130 squadrons based in the United States, Europe, and the Pacific, with special task forces operating in Formosa and Vietnam. The Military Airlift Command, which was known as the Military Air Transport Service until Congress changed its name in May (see *AIR FORCE*), operated about 1,000 aircraft in 37 squadrons.

Plans announced in January 1966 called for increasing the total manpower strength of the armed forces to about 3,030,000 men by mid-1966, compared with 2,681,000 at mid-1965. Most of the increase would go toward strengthening Army and Marine units. (See *MARINE CORPS*.)

The War in Vietnam. Participation by the United States in the Vietnamese war increased sharply during the year, beginning in February with the bombing of military and transportation targets in North Vietnam. This step had been advocated for some time by many Americans.

As the attacks increased in intensity during the year, they were justified by the administration as a means of physically reducing the flow of supplies and manpower to the Communist rebels in the south and as a means of persuading the North Vietnamese leaders to accept a negotiated settlement by demonstrating to Hanoi the high cost of continuing the fight. Gradually the raids were extended to nearly all of North Vietnam and included occasional strikes at industrial facilities near the cities of Hanoi and Haiphong. The Ho Chi Minh Trail in Laos, along which most of the supplies to the southern rebels were moving, also came under heavy air attack.

To meet the guerrilla tactics in South Vietnam, the United States escalated its role in the war step by step, from advising the South Vietnamese army, to establishing more U.S. air and naval bases, to actively protecting these bases, and, finally, to launching major combat offensives against Vietcong forces. The number of U.S. ground forces in South Vietnam jumped from 16,000 in January 1965 to 190,000 as of Jan. 12, 1966, and predictions for future commitments ran as high as 250,000 to 350,000 men. In support of the increased U.S. ground effort, American jet fighters and bombers, including the giant B-52's, began launching almost daily attacks against Vietcong positions, and the Seventh Fleet began intensive patrolling of the Vietnamese coast and participated in the bombing operations.

By the year's end, expanded American operations had succeeded in preventing South Vietnam's collapse, but had failed to force the Communists to negotiate. Bombing of North Vietnam was stopped on President Johnson's orders as of Dec. 24, 1965. He sent diplomats to more than 113 governments to seek channels leading to peace, but this brought only contemptuous rejection from North Vietnam.

The North Vietnamese showed no signs of reducing their infiltration of supplies and men. At least seven North Vietnamese army regiments of 2,000 men each were operating in the south by December, and soldiers from the north continued to infiltrate at an estimated rate of 1,500 per month.

Communist China expanded military and industrial shipments to the Hanoi government, and the Soviet Union also was reported to have increased its military aid. Just as ominous as the communist buildup was a new willingness to stand and fight against superior forces, reversing the tactic of slipping away when outnumbered. (See also *FOREIGN POLICY, U.S.*)

NATO. During the year, it became apparent that President Charles de Gaulle of France was bent on ending what he called American domination of the North Atlantic Treaty Organization (NATO) as a result of the preeminent U.S. influence in the integrated NATO military force and its command structure. De Gaulle's ultimate aim, it appeared, was to effect the disintegration of the combined forces of the alliance and dissolve its planning and decision-making organs, thus reducing NATO to a traditional military alliance based solely on commitments of mutual aid. To achieve this aim, he threatened, and seemed prepared to carry out, an eventual withdrawal of France from NATO, possibly substituting a series of bilateral pacts with selected countries, but relying heavily on France's own nuclear *force de frappe* as an alternative to American protection.

Not only the "French problem" but also the "German problem" became more acute for NATO during the year. Forbidden by treaty to manufacture her own nuclear weapons, West Germany aimed to achieve greater participation and influence in NATO's nuclear strategy, and a greater share in the physical control of the nuclear weapons provided by the United States. Fearing that frustrating this aim might lead Germany to opt for her own independent nuclear arsenal, the United States earlier had proposed a multilateral force of 25 naval vessels to be armed with nuclear missiles and controlled jointly by NATO members willing to participate. This idea was virtually shelved during 1965, however.

Nevertheless, Germany's insistence on a greater nuclear role continued. In May, probably in part to appease Germany, as well as to placate de Gaulle, the United States proposed the creation of a select committee composed of the United States, Britain, France, West Germany, and perhaps Italy, to study the whole problem of allied participation in nuclear command and control and possibly to act as a kind of board of directors for the alliance on nuclear matters. The suggestion was immediately rejected by de Gaulle and did not seem to provoke more than mild interest among other European statesmen. West Germany's Chancellor Ludwig Erhard visited President Johnson on December 20-21 to request more nuclear weapons for NATO—specifically, 10 Polaris submarines. The president agreed to discuss this further with Germany and other allies. (See also *NORTH ATLANTIC TREATY ORGANIZATION*.)

Continental Defense. Urgent research and development continued on the Nike-X antiballistic missile system. As designed, it will be a defensive network which combines a warning of incoming offensive missiles with the means of tracking them, discriminating between real warheads and decoys, and intercepting the warheads at a relatively low altitude by extremely fast defensive missiles. The Department of Defense deferred the decision of whether or not to produce the missiles, pending the resolution of technical uncertainties. (See *MISSILES*.)

As for defense against bomber attack, the primary reliance was upon Nike, Hawk, and Bomarc ground-to-air missiles, plus 38 squadrons of fighter-interceptor aircraft equipped with air-to-air missiles. In general, the number of fighter-interceptors was being reduced in view of the apparent decline of the threat of bomber attack, but qualitative improvements were being made in both the interceptor and missile systems.

The defense of North America is the responsibility of NORAD, a joint Canadian-American com-

WIDE WORLD PHOTOS

mand at Ent Air Force Base, Colorado Springs, Colo. A new operations center was approaching completion nearby, deep in Cheyenne Mountain, where some units of the command were installed in 1965.

Defense Budget. The military budget for the fiscal year ending June 30, 1966, was set in January 1965 at \$48.8 billion, a slight increase above the \$47.2 billion spent in fiscal year 1965. However, it was estimated in December that increased equipment and manpower needs generated by the war in Vietnam would raise the year's spending well above \$50 billion. President Johnson requested and was granted \$2.7 billion in supplemental appropriations during the summer to finance the build-up in Vietnam. Secretary of Defense McNamara's highly effective cost-reduction program, including the closing of many obsolescent military installations, along with a further tapering-off of the scheduled increase in nuclear missile forces, was expected to offset in part the emergency expenses of the war.

President Johnson on Jan. 12, 1966, requested \$58.3 billion for the military budget for fiscal year 1967—about \$2 billion less than was anticipated. Much of the increase was attributed to rising personnel costs resulting from the planned increase of 390,000 in manpower plus a rise in military pay.

Administration. In 1965, Robert S. McNamara continued as secretary of defense and Cyrus R. Vance as deputy secretary. Few significant changes occurred among high-ranking civilian and military officials, although a stir was created by the resignation of Rear Admirals William A. Brockett and Charles A. Curtze, chief and deputy chief of the Navy's Bureau of Ships, in protest against what they considered inordinate encroachment by McNamara in the area of professional military decisions.

Gen. Earle G. Wheeler continued to serve as chairman of the joint chiefs of staff, Gen. Harold Johnson as chief of staff of the Army, Adm. David L. McDonald as chief of naval operations, and Gen. Wallace M. Greene as chief of staff of the Marine Corps. Gen. John P. McConnell became chief of staff of the Air Force, replacing Gen. Curtis E. LeMay, who retired in February.

NATIONAL GUARD

The National Guard, the largest organized ready reserve force in the U.S. military establishment, brought certain of its Air and Army Guard units to a state of increased readiness and manpower in 1965. After Congress refused Secretary of Defense Robert S. McNamara's request to merge the federal Army Reserve into the Army National Guard, Secretary McNamara announced on September 30, and confirmed on November 13, that 751 Army Reserve units, including 6 divisions with 55,000 men, would be abolished, and that the National Guard would be enlarged.

Combat Readiness. The Army National Guard was ordered on September 30 to form immediately a selected reserve force of 119,000 men to be trained and prepared for combat wherever needed. The Army Reserve was to contribute about a sixth of this force, which will comprise three infantry divisions, five separate infantry brigades, a separate mechanized infantry brigade, an armored cavalry regiment, and other combat-support and service units. The select-force members will receive a 50% increase in drill pay, and the force will have priority for equipment and maintenance.

On August 18 the Air National Guard was ordered to man nine tactical fighter groups, four tactical reconnaissance groups, and a tactical control group, and have them ready for combat in early 1966.

Special Services. Several state governors called out National Guard troops in 1965 to handle emergency duties. These duties included service at such disasters as the Los Angeles riots, hurricane Betsy, West Coast and Midwest spring floods, and the electric power blackout in the Northeast.

The Air National Guard significantly increased its passenger and cargo airlift operations with flights that combined training with assistance to the Air Force Military Airlift Command. Air Guardsmen flew 3,900 patients and medical passengers and delivered over 27,500 tons of cargo to overseas areas, including South Vietnam.

Exercises. *Guardlift II* airlifted 30,000 Army Guard and Army Reserve troops to training sites in the southwestern United States, Hawaii, Panama, Europe, and Alaska. Training was conducted in jungle, desert, and Arctic areas to take advantage of climatic and geographic conditions not available in local training situations. Tactical air units made overseas trips that required refueling in flight by Air Guard tankers.

Continental Defense. As integral parts of the North American Air Defense Command, 22 Air Guard fighter groups and 54 Army Guard Nike Hercules missile batteries remained operational in 1965.

Strength. The total assigned strength of the Army National Guard on Oct. 31, 1965, was 34,972 officers and 367,119 enlisted men in 3,998 units, including 17 infantry divisions and 6 armored divisions. The Air National Guard's assigned strength was 10,115 officers and 68,310 airmen in 735 units, organized in 24 wings with 86 groups, 88 flying squadrons, and other units.

MAJ. GEN. WINSTON P. WILSON, USAF
Chief, National Guard Bureau

WILD PONY HERDS roam on Assateague Island (above), which was made a national seashore in 1965. Every year in late July, some of the ponies are herded across the channel to Chincoteague Island (right) for auction. Assateague is divided between Virginia and Maryland.

U.S. DEPARTMENT OF THE INTERIOR

NATIONAL PARKS

President Johnson's special message to Congress in early 1965 on improving the natural beauty of the United States, and the ensuing White House Conference on Natural Beauty, heightened public interest in the national park system and the great need for more parks, protected seashores, and recreation areas. (See CONSERVATION.)

New Parks. In 1965, Congress authorized the establishment of Assateague Island National Seashore in Maryland and Virginia, thus preserving for public use and enjoyment the largest remaining undeveloped seashore between Cape Cod and Cape Hatteras. Other areas authorized in 1965 included Herbert Hoover National Historic Site, Iowa; Delaware Water Gap National Recreation Area, Pennsylvania-New Jersey; Hubbell Trading Post National Historic Site, Arizona; Agate Fossil Beds National Monument, Nebraska; Nez Perce National Historical Park, Idaho; Alibates Flint Quarries and Texas Panhandle Pueblo Culture National Monument, Texas; Pecos National Monument, New Mexico; Pennsylvania Avenue National Historic Site, Washington, D.C.; and Golden Spike National Historic Site, Utah.

Historic Sites. Under a proclamation issued by President Johnson, Ellis Island, which had been the gateway to the New World for millions of immigrants, was added to the Statue of Liberty National Monument on nearby Liberty Island in New York harbor. More than 50 historic structures and sites throughout the country were declared eligible for designation as registered national historic landmarks by Secretary of the Interior Stewart L. Udall.

Sites declared eligible for the registry of natural landmarks included the San Andreas Fault, Cali-

fornia; Summit Lake, Colorado; Battle Creek Cypress Swamp, Maryland; Bear Butte, South Dakota; Odessa Meteor Crater, Texas; Seashore Natural Area, Virginia; Ramsey Canyon, Arizona; Cranesville Swamp Nature Sanctuary, West Virginia-Maryland; Mentor Marsh, Ohio; and Grand Coulee, Washington. These landmarks are not units of the national park system but are recognized by the National Park Service with certificates and plaques.

NAVY

Combat operations in Vietnam overshadowed other United States naval activities during 1965, but equally significant was the deployment to the West Pacific of a squadron of nuclear-powered submarines armed with 2,500-mile-range Polaris A-3 missiles. Although the war in Vietnam drew heavily on the Navy's resources of ships, planes, and men, the service continued to carry out cold war and peacetime duties around the world.

The War in Vietnam. Direct naval action in South Vietnam began with the accidental discovery, late in February, of a North Vietnamese steamer unloading ammunition in Vung Ro Bay, one of the numerous harbors on Vietnam's long, mountainous, indented coast. The incident revealed a fact that U.S. intelligence sources had failed to discover—that major support for Vietcong guerrillas in South Vietnam was coming from the north by means of the ancient water routes along the coast.

Within three weeks the United States reacted with its sea power. Marines landed on March 8 at Danang, about 100 miles south of the 17th parallel of latitude, which is the border between North and South Vietnam. This landing was possible because a reinforced battalion of Marines is kept continually embarked in amphibious ships as part of the 7th (Far East) Fleet. The establishment of a base at Danang marked a change in United States military policy from advisory warfare to holding enclaves with organized U.S. forces supported from the sea. This direct participation in the ground war required a buildup of Marines and Army troops to nearly 200,000 men by the end of 1965. All but a fraction of them were transported by ship. (See also VIETNAM.)

Under the new policy the Navy began construction of a permanent base at Camrahn Bay, up the coast from Saigon. Completion will put Malacca

Strait, one of the world's most critical seaways, within the protective reach of U.S. sea power.

Navy responsibilities off South Vietnam are: (1) carrier aircraft destruction of bases and supply lines in North Vietnam; (2) carrier aircraft support of ground troops; (3) amphibious support of enclaves; (4) control of coastal waters; and (5) overseas logistic support of ground and air forces. The first three missions are being effectively fulfilled. Carrier forces off Vietnam were strengthened in December by the U.S.S. *Enterprise*, the world's largest warship and largest nuclear-powered ship. For the fourth mission, the Navy had to get assistance from the U.S. Coast Guard in the form of 82-foot patrol boats. The Navy's most difficult task may be to gain control of the extensive navigable waters of the Mekong Delta, where the Vietcong are strong. Because of the condition of the U.S. merchant marine, the Navy's Military Sea Transportation Service (MSTS) cannot discharge its responsibility of transporting men and supplies from the United States without the aid of foreign flag ships.

The Dominican Crisis. During the revolution and occupation in the Dominican Republic, starting in April, naval ships evacuated refugees and landed Marines. Hard-pressed MSTS ships furnished sea support for occupation troops. (See DOMINICAN REPUBLIC.)

NATO Operations. Notable naval activities of 1965 included continued efforts to integrate North Atlantic Treaty Organization (NATO) naval forces. NATO naval integration took two forms, the most promising being Match Maker, a five-month employment of an antisubmarine unit composed of British, Canadian, Dutch, and American destroyer types. This four-ship squadron participated in NATO and U.S. exercises and operated out of ports of the participating countries to test logistic support.

Less successful was the mixed manning of the U.S. missile destroyer *Claude V. Ricketts*, with personnel from the navies of the United States, Britain, the Netherlands, West Germany, Italy, Greece, and Turkey. This hasty experiment suffered from State Department pressure and from the unpopularity in Europe of the United States concept of a multilateral force (MLF). France refused to participate, and Turkey withdrew her contingent. Different pay scales, standards of living, and codes of discipline created shipboard problems. However, *Ricketts'* performance in the 6th (Mediterranean) fleet was superior. The U.S. Navy derived much benefit from a close and critical scrutiny of one of its ships by experienced junior and petty officers of other navies. In December, the U.S. government dropped the MLF plan.

Admiral H.P. Smith, NATO's supreme allied commander, Atlantic, retired on May 1 and was relieved by 53-year-old Thomas H. Moorer, who also became commander in chief, Atlantic Fleet.

Deep-Sea Submergence Program. The major deep-sea submergence project for 1965 was *Sealab II*. A 12-by-52-foot cylinder was placed in 205 feet of water off La Jolla, Calif., on August 26. Three ten-man crews lived in and worked from it, each for 15 days. They constructed an underwater oceanography station and an experimental oil rig. (See also OCEANOGRAPHY.)

The Functions and Resources of the Navy. The fact that the Navy was engaged in a war in Southeast Asia, besides carrying on duties in other parts of the world, focused attention on how well this branch of the armed service is fulfilling its responsibilities

U.S.S. *SIMON BOLIVAR*, the Navy's 31st Polaris submarine, was commissioned at Newport News, Va., October 29.

WIDE WORLD

for national security. The Navy's function is to use the waters of the earth to defend the Western Hemisphere, maintain overseas communications, and support national policy wherever necessary. No navy disputes the control of the seas that the U.S. Navy gained in World War II. Therefore, its efforts can be devoted to using that control—protecting sea routes, surface and air; projecting military power overseas; providing nuclear deterrence; and gaining control of enemy waters.

The Navy has assumed a major role in the nation's nuclear deterrence policy through its highly successful Polaris-equipped, nuclear-powered submarines. However, this role has been carried out at the cost of some sacrifice of readiness to meet the Navy's other responsibilities. Antisubmarine warfare capabilities have not kept pace with increased potential of the submarine. The promising nuclear propulsion program for surface ships has been delayed by the Defense Department because of costs.

Other problems include the discovery that missile armaments in surface ships have been less successful than anticipated. Operations off Vietnam have forced renewed emphasis on guns, propeller-driven aircraft, and small combat ships. The big-ship, deep-water U.S. Navy is neither trained nor equipped for the kind of coastal operations that are essential in the war in Vietnam. Lack of naval interest in the merchant marine is in part responsible for the latter's incapacity to perform its military support duties.

The defense budget has given a high priority to preparation for possible nuclear war—to Atlas and Titan missiles, for example. Yet some of the heaviest of the present burdens of national security are being borne by World War II carriers, destroyers, amphibious craft, and merchant ships. For example, the *Coral Sea*, a carrier built between 1944 and 1947, operated for 331 days off the coast of Vietnam. As the United States is sea centered in an

U.S.S. *ENTERPRISE*, nuclear-powered aircraft carrier, began combat operations off Vietnam in December. (Below) A fighter-bomber is prepared for a strike to support ground troops. (Right) A deck crewman guides a jet to the catapult.

SAILORS OF SIX NATIONS (Italy, West Germany, the Netherlands, Britain, the United States, and Greece) made up an experimental crew for a U.S. destroyer during 1965, to test the proposed multilateral force (MLF) under NATO.

oceanic world and the cold war has been basically maritime, the Navy has been involved in almost every phase of the East-West struggle.

JOHN D. HAYES
Rear Admiral, USN (Ret.)

NEBRASKA

Bountiful rains in Nebraska during the 1965 growing season removed the earlier threat of drought. The result was a bumper crop—11% above 1964 and the sixth largest on record. Composite yields—the highest recorded—were 14% above average. Reserves of soil moisture in the fall, especially important for the state's winter wheat and livestock production, were the highest since soil moisture tests were begun in 1937.

Legislation. The Nebraska Legislature was in session 149 legislative days. It considered 937 bills and enacted 584 laws, thus topping records which had been established in 1963. Reversing a long-established tradition of opposing a broadened tax base, the legislature enacted a flat rate for individual and corporate income taxes, effective Jan. 1, 1967. Opponents of the measure immediately began to circulate referendum petitions, and secured the requisite number of signatures to place the question on the ballot in the general election of November 1966.

The legislature authorized a six-year, \$68.5 million building fund, primarily for the University of Nebraska and state colleges. It also established a program of college scholarships for deserving farm youths, and provided for an enlarged system of state vocational technical schools.

Legislative reapportionment was carried out during the 1965 session. While retaining the present membership of 49, the legislature crossed county lines to establish new legislative districts.

Other legislation included a fair employment practices law, provisions for the expansion of state park and recreational areas, and the creation of a state council on the arts. Later in the year, Nebraska became the first state in the union to complete its enrollment in the federal Medicare program.

State appropriations from all sources totaled \$437,585,726 for the 1965-67 biennium, as compared with \$374,288,000 for 1963-65. The appropriations required \$137,088,805 in new tax funds, or \$41,692,068 more than was required for the 1963-65 biennium.

Area: 77,227 square miles.

Population: 1,507,000 (1965 est.).

Chief Cities (1965 est.): Lincoln, the capital (149,000); Omaha (340,000); Grand Island (28,600); Fremont (22,500); Hastings (21,900); North Platte (17,800); Kearney (15,600); Norfolk (14,700).

Government: Chief Officers—governor, Frank B. Morrison (Democrat); lt. gov., Philip C. Sorensen (R); secy. of state, Frank Marsh (R); atty. gen., Clarence A.H. Meyer (R); treas., Frederick Sorensen; comm. of education, Dr. Floyd A. Miller; chief justice, Paul W. White. **Legislature** (unicameral)—49 members (convened Jan. 5, 1965).

Education: School enrollment (1964-65)—public elementary, 201,000 pupils (8,700 teachers); public secondary, 119,000 pupils (6,100 teachers); nonpublic schools, 64,800 pupils (2,010 teachers); college and university (fall 1964), 43,539 students. **Public school expenditures** (1964-65)—\$123,800,000 (\$407 per pupil); average teacher's salary, \$5,000.

Public Finance: (fiscal year 1965): Revenues, \$267,058,382 (motor fuel tax, \$48,264,020; federal funds, \$28,583,346). Expenditures, \$263,980,373 (education, \$24,447,401; health, welfare, and safety, \$27,184,529; highways, \$70,319,806). **State debt** (net long-term), \$28,661,000 (fiscal year 1964).

Personal Income (1964): \$3,477,000,000; average annual income per person, \$2,349.

Public Assistance (fiscal year 1965): \$22,273,582 to 32,551 recipients (aged \$12,018,176; dependent children, \$5,797,680).

Labor Force (employed persons, July 1965): Agricultural, 173,000; nonagricultural (wage and salary earners), 488,000 (17% manufacturing, 25% trade, 21% government). **Unemployed persons** (July 1965)—16,600.

Manufacturing (1963): Value added by manufacturing, \$743,087,000 (transportation equipment, \$34,096,000; primary metals, \$26,000,000; nonmetallic machinery, \$47,664,000; electrical machinery, \$65,055,000; fabricated metals, \$40,054,000; food and products, \$314,679,000; printing and publishing, \$50,238,000; chemicals and allied products, \$42,599,000).

Agriculture (1964): Cash farm income, \$1,464,313,000 (livestock, \$881,918,000; crops, \$417,496,000; govt. payments, \$164,899,000). **Chief crops** (tons)—hay, 6,076,000 (ranks 5th among the states); corn for grain, 5,993,000 (rank, 5th); alfalfa, 3,845,000 (rank, 5th); sorghum grain, 2,614,000 (rank, 3rd); wheat, 2,215,000 (rank, 6th); sugar beets, 1,403,000 (rank, 4th); oats, 366,000 (rank, 12th); barley, 57,000 (rank, 20th); rye, 62,000 (rank, 3rd); potatoes, 96,000.

Mining (1964): **Production value**, \$91,959,000 (ranks 31st among the states). **Chief minerals** (tons)—petroleum, 19,113,000 barrels (rank, 16th); natural gas, 11,155,000,000 cubic feet (rank, 19th); sand and gravel, 14,641,000; stone, 3,779,000; clays, 143,000.

Transportation: **Roads** (1965), 102,874 miles (12,851 paved); motor vehicles (1964), 921,846; railroads (1965), 7,804 miles; airlines (1965), 5 (359 airports).

Communications (1965): Telephones, 690,100; television stations, 15; radio stations, 55; newspapers, 21 (daily circulation, 482,607 in 1964).

Education. College and university enrollments continued to increase, with the University of Nebraska reaching a record enrollment of 15,138 students. Dr. Leland Traywick was inaugurated as president of the University of Omaha, succeeding Dr. Milo Bail, who retired. The governing boards of the state-supported colleges and universities formed an organization to develop more effective means of cooperation.

Centennial Celebration. In preparation for the centennial of statehood in 1967, the legislature appropriated funds for the State Centennial Commission and designated the Thomas P. Kennard House, the oldest building in Lincoln, as the Nebraska Statehood Memorial.

Economy. Economic conditions in the state remained generally good in 1965. Unemployment and related problems, however, were expected to arise with the closing of Lincoln Air Force Base, which was scheduled to be inactivated by March 1966.

NECROLOGY, 1965. See the selected listing of prominent persons who died in 1965 on pages 757-768. Separate biographies of certain prominent persons also appear under their own headings throughout this volume.

NEPAL

The government of Nepal underwent a change early in 1965. Premier Tulsi Giri resigned on Jan. 25, 1965, and on the following day King Mahendra appointed Surya Bahadur Thapa as the new premier. Thapa also became chairman of the Council of Ministers. Kirtinidhi Bista was appointed as Nepal's foreign minister.

Foreign Aid. Nepal continued to receive foreign aid from both Communist and Western nations in 1965.

On March 29 the Nepalese Ministry of Economic Planning announced that India had agreed to construct more than 400 miles of highway from the eastern to the western border of Nepal. The United States agreed to provide road-building machinery for the project.

At the same time, Nepal announced that it had agreed with India to keep Communist China out of economic aid projects in Terai, the southern Nepalese area bordering on India. Consequently, at Nepal's request, Communist China withdrew resources previously earmarked for the Ithari-Dhalkewar section of the highway and also from a Kamala irrigation project. The resources were to be diverted to other projects upon mutual agreement by Nepal and Communist China.

Later, in August, Communist China agreed to grant Nepal \$28 million for construction of a highway linking Katmandu, the Nepalese capital, with Pokhara, in the central region of Nepal. In addition to funds, Communist China also agreed to provide

Area: 54,362 square miles.

Population: 9,900,000 (mid-1964 est.).

Chief Cities (1961 census): Katmandu, the capital, 122,507; Lalitpur, 48,776; Bhaktapur, 37,075; Biratnagar, 33,292.

Government: King—Mahendra Bir Bikram Shah Deva (acceded 1955); Premier—Surya Bahadur Thapa (took office Jan. 26, 1965). Parliament—Panchayat, 125 members.

Religious Faiths: Hinduism, Buddhism.

Education: Literacy rate (1954)—5% of population aged 15 and over. Total school enrollment (1961)—219,687 (primary, 149,921; secondary, 63,480; teacher-training, 612; technical, 386; higher, 5,288).

Finance (1964-65 budget): Revenues (taxation), \$23,500,000; expenditures, \$16,100,000; monetary unit, Nepalese rupee (7.619 rupees equal U.S.\$1).

Chief Crop: Rice (1962-63), 1,250,000 metric tons.

Foreign Trade (1960-61): Exports, \$26,600,000 (chief exports: food grains, jute, timber, oilseeds, ghee, potatoes, medicinal herbs, hides and skins); imports, \$53,300,000 (chief imports: textiles, cigarettes, salt, gasoline, sugar, machinery). Chief trading partner: India.

Transportation: Roads (1964), 300 miles; motor vehicles (1963), 2,921 (automobiles, 2,033); railways (1963), 63 miles; civil airline, Royal Nepal Airlines; principal airport, Katmandu.

Communications: Telephones (1964): 1,500; radios (1964), 30,000; newspapers (1960), 13 (daily circulation, 7,000).

NEPALESE SIDE OF MOUNT EVEREST was used by an Indian mountain climbing expedition in their successful ascent to the summit in May 1965.

technicians to aid in constructing the new highway.

Kosi Barrage. On April 24, 1965, at Bhimnagar, near the Nepalese-Indian frontier, King Mahendra and Indian Prime Minister Shastri inaugurated the Kosi Barrage, part of the Kosi irrigation and hydroelectric project. When completed, the project will help irrigate about 2.6 million acres of land in the northern Bihar state of India and the southern territory of Nepal. The United States will assist in financing the project.

Military Aid. In April, Nepal received its first consignment of military aid from Britain, in the form of ammunition. The aid is part of a U.S.-British agreement with Nepal to modernize the Nepalese Army's equipment. Earlier, two consignments of American medical, transportation, and communication equipment arrived in Nepal.

Land Reform. Nepal continued to move forward in 1965 with land reform and resettlement, which had begun late in 1964. The reform, which is expected to be completed in 1967, involves nearly 5 million acres.

Mount Everest Expedition. Four Indian mountain climbing teams, which included Nepalese Sherpa guides, reached the summit of Mount Everest between May 20 and May 29.

NETHERLANDS

A controversy over the future development of commercial radio and television resulted in the resignation of Premier Victor G.M. Marijnen's cabinet on Feb. 27, 1965. Joseph M.L.T. Cals, a member of the Catholic People's party, who had served several times as minister of education, formed a coalition cabinet of the Catholic People's, Socialist, and Calvinist parties. The new cabinet was sworn in April 14. The new cabinet did not undertake any great changes in policy.

The Royal Family. Queen Juliana's announcement on June 28, 1965, of the engagement of Crown Princess Beatrix, aged 27, to Claus von Amsberg, aged 38, a West German diplomat, caused considerable

public dissatisfaction. Von Amsberg had been a member of the Hitler Youth organization and had served in the 90th Panzer Division during World War II, but neither he nor his immediate family had any apparent connection with the National Socialist party.

The announcement of Princess Beatrix's proposed marriage, coming only a year after the government crisis that resulted in Princess Irene's renouncing her claim to the throne when she married Prince Carlos Hugo of Spain, caused public discussion of the desirability of retaining the monarchy. By October, several hundred thousand persons had signed a petition asking Parliament to withhold consent to the marriage, which was scheduled to take place in the spring of 1966. (Parliament must approve the marriages of heirs to the throne.) Earlier, the engagement of Princess Margriet, the queen's third daughter, to Pieter van Vollenhoven, a Dutch commoner, was announced.

Taxation. At the opening of Parliament on Sept. 21, 1965, the Dutch were told that greater spending for housing and road projects and for education called for higher taxes on luxury goods. Other tax increases were also contemplated.

Economy. The economic boom of 1964, when the gross national product rose 7.5%, continued in 1965 at a rate exceeding cautious forecasts. With exports up about 10% over 1964, and imports at about the same level, the balance of payments position improved, and there was a possibility of wiping out the 1964 trade deficit.

Employer and employees' organizations annually review wages and negotiate increases. Between 1945 and 1963 the government virtually set the wage and price scales, but now it intervenes only if no agreement is reached or if an agreement is detrimental to the national economy. Wages rose 9 to 10% in 1965, or almost double the advances agreed upon, but still well below the 17% increase of 1964. Increased wage costs were absorbed largely by the steady rise in domestic and foreign sales.

Worker productivity increased in 1965, but not as

Parliament—Staten-Generaal, First Chamber, 75 members: party seating (1963), Catholic People's, 50; Labor, 43; Anti-Revolutionaries, 17; Christian Historical, 13; Freedom and Democracy, 16; Pacifist Socialist, 6; Communists, 4; others, 7. Second Chamber, 150 deputies.

Religious Faiths: Protestants, 41% of population; Roman Catholics, 40%; Jews, 0.1%.

Education: Literacy rate (1962), 99% of population. Total school enrollment (1962)—2,542,879 (primary, 1,395,047; secondary, 505,967; teacher-training, 6,254; technical, 516,945; higher, 118,666).

National Income (1964): \$13,700,000,000; average annual income per person, \$1,388.

Finance (1965 est.): Revenues, \$3,792,000,000; expenditures, \$3,896,000,000; public debt (1964), \$5,517,000,000; monetary unit, guilder (3.62 guilders equal U.S.\$1).

Gross National Product (1964): \$16,800,000,000.

Economic Indexes: Industrial production, (1964), 151 (1958=100); agricultural production, 118 (1956-57=100); cost of living, 119 (1958=100).

Manufacturing (metric tons, 1964): Gasoline (1963), 3,660,000; cement, 2,873,000; crude steel, 2,653,000; wheat flour (1963), 670,000; meat (1963), 664,000; cheese, 212,400.

Crops (metric tons, 1964): Potatoes, 4,082,000 (ranks 9th among world producers); sugar beets, 4,000,000 (world rank, 11th); oats, 410,000 (world rank, 17th); rye, 356,000 (world rank, 11th); wheat, 718,000; barley, 372,000; linseed, 35,000; flax (1963), 33,800.

Minerals (metric tons, 1964): Anthracite coal, 3,900,000 (ranks 10th among world producers); salt, 1,596,000 (world rank, 15th); sulfur (1963), 35,000; cadmium, 40; crude petroleum, 15,758,000 barrels.

Foreign Trade (1964): Exports, \$5,807,000,000 (chief exports, 1963: vegetables, \$228,000,000; aircraft, \$133,000,000; gasoline, \$122,000,000; organic chemicals, \$112,000,000); imports, \$7,055,000,000 (chief imports, 1963: crude petroleum, \$411,000,000; automobiles, \$178,000,000; coal, \$157,000,000). Chief trading partners (1963): West Germany (took 26% of exports, supplied 24% of imports); Belgium-Luxembourg (took 15% of exports, supplied 19% of imports); U.S. (took 4% of exports, supplied 11% of imports).

Transportation: Roads (1964), 54,400 miles (all paved); motor vehicles (1964), 1,213,000 (automobiles, 985,300); railways (1963), 2,017 miles; merchant vessels (1964), 1,513 (4,556,000 gross registered tons); national airline, Royal Dutch Airlines (KLM); principal airports, Amsterdam, Rotterdam.

Communications: Telephones (1964): 2,023,258; television stations (1964), 7; television sets (1964), 1,825,000; radios (1963), 3,097,000; newspapers (1962), 97 (daily circulation, 3,335,000).

NETHERLANDS QUEEN JULIANA (right, on a visit to Surinam in December with her husband Prince Bernhard) announced the engagement of her daughter Princess Beatrix to West German diplomat Claus von Amsberg (above) on June 28, 1965.

KEYSTONE PRESS

fast as wages rose. Despite the steady recruitment of foreign workers, there were about four times as many vacancies as unemployed persons. The persistent labor shortage exerted pressure on wages, and "black," or under-the-table, wages were not uncommon. (Employers granting wages in excess of the agreed increase can be fined.)

Industry. Industrial production was on the increase, with the chemical industry as the biggest gainer. Shipbuilding and textiles lagged. There were new discoveries of natural gas in North Holland, and larger estimates of reserves were made.

Holland and England agreed upon a division of the North Sea for exploratory drilling for natural gas and oil, but not much success has been achieved in these exploratory operations. The government reserved the right to take up to 50% of the profits from off-shore exploitation, according to the potential of each discovery.

The government spent \$100 million to improve Rotterdam's harbor, the country's largest port, which earns a large share of the national income.

Farming. Agricultural production suffered because of adverse weather conditions in 1965. Measures taken by the government to help farmers expand production include voluntary redistricting and buying of farms from older farmers to increase the size of holdings, credit aids for mechanization, new roads, and drainage and soil-improvement projects.

Loan to Indonesia. Improved relations with Indonesia were reflected in the \$4.17 million credit for rehabilitation of the tin-mining facilities on Bangka Island. The loan was part of a \$28 million credit agreed upon earlier.

University of Kentucky

NEVADA

November 13 was a historic day for Nevada: it marked the close of a special session in which the legislature voted to reapportion itself. The act ended 50 years legislative domination by rural counties, switching control to populous Clark and Washoe

counties. Governor Grant Sawyer signed the reapportionment bill on November 15.

Legislation. The legislature, in its 53rd regular session, enacted a civil rights bill against discrimination because of race, color, religion, or national origin. Housing facilities, however, were not included in the bill's provisions. The legislature also passed a 5% cabaret tax and a bill permitting a prisoner to be paroled after serving one third of his sentence if

Communications: (1965): Telephones, 207,800; television stations, 5; radio stations, 20; newspapers, 7 (daily circulation, 118,962).

the sentence is more than a year in length. Medical aid for the aged and increases in unemployment benefits under the Kerr-Mills Act were authorized, and pay raises were granted to the governor (\$20,000 to \$25,000) and other state officers.

Economic Review. Nevada had an all-time record rainfall in August. Reservoirs were filled above normal levels, fire hazards were reduced, and irrigation water in storage provided an exceptional carry-over. The hay crop, however, was poor in quality and quantity, and low temperatures in September damaged crops. Even so, the ranges were in the best condition in five years.

Gambling casinos reported a record gross of \$295,400,000 for the fiscal year 1964-65. The state received \$15,100,000 of this amount—an increase of 4% over 1963-64.

Unemployment compensation benefits were increased, and the wage base for figuring disability benefits was raised. Also, the wage rate for workers over 17 years of age was raised to \$1.25 an hour.

Water Supply. To meet the water shortage problem, President Lyndon B. Johnson signed the \$81 million Southern Nevada Water Supply Project Bill on Oct. 23, 1965. The bill provided the first assurance of adequate supplies of water for the most populous area of Nevada. In addition, the Water Resources Building at the University of Nevada was dedicated for experimentation in desalinization.

Mining Development. The pouring of the first ingot of gold from a new open-pit gold mine near Carlin, Elko County, took place on May 27, 1965. With reserves estimated at 7,000,000 tons, the new mining operation is second in size only to the gold operation at Lead, South Dakota.

A new fuel-generating plant to be built on the Colorado River, below Davis Dam in Clark County, will be fueled by Navajo and Hopi coal reserves at Black Mesa, Ariz. With a total investment of \$150 million to be made in the project, potential royalties to the Indians are estimated to total \$30 million. Operation has been slated for 1970-71.

NEW BRUNSWICK

News of a vast new industrial complex planned for New Brunswick, coupled with Premier Louis J. Robichaud's designation of a council to encourage further industrialization in the province, provided new impetus to the economy in 1965.

Economy. Brunswick Mining and Smelting Corporation of Belledune Point, in northern New Brunswick, announced plans for a \$117 million expansion program in October. The new units will comprise a \$64 million steel mill, two base-metal concentrators, a chemical and fertilizer plant, and extensive shipping and handling facilities, including a new ore carrier. To complement this expansion, Minister of Fisheries H.J. Robichaud announced that the province would build a \$16 million port at the site capable of handling 5 million tons of cargo annually. Fraser Company, Ltd., announced a \$25 million expansion of its plant at Newcastle that will enable it to process an additional 280 tons of unbleached pulpwood annually.

Under the guidance of a 12-man industrial council appointed by Premier Robichaud, other industries will be encouraged to locate their plants in New Brunswick.

NEW BRUNSWICK · Information Highlights

Area: 28,354 square miles.
Population: 625,000 (Oct. 1, 1965, est.).
Chief Cities (1961 census): Fredericton, the capital (19,683); Saint John (55,153); Moncton (43,840); Lancaster (13,848); Edmundston (12,791).
Government: Chief Officers—Lieutenant governor, John B. McNair; premier, Louis J. Robichaud (Liberal Party); prov. secy., Joseph E. LeBlanc (L); min. of finance, L.G. DesBrisay (L); min. of educ., Henry G. Irwin (L); chief justice, G.F.G. Bridges. **Legislature**—Legislative Assembly (convened Feb. 16, 1965), 52 members (32 Liberals; 20 Conservatives).
Education: School enrollment (1964-65 est.)—public elementary and secondary, 178,794 pupils (6,143 teachers); private (1963-64), 1,993 (154); Indian, 645 (24); college and university (1964-65), 6,922. **Public school expenditures** (1963)—\$44,500,000; teachers' average salary, \$3,572.
Public Finance (fiscal year 1965 est.): Revenue, \$103,070,000 (sales tax, \$30,425,000; income tax, \$12,006,000; federal funds, \$35,613,000); expenditures, \$118,130,000 (health and welfare, \$33,630,000; transportation and communications, \$24,630,000; education, \$22,320,000).
Personal Income (1964): \$769,000,000; average annual income per person, \$1,242.
Public Assistance (fiscal year 1965 est.): \$8,050,000 (aged and blind, \$2,990,000; dependents and unemployed, \$3,520,000).
Labor Force (1961 census, agricultural and manufacturing only): Agricultural, 12,727; manufacturing, 23,599.
Manufacturing (1962): Value added by manufacture, \$171,900,000 (transportation equipment, \$14,239,000; nonelectrical machinery, \$449,000; electrical machinery, \$3,931,000; fabricated metals, \$7,541,000; food and products, \$51,966,000).
Agriculture (1964 est.): Cash farm income, \$49,070,000 (livestock, \$26,580,000; crops, \$19,559,000). Chief crops (cash receipts)—potatoes, \$15,761,000 (ranks 1st among the provinces); fruits, \$1,407,000 (rank, 5th); tobacco, \$32,000 (rank, 5th).
Mining (1964 est.): Production value, \$49,856,301. Chief minerals (tons)—zinc, 53,785 (ranks 4th among the provinces); coal, 997,187 (rank, 3rd); copper, 10,523 (rank, 7th); lead, 22,377 (rank, 3rd); stone, 2,952,297 (rank, 4th); cement, 176,584 (rank, 7th).
Fisheries (1964): Commercial catch, 251,779,000 pounds (\$10,233,000). Leading species—lobster, 151,066,000 (\$1,681,000); cod, 37,916,000 (\$1,402,000); salmon, 1,039,000 (\$634,000).
Transportation: Roads (1962), 13,738 miles (all surfaced); motor vehicles (1964), 168,329; railroads (1963), 1,771 miles; airlines (1963), 2 (8 airports).
Communications (1963): Telephones, 152,793; television stations, 3; radio stations, 12; newspapers, 6 (daily circulation, 99,287).

Legislature. At a special session of the provincial legislature in 1965, the government announced plans for a "program of evolution" to bring responsibility for education, justice, and health and welfare under provincial jurisdiction. The proposal, which would be financed by an increase in the sales tax from 3% to 6%, effective April 1966, engendered considerable controversy in the province since it would remove these services from municipal control.

Conservative opposition leader C.B. Sherwood called for a vote of "no confidence" in the Liberal government in the Legislative Assembly late in December, but was defeated on a party-line vote.

Power. In his January budget message, U.S. President Lyndon B. Johnson proposed construction of the \$227 million Dickey Dam on the Saint John River between New Brunswick and Maine, and the U.S. Congress passed the measure on October 20. It is expected that this Canadian-American power development will eventually be linked with the Pasamaquoddy tidal power project.

Communications (1965): Telephones, 28,100; television stations (1964), 1; radio stations (1964), 28; newspapers, 9 (daily circulation in 1964, 138,332).

ban bill, designed to prevent Communist speakers on the University of New Hampshire campus in Durham, was defeated by a vote of 205-176. Governor King and Democratic legislators largely supported the ban, while Republican members voted overwhelmingly against it.

Departmental Reorganization Efforts. Governor King's efforts to reorganize the Department of Health and Welfare and the Department of Resources and Economic Development were thwarted by the Republican-controlled legislature. The legislature passed substitute bills designed to improve the administration of both departments, but Governor King vetoed the Resources and Economic Development bill.

New Tax Levies. Despite renewed interest in a broad-based tax, the legislature resisted any new revenue-raising proposals. Instead, the pressing need for additional state revenue was partially offset by following the governor's recommendation of raising existing levies on beer, tobacco, utilities, and inheritances. Substantial increases were also made in motor vehicle and license fees.

Labor Legislation. The legislature passed a bill to raise weekly unemployment compensation benefits from \$45 to \$49.

Sweepstakes. In its second year of operation, the state-operated sweepstakes proved to be something of a disappointment to its supporters. Revenue from the "Sweeps" fell to \$3.9 million in 1965—off more than 30% from the \$5.7 million grossed in 1964. Net sweepstakes proceeds available for distribution to local school districts in 1965 amounted to \$2.5 million (\$2.7 million in 1964), or \$21 per pupil. In an effort to attract more customers, the legislature authorized additional outlets for the sale of sweep-

stake tickets at turnpike toll stations and at the Sweepstakes Commission office in Concord.

Educational Appropriations. Appropriations for education rose sharply in 1965, with the legislature appropriating \$7.3 million more than for the previous biennium. The additional funds went for foundation aid; school construction, including vocational-technical training schools; the University of New Hampshire; educational TV; and a new special education program for handicapped children. The legislature also approved a self-liquidating fund of \$500,000 for a new regional center for continuing education at the university. (The university had received an initial grant of \$1.5 million for construction of the center from the W.K. Kellogg Foundation.) When it is completed, the center will bring together at Durham the regional and international programs of the six state universities of New England.

New State Commission. New Hampshire's antidiscrimination laws were strengthened during the 1965 legislative session with the establishment of a State Commission on Human Rights, composed of five members appointed by the governor. The commission is empowered to eliminate and prevent discrimination in employment, places of public accommodation, and housing.

Election Law. A significant change was made in the state's election laws by the repeal of the requirement for reporting campaign finances in presidential primaries. The legislature also passed a new apportionment law which allocates seats for the House of Representatives and Senate on the basis of population.

University of New Hampshire*

NEW JERSEY

Amassing the largest plurality ever gained by a New Jersey gubernatorial candidate, Governor Richard J. Hughes won a second four-year term in the November 1965 election. After a bitter campaign, the vote for the governor was more than 350,000 ahead of that tallied by the Republican challenger, state Senator Wayne Dumont, Jr.

Campaign Issues. The major issue in the campaign was the question of academic freedom. This issue grew out of remarks made in April by Dr. Eugene Genovese, an assistant professor of history at Rutgers University at a campus "teach-in" on American policy in Vietnam. Dr. Genovese criticized this policy at the teach-in, prefacing his remarks by saying that he considered himself to be a Marxist and a Socialist, and that he did "... not fear or regret the impending Vietcong victory in Vietnam." Instead, he said, "I welcome it."

Both a legislative committee and the university's Board of Governors met to investigate the Genovese case, but found no grounds for dismissing the professor. During the summer and fall, Senator Dumont continued to press the issue and demanded that Governor Hughes take action against Genovese. The governor, however, supported the position of the university's Board of Governors, and accused Dumont of fostering "McCarthyism."

While the candidates differed on a number of other questions—Hughes, for example, favored imposing a personal income tax to meet the state's needs, while Dumont urged a sales tax—the Genovese case remained the major campaign issue and obscured discussion of other state problems.

WIDE WORLD

NEW JERSEY GOVERNOR Richard J. Hughes signals victory to the crowd at his campaign headquarters in Trenton after being reelected on November 2 for a second term. Hughes defeated Republican state Sen. Wayne Dumont, Jr., by a margin of 350,000 votes, and carried Democratic majorities into both houses of the New Jersey Legislature.

Election. Governor Hughes' huge plurality in the election was enough to sweep into office a majority of Democratic candidates for both houses of the state Legislature, as well as many local candidates. Democrats captured 41 of the 60 General Assembly seats, and, with 19 seats out of 29, took control of the state Senate for the first time since 1913. The new Legislature also included the first woman senator, Mrs. Mildred Barry Hughes, and the first Negro senator, Dr. Hutchins F. Inge, in New Jersey history.

Reapportionments. A new apportionment plan contributed to the Democratic victory in the Senate

elections. The New Jersey Supreme Court found in November 1964 that under existing state constitutional provisions the seating in the Senate violated the U.S. Supreme Court's "one-man, one-vote" ruling.

A commission set up by the Legislature in December 1964 suggested new apportionment plans that combined legislative districts and revised congressional districts. However, the Legislature took no action on these proposals.

Finally, after several hearings before the state Supreme Court, a temporary plan was agreed upon for use only in the 1965 election. The size of the Senate was raised from 21 to 29 seats, with some small counties grouped for representation by a single senator, and with up to four seats allotted to the larger counties. The apportionment of the Assembly was not changed in the temporary plan. The Legislature also authorized the election of representatives to a constitutional convention in March 1966 to draw up amendments for a permanent apportionment plan.

In May the New Jersey Superior Court declared the state's congressional districts to be unconstitutionally drawn, and gave the Legislature until Feb. 21, 1966, to effect a change. A few weeks earlier, the courts also had applied the "one-man, one-vote" criterion to the county governing bodies, the boards of chosen freeholders.

Water Shortage. Another year of drought conditions resulted in water-use restrictions for much of the state, and plans were made for tapping lakes throughout large areas of northern New Jersey. Conflicts with New York City over the allocation of Delaware River water to the two states arose during the summer, but they appeared to be resolved by the end of the year.

Budget and Taxes. In February, Governor Hughes recommended a record budget of \$646,829,749 for the fiscal year beginning July 1, 1965, but without new broad-based taxes. Minor cuts by the legislature reduced the governor's proposed budget to \$639,597,483.

Following the election, the governor announced his intention to propose a personal income tax to the new Legislature in January. He began a campaign to marshal support for this measure among party leaders.

After three successive postponements, a property-tax reform measure (Chapter 51 of the Laws of 1960) which required all owners of personal property used in business to file local tax returns went into effect for the tax year 1965. By the end of the year, there were demands for the repeal, revision, or replacement of the law.

NEW MEXICO

The New Mexico Legislature passed reapportionment plans for both its House of Representatives and Senate in 1965. On September 28, however, state voters defeated the reapportionment plan for the Senate and rejected four other proposed constitutional amendments.

Reapportionment. The House reapportioned itself by creating five multiple-county districts and reducing its membership from 77 to 70.

The Senate reapportionment plan provided for five additional senators, all from Bernalillo County. The plan, in the form of an amendment to the state constitution, also provided for a weighted voting system giving each senator a certain percentage of 509 total votes in proportion to the population of his county. Voters rejected the plan on September 28.

Other Legislation. Measures passed by the Legislature included a record \$161 million appropriation bill; provisions for the codification of municipal law; pay raises for judicial and county officials; and a requirement that counties establish funds providing hospital care for the needy.

Of eight proposed constitutional amendments passed by the Legislature, three were approved by the voters. These amendments created an intermediate court of limited appeal; permitted school districts to borrow money for remodeling existing buildings, as well as for constructing new ones; and authorized the State Investment Council to invest up to half of the permanent funds in common stock. In addition

to the senate reapportionment plan, the defeated amendments called for increased pay for state legislators; the appointment, rather than the election, of the state auditor; permission for decisions by the state engineer to be appealed in district court trials; and repeal of the section of the constitution that requires a convention to change voting requirements. Most counties also decisively defeated tax levies to implement the Indigent Hospital Claims bill.

Rio Grande Gorge Bridge. The Rio Grande Gorge Bridge, situated 10 miles northwest of Taos, was completed in 1965 and dedicated by Gov. Jack M. Campbell on September 10. The \$2 million, 600-foot-high bridge completes a major link in the east-west highway across northern New Mexico.

Agriculture. Above-normal rainfall in 1965 resulted in record yields for most crops except fruit and cotton. Livestock also benefited, although the livestock count was lower than in previous years because many ranchers reduced the size of their herds during the 1964 drought.

Special Projects. In depressed northern counties and on the Navajo reservation, VISTA and Operation Head Start programs were begun in 1965.

NEW ORLEANS

New Orleans, the largest city in Louisiana (1965 est. pop.: city, 658,050; metropolitan area, 1,029,500) suffered severe damage from hurricane Betsy in 1965.

Hurricane Betsy. On Sept. 9, 1965, the hurricane struck New Orleans. With winds of 130 to 150 mph, accompanied by tides 12 feet above normal, the hurricane inundated a wide area in the eastern part of the city, causing 81 deaths and more than \$372 million worth of property damage. About 30,000 persons were left homeless. Several years of work will be required to repair the damage.

Primary Elections and City Government. The Democratic party primary, tantamount to election in New Orleans, was held on Nov. 6, 1965. Incumbent Mayor Victor Schiro was renominated by a majority of 514 votes for another four-year term. Vacant seats on the 7-member City Council were filled as the result of run-off elections held on December 11.

The mayor of New Orleans is assisted by an appointed chief administrative officer, who wields considerable management authority. The City Council is composed of five councilmen elected from districts, and two elected at large. Council members serve four-year terms.

Port of New Orleans. Expenditure of \$36.9 million over three years for modernization and construction of New Orleans' port facilities was planned in 1965. The port handled a record 83,496,920 tons of cargo, valued at \$2,244,400,000, in 1964—an increase of 20% over the 1963 tonnage. Of the 1964 total, \$1,615,300,000 was in exports, which included a record 453,287,000 bushels of grain, and \$629,100,000 was in imports.

Industry. The city's shipbuilding industry continued to expand. Avondale Shipyards, with nearly \$250 million in construction contracts, now ranks as the largest private builder of subsidized merchant shipping in the United States.

Firms producing rockets for the aerospace industry had a great impact on the city's economy, em-

Education: School enrollment (1964-65)—public elementary, 160,533 pupils (5,484 teachers); public secondary, 110,044 pupils (4,472 teachers); nonpublic schools, 31,000 pupils (950 teachers); college and university (fall 1964), 26,159 students. Public school expenditures (1964-65)—\$115,500,000 (\$470 per pupil); average teacher's salary, \$6,085.

Public Finance (fiscal year 1965): Revenues, \$580,764,944 (sales tax, \$79,788,174; motor fuel tax, \$29,369,525; federal funds, \$82,150,472). Expenditures, \$569,287,849 (education, \$119,518,840; health, welfare, and safety, \$35,689,009; roads and highways, \$83,548,599). State debt, \$40,819,000 (June 30, 1965).

Personal Income (1964): \$2,058,000,000; average annual income per person, \$2,041.

Public Assistance (fiscal year 1965): \$26,601,000 to 22,360 recipients (aged, \$14,105,000; dependent children, \$12,221,000).

Labor Force (employed persons, Dec. 31, 1964): Nonagricultural (wage and salary earners), 170,029 (10% manufacturing, 33% trade). Unemployed persons (Dec. 18, 1964)—7,739.

Manufacturing (1963): Value added by manufacture, \$170,453,000; nonelectrical machinery, \$6,274,000; fabricated metals, \$3,261,000; food and products, \$33,971,000.

Agriculture (1964): Cash farm income, \$262,749,000 (livestock, \$148,019,000; crops, \$96,006,000; govt. payments, \$18,724,000). Chief crops (tons)—sorghum grain, 298,600 (ranks 6th among the states); hay, 760,000; cottonseed, 107,000; wheat, 83,200; barley, 36,000.

Mining (1964): Production value, \$720,124,000 (ranks 7th among the states). Chief minerals (tons)—coal, 2,969,000 (rank, 14th); uranium, 2,093,350 (rank, 1st); copper, 86,104 (rank, 4th); zinc, 29,833 (rank, 8th); manganese, 5,794 (rank, 2nd); petroleum, 113,863,000 barrels (rank, 6th).

Transportation: Roads (1965), 65,725 miles (10,474 surfaced); motor vehicles (1964), 644,795; railroads (1965), 2,360 miles; airlines (1965), 6 (183 airports).

Communications (1965): Telephones, 371,000; television stations, 4; radio stations, 42; newspapers, 19 (daily circulation, 165,599).

WIDE WORLD PHOTOS

employing 12,000 people and having an annual payroll of \$90,000,000. In addition, it is estimated that 27,000 other jobs are related to the aerospace industry.

The building industry also continued to expand in 1965, with \$500 million being allocated for new plants and industrial expansion in the city area. The total value of building contracts awarded in the first half of 1965 was \$148,877,000.

Economy. The civilian labor force in the New Orleans metropolitan area totaled about 391,000 in mid-1965. Of this total, civilian employment was about 374,000; unemployment, 17,000.

Retail sales in the metropolitan area at mid-1965 amounted to \$884,074,000.

Finance. The city's finances in 1965 included: operating budget, \$41,875,592; adopted capital budget, \$1,640,500; long-term general obligation bonded debt, \$117,524,000; water revenue bonded debt, \$9,564,000; and a special 2-mill tax bonded for sewerage, water, and drainage, \$7,195,000.

New Orleans collects a 35-mill tax, of which the city receives 7 mills on 100% assessed property value, and the public school system 13 mills on a 100% base. In addition, 8 mills are for liquidation of the city debt, 4 mills for sewerage and water capital projects, and 3 mills for police and fire benefits.

NEW YORK

The first Democratic-controlled New York State Legislature in 30 years became embroiled in an intraparty dispute at the opening of the 1965 session, thereby causing a 30-day delay in the legislative process. When work commenced, however, precedent-making legislation was enacted, including a bill virtually outlawing capital punishment. By federal court order, the legislators, elected in No-

vember 1964, were required to stand for reelection in November 1965, rather than fill normal two-year terms. The 1965 election, held under a temporary redistricting plan, returned the Republicans to control of an enlarged Senate, but kept the Democratic majority in an enlarged House of Representatives.

Politics. As soon as the 188th Legislature convened on January 6, Democrats found themselves in the midst of a bitter fight over the election of a majority leader for the Senate and a speaker of the Assembly. One faction, led by Mayor Robert F. Wagner of New York City, was supported by J. Raymond Jones, the Manhattan Democratic leader, and legislators from Manhattan and Queens. Their chief antagonist was William H. McKeon, the state party chairman, who had aligned himself with the leaders of the Bronx, Brooklyn, Nassau, and Erie county organizations. Wagner's candidates were Thomas Mackell, a state senator from Queens, for majority leader, and Anthony J. Travia, an assemblyman from Brooklyn, for speaker. McKeon favored Jack E. Bronson of Queens for the Senate leadership and Stanley Steingut of Brooklyn for the speaker's post.

The battle brought forth charges by Mayor Wagner that McKeon had attempted to use bribery to influence their votes when he proposed that two Manhattan state senators receive important committee chairmanships with substantial expense allowances. The accusation of having offered a "double Lulu" (double expense allowance), denied by McKeon, led to an inquiry by State Commission of Investigation, but the commission ended its public hearings on January 29 without reaching a decision.

The impasse over legislative leadership was finally ended on February 3, when Republican senators teamed up with Wagner Democrats and elected Senator Joseph Zaretzki of Manhattan, the former minority leader in the Republican-controlled Senate, as majority leader. On the following day Travia was elected speaker. Their election was considered a victory for Mayor Wagner.

Legislation. On April 14, two weeks after the constitutional deadline, the Legislature passed a record \$3.48 billion budget, which was basically the same as that proposed by Governor Nelson A. Rockefeller in his message of January 29. Accompanying

the budget were revenue bills imposing a 2% state sales tax, increasing automobile registration fees by 50%, and doubling the state cigarette tax to 10 cents a package.

An historic step was taken on June 1 when Governor Rockefeller signed a bill that eliminated capital punishment except for persons found guilty of killing a police officer acting in the line of duty and for convicts under life sentence who murder a prison guard or an inmate while in jail or attempting to escape. A bill completely revising the state's 84-year old penal law also was enacted, but it was not to become effective until Sept. 1, 1967, to allow time for study. The ban on the dissemination of birth-control devices and information, a statute in the long-standing penal law, was struck down separately and removed from the statute books as of Sept. 1, 1965. Another bill liberalized the definition of legal insanity to bring it into closer accord with modern psychiatric views. The 1965 Legislature adjourned on June 23 after a near-record session of 169 days.

Reapportionment. The problem of compliance with the U.S. Supreme Court "one-man, one-vote" decision of June 1964 in matters of legislative apportionment continued to plague the state in 1965. In January a special three-man federal court, while invalidating three of the four redistricting plans approved the previous month by a lame duck spe-

cial session of the Republican-controlled 1964 Legislature, upheld Plan A, a straight reapportionment based on 1960 census figures, which enlarged the Senate from 58 to 65 members and the Assembly from 150 to 165.

In March, New York Supreme Court Justice Nathan Levy rejected all four plans as violative of the state constitution. His decision was upheld on April 15 by the New York Court of Appeals. The Democrats then set forth a plan that transferred the voting strength of upstate communities to New York City's suburbs, but failed to get it through the Legislature.

On May 24, a federal court again ruled in favor of Republican Plan A and ordered a special legislative election to be held on November 2, stipulating that legislators serve one-year terms and that another election be held in November 1966 under a permanent apportionment law. The U.S. Supreme Court upheld this decision on June 1, and dismissed all appeals to stay the 1965 election on October 11. Reapportionment was to be the first order of business for the 1966 Legislature as the New York Supreme Court had set Feb. 1, 1966, as the deadline date for submitting a new redistricting plan.

Elections. In the November 2 election, the Democrats lost control of the state Senate, capturing 28 seats to the Republican's 37. They retained their majority in the Assembly, gaining 90 of the 165 seats. In the only statewide contest, former U.S. Senator Kenneth Keating, a Republican, was elected to the Court of Appeals, defeating Democrat Owen McGivern by a vote of 1,972,496 to 1,327,101.

Voters approved five amendments to the state constitution, a proposal to hold a constitutional convention in 1967, and a \$1 billion bond issue to help communities build antipollution facilities. They rejected two propositions intended to bolster the New York City low-income housing program and four proposed amendments, including one which would have increased legislative terms from two to four years.

NEW YORK • Information Highlights

Area: 49,576 square miles.

Population: 17,845,000 (1965 est.).

Chief Cities (1965 est.): Albany, the capital (127,000); New York City (8,080,000); Buffalo (505,000); Rochester (305,000); Syracuse (216,000); Yonkers (206,000); Niagara Falls (101,000); Utica (100,000).

Government: Chief Officers—governor, Nelson A. Rockefeller (Republican); lt. gov., Malcolm Wilson (R); secy. of state, John P. Lomenzo (R); atty. gen., Louis J. Lefkowitz (R); treas., Harry O. Harman; comm. of education, James E. Allen, Jr.; chief justice, Charles S. Desmond. Legislature (convened Jan. 6, 1965)—Senate, 58 members (34 Democrats, 24 Republicans); House of Representatives, 150 members (88 D, 62 R).

Education: School enrollment (1964-65)—public elementary, 1,825,800 pupils (17,600 teachers); public secondary, 1,366,800 pupils (67,200 teachers); nonpublic schools, 959,500 pupils (28,560 teachers); college and university (fall 1964), 536,901 students. Public school expenditures (1964-65)—\$2,267,000,000 (\$790 per pupil); average teacher's salary, \$7,800.

Public Finance (fiscal year 1965): Revenues, \$4,447,917,099 (motor fuel tax, \$250,795,828; federal funds, \$652,145,949). Expenditures, \$4,376,082,175 (education, \$1,566,000,000; health, welfare, and safety, \$1,628,000,000; highways, \$513,000,000). State debt, \$1,082,462,000 (March 31, 1965).

Personal Income (1964): \$56,649,000,000; average annual income per person, \$3,162.

Public Assistance (fiscal year 1965): \$577,643,189 to 737,274 recipients (aged, \$63,142,492; dependent children, \$279,564,190).

Labor Force (employed persons, July 1965): Agricultural, not available; nonagricultural (wage and salary earners), 6,478,724 (28.1% manufacturing, 20.2% trade, 14.4% government). Unemployed persons (July 1965)—395,000.

Manufacturing (1963): Value added by manufacture, \$1,510,191,000 (transportation equipment, \$1,397,178,000; primary metals, \$908,473,000; nonmetallic machinery, \$1,516,356,000; electrical machinery, \$1,948,630,000; fabricated metals, \$844,870,000; food and products, \$1,845,385,000).

Agriculture (1964): Cash farm income, \$921,677,000 (livestock, \$613,929,000; crops, \$288,811,000; govt. payments, \$18,937,000). Chief crops (tons)—hay, 3,291,000 (ranks 16th among the states); alfalfa, 2,390,000 (rank, 11th); potatoes, 917,500 (rank, 4th); apples, 540,000 (rank, 2nd); oats, 468,000 (rank, 9th); grapes, 120,000 (rank, 2nd).

Mining (1964): Production value, \$288,445,000 (ranks 18th among the states). Chief minerals (tons)—sand and gravel, 39,282,000 (rank, 3d); salt, 4,816,000 (rank, 3d); gypsum, 653,000 (rank, 7th); zinc, 60,754 (rank, 2nd).

Fisheries (1964): Commercial catch, 79,157,617 pounds (\$9,884,035). Leading species—menhaden, 42,424,700 pounds (\$516,226); scup or porgy, 8,343,820 pounds (\$783,648); hard clams, 5,402,292 pounds (\$4,135,545); sea scallops, 2,044,332 pounds (\$1,114,682).

Transportation: Roads (1965), 101,787 miles (92,687 paved); motor vehicles (1964), 5,969,221; railroads (1964), 7,764 miles; airlines (1965), 35 (351 airports).

Communications: (1965): Telephones, 10,097,000; television stations, 31; radio stations, 219; newspapers, 107.

NEW YORK CITY

The two most dramatic events of 1965 in New York City took place one week apart. On November 2 a long, hard-fought mayoralty election campaign culminated in the upset victory of the Republican-Liberal candidate, John V. Lindsay. On the night of November 9-10, a spectacular electrical "black-out" temporarily paralyzed the city.

Elections. John Lindsay's stunning victory in the mayoralty race was the first for a Republican since that of Fiorello La Guardia, who served as mayor from 1933 to 1945. A New York congressman, Lindsay initially announced he would not be a candidate, but on May 13 he reversed his stand, and two weeks later was officially given the Republican nomination. On June 28 he received an overwhelming endorsement from the Liberal party. Shortly thereafter, Timothy W. Costello, the Liberal party state chairman, was chosen as candidate for the presidency of the City Council on Lindsay's slate. On July 19, Milton Mollen, a Democrat, bolted his party to join ranks with Lindsay as candidate for comptroller.

On June 10, Mayor Robert F. Wagner, a Democrat, announced that he would not seek a fourth term. This announcement set off a four-way contest

NEW YORK TRANSIT STRIKE, called by union chief Michael Quill (above), badly disrupted city in January 1966.

for his party's mayoral nomination. The contenders were Comptroller Abraham D. Beame, City Council President Paul R. Screvane, Congressman William Fitz Ryan, and Councilman Paul O'Dwyer. Although Screvane had Mayor Wagner's backing, Beame defeated him in the Democratic primary election on September 14. Also victorious in the primary were Beame's running mates; Queens District Attorney Frank D. O'Connor, who became the Democratic candidate for City Council president, and Judge Mario A. Procaccino, the candidate for comptroller.

A third figure, William F. Buckley, entered the mayoralty race early in the summer as the Conservative party candidate. The campaign centered around the issues of bossism and experience. Lindsay characterized Beame as a dupe of Democratic party bosses; Beame stood on his record of experience in

ELECTRICAL BLACKOUT on the night of Nov. 9, 1965, left commuters stranded in New York's Pennsylvania Station.

municipal government; and Buckley attacked Lindsay's liberal Republican record.

The results of the November 2 election showed extensive ticket splitting. In a traditionally Democratic city, the voters elected Lindsay by a vote of 1,156,915 to Beame's 1,030,771. However, Procaccino defeated Mollen for comptroller by a vote of 1,195,424 to 1,003,577, and O'Connor defeated Costello for City Council president by a vote of 1,366,260 to 939,470. Buckley ran ahead of his ticket, garnering 339,137 votes. The electorate returned 30 Democrats and 7 Republicans to the City Council.

The Blackout. The regional power failure that affected 30 million people in nine northeastern states and two Canadian provinces on November 9 hit New York City the hardest. Electric clocks in the city stopped at 5:27 P.M., and power was not restored in some neighborhoods until more than 13 hours later. Some 800,000 riders were trapped in subways at the height of the rush hour, and thousands of others had to be rescued from elevators. Fortunately, New Yorkers' spirits remained high, and the only major casualty was the business community, which suffered a trade loss of \$100 million.

Water Conservation. A four-year drought in the New York watershed became a major concern of New Yorkers during the spring and summer of 1965. In April the city's water-storage levels stood at 48% of capacity, compared with a normal level of 75-80%. By mid-September the level had fallen to 38%. Mayor Wagner ordered restrictions on the use of water, and the public was urged to minimize water consumption and eliminate waste. A program of inspection and repair of water fixtures and aqueducts was initiated. In addition, steps were taken to reopen pumping stations on the Hudson River and to purchase private water. Although the problem remained at year's end, the immediate crisis had been weathered. (See also WATER SUPPLY.)

After years of discussion, the city's water supply was fluoridated beginning September 30.

Strikes. Labor unrest continued to be part of the New York scene. Early in the year, Welfare Department employees went on strike, demanding reduced case loads and higher salaries. On January 31, after a 28-day walkout, union and city officials accepted a four-point program, which included a provision for a five-man fact-finding panel with authority to settle wages and working conditions.

New Yorkers were without most of their daily newspapers for a 25-day period from September 16 to October 10. When the *Times* was struck by the American Newspaper Guild, five other newspapers that are members of the Publishers' Association of New York City closed voluntarily. The dispute, centering on automation, pensions, severance pay, and the extension of the union shop, was settled after prolonged negotiations led by special mediator Theodore W. Kheel. (See also NEWSPAPERS.)

At the year's end, Michael J. Quill, president of the Transport Workers Union, having failed to solve a wage dispute during contract negotiations with the city's Transit Authority, called a crippling subway and bus strike. Despite an antistrike injunction issued by the State Supreme Court, public transportation ground to a halt at 5 A.M. on Jan. 1, 1966, and did not resume until January 13, when the union accepted a compromise packet amounting to \$50-70 million. During the 12-day strike, a monumental traffic jam choked the city. Business and wage losses were estimated at \$1 billion.

JOHN VLIET LINDSAY is the first Republican to win a mayoralty election in New York City in 24 years. Campaigning on a nonpartisan "fusion" ticket, Lindsay overcame the Democratic registration advantage of 3½ to 1, to defeat the Democratic candidate, Abraham Beame by a 126,144-vote margin on Nov. 2, 1965. Lindsay, a handsome, youthful congressman from New York's 17th District, conducted an energetic campaign to convince the voters that he was "fresh while everyone else is tired" and that he could make "our city great again."

Lindsay was born in Manhattan on Nov. 24, 1921. He was graduated from Yale University in 1943 and Yale Law School in 1948. During World War II, he served in the Navy and was awarded five battle stars. After practicing law in New York, he won election to Congress from the so-called Silk Stocking district.

(Photo at right) Mayor Lindsay is sworn in on Dec. 31, 1965, following his upset election victory in New York.

UPI

Education. Administrative personnel created problems on the educational scene. Dr. Calvin E. Gross, the superintendent of schools, was placed on an involuntary three-month leave of absence by the Board of Education in March 1965, and in June he announced his resignation, effective August 31. He was replaced by Bernard E. Donovan. James B. Donovan, president of the board, announced his resignation effective June 30; he was succeeded by Lloyd K. Garrison. The chancellor and the academic dean of the city university and the presidents of Brooklyn and Hunter colleges announced either their resignations or retirement on November 20, after a controversy with the Board of Higher Education over a proposed tuition plan for the municipal colleges, but the chancellor and dean returned to their posts in mid-December.

A teachers' strike, scheduled for September 13, the first day of school, was averted on September 10, when the United Federation of Teachers agreed to a salary increase offered by the Board of Education.

Poverty Programs. The war on poverty was continued in New York through activities of Mobilization For Youth (MFY) and Haryou-Act. In March, Mayor Wagner outlined a joint municipal-federal program to build 22 centers to help the jobless and the needy. In June the federal government allocated about \$13.5 million to the city to implement anti-poverty plans. (See also ANTI-POVERTY PROGRAM.)

Law Enforcement. A reported 52.5% increase in major crime in the subways during 1964 caused alarm and led to intensive police patrolling of the subway system beginning in May 1965. In late October, Mayor Wagner reported a 63% decrease in felonies committed at night in the subways.

Civil rights organizations demanded the creation of a civilian review board to deal with cases of alleged police brutality. On May 18, after a subcommittee of the City Council recommended the creation of such a board, Police Commissioner Michael J. Murphy resigned. His successor, Vincent L. Broderick, also opposed the plan.

Economy. During the second quarter of 1965, employment rose by 2%, to 3,578,000, as compared with the same period of 1964; unemployment declined by 7.3%, to 213,000. During the same period, the consumer price index rose 1.5%, to reach 111.9 (1957-59=100). Reflecting the upward trend, a record city expense budget of \$3,875,000 was passed on June 8, 1965. The total sales tax in the city was increased from 4 to 5% on August 2, with 2% going to the state.

World's Fair Ends. More than 50 million people had visited the New York World's Fair before its two-year run ended on October 17. Among the visitors to the fair was Pope Paul VI, who, on a one-day visit to the city on October 4, addressed the UN General Assembly, conferred with President Johnson, and celebrated Mass for 90,000 people at Yankee Stadium. (See also NEW YORK WORLD'S FAIR 1964/1965; RELIGION.)

NEW YORK WORLD'S FAIR 1964/1965

WORLD'S FAIR reopening, April 21, was attended by (l. to r.) Berlin Mayor Willy Brandt, Fair Corporation President Robert Moses, Vice President Hubert Humphrey, Chief Justice Earl Warren, and New York Mayor Robert F. Wagner.

LAST DAY OF FAIR, October 17, drew a crowd of 446,953 persons. Unisphere is in the foreground.

AFTER FAIR CLOSED, Michelangelo's masterpiece, the *Pietà*, was placed on Italian liner for return trip to Rome.

to remove Moses from his post had failed.

Drastic measures were taken. A sharp reduction in security forces brought protests from some exhibitors and from some visitors seeking directions or other assistance. An increase in adult admission, from \$2.00 to \$2.50, angered concessionaires, but Moses was adamant and had the backing of the fair corporation's executive committee. Attendance for the 1965 season was down 10% from 1964 (24.5 million vs. 27 million).

Furthermore, the attendance fluctuated wildly during 1965. It was so low during the first two months of the season that fair personnel seemed resigned to having a "flop." Then people began to come in increasing numbers, to make the summer a success by most standards. A post-Labor Day slump continued until the final two weeks. But then attendance picked up, and during the last eight days, more than 10% of the season's visitors went through the gates. On the final Sunday (October 17) a record total of 446,953 persons were admitted.

General Motors, with its Futurama, attracted the most people—29,002,186 for the two seasons. Second in attendance, with 27,020,857, was the Vatican pavilion. Its principal attraction was Michelangelo's *Pietà*, but the pavilion itself was among the most beautiful on the fairgrounds. The New York State pavilion drew 24,707,204. This pavilion had a colorful design that gave it the appearance of a circus "big top"; from its observation towers, visitors had a magnificent view of the fair. Other attendance leaders were, in order, Chrysler, General Electric, Ford, Florida, Bell System, United States, IBM, Du Pont, and Johnson's Wax. Johnson's Wax, which could accommodate only 500 persons every 20 minutes to see its beautiful motion picture, *To Be Alive*, was obliged to turn away thousands of visitors.

The 1965 Season. Much of the fair was new in 1965. At an exhibit sponsored by the People-to-People organization, a striking collection of photographs, paintings, and other memorabilia recalled the career of Sir Winston Churchill. The United States pavilion exhibited the Bill of Rights, the Emancipation Proclamation, and other historic documents, along with mementos of 13 presidents. The Belgian Village, a late opener in 1964, was a big hit in 1965; as were the new exhibits at the U.S. Space Park. On October 4, Pope Paul VI visited the Vatican pavilion after his trip to the United Nations.

The last two days of the fair presented a sorry spectacle. Vandals defaced buildings and smashed what they could not carry off. Flower beds were destroyed; saltshakers, silverware, and china were stolen as souvenirs, and trash cans were overturned.

Dismantling the Fair. The fair corporation's lease with the city required that everything be removed so that the area could be restored as a public park. Exhibitors sought to sell as much as possible to cut down transportation or demolition costs. Purchases by bargain hunters ranged from cheap dolls to the Austrian pavilion, which was sold as a ski lodge for \$3,000. (It cost \$300,000 to ship it to Jamestown, N.Y., and rebuild it.)

Most pavilions were reduced to rubble. One exception was the triple-towered Mormon pavilion, a reproduction of a portion of the Mormon Temple in Salt Lake City, which was dismantled and moved to Plainview, N.Y., where it was to become a Mormon chapel. (See also St. Louis.)

Several structures will be retained at the site of the fair in Flushing Meadow Park. They are the Hall of Science, the Port of New York Authority heliport, the Unisphere, the New York City building, the amphitheater on Meadow Lake, Singer Bowl, and the United States pavilion.

RALPH CHAPMAN

NEW ZEALAND

New Zealand followed the example of the United States and Australia in 1965 by sending combat troops to help the government of South Vietnam in its struggle against the Vietcong guerrillas. On the economic front, New Zealand signed an important trade agreement with Australia, and acted to reduce inflationary pressures within its economy.

Aid to South Vietnam. The prime minister, Keith Holyoake, announced in May that in response to a request from the government of South Vietnam, New Zealand would send a combat unit of 120 men to fight in that country. The unit chosen was an artillery battery equipped with 105-mm. howitzers.

Religious Faiths: Anglicans, 35% of population; Presbyterians, 22%; Roman Catholics, 15%.
Education: Total school enrollment (1963)—638,947 (primary, 442,985; secondary and technical, 152,237; higher, 43,725).
Finance (1964): Revenues, \$1,173,400,000; expenditures, \$1,401,100,000; public debt, \$2,807,500,000; monetary unit, New Zealand pound (0.3597 pound equals U.S.\$1).
Gross National Product (1964): \$2,866,200,000.
National Income (1964): \$2,465,900,000; average annual income per person, \$952.
Economic Indexes: Manufacturing (1962), 125 (1958=100); agricultural production (1964), 130 (1956-57=100); cost of living (1964), 115 (1958=100).
Manufacturing (metric tons, 1964): Meat, 838,800; cement, 788,000; butter, 231,600; wheat flour, 208,800; wool yarn (1962), 5,300; tobacco (1963), 2,144.
Crops (metric tons, 1963-64 crop year): Wool, 279,400 (ranks 3rd among world producers); wheat, 271,000; potatoes, 247,000; barley, 103,000; oats, 24,000; linseed, 11,000; tobacco (1964-65), 4,100; hard fibers, 4,000.
Minerals (metric tons, 1964): Coal (1963), 672,000; salt, 22,000; pumice, 20,847; iron ore (1963), 3,123; diatomite, 1,600; crude petroleum (1963), 4,000 barrels.
Foreign Trade (1964): Exports, \$1,074,000,000 (chief exports: wool, \$369,200,000; lamb and mutton, \$169,600,000; butter, \$161,800,000); imports, \$961,000,000 (chief imports, 1963): nonelectrical machinery, \$115,600,000; petroleum products, \$76,400,000; iron and steel, \$75,300,000). Chief trading partners (1963): Great Britain (took 46% of exports, supplied 35% of imports); U.S. (took 17% of exports, supplied 9% of imports); Australia (took 5% of exports, supplied 21% of imports).
Transportation: Roads (1964), 57,439 miles (19,264 paved); motor vehicles (1964), 877,029 (automobiles, 649,150); railways (1963), 3,263 miles; merchant vessels (1964), 61 (212,000 gross registered tons); national airline, New Zealand National Airways; principal airports—Auckland, Christchurch, Wellington.
Communications: Telephones (1964): 901,955; television stations (1964), 8; television sets (1964), 147,000; radios (1963), 616,000; newspapers (1963), 41 (daily circulation, 1,018,000).

The prime minister's announcement touched off a national debate over New Zealand's proper attitude toward the Vietnam conflict. The Labour Party, which forms the opposition to the government in parliament, opposed sending troops to Vietnam except as a part of a peace-keeping force. The New Zealand troops arrived in Vietnam in July.

Free Trade Agreement. In August the New Zealand and Australian governments reached agreement on the terms of a trade pact which will establish a limited free trade area between the two countries. New Zealand's minister for overseas trade, John R. Marshall, said that the agreement (to take effect in January 1966) will cover 60% of the trade between Australia and New Zealand, including 85% of New Zealand's exports to Australia. It was expected that under the agreement New Zealand will be able to increase its exports to Australia in a number of commodities, especially forest products. Critics suggested that secondary industry in New Zealand will suffer from Australian competition, but the government stated that adequate safeguards for New

NEW ZEALAND COMBAT UNIT IN VIETNAM is reviewed by Ambassador Stephen Weir and Brig. Gen. Linh Quan Vien of South Vietnam army. Artillery battery arrived in July.

Zealand's industry are included in the pact.

Economy. The year 1965 was prosperous in New Zealand. Exports and imports were at record levels. Profits, salaries and wages, and farm income all rose. National income increased by 6.2% in the year ending March 31, 1965, and continued to rise during the rest of 1965.

Nevertheless, New Zealand faced some troublesome economic problems in 1965, especially inflation and balance of payments difficulties. In March, consumer prices were 4.3% higher than they had been a year previously and were still rising. Labor shortages and a rapid growth in the number of building permits issued were other indications of inflationary pressure. A high level of imports created a substantial deficit in New Zealand's balance of payments abroad and threatened to reduce foreign exchange reserves to the 1938 level.

The government acted to cope with these problems. Under new regulations for the construction industry, large building projects could be postponed for up to 18 months. Government spending on non-essential capital projects was also delayed. However, the government preferred not to impose tighter controls on imports, and in July it added 90 items to the commodities not subjected to import controls.

Hydroelectric Power. Two major steps to develop New Zealand's hydroelectric power resources were taken in 1965. The largest dam in New Zealand was opened at Benmore, in the South Island, and began producing electric power. At the same time the interisland transmission cable went into operation.

Armed Forces. The New Zealand government took steps in 1965 to increase the efficiency of the armed forces. A new frigate for the navy was ordered in February, three Hercules transport aircraft were delivered in April, and five Orion antisubmarine aircraft and some helicopters ordered.

Cook Islands Dependency. In April the first elections were held under the Cook Islands new constitution, which gives the territory internal self-government. A six-man team of UN observers verified that the elections were democratically organized. The Cook Islands party, led by Albert Henry, won a victory at the polls.

University of Auckland

NEWFOUNDLAND

The major developments of concern to the government of Newfoundland and Labrador during 1965 were hydroelectric power, industrial expansion, royal commissions, and Come Home Year activities.

Economy. Negotiations continued with the Province of Quebec over transmitting hydroelectric power to

Area: 156,185 square miles (including Labrador).

Population (Oct. 1, 1965, est.): 501,000.

Chief Cities (1961 census): St. John's, the capital (63,633); Corner Brook (25,185).

Government: Chief Officers—Lt. gov., Fabian O'Dea; premier and min. of econ. develop., Joseph R. Smallwood (Liberal party); min. of prov. aff., J.T. Cheeseman (L); atty. gen., Leslie R. Curtis (L); min. of finance, E.S. Spencer (L); min. of educ., G.A. Frecker (L); chief justice, R.S. Furlong. Legislature—Legislative Assembly (convened Jan. 27, 1965), 42 members (34 Liberal, 7 Progressive Conservative, 1 independent).

Education: School enrollment (1963-64 est.)—public elementary and secondary, 141,808 pupils (5,085 teachers); private, 140 (12); college and university (1962-63), 1,998 students. Public school expenditures (1963)—\$23,935,000; average teacher's salary, \$2,935.

Public Finance (fiscal year 1965 est.): Revenues, \$89,660,000 (sales tax, \$28,025,000; income tax, \$8,863,000; federal funds, \$38,969,000). Expenditures, \$102,200,000 (education, \$26,370,000; health and welfare, \$25,680,000; transportation and communications, \$24,200,000).

Personal Income (1964): \$523,000,000; average annual income per person, \$1,061.

Public Assistance (fiscal year 1965 est.): \$10,750,000 (aged and blind, \$2,480,000; dependents and unemployed, \$5,640,000).

Labor Force (1961 census, agricultural and manufacturing only): Agricultural, 1,694; manufacturing, 10,114.

Manufacturing (1962): Value added by manufacture, \$75,508,000 (including fabricated metals, \$1,072,000; food and products, \$21,521,000).

Mining (1964 est.): Production value, \$191,922,042. Chief minerals (tons)—iron ore, 13,094,240 (ranks 2d among the provinces); zinc, 41,498 (rank, 6th); copper, 14,505 (rank, 6th); asbestos, 50,281 (rank, 4th); lead, 24,368 (rank, 2nd); sand and gravel, 3,330,010 (rank, 8th).

Fisheries (1964): Commercial catch, 579,126,000 pounds (\$20,350,000). Leading species—cod, \$65,108,000 pounds (\$12,390,000); lobster, 4,510,000 (\$2,129,000); flounders and sole, 72,200,000 (\$2,114,000); redfish, 40,397,000 (\$1,055,000).

Transportation: Roads (1962), 7,291 miles (4,275 surfaced); motor vehicles (1963), 79,422; railroads (1963), 934 miles; airlines (1963), 2 (5 airports).

Communications (1963): Telephones, 74,099; television stations, 3; radio stations, 11; newspapers, 3 (daily circulation, 29,949 in September 1964).

be developed in Labrador through Quebec. Meanwhile, construction was begun on the Bay d'Espoir power development on the Salmon River. This \$80.7 million project will generate 600,000 horsepower to be fed by grid lines to industrial and commercial users across Newfoundland.

Through extensive advertising in European and American publications, the Newfoundland government invited industrial firms which are large consumers of electricity to relocate in the province. As a result of this effort, a \$3.6 million steel mill, financed by Newfoundland and Ontario investors, will be built near St. John's. The plant, using scrap steel, will have an initial annual production of 60,000 tons of construction and reinforcement steel.

It was announced during the year that the province's third pulp and paper mill will be built at the town of Come by Chance, 65 miles northwest of St. John's. Estimated to cost \$50 million, the mill will turn out 100,000 tons of newsprint and 75,000 tons of pulp annually.

Royal Commissions. Five royal commissions were set up early in 1965 to study various aspects of Newfoundland life. The areas to be reviewed by the commissions are transportation, electric power, health, education, and economic developments.

Come Home Year. Preparations were under way for Newfoundland's Come Home Year, which is to be celebrated in 1966. The section of the Trans-Canada Highway crossing the province is scheduled for completion in time to accommodate the expected influx of tourists, and Newfoundland's hotel facilities were being expanded.

NEWSPAPERS

The debate over the relationship between a free press and a fair trial, and the strain caused by automation on newspaper labor-management relations held the attention of newspapermen in 1965.

Free Press-Fair Trial Controversy. In its report in 1964 on the assassination of President Kennedy, the Warren Commission asserted that the press was in part responsible for "groundless rumors and public confusion" during the dark days in Dallas. Lawyers and jurists took up this refrain, and criticized the coverage of crime news in general. Many newsmen were equally concerned about the clash between two fundamental American rights: the right of a free press and the right of the accused to a fair trial. Was the press "over-reporting" criminal cases, standing in the way of justice, and prejudicing public opinion against persons accused of crimes but not yet convicted?

Many persons thought so. In 1965, Senator Wayne Morse of Oregon revived his bill to restrict the release of information in criminal cases. Bar associations in Philadelphia and elsewhere drafted guidelines for the courts and the press. High courts in several states banned statements to the press by police, lawyers, or court officials. Some newspapers directed their reporters to be more circumspect in pre-trial coverage. Although the Illinois Supreme Court held that newspaper publicity had not prejudiced a trial of five Chicago policemen, the U.S. Supreme Court in June 1965 threw out the conviction of Texas financier Billie Sol Estes for swindling, because segments of his trial had been televised.

In April 1965, Attorney General Nicholas Katzenbach addressed the American Society of Newspaper Editors (ASNE). With respect to pre-trial information, he said that his department would supply general background data on a defendant, the substance or text of the charge, the identity of the agencies involved, and the circumstances of the arrest. But he said that the government should be circumspect in disclosing a criminal's past record, and would not report any confession made by the criminal, or the results of fingerprint, polygraph, or ballistic tests. Although the attorney general said that his department would not attempt to regulate the content or the conduct of the press, he criticized attempts by police and prosecutors to try cases in the press.

The directors of the ASNE rejected the Warren Commission's proposal that the press adopt a code of conduct to protect accused persons. A committee of editors defended the press coverage of President Kennedy's assassination as accurate and complete.

Automation. Newspaper managers and workers were preoccupied with the economics of publishing, and automation was a point of conflict between them. Computerized production continued to grow, and was the major issue in a 25-day strike (September 16–October 10) by the Newspaper Guild against the New York *Times*, where workers sought protection against elimination of jobs through automation. Publishers of six other dailies in the New York area suspended publication in sympathy with the *Times*. A federal mediator helped settle the strike, with the *Times* agreeing to administer a pension plan jointly with the guild, to require all workers in departments under guild jurisdiction (except those in news and editorial positions) to join the guild, and to protect the jurisdiction of the guild. As in many other recent disputes, the automation issue was not settled, only postponed.

THE SOUTH BEND TRIBUNE

Automation of newspapers continued in 1965. Here, an operator transfers copy to perforated tape—the first step in producing type by means of an electronic computer.

Other strikes in 1965 included a five-week walk-out and lockout in Baltimore. The disputes within the newspaper industry bared growing friction within the ranks of both labor and management.

Circulation, Failures, and Mergers. The year 1965 began with 1,763 daily newspapers in the United States, having a circulation of 60,412,266 copies. In 1964 the number of dailies increased by nine, and circulation topped 60 million for the first time. The circulation gain (from 58,905,251 in 1963) was the largest for any year since 1946, and was particularly marked in the smaller cities. Small papers often showed more vigor than their metropolitan counterparts. In October 1965 a new daily, *The Connecticut Valley Times*, published in Springfield, Vt., appeared, while in Indianapolis the 78-year-old *Times*, a Scripps-Howard property, failed and abandoned some 90,000 subscribers. Two struggling one-year-olds, the Vancouver (B.C.) *Times* and the Atlanta *Times*, closed in 1965. The Latin American *Times* began publication in New York City during the summer, but closed again in the fall.

Mergers seemed to offer hope in some cities. In September, three dailies in San Francisco (the *Chronicle* and two owned by Hearst) agreed to share the market with one morning, one afternoon, and one Sunday paper. All were produced by a single new corporation, but they remained editorially independent.

The Department of Justice kept an eye on mergers and chain purchases. Antitrust actions were pending against the Scripps-Howard chain because of its purchase of the Cincinnati *Enquirer*; the Hoiles chain for monopolizing properties in Lima, Ohio; the two dailies in Tucson, Ariz., because of an attempted merger; and the Times-Mirror Company of Los Angeles after it purchased publishing properties in San Bernardino in 1964.

Florida was a promised land for newspaper in-

vestors in 1965. Newspaper properties in that state were bought by the Chicago *Tribune* (Orlando), the Scripps-Howard interests (Hollywood), the Lindsay-Schaub chain (Venice), and the Gannett chain (Cocoa and Titusville). Also the John S. Knight newspapers bought the Tallahassee *Democrat*. Elsewhere, the Minneapolis *Star* and *Tribune* purchased the Rapid City (S. Dak.) *Journal*.

Makeup Innovations. Innovations in newspaper makeup appeared. The *Christian Science Monitor*, in adopting a new five-column format, increased the size of its body type and dropped column rules. The Louisville *Courier-Journal* and *Times*, the Riverside (Calif.) *Press* and *Enterprise*, the Dallas *Morning News*, and the Rock Hill (S.C.) *Evening Herald* dropped the traditional column format.

Prizes. For typographical excellence, the Bennington (Vt.) *Banner* won the Ayer Cup in 1965, and, in Canada, the Hamilton (Ont.) *Spectator* and the Kingston (Ont.) *Whig-Standard* won the McLaren awards. For a campaign on legislative reapportionment, the Hutchinson (Kans.) *News* won the Pulitzer Prize for meritorious public service. (See also PRIZES AND AWARDS.)

Appointment. President Johnson named Bill Moyers his press secretary, succeeding George Reedy.

NICARAGUA

The Republic of Nicaragua enjoyed a generally calm and prosperous year in 1965. Premature political campaigning for the 1967 presidential elections presented the only seriously disruptive note, as it tended to generate tensions and create a climate for possible future violence.

Politics. The reason for heated political activity so far in advance of the election was that the leader—and probable presidential candidate—of the governing Liberal party, Maj. Gen. Anastasio Somoza Debayle, is the younger son of Gen. Anastasio Somoza García, who was a virtual dictator of Nicaragua from 1937 until his assassination in 1956. Many Nicaraguans contend that a “Somoza dictatorship” still exists behind the government of President René Schick Gutiérrez. They are loathe to see the armed forces chief assume the presidency.

As the Liberal party candidate, General Somoza would have an automatic lead, but Dr. Fernando Agüero Rocha, leader of the opposition Conservative party, already was campaigning strongly and confidently. Dr. Agüero had the support of Pedro Joaquín Chamorro, editor of the influential Managua daily, *La Prensa*. The opposition hoped to organize a coalition or “Patriotic Alliance” of all dissident parties and independents.

Economy. Intensified economic growth continued for the fifth straight year, with an anticipated 8% expansion in the real domestic product in 1965. Cotton production rose to about 543,000 bales at the end of the 1964-65 crop year in June. However, a severe drought and heavy winds from May to September caused serious losses and harmed the 1965-66 cotton crop. Coffee production increased, and by August the quota under the International Coffee Agreement was raised by 63,000,000 bags.

At least 19 new industrial mills, financed with ample national and foreign loans, were under way—evidence of an increasing diversification of production and location. The Planta Centroamérica hydroelectric project on the Tuma River began production in March, and a 20% reduction on household electric rates was announced in April.

Foreign Affairs. Nicaragua maintained its policy of outspoken opposition to Cuban dictator Fidel Castro. In August the government denounced Castroite subversion and stated that it anticipated no resumption of relations with Cuba. Nevertheless, the anti-Castro Revolutionary Recovery Movement closed its hit-and-run training center in Nicaragua in March, reportedly to concentrate on activities within Cuba.

On May 6, at the Organization of American States (OAS) ministerial meeting, Nicaragua voted for the creation of an Inter-American Peace Force to serve in the Dominican Republic. Within a few days about 175 Nicaraguan troops were sent to join the force.

Canal. Although the National Assembly had voted in 1964 to abrogate the 1916 Bryan-Chamorro Treaty, which gave the United States perpetual rights to build and operate a Nicaraguan canal, Nicaragua retained its interest in the construction of a sea-level canal under a revised treaty. Officials from the United States visited Nicaragua and other Central American countries having possible canal sites in late January and February 1965.

Conflicting claims faced Nicaragua on both sides of the possible canal route. El Salvador and Honduras claim condominium rights in any western ter-

NIGER

President Hamani Diori and leading members of the Niger government escaped an assassination attempt on April 13, 1965, while they were participating in an outdoor prayer ceremony. The attempt was made by Amadou Diop, a former announcer for Radio Peiping and a member of the outlawed Sawa-ba party. About 50 persons were arrested in conjunction with the plot. Investigations by Niger's security forces pointed to the existence of a more extensive underground Sawaba network than had been previously suspected.

The Sawaba party, a revolutionary group led by Djibo Bakari, is reputedly based in Ghana and receives support from the Communist bloc, particularly Communist China. Since October 1964 the party has carried out subversive activities in Niger, including armed attacks.

Elections. On September 7 the Legislative Assembly approved a new electoral law. On September 23, President Diori was reelected for a second five-year term. A new National Assembly was elected on October 21.

Conspiracy Trial. From May 18 to 28, 65 conspirators who had participated in Captain Diallo's mutiny to overthrow the government in December 1963 were tried at Tillabery. Diallo and four

others were condemned to death, 42 defendants received prison terms, and 18 were acquitted.

Construction. In April, President Diori laid the cornerstones of a new hotel, a brick factory, and a metal furniture factory in Niamey.

Foreign Affairs. Niger's foreign policy continued to be predominantly Western-oriented, but Communist countries expanded their activities in the country. From January to April, three Soviet geologists reviewed geological studies in Niger to determine where Soviet technical assistance in this field could best be applied.

On June 10, at Tamanrasset, Algeria, President Diori met with Algerian President Ben Bella (who was ousted from office in July) to discuss the Sawaba problem. The U.S. assistant secretary of state for Africa, G. Mennen Williams, visited Niger from October 2 to 4.

NIGERIA

The Republic of Nigeria appeared to be on the verge of disintegration early in 1965, in the aftermath of a controversial federal parliamentary election held at the end of 1964. Tension abated after the government announced that new elections would be held in districts which had been heavily boycotted by the opposition. Late in 1965 an election was again a source of friction. Looting and killing continued long after the October voting for the regional parliament of Nigeria's Western Region.

The latter crisis precipitated a bloody military coup in January 1966, which brought down the federal government and left the nation under the provisional regime of army commander Maj. Gen. Johnson T.U. Aguiyi-Ironsi. Despite the stormy beginning, most Nigerians were optimistic for progress in 1966. They spoke idealistically about a "new Nigeria" without corruption and tribalism.

Federal Elections. On Dec. 30, 1964, Nigeria held its first nationwide parliamentary election since independence. Even more important than the selection of deputies was the issue of whether the large Northern Region or the smaller combination of Western, Mid-West, and Eastern regions in the south would control the federation. Two large blocs faced each other in the contest. The interests of the north were represented by the Nigerian National Alliance (NNA), a coalition of the Northern Peoples Congress, the Nigerian National Democratic party, and splinter groups. The common concern over Northern domination had brought together rival political leaders in the southern regions. They formed the United Progressive Grand Alliance (UPGA), a coalition of the National Council of Nigerian Citizens (NCNC) of the Eastern Region, the Action Group of the Western Region, and smaller parties.

When irregularities appeared in the nomination of candidates in the north, the UPGA, in an atmosphere of growing tension and violence, demanded that the elections be postponed. The request was refused, and the UPGA called upon its supporters to boycott the polls. The UPGA boycott was partly successful, and 54 of the 312 seats in the House of Representatives were left vacant. Of the remaining 258 seats, the NNA won 198 (of which 162 came from the Northern Region); the UPGA, 57; and the Independents, 3.

The results did not settle the political crisis, however. At first President Nnamdi Azikiwe, who had

Communications: Telephones (1964), 1,700; radios (1963), 20,000; newspapers (1963), 1 (daily circulation, 1,000).

Area: 356,668 square miles.

Population: 56,400,000 (July 1, 1964 est.).

Chief Cities (1963 census): Lagos, the capital, 665,246; Ibadan, 627,379; Ogbomoso, 319,881; Kano, 295,432.

Government: Provisional military government under Chief of State Maj. Gen. Johnson T.U. Aguiyi-Ironsi (assumed power Jan. 16, 1966).

Religious Faiths: Muslims, 42% of population; tribal religions, 27%; Christians, 25%.

Education: Total school enrollment (1962)—3,071,526 (primary, 2,834,010; secondary, 195,499; teacher-training, 30,756; technical, 7,241; higher, 4,020).

Finance (1963-64 est.): Revenues, \$339,700,000; expenditures, \$337,200,000; public debt, \$273,300,000; monetary unit, pound (0.3571) pound equals U.S.\$1.

Gross Domestic Product (1962): \$3,002,000,000.

Cost of Living (1964): 124 (1958=100).

Manufacturing (metric tons): Cement (1964), 660,000; margarine (1961), 600; beer (1963), 446,000 hectoliters.

Crops (metric tons, 1964-65 crop year): Peanuts, 1,633,000 (ranks 3rd among world producers); palm kernels (1963-64), 419,700 (world rank, 1st); cocoa beans, 270,000 (world rank, 2nd); cottonseed (1963-64), 88,000; rubber, 73,200.

Minerals (metric tons, 1964): Tin, 8,861 (ranks 7th among producers); coal (1963), 577,000; columbium, 2,377; zirconium (U.S. imports), 564; tantalum (U.S. imports), 38; gold, 244 troy ounces; crude petroleum, 43,997,000 barrels.

Foreign Trade (1964): Exports, \$600,800,000 (chief exports: peanuts and peanut oil, \$118,720,000; cacao, \$112,280,000; crude petroleum, \$89,880,000; palm kernels and palm oil, \$88,760,000); imports, \$712,880,000 (chief imports, 1963: cotton fabrics, \$60,035,000; nonelectrical machinery, \$58,565,000; iron and steel, \$30,979,000). Chief trading partners (1963): Britain (took 40% of exports, supplied 34% of imports); U.S. (took 9% of exports, supplied 9% of imports).

Transportation: Roads (1964), 45,498 miles (7,706 paved); motor vehicles (1964), 77,000 (automobiles, 50,000); railways (1963), 1,989 miles; merchant vessels (1964), 9 (53,000 gross registered tons); national airline, Nigerian Airways; principal airports, Kano and Lagos.

Communications: Telephones (1964): 58,658; television stations (1964), 8; television sets (1964), 15,000; radios (1963), 400,000; newspapers (1963), 20.

sided with the opposition, refused to call on the NNA leader and outgoing prime minister, Abubakar Tafawa Balewa, to form a government. Finally, on Jan. 4, 1965, Azikiwe and Balewa settled their differences, and on January 7 the prime minister announced his temporary 17-member cabinet. All of the cabinet were members of the NNA except for the ministers of finance and aviation, who belonged to the NCNC. Both the Action Group and the NCNC accepted the new government with misgivings on the condition that supplementary elections would be held in the Eastern Region and in Lagos to fill vacancies created by the boycott.

The new federal parliament, which convened on February 17, passed a special electoral bill, and in the subsequent election, held on March 18, the UPGA captured 51 of the 54 contested seats. The House of Representatives was later redistributed so that the NNA held 199 seats; the UPGA, 108; and the Independents, 5.

Regional Election. Balloting for the assembly of the Western Region took place on October 11. The Action Group, which governed the region until 1962, had been given a good chance of making a comeback, but the ruling Nigerian National Democratic party won by a 3-to-1 majority. Angered supporters of the Action Group charged the government with widespread vote-rigging. After the results became known, rioting broke out and continued through the end of the year. At least 160 persons were killed during the disorders.

Government Upheaval. Dissident young military officers, aroused against the politicians whom they considered corrupt and incompetent, staged a coup d'état on Jan. 15, 1966. They kidnapped and killed Prime Minister Sir Abubakar Tafawa Balewa, his finance minister, and the prime ministers of the Northern and Western Regions. However, most of the army remained loyal to the federal government, and on January 16, General Aguiyi-Ironsi gained control. Accepting the invitation of the civilian Council of Ministers to head a provisional military government, he suspended Parliament and abolished all federal and regional civilian offices. On January 18 he appointed military governors for the four regions, and on January 21 he founded a Supreme Military Council and a federal Executive

Council, both under his personal leadership. The new regime pledged its determination to end corruption and solidify the federal government.

Economy. On July 8, Dr. Pius Okegbo, Nigeria's ambassador to the European Economic Community (EEC), announced in Brussels that Nigeria had successfully concluded negotiations for its association with the EEC. There was skepticism among some Nigerians of the benefits of association with EEC, and concern that Nigeria would be relegated to the role of a supplier of raw materials for Europe.

In 1964 the value of Nigeria's external exports reached a record \$600,800,000. However, the demands of the National Development Plan resulted in imports totaling \$712,880,000, thus creating a deficit of \$112,000,000 in 1964, compared with a \$50,000,000 deficit in 1963. Moreover, in the National Development Plan Progress Report, the cost of Nigeria's six-year development plan (1962-68) was raised from \$1,895,040,000 to \$2,240,000,000, indicating that Nigeria will need even greater amounts of external assistance to carry out its projects.

Nevertheless, the Nigerian economy continued to grow in 1965, paced by oil exploration and production for export. Nigerian Gulf Oil discovered a new oilfield in the Eastern Region in January, and another in the Niger Delta in March. In September the Phillips Petroleum Company opened an oil refinery, at Port Harcourt, capable of processing 1,900,000 tons of crude petroleum annually, to become the eighth oil company working in Nigeria. Also in 1965, a new sugar refinery was opened at Baita, and a textile plant began operation at Kaduna.

In November 1964 the Nigerian External Broadcasting Service (the Voice of Nigeria) was inaugurated, the Bornu Railway extension in northeastern Nigeria, was completed and the multimillion-dollar Wuja bridge over the Niger near Bida was opened. The expansion of communications continued in 1965, and both Britain and the United States pledged assistance to expand and modernize Nigeria's long-distance telecommunications. In March the International Development Association of the World Bank extended \$35,000,000 in credits to Nigeria.

PICTORIAL PARADE

1965 NOBEL PRIZE WINNERS are (left to right) Robert Burns Woodward (chemistry); Julian Schwinger and Richard Feynman (physics); François Jacob, André Lwoff, and Jacques Monod (medicine); Mikhail Sholokhov (literature).

NOBEL PRIZES

The Nobel Prizes for 1965, each award worth the equivalent of about \$56,000, were presented on Dec. 10, 1965, to individuals for their work in literature and the sciences, and to an agency of the United Nations for its contributions to world peace. All of the prizes except the peace prize were awarded in Stockholm, Sweden.

Peace. The 1965 Nobel Prize for peace was given to UNICEF (United Nations International Children's Fund), which became the ninth organization in the 64-year history of the Nobel awards to receive the peace prize. UNICEF's accomplishment was described as "spread[ing] a table, decked with all the good things that nature provides, for all the children of the world."

The peace prize, which was awarded in Oslo, Norway, by King Olav V, was accepted by Henry R. Labouisse, executive director of UNICEF.

Physics. A Japanese and two American scientists shared the 1965 Nobel Prize in physics and the \$56,000 in prize money "for their fundamental work in quantum electrodynamics, with deep-plowing consequences for the physics of elementary particles." The winners were Richard P. Feynman of the California Institute of Technology, Julian S. Schwinger of Harvard, and Shinichiro Tomonaga of Tokyo Kyoiku University.

Richard Phillips Feynman was born in New York, N.Y., on May 11, 1918. He received his B.S. at the Massachusetts Institute of Technology in 1939 and his Ph.D. in theoretical physics at Princeton in 1942. He was involved in the Manhattan (atomic bomb) Project during its early stages. As a group leader in theoretical physics at Los Alamos, N. Mex., Feynman saw the first test explosion of the atomic bomb. He has been Tolman professor of physics at the California Institute of Technology since 1951. In 1954 he won the \$15,000 Albert Einstein award for scientific achievement.

Julian Seymour Schwinger was born in New York, N.Y., on Feb. 12, 1918. He received his B.A. in 1936 at the age of 17 and his Ph.D. in physics a year later, both from Columbia University. After working in California with nuclear physicist J. Robert Oppenheimer, he joined the faculty of Harvard University in 1945 and became a full professor in 1946—one of the youngest in Harvard's 300-year history. He was a cowinner in 1951 of the Albert Einstein award.

Shinichiro Tomonaga was born in Kyoto, Japan, on March 31, 1906. He is a son of the noted philosopher and teacher Sanjuro Tomonaga. He graduated from Kyoto University in 1929, studied for a time at the University of Leipzig with the great German physicist Werner Heisenberg (the 1932 Nobel laureate in physics), then took his Ph.D. at Kyoto University in 1939. In 1941 he began teaching at the

Tokyo Bunrika University (now Tokyo Kyoiku University), where he is now director of the Institute for Optical Research. He won the Japanese Academy Prize in 1948 for his work with Masao Kotani on electromagnetism.

Chemistry. The 1965 Nobel Prize in chemistry was won by Robert Burns Woodward, Morris Loeb professor of chemistry at Harvard, for his development of fundamental techniques for the synthesis of organic substances. The Swedish Royal Academy of Science cited Woodward for illustrating "the difference in structure between chlorophyll and its counterpart in . . . human blood, hemoglobin."

Robert Burns Woodward was born in Boston, Mass., on April 10, 1917. He acquired both a B.S. (1936) and a Ph.D. (1937) in just four years at the Massachusetts Institute of Technology. He began teaching at Harvard in 1938 and became Morris Loeb professor of chemistry there in 1953. His other awards include the Synthetic Organic Chemistry Award of the American Chemical Society (1957) and the Davy Medal (1959).

Physiology or Medicine. Three French biologists shared the 1965 Nobel Prize in physiology or medicine. They were honored for their discovery of regulatory activities inside body cells that contribute to the "genetic control of enzymes and virus synthesis." The three men are André Lwoff, Jacques Monod, and François Jacob, of the Pasteur Institute, Paris, where they work as a team. (See BIO-CHEMISTRY.)

André Lwoff was born in Allier Department, France, in 1902. He received doctorates in both medicine and natural science in 1927, then joined the staff of the department of microbial physiology of the Pasteur Institute in Paris, where he later headed the department. In addition to his work at the Pasteur Institute, he has taught microbiology at the Sorbonne since 1959. Both the U.S. National Academy of Sciences and the Royal Society of London elected him to foreign membership some years ago, but, ironically, the French Academy of Sciences has not yet offered him membership. He holds the Medal of the Resistance for his work with the French underground in World War II, and is an officer of the Legion of Honor.

Jacques Monod was born in Paris in 1910. He took his doctorate in biology in 1941, became laboratory chief of the Pasteur Institute (1945-53), and head of the cellular biochemistry department there in 1953. Since 1960 he has been professor of metabolic chemistry at the Sorbonne. An officer of the Legion of Honor, he holds the Croix de Guerre and the American Bronze Star (1945).

François Jacob was born in Nancy in 1920. He took an M.D. in 1947 and a Sc.D. in 1954 from the University of Paris, joining the Pasteur Institute in 1950. In 1964 he became professor of cellular genetics at the Collège de France—a chair created especially for him. He was instrumental in establishing in 1964 the Council of the European

Organization for Molecular Biology, which he heads. He is a commander of the Legion of Honor and a holder of the Croix de Guerre.

Literature. For only the third time in the history of the Nobel Prizes, the award for literature went to a Russian—Mikhail Sholokhov. It was the first time the prize was given to a Kremlin-approved Russian writer. In awarding Sholokhov the 1965 Nobel Prize in literature, the Swedish Academy cited his “artistic power and integrity,” and described him as “one of the most outstanding writers of our time.” (See SOVIET LITERATURE.)

Mikhail Aleksandrovich Sholokhov was born in Kruzhilin, a village in Russia's Don River basin, on May 24, 1905. He joined the Red Army as a machine gunner in 1920 and saw action against roving terrorist bands. And *Quiet Flows the Don*, the first two volumes of *The Silent Don*, appeared in English in 1934; the third and fourth volumes were published in English as *The Don Flows Home to the Sea* (1940).

NORTH AMERICA. See CANADA; MEXICO; UNITED STATES.

NORTH ATLANTIC TREATY ORGANIZATION

The North Atlantic Treaty Organization (NATO), like the Common Market and other agencies for European international cooperation, was in serious difficulty in 1965. The main cause of the crisis was the intransigence of French policy as directed by President Charles de Gaulle. The view of most NATO members was that the French president was oversensitive about French independence in an age when economic and military considerations made absolute independence obsolete.

De Gaulle was more hostile toward NATO than he was toward the Common Market. He was especially sensitive to problems of national defense, and he increasingly opposed the NATO system of an integrated defense force. Because NATO includes Britain, Canada, and, above all, the United States, he distrusts the alliance, claiming to fear the domination of Europe by the United States.

De Gaulle's Threat of Withdrawal. In a press conference on Sept. 9, 1965, de Gaulle spoke of the possibility of French secession from NATO. He scoffed at those who “profess that our country should efface its personality in international organizations” and warned that “upon the expiration of the commitments formerly made—that is, in 1969 by the latest—the subordination known as integration, which is provided for by NATO and which hands our fate over to foreign authority, shall cease, as far as we are concerned.”

In mentioning 1969, de Gaulle was alluding to Article 13 of the North Atlantic Treaty, which provides that after the treaty has been in force for 20 years, a member may withdraw from it after giving 12 months' notice. He was perhaps delivering advance notice of complete French withdrawal, or preparing NATO for a French demand in 1969, or earlier, that the integrated command structure be dismantled as the price of France's continuing as a member. This interpretation of de Gaulle's remarks was made by former President Dwight D. Eisenhower, who was the first supreme commander of NATO forces. Eisenhower further commented that without an integrated command structure NATO would be no more than a coalition of separate forces, and “coalitions in the past have always failed.”

NATO Problems Without France. In 1965 there was evidence of France's noncooperation with its NATO partners. In the spring, France announced that it would not participate in an exercise planned for 1966 as a test of the alliance's communication systems. More significant still was French disapproval (amounting to a veto) of building a new center of operations for Supreme Headquarters, Allied Powers, Europe (SHAPE). SHAPE, the military directorate of NATO, has operated thus far from makeshift headquarters outside Paris.

French noncooperation poses a geopolitical difficulty, for, in a physical sense, France is the core of the alliance. Not only are NATO headquarters, both civil and military, situated in France, but the enormously expensive NATO military installations and communication systems built in the past decade center on France. Consequently the United States and the other NATO members, if they are to be realistic, must face the question of how NATO could continue to exist and function in the event of France's withdrawal. There would be great cost, and considerable technical disadvantages, in moving establishments to the alternative sites (West Germany or Britain). However, there would also be corresponding advantages in gaining freedom to operate without French opposition.

The Price of NATO's Success. To speak as if NATO's present troubles are all the fault of France is, of course, to oversimplify. NATO's success in blocking Soviet advances in Europe since 1949 has led European members to regard NATO as being no longer necessary. The French are just more outspoken in expressing the nationalistic attitudes that may be found in other NATO countries. For example, the British have made it clear that they would like to withdraw one fifth of their 51,000-man British Army of the Rhine.

Council Meetings. The routine functioning of NATO continued in 1965. The North Atlantic Council held its spring ministerial meeting in London, May 11–12. In an opening address, British Prime Minister Harold Wilson stressed the need for interdependence. He declared: “There is no greater delusion than the feeling we can solve our common problem on the basis of adventures in military nationalism.”

The meeting's final communiqué, as has been customary in recent years, skirted rather than dealt with the great problems faced by the alliance. It contained a “Three-Power Declaration on Germany” by the United States, France, and Britain, which stated: “The three governments consider that in the absence of a real solution of the German problem, based on the exercise in the two parts of Germany of the right of self-determination, the situation in Europe as a whole will remain unsettled and . . .

NATO COUNCIL MEETS at ministerial level in London in 1965. British Prime Minister Harold Wilson (standing) speaks at the opening of the spring session on May 11. Seated (left to right) are Stavros Costopoulos (Greece), G.I. Gudmundsson (Iceland), Amintore Fanfani (Italy), and Paul-Henri Spaak (Belgium).

KEYSTONE

in consequence peace will not be assured on that continent." This declaration constituted a conciliatory gesture on de Gaulle's part, for in February he had come out in favor of a European approach to the German problem—one excluding the United States and, perhaps, Britain as well.

The semiannual meeting of the NATO Ministerial Council, held December 14-16 in Paris, heard U.S. Secretary of State Dean Rusk and Secretary of Defense Robert McNamara ask for NATO support of the U.S. policy in Vietnam. The communiqué issued at the end of the conference expressed the council's disappointment over the continued division of Germany and their hope for an amicable settlement of the situation in Cyprus.

Problem of Nuclear Control. Apart from French attitudes there remains the related and unsolved

problem of controlling atomic weapons within the alliance. The problem is to modify the American quasi-monopoly of nuclear weapons so that the European NATO members can participate meaningfully in the control and ownership of these weapons systems and take part in making and executing strategic policies.

The U.S. Department of Defense officially admitted on October 16 that the original proposal for a mixed-manned nuclear missile fleet was dead. However, there seemed to be official backtracking a few days later, for the U.S. State Department announced that it still favored participation by West Germany in some kind of nuclear arrangement. It was not clear, however, how that objective could best be obtained. At the same time, Harlan Cleveland, the new U.S. ambassador to NATO, said in

IN ANOTHER SEVEN YEARS MY WORK SHOULD BE FINISHED

PLETCHER-SIOUX CITY JOURNAL

DESTRUCTION OF THE NATO ALLIANCE by French President de Gaulle is satirized in American newspaper cartoon.

Paris that the United States would continue to press for increased integration among nations that were ready, willing, and able to cooperate. It was surprisingly announced on November 20 that for six years, planes and missiles of NATO allies (including West Germany) have been nuclear armed though still allegedly under U.S. controls.

French Plan for Reorganization. Cleveland's speech was in part a reply to a French proposal for reforming NATO, published, with de Gaulle's approval, in the October issue of *Politique étrangère*, the organ of the Centre d'Études de Politique Étrangère. The proposal envisaged a new NATO consisting of inner-circle and outer-circle groups. The latter would cover the geographical area of the present NATO, but under a traditional treaty of alliance. The inner group, with the United States excluded, would embody some degree of integration. The other NATO members are unlikely to accept the proposal.

University of California, Riverside

NORTH CAROLINA

Faced with a threat that its state-supported universities and colleges might be discredited by the Southern Association of Colleges and Schools, the North Carolina General Assembly met in a special session on November 15 to amend a controversial 1963 statute controlling Communist speakers at state-supported institutions. The legislature, following the recommendation of a nine-member commission, modified the law by returning to the institutions' boards of trustees control over visiting speakers. The commission had held two days of televised hearings in August, and two more in September, before reporting on November 5 to Gov. Dan K. Moore, who promptly called the special session of the legislature.

Legislation. In its biennial session, held from February 3 to June 17, the General Assembly adopted the largest budget in the history of the state. The salary of state employees was increased by 10%. Seven new state agencies were created in the executive branch, one was abolished, and at least a dozen underwent organizational changes. The legislature authorized a record number of 11 temporary study commissions.

The General Assembly sent two issues to the voters for approval on November 2: (1) a proposed constitutional amendment to create an intermediate Court of Appeals between the State Supreme Court and the Superior Courts; and (2) a \$300 million highway bond issue. The voters approved both of these proposals by a 3 to 1 majority.

During the regular session, many laws relating to motor vehicles and highway safety were passed, including one requiring periodic inspection of all motor vehicles registered in the state. The legislature also created a Traffic Safety Authority and a Highway Safety Research Center.

No action was taken on the reapportionment of seats in the General Assembly or of the state's congressional districts.

Economic Developments. In general, North Carolinians enjoyed prosperity in 1965. Cash income from farm crops and livestock was one of the highest on record—some \$1,167,000,000. Industrial

NORTH CAROLINA · Information Highlights

Area: 52,712 square miles.
Population: 4,877,000 (1965 est.).
Chief Cities (1965 est.): Raleigh, the capital (104,000); Charlotte (230,000); Winston-Salem (139,000); Greensboro (136,000).
Government: Chief Officers—governor, Dan K. Moore (Democrat); Lt. gov., Robert W. Scott (D); secy. of state, Thad Eure (D); atty. gen., Wade Bruton (D); treas., Edwin Gill; supt. of pub. instr., Charles F. Carroll; chief justice, E.B. Denny. Legislature—General Assembly (convened Feb. 3, 1965); Senate, 50 members (49 Democrats, 1 Republican); House of Representatives, 120 members (106 D, 14 R).
Education: School enrollment (1964-65)—public elementary, 867,103 pupils (29,450 teachers); public secondary, 335,049 pupils (13,150 teachers); nonpublic schools, 22,200 pupils (1,060 teachers); college and university (fall 1964), 99,075 students. Public school expenditures (1964-65)—\$353,377,000 (\$322 per pupil); teacher's average salary, \$5,052.
Public Finance (fiscal year 1964): Revenues, \$1,138,269,452 (3% sales tax, \$156,730,512; motor fuel tax, \$141,959,630; federal funds, \$239,120,636). Expenditures, \$970,971,559 (education, \$368,987,361; health, welfare, and safety, \$171,661,132; highways, \$200,206,092). State debt, \$212,368,000 (June 30, 1964).
Personal Income (1964): \$9,282,000,000; average annual income per person, \$1,913.
Public Assistance (fiscal year 1964): \$79,235,000 (aged, \$24,536,000; dependent children, \$28,689,000).
Labor Force (employed persons, July 1965): Agricultural, 533,000; nonagricultural (wage and salary earners), 1,379,900 (41.5% manufacturing, 18.1% trade, 13.5% government). Unemployed persons (July 1965)—88,000.
Manufacturing (1963): Value added by manufacture, \$4,617,912,000 (transportation equipment, \$37,713,000; primary metals, \$42,875,000; nonelectrical machinery, \$114,895,000; electrical machinery, \$278,895,000; fabricated metals, \$80,946,000; food and products, \$328,381,000).
Agriculture (1964): Cash farm income, \$1,271,913,000 (livestock, \$369,911,000; crops, \$866,846,000; govt. payments, \$35,156,000). Chief crops (tons)—corn for grain, 2,323,000 (ranks 10th among the states); tobacco, 486,000 (rank, 1st); peanuts, 182,000 (rank, 2nd); sweet potatoes, 128,000 (rank, 2nd); potatoes, 114,200 (rank, 18th); barley, 69,000 (rank, 19th); grapes, 1,400 (rank, 11th).
Mining (1964): Production value, \$56,470,000 (ranks 40th among the states). Chief minerals (tons)—feldspar, 363,047 (rank, 1st); talc, 106,035 (rank, 3rd); mica, 64,131 (rank, 1st); stone, 17,943,000; sand and gravel, 11,150,000; clays, 3,199,000.
Fisheries (1964): Commercial catch, 227,375,644 pounds (\$7,770,621). Leading species—menhaden, 172,991,671 pounds (\$2,108,529); hard blue crabs, 84,091,505 pounds (\$1,275,189); alewives, 7,560,904 pounds (\$76,880); shrimp, 4,279,141 pounds (\$1,503,288).
Transportation: Roads (1965), 83,247 miles (49,821 paved); motor vehicles (1964), 2,258,006; railroads (1964), 6,483 miles; aircraft (1964), 2,257 (167 airports).
Communications (1965): Telephones, 1,513,700; television stations, 16; radio stations, 241; newspapers, 47 (daily circulation, 1,138,024).

growth continued at about the same pace as in previous years, with investments in new and expanded industrial plants totaling \$285 million. The revenues of the state's two ports increased 18.6% over 1964, and transportation industry receipts reached a record \$1,100 million.

Education. Expenditures for state, local, and federal education reached an all-time high. Salaries of teachers were increased 5% for each year of the 1964-65 biennium. By the end of 1965, most, if not all, of the state's school districts were integrated. However, there was considerable confusion in the matter of compliance with the provisions of the Civil Rights Act of 1965.

Charlotte College became the University of North Carolina at Charlotte, and the state university campus at Raleigh was renamed the North Carolina State University at Raleigh. The General Assembly also gave qualified authorization for a two-year medical school at East Carolina College in Greenville. Several new community colleges began operation during the year, and others were preparing to open in 1966.

Civil Rights Demonstrations. Violence flared during August at Negro voting rights demonstrations in Plymouth, and in November the homes of four Negroes were bombed in Charlotte.

HUGH T. LEFLER
*Kenan Professor of History
University of North Carolina*

NORTH DAKOTA

In 1965, for the first time in many years, a coalition between the Democratic party and the Non-partisan League (NPL) held a majority of seats in the North Dakota House of Representatives. The Senate, however, was controlled by the Republicans. Although much essential legislation was passed, dissension in the Senate between Democrats and Republicans over taxation resulted in the suspension of the current state tax program.

The Tax Problem. The Republicans proposed a tax plan, presented by the Interim Legislative Research Committee, which provided for an increase in the sales tax and a gradual elimination of the personal property tax. The Democratic-NPL faction introduced their own plan, which involved the immediate elimination of all personal property taxes and an increase in the state income tax. The Democrats refused to accept the Republican proposal, and the legislative session ran six days beyond the scheduled adjournment before the Democratic proposal was adopted. However, the measure was quickly referred to the voters, who defeated the proposed tax package by a 3 to 1 margin. Because the former sales tax was suspended as of July 1, 1965, the referendum defeat left the state without any tax program.

On June 14, Gov. William L. Guy called a special session of the legislature to reenact the sales tax. No agreement was reached, and Attorney General Helgi Johannesson ruled that it was legal to substitute a state-use tax originally designed to tax goods purchased outside the state. The question of the legality of applying this tax to goods purchased within the state was referred to the courts.

Agriculture. North Dakota farmers harvested a record crop in the fall of 1965, despite damaging rains throughout September. Production of the state's principal crops totaled 12.3 million tons, as compared with the previous all-time record of 11.2 million tons harvested in 1962. Wheat was the

Area: 70,655 square miles.

Population: 642,000 (1965 est.).

Chief Cities (1965 est.): Bismarck, the capital (31,800); Fargo (50,500); Grand Forks (37,000); Minot (35,800); Jamestown (16,800); Williston (12,300); Dickinson (11,400); Mandan (11,200).

Government: **Chief Officers**—governor, William L. Guy (Democrat); lt. gov., Charles Tighe (D); secy. of state, Ben Meier (Republican); atty. gen., Helgi Johannesson (R); treas., Walter Christensen (D); supt. of pub. instr., M.F. Peterson; chief justice, Thomas J. Burke. **Legislature**—Legislative Assembly (convened Jan. 5, 1965); Senate, 49 members (29 Republicans, 20 Democrats); House of Representatives, 109 members (65 D, 44 R).

Education: **School enrollment** (1964-65)—public elementary, 106,390 pupils (3,930 teachers); public secondary, 43,650 pupils (2,634 teachers); nonpublic schools, 23,600 pupils (950 teachers); college and university (fall 1964), 19,705 students. **Public school expenditures** (1964-65)—\$56,475,000 (\$422 per pupil); average teacher's salary, \$4,800.

Public Finance (fiscal year 1965): Revenues, \$193,308,075 (2.25% sales tax, \$23,493,530; motor fuel tax, \$15,301,965; federal funds, \$2,579,690). **Expenditures**, \$184,191,917 (education, \$58,450,351; health, welfare, and safety, \$43,382,506; highways, \$62,323,575). **State debt**, \$3,397,250 (June 30, 1965).

Personal Income (1964): \$1,376,000,000; average annual income per person, \$2,133.

Public Assistance (fiscal year 1965): \$16,385,155 to 18,244 recipients (aged, \$5,862,556; dependent children, \$4,117,716).

Labor Force (employed persons, July 1, 1965): Agricultural, 113,000; nonagricultural (wage and salary earners), 176,650 (4.7% manufacturing, 23.0% trade, 22.3% government). **Unemployed persons** (July 1965)—6,470.

Manufacturing (1963): Value added by manufacture, \$72,484,000 (fabricated metals, \$2,016,000; food and products, \$34,285,000; printing and publishing, \$11,089,000; stone, clay, and glass products, \$5,221,000).

Agriculture (1964): Cash farm income, \$740,772,000 (livestock, \$212,327,000; crops, \$420,768,000; govt. payments, \$107,677,000). **Chief crops** (tons)—wheat, 4,525,000 (ranks 2nd among the states); hay, 4,227,000 (rank, 10th); barley, 2,183,000 (rank, 1st); oats, 1,389,000 (rank, 4th); sugar beets, 567,000 (rank, 10th); potatoes, 510,000 (rank, 7th); rye, 293,000 (rank, 1st); sorghum grain, 195,000 (rank, 9th); flaxseed, 376,000 (rank, 1st); corn for grain, 160,000; soybeans, 81,000.

Mining (1964): **Production value**, \$92,866,000 (ranks 30th among the states). **Chief minerals** (tons)—coal (lignite), 2,637,000 (ranks 15th among the states); petroleum, 25,731,000 barrels (rank, 14th); natural gas, 34,700,000,000 cubic feet (rank, 16th); sand and gravel, 10,520,000; stone, 31,000.

Transportation: **Roads** (1964), 107,544 miles (7,925 paved, 55,626 gravel surfaced); motor vehicles (1965), 382,789; **railroads** (1965), 5,264 miles; **airlines** (1965), 3 (271 airports).

Communications (1965): **Telephones**, 250,600; **television stations**, 10; **radio stations**, 28; **newspapers**, 10 (daily circulation, 176,292).

NORTH DAKOTA and other upper Midwestern states were inundated by floods in April. Farm near Drayton, N. Dak., lies buried under rising waters of the Red River.

WIDE WORLD

leading crop with a total yield of 176,250,000 bushels.

Electric Power. With an almost inexhaustible supply of lignite resources (more than 400 billion tons), North Dakota is now annually "exporting" 1.2 million tons of lignite coal in the form of electric power. It is estimated that the area being supplied, comprising several states, will need 2 million kilowatts by 1970 and 3.5 million by 1980. To help meet this demand, North Dakota's power capacity is being increased from 200,000 to 600,000 kilowatts. The power is sold at a "postage stamp" rate—that is, consumers along the entire line (whether they live in Colorado, Nebraska, Iowa, or other distant points) pay the same amount for their electricity.

Water. In the fall, the state authorized construction to begin on the Garrison Diversion plan under which about 250,000 acres will be irrigated. The plan provides for many alkali lakes, including Devils Lake, to be brought up to higher levels and freshened so that they can sustain fish. As a result, both recreation and agriculture will benefit from the plan.

NORTHWEST TERRITORIES

Measures were taken during 1965 to bring a greater degree of self-government to the Northwest Territories and extend the franchise to all residents.

Government. At the request of the Territorial Council, an advisory commission was appointed by the Canadian government to investigate the development of self-government in the Northwest Territories. The commission is headed by A.W.R. Carrothers, dean of law at the University of Western Ontario, and includes John W. Parker, mayor of Yellowknife, and Jean Beetz, associate professor of law at the University of Montreal. It will study the problems involved in such a development, seek the views of local residents, and recommend the necessary steps to provide increased self-government.

Legislation. At the June session of the Territorial Council, the franchise was extended to all territorial

residents. The council increased the number of electoral districts to seven by creating three new electoral districts: Central Arctic, Keewatin, and Eastern Arctic. Complementary federal legislation is being sought to increase council membership from nine to 12 to accommodate the new districts.

Deputy Commissioner. Stuart M. Hodgson of Vancouver, B.C., was appointed first full-time deputy commissioner of the territories.

Power Project. The 18,000-kilowatt hydroelectric power project at the Twin Gorges of the Taltson River, 35 miles northeast of Fort Smith, was completed in October. The \$9.1 million complex includes a 25,000-horsepower generating station operated from a remote control center at Fort Smith, and a 170-mile transmission line carrying power through Fort Smith to Pine Point Mines' new lead-zinc concentrates plant near Great Slave Lake. Substations have already been built at Fort Smith and Pine Point to distribute the power locally.

Highways. Tenders will be called in 1966 for the building of a 60-mile stretch of highway, starting 67 miles west of Fort Smith and joining an existing road from Pine Point to the Hay River Highway. The new road will form the midsection of a 165-mile, east-west communicating road between Fort Smith and the highway junction directly south of Hay River.

B.G. SIVERTZ
Commissioner, Northwest Territories

NORWAY

A coalition government, excluding the Labor and Socialist parties, took over control of the Storting (the Norwegian parliament), as a result of the elections on Sept. 12–13, 1965.

Elections. The Conservative, Liberal, Center (farmers'), and Christian People's parties were returned to power for the first time in 30 years. Agreeing in advance to form a coalition government, they won a sweeping victory in the general elections, capturing 80 seats in the 150-member Storting. The parties previously had held a total of 74 seats. The Conservatives increased their membership from 29 to 31, the Liberals from 14 to 18, and the Center party from 16 to 18. The Christian People's party, however, dropped from 15 to 13. Of the noncoalition parties, the Labor party, by far the largest single party, won over 43% of all the votes cast, yet lost 6 seats, for a total of 68. The left-wing Socialist party kept its 2 seats.

New Government. The coalition government, with Center party leader Per Borten as prime minister, took office on October 12. Of the 14 other seats in the cabinet, six were allocated to the Conservatives, three to the Liberals, three to the Christian People's party, and two to the Center party.

Outlining his government's policy to the Storting on October 22, Prime Minister Borten said that Norway's foreign and defense policy would continue to be based on support for the United Nations, the North Atlantic Treaty Organization, and certain international economic organizations. He said that adjustments would be made in the progressive state income tax, and that the whole fiscal system would be thoroughly reconsidered, with a shift in emphasis from taxation on earned income to more indirect forms of taxation. Measures would be taken to reduce inflationary pressure and Norway's international payments deficit.

Economy. Norway's economic boom continued

— NORTHWEST TERRITORIES · Information Highlights —

Area: 1,304,903 square miles.
Population: 25,000 (Oct. 1, 1965 est.).
Largest City (1961 census): Yellowknife, 3,245.
Government: Chief Officer—Commissioner B.G. Sivertz. Legislature—Territorial Council, 9 members (4 elected locally, 5 appointed), meets twice yearly: in winter, at Ottawa; in summer in the territories, at Fort Smith. There are also regional offices at Inuvik, Yellowknife, Churchill, and Frobisher Bay.
Education: School enrollment (1963–64 est.)—public elementary and secondary, 869 pupils (43 teachers); federal, 5,391 (289). Public school expenditures (fiscal year 1961–62)—\$1,033,000.
Public Finance (1964–65): Revenues, \$6,218,965 (liquor profits, \$1,170,951; gasoline and fuel oil tax, \$709,615; game management, \$44,914). Expenditures, \$6,808,898 (education, \$1,686,729; health and welfare, \$2,449,296; municipal affairs and development, \$401,610).
Public Assistance (fiscal year 1962): \$138,000 (aged and blind, \$55,000; dependents and unemployed, \$83,000).
Mining (1964 est.): Production value, \$17,234,800. Chief minerals—gold, 416,963 troy ounces (ranks 3rd among the provinces and territories); zinc, 3,195 tons (rank, 8th); crude petroleum, 680,239 barrels (rank, 6th); silver, 66,462 troy ounces (rank, 10th).
Fisheries (1963 est.): Commercial catch, 6,347,000 pounds, valued at \$796,000.
Transportation: Motor vehicles (1963), 4,323; airlines (1963), 2 (13 airports).
Communications: Telephones, 2,912 (1963); radio stations, 4.

NORWAY'S ELECTION In September brought in a coalition government. Per Borten (right), the Center party leader and the new prime minister, confers with John Lyng (left), the Conservative party leader, and Kjell Bondevik (center), the Christian National party leader.

KEYSTONE

throughout 1965, but the increase in production and exports was somewhat smaller than in 1964. The balance of payments deficit, sharply reduced in 1964, rose again, mainly because more ships and other capital investment goods were imported during the year 1965. The budget was extremely expansionary, with expenditures up by about 13% from the previous year, but its effect was partly offset by strict credit restrictions. Although inflationary pressures continued, consumer prices showed a more moderate increase than in previous years.

In June the Storting, then Labor controlled, passed a law on monetary and credit policy over the protest of the opposition parties and the business community. The law gives the government extensive power to regulate money and the capital market, as well as the activities of private credit institutions. As a consequence, the private credit institutions withdrew from the Joint Consultation Council, which for 10 years had been a major instrument in formulating Norwegian credit policy. The new government is not likely to make use of the law's more controversial provisions.

Social Legislation. The Storting agreed on the main principles of a "people's pension scheme" to

take effect Jan. 1, 1967. It seeks to secure a reasonable standard of living for the retired, the disabled, and those who have lost their family breadwinner, and will incorporate the present system covering these groups.

Oil and Natural Gas. The Ministry of Industry granted concessions for oil and gas exploration and exploitation off the Norwegian coast south of the 62nd parallel. The concessions, given to nine groups representing American, Canadian, British, French, Italian, Dutch, Belgian, and Norwegian interests, include a total area of over 40,000 square kilometers. Drilling operations are scheduled to start in 1966. Meanwhile, a U.S. petroleum company, Caltex, started exploratory drilling in the concession area on Spitsbergen (Svalbard) that the government had granted to it.

State Visits. King Olav V paid visits to Iran and Thailand during the year. King Baudouin and Queen Fabiola of Belgium, President Giuseppe Saragat of Italy, and President Tito of Yugoslavia paid state visits to Norway.

NOVA SCOTIA

Nova Scotia continued its economic expansion during 1965, despite a slight downward trend in some areas of the economy. The number of jobs in the province increased, although unemployment still remained at a fairly high level. Labor income rose substantially during the year, spurred by the establishment of a minimum-wage scale for male workers in Nova Scotia—the first time such a guideline has been applied.

Economy. The primary sectors of the economy showed only slight growth during 1965. Farm cash receipts, the value of seafood landings, and pulpwood consumption made some gains, while the production of coal, pulpwood, and sawn lumber declined. Electric power output expanded rapidly.

Factory shipments by manufacturers increased moderately. Some expansion in the sale of primary steel, substantial gains in petroleum refining, and a moderate growth in shipbuilding and repair were key factors in maintaining economic stability. Fish processing showed the largest production gain because of an increase in the number of plants during the year.

Manufacturing. Industry expanded at a rapid pace in 1965. The Clairetone Sound Corporation began construction of an \$8 million television and electronics equipment plant in New Glasgow. Canadian Motor Industries Limited announced plans for a second car assembly plant. Scott Maritimes Pulp Limited established a \$50 million kraft pulp plant near Pictou. Also under construction was a \$30 million heavy water plant at Glace Bay, several fish-

processing plants, and a \$7 million hardboard plant at Amherst.

Nonindustrial Construction. New hospital units were added to existing facilities at Amherst, Glace Bay, Bridgewater, Digby, Truru, New Glasgow, and Halifax. A law school building was added at Dalhousie University, and a women's residence was built at Mount Saint Vincent College. In Halifax a 21-story apartment building neared completion. The provincial government completed a \$30 million highway construction program.

Legislation. To implement the provisions of the Minimum Wage Act of 1964, a government board established the province's first system of minimum wages for male workers.

An act was passed to ensure that creditors fully inform borrowers of their obligations and of the cost of loans.

The Forest Improvement Act of 1965 was expected to contribute to the long-term growth and preservation of the province's forest resources by providing an instrument for enforcing forest management. Major provisions of the act include the appointment of district forest practices improvement boards, licensing of commercial wood buyers, and prohibitions against cutting immature woodstands.

Education. The provincial government announced plans to develop a comprehensive school system that will coordinate various school programs (academic, vocational, and other) in separate institutions to provide better facilities than are presently available in small neighborhood schools. The proposed program will triple vocational training-school capacity from 3,000 to 9,000 pupils through the construction of five new units.

Social Development. A new Division of Social Development was established in the provincial Department of Public Welfare to give greater impetus to the government's program on human rights. This unit will establish self-help community development programs in designated areas.

NUCLEAR ENERGY. See ATOMIC ENERGY; PHYSICS. **NUREYEV, Rudolf.** See biographical sketch under DANCE.

NUTRITION

A principal development in nutrition during 1965 was the perfecting of a new and inexpensive process for the mass production of protein, the food element most needed to correct the insufficient diet from which a majority of the world's population suffers. In vitamin research, it was discovered that vitamin E can eliminate anemia in premature babies. Another finding was that the astronauts' synthetic diet is helpful in treating severe liver disease.

Also in 1965, nutritional changes were made in the American programs for sending food to underdeveloped countries. Food shipped abroad under these programs was being enriched and fortified to meet specific nutritional needs, and a beginning was made toward helping less-developed nations establish their own sources of needed foods and special nutrients.

Protein. Recent studies by the Food and Agricultural Organization (FAO) and the World Health Organization (WHO) of the United Nations indicate that over 80% of the world's people receive insufficient protein, and that about 60% are virtually

starved for protein. A report prepared for President Johnson stated that kwashiorkor—resulting from protein malnutrition—is evident in as many as 50% of infants up to 5 years of age in some of the less-developed countries, and that this apparently causes mental and physical retardation of from 10% to 25% of those who survive.

A new process for mass producing protein at low cost will help supply sufficient quantities to persons who presently have too little of this nutrient in their diets. In the new process, whole fish are finely ground, purified, and dried to form a light gray flourlike concentrate called fish flour, which is almost without odor or taste. Both the fish and the processing are so inexpensive that protein for a typical undernourished child can be provided for about 4 cents per day, including commercial profit.

The production of fish flour as a protein supplement has been under study for several years. A major deterrent to making it available was the lack of an economical method for purifying whole-fish flour to make it edible. Scientists of the Commercial Fisheries Bureau of the Department of the Interior applied themselves to the purification problem, and in 1965 perfected a process in which three washings in isopropyl alcohol remove all fatty substances and bacteria, and most of the moisture. The resulting fish concentrate is 80% protein, the balance providing small amounts of calcium, phosphate, and other minerals useful in the diet.

The National Academy of Sciences estimated that the current annual world harvest of 50 million tons of fish could be increased to 250 million tons, using standard fishing techniques, and that the catch would yield 50 million tons of fish flour, enough to end protein deprivation throughout the world. (See also **FOOD SUPPLY**.)

Astronauts' Synthetic Diet. Dr. Milton Winitz of the United Technology Center, Sunnysvale, Calif., reported that patients with severe kidney or liver damage, as well as healthy volunteers, have thrived for periods up to 19 weeks on the synthetic diet developed for astronauts. No weight loss occurred and the physical condition and psychological outlook improved. The diet consists of pure chemicals: mineral salts, amino acids, vitamins, glucose, ethyl linoleate, and distilled water.

Vitamins. Many foods customarily have been enriched with vitamin D to prevent rickets. Committees of the American Council on Pediatrics and the American Medical Association reported that 400 USP units of vitamin D per day satisfy all requirements, and that excessive amounts are at best useless. They recommended to the Food and Drug Administration that restrictions on excessive use be imposed, and on Aug. 27, 1965, the agency published a proposal to limit vitamin D to a level of 400 USP units per day in milk, milk products, baby formulas, and nonprescription vitamin pills, and to eliminate it from other foods.

Premature babies are so prone to anemia that it was thought to be a normal result of premature birth. In 1965, however, research physicians and scientists at the University of Pennsylvania reported the discovery that anemia in these infants can be eliminated by giving them vitamin E. Because this essential vitamin is difficult to transfer from mother to baby before birth, all babies are born with only limited amounts of the vitamin in their systems. In the case of full-term babies, however, breast feeding usually increases their vitamin E supply to the proper level within a month after birth. Although

vitamin E will cure anemia in premature babies, its full effects are not known, and further studies are being conducted to make sure that there are no undesirable side effects.

Enriched Food for Foreign Aid. In the past, food shipped to less-developed countries by the United States has usually been whatever was in surplus supply. However, at the Western Hemisphere Nutrition Congress held in Chicago in November, the Agency for International Development (AID) announced that foods sent abroad since August 1965 have been enriched to meet specific nutritional deficiencies. Vitamins A and D are being added to dried skim milk, and calcium, thiamin, riboflavin, niacin, and iron are being used to fortify wheat flour and cornmeal. Previously, surplus food programs had been directed toward improving the nutrition of school children, but now they concentrate on improving the diets of preschool children in an effort to prevent physical and mental deterioration that is directly attributable to diet deficiencies during early childhood.

Beginning in January 1966, AID was conducting a many-faceted experimental program in underdeveloped nations in an effort to help these countries help themselves. In addition to increasing local production of food, the participating countries started commercial distribution of a grain-based food enriched with vitamins, minerals, and protein. These additives—to be obtained locally if available, but otherwise to be supplied by AID—were mixed with the grain by local processors during milling. Participating governments were urged to set permanent standards for enriching foods, to initiate research leading to the development of low-cost local protein sources, and to encourage the establishment of local commercial storage and distribution facilities. The overall aim was to help less-developed countries contribute to their own development, so that they eventually can free themselves from the need for charity.

Undernourished Americans. Surveys in North America in 1965 indicated that while most people in the United States and Canada enjoy excellent nutrition levels, a large percentage of three population groups—teenage girls, the aged, and steady social drinkers—have nutritionally substandard diets, mainly because of a poor choice of food. The last group lacks a sufficient supply of B-complex vitamins.

The reducing-diet fad of the year was "the drinking man's diet," so called because it advised overweight people to reduce carbohydrate intake, but not to worry about high-calorie foods such as alcohol. Nutritionists warned against the possible bad effects of this diet on blood, heart, liver, and kidneys.

Other Research. An ancient belief of cannibals that one acquires the abilities of a superior person by eating him found support for the first time in a laboratory experiment conducted in 1965. Researchers found that untrained worms, after eating pieces of trained worms, could pass complicated tests that the trained worms had passed, but which the untrained worms could not pass before the meal. The scientific significance of this discovery is that synthesized biochemical materials may some day be fed to people with disoriented memory patterns, thereby perhaps helping restore them to mental health.

OCEANIA. See **PACIFIC ISLANDS.**

OCEANOGRAPHY

Significant developments in oceanography in 1965 included the U.S. Navy's second man-in-the-sea experiment, further development of deep submersibles, and the discovery of deep pools of very hot, salty water at the bottom of the Red Sea. Other important developments in research included the analysis of long-traveling ocean waves, new methods of measuring the amount of water transported by ocean currents, and the first phase of a cooperative international survey of the Kuroshio Current, Japan's "Gulf Stream."

Sealab II. As part of the U.S. Navy's man-in-the-sea program, three 10-man teams lived for successive 15-day periods in a 12-by-50-foot undersea laboratory, called *Sealab II*, at a depth of 205 feet beneath the surface. Comdr. Scott Carpenter, the astronaut, who was the leader of both the first and

second teams, stayed down 30 days. The 45-day test (from Aug. 28 to Oct. 12) was made on the continental shelf off La Jolla, Calif. The purpose of the experiments was to learn how to explore and use the continental shelf areas of the oceans, and to demonstrate that man can live in an underwater environment for prolonged periods. The astronauts lived in close quarters aboard *Sealab II*.

The teams not only lived at great depth but also performed various tasks. They explored and mapped the continental shelf and submarine canyons down to 300-foot depths; caught and ate fish, crabs, and plankton; measured water currents and water temperature; tested new salvage methods, including foam and explosive devices, and tested air-lift and bottom-coring techniques. They also conducted various physiological and marine biological experiments.

Red Sea Basins. Basins at the bottom of the Red Sea have been found to contain extremely warm and highly saline water. These basins are about 200 meters below surrounding areas that lie at depths of about 2,000 meters. Water temperatures as high as 44.9° C (113° F.) were found near the bottom of the basins, beneath water that had a tempera-

SCOTT CARPENTER (right), Navy astronaut and aquanaut, gives signal to lower *Sealab II* to the sea bottom. Carpenter was the leader of two 10-man aquanaut teams in the underwater laboratory for 30-day period, Aug.-Sept. 1965.

SEALAB II (below) is an underwater laboratory in which aquanaut teams of 10 men lived for 15 days at the sea bottom in the Navy's second man-in-the-sea program. Interior view (lower left) shows aquanauts eating soup while submerged at 205 feet.

ture of about 22° C (71.6° F.). The salt content of the basin water was about 25.5 percent by weight, while the water above the basin water had a salt content of about 4 percent by weight. The various components of the salt content of the basin water were present in slightly different relative proportions than in ordinary sea water. Three possible explanations for the origin of the basin water have been suggested: (1) it originated from local evaporation in coastal regions and sank because of its high salt content and density; (2) it originated from an old salt deposit at the sea bottom; or (3) it originated from interstitial water of older sediments.

Long-Traveling Ocean Waves. Waves formed by storms in the Indian Ocean have been traced across the Pacific Ocean as far as Alaska—halfway around the world. Five land observation stations were selected along a great-circle route, beginning at New Zealand and continuing through Samoa, Palmyra, Honolulu, and Yakutat, Alaska. In addition, the specially designed research vessel *Flip* was positioned between Honolulu and Yakutat. Wave records clearly showed that waves formed by Indian Ocean storms traveled progressively along the line of stations. Various changes in wave characteristics were recorded as the waves moved farther away from their source.

Deep Submersibles. Progress has been rapid toward a wider exploration of the sea by deep submersibles. Two deep-diving vessels, the *Alvin* (U.S. Navy) and the *Aluminaut* (Reynolds International, Inc.) have been successfully tested near Miami, Fla. The *Alvin* dived to 6,000 feet in 2½ hours, remained on the bottom for 20 minutes, and surfaced two hours later. This vessel, which is 22 feet long and 8 feet wide, is designed for a submerged cruising range of 20 to 25 miles at a speed of 2½ knots, with a maximum speed of 6 to 8 knots.

The *Aluminaut* has remained submerged for as long as 33 hours, reaching depths as great as 2,750 feet. During this period, it traveled 70 miles at speeds up to 3½ knots. The 51-foot-long vessel, which was designed for diving to depths of 15,000 feet, went to a depth of 6,250 feet late in 1965.

Ocean Current Measurements. A new method has been used to measure the amount of water that is transported per unit width of ocean current. Measurements have been made in the Straits of Florida by dropping a free instrument that sinks either to

OCEANOGRAPHIC SUBMARINE *Alvin* houses a two-man crew in a steel sphere within its molded fiberglass hull.

the bottom or to a given depth, and then returns to the surface for recovery. If the drop point, rate of fall, rate of rise, and recovery point are known, then the average current speed of the water through which the instrument passed can be calculated. By dropping several of these instruments to different depths, the total flow and the average flow can be determined.

Kuroshio Current. The first phase of an international cooperative study of the Kuroshio Current began in 1965. The countries taking part in the program are Japan, the Soviet Union, the United States, the Philippines, Great Britain, South Korea, and Nationalist China. The first phase (July 1965 to March 1966) includes synoptic surveys of the area from 5° to 43° north latitude and from the eastern shores of the Philippines, Taiwan, the Ryukyu Islands, and Japan to points about 600 miles to the east. The study area also includes the Sea of Japan. In particular areas, the study includes regular monitoring of the seasonal changes of the Kuroshio Current and closely spaced observations of the high-frequency fluctuations of the current. A major purpose of the study is to understand the relationship between fishing grounds and ocean currents.

OHIO

Reapportionment of the Ohio Senate and House of Representatives was bogged down by controversy during 1965. The legislature did succeed, however, in reapportioning the federal congressional districts of the state late in 1964.

Reapportionment. In 1964, Ohio was ordered by a U.S. district court to reapportion the state House of Representatives. A special legislative session, called in November by the Republican governor, James A. Rhodes, worked out a reapportionment plan which was submitted to the voters as a proposed constitutional amendment in the May 1965 primaries. There was strong opposition to the plan in big cities and among Democratic and labor leaders. They charged that the lame duck special session, which included many Republicans who had lost their seats in the General Assembly in the 1964 elections, had rushed through an inequitable reapportionment plan. The plan was rejected by the voters. At its regular session, from January through August 1965, the assembly failed to agree on a new plan, and the problem was turned over to an apportionment board.

AQUANAUTS feed Tuffy the porpoise, which ran errands and messages from submerged *Sealab II* to the surface.

AFTER TORNADOES STRUCK OHIO on April 11, killing more than 50 persons, residents of Pittsfield, a rural community in Lorain County southwest of Cleveland, inspect the ruins of their homes. Pittsfield's town hall, its two churches, and most of its homes were demolished.

WIDE WORLD

In a surprise decision on September 16, three federal court judges ordered the state Senate, as well as the House of Representatives, to be reapportioned by October 16. The apportionment board arrived at a formula for House and Senate reapportionment which was challenged by Democratic leaders. In November the federal court refused to postpone implementation of its apportionment order, and accepted the board's formula for use in the 1966 elections. An appeal to the United State Supreme Court was imminent.

OHIO · Information Highlights

Area: 41,222 square miles.

Population: 10,372,000 (1965 est.).

Chief Cities (1965 est.): Columbus, the capital (540,000); Cleveland (855,000); Cincinnati (495,000); Toledo (354,000); Akron (298,000); Dayton (260,000); Youngstown (162,000); Canton (110,000).

Government: Chief Officers—governor, James A. Rhodes (Republican); lt. gov., John W. Brown (R); secy. of state, Ted W. Brown (R); atty. gen., William B. Saxbe (R); treas., John D. Herbert (R); supt. of pub. instr., Edward E. Holt; chief justice, Kingsley A. Taft. **Legislature**—General Assembly (convened Jan. 4, 1965); Senate, 32 members (16 Republicans, 16 Democrats); House of Representatives, 137 members (75 R, 62 D).

Education: School enrollment (1964-65)—public elementary, 1,446,460 pupils (50,900 teachers); public secondary, 824,960 pupils (35,100 teachers); nonpublic schools, 435,500 pupils (11,090 teachers); college and university (fall 1964), 247,948 students. **Public school expenditures** (1964-65)—\$978,000,000 (\$469 per pupil); average teacher's salary, \$6,050.

Public Finance (fiscal year 1964): Revenues, \$2,309,524,000 (sales tax, \$296,353,000; motor fuel tax, \$235,501,000; federal funds, \$402,376,000). **Expenditures**, \$1,949,108 (education, \$375,085,000; health, welfare, and safety, \$231,995,000; highways, \$522,984,000). **State debt**, \$105,523,000 (1964).

Personal Income (1964): \$26,728,000,000; average annual income per person, \$2,646.

Public Assistance (fiscal year 1965): \$216,950,397 to 366,700 recipients (aged, \$87,742,437; dependent children, \$69,887,830).

Labor Force (employed persons, July 1965): Agricultural, 153,000; nonagricultural (wage and salary earners), 3,335,000. **Unemployed persons** (July 1965)—124,000.

Manufacturing (1963): Value added by manufacture, \$15,443,018,000 (transportation equipment, \$2,458,182,000; primary metals, \$2,254,048,000; nonelectrical machinery, \$1,919,086,000; electrical machinery, \$1,537,194,000; fabricated metals, \$1,332,813,000; food and products, \$1,018,270,000).

Agriculture (1964): Cash farm income, \$1,114,674,000 (livestock, \$627,606,000; crops, \$431,162,000; govt. payments, \$55,906,000). **Chief crops** (tons)—corn for grain, 5,389,000 (ranks 6th among the states); hay, 3,480,000 (rank, 13th); alfalfa, 1,993,000 (rank, 15th); wheat, 1,359,000 (rank, 12th); oats, 580,000 (rank, 7th); sugar beets, 400,000 (rank, 14th); potatoes, 118,250 (rank, 17th).

Mining (1964): Production value, \$454,937,000 (ranks 14th among the states). **Chief minerals** (tons)—coal, 37,310,000 (rank, 5th); clays, 5,005,000 (rank, 1st); salt, 4,537,000 (rank, 4th); lime, 3,664,000 (rank, 1st); natural gas, 37,309,000,000 cubic feet (rank, 15th); petroleum, 15,859,000 barrels (rank, 17th).

Transportation: Roads (1965), 105,860 miles (76,363 paved); motor vehicles (1964), 5,061,333; railroads (1963), 8,176 miles; airlines (1964), 13 (441 airports).

Communications (1964): Telephones, 4,768,200; television stations, 27; radio stations, 182; newspapers, 96 (daily circulation, 3,349,258).

Legislative Action. Besides the unsuccessful reapportionment amendment, the special session of the General Assembly submitted three other proposed constitutional amendments to voters in the May primary. All three were approved. One amendment allowed a \$290 million capital improvements bond issue; the second permitted the state to provide industrial expansion loans; and the third validated the state's guarantee of loans to college students, a program created by the legislature in 1961. Among the capital improvements that will be financed by the bond issue are a new state penitentiary, a new medium-security prison at Grafton, new state universities at Cleveland and Dayton, and a new medical school at Toledo.

The General Assembly's work in its regular session was slowed down because the Senate was equally divided between Republicans and Democrats. It did approve appropriations for extensive capital improvements and for increased operating funds for schools and colleges. The Department of Public Welfare was reorganized, a more rigid strip-mining law was passed, and pay raises were provided for many public employees. The governor's salary was increased from \$25,000 to \$40,000, effective in 1967. An old statute banning the sale and distribution of birth control devices was repealed.

Two especially controversial laws were passed after hot debate. One measure provided bus transportation for parochial school students; the other was a fair-housing bill prohibiting racial discrimination in sales or rental of housing, except in owner-occupied residential dwellings of two units or less. The bussing law, advocated by Catholic groups, was challenged, and an appeal to the courts was indicated.

November Elections. In mayoralty contests, Republicans replaced Democrats in Akron and Lima, and Democrats replaced Republicans in Elyria, Coshoc-ton, Newark, and Marietta.

The voters approved a constitutional amendment allowing judges in counties of less than 40,000 population to preside in more than one court below the level of the State Court of Appeals. However, they overwhelmingly defeated a proposal that would have provided funds for education by increasing the state retail and use taxes from 3% to 4%.

Storm. A violent windstorm on April 11 (Palm Sunday) killed over 50 people in the state, and caused millions of dollars in property damage. Especially hard hit were Allen, Hancock, Lorain, and Lucas counties—all in the northern part of the state. (See also CLEVELAND.)

OKINAWA. See PACIFIC ISLANDS.

OKLAHOMA

Because of irregularities attributed to two members of the 9-member State Supreme Court and the rejection by voters of proposals to finance urgently needed services, Oklahoma received unfavorable publicity during 1965.

State Justices. On March 22, State Supreme Court Justice Earl Welch submitted his resignation only a few hours before an investigating committee was to bring recommendations for his impeachment before the House of Representatives. Welch, who had served on the court since 1933, was charged with income tax evasion. Two days later the House voted articles of impeachment against Justice N.B. Johnson, a 16-year veteran of the court. On May 23 the Senate sustained the two charges of bribery against him by a vote of 32 to 15—one vote over the required two-thirds majority.

Public Finances. Early in January, Oklahoma's first Republican governor, Henry Bellmon, submitted his first proposed fiscal program, known as Giant Stride, to the 30th Legislature. Since the governor pledged during his political campaign in 1962 not to introduce new taxes, his proposed program pro-

vided for a \$500 million bond issue to take care of the increased cost of general government services, teachers' salaries, road improvements, and construction.

The Legislature, however, did not approve the governor's program. Instead, it submitted a three-part program, which included a 1-cent increase in the 2-cent sales tax to furnish revenue for the public school system, and two bond issues for building construction and highway needs. The voters overwhelmingly rejected these proposals in a special election on April 27.

A referred measure was then put to the voters in a statewide election on December 14. The measure, which provided funds for building equipment for new state institutions and renovation of old buildings, was carried by a majority of 3 to 1.

Education. In May the National Education Association (NEA) censured the Oklahoma public schools, citing alleged "sub-minimal" working conditions for teachers in the state. The NEA offered to help teachers find teaching positions in other states, and admonished teachers in other states not to apply for positions in Oklahoma. Few teachers left the state, however, and the NEA later lifted the sanctions it had imposed.

Many Oklahoma teachers who had expected a minimum annual salary increase of \$1,000 were disappointed when the Legislature provided only half of that amount. Hope for educational improvements was kept alive, however, by legislative action.

Oilwell Fire. Shortly before daylight on Aug. 14, 1964, a wildcat oilwell blew out near Canton in northwestern Oklahoma. Gas from the well ignited, destroying the \$250,000 drilling rig and nearby equipment. Fueled each day by about 3 million cubic feet of gas, the fire was not brought under control until June 11, 1965.

Memorials. The National Cowboy Hall of Fame and Western Heritage Center was dedicated on June 26. Located on a hill in Oklahoma City, the modernistic building was sponsored jointly by 17 Western states. The facility is a memorial to the courageous men and women who built the West.

SENIOR CITIZENS were urged to meet in support of the 1965 Medicare bill. At such a meeting in Washington, D.C., Sen. Thomas Kuchel (Calif.) discusses details of the bill.

demonstration programs, and training professional personnel.

Medicare. On July 30, President Johnson signed amendments to the Social Security Act that provide hospital, extended care, and home services to all persons aged 65 and over. The Medicare amendments also provide a voluntary program of physicians', surgeons', and other services to those who elect coverage. The Medicare legislation was hailed as the greatest advance in the Social Security program since its enactment in 1935. (See MEDICARE.)

Heart, Cancer, and Stroke Centers. Soon after the signing of the Medicare Act, Congress approved a \$340 million program to provide some 25 regional health centers for study and treatment of heart disease, cancer, and stroke—the three major causes of illness and death among older people. Part of the appropriation will be used to train specialists who will work in community hospitals and teach local doctors in diagnosis and treatment of these conditions. The appropriation also covers the purchase of equipment. Payment for services rendered older people will be made largely from the Medicare programs. (See also PUBLIC HEALTH.)

Mental Health. Congress appropriated funds in 1965 for salaries of personnel to be employed under the 1964 Community Mental Health Services Act. Another amendment to the Social Security Act provides for payment of public assistance benefits to patients in mental hospitals, with the stipulation that the hospitals use the money to improve welfare services. (See MENTAL HEALTH.)

New Housing Benefits. The Act that created the Department of Housing and Urban Development in August 1965, also increased authorizations for construction of low-rent housing, and appropriated funds for purchase, rehabilitation, and lease of existing housing for older people. Authorization for new construction under the Federal Housing Administration direct-loan program was increased to \$500 million. The interest rate on mortgages insured under the program was fixed at 3%. A program of rent supplements to augment rental payments of low-income older people in certain existing housing was authorized. The act also provides a construction grant program for neighborhood centers. (See also HOUSING.)

Retirement Income Benefits. Retirement income benefits were increased 7%, effective retroactively to Jan. 1, 1965. Widows were made eligible for reduced benefits at age 60, and remarried widows were allowed one half of the former husband's benefit or a wife's benefit based on the earnings of her present husband. Under the new legislation, beneficiaries may earn up to \$1,500 a year without losing benefits. To finance the new amendments, the maximum amount of earnings taxed to provide benefits was increased to \$6,600.

Additional amendments increased the federal share of public assistance payments to needy persons by about \$2.50 a month, increased to \$50 a month the amount of earnings that may be disregarded in determining eligibility, and provided for payments to a third person if a recipient is unable to manage his own money.

At mid-1965, 13.9 million persons aged 65 and over were receiving monthly benefits under the Old-Age, Survivors, and Disability Insurance program. Another 1.9 million between 62 and 64 years of age also were beneficiaries. Average monthly benefits to retired workers increased from \$78 to \$84 following passage of the Social Security Medicare Amendments. Average benefits to wives or husbands of retired workers reached \$44; to widows or widowers, \$73; and to parents of retirees, \$76.

Employment and Retirement. In 1965 the Department of Labor, in response to a 1964 congressional directive, published the results of a major investigation of discrimination against workers 45 to 64 years of age. The department recommended stepping up services to increase employment opportunities for these workers. Other studies indicated that management and labor are cooperating in extending opportunities for separation prior to age 60 without loss of retirement income. One of the major agreements of this kind became effective in the automobile industry in 1965. In an effort to stimulate retirement of older federal employees, Congress increased benefits by 6.1% for those who retired during November and December of 1965. An estimated 30,000 took advantage of the inducement.

The Economic Opportunity Program. Launched in 1964, this new program was the first of President Johnson's announced series of community programs that will employ low-income people 60 years of age and over. In most instances, older people will augment the staffs of facilities for orphans, the mentally retarded, and the aged, offering personal attention, companionship, and assistance. Benefits to the employed older person include the opportunity to serve the community while earning additional income for himself.

Professional Training. Several training programs were initiated to alleviate acute shortages of researchers, teachers, program planners, and professional service personnel in aging. The University of Southern California, the University of Georgia, and the University of Michigan together with Wayne State University created institutes or councils of gerontology. The National Institute of Child Health and Human Development, the Gerontology Branch of the Public Health Service, and the new Administration on Aging made several grants for training research and professional personnel.

ONTARIO

Financial affairs and legislation dominated developments in Ontario during 1965. Stock market manipulations were probed by royal commissions, and the provincial legislature enacted a record number of laws.

Finance. In October the Royal Commission of Inquiry on Windfall Oils and Mines Limited submitted its study of the reasons for Windfall's failure following wild fluctuations of the company's stock on the Toronto Stock Exchange. The commission blamed the company's management and stock exchange executives for the resulting financial loss. Its findings are expected to bring about a further tightening of corporate and securities laws, which already had been revised in 1965. In June, anticipating the commission's report, the Toronto Stock Exchange announced new rules and suspended or removed 19 companies from its listing, and there was a further possibility that many others would be affected.

Another financial collapse—that of the Atlantic Acceptance Corporation Limited in June 1965—led to the establishment of another royal commission of inquiry. Atlantic, Canada's seventh largest finance company, defaulted on its short-term obligations. The repercussions were felt throughout Canada and abroad because of interlocking interests and Atlantic's vast assets. Fourteen other companies were bankrupted as a result of Atlantic's failure.

 ONTARIO • Information Highlights

Area: 412,582 square miles.

Population: 6,794,000 (Oct. 1, 1965, est.).

Chief Cities (1963 est.): Toronto, the provincial capital (630,339); Hamilton (271,300); Ottawa, the federal capital (276,769); Windsor (112,049); London (171,116); Kitchener (80,283); Sudbury (79,987).

Government: Chief Officers—Lieutenant governor, William E. Rowe; premier, John P. Roberts (Progressive Conservative); prov. secy., John Yaremko (PC); atty. gen., Arthur A. Wishart (PC); treas., James N. Allan (PC); min. of educ., William G. Davis (PC); chief justice, Dana H. Porter. **Legislature**—Legislative Assembly (convened Jan. 20, 1965), 108 members (77 Progressive Conservative, 22 Liberal, 8 New Democrat; 1 Liberal-Labour).

Education: School enrollment (1963-64 est.)—public elementary and secondary, 1,597,374 pupils (58,047 teachers); private, 41,721 (2,589); Indian, 6,815 (267); college and university (1962-63), 39,269 students. **Public school expenditures** (1963)—\$741,213,000; average teacher's salary, \$5,694.

Public Finance (fiscal year 1965 est.): Revenues, \$1,293,530,000 (sales tax, \$440,900,000; income tax, \$398,819,000; federal funds, \$19,941,000). **Expenditures**, \$1,434,600,000 (education, \$424,290,000; health and welfare, \$397,050,000; transportation and communications, \$302,300,000).

Personal Income (1964): \$13,996,000,000; average annual income per person, \$2,109.

Public Assistance (fiscal year 1965 est.): \$71,420,000 (aged and blind, \$18,460,000; dependents and unemployed, \$37,820,000).

Labor Force (1961 census, agricultural and manufacturing only): Agricultural, 172,171; manufacturing, 643,728.

Manufacturing (1962): **Value added by manufacture**, \$6,347,432,000 (transportation equipment, \$729,103,000; primary metals, \$758,069,000; nonelectrical machinery, \$401,195,000; electrical machinery, \$511,799,000; fabricated metals, \$526,791,000; food and products, \$848,775,000).

Agriculture (1964 est.): **Cash farm income**, \$995,596,000 (live-stock, \$704,075,000; crops, \$286,356,000). **Chief crops** (cash receipts)—tobacco, \$92,369,000 (ranks 1st among the provinces); vegetables, \$54,832,000 (rank, 1st); fruits, \$32,967,000 (rank, 1st); wheat, \$23,247,000 (rank, 4th); soybeans, \$15,709,000 (rank, 1st); potatoes, \$12,912,000 (rank, 2nd); flaxseed, \$983,000 (rank, 4th).

Mining (1964 est.): **Production value**, \$911,098,372. **Chief minerals** (tons)—copper, 201,031 (ranks 1st among the provinces); iron ore, 7,985,715 (rank, 3rd); sand and gravel, 75,333,285 (rank, 1st); cement, 2,975,590 (rank, 1st); gold, 2,135,269 tray ounces (rank, 1st); uranium, 12,035,382 pounds (rank, 1st); crude petroleum, 1,260,000 barrels (rank, 5th).

Transportation: Roads (1962), 77,143 miles (73,163 surfaced); motor vehicles (1964), 2,375,000; railroads (1963), 10,117 miles; airlines (1963), 3 (83 airports).

Communications (1963): Telephones, 2,639,749; television stations, 19; radio stations, 91; newspapers, 46 (daily circulation, September 1964, 1,757,816).

PICTORIAL PARADE

CAMPUS OF THE FUTURE IN TORONTO, at York University, is defined in this scale model, which incorporates the six first buildings (identified by small black markers).

Legislature. The provincial legislative session of 1965 was the longest ever held and one of the busiest. Parliament sat for 98 days and passed a record total of 175 bills. One of the most important was the Medical Services Insurance Act (effective June 1, 1966), providing for payment of doctors' fees and making subsidies available to families with a taxable income of \$1,000 or less.

The legislature accepted a commission's report which recommended equalizing urban and rural representation by increasing the number of seats in the Legislative Assembly by nine, bringing the total to 117. The legislators also increased their salaries from \$5,000 to \$8,000 and voted allowances of \$3,000 or \$4,000 each for members living outside Toronto.

Other important legislation included: outlawing strikes in hospitals and instituting compulsory arbitration for Ontario hydroelectric workers; establishing community colleges; authorizing Canada's first government-sponsored rail commuter service (from Toronto to Burlington and Dunbar); approving a formula for amending the federal constitution; imposing stricter controls on used car sales and advertising; extending antidiscrimination laws; and adopting an Ontario flag (a red ensign with the provincial shield).

Economy. Ontario experienced continued economic growth during 1965. The province's share of the gross national product rose above the \$18.5 billion reported for 1964; unemployment dropped below

1964's 3.3%; and the population growth exceeded that year's 2.2% increase. New starts in housing were estimated at 60,000—up almost 11% over 1964.

Education. The amalgamation of rural public school trustee boards into township area boards continued during the 1964-65 school year. By January 1965, 1,926 rural boards had been consolidated into 423 township boards. The province assumed control of schools for retarded children.

A Department of University Affairs was established to supervise higher education in the provinces. Three colleges were opened in September 1965: a new campus for York University; Scarborough College of the University of Toronto; and Wellington College of the University of Guelph. Construction was begun on a medical school at McMaster University, a dental school at the University of Western Ontario, a medical science center at Queen's University, and enlarged medical school facilities at the University of Toronto. The province's financial assistance to universities increased to \$165 million.

Highways. The sharp rise in motor vehicle registrations during 1964 (up 5% over 1963, to 2,375,000) brought the total highway expenditures to \$329.4 million in 1965. Highway 401 was renamed the Macdonald-Cartier Freeway, and its Toronto-Windsor section was completed as a four-lane road.

Politics. Two issues caused the government considerable embarrassment during 1965. One involved Frederick Fawcett, an Owen Sound farmer, who had been detained in a mental hospital for 3½ years despite a controversy over his sanity. Premier John P. Robarts promised to review his case, and Fawcett was released prior to the review. The second issue concerned procedures followed by the Upper Thames River Conservation Authority in expropriating land. Farmers affected by the authority's actions protested both the price and the procedure.

The Royal Commission on Civil Rights, formed as a result of the "Police Bill" protests in 1964, unearthed evidence of actual or possible infringements of civil liberties. Other commissions proposed reorganization of local government in the province, establishment of legal aid to give everyone an equal chance before the law, and reorganization of Toronto's metropolitan government.

OREGON

In early 1965, Oregon dug out of debris left by disastrous floods along the Willamette River, and late in the year more floods occurred along the southern coast. Parched Southwestern states, seeking Oregon's excess water, hoped that the Columbia River might be tapped for their use in the future. The debate over possible water diversion promised to become a major political issue. Air and water pollution was another issue in state politics, with state Treasurer Robert Straub claiming that Gov. Mark Hatfield's administration had been lax in these matters.

Economy. Business boomed in the state during 1965. The amount spent during the year for construction of new plants and expansion of older facilities, totaled more than \$100,000,000 for the third consecutive year. Employment and wages

reached new heights, and retail sales approached \$3 billion by year's end. The leading industry was lumbering, which had an output of \$1.4 billion, for a gain of 4.3% over 1964. The growing tourist industry brought a record \$250,000,000 into the state during 1965.

Mineral Resources. Ships drilled off the Oregon coast during the year in an effort to find oil. A U.S. Bureau of Mines study showed that the state's vast deposits of dune sand along the shore could provide raw material for the manufacture of glass.

Legislation. Two legislative sessions were held during the year. The regular session began in January, with a Republican majority in the House. The Senate, although controlled by the Democrats, was organized by the Republicans with the aid of a group of conservative Democrats.

The legislature passed 24 statutes. The two which attracted the most attention were an implied consent law requiring persons suspected of drunken driving to take a breath test, and a three-way insurance bill under which employers are permitted to provide injury insurance by means of state compensation, private insurance, or self-insurance.

At a special session called by the governor in May, the Legislature slightly redrew the boundaries of

OREGON · Information Highlights

Area: 96,981 square miles.

Chief Cities (1965 est.): Salem, the capital (63,500); Portland (380,000); Eugene (70,000); Corvallis (28,500); Medford (27,400); Springfield (23,500); Parkrose (23,000); Klamath Falls (16,500).
Government: **Chief Officers**—governor, Mark O. Hatfield (Republican); secy. of state, Tom McCall (R); atty. gen., Robert Y. Thornton (Democrat); treas., Robert W. Straub; supt. of pub. instr., Leon P. Minear; chief justice, William M. McAllister. **Legislature**—Legislative Assembly (convened Jan. 10, 1965); Senate, 30 members (19 Democrats, 11 Republicans); House of Representatives, 60 members (32 R, 28 D).
Education: **School enrollment** (1964-65)—public elementary, 290,000 pupils (11,381 teachers); public secondary, 174,000 pupils (7,593 teachers); nonpublic schools, 40,200 pupils (1,380 teachers); college and university (fall 1964), 61,705 students. **Public school expenditures** (1964-65)—\$234,000,000 (\$69 per pupil); average teacher's salary, \$6,470.
Public Finance (fiscal year 1965): Revenues, \$929,557,972 (individual income taxes, \$164,000,000; motor fuel tax, \$59,660,244; federal funds, \$137,482,382). Expenditures, \$895,540,546 (education, \$168,121,000 in 1964; health, welfare, and safety, \$57,213,000 in 1964; highways, \$169,416,199 in 1965). **State debt**, \$452,130,000 (July 1, 1965).
Personal income (1964): \$4,876,000,000; average annual income per person, \$2,606.
Public Assistance (fiscal year 1965): \$42,587,376 to 3,358 recipients (aged, \$8,788,229; dependent children, \$14,372,997).
Labor Force (employed persons, July 1964): Agricultural, 95,400; nonagricultural (wage and salary earners), 672,100 (24% manufacturing, 18% trade, 16% government). Unemployed persons (July 1964)—30,500.
Manufacturing (1963): Value added by manufacture, \$1,569,824,000 (lumber and wood products, \$691,233,000; transportation equipment, \$49,676,000; primary metals, \$66,262,000; nonelectrical machinery, \$64,981,000; electrical machinery, \$57,159,000; fabricated metals, \$60,691,000; food and products, \$236,197,000).
Agriculture (1964): **Cash farm income**, \$443,371,000 (livestock, \$178,086,000; crops, \$245,862,000; govt. payments, \$19,423,000). **Chief crops** (tons)—wheat, 831,000 (ranks 15th among the states); sugar beets, 453,000 (rank, 12th); potatoes, 424,000 (rank, 10th); barley, 391,000 (rank, 7th); oats, 125,000 (rank, 18th); pears, 122,500 (rank, 2nd); apples, 43,200 (rank, 15th); hay, 2,134,000; corn for grain, 28,600; cherries, 28,000.
Mining (1964): **Production value**, \$64,269,000 (ranks 39th among the states). **Chief minerals** (tons)—pumice, 566,000 (rank, 2nd); lime, 95,000 (rank, 17th); nickel, 15,420 (rank, 1st); copper, 15 (rank, 14th); silver, 14,000 troy ounces (rank, 13th); gold, 661 troy ounces (rank, 12th).
Fisheries (1964): **Commercial catch**, 58,110,000 pounds (\$8,062,000). **Leading species** (1963)—flounder, sole, 15,932,000 pounds (\$922,000); albacore tuna, 11,400,000 pounds (\$1,757,000); salmon, 8,262,000 pounds (\$2,606,000); ocean perch, 8,011,000 pounds (\$363,000).
Transportation: **Roads** (1965), 80,794 miles (51,072 surfaced); motor vehicles (1964), 1,159,883; **railroads** (1964), 5,081 miles; **airports** (1964), 187.
Communications: **Telephones** (1965), 862,800; **television stations** (1964), 14; **radio stations** (1964), 97; **newspapers** (1965), 21 (daily circulation, 602,439).

Oregon's congressional districts in accordance with the "one-man, one-vote" ruling by the U.S. Supreme Court. The eastern sections of Districts 1 and 3 were attached to the large eastern District 2 in order to equalize the populations among these districts.

Conferences. Two conferences were held in Portland. The Western Governors Conference, with Governor Hatfield as chairman, met in June to discuss such mutual state problems as revenue sources and legislative reform. The National Legislative Conference met in August, with 1,000 delegates from state legislatures. In August, an International Lunar Geological Field Conference was held in Bend.

Politics. As the year ended, there was much speculation over who would run for the two major political offices to be vacated in 1966. Democratic Sen. Maurine Neuberger announced that she would not seek another term in the U.S. Senate. Governor Hatfield, who is required by law to step down after his second term, announced in early 1966 that he would run for the Senate seat.

ORTHODOX CHURCHES. See RELIGION.

OTTAWA

Ottawa is Canada's national capital and fifth largest city (1965 est. pop.: city, 290,446; metropolitan area, 450,000). During 1965, preparations were under way for the city's participation in the Canadian Centennial events scheduled for 1967.

Centennial Projects. Work continued on the Centre for the Performing Arts, which will be the principal national monument of the 1967 Canadian Centennial. The center, occupying an entire city block on Confederation Square in the heart of Ottawa, will include a concert hall seating 2,300, a theater seating 900, and a small studio for experimental theater. The cost of the complex will be over \$18,000,000.

A multipurpose arena that will seat 10,000, combined with a covered grandstand that will hold 15,000 more, was designated as the city's official project for the 1967 Canadian Centennial. The

structure, which will cost an estimated \$5,200,000, will be used for activities connected with Ottawa's annual Central Canada Exhibition. The arena will also serve as the official home of the Ottawa Rough Riders football club and will be used as well for hockey games.

Inter-Parliamentary Conference. Ottawa was host to delegates from Western, Communist, and non-aligned nations at the 54th Inter-Parliamentary Conference, Sept. 8-17, 1965. The city entertained the world legislators with special performances of the Toronto Symphony Orchestra and the Royal Winnipeg Ballet.

Government. A report commissioned by the city proposed that all municipal administrations in the national capital area be abolished and replaced by a powerful regional government. In addition to Ottawa proper, the capital area includes Hull, in Quebec Province, and several nearby municipalities in Ontario. The sweeping proposal provoked strong controversy among municipal leaders throughout the Ottawa region.

The present city government consists of a Board of Control and a Council. Administrative functions are vested in the Board of Control, which is responsible to the Council. The board is composed of a mayor (Donald B. Reid, elected in December 1964 for a two-year term) and four elected controllers. The Council is composed of two aldermen from each of the city's 10 wards.

Economy. The city budget for 1965 called for expenditures of \$81,671,819, an increase of 10% over 1964. Of this total, \$34,422,700 was spent for education and \$47,249,119 for general purposes. These sums were raised from federal and provincial grants (\$24,106,324), from the provision of services (\$22,460,343), and from taxes on real estate (\$35,105,152). The total assessed property valuation in 1965 was \$610,230,000 (\$214,762,000 in business and commercial assessments; \$395,468,000 in residential assessment).

Education. For 1965, Ottawa's school enrollment figures were: public primary schools, 25,984; Roman Catholic primary schools, 28,331 (14,014 in the English-speaking section; 14,317 in the French); and collegiate high schools, 20,950. The University of Ottawa had 4,500 students, and Carleton University, 3,100.

OUTER MONGOLIA. See MONGOLIA.

OTTAWA will be a primary site for Canadian Centennial activities in 1967. Here, in Confederation Square, ground has been cleared to make way for constructing the Canadian Centre for the Performing Arts as a part of the celebration. A Human and Natural History Museum will be built nearby.

PACIFIC ISLANDS

Delegates from 17 island territories in the Pacific Ocean met at Lae, New Guinea, in July 1965 to discuss mutual social and economic problems. The 50 delegates represented islands governed by members of the South Pacific Commission, which includes Australia, France, the United States, New Zealand, Britain, and Western Samoa.

Pacific Islands Conference. K. T. Mara, delegate from the Fiji Islands, and Carlos Taitano, delegate from Guam, led a contingent of conference delegates which demanded that the island territories be given a direct voice in the decisions of the South Pacific Commission. They proposed that the island territories share the expenses of the commission's programs, and that they be raised from an advisory to a partnership level in the commission.

Discussion of local island problems indicated that the rapid growth of major cities was producing slums, poverty, crime, and delinquency in urban areas throughout the territories. Dr. J. V. de Bruijn, officer in charge of urbanization problems for the South Pacific Commission, attributed the burgeoning growth of cities to "alarming" population growth which is driving rural dwellers to the cities to find work. Among the fastest growing cities are Suva, Fiji; Noumea, New Caledonia; and Apia, Western Samoa. Few of the islands are large enough or have enough natural resources to diversify and expand their economy, and many governments are finding it increasingly difficult to provide housing, education, and health services for the growing population.

Ryukyu Islands. A steady build-up of the American military base on Okinawa accompanied the escalation of the war in Vietnam during 1965. The United States, which took over the administration of the islands from Japan in 1945, reaffirmed its intention of maintaining trusteeship of the islands, but made concessions to islanders' demands for more autonomy for their government and eventual return to Japanese control. Japan's "residual sovereignty" over the islands was acknowledged in a joint declaration issued early in January by President Johnson and Premier Eisaku Sato of Japan. However, the declaration also reaffirmed the need for continuing U.S. control of the islands while they remain strategic to U.S. military security in Southeast Asia.

Premier Sato paid a three-day visit to the Ryukyu Islands in August. His arrival on August 21 was greeted by about 7,000 leftist demonstrators demanding the immediate return of the islands to Japanese

control. Sato announced that Japan would increase its aid to the islands to implement a long-range economic development program. He promised to increase aid to \$15 million for the fiscal year 1966, and eventually to \$56 million.

On December 20, President Lyndon Johnson authorized the Ryukyuan Legislature to choose the islands' chief executive, who formerly was appointed by the U.S. high commissioner for the Ryukyu Islands. The legislature was expected to elect Seiho Matsuoka, leader of the Democratic party, who has been serving as appointed chief executive of the islands.

In legislative elections held on November 14, the pro-American Democratic party retained its majority, winning 19 seats in the 32-seat Ryukyuan Legislature. The major opposition party in the islands, the Socialist Masses party, took seven seats in the legislature, the Socialists two, and the Communists one. The remaining three seats went to independent candidates.

A special U.S. counterinsurgency force, the Special Action Force, Asia, practiced civic action techniques in isolated parts of the Ryukyu Islands during 1965. They provided medical service and taught sanitation methods that will ultimately be used in Vietnam to supplement counterinsurgent warfare there.

On October 27, President Johnson signed a resolution authorizing the expenditure of \$22 million to pay for Okinawan claims that arose during the U.S. military occupation from 1945 to 1952. Although the peace treaty with Japan in 1952 waived all Okinawan death and injury claims during the seven-year period, the U.S. high commissioner, Lt. Gen. Albert Watson, recommended payment as an act of good faith by the United States.

The gross national product of the Ryukyu Islands in 1964 totaled \$328 million. About 45% of the amount derived from United States payments for use of privately and municipally owned land. Of the total labor force of 412,000, more than 60,000 were employed by the U.S. military installations on the islands.

United Nations Trust Territory. The Trust Territory of the Pacific Islands, administered by the United States and comprising the Mariana Islands (except Guam), the Caroline Islands, and the Marshall Islands, elected its first Congress on January 19. The 12-member House of Delegates is composed of two representatives from each of six districts, and the 21-member General Assembly is apportioned on a population basis. Of a total population of 88,000 in the territory, about 35,800 were registered to vote. The Congress met for the first time on July 12 in Saipan. U.S. Secretary of the Interior Stewart L. Udall described the election as a major step in developing self-government in the islands.

The United Tanker Corporation was awarded a two-year contract to operate the three-ship fleet of the Trust Territory of the Pacific. The contract was awarded in August on the recommendation of the U.S. Department of the Interior, which administers the territory. The contract provides that 25% of the gross receipts for the operation of the vessels be paid annually to the territory.

American Samoa. American Samoa suffered extensive damage from tropical hurricanes that battered the islands on Jan. 29 and 30, 1966. At least two persons were killed, and the entire crop of breadfruit was reportedly destroyed.

PAKISTANI WOMEN in Dacca participate in a mass military training program spurred by the war with neighboring India during the summer of 1965.

UPI

PAKISTAN

Although 1965 opened on a note of stability with President Ayub Khan's reelection, the year proved to be a troubled time for Pakistan. The president faced opposition at home and a dangerous situation along the borders with India.

The 18-year old Indian-Pakistani dispute over Kashmir erupted in open warfare in August and September, and, although a cease-fire soon took effect, Pakistan's economy was set back and many of its allies were alienated. The year ended on a note of

hope with Ayub and India's Prime Minister Shastri planning to meet to resolve their differences. This meeting produced an encouraging accord on Jan. 10, 1966, but left the Kashmir issue untouched.

Domestic Politics. On Jan. 2, 1965, President Mohammed Ayub Khan was elected to a new five-year term, defeating Miss Fatima Jinnah by a two-thirds vote of the 80,000-member electoral college, which itself had been elected the previous November. On March 21 the electors presented Ayub with a National Assembly dominated by his own Muslim League, which captured about 80% of the seats. In

Population: 100,762,000 (July 1, 1964 est.).

Chief Cities (1961 census): Rawalpindi, the temporary capital, 340,175; Karachi, 1,912,598; Lahore, 1,296,477; Dacca, 556,712.

Government: President—Mohammed Ayub Khan (since Oct. 27, 1958). Parliament—National Assembly, 156 members.

Religious Faiths: Muslims, 88% of population; Hindus, 11%; Christians, 1%.

Education: Literacy rate (1961)—19% of population aged 15 and over. Total school enrollment (1961-62)—6,932,325 (primary, 5,334,637; secondary, 1,559,247; teacher-training, 12,041; vocational, 13,715; university, 12,685).

Finance (1965 est.): Revenues, \$585,700,000; expenditures, \$1,167,600,000; monetary unit, rupee (4.7619 rupees equal U.S.\$1).

Gross Domestic Product (1964): \$8,550,000,000.

National Income (1964): \$7,962,000,000; average annual income per person, \$79.

Economic Indexes: (1964): Industrial production, 182 (1958=100); agricultural production, 120 (1956-57=100); cost of living, 110 (1958=100).

Manufacturing (metric tons, 1964): Cement, 1,553,000; gasoline (1963), 356,000; meat (1963), 351,000; sugar, 293,000; cotton yarn, 230,400; newsprint paper, 35,160; beer (1963), 1,820.

Crops (metric tons, 1964-65 crop year): Rice, 16,800,000 (ranks 4th among world producers); wheat, 4,184,000 (rank, 11th); cottonseed, 761,000 (rank, 7th); tobacco, 100,100 (rank, 10th); tea, 28,700 (rank, 6th); wool (1963), 19,500 (rank, 16th); jute, 967,000; maize, 531,000.

Minerals (metric tons, 1964): Bituminous coal and lignite, 1,214,000; salt, 522,000; gypsum, 195,000; barite, 12,088; iron ore, 5,100; crude petroleum, 3,732,000 barrels; natural gas, 59,100,000,000 cubic feet.

Foreign Trade (1964): Exports, \$427,000,000 (chief exports, 1963: jute, 154,200,000; raw cotton, \$68,900,000); imports, \$998,000,000 (chief imports, 1963: nonelectrical machinery, \$151,600,000; unmillied wheat and maslin, \$106,600,000; iron and steel, \$104,400,000). Chief trading partners (1963): U.S. (took 9% of exports, supplied 44% of imports); Britain (took 13% of exports, supplied 14% of imports); Japan (took 10% of exports, supplied 5% of imports).

Transportation: Roads (1964), 141,169 (automobiles, 92,534); railways (1963), 7,039 miles; merchant vessels (1964), 50 (341,000 gross registered tons); national airlines, Pakistan International Airlines, Pakistan Aviation, Ltd.; principal airports, Dacca, Karachi.

Communications: Telephones (1964): 107,334; television stations (1964), 2; radios (1962), 396,000; newspapers (1962), 100 (daily circulation, 511,000).

PICTORIAL PARADE

PAKISTAN PRESIDENT AYUB KHAN (l.) confers with U.S. President Johnson in Washington, D.C. on December 14. The two leaders reaffirmed Pakistani-American friendship.

MOHAMMED AYUB KHAN was reelected president of Pakistan by a large majority early in 1965. To charges that he was a dictator, Ayub countered, "dictatorships do not have elections." Pakistan's apparent drift toward Communist China was rationalized by the president as a "geographic necessity," and Ayub assured skeptical Americans that Pakistan looked to the United States because it had "no expansionist ambitions." Although the year brought war with India, Ayub gave credence to his expressed peaceful intentions by accepting a truce and signing an accord with India.

Ayub Khan was born about 1908 in Abbottabad, British India. A Muslim from a military family, he studied at the Royal Military College at Sandhurst, England, and became an officer in the British Indian Army in 1928. Following the 1947 partition of India and Pakistan, Ayub rose in the Pakistani army, becoming commander-in-chief in 1951. After a series of government crises he seized power on Oct. 27, 1958. Two years later he was confirmed as president.

PAKISTANIS DETAINED BY INDIA during the India-Pakistan war of August-September 1965 march homeward in late December as part of an exchange of some 7,000 internees.

UPI

May the Muslim League gained an overwhelming majority in the West Pakistan Provincial Assembly and a strong plurality in the East Pakistan Assembly.

Nevertheless, there was evidence that Ayub no longer completely controlled his government. In his inaugural address on March 23, the president expressed concern over "internal disunity." Foreign Minister Zulfikar Ali Bhutto headed a group within the government that pressed for closer ties with Communist China and continued war with India.

War with India. India and Pakistan have quarreled since 1947, and 1965 witnessed the outbreak of war between them. The year began with the usual re-cremations on both sides. Starting in April, hostilities occurred in a dispute over the Rann of Kutch, an area of salt flats on the Arabian Sea. Both countries employed arms, and there were several hundred casualties. On June 30 the antagonists signed a cease-fire agreement negotiated by Britain. Similar incidents occurred along the East Pakistan-India border throughout the spring.

It was Kashmir, however, that provided the impetus to open warfare. Early in the year India took steps to integrate Indian-held Kashmir with India proper; to Pakistan this was an invitation to battle. In early August about 3,000 armed Pakistanis infiltrated Indian Kashmir. The Indian army retaliated by crossing the 1949 UN cease-fire line and moving into Pakistan. In September the Pakistan and Indian armies, using tanks and jet planes, engaged in combat in Kashmir and at other points along their lengthy border, notably in the region of Lahore, Pakistan. Although both sides claimed great victories, neither country launched a major thrust. India and Pakistan both were too weak to conduct massive battles, especially since the United States suspended military aid to the warring nations.

Peace in this part of the world, however, was of vital interest to both the West and the Soviet bloc, and most major nations backed the efforts of UN Secretary-General U Thant to arrange a cease-fire. A Kashmir settlement became especially urgent in mid-September, when Communist China, which had clashed with India in 1962, threatened to join the war.

On September 22, India and Pakistan agreed to a truce called by the UN Security Council. Numerous serious truce violations occurred through the end of 1965, but Ayub and Shastri accepted an offer by Soviet Premier Kossygin to mediate the Kashmir dispute in Tashkent, Soviet Asia. The Declaration of Tashkent, signed on Jan. 10, 1966 (a few hours before Shastri's death), provided for a troop withdrawal to positions held prior to Aug. 5, 1965.

Foreign Relations. Pakistan's foreign relations were colored by the war with India. Relations with the United States declined to an all-time low in September with the cessation of American military and economic aid. This provoked anti-American riots and demonstrations in Karachi and Lahore. It was not until Jan. 19, 1966—after President Ayub's cordial visit to Washington (Dec. 14-15, 1965) and after the Tashkent accord—that the United States authorized a new commitment of \$8.2 million for Pakistan's economic development.

On October 5, Pakistan broke diplomatic ties with Malaysia, a fellow member of the Commonwealth of Nations, because of Malaysia's alleged partiality toward India. On the other hand, Pakistan became friendlier with Indonesia, Malaysia's sworn enemy.

Relations with the Soviet Union improved after a visit by Ayub to Moscow in April. A visit to Peking in March resulted in strong support by Commu-

UPI PHOTOS

nist China of Pakistan's position on Kashmir, interest-free loans, and other agreements. Throughout the year Pakistan seemed to be drawing closer to Communist China at the expense of its ties to the West; but in late December, Ayub asserted that "normalizing" relations with China and the Soviet Union was a geographic necessity rather than an indication of change in foreign policy. (See also ASIA.)

Economy. Pakistan's economic development was seriously retarded by the war with India. Pakistan's third five-year plan—capitalized at \$11 billion—began on July 1 amid high expectations, but by late October proposed government spending for the first fiscal year had been cut back almost 25%, largely because of the uncertainty of foreign aid.

Disasters. Violent cyclones and tidal waves struck the same region around the Bay of Bengal in East Pakistan on May 12, June 1, and December 15, causing more than 45,000 deaths. On May 20 a Pakistan jetliner crashed in Cairo on its inaugural flight from Karachi to London, killing 119 persons.

PANAMA

Developments in Panama in 1965 were dominated by negotiations for a new Panama Canal treaty with the United States. As a result of the new hopeful atmosphere generated by these negotiations, and the firm police measures taken by the government, there was no repetition of the violent anti-United States demonstrations that took place in 1964. The economy recovered substantially in 1965 from the damage suffered the previous year.

Canal Treaty. Negotiations for a new canal treaty began in Washington in January and created an atmosphere of expectation in Panama. By mid-1965, however, the lack of further action on the canal treaty and U.S. indecision concerning the location of the proposed new sea-level canal gave rise to rumors and apprehension in Panama. This concern was reduced by a joint announcement issued on September 24 by Presidents Lyndon Johnson and Marco Robles that an agreement in principle had been reached in the treaty negotiations. It was also an-

nounced that the new treaty would recognize Panama's sovereignty in the Canal Zone; integrate the canal area with the rest of Panama; make Panama a partner in the administration, operation, and profits of the canal; and provide for the termination of the new treaty either after a specific number of years or on the date of the opening of a new sea-level canal—whichever occurred first.

The opposition Panameñista party immediately denounced the announcement as ambiguous, but President Robles said in November that he expected the new treaty to be accepted in Panama if the terms were right. There was impatience, however, at the lack of information given to the public on the details of the negotiations. The economic benefits expected from a new treaty were impatiently awaited as one answer to Panama's social and economic development problems.

There were no anti-U.S. demonstrations of the kind that in January 1964 had caused widespread destruction of property, damaged Panama's economy, and hurt U.S.-Panamanian relations. A chief reason for the relative tranquility was President Robles' determination to use the National Guard, the only armed force in the country, to keep order. The anniversary of the 1964 rioting passed without an important incident. (See also LATIN AMERICA.)

Government Reorganization. President Robles improved his political position in July by reorganizing the cabinet to give more strength to the Liberal and Republican parties, which were not part of the coalition that elected him in 1964. The reorganization

made it easier for Robles to resist moves by the large opposition Panameñista party.

Fiscal Affairs. Early in 1965 the president sought to increase government revenues by raising customs duties, but widespread fear that this action would increase prices led him to abandon the project. There was some criticism of the new, higher, and

more efficiently enforced income tax that went into effect on Jan. 1, 1965. As economic activity remained fairly strong, however, fear of the new tax declined.

For the first half of 1965, ordinary government receipts were up 11% over the same period of 1964. The increased revenues lowered the expected deficit from the record \$86.6 million 1965 budget.

Economy. In the early months of 1965, gains were registered for banana and shrimp exports, and for potato, rice, and electric power production. Colón Free Zone operations also reported gains.

Unemployment in the cities and underemployment in the countryside remained a problem. A government report showed that although 50% of the labor force was employed in agriculture, it created only 25% of the gross national product. Slow industrial investment was a soft spot in the economy.

President Robles expressed the belief that industrial investment would remain slow unless Panama joined the Central American Common Market. A Foreign Trade Advisory Department was created to deal with this question.

PANAMA CANAL AND CANAL ZONE

The Panama Canal, which crosses the Isthmus of Panama, connects the Atlantic and Pacific oceans. Its length is 51.6 miles from deep water to deep water, and 40.3 miles from shore to shore. It is located in a 10-mile-wide strip of land, the Canal Zone, which was leased in perpetuity to the United States by the Republic of Panama in 1903. Including tidal water, the Canal Zone covers 647.29 square miles. The United States was given the right to act as sovereign in the area "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights." It guaranteed the independence of Panama, paid \$10 million, and agreed to pay an annuity of \$250,000, later increased to \$1,930,000. After receiving the grant the United States paid private property owners in the zone \$1,873,170 for their holdings.

Population. The 48,224 residents of the Canal Zone in 1965 consisted almost entirely of employees of the U.S. government and their families, and included 38,225 U.S. citizens.

Administration and Government. The Canal Zone government, with headquarters at Balboa Heights, was created by Congress. The governor of the Canal Zone, appointed by the president of the United

States, is automatically president of the U.S. government-owned Panama Canal Company.

The Panama Canal Company operates the canal and repays net operating costs of the government (about \$12,000,000 annually) to the U.S. Treasury. Interest of \$10 million a year on unrecovered U.S. investment in the zone (almost \$500 million) must also be paid. The small remaining balance finances capital improvement in the waterway.

The Panama Canal Company and the Canal Zone government in the fiscal year 1965 employed 14,265 full-time persons—Panamanians and Canal Zone residents, of whom 3,821 were U.S. citizens.

Besides the annuity of \$1,930,000 paid to Panama by the United States, purchases by Canal Zone civilian and military agencies in 1964 added more than \$90 million to Panama's economy.

Education. School attendance is not compulsory in the Canal Zone. The U.S. school system is modeled after school programs in the United States, with Spanish emphasized as a language course. The Latin American schools, for non-U.S. citizens, are comparable in curriculum to schools in Panama. The curriculum is in Spanish.

Canal Traffic. In the fiscal year ended June 30, 1965, records were set for traffic, cargo tonnage, and tolls collected. Over 12,000 oceangoing vessels passed through the canal and paid tolls of more than \$67,000,000. The cargo tonnage was 78,496,609.

In 1965 a central traffic control system was completed in Balboa to provide more efficient control of ships. Conversion to new locomotives for towing ships through the locks was completed when the last of the faster, more powerful machines went into service in 1965. Experiments continued to improve methods for overhauling locks so as to shorten the time that lanes are out of use.

PAPER INDUSTRY

The consumption of paper and paperboard in the United States in 1965 reached 48 million tons—a new high for the seventh consecutive year. This was equivalent to 490 pounds per person, a gain of 5% from 1964.

Product Gains. The major gains in consumption were made by coated printing papers, which are used largely for magazines, and by uncoated printing grades, which are used for books and business papers. Fine paper grades, particularly thin papers for one-time carbons in electronic computers, also gained strongly. In addition, refuse sacks made from kraft papers were strongly promoted by the industry and gave promise of future growth.

Growth in special food board and other boxboard reflected the rising trend of packaged products sold through supermarkets. Growth in containerboard production can be traced in part to a rising trend in exports. The fibre-foil can, used mainly for fruit juices and motor oil, but rapidly finding many new uses in other fields, continued to show a strong growth trend.

Plant Capacity and Capital Expenditures. The paper and paperboard industry scheduled about 4.8 million tons of new capacity for 1966 and 1967, which would bring total capacity to over 53 million annual tons. Total expenditures on plant and equipment amounted to a record \$1.1 billion in 1965.

PICTORIAL PARADE

PAPER INDUSTRY in the United States used more than 50 million cords of wood in 1965. Here, a workman in Kimberly, Wis., prepares wood for a Kimberly-Clark mill.

¹ Preliminary. Details may not add to totals because of rounding of figures to the nearest thousand.

Output and Raw Materials. Record-high consumption levels, combined with rising exports, more than offset a relatively strong increase in newsprint imports. The domestic output of paper and paperboard in 1965 was estimated at 43.3 million tons, or 2 million tons above 1964.

Consumption of wood pulp at paper and paperboard mills exceeded 34 million tons, and that of waste paper was close to 10 million tons. Wood pulp production totaled about 33 million tons—an increase of 1 million tons from 1964 in spite of a decline in exports. Consumption of pulpwood in 1965 exceeded 50 million cords.

PARAGUAY

AFRICA

As expected, the Colorado party, which dominates the central government, retained most seats in the municipal council elections of October 1965. These were the first municipal elections since President Alfredo Stroessner came to power in 1954 in which opposition parties were allowed to present lists of candidates opposing those of the Colorado party. The Colorado party made a strong showing, probably as a result, in part, of Paraguay's continuing economic prosperity stemming from a favorable trade balance, increased production, and much foreign aid.

Political Affairs. The participation of the Liberal Febrerista parties in the municipal elections reflected a more relaxed political atmosphere in Paraguay. It also indicated a feeling of greater security on the part of the central government, which is dominated by the Colorado party and the armed forces. The constitution guarantees one third of the 60 seats in the unicameral Congress to the party that polls the second largest number of votes. Because a small splinter of the Liberal party participated in the presidential and congressional elections of 1963, 20 of

its members now have an ineffectual voice in Congress.

There were rumors in 1965 that President Stroessner wanted to continue in office after his term expires in 1968, and that he was seeking to have the constitution amended to permit him to run for a third term.

Paraguayan exiles continued to maintain that an oppressive political atmosphere prevailed in the country and that more than 3,000 persons were being held as political prisoners. The Human Rights Commission of the Organization of American States (OAS) investigated the charges. The commission's findings were submitted to the Second Extraordinary Inter-American Conference, which met in Rio de Janeiro in November.

Economic Developments. Landlocked Paraguay completed a vehicular route to Brazil in 1965, thus achieving easier access to its free port facilities at the Brazilian port of Paranaguá. Paraguay is dependent on its river system, and low-water levels in 1964 had an adverse effect on the country's ability to compete in international trade.

The river problem was not serious enough, however, to reverse the trend toward a stable and more productive economy that began in 1961 with the stabilization of the monetary system. Other factors contributing to the general prosperity included increased demands for Paraguayan exports, a favorable balance of trade (\$16 million in 1964), rising investor confidence in the economic and political system, increased agricultural and industrial production, and considerable foreign assistance. Paraguay received a \$5.5 million loan from the International Monetary Fund and a \$2.2 million loan for highway construction from the World Bank.

Despite the general prosperity, a budgetary deficit that began in 1962 persisted. Government revenues in 1965 were \$3.5 million below anticipated expenditures.

Land Reform. Between 1960 and 1963 the government granted 20,500 property deeds, covering 1.2 million acres, to landless peasant families. Three thousand more families were scheduled to be settled on their own land during 1965 and 1966.

Alleged Communist Plot. The government announced in July that it had uncovered an armed Communist plot. Four guerrilla units were allegedly ready to unleash war in the rural areas, particularly in the sugarcane district west of Asunción. Many of the 50 persons arrested in a three-day mop-up campaign were said to be infiltrators from Argentina, Brazil, and Chile. Stroessner's government accused Cuba and the USSR of backing the abortive antigovernment plot.

Foreign Relations. Paraguay gave asylum to Juan Lechín Oquendo, Bolivian labor leader and a founder of Bolivia's revolutionary party, the Movement of the National Revolution.

Early in May, Paraguay voted with most OAS countries to set up an Inter-American Peace Force to settle the crisis in the Dominican Republic.

Tornado. The city of Encarnación, about 140 miles south of Asunción, was hit by a severe tornado on October 24. More than 100 houses were destroyed. The government sent food, medical supplies, and other assistance to the city.

HUBERT HUMPHREY (left), who as U.S. vice president is chairman of Peace Corps Advisory Council, meets council on January 27 with corps director Sargent Shriver (right).

PEACE CORPS

The number of Peace Corps volunteers rose from about 8,600 in 1964 to about 11,800 in 1965. Volunteers were at work in 46 countries, the same as the 1964 total. In April the Peace Corps withdrew its personnel from Indonesia, but in September it sent a contingent to Barbados. In 1965 over 7,500 Peace Corps candidates were in training in the United States and Puerto Rico for overseas service.

By Dec. 31, 1965, of the 6,446 Peace Corps volunteers who had completed their service, 44 had re-enrolled for another two-year tour of duty and 918 had extended their service by one year. There had been 653 married couples in the organization, including 253 couples who were married while in the corps. Thirty two children were born to Peace Corps couples abroad.

Recruitment Changes. There was a significant change of emphasis in Peace Corps recruiting in 1965. For the first time an attempt was made to enroll in the corps persons with a high degree of political as well as of intellectual motivation. Warren W. Wiggins, deputy director of the Peace Corps, stated on October 19 that "strongly motivated people, the individualists with intense social and political convictions, might give us some trouble as individuals. But on the whole, their contribution will be greater."

Wiggins pointed out that in seeking politically active young people, the corps was attempting to enroll dynamic individuals with a passion to make the world better, to take a stand, and to make sacrifices. He said that the agency was trying to make its personnel more representative "of the whole spectrum of American life and thought." He added that the agency obviously did not want "those who don't know where to draw the line, and who try to become political activists abroad."

The recruitment program, reorganized under Donovan McClure, an associate director of the corps, added 50 veterans of overseas Peace Corps duty to the recruiting force in 1965, and continued to send executives of the agency's headquarters staff on occasional recruiting missions.

In 1965 the corps expanded a program to recruit college juniors, who would be given six weeks of training in the summer between their junior and senior years. In his senior year, the successful applicant would incorporate into his college pro-

NURSES IN DOMINICAN REPUBLIC work as Peace Corps members in rebel hospital during 1965 revolt.

gram specialized languages and other studies related to Peace Corps work.

Psychological Testing. On June 9, Sargent Shriver, the director of the Peace Corps, and Al Carp, the director of the corps' selection division, defended in a Senate hearing the use of psychological tests for Peace Corps volunteers. Both men urged that the use of such tests be continued, arguing that the House Foreign Affairs Committee in 1961 had specified that during Peace Corps training each applicant must receive psychological and psychiatric tests. Carp warned that "an emotionally immature and mentally unstable volunteer could do serious damage to the United States overseas."

College Accreditation. On June 12, Shriver announced in a commencement address at Western Michigan University, Kalamazoo, Mich., that Western Michigan would grant approximately one year of college credit for two years of Peace Corps service. The plan was conceived by the administration and approved by the faculty of the university. Shriver pointed out that "a volunteer overseas discovers that he learns as much as he teaches. If he makes this discovery sooner [rather] than later, he will be able to accomplish more." He also said that the volunteers would prove to be a great asset to the campus when they returned after their overseas service.

Appointments. On July 8, Shriver announced the appointment of Robert T. Freeman, a 47-year-old Negro, as associate director for management—one of the five top positions in the Peace Corps.

It was announced by President Johnson on Jan. 17, 1966, that Shriver was resigning as the corps' director in order to devote full time to the anti-poverty program. Jack H. Vaughn, former assistant secretary of state for inter-American affairs, was sworn in as director on March 1.

Budget and Personnel. On August 4, House and Senate conferees approved a one-year extension of the Peace Corps and an appropriation of \$114.1 million. This sum would enable the corps to expand its strength to a total of 14,800 volunteers in the field or in training by Aug. 31, 1966.

JACK H. VAUGHN
Director of the Peace Corps

PEARSON, Lester Bowles

Canadian prime minister: b. Toronto, Ont., April 23, 1897.

Lester Pearson was forced to reshuffle his cabinet several times in 1965 because of a number of scandals and hints of scandal involving members of his official family. On September 7 he called for general elections in November, hoping to bolster the Liberal party's strength in the House of Commons. The results of the election were disappointing and prompted the resignation of still another cabinet member.

The Cabinet. In January, in the wake of accusations of influence peddling and other "reprehensible" acts, Pearson had to ask for the resignations of his minister without portfolio, Yvon Dupuis, and his parliamentary secretary, Guy Rouleau. In June he accepted the resignation of Minister of Justice Guy Favreau, even though Favreau had been cleared of any wrongdoing in a bribery case. A month later Pearson took him back into the government as president of the Privy Council.

In November, Finance Minister Walter Gordon, who had urged Pearson to call the general election and had acted as the Liberal party's campaign manager, resigned as the result of the Liberals' poor showing in the election (they gained only two seats). Finally, in December, Secretary of State Maurice Lamontagne and Postmaster General René Tremblay resigned over a bankruptcy scandal in Montreal.

Foreign Affairs. In a speech on April 2 in Philadelphia, Pearson suggested a pause in the U.S. air strikes against North Vietnam to give the Hanoi government an opportunity to negotiate a peace. The next day he was a guest of President Johnson at Camp David, Md. Pearson reported that they had "argued" about his suggestion; but when President Johnson eventually ordered a lull in the bombing of North Vietnam, Canada was one of the few nations to be informed beforehand.

In June, Indian Prime Minister Shastri visited Canada to discuss world affairs with Pearson. The two leaders issued a communiqué expressing their agreement on support of the United Nations and its peacekeeping activities, on the need for disarmament and the danger of the proliferation of nuclear weapons, and on their hope for an early cessation of hostilities in Vietnam.

One result of these and other peacemaking efforts was that the 1965 Family of Man Award of the Protestant Council of the City of New York was given to Pearson on November 17. The council cited him for "helping prevent worldwide conflagrations and restoring peace." (See also CANADA.)

Career. Pearson joined the Canadian Foreign Service in 1928. He served as ambassador to the

PEARSON PLAYS HOST to British Prime Minister Harold Wilson (left) at Canadian prime minister's Ottawa home on Dec. 19, 1965. Wilson was returning to Britain from United States.

UPI

United States in 1945–46. In 1948 he was elected to the House of Commons as a Liberal. From 1948 to 1957, while serving as secretary of state for external affairs, he headed Canada's delegation to the United Nations. For his contribution to the settlement of the 1956 Suez crisis he was awarded the 1957 Nobel Peace Prize. He was elected Liberal party leader in 1958, and became prime minister in 1963.

PEDIATRICS

Rubella, amniocentesis, and fluorescent antibodies made news in pediatrics in 1965.

Rubella (German Measles). The rubella epidemic that swept the United States in early 1964 caused congenital anomalies in 10,000 to 20,000 infants born late that year and in 1965. It has been known for some time that infants born of mothers who have rubella early in pregnancy may be damaged seriously by the viral infection. The 1964 epidemic was of unprecedented severity. A large number of infants were studied, and previously unrecognized features of the post-rubella syndrome were identified.

The danger to the fetus is greatest when the mother develops rubella during the first month of pregnancy. The risk to the infant decreases thereafter, disappearing by the end of the third month. The affected infants may have one or more anomalies. Congenital heart disease, certain types of deafness, cataracts, and mental retardation often occur.

Many of the babies studied developed jaundice and other evidence of liver disease, as well as a diminished number of platelets in the blood, possibly resulting in excessive bleeding. Approximately 20% of the affected liveborn infants died, primarily of cardiac or liver disease. Stillbirths were frequent.

Live rubella virus was recovered from the throat, urine, and tissue specimens of many infants. Although these infants had developed their infection many months previously, they remained infectious, and hospital workers contracted rubella from them. Such babies continue to harbor the virus for many months, and they may be an important reservoir of the disease. It has been suggested that even apparently undamaged infants of mothers exposed to rubella be tested for virus shedding. The 1964 epidemic has resulted in intensified efforts to prepare an effective rubella vaccine.

Amniocentesis. Erythroblastosis fetalis (Rh disease) continues to be an important cause of fetal death.

Although exchange transfusion is available and is an effective treatment for infants born alive, many infants are stillborn during the last weeks of pregnancy. Some of these infants would survive if they were delivered early and were appropriately treated. Until recently it has been impossible to tell which infants need early delivery, but recently a test has been developed to provide this information. A needle is inserted through the wall of the uterus and a sample of the amniotic fluid is obtained. This procedure is called amniocentesis.

The amniotic fluid is analyzed for certain chemical substances which are present only when erythroblastosis is severe, in which case premature delivery is needed. However, some infants are too immature when they develop severe erythroblastosis to be delivered prematurely. A technique has been perfected whereby these infants can be given blood transfusions while they are still inside the uterus. The infant's condition is improved, and he can benefit from additional weeks of interuterine growth.

These preliminary studies probably represent a significant medical milestone because they indicate that the infant no longer need be isolated from appropriate diagnostic and therapeutic procedures while in the uterus.

Fluorescent Antibodies. Many acute illnesses in children are due to infection by bacteria or viruses, but the specific agent can be implicated only infrequently prior to treatment. From one to several days is required to identify bacteria, and many weeks or months are needed before a specific viral agent can be isolated. A technique was developed for prompt identification of infecting organisms.

Animals form antibodies against bacteria and viruses. These antibodies become physically attached to the specific organism (antigen) that is responsible for their production. Specific antibodies can be produced and then tagged with a fluorescent material which can be seen under ultraviolet light. Material such as tonsillar exudate can then be taken from an area of infection and screened against a battery of tagged antibodies. If the antibody against the infecting organism is present, the fluorescent material accumulates on the bacteria or in the infected cells. A specific diagnosis therefore can be made to facilitate precise therapy.

PENNSYLVANIA

The major problem confronting Pennsylvania in 1965 was the reapportionment of the state legislature. One year before, the State Supreme Court ruled that the legislature would have to reapportion its districts by Sept. 1, 1965, or the court would assume the responsibility. The Republican-controlled Senate and the Democratic-controlled House were unable to agree on a satisfactory reapportionment solution and, as a consequence, the legislature failed to meet the September 1 deadline imposed by the court. In late October, after two extensions were granted, the court recognized that the legislature was hopelessly deadlocked and reluctantly assumed responsibility for the reapportionment. The court studied the merits of different plans, but no final decision was made by the end of the year.

Integration. The state assumed legal jurisdiction in the dispute that developed over segregated Girard College in Philadelphia. Governor William Scranton's attempts to obtain voluntary integration of the school failed, and Attorney General Walter E. Alessandrini was directed to institute court proceedings to end segregation. It was hoped that an out-of-court compromise between government officials and the school's private Board of Trustees could be reached. (See PHILADELPHIA.)

Legislation. Governor Scranton submitted a record general fund budget of \$1.26 billion to the legislature to cover proposed expenditures for the 1966 fiscal year. Although the proposed budget represented an increase of approximately \$89 million over the budget approved by the legislature for the preceding fiscal year, the governor made no request for tax increases. As finally enacted by the legislature, the new general fund budget authorized expenditures of \$1,116,314,800. Shortly before the end of the 1965 fiscal year, Governor Scranton announced that the state had accumulated a \$102,713,510 surplus. In the wake of the announcement, state legislators raised their own pay scales and those of other state employees.

He also signed into law the highly controversial school bussing bill. It extended the free, state-supported, school bus service to approximately 136,000 private and parochial school students throughout the state. Opponents of the measure instituted court action to test the measure's constitutionality.

The state legislature enacted legislation bestowing

formal recognition on the great Dane as the official dog of Pennsylvania. The governor allowed this measure to become law without his signature.

Education. The education problem in the state improved when approximately 50% of the 1966 general fund was earmarked for educational purposes. In addition, the governor suggested that a major share of the fiscal year 1965 budget surplus be returned as bonuses in the form of lower tuition rates at Pennsylvania State and Temple universities.

The public school system of Pittsburgh received a tremendous boost from a grant of \$2,485,000 by the Ford Foundation. This grant, the first of its type ever awarded by the foundation, introduced a new concept of supporting systemwide educational improvements instead of isolated pilot projects.

The educational outlook was not all bright, however. Shortly before the opening of the fall semester, the trustees of the University of Pittsburgh, a private institution, announced that the university was in financial chaos. A special committee composed of state, university, and Ford Foundation representatives was appointed by the trustees to evaluate the future of the institution. Although no final solution has been reached, one plan advanced would join Pittsburgh with the other two state-supported universities, Pennsylvania State and Temple. (Temple officially became a state-related institution in December.)

PENNSYLVANIA • Information Highlights

Area: 45,333 square miles.
Population: 11,511,000 (1965 est.).
Chief Cities (1965 est.): Harrisburg, the capital (75,000); Philadelphia (2,030,000); Pittsburgh (560,000); Erie (136,000); Allentown (106,500); Scranton (105,000).

PERU

President Fernando Belaúnde Terry continued in 1965 to pursue his "popular cooperation" social reform program that was designed mainly to benefit the Indian and mestizo lower classes. However, the opposition parties in the legislature combined to defeat some of his financial and welfare proposals. The split between the president and the legislature widened over the handling of Communist terrorism and guerrilla activity. On September 13 the cabinet resigned to allow the president to ease political tensions by appointing a new cabinet more acceptable to the opposition parties.

Both domestic and foreign business responded favorably to Peru's relatively unrestricted economy, and improvement continued in most economic areas.

Communist Activity. The legislature, dominated by a coalition of parties opposed to many aspects of President Belaúnde's reform program, accused the government of underestimating the threat of Communist terrorism in the cities and guerrilla activity in the central and southern Andes. President Belaúnde argued that reports of such threats were "greatly exaggerated" and insisted that there were no more than 200 insurgents in the Andes. In June, nine policemen were killed and several others were

wounded in surprise attacks on two police posts in the Andamarca region of the Andes. President Belaúnde then declared a suspension of constitutional guarantees for 30 days.

In August, military forces killed 21 guerrillas in the jungle terrain of Satipe, about 375 miles from Lima. In addition to regular army and air force contingents, an elite ranger company trained in counterinsurgency tactics was called into action. By September the roads leading inland from the coastal cities were tightly controlled. However, terrorists remained at large and distributed leaflets assailing "capitalist exploitation" and demanding "true agrarian reform," and "authentic democracy."

In September the opposition coalition in the legislature passed measures to meet the threat of subversion. These suspended constitutional guarantees, provided the death penalty for terrorists, and allocated \$10 million to finance the counterinsurgency program of the armed forces. They also set up a committee to investigate subversion in government. Former President Manuel A. Odría claimed that guerrillas were active in nine of Peru's 23 departments, and Víctor Raúl Haya de la Torre, leader of the American Popular Revolutionary Alliance (APRA), estimated that 1,055 Peruvian guerrillas had been trained in the Soviet Union, Cuba, Communist China, and North Vietnam.

Although President Belaúnde took action to curb guerrilla warfare and rebel violence in both urban and rural areas, he insisted that there was no need to establish an inter-American military force to combat subversion on a continental scale, as had been proposed by the United States and Brazil. He said, "As far as Peru is concerned, we are fully capable of taking care of our internal security."

Cabinet Crisis. In September the opposition majority in the legislature invited the cabinet to answer questions about the government's handling of Communist activity. The interrogation was expected to result in a vote of censure, which would have forced the cabinet to resign, or in a vote of dissatisfaction,

Crops (metric tons): Coffee (1964-65), 52,000 (ranks 14th among world producers); potatoes (1962-63), 1,232,000; maize (1964-65), 400,000; cassava (1962-63), 377,000; wheat (1963-64), 150,000; sweet potatoes and yams (1962-63), 146,000; lentils (1964-65), 6,000.

Minerals (metric tons, 1964): Silver, 37,043,217 troy ounces (ranks 2nd among world producers); iron ore, 6,605,000 (rank, 15th); zinc, 230,963 (rank, 6th); copper, 174,478 (rank, 7th); lead, 149,238 (rank, 6th); guano, 205,000; gold, 85,809 troy ounces.

Foreign Trade (1964): Exports, \$665,900,000 (chief exports: fishmeal, \$143,500,000; copper, \$103,100,000; cotton, \$91,400,000; sugar, \$64,000,000); imports, \$570,700,000 (chief imports, 1963: nonelectrical machinery, \$112,000,000; transport equipment, \$78,600,000; electrical machinery, \$47,700,000). **Chief Trading Partners** (1963): U.S. (took 35% of exports, supplied 37% of imports); West Germany (took 11% of exports, supplied 13% of imports); Great Britain (took 9% of exports, supplied 7% of imports).

Transportation: Roads (1964), 25,276 miles (2,554 paved); motor vehicles (1964), 193,192 (automobiles, 110,814); railways (1963), 1,658 miles; merchant vessels (1964), 28 (128,000 gross registered tons); national airlines, Aerolíneas Peruanas SA and Expreso Aéreo Peruano SA; principal airport, Lima.

Communications: Telephones (1964): 126,325; television stations (1964), 16; television sets (1964), 175,000; radios (1963), 2,000,000; newspapers (1959), 53 (daily circulation, 492,000).

which would have forced the premier, Fernando Schwalb López Aldana, to resign. To avoid an open split between the executive and legislative branches, the cabinet resigned on September 13. President Belaúnde selected Senator Daniel Becerra de la Flor to serve as premier, and a new cabinet was sworn in on September 15.

Economy. Since 1960, because of a stable and freely convertible currency, few external trade restrictions, and relatively little government planning and regulation of the internal economy, Peru has achieved an annual increase in its gross national product of about 5.9%. The country's foreign trade in 1965 was more than double that of 1960.

Peru, which claims a 200-mile fishing limit off its coast, became the world leader in total fish catch in 1964. (About 6,801,300 metric tons of fish were caught in 1965.) In June 1965, Peruvian officials seized four American fishing boats from California for allegedly violating the limit.

In spite of its growing economy, Peru has a low per capita income—only slightly over \$200 in 1965. However, small manufacturing industries are expanding rapidly. Between 1960 and 1963, industrial output grew 7.1% annually, and industry's share of the gross national product increased from 15% to 19.5%.

Claremont Men's College*

PETROLEUM

Most of the important developments in the world petroleum industry in 1965 were continuations of significant events of the previous year. The production and export to Europe of crude oil in Libya and Nigeria maintained a rapid growth rate. The first round of drilling started in the North Sea, where at the end of 1965 about 12 huge offshore drilling units were in operation. Exploration for oil continued in Australia, and interest in exploration was renewed in Central America, Venezuela, Colombia, Mexico, and western Canada.

The petroleum industry's decline in earnings was reversed in 1965. Although depressed prices were still a problem for many companies, increased efficiency in management practices helped effect substantial savings in the petroleum industry generally.

Production. World output of crude petroleum reached a milestone in 1965 by surpassing 30,000,000 barrels daily. Production totaled 30,234,800 barrels per day—a gain of 7.6% over 1964. The rise in the Eastern Hemisphere was 1,771,600 barrels (up 11.6% from 1964); in the Western Hemisphere, 311,200 barrels (up 2.4%).

Africa showed the largest growth rate—30.5%—and production there totaled over 2,000,000 barrels daily. The increase was due primarily to Libya's increased output, which averaged 1,200,000 barrels daily.

The largest increase in volume was again in the Middle East, where output averaged 834,100 barrels daily (up 10.8% over 1964). The Middle East was still the world's major supplier, accounting for 28.3% of the total world output in 1965. Of this total, 26.4% came from Kuwait, 23.7% from Saudi Arabia, 22% from Iran, and 15.3% from Iraq. Crude oil production in the USSR rose by 8%, to 4,817,000 barrels daily; this figure represents 15.9% of the world's total supply.

In the Western Hemisphere, U.S. production in

1965 rose almost 2%, to 7,815,000 barrels daily. Canada's daily production increased 6.8%, to 804,000 barrels. In Venezuela, the world's leading oil-exporting country, production gained by 2.4%, to 3,475,000 barrels daily. On the other hand, Argentina's output dropped 5.2%, to 267,000 barrels daily. Production in other Latin American countries did not change from the preceding year.

¹ Final figures. ² Arizona, Florida, Missouri, Nevada, South Dakota, Tennessee, Virginia, and Washington (except 1963, when no oil was produced in Washington). ³ Includes some field condensate. Source: U.S. Bureau of Mines.

Wells. The number of wells drilled decreased slightly in 1965, in line with the trend of the last several years. The estimated total of 52,165 new holes was a decrease of about 0.5% from 1964, and reflected the small decrease in the number of holes (43,950) drilled in the United States. There were increases, however, in Canada, Australia, most of South America, and western Africa.

Reserves. Proved reserves of crude oil in the world rose by 15,157,000,000 barrels, or 4.6%, during 1964, bringing the total to 341,782,000,000 barrels. Most of the gain, as in the past, was in the Middle East. Iran's reserves rose 15.5%, and Iraq's increased 8.3%. U.S. reserves showed a slight rise of about 20,000,000 barrels, to 30,990,000,000 barrels.

Consumption. The worldwide demand for crude oil and for liquid hydrocarbons derived from natural gas rose 6.4% in 1965, to a daily average of over 30,500,000 barrels. Consumption increased 4.4% in the Western Hemisphere, and 8.4% in the Eastern Hemisphere. A 3.8% gain in the United States was a significant improvement over the 1964 record and a substantial contribution to the brighter outlook in the western half of the world.

Consumption in the Eastern Hemisphere continued to show strong gains in Japan and most of Europe. Japan's increase was 15.3% for a total of 1,690,000 barrels daily. The European increase was 10.8%, to 7,380,000 barrels daily.

Transportation. At mid-1965 the world fleet of oil tankers of 2,000 deadweight tons and over was 3,439 vessels, totaling 85,920,958 deadweight tons. This represented a net gain of 59 ships and 4,301,999 deadweight tons, an increase of 5.3% over the total at the end of 1964. In 1964, 115 new tankers were delivered, and 56 were scrapped or converted to other uses. Total deliveries of tankers in 1965

¹ Final. ² Preliminary. ³ Because of the use of several sources of data for the USSR and its satellites, the figures given for the individual countries do not always add up to the total shown for the group. ⁴ Starting with 1964, New Guinea is included with Indonesia's total. (Sources: U.S. Bureau of Mines and World Petroleum.)

were estimated at close to 10,000,000 deadweight tons, and deliveries scheduled for 1966 will almost be equal to that figure.

Tanker size also continued to increase. The average deadweight tons of the ships in operation at mid-1965 was 27,858, but the average tonnage of the ships delivered in the first six months of the year was 51,545. Tankers on order as of midyear averaged 67,175 deadweight tons. The order for tankers of 100,000 deadweight tons or larger increased from 16 at mid-1964 to 33 at mid-1965,

1965 WORLD PETROLEUM PRODUCTION
(Estimated Number of Barrels)

with at least five more in the negotiation stage.

Most of the carrying capacity in 1965 continued to be represented by the flag fleets of four countries. Liberia, with 17,471,861 deadweight tons, had 20.33% of the carrying capacity; Norway, with 12,887,545 deadweight tons, 15%; Britain, with 11,833,356 deadweight tons, 13.77%; and the United States, with 8,702,837 deadweight tons, just over 10%.

Pipelines. Most of the major pipeline projects in 1965 were in Europe and Asia, primarily from Mediterranean and Adriatic ports to Germany and Austria, eastward, across Siberia, from the USSR's major crude oilfields in the Urals. An increasing network of oil and natural gas lines was also under

EXPERIMENTAL DRILLING FOR GAS was conducted by a British firm in the North Sea off the Humber estuary. On Dec. 27, 1965, the drilling rig collapsed and sank.

construction from oilfields in Algeria and Libya to ports on the Mediterranean. The diameter of pipe used increased to about 40 inches, and the capacity of most of the new lines rose to 500,000 or more barrels daily.

Refining. Worldwide capacity for crude oil distillation rose to 33,230,000 barrels daily in 1965—an increase of 5.8%. Capacity in the non-Communist world alone gained by 5%, to 28,741,900 barrels daily. Once again, the major share of the growth was in the Eastern Hemisphere, which increased capacity by 1,500,000 barrels daily.

Downstream processing, which continued to be dominated by the increased use of hydrogen processes, rose 6.2% in 1965, to 4,949,000 barrels daily. Catalytic cracking, with a modest 1.4% growth, reached 5,743,000 barrels daily; and catalytic reforming increased 5.3%, to 3,825,000 barrels daily.

There were 939 petrochemical plants in operation in 1965—an increase of 2.7% over the previous year's level. Western Hemisphere plants accounted for 65% of the total—a decrease of 3.5% from 1964.

Natural Gas. The estimated total of 721.5 trillion cubic feet of natural gas reserves has not been revised for several years. The United States has 274 trillion cubic feet of this total; the Middle East, 180 trillion; the USSR, 75 trillion; Africa, 54 trillion; and the Netherlands, 38.5 trillion.

WILLIAM C. UHL

Editorial Director, "World Petroleum"

PHILADELPHIA

Philadelphia (pop.: city, mid-1965 est., 2,067,000; metropolitan area, mid-1964 est., 4,632,000) experienced a year of relative calm in 1965, in contrast to the explosive racial discord that hit the city in 1964. Some civil right demonstrations took place, however, with Girard College, a private elementary and secondary school for boys, as the focal point of attention.

Girard College Controversy. Girard College, established under the will of Stephen Girard (1750-1831) as a school for "poor, white male orphans," was the prime civil rights target. In May, the Philadelphia chapter of the National Association for the Advancement of Colored People (NAACP) began a concerted drive to "break the will." Hundreds of pickets (and a corresponding number of police)

appeared daily outside the college gates. Martin Luther King, Jr., came to the city in support of the NAACP cause. Numerous attempts by local, state, and federal officials to achieve voluntary integration were rejected by the school's board of trustees. Finally, the state attorney general, Walter E. Alesandrone, in response to a direct order of the governor, William W. Scranton, attempted to obtain a court order that would terminate segregation in the school.

Elections. In the election on November 2, the Republican candidate for district attorney, Arlen Specter, upset the Democratic incumbent, James Crumlish, in the first citywide Republican victory since 1953. In the only other major contest, the Democratic city controller, Alexander Hempill, was re-elected to a third four-year term. City voters also approved four loan requests that will permit the city to borrow a total of \$82,450,000 for improvement and expansion projects.

Board of Education Reorganized. In the May primary election, Philadelphia voters approved a proposal to replace the 15-member board of education with a 9-member board. A nominating panel submitted two lists of nominees to Mayor James H.J. Tate for final selection. Former Mayor Richardson Dilworth was named president of the new board, which will take office in December 1965. Cecil Moore, director of Philadelphia's NAACP chapter, instituted legal proceedings to contest the validity of the selection process.

New Community College. Philadelphia Community College, the first of its kind in the city, opened its doors in September 1965. The initial enrollment was 750 full-time day students and 1,000 part-time evening students.

School Operations. The 1966 operating budget that the Philadelphia Board of Education submitted to the City Council called for expenditures of \$191 million, or an increase of \$43 million over 1965 appropriated funds. The retiring school board president, J. Harry LaBrum, who submitted the budget, said he felt the state could provide the funds for the increase. Of the total amount, \$19 million was earmarked for salary increases for teachers and other school personnel.

At the beginning of the 1965 school year, public school enrollment in Philadelphia was 276,347, a decrease of 1,543 from the previous year.

New U.S. Mint. The federal government obtained congressional approval of expenditure of approxi-

CITY OF PHILADELPHIA

IN PHILADELPHIA, Girard College is picketed by NAACP members in May, in an effort to "break the will" that established the institution in 1831 as an all-white school.

mately \$35 million for a new U.S. mint in Philadelphia. Construction was begun in 1965.

City Budget. A record operating budget of \$365.3 million for the 1966 fiscal year was presented to the City Council by Mayor Tate. The new budget is \$37.5 million higher than the 1965 budget. The mayor proposed increases in the city wage tax and the real estate tax to meet the higher operating costs.

Economy. Unemployment in the Philadelphia metropolitan area for the first nine months of 1965 averaged 64,400, or 3.4% of the estimated civilian work force. The figure represented a 1.4% decrease in unemployment over the average for the comparable period of 1964.

A total of \$132,325,784 in building permits was issued through September 1965, an increase of 12.2% over the first nine months of 1964.

LOUIS C. GAWTHROP
Assistant Professor of Political Science
University of Pennsylvania

PHILANTHROPY

Federal legislation during 1965 in fields traditionally served by private giving raised questions about the future direction of philanthropy. New federal programs were established to support public education in poverty-ridden areas, medical care for the aged, and higher education. As the government assumes a larger share of the burden of these activities, private philanthropy may be able to devote more of its resources to the prevention, rather than the cure, of social ills.

In spite of expanding public programs, private philanthropy continued to grow vigorously. Past increases in the major categories of giving were sustained in 1965, with total private donations probably exceeding \$13 billion. Indicative of the rise is the increase in private donations to the 2,200 United States and Canadian community chests and united funds, from \$458 million in 1960 to \$580 million in 1965. Corporation giving has also shown a considerable increase.

Congressional passage of Medicare legislation in 1965 probably will have direct consequences on philanthropic support of hospitals. Of the 7,138 hospitals in the United States, 3,394 are nonprofit voluntary hospitals which rely on private giving for part of their support. Of the \$1.44 billion spent for new hospital construction in 1964, an estimated \$832 million came from gifts. An additional \$400 million was donated for current budgets, and \$150 million went into endowment funds.

Increased support for the arts was evident in 1965. In June the John F. Kennedy Center for the Performing Arts in Washington, D.C., surpassed its public contributions goal of \$15.5 million. In September, Congress established the National Foundation on the Arts and Humanities and appropriated \$63 million for the first three years of the program. In October, the Ford Foundation announced grants totaling \$85 million to symphony orchestras throughout the United States.

Individuals and families are the largest single class of donors to philanthropic programs, accounting for about four fifths of total giving. In 1962, deductions for contributions itemized on 25.1 million individual income tax returns totaled \$7.5 billion. Of this sum, \$5.4 billion, or 71%, was given by 23.3 million persons or families whose total annual income was less than \$15,000.

In February 1965, a report from the U.S. Treasury Department proposed changes in laws relating to private foundations. The proposals would restrict dealings between foundations and their donors, reduce delay in transmitting funds to charitable recipients, limit direct foundation involvement with business, prohibit speculation in securities, and require the broadening of foundation management. Noting that foundations have "preserved fluidity and provided impetus for change within the structure of American philanthropy," the report estimated that in 1962 the more than 15,000 foundations in the United States made grants and related outlays of \$1 billion. The Ford Foundation alone accounted for \$223 million of this total with numerous grants in different fields.

PHILATELY. See **STAMP COLLECTING.**

PHILIPPINES

The election of Ferdinand E. Marcos as president of the Philippines on Nov. 9, 1965, capped an exhausting, year-long campaign. While politicians scrambled for votes, unpopular tax legislation was delayed, and the country's economy suffered. In the area of foreign affairs, the Philippine and United States governments reached agreement on the question of criminal jurisdiction under the 1947 military bases treaty.

Elections. In the presidential election, Senate President Ferdinand E. Marcos, candidate of the Nationalist party, decisively defeated the incumbent president, Diosdado P. Macapagal, who ran for reelection on the Liberal party ticket. Marcos received 3,861,324 votes, and Macapagal, 3,187,752. Marcos' running mate, Senator Fernando Lopez, defeated Macapagal's choice, Senator Gerardo Roxas, in the vice presidential contest by a vote of 3,531,550 to 3,504,826.

During the hard-fought campaign, the Nationalists attacked the Macapagal administration for bureaucratic corruption and economic disorders. Opponents of Marcos charged him with misappropriating farmlands, forgery, and passing bad checks. In the months before the balloting, at least 48 political murders were committed, and on election day many voting irregularities were reported.

Also at stake in the elections were eight Senate seats and all 104 seats in the House of Representatives. The results gave 6 Senate seats to the Nationalists (for a total of 11) and 2 to the Liberals; 59 House seats to the Liberals, 36 to the Nationalists, and 9 to independents. President-elect Marcos therefore would be faced with a lower house dominated by the opposition Liberals.

TAAL VOLCANO IN THE PHILIPPINES, dormant for 50 years, erupted on Sept. 28, 1965, killing 208 persons.

Economy. Consideration of the possible effects upon the electorate of certain legislative measures influenced the action of Congress in 1965. Tax measures intended to increase government income were set aside, but the minimum daily wage was raised from 4 to 6 pesos. In view of Congress' failure to pass his Omnibus Tariff Bill, President Macapagal, by executive order, revised the existing tariff in an effort to encourage new industries and discourage smuggling.

Although the Supreme Court affirmed the right of the Central Bank to retain 20% of exporters' foreign exchange receipts, the restriction was lifted on the bank's own recommendation late in the year. The Philippine peso was officially pegged at 3.90 to one U.S. dollar.

Foreign Affairs. On August 10 the United States and Philippine governments signed an agreement under which the United States renounced the right to exercise jurisdiction over Filipino citizens involved in offenses within the American military bases, and recognized the right of Philippine courts to exercise jurisdiction over Americans involved in offenses inside or outside base areas. The agreement was expected to remove sources of misunderstanding that could cause tension in Philippine-American relations. Agitation against the bases has alarmed the U.S. government because of their strategic importance in the Vietnam war effort.

Philippine-Indonesian relations reached a low ebb early in 1965, as each nation charged the other with subversion. The Philippines adopted a friendlier attitude toward Malaysia, but still withheld diplomatic recognition because of its unsettled claim to territory in the Malaysian state of Sabah.

FERDINAND EDRALIN MARCOS was elected the sixth president of the Philippines on Nov. 9, 1965, defeating incumbent President Diosdado Macapagal after a long and fierce campaign. Marcos, the nation's most decorated war hero and a brilliant congressman, has the reputation of being strong willed and unpredictable. Although he declared his intention to "set a new moral tone" at home and to maintain cordial relations with the United States, many observers were unsure of what course his leadership would take.

The son of a wealthy family active in politics, Marcos was born in Sarrat, Ilocos Norte, on Sept. 11, 1917. As a law student at the University of the Philippines, he chalked up records in scholarship and sports. During World War II he fought as a guerrilla officer beside American soldiers. Elected to the House of Representatives in 1949 and to the Senate in 1959, he became Senate President on April 6, 1963. Shortly afterward he left Macapagal's Liberal Party to become the standard bearer of the Nationalists.

Domestic Affairs. In January and November there were reports of Communist guerrilla activity among Huk tribesmen in northern Luzon, the scene of a rebellion in 1950. Although the outlawed Philippine Communist party has shifted to a "legal" phase, government security officials did not rule out the possibility of a renewal of the Huk movement.

Taal volcano, inactive since 1911, erupted on the morning of Sept. 28, 1965, bringing death and desolation to Mt. Taal Island in Lake Taal. The disaster claimed 208 lives.

PHILIPPINES · Information Highlights

Area: 115,707 square miles.
 Population: 32,629,000 (Sept. 30, 1965 est.).
 Chief Cities (1960 census): Quezon City, the capital, 397,990; Manila, 1,138,611; Cebu, 251,146; Davao, 225,712.
 Government: President—Ferdinand Edralin Marcos (took office Dec. 30, 1965); Vice President—Fernando Lopez. Congress—House of Representatives, 104 members (party seating, 1966: Liberals, 59; Nationalists, 36; Independents, 9); Senate, 24 members (party seating, 1966: Nationalists, 11; Liberals, 9; others, 4).
 Religious Faiths: Roman Catholics, 86% of population; others, 14%.
 Education: Literacy rate (1960)—72% of population aged 15 and over. Total school enrollment (1960)—5,124,442 (primary, 4,197,489; secondary, 564,197; technical, 94,553; higher, 268,203).
 Finance (1965 est.): Revenues, \$558,100,000; expenditures, \$627,400,000; public debt, \$889,300,000; monetary unit, peso (3.90 pesos equal U.S.\$1).
 Gross National Product (1963): \$4,332,000,000.
 National Income (1964): \$4,097,000,000; average annual income per person, \$131.
 Economic Indexes (1964): Manufacturing production, 145 (1958=100); agricultural production, 137 (1956-57=100); cost of living, 127 (1958=100).
 Manufacturing (metric tons, 1964): Sugar, 1,941,000; cement, 1,062,000; gasoline (1963), 990,000; wheat flour, 298,800; meat (1963), 205,000; cotton yarn, 14,160; lumber (1963), 1,138,000 cubic meters.
 Crops (metric tons, 1964-65 crop year): Rice, 4,002,000 (ranks 10th among world producers); maize, 1,299,000 (rank, 17th); abaca fibers (1963-64), 120,000 (rank, 1st); sweet potatoes and yams, 798,000.
 Minerals (metric tons, 1964): Chromite (1963), 456,206 (ranks 3rd among world producers); copper, 60,456 (rank, 12th); gold, 425,770 troy ounces (rank, 8th); iron ore, 1,367,000; bituminous coal, 127,000; lime, 78,000; silver, 851,814 troy ounces.
 Foreign Trade (1964): Exports, \$742,000,000 (chief exports: coconut products, \$246,000,000; sugar, \$148,300,000; wood, \$143,100,000; abaca, \$30,400,000); imports, \$868,500,000 (chief imports, 1963: nonelectrical machinery, \$115,970,000; motor vehicles, \$54,930,000; crude petroleum, \$50,220,000). Chief trading partners (1963): U.S. (took 46% of exports, supplied 45% of imports); Japan (took 27% of exports, supplied 18% of imports); West Germany (took 7% of exports, supplied 6% of imports).
 Transportation: Roads (1964), 34,308 miles (5,615 paved); motor vehicles (1964), 250,698 (automobiles, 115,524); railways (1963), 633 miles; merchant vessels (1964), 81 (432,000 gross registered tons); national airline, Philippine Air Lines; principal airport, Manila.
 Communications: Telephones (1964), 146,663; television stations (1964), 12; television sets (1964), 70,000; radios (1963), 1,220,000; newspapers (1962), 20 (daily circulation, 535,000).

PHILIPPINE PRESIDENT Ferdinand E. Marcos greets crowd on inauguration day, Dec. 30, 1965. With him on the reviewing stand are his wife, Mrs. Imelda Marcos, his mother, Mrs. Josefa Marcos, and his three children.

UPI

The fourth centenary of the Christianization of the Philippines was commemorated April 27 to May 3.

NICOLAS ZAFRA
Professor Emeritus of History
University of the Philippines

PHILOSOPHY

Present-day philosophy is divided into two distinct schools—analytic and speculative. The division is marked by a fundamental disagreement concerning the proper nature and function of philosophy. The controversy between the two schools was heightened in 1965 when Richard Bernstein, of Yale University, editor of speculative philosophy's *Review of Metaphysics*, did not receive a tenure appointment. The incident, according to some observers, demonstrated anew the strength that analytic philosophy has in Anglo-American philosophy.

Phenomenology. Interestingly, phenomenology, which many analytic philosophers reject as speculative, has gradually increased its influence in the United States. Many books by the important French phenomenologist, Maurice Merleau-Ponty, were translated into English in 1965, as was Edmund Husserl's *The Phenomenology of Internal Time-Consciousness*. The journal, *The Monist*, devoted a special issue (January 1965) to "Linguistic Analysis and Phenomenology." Several contributors pointed out the similarities, rather than the differences, between phenomenology and linguistic or analytic philosophy.

Existentialism. Although existentialism has attracted greater popular interest than philosophical attention, the situation is gradually changing. The works of Jean-Paul Sartre are widely read and discussed, and his autobiography, *The Words*, was translated into English in 1965. Moreover, the *Journal of Existential Psychiatry* was expanded and renamed *The Journal of Existentialism* in order to devote more attention to existential philosophy. Maurice Friedman's critical reader, *The Worlds of Existentialism*, was one of many new books on the subject.

Martin Buber, the Jewish theologian, philosopher, and mystic, died in Israel on June 13, 1965. He has long been considered a leading advocate of religious existentialism. (See *NECROLOGY*.)

Science and Philosophy. Philosophers in the United States as distinct from their British and Continental counterparts, maintain a strong interest in science. For example, Carl C. Hempel's *Aspects of Scientific*

Explanation examines various concepts, theories, and rational beliefs in natural science, social science, and history.

Social Philosophy. Other American philosophers continued to express interest in social questions, no doubt as the result of the influence of pragmatism. Sidney Hook edited the symposium, *Law and Philosophy* (1964). Also, the Council for Philosophical Studies was founded during 1965 to deal with, among other things, "problems that concern the relation of philosophy to social and political problems."

American Philosophy. Two books on the history of American philosophy published late in 1964 attracted considerable attention during 1965. They were *John Dewey and Arthur F. Bentley: A Philosophical Correspondence, 1932-51*, edited by Sidney Ratner, and *Studies in the Philosophy of Charles Sanders Peirce*, edited by E.C. Moore and R.S. Robin. The Charles S. Peirce Society, at a meeting held in conjunction with the American Philosophical Association's eastern division meeting in December 1964, commemorated the 50th anniversary of Peirce's death.

Traditional Areas of Philosophy. In metaphysics, Donald C. Williams published *Principles of Empirical Realism* in 1965. Late in 1964, Milton K. Munitz published *The Mystery of Existence: An Essay in Philosophical Cosmology*, dealing with the question "Why is there a world at all?" Munitz' book countered the views of both theists and positivists.

In the history of philosophy, Jacob Loewenberg published his "Carus Lectures" under the title *Hegel's Phenomenology, Dialogues on the Life of Mind*. Other 1965 publications included *Aristotle's Vision of Nature*, the collected lectures of F.J.E. Woodbridge (1867-1940), and *Hegel*, by Walter Kaufmann.

In ethics, Jacques Maritain published *Moral Philosophy: An Historical and Critical Survey of the Great Systems* (1964). Arthur E. Murphy's posthumously published "Carus Lectures" were entitled *The Theory of Practical Reason*. In logic, W.V.O. Quine published *Set Theory and Its Logic* (1964).

UNESCO Directory. The *International Directory of Philosophy and Philosophers* was published in 1965. It brings together detailed information on philosophy in 90 countries or areas of the world.

State University of New York at Buffalo

PHOTOGRAPHY

NEWSPAPER NATIONAL SNAPSHOT AWARDS

PHOTOGRAPHY

Advances in photography in 1965 provided more versatile tools for the professional photographer, more sensitive materials for the scientist, and increased convenience for the amateur. Trade was stimulated by the midyear repeal of the federal excise tax on manufacturers, which had amounted to 5 or 10% of the cost of most photographic equipment. The International Photographic Exposition, held in New York City in May 1965, presented a great variety of new apparatus and sensitive materials.

Super-8 Movie Equipment. An innovation that had a great impact on the field of photography in 1965 was the commercial introduction of the Super-8 movie format, which provides a larger picture area and better sound quality than the regular 8-mm format. The new Super-8 system has a 50% larger image, a higher frame rate (18 frames per second), and smaller sprocket holes. The higher speed of the film through the camera and projector provides better fidelity in sound movies.

All Super-8 movie cameras accept a square plastic cartridge containing 50 feet of film. Code notches on the cartridge set the control system of automatic cameras for the proper film type and speed. Acetate-base film of conventional thickness unwinds from one of two coaxial cores, travels over a pressure plate at the exposure aperture, and passes to the other core. This design prevents film from being run inadvertently through the camera twice. The Super-8 system is designed primarily for a color film balanced for artificial light. A filter, built into all cameras to convert the film to daylight use, is displaced when a movie flood lamp is fitted on the camera.

Many manufacturers introduced Super-8 cameras and projectors that range from simple models to elaborate professional equipment. Automatic expo-

sure control, electric drive, and zoom lens—special-equipment features only a short while ago—are now practically standard items.

The Eumig Viennette Camera is remarkable for its boldness and elegance of styling. The DeJur Electra VII Camera has an $f/1.8$, 4-to-1 power zoom lens. The Bell and Howell Autoload Camera has overcome the diffraction troubles usually present when short-focal-length movie camera lenses are stopped down to small apertures. A tiny spot of a neutral coating deposited in the center of the lens permits light transmittances equivalent to $f/64$.

Single-8 Equipment. In the Single-8 system, introduced by Fuji of Japan, the design of film components—picture, sound track, sprocket holes—is the same as that for the Super-8 system, but the cartridge design is different. The flat, tall, plastic cartridge contains two tandem cores that hold a 50-foot length of thin polyester-base film, which provides 50% more footage in a given space than is possible with heavier acetate bases. Code notches on the cartridge operate the automatic exposure control for proper film speed setting. The shape of the cartridge permits the design of slim, pocketable cameras, such as those made by Fuji.

Versatile Super-8 Cameras. For nonamateur applications of the Super-8 system—educational films, for example—there are cameras of great versatility. The Pathe Professional Reflex DS 8/BTL automatically can thread a 400-foot roll of double Super-8 perforated film. Other features include a behind-the-lens exposure control system, speeds of 8 to 80 frames per second, a variable shutter, and a frame counter. The Beaulieu S 2008 Camera, which has many similar capabilities, also has provisions for synchronous operation with an external tape recorder. J-M Developments, Inc., is developing an optical sound system for use with Super-8 Eastman Color release prints.

NEWSPAPER NATIONAL SNAPSHOT AWARDS

SECOND-PRIZE PHOTO in 1965 Newspaper National Snapshot Awards, by Donald Kearns, Andover, Mass., was praised for humor and technical quality.

ADROIT CAMERA WORK by Robert L. Meyers won top honors in the 1965 Newspaper National Snapshot Awards.

Honeywell introduced the Elmo Tri-o-Matic Camera, which uses different inserts to adapt it for Single-8 or Super-8 cartridges or conventional Double-8 rolls. Reverse filming in Single-8 and Double-8 format can be used to make lap dissolves.

Because the main distinction between Super-8 and Single-8 systems is in the camera cartridge, the two systems are practically identical with respect to editing, splicing, and projection equipment. Yashica, Kalart, and Atlas-Warner have developed film editors for Super-8 and Single-8 films. The Craig Master Six Splicer will make splices of any 8-mm or 16-mm films.

Projectors. The Eumig Mark M Projector for Super-8 films features a quartz-iodine lamp, automatic threading, and a zoom lens. One DeJur Super-8 projector has a small integral rear-projection screen for private viewing. Another DeJur model handles interspersed regular-8 and Super-8 films; a turn of a knob adjusts the projection gate and pulldown mechanism for the different formats. Kodak also makes a projector that will show both 8-mm formats. The Bolex 18-5 Projector, which can be fitted with long-focal-length lenses for use in large halls, has provisions for slow-motion projection and synchronization with a separate tape recorder. Kodak, Fuji, and Eumig have models for magnetically striped sound film.

Still Cameras. The 35-mm single-lens reflex camera with behind-the-lens exposure measurement is becoming more popular. The Honeywell Pentax Spotmatic contains a pair of cadmium sulfide (CdS) cells that measure the light focused on the ground glass. The Canon Pellix uses a stationary, extremely thin pellicle to direct a portion of the light to a viewing screen. A CdS cell mounted on a swinging arm just in front of the exposure plane flips aside shortly before the shutter operates.

The Leicaflex, announced in 1965, contains many

features of other single-lens reflex cameras, and it has a few extras. The electronic flash is synchronized at 1/100 second, and the top shutter speed is 1/2000 second. A series of special achromatic close-up lenses, offered for the Leicaflex, do not require extension rings or bellows, and thus retain in close-up photography the automatic features of the lenses.

Single-frame (or half-frame) 35-mm cameras with many automatic features were presented in 1965. The Olympus Pen-EM Camera is electrically operated, including film advance and rewind. A CdS cell, which controls an electronically actuated leaf shutter, monitors light intensity during exposure. The Yashica Electro-Half Camera has an electronic shutter. Late in 1965, Kodak provided single-frame mounting services at its processing laboratories.

Many new cameras have simplified loading systems. In 1965, Ricoh, Voigtlander, Yashica, Argus, Kodak, and Imperial showed new models that use the 126-size (Instamatic) cartridge. The Rapid System of loading 35-mm film cartridges is being incorporated in many German and Japanese cameras. Rapid cartridges may be used in double-frame and single-frame cameras, and in square-format cameras, such as the Fujica Rapid S and S-2. The Canon QL film-loading system, used in the new Canonet QL camera, accepts standard 35-mm cassettes. A shaped spring-steel plate and guide rollers lead the film to the take-up spool. The film is rewound into its original cassette.

A modular component system introduced in 1965—the Graflex xl Camera System—has quickly interchangeable components that include eight lenses (47 to 180-mm) set in Synchro-Compur shutters; normal backs that accept 120- and 220-size rolls, 70-mm film, and wide-angle camera bodies; and different film and Polaroid Packs. The Koni-Omega Rapid Camera is a functionally designed roll-film camera that

makes 10 exposures on 120-size film or 20 exposures on 220-size film held in interchangeable backs.

The Yashica Atoron Ultraminiature Camera uses 9.5-mm film in Minox-type cartridges. It has an 18-mm, $f/2.8$, fixed-focus lens.

The direct-color Fotochrome Camera, announced in 1965, uses a special sensitive material that is developed directly as a color print. No negative is produced. The camera has a 45° mirror behind the lens to provide optical reversal of the image, as is necessary in any direct print system. Other features include automatic exposure control, an $f/4.5$ lens, and an integral flash unit.

A special camera designed for Gemini astronauts by J.A. Maurer, Inc., has a 160° wide-angle lens coverage and a 2-mm effective focal length. It makes still exposures or motion pictures on 16-mm film.

Instant-Developing Cameras. The Crislin Instacamera, introduced by the Camera Corporation of America in 1965, produces finished black-and-white prints in one minute. It is loaded with a special cartridge that contains sensitive material and chemicals. Model 20 of the Polaroid Swinger Camera uses 3000-speed film and delivers black-and-white prints in 10 seconds. The correct exposure setting is determined by the photographer who matches the intensity of the reflected scene illumination against an internal standard provided by a very small electric lamp. In making this setting, the aperture of the 100-mm lens varies between $f/17$ and $f/96$, with the shutter speed fixed at $1/200$ second.

Polaroid introduced apparatus to use its instant-developing materials for three special applications. A modular close-up camera for medical and technical use, which produces images that are one fourth, 1, 2, and 3 times natural size, has an electronic flash ring around the lens for shadowless lighting. A portrait system, providing six poses on a 4-by-5-inch format, gives an instant proof print as well as a film negative for enlargements. An identification photograph system makes laminated color or black-and-white badges and cards that contain a portrait and printed data.

Lenses. Afocal supplementary lenses of the Barlow type, such as Teleextenders and similar lenses, are a popular accessory for 35-mm single-lens reflex cameras. These lenses, placed between the prime lens and the camera, produce an effective focal length two or three times that of the prime lens alone.

The basic unit of Enna Auto-Magic Interchangeable Lens System (Enna Optical Works, Munich) is an automatic diaphragm mechanism that acts as a holder for special bayonet-mounted lens groups. Seven lens groups, with 24- to 240-mm focal lengths, are offered. The diaphragm mechanism is available in forms to fit many single-lens reflex cameras.

Several special-purpose lenses are of particular note. The Medical-Nikkor lens (200-mm, $f/5.5$) for the Nikon F Camera, which has a xenon flash tube that encircles the lens, is designed to work at magnifications of one fifteenth to 3 times. The magnification is automatically recorded on the film. The Kinoptic Tegea lens (9.8-mm, $f/1.8$) for 35-mm motion picture cameras encompasses a 108° field of view. A special lens for microphotography, developed by Dr. Frank Back, gives a reduction of 500 times. The lens forms the image in the plane of its rear surface, against which the film is placed for exposure. This lens is a key part of an information storage and retrieval system that achieves enormous

compression of data by means of this great reduction.

Shutters. Electronic shutters were introduced by Copal of Japan and by Compur and Prontor of Germany. Instead of using mechanical or pneumatic devices, these between-the-lens leaf shutters have electronic circuits to control the duration of the exposure. The Copal Elec shutter provides continuously variable exposure times that range from 2 minutes to $1/500$ second. It is used in the Yashica Electro-Half Camera, in which a CdS cell determines the proper time, and a 5.6-volt mercury battery provides the power. The Prontor-Press Electronic Shutter uses high-precision resistors and capacitors for electromagnetic control of the shutter operating springs. The Compur Electronic Shutter 5FS is contained in a sleek, uncluttered housing. A remote-control box connected by an electric cable has dials for setting shutter speed and lens aperture, and for cocking and releasing the shutter. Rodenstock, Schneider, and Voigtlander offer 45 lenses mounted in the new Compur shutters.

Exposure Meters. The Gossen Sinarsix Focal Plane Exposure Meter provides a behind-the-lens exposure measurement for cameras with 4-by-5-inch and 5-by-7-inch formats. The sensitive element, a $1/10$ -square-inch area on the end of a long probe, may be positioned at the focal plane to read the relative brightness of individual elements in the scene to be photographed. Behind-the-lens exposure measurement, which was extended to these large-format cameras, has been a popular feature in modern 35-mm cameras.

The Minolta Viewmeter 9 is a CdS meter with a 9° acceptance angle. The Honeywell Pentax $1^\circ/21^\circ$ Exposure Meter is a reflex viewing unit that reads a 1° spot in the center of a 21° field.

Sensitive Materials. Dynachrome films have new higher ASA speed ratings—ASA 25 (daylight) and ASA 40 (tungsten light). Agfachrome CK17 film, Type A, is available in Super-8 and Double-8 packaging. Fuji offers ASA 25 reversal color film and ASA 50 and ASA 200 reversal black-and-white films in Single-8 cassettes. Kodak Panatomic-X Film provides improved antihalation protection by using a dye under the emulsion that is bleached during processing. Eastman Ektachrome EF films for ambient-light photography and color television news reporting have a wide exposure latitude, which is adjustable in processing. The new process at 100°F is three times as fast as the previous process. Kalvar Instant 80 Film is a general-purpose, nonsilver-halide, microimage print film that is exposed by light and cleared by an ultraviolet flash. Wet processing is not involved.

A new type of plate for astronomy, designed at the Kodak Research Laboratories, is so sensitive that the size of the photographable universe is more than doubled. The finding was confirmed by tests at Mt. Wilson and Mt. Palomar observatories.

In 1965 Ansco introduced Allura Paper, a high-speed, warm-tone enlarging paper for portrait printing that is available in five surfaces. New Kodak Ektacolor papers provide better dye stability, truer colors, and simplified processing to suit the needs of photofinishers and professional photographers.

Lighting. The amateur photographer's dilemma over using white or blue flash bulbs with color films appears to be solved by a mutual agreement between bulb and film manufacturers. Blue bulbs are now recommended with all amateur films, both color and black-and-white. General Electric's new AG-3B

UPI

KYOICHI SAWADA, who won grand prize in World Press Photo Contest, took this picture of two U.S. soldiers helping comrade who was wounded in ambush in Vietnam on November 17.

WAR NEWS PHOTOGRAPHY FROM VIETNAM

The war in Vietnam is being photographed by a group of courageous men who daily risk their lives to capture on film the horrifying reality of battle. On this page are shown examples of the work of three outstanding photographers—men whose artistry and sense of drama record the cruelty and pathos of the "dirty war" in Southeast Asia.

UPI

WIDE WORLD

HORST FAAS, a Pulitzer Prize winner in 1965, snapped picture of injured Vietnamese girl hobbling to a helicopter.

NGUYEN THANH TAI took photo of two Vietnamese soldiers carrying dead comrade out of rice paddy in Vietnam.

WILLIAM VANDIVERT

PHOTOGRAPH of chessmen (l.) was taken by using conventional camera and light to record 2-dimensional image on photographic film. Hologram (c.), a photographic film record of chess scene, was made by using laser light. Image (r.), reconstructed by passing laser beam through hologram, appears as 3-dimensional scene.

bulb gives one third more light than the AG-1B, which has the same size.

The Sylvania Flashcube—four independent flash bulbs in individual reflectors set within the four sides of a plastic cube about one inch on a side—has sparked a considerable redesign of cameras, and it may change picturemaking habits. Cameras designed for the cubes have a rotating socket to grip the base of the cube and to make electrical contact. Cube rotation is linked to film transport in the new Kodak Instamatic cameras, and four pictures can be made in five seconds. General Electric also makes flashcubes, and Yashica makes a device to adapt flashcubes to cameras.

The Honeywell Auto-Strobonar electronic flashgun eliminates the need for computing lens apertures from flash exposure guide numbers. After film speed and lens aperture have been set on a dial, a photocell in the gun housing responds to light reflected from the subject and electrically quenches the flash at the proper moment. Flash durations of 1/50,000 to 1/1000 second are obtained, depending on the nature and distance of the subject.

Single-ended quartz-bromine (halogen cycle) lamps can be used with a focusing device to provide spotlight or floodlight, as in the GE Mardi Gras Movie Light.

Processing. Stabilization processing of photographic papers is used when rapid delivery is necessary and long-term storage is not essential. Ilford's new Ilfoprint System includes a stabilization processing machine, chemicals, and high- and low-contrast papers of projection and contact speeds. The Kodak "Q" System is a two-bath stabilization system for the rapid production of intermediate prints of engineering drawings. If permanent images are desired, the stabilized papers may be fixed and washed in the usual manner. The system includes processor, chemicals, and papers. Stabilization processing is also used in the Minolta Quick-mat Printer—a countertop black-and-white print maker for photo shops—that automatically produces 3-by-4¼-inch prints from 16-mm to 35-mm negatives in 20 seconds. The printer is equipped with push buttons that control exposure and contrast. Coin-operated models are available.

The Kodak Versamat Film Processor Model 5 is a compact device that processes and dries sheet films (up to sizes of 5 by 7 inches) and roll films (from

16 mm to 5 inches wide and up to 200 feet long) at rates up to 10 feet per minute.

Minicol II Developer Concentrate (Edwal Scientific Products), diluted seven times, develops slow, fine-grain films.

Holography. An interesting use of laser light for making photographs recently has been demonstrated. Photographic film, exposed to the coherent laser light reflected from an object, records a pattern of wave fronts without the use of conventional image-forming devices, such as lenses, pinholes, and concave mirrors. The photographic record is called a hologram. The developed film shows only diffuse patches when viewed under ordinary conditions, but when it is properly viewed by coherent light from a laser, the original scene reappears in three dimensions. One may even look around objects in the reconstructed image by shifting one's viewpoint. A further interesting feature is that any part of the film, such as a small piece snipped from the corner, side, or center, is capable of reconstructing the entire original scene when laser light is passed through the film.

Literature. Several books published in 1965 on the art, science, and history of photography are of particular note. *Xerography and Related Processes*, by J.H. Dessauer and H.E. Clark (Focal Press), covers the theory and practice of xerography. Chester Carlson, the inventor of xerography, contributed a chapter on the history of electrostatic image recording. *Electrophotography*, by R.M. Schaffert (Focal Press), is also of note. *Light Sensitive Systems: Chemistry and Application of Non-Silver Halide Photographic Processes*, by Jaromir Kosar (Wiley), and *Photographic Gelatin*, by R.J. Croome and F.G. Clegg (Focal Press), are other significant additions to the scientific literature on photographic processes.

NASA published several series of photographs of the moon taken by the Ranger 7 cameras (Government Printing Office).

Edward Weston: Photographer, an Aperture Monograph edited by Nancy Newhall, contains many of his photographs. *Antique and Classic Cameras*, by Harry I. Gross (Chilton), describes apparatus that was significant in the history and development of photography.

MARTIN L. SCOTT
Technical Staff Assistant, Applied Photography
Division, Research Laboratories
Eastman Kodak Company

THE ANTIDEUTERON, an elementary particle, was discovered after protons had left the alternating gradient synchrotron (high energy particle accelerator) at Brookhaven National Laboratory. The giant circular synchrotron magnet ring accelerates protons in a near vacuum. The technician is adjusting controls of the evaporation pump, at right, which maintains vacuum.

BROOKHAVEN NATIONAL LABORATORY

PHYSICS

Although 1965 was largely another year of consolidation and fence-mending in most areas of physics, there were two notable developments: the discovery of the antideuteron, and experiments which cast doubt on the validity of time-reversal invariance.

Antideuteron. Elementary particle physics continues to be one of the most exciting and rapidly changing areas of physics. The antideuteron was observed by a team of physicists working with the Brookhaven National Laboratory's alternating-gradient synchrotron (high-energy particle accelerator).

In the general scheme of things, physicists believe that every particle has its antiparticle. Thus, every neutron has an antineutron; every proton, an antiproton; and every electron, an antielectron, or positron. Positrons, for instance, are not inherently unstable. Instead, their antiparticles, electrons, exist in abundance, and positrons and electrons are mutually annihilative. The discovery of antiparticles has led to endless speculative possibilities about antimatter in bulk; for example, the possible existence of antiatoms, an antiearth, and even an anti-universe.

While various antiparticles have been produced individually, no compound of antiparticles (or piece of antimatter) had been observed. However, using the 30-Bev proton beam from the Brookhaven synchrotron in conjunction with a maze of bending magnets, Cerenkov counters, and complex electronics, a group of physicists led by Leon M. Lederman observed the antideuteron, which is made up of the antineutron and antiproton of the heavy hydrogen atom. It now seems reasonable to expect to find antitritons, antialphas, and other composite particles of antimatter.

Time-Reversal Invariance. One of the basic rules of physics during the past decade has been the CPT (charge conjugation, parity, time reversal) conservation theorem. The CPT theorem states that the laws governing antimatter are the same as those governing matter, except that antimatter must be viewed as if in a mirror and timed with a clock that runs backward. Charge conjugation relates matter and antimatter. Parity relates a reaction to its mirror image; that is, the parity rule asserts that a particle has no intrinsic right- or left-handedness. Time-reversal invariance refers to the principle that the direction of the flow of time should have no effect on the validity of physical laws.

Originally it was believed that C, P, and T are

all conserved. However, in early 1957 a theory advanced by T.D. Lee and C.N. Yang that parity is not always conserved for weak interactions was proved true. Particles do have a right- or left-handedness. At the same time, it was found that charge conjugation is also violated in weak interactions.

When it was found that C and P are not conserved, scientists wondered whether the product CP is conserved. If CP is not conserved, but CPT is (conservation of CPT is still generally assumed to be true), then T is not conserved. An experiment with the Brookhaven synchrotron was made in order to examine this question.

The experimenters, from Princeton University, studied the decay of the neutral K mesons, K^0_1 and K^0_2 . Mesons are subatomic particles that act to bind together the protons and neutrons that form the nuclei of atoms. For CP to be conserved, K^0_1 should be able to decay into two pi mesons (pions), π^+ and π^- , but K^0_2 should not. However, in about 45 cases out of 22,700, K^0_2 did decay in this fashion.

Theoreticians sought to explain this phenomenon by something other than the violation of CP conservation. Independently and at almost the same time, two groups of physicists postulated that the results shown by the decay of the K^0_2 meson are caused by a fifth force in nature. An opposite effect on the K mesons and on their antiparticles by the new force would account for the results obtained. (To date, four forces of nature have been discovered: gravity, electromagnetism, and the two nuclear forces, strong interaction and weak interaction.)

The new theories also proposed a neat way of testing the existence of the "fifth force." The number of two-pion decays would be proportionate to the square of the energy of the K meson. An experiment to check this effect was performed at the CERN synchrotron in Switzerland. The experimental results confirmed the original Princeton work, but disagreed with the predictions of the "fifth-force" theories.

The situation seems more confusing than ever, since physicists find the denial of time-reversal invariance very difficult to accept. Active study and speculation in this area continues.

Neutrinos. High-energy (elementary particle) physicists have discovered many new particles, especially in the last decade. They are continuing their efforts to classify and understand these constituents of the "nuclear zoo." A major problem has been to define the meaning of the term "elementary." Of the hundred or so observed particles, many are not truly elementary particles. Instead, they are

"resonances" or excited states based upon the elementary particles.

Of all of these particles, the most perplexing is the neutrino. The neutrino has no rest mass and no electrical charge. It interacts with matter so weakly that a neutrino can travel through a million miles of solid lead without hitting anything.

The existence of a new particle was suggested in 1931 by Wolfgang Pauli to explain away some difficulties in beta decay (spontaneous disintegration of an atomic nucleus by emitting an electron or positron). The energy of the observed particles was always less than predicted; the function of the new particle was to carry off the missing energy. Enrico Fermi later named this particle "the little neutral one," or neutrino.

The ordinary beta decay process actually produces antineutrinos. Antineutrinos interact with protons to produce neutrons and a positron. This reaction was used by F. Reines and C.L. Cowan to first prove experimentally the existence of the neutrino.

Later it was found that there were two kinds of neutrinos (and antineutrinos). The one associated with beta decay was called the electron-type neutrino. The other type arises from the decay of a pimeson (pion) into a mu meson (muon) and a neutrino. This is called a muon-type neutrino.

The new area of interest may well be called neutrino astronomy. High-energy protons (from cosmic rays) strike air atoms in the upper atmosphere. Some pions are produced; these decay into muons and neutrinos. Most of the neutrinos go straight through the earth, but a few interact with nuclei in the rock and create muons. Studying these muons tells about the neutrinos, and this in turn yields information about the cosmic rays.

The practical problem is to differentiate between muons created in the upper atmosphere and those created in the earth. To shield against the muons created in the atmosphere, Reines performed experiments at the bottom of a two-mile-deep gold mine in South Africa. He used 36 tanks containing 4,400 gallons of mineral oil to catch the muons, and apparently succeeded in detecting seven neutrinos that had been produced naturally. Thus, in order to study the far reaches of space, physicists have gone into the depths of the earth.

Laser Photography. The development, improvement, and application of lasers is of major interest. Lasers possess great research possibilities, as well as many technological applications. One of the most exciting developments, especially to the nonspecialist, is the development of laser photography.

In the ordinary photographic process an illuminated three-dimensional scene is recorded as a two-dimensional image on a light-sensitive surface. There is an alternative, relatively new approach called wave-front reconstruction. In this process the reflected light waves themselves, rather than their image, are recorded. The record, called a hologram, is a mass of blobs and whorls, and bears no resemblance to the original object. All of the information is there, but in a rather complex code. Creating a recognizable image from the hologram is the reconstruction process. The waves, which are effectively captured and frozen in the original "photographic" process, are later released from the hologram. They proceed as if just created, and the observer sees the image as he would with two eyes rather than through a single lens as on a photographic print.

Holography is not new, but all efforts in the

past have been severely limited by the lack of a suitable source of coherent light (light whose waves are all in phase). A laser is, of course, just such a source of coherent light.

The process involves no lenses, the object is illuminated by coherent light, and a beam of coherent light is sent directly to the photographic plate. The whorls observed on the plate are the interference patterns formed.

Hologram television and motion pictures would be almost the ultimate in realism. Practical difficulties abound in the present state of the art. The most important immediate results probably will be in research areas such as electron microscopy. However, it is hoped that laser photography soon will become more than just a laboratory technique.

200-Bev Accelerator. In 1965, almost every state showed great interest in being the location for the proposed 200-Bev accelerator (which is to cost several hundred million dollars) and the national high-energy physics laboratory which surely will grow up around the accelerator.

More than 100 proposals have been submitted to the Atomic Energy Commission. In late 1965 a panel of experts organized by the National Academy of Sciences was in the process of selecting the much smaller number of proposals to be given further consideration. The final site will be selected by the AEC.

PLANTS. See AGRICULTURE—Agricultural Research; BOTANY; GARDENING AND HORTICULTURE.

PLASTICS

The plastics industry registered a 10% production increase in 1965. Leading materials were polyethylene, vinyl, and styrene plastics. The two major markets were construction (2.5 billion pounds) and packaging (1.5 billion pounds). Expanding use of plastics was recorded in the automobile, appliance, agricultural, machinery, and chemical plant equipment industries.

New materials, including Du Pont's ionomers and polyimides and General Electric's polyphenylene oxide, have a higher heat resistance for aerospace applications than products heretofore developed.

New uses were made of transparent plastics containing about 2% of photochromic compounds that darken in seconds on exposure to bright light, but as quickly return to normal when the light is removed. These plastics were first used commercially in sunglasses and visors.

The Skoda Works in Czechoslovakia produced 62-foot electric locomotives with 3,600-pound reinforced plastic bodies that were 3,000 pounds lighter

PLASTIC LOCOMOTIVE BODIES are produced by the Skoda Works, Czechoslovakia, using glass-fiber polyester resin material. They are 1½ tons lighter and much less expensive than their new all-steel equivalents.

MODERN PLASTICS MAGAZINE

than their steel equivalent. The use of the glass-fiber polyester-resin material also resulted in cost reduction and a faster production rate.

Provisional regulations for constructing reinforced plastic yachts with hulls between 20 and 120 feet long were published in 1965 by Lloyd's of London.

Consumption of plastic pipe in the United States in 1965 was estimated at 200 million pounds. Cleveland became the first large U.S. city to approve plastic pipe for drain, waste, and vents in building construction.

The 1965-model automobiles averaged 35 pounds of plastics per car, up 15% over 1964. This figure was increased in 1966 models, in which padded instrument panels and windshields with thicker plastic interlayers became standard safety equipment. In related products, a one-quart pouch container for motor oil made of polyvinyl chloride film produced a savings of 1.4 cent per container over metal cans. The lubricant container market is estimated to use 1.5 billion quart containers per year.

POLAND

An election campaign, in which almost all the candidates were Communists or closely affiliated with them, dominated the news from Poland in the first half of 1965. Since they were given no choice, the voters reconfirmed the Communist regime in power. Abroad, Poland sought closer economic ties with the Common Market countries and with Britain in order to bolster an economy that offered very little to the Polish consumer.

Elections. In early 1965 a vigorous government campaign was waged in preparation for the quadrennial parliamentary elections held on May 30. Although voters were not allowed to ballot for any genuine opposition parties, in some areas they could express a preference among several Communist-approved candidates. The government also tried to produce a high voter turnout as a sign of popular confidence in the regime.

It was reported that 96.6% of the qualified citizens cast ballots, as compared with 94.8% in 1961. The leader of the Communist party, Władysław Gomułka, headed the list in his own electoral district in Warsaw. In Kraków, however, Premier Józef Cyrankiewicz finished last among eight candidates.

The officially announced election figures showed virtually no change from the outcome of 1961. Of

POLAND · Information Highlights

Net Material Product (1964): \$124,075,000,000.

Economic Indexes (1964): Industrial production, 169 (1958=100); agricultural production, 152 (1949=100); cost of living, 108 (1958=100).

Manufacturing (metric tons, 1964): Cement, 8,761,000; crude steel, 8,568,000; wheat flour, 1,824,000; meat (1963), 1,571,000; sugar, 1,794,000; gasoline (1963), 285,000; cotton yarn, 178,800.

Crops (metric tons, 1964): Potatoes, 48,065,000 (ranks 2nd among world producers); sugar beets, 12,451,000 (world rank, 5th); rye, 6,956,000 (world rank, 2nd); wheat, 3,068,000 (world rank, 16th); oats, 2,236,000 (world rank, 6th); barley, 1,268,000 (world rank, 13th); tomatoes (1963), 295,000; onions (1963), 272,000.

Minerals (metric tons, 1964): Coal (1963), 113,150,000 (ranks 6th among world producers); salt, 2,242,000 (world rank, 10th); gypsum, 585,000 (world rank, 15th); zinc, 151,199 (world rank, 8th); iron ore, 2,680,000; sulfur, 294,000; crude petroleum, 2,092,000 barrels.

Foreign Trade (1964): Exports, \$2,096,000,000 (chief exports, 1963: coal, \$207,200,000; rolled steel, \$129,300,000; ships and boats, \$90,100,000; coke, \$59,300,000); imports, \$2,072,000,000 (chief imports, 1963: wheat, \$101,300,000; petroleum products, \$98,100,000; iron ore, \$97,800,000). Chief trading partners (1963): USSR (took 35% of exports, supplied 33% of imports); East Germany (took 7% of exports, supplied 13% of imports); Czechoslovakia (took 8% of exports, supplied 10% of imports).

Transportation: Roads (1964), 196,520 miles (35,470 paved); motor vehicles (1964), 369,378 (automobiles, 188,192); railways (1963), 16,947 miles; merchant vessels (1964), 164 (876,000 gross registered tons); national airline (1964), Polish State Air Service (LOT); principal airport, Warsaw.

Communications: Telephones (1964): 1,088,686; television stations (1964), 35; television sets (1964), 1,500,000; radios (1963), 5,701,000; newspapers (1963), 41 (daily circulation, 4,490,000).

EUROPE

ASIA

AFRICA

Area: 120,359 square miles.

Population: 31,420,000 (Mar. 31, 1965 est.).

Chief Cities (1964 est.): Warsaw, the capital, 1,232,000; Łódź, 737,000; Kraków, 509,000; Wrocław, 466,000.

Government: President, Council of State—Edward Ochab; Premier—Józef Cyrankiewicz; Communist Party First Secretary—Władysław Gomułka. **Parliament (Sejm)**, 460 members; party seating (1965)—Communist Party (PZPR), 255; Populists (ZSL), 117; Democrats (SD), 39; others, 49.

Religious Faiths: Roman Catholics, 96.5% of population.

Education: Literacy rate (1960)—95% of population aged 14 and over. Total school enrollment (1962-63)—6,490,779 (primary, 5,117,319; secondary, 339,403; teacher-training, 109,906; vocational, 879,151; university, 45,000).

Finance (1965 est.): Revenues, \$72,980,000,000; expenditures, \$72,322,000,000; monetary unit, zloty (4.00 zlotys equal U.S.\$1).

460 seats in the Diet (Sejm), 255 belong to the ruling Communist party (PZPR), with the two front or affiliate parties, the Populists (ZSL) and Democrats (SD) receiving 117 and 39 seats, respectively. There are also 49 so-called independents in the Sejm, of whom 13 have Roman Catholic lay affiliations.

Church-State Relations. An important theme of the campaign was Gomulka's open appeal for the support of the Roman Catholic laity. This appeal, however, followed a number of bitter exchanges on church-state issues between the government and the primate of Poland, Stefan Cardinal Wyszyński. In February and again in April, the cardinal accused the regime of repressing religious worship and education, and of enslaving the citizenry.

Communist Party Politics. A significant development in the internal politics of the party was the transfer of the crack internal security troops from the jurisdiction of the Ministry of the Interior to the Ministry of Defense. As the Interior Ministry is headed by the politically ambitious General Moczar, leader of the so-called partisan group within the party, the move was widely regarded as one that strengthened Gomulka's moderate leadership.

Defections. Unrest and disillusionment at home seemed to find expression in a number of Polish defections to the West. The most publicized defections included those of the head of the Polish military mission in West Berlin, Władysław Tykocinski, in May; and of the Polish consul general in Stockholm, Edmund Michalski, in September.

Economy. On the economic front, Poland made some notable advances in her foreign trade; exports increased by 18.4% in 1964 over the previous disastrous year. But overall economic development was uneven because industrialization was favored over other sectors in the economy. The output of manufactured goods increased substantially, whereas agricultural output remained stagnant. The sorry plight of the consumer went unheeded for still another year.

Foreign Affairs. In 1965, Poland enjoyed an increasing number of diplomatic contacts with countries anxious to woo her politically and economically. In January, bilateral talks were held with the Soviet Union on the coordination of Polish and Soviet economic planning up to 1970. In April a Soviet delegation headed by Soviet leaders Leonid Brezhnev and Aleksei Kosygin visited Warsaw and pledged support of the Oder-Neisse line as Poland's western frontier.

At the end of March, Poland became the first eastern European nation to send an official delegation to Brussels for exploratory technical discussions with Common Market representatives. In September, Premier Cyrankiewicz made an unprecedented trip to Paris. He visited President de Gaulle and explored the latter's bid for closer relations between France and the countries of eastern Europe. In the latter part of September, Poland was visited by British Foreign Secretary Michael Stewart. Expanded trade, denuclearization of Europe, and an eventual German settlement were prominent themes in their talks. However, Poland's attempts to win British support for recognizing the Oder-Neisse frontier with Germany appeared to have failed.

While Poland seemed to improve her international position generally, relations with the United States worsened perceptibly. In connection with the war in Vietnam, the Polish government chose to echo the more belligerent tones of Soviet propa-

ganda. Symptomatic of the new trend were the expulsion in January of the American air attaché, Col. George F. Carey, and the bitter denunciation of American policy by Gomulka in his May Day speech in Warsaw.

From Dec. 30, 1965, to Jan. 1, 1966, U.S. Ambassador at Large W. Averell Harriman held talks in Warsaw with Polish officials on how a cease-fire might be achieved in the war in Vietnam.

University of California, Davis

POLAR REGIONS. See ANTARCTICA; ARCTIC REGIONS.

POLICE

The trend toward statewide police selection and training standards gained momentum during 1965. Florida and Ohio considered legislation setting minimum standards for police officers. California, New Jersey, and Oregon, passed legislation prescribing minimum selection and training standards. New York already had passed laws making it mandatory for a police applicant to complete a prescribed basic training course before entering police service.

The Metropolitan Police Department, Washington, D.C., adopted the cadet system as a recruiting device. Under this system, men are appointed to the force on graduation from high school, usually at age 18. After three years of on-the-job training, they take the competitive examination for regular appointment to the force as a police officer. This system of recruitment has worked successfully in departments in several cities and states.

The technological capability of electronic data processing for storing volumes of data and recalling required facts quickly has far-reaching implications for the American police field. In 1965, the states of California and Illinois began to explore the possibilities of establishing a central facility for the electronic data processing of criminal records and information.

Legislation designed to prohibit the use of lie detector tests as a condition of employment were introduced in the legislatures of New York, California, Illinois, Washington, and other states. Police leaders generally were skeptical of these attempts to discredit the polygraph and associated techniques.

The 72nd Annual Conference of the International Association of Chiefs of Police was held Oct. 2-7, 1965, at Miami Beach, Fla. Two pertinent topics on the agenda were the control and prevention of civil rights disturbances and the promotion of an efficient traffic stream on streets and highways.

More than 130 police executives met at the University of Oklahoma to discuss the law enforcement implications of the Civil Rights Act of 1964.

The United Nations invited 120 countries to participate in the Third Congress on the Prevention of Crime and the Treatment of Offenders, held at Stockholm, Sweden, Aug. 9-18, 1965. The delegates discussed two major themes: the prevention of criminal acts by young offenders, and the prevention of further offences by first offenders.

A study analyzing police philosophy, policy, and opinion, entitled *Juvenile Delinquency and Youth Crime: The Police Role*, was released by the International Association of Chiefs of Police in 1965.

V.A. LEONARD
Professor Emeritus of Police Administration
Washington State University

DEMOCRATIC congressional leaders in 1965 included (l. to r.) Vice President Hubert Humphrey; John McCormack, speaker of the House; Mike Mansfield, Senate majority leader; Carl Albert, House majority leader; and Hale Boggs, party whip.

WIDE WORLD

POLITICAL PARTIES

Officeholders of the Democratic party, under the skillful leadership of President Lyndon B. Johnson and with widespread public support, continued in 1965 to dominate American national politics. The president pressed for legislation aimed at helping to build his Great Society. He sought also to win a popular consensus for his policies. His sense of political timing, pressure, and accommodation, coupled with overwhelming majorities in Congress, brought a record of legislative accomplishment rarely matched in a single session.

But the president encountered some disaffection. Conservative Democrats, mostly in the South, opposed federal activity in the racial and welfare areas, while some liberal Democrats asserted that such programs were not sweeping enough. And there were Democrats, including Senator J. William Fulbright, chairman of the Committee on Foreign Relations, who criticized the administration's foreign policies. Scattered local elections on November 2 revealed that liberal Republicans could draw enough support even in big-city Democratic strongholds to defeat lackluster Democratic candidates.

Congress. When the 89th Congress convened on Jan. 4, 1965, Democrats outnumbered Republicans in the House 295 to 140 and in the Senate 68 to 32—the largest margins for either party since 1936. The House again chose John W. McCormack (D, Mass.) as its speaker, and the Senate re-elected Carl Hayden (D, Ariz.) president *pro tem*.

Republicans, by a vote of 73 to 67, elected Gerald R. Ford of Michigan to replace Charles A. Halleck of Indiana as minority leader. Melvin R. Laird of Wisconsin was elected chairman of the House Republican conference. Democrats continued Carl Albert of Oklahoma as majority leader. In the Senate, Mike Mansfield (D, Mont.) and Everett M. Dirksen (R, Ill.) were again chosen party floor leaders. Democrats elected Russell B. Long of Louisiana as party whip (assistant leader) on the second ballot, 41–25, over John O. Pastore of Rhode Island. He replaced Hubert H. Humphrey, who had been elected vice president in 1964.

The net Democratic gain of 38 seats and the defeat in 1964 of a number of conservatives sharply reduced the effectiveness of a long-standing coalition of Republicans and Southern Democrats in the House. Administration Democrats and some liberal Republicans joined forces to reduce the power of the Rules Committee to delay legislation.

By a vote of 157 to 115 on Jan. 2, 1965, House Democrats stripped committee seniority from John Bell Williams of Mississippi and Albert W. Watson of South Carolina for having supported Barry Goldwater, Republican nominee for president, in 1964. Watson resigned from Congress, joined the Republican party, and was reelected on June 15. The Mississippi Freedom Democratic party, a civil rights group with predominantly Negro membership, challenged the seating of the Mississippi House delegation on the ground that Negro citizens had been denied voting rights. The delegation (4 D, 1 R)

REPUBLICAN leaders, on March 11, urge U.S. action to ensure Negro voting rights. They are (l. to r.) Ray Bliss, national chairman-elect; Gerald Ford, House minority leader; Dean Burch, outgoing chairman; and Everett Dirksen, Senate minority leader.

WIDE WORLD

WIDE WORLD

JOHN M. BAILEY, chairman of the Democratic National Committee, "tended the store"—the national headquarters—in 1965, mindful that President Johnson was the party leader. Noting Republican gains in the South in 1964, Bailey warned that "the day of the one-party South is over." He set up a unit to help 71 freshmen Democratic congressmen win reelection in 1966, when they could not run on Johnson's "coattails." Bailey sought to end racial discrimination in the selection of convention delegates, and to guarantee that national candidates would be listed in every state (Alabama did not do so in 1964).

Bailey was born in Hartford, Conn., on Nov. 23, 1904. He graduated from the Catholic University in 1926, and from the Harvard Law School in 1929. He served in judicial and Democratic party posts during the 1930's. Bailey won control of the Connecticut Democratic party in 1946, and was elected chairman of the Democratic State Commission. He supported John F. Kennedy for the presidency in 1960, and was elected national chairman on Jan. 21, 1961.

was seated by a House vote of 276 to 148.

The liberal record of Congress brought praise from friends of the administration and derisive cries of "rubber stamp" from some Republicans. Major new legislation consistent with Democratic platform pledges included medical aid to the aged financed through social security, the first general federal aid to elementary and secondary education, changes in the immigration law, and a voting rights bill. Senator Dirksen played a major role in shaping much of the legislation; his influence with the administration was a notable feature of the session. (See CONGRESS; UNITED STATES.)

Party Organization. The Democratic party's national organization, basking in the election victories of 1964, was controlled from the White House. While its fund raising and promotional activities prospered, Republicans faced a rebuilding task. After a struggle, Dean Burch, a Goldwater supporter, resigned as chairman of the Republican National Committee. Ray C. Bliss, the Republican chairman in Ohio who had built a reputation for organizational skill, was elected national chairman on January 22 and took office April 1. Thereafter Goldwater's role in the committee and in the party declined rapidly, although he remained active in politics. On June 17 he announced the organization of the Free Society Association, with headquarters in Washington, to support conservative principles. The next day, Bliss criticized splinter groups as "destructive of party unity," but he observed later that "we are going to find a way to live with them and work with them." By mid-November the Goldwater organization had 20,000 members, but the former senator insisted that it would help the Republican party. More serious problems arose from the ultra-conservative John Birch Society, whose members tended to be loyal to the society rather than to the party, and whose influence, rarely extensive, was often divisive. By fall, all major Republican leaders

had urged Republicans to avoid the Birch society.

Meanwhile a Republican Coordinating Committee, composed of party leaders, was established to study issues. In September it advocated stronger local civil rights action and vigorous effort to improve the international balance of payments. The Republicans, having no mandate for national responsibility and generally pledged to support the administration in international crises, found it difficult to develop new issues. Governor William W. Scranton (R, Pa.) said, on August 12, that the party "is not, for the most part, serving as an effective instrument of the two-party system."

Prospects. Democrats watched two contenders for future national leadership. Vice President Humphrey necessarily adhered to the wishes of the president, and worried some liberals by campaigning in New York and Philadelphia for nominees supported by political "bosses." Senator Robert F. Kennedy, (D, N.Y.) seemed at times to taunt the administration by his own association with more liberal causes.

Richard M. Nixon, former vice president and Republican presidential nominee in 1960, was considered the leader among potential Republican presidential candidates for 1968, but the 1966 elections could change the picture. Governor Nelson A. Rockefeller (R, N.Y.) announced on July 25 that he would not be a presidential candidate in 1968. Election as mayor of New York City threw Republican John V. Lindsay into the national limelight despite his disinclination to identify himself with partisanship in a normally Democratic city. (See ELECTIONS; NEW YORK CITY.)

A clear lesson of the 1965 elections is that voters in big cities will shift party allegiance to support moderate liberals, with fresh programs, who are free from the image of machine control.

FRANKLIN L. BURDETTE
Professor and Director, Bureau of
Governmental Research, University of Maryland

WIDE WORLD

RAY C. BLISS, elected chairman of the Republican National Committee on Jan. 22, 1965, took office on April 1. He had secured the support of the party's leading moderates and conservatives. Sniping between the party factions troubled Bliss, who sought to avoid ideological controversy by asserting that he was a "technician" concerned with winning elections. He urged the party to reject extremists of the right and left. Bliss, a man of dawn-to-dusk energy, was praised for streamlining operations at the national headquarters.

Bliss was born in Akron, Ohio, on Dec. 16, 1907. He graduated from the University of Akron in 1935. Entering politics as a campaign worker, he was active in Summit County politics for many years, winning recognition for his painstaking attention to the details of political organization. Elected state chairman in 1949, he led the Republican party to a number of victories. The party suffered a noteworthy defeat in 1958 when it ignored Bliss's warning to leave a right-to-work proposal off the ballot.

POLLUTION

LITTON INDUSTRIES

AIR POLLUTION, an increasing problem in many of the world's commercial centers, is dramatically illustrated by this view of low-lying smog in New York City.

POLLUTION

The overshadowing event of 1965 for opponents of water pollution was the signing into law of the Water Quality Act by President Johnson. The changes in water-quality management envisioned as a result of the act are so sweeping that President Johnson told a group of congressmen: "I believe that with your help and your continued cooperation, water pollution is doomed in this century." Furthermore, industries showed a maturing sense of responsibility for their role in the pollution problem.

Water Pollution. The Water Quality Act establishes a Federal Water Pollution Administration, provides grants for research and development, increases grants for construction of municipal sewage treatment works, and authorizes the establishment of standards of water quality to aid in preventing, controlling, and abating the pollution of interstate waters.

Presidential Message. President Johnson said at the signing on October 2:

Today, we proclaim our refusal to be strangled by the wastes of civilization. Today, we begin to be masters of our environment. But we must act, and act swiftly. The hour is late, the damage is large. The clear, fresh waters that were our national heritage have become dumping grounds for garbage and filth. They poison our fish, they breed disease, they despoil our landscapes.

No one has a right to use America's rivers and America's waterways, that belong to all the people, as a sewer. The banks of a river may belong to one man or one industry, or one state, but the waters which flow between those banks should belong to all the people.

There is no excuse for a river flowing red with blood from slaughter houses. There is no excuse for

paper mills pouring tons of sulfuric acid into the lakes and the streams of the people of this country. There is no excuse—and we should call a spade a spade—for chemical companies and oil refineries using our major rivers as pipelines for toxic wastes. There is no excuse for communities to use other people's rivers as a dump for their raw sewage. This sort of carelessness and selfishness simply ought to be stopped; and more, it just must be reversed. And we are going to reverse it.

Federal Program. Congress authorized \$150 million annually for the construction of waste-water works. It limited federal payments to 30% of a contract price, but not more than \$1.2 million for any single contract, except metropolitan or regional works, which may receive grants up to \$4.8 million. Funds also may be provided to match state contributions. In addition, \$20 million was appropriated for each of the next four fiscal years to demonstrate new and improved methods of controlling the discharge of storm water (waste waters other than sewage) and overflows from combined storm-water and sanitary sewers into rivers, lakes, and tidal estuaries.

Combined Systems. The demonstration grants followed a preliminary appraisal by the Public Health Service of the pollutional effects of storm water and of overflows from combined storm-water and sanitary sewer systems. According to the Public Health Service, 59 million people—about half of the U.S. population served by sewers—live in 1,900 communities that fail to maintain entirely separate sewer systems to keep sanitary sewage apart from the cleaner storm water.

Historically, combined systems emerged during the Industrial Revolution of the early 19th century

when people began to cluster near factories, and storm drains were pressed into service to carry away human body wastes from habitations. Up to that time, these and other waste substances had been removed at night for use as fertilizer. Conversion of existing storm drains into combined sewers was, in essence, a crash program. Later in the 19th century, however, combined sewers were built as such in expanding urban complexes. It was recognized belatedly that this practice resulted in vicious pollution of the water courses into which the combined flows were emptied. Sewers, called interceptors, were then built to intercept the most grossly polluted waste waters of cities. These dry-weather flows were carried to points of discharge below the cities or to treatment plants that normally emptied their effluents (liquid wastes) in the natural drainage channels of the region. Only rarely were effluents discharged onto the land for irrigation.

In the United States, studies of combined sewerage systems have shown that an average of 3 to 5% of all raw waste water (at least 65 billion gallons annually) continue to be discharged by overflow from combined sewers to water courses. Most of the resulting gross pollution can be prevented by substituting separate systems for combined systems. Public Health Service studies show that the bacterial contamination of water courses by overflows from combined systems is far above accepted standards, and that large amounts of putrescible organic matter enter the receiving waters at the same time. It has also been shown that the first flush of storm water by itself may carry much the same kind and quantity of pollutants into water courses. In separate systems, storm sewers collect runoff from rainfall and discharge it into nearby water courses, and sanitary sewers conduct the waste waters from household and industry to treatment plants or outfalls (outlets to a water course).

Leadership Change. The Water Quality Act of 1965 transfers administration of water pollution control from the surgeon general of the Public Health Service to the secretary of health, education, and welfare. The latter is empowered to add an assistant secretary and an administrator or commissioner to direct the program. To indicate the importance of the reorganization of the water pollution control program within the department, House and Senate conferees recommended that the new assistant secretary

and the administrator "be individuals of the highest caliber with the finest possible background in the field of water pollution, so that this program can be accelerated."

Water pollution studies were begun in 1912 at the federal level when Congress directed the Public Health Service to investigate "the diseases of man and conditions influencing the propagation and spread thereof, including sanitation and the pollution, either directly or indirectly, of the navigable streams and lakes." Soon thereafter, a survey of the Ohio River was started under epidemiologist Wade Hampton Frost. Engineers, chemists, and biologists initially were recruited for this task as civil servants, and later as members of the commissioned corps of the Public Health Service.

When the Water Quality Act of 1965 removed the control of water pollution from the commissioned corps of the Public Health Service, the Civil Service became the single channel for appointment to responsible positions in the administration of the water-quality program. Conceivably, the new administrators eventually will enter the related areas of air pollution and control of man's environment in general.

State Participation. The Water Quality Act enlists the cooperation of states in establishing water-quality criteria applicable to interstate waters. Quality standards are drafted to protect the public health and welfare, and to enhance the acceptability of water for the purposes it is to serve. If a state does not file a letter of intent to do so, the secretary of health, education, and welfare may in substance prepare and publish water-quality standards for interstate waters within that state. Both state and federal standards are to be developed in cooperation with water authorities and the industries affected.

The act also provides legal procedures to stop the discharge of matter that reduces the quality of interstate waters below the applicable standard. Enforcement is to be pursued in three stages: conference, public hearings, and court action. According to a report by the House of Representatives, "the court is given jurisdiction to enter whatever judgment and orders the public interest and equities of the case may require after giving due consideration to the practicability and to the physical and economic feasibility of complying with the applicable standards." (See also WATER SUPPLY.)

Detergents and Other Chemicals. A promised switch from "hard" to "soft" detergents by the soap and glycerine industry was completed on time by mid-1965. Field tests demonstrated that the new soft synthetic detergents (linear alkylate sulfonate, or LAS) break down more rapidly during waste-water treatment or in the soil. This action eliminates the foam that had plagued sewage treatment plants and receiving streams, or had seeped into wells near houses. Within the waste waters, moreover, the soft detergents break down about as fast as other pollutants. The success of soft detergents led to hope for solving another problem: how to remove soluble phosphates from washing products, and from some soaps in hard-water regions of the country to reduce nuisance blooms of algae whose growth is stimulated by the phosphates. Researchers are also considering the possibility of the biological control of nuisance growths of algae by means of an algicidal virus.

The Public Health Service estimated that water pollution killed 18.4 million fish in 1964—about 10.5 million more than in 1963. Industrial wastes were

WATER POLLUTION may be attributed in part to a higher standard of living. Detergents created this suds area, 300 feet long and 12 inches deep, in Lake Erie near Erie, Pa.

UPI

held responsible for killing 12.7 million fish; municipal wastes, 4.1 million; and toxic substances from agricultural operations, 1.5 million. Pollution from transportation operations killed a relatively small number of fish.

Air Pollution. Recognizing that motor-vehicle exhaust is a major pollutant of urban air and that suitable control devices are available for gasoline-driven vehicles, Congress directed the secretary of health, education, and welfare to prescribe quality standards for the exhaust emission of new automobiles. No deadline was set in this 1965 amendment to the Clean Air Act of 1963, but it is understood that the 1968 models will have to meet quality standards. Before standards are set for control of exhaust from diesel engines, appropriate consideration is to be given to the technology and cost of control.

The Clean Air Act amendments also permit the department secretary to call conferences on air pollution abatement and to warn against specific interstate threats. The courts eventually may become involved in abatement proceedings. The secretary can be requested by a state to assist in intrastate problems. Also, pollution harmful to a neighboring country will become a responsibility of the Department of Health, Education, and Welfare if the United States is assured reciprocal treatment.

In California, the automobile industry began in the fall of 1965 to include exhaust-control devices on the new 1966 models. This action inspired New York, New Jersey, and other populous states to consider similar legislation.

Impetus had been given to the pollution-control campaign when Anthony J. Celebrezze, as secretary of health, education, and welfare, reported to Congress in December 1964:

Photochemical air pollution or smog is a problem of growing national importance and is attributable largely to the operation of the motor vehicle. Manifestations of this type of air pollution are appearing with increasing frequency and severity in metropolitan areas throughout the United States. Biological studies of animals show that photochemical reaction products of automotive emissions produce adverse health effects. There is substantial evidence that these effects may appear in humans after extended exposure to air which is known to be polluted with these same products in many of the larger urban areas.

Solid Wastes Disposal. Both the land and air resources of urban complexes are being placed under stress by increasing amounts of solid wastes—rubbish, garbage, and demolition materials—that must be disposed of inoffensively and at reasonable cost. Recognizing the many-sided importance of this mounting municipal problem, Congress in 1965 authorized the expenditure of up to \$82.5 million over the next four years for research, training projects, and surveys, and for demonstrations that cover the construction of new disposal works.

The urban waste program is to be administered by the Department of Health, Education, and Welfare; the solid wastes program of the mineral and fossil-fuel industries is the responsibility of the Department of the Interior. (See INDUSTRIAL HYGIENE.)

POPULATION TRENDS

The world had an estimated population of 3.3 billion at mid-1965 and an annual rate of increase that approached 3% in many countries. These figures bore out predictions that the population of the world will almost double to 6 billion within the next 35 years.

In 1965 the population of the underdeveloped countries in Latin America and Africa continued to grow at a faster pace than those of the industrialized nations. The higher growth rate was the result of two causes: more advanced medical treatment that helped reduce the death rate, and a continuing high birthrate. (The annual birthrate in the underdeveloped countries is more than 40 per 1,000 persons, as against an average birthrate in industrialized countries of from 17 to 23 per 1,000.) It is expected that if the present growth rate continues in Latin America and Africa, their populations will triple within the next 35 years.

Most Populous Countries. Communist China remains the most populous country in the world. A United Nations estimate for 1964 placed its population at 660 million, while other estimates ran as high as 729 million. India ranked second, with 471 million, followed by the Soviet Union, with 229.1 million; the United States, with 194.8 million; Pakistan, with 100.8 million; and Japan, with 97.8 million.

Between 1959 and 1964, Hong Kong had the highest rate of population increase—5.8%. Other countries with high rates of increase were Costa

Rica, with 4.6%, and the Ivory Coast, Sudan, and Venezuela, with 3.6% each.

U.S. Population Trends. In 1965, for the first time in 12 years, the number of births in the United States fell below 4 million for an estimated total of 3.8 million, as compared with the peak of 4,308,000 in 1957. If the current estimated birthrate of 19.5 per 1,000 persons continues, the population of the United States will reach 300 million by the year 2000, or one third more than the 1964 estimate.

Figures released during 1965 showed that California, with an estimated population of 18,602,000 (excluding servicemen), was the most populous state. New York ranked second with 18,073,000.

Nevada, one of the least populous states, has the highest annual growth rate—54.2% for the past 5 years. West Virginia was the only state to lose population—49,000 since 1960.

PORTUGAL

Dr. António de Oliveira Salazar celebrated his 76th birthday and his 33rd anniversary as Portugal's premier in 1965. His control over the country remained absolute, and his candidates for the presidency and the National Assembly were automatically elected. His government suppressed all signs of opposition both at home and in Portugal's African territories, where guerrilla activities were kept in check. Portugal continued to jettison its traditional policies of economic caution and self-containment in order to raise the economy to the level of other European countries.

Elections. Two national elections took place in 1965, one for the presidency and one for the National Assembly. As the political opposition found it almost impossible to campaign under the conditions set by the government, there was general apathy in regard to both elections.

In the case of the presidential election, which took place on July 25, the vote was limited to an electoral college made up of government supporters in the national and provincial assemblies. The seven-year presidential term of Rear Admiral Américo Deus Rodrigues Tomás ended in June. Tomás was 70 years old, and it was felt in some circles that his age should preclude him from reelection, especially since Premier Salazar, the country's dictator, was 76. Certain military leaders favored a general who could direct the war against the guerrillas in Portugal's African territories.

In spite of this mild opposition to him, President Tomás was named the official candidate of the National Union, Salazar's political organization. No other candidate was offered the electoral college, and Tomás was reelected president by 556 votes out of a possible total of 585.

Following the presidential elections, Premier Salazar ordered a reorganization of the National Union, the only legal political organization in Portugal. He announced that he wished to revitalize it by bringing in new and younger leaders and to intensify the policy of indoctrinating the electorate. The immedi-

ate objective was to prepare for national legislative elections in November.

Though the political opposition announced that it would contest some of the seats, its 34 candidates were withdrawn several weeks before the election, when the government refused to permit the opposition to watch the polls on election day. Shortly before the election, a group of 100 Roman Catholic laymen published a manifesto declaring that Salazar's government had systematically offended Catholic values. They called for more political democracy and social reform. However, since the group was not organized politically, Salazar's nominees had no difficulty winning the election on November 7.

Domestic Unrest. A student demonstration occurred in Lisbon on February 2 to protest the trial of four college students charged with being Communists. On April 1, students demonstrated against the arrest of nine students. On July 10, the arrested students and a civil servant were convicted of having engaged in subversive activity on behalf of the Communist party. They were accused of belonging to the Front for Popular Action, the pro-Chinese faction of the Portuguese Communist party. Disciplinary action was also started against 208 students who had demonstrated on April 1.

Lt. Gen. Humberto Delgado, vigorous leader of the opposition in the 1958 presidential elections, disappeared in February while on a secret mission to Spain, reportedly to start an armed revolt in Portugal. A body identified as that of Delgado was found in April near Villanueva de Fresno in Spain, two miles from the Portuguese border. Delgado's friends and political associates accused the Portuguese government of involvement in the slaying, while the Portuguese authorities countered that it was the act of Communists. General Delgado had dedicated himself to the overthrow of Premier Salazar. He had been involved in the attack in 1962 on the Beja garrison and in the spectacular seizure of the Portuguese liner *Santa Maria* in 1961.

In May, the Salazar government dissolved the Portuguese Writers Association, which had awarded a literary prize to a man convicted in 1963 of ter-

PORTUGAL · Information Highlights

Gross National Product (1964): \$3,142,000,000.

National Income (1964): \$2,757,000,000; average annual income per person, \$303.

Economic Indexes: Industrial production (1963), 145 (1958=100); agricultural production (1964), 108 (1956-57=100); cost of living (1964), 115 (1958=100).

Manufacturing (metric tons, 1964): Cement, 1,622,000; wine, 1,118,000; wheat flour, 405,600; crude steel, 250,800; meat, 90,000; cotton yarn, 67,320; olive oil, 39,000; fuel briquets and packaged fuel, 38,000.

Crops (metric tons, 1964): Grapes, 1,551,000 (ranks 8th among world producers); citrus fruits, 172,000 (world rank, 19th); rye, 131,000 (world rank, 19th); potatoes, 1,078,000; maize, 479,000; wheat, 472,000; figs, 366,000; rice, 174,000; citrus fruits, 172,000; apples (1963), 92,000; oats, 81,000; dry beans, 58,000; pears (1963), 58,000.

Minerals (metric tons, 1964): Anthracite coal, 444,000 (ranks 15th among world producers); tin, 668 (world rank, 17th); pyrites, 608,000; salt (1963), 347,000; iron ore, 172,000; manganese, 6,883; silver, 48,775 troy ounces.

Foreign Trade (1964): Exports, \$515,000,000 (chief exports: cork, \$57,800,000; fish, \$40,800,000; wine, \$37,200,000); imports, \$761,000,000 (chief imports, 1963, nonelectrical machinery, \$85,000,000; raw cotton, \$46,000,000; motor vehicles, \$42,000,000). Chief trading partners (1963): Britain (took 14% of exports, supplied 14% of imports); West Germany (took 8% of exports, supplied 15% of imports); U.S. (took 12% of exports, supplied 9% of imports).

Transportation: National roads (1964), 10,952 miles (8,334 paved); motor vehicles (1964), 249,554 (automobiles, 222,193); railways (1963), 2,240 miles; merchant vessels (1964), 89 (556,000 gross registered tons); principal airport, Lisbon.

Communications: Telephones (1964), 485,177; television stations (1964), 4; television sets (1964), 150,000; radios (1963), 1,068,000; newspapers (1963), 29 (daily circulation, 577,000).

EUROPE

ASIA

AFRICA

Area: 35,510 square miles.

Population: 9,172,000 (July 1, 1965 est.).

Chief Cities (1960 census, de jure): Lisbon, the capital, 802,230; Porto (Oporto), 303,424; Coimbra, 46,313; Setúbal, 44,435.

Government: President—Rear Admiral Américo Deus Rodrigues Tomás; Premier—Dr. António de Oliveira Salazar. Parliament—National Assembly (130 seats).

Religious Faiths: Roman Catholics, 93% of population; others, 7%.

Education: Literacy rate (1960)—62% of population aged 15 and over. Total school enrollment (1962)—1,187,100 (primary, 886,519; secondary, 136,274; teacher-training, 4,455; technical, 132,528; higher, 27,324).

Finance (1965 est.): Revenues, \$455,000,000; expenditures, \$581,000,000; monetary unit, escudo (28.75 escudos equal U.S.\$1).

rorism in Angola, José Vieira Mateus de Graça. Vieira had written his novel under the pseudonym of Luandino Vieira. The writers association, which included most of Portugal's prominent authors and journalists, declared that the prize had been awarded for the literary value of the work and that no judgment had been made on the political activities of the writer.

By July the government's action against the writers had spread to the publishers, under the stimulation of the Salazar and conservative Roman Catholic press. Political police checked the contents of some 23 books of Portuguese and foreign writers to ascertain whether they had Communist or other subversive connections.

African Territories. At the beginning of 1965 a spirit of optimism prevailed concerning the future of the Portuguese provinces in Africa. Few disorders were reported, and economic progress had been made. The guerrilla and terrorist bands in northern Angola and in Portuguese Guinea and Mozambique appeared to have been contained.

Portuguese casualties were light in the anti-guerrilla actions in Africa. Between March 1961 and Jan. 1, 1965, only 433 Portuguese soldiers had been killed in combat in Angola. The Angolan nationalist groups appeared to be divided, and independent African countries were preoccupied with more pressing issues than their campaign against Portugal. The Portuguese government has undertaken a campaign to persuade Africans that they are better off in Portuguese territories than in neighboring independent countries. To bolster this campaign, educational and health facilities have been improved.

Considerable economic expansion was reported in Angola, and moderate progress was made in the other African possessions as both Portuguese and foreign capital began to return in 1964, after having taken flight during the Angolan crisis of 1961. At the beginning of 1965 the government inaugurated a three-year development plan which was to triple Portugal's investment in the territories. They form an important asset for Portugal that it does not intend to lose. Angola has begun to export petroleum and has become the third largest coffee producer in the world.

Foreign Affairs. In August, Foreign Minister Alberto Franco Nogueira announced that Portugal had invited Brazil to act jointly with it for "the guarantee and defense" of their respective countries, including Portuguese Africa. This proposal represented a modification of Portugal's former position regarding the territories. It had concluded a treaty of friendship and consultation with Brazil in 1954, but the treaty had not been fully implemented because Portugal had refused at that time to include the African territories in the agreement. The broader community proposed in 1965 would contain more than 100 million inhabitants and might play an important role in the South Atlantic area.

The Portuguese government closed the Chinese Nationalist consular agency in its colony of Macao on the southeast coast of China. Officially it did so because of the consulate's alleged illegal activities, but more probably because of Communist Chinese protests against Nationalist espionage activities there. Although resolutely anti-Communist in the conduct of its internal affairs, Portugal has tried to avoid trouble with Communist China, since Macao is a small enclave on the Chinese mainland and is at the mercy of Peking.

Economy. The Portuguese economy continued to be based on agriculture, forestry, and fishing, but the country's 1 million foreign visitors in 1964 made tourism an increasingly important source of income. Half of the active population is engaged in agriculture, which is handicapped by an unreliable climate, erosion, and the failure of farmers to adopt modern methods. Portugal is the foremost cork producer in the world and an important producer of naval stores. The current three-year development plan provides for the expenditure of 1.7 billion escudos in continental Portugal and substantial sums in Angola and Mozambique.

A sign of Portugal's economic progress is found in a monumental suspension bridge over the Tagus River. It will provide a vital link between the industrial northern part of Portugal and the backward south. To be completed in 1966, the bridge symbolizes the transition from a cautious, self-contained economic policy to the promotion of more daring and progressive enterprises. The government has been contracting foreign loans in England, Europe, and the United States to stimulate industry, private investments, and increased production. As a result of the brightening economic picture, new foreign corporations are being attracted to Portugal.

POST OFFICE

Lawrence Francis O'Brien was sworn in as postmaster general on Nov. 3, 1965, succeeding John A. Gronouski, who had resigned to become ambassador to Poland. In announcing O'Brien's appointment, President Johnson referred to his efforts as liaison man between the president and Congress in securing the enactment of social legislation: "I know of no single individual who has contributed more to the enactment of legislation that touches the lives of so many Americans." (For a biographical sketch of O'Brien, see UNITED STATES.)

ZIP Code. The Post Office continued its efforts to establish the use of ZIP Code numbers. On November 18, Postmaster General O'Brien announced that, effective Jan. 1, 1966, the ZIP Code number must be carried on all official federal mail.

Stamps. Seventeen special stamps were issued in 1965 to commemorate important events, movements, organizations, and individuals. Americans honored were John Singleton Copley, Robert Fulton, Herbert Hoover, and Adlai Stevenson, and stamps were also issued for Dante Alighieri and Winston Churchill. See STAMP COLLECTING.

Ruling on Post Office Procedures. On February 23 the Senate Judiciary Subcommittee on Administrative Practice and Procedure opened hearings on reported Post Office surveillance of first-class mail—the delivery of mail to an addressee unopened only after the information on the envelope has been checked for possible clues that might lead to the solving of crimes or detection of tax evasion. Senator Robert F. Kennedy denied that, when he was attorney general, he had authorized the submission of some first-class mail to supervisors for this purpose. Postmaster General Gronouski reported that his department had halted liens against mail deliveries to alleged tax delinquents.

On May 24 the Supreme Court held unconstitutional a federal law requiring persons to whom "Communist political propaganda" from abroad was addressed to make a special request to the Post Of-

fice to deliver it. It held that this was a violation of the 1st Amendment of the Constitution.

Finances, Offices, and Employees. The net revenue of the Post Office Department for the fiscal year 1964 (ending June 30, 1965) was \$4.276 million.

As of June 21, 1965, there were 33,625 post offices in the United States and its possessions—4,439 first class, 6,836 second class, 12,889 third class, and 9,461 fourth class.

There were 534,505 full-time employees and 59,370 part-time employees in the United States proper, and 1,622 employees in the territories. In October a 3.6% pay increase was granted to postal workers.

POWER, Electric. See ELECTRICAL INDUSTRIES.

PRESBYTERIAN CHURCHES

In 1965 the Presbyterian churches in the United States included The United Presbyterian Church in the United States of America; Presbyterian Church in the United States; Reformed Presbyterian Church, Evangelical Synod; Reformed Presbyterian Church of North America; Associate Presbyterian Church of North America; Associate Reformed Presbyterian Church; Cumberland Presbyterian Church; Second Cumberland Presbyterian Church; and Orthodox Presbyterian Church.

The 177th General Assembly of The United Presbyterian Church in the U.S.A. met at Columbus, Ohio, May 20, 1965. Ruling Elder William P. Thompson of Wichita, Kans., was elected moderator. The capital-needs fund campaign for \$50 million reported progress. Contributions for 1964 totaled \$304,833,435, of which \$57,900,012 was for benevolences.

The Cumberland Presbyterian Church and Second Cumberland (Negro) Church are studying a plan of union. The Orthodox Presbyterian Church reaffirmed commitment to the Westminster Confession of Faith and catechisms. In April 1965 the Reformed Presbyterian Church in North America, General Synod, merged with the Evangelical Presbyterian Church to form the Reformed Presbyterian Church, Evangelical Synod.

PRESBYTERIAN CHURCH STATISTICS

Church	Ministers	Churches	Members
Associate Presbyterian Church of North America	4	5	760
Associate Reformed Presbyterian Church	131	143	27,017
Cumberland Presbyterian Church	881	954	80,231
Orthodox Presbyterian Church	149	101	8,067
Presbyterian Church in the U.S.	4,082	4,007	940,634
Reformed Presbyterian Church, Evangelical Synod	228	110	10,000
Reformed Presbyterian Church of North America	98	68	4,537
Second Cumberland Presbyterian Church	120	147	10,000
United Presbyterian Church in the U.S.A.	12,618	9,100	3,302,839

The 105th General Assembly of the Presbyterian Church in the U.S. was held in Montreat, N.C., April 21 to 26. Ruling Elder Dr. Samuel J. Patterson, Jr., of Atlanta, Ga., was elected moderator. This church primarily serves the southeastern and southwestern areas of the United States. It is working with the Reformed Church in America on a plan of union. Its total contributions in 1964 amounted to \$108,269,579, of which \$26,341,356 was spent for benevolences.

The United Presbyterian Church in the U.S.A.*

PRESIDENTIAL SUCCESSION

Scholars have argued for years over the meaning and the adequacy of the passage in the U.S. Constitution that provides for the transfer of executive authority when a president dies or is disabled. In 1965, Congress approved a constitutional amendment on presidential succession. It will become part of the Constitution if ratified by three fourths of the states within seven years.

The Constitution states: "In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President. . . ." Does "the Same" refer to "the said Office" or only to "the Powers and Duties" of the office? When a president died, the vice president always assumed both the office and its powers and duties. But in instances of apparent presidential disability, each vice president declined to act, fearing that if he assumed both the office and its powers and duties the disabled president, should he recover, would have no constitutional means of reclaiming his office.

In January 1965, while hospitalized briefly with a chest cold, President Johnson called on Congress to resolve the succession problem. Senator Birch Bayh, Jr., of Indiana, who had tried in 1964 to secure approval of an amendment, brought forth a revised draft in 1965. Some senators wanted to handle the problem by statute, but others argued that a statute could be challenged in court, possibly

EXECUTIVE AUTHORITY, should President Johnson be incapacitated, would pass to Vice President Humphrey (l.).

creating chaos. The amendment, further revised, was approved by the House by voice vote on June 30, and in the Senate by a vote of 68-5 on July 6.

The amendment does not say what physical or mental conditions constitute disability. It provides that the president may declare himself disabled, in which case the vice president discharges the powers and duties of the office as acting president until the president says he has recovered.

If the vice president believes the president to be disabled, and if the president fails to so declare himself, the vice president may become acting president on securing the support of a majority of the members of the cabinet "or of such other body as Congress may by law provide. . . ." Thereafter, the president might claim that he is able to serve. In the face of this claim, the vice president may try to retain control of the executive branch by appealing to Congress, which must convene within 48 hours. If Congress, within 21 days, decides by a two-thirds vote of both houses that the president is unable to discharge his duties, the vice president continues to serve as acting president; otherwise, the president resumes his office.

The amendment also provides that in the event of a president's death or removal, the vice president inherits the office, not just its powers and duties.

In the event of a vacancy in the vice presidency, the amendment authorizes the president to nominate a vice president, who must be confirmed by a majority vote of both houses of Congress.

On Oct. 8, 1965, President Johnson's gallbladder was removed. He was out of touch with his responsibilities for only a few hours. But only eight states had then ratified the amendment (17 by Feb. 3, 1966), and the requisite number, 38, cannot be secured before 1967, when most state legislatures meet.

PRINCE EDWARD ISLAND

Interest in 1965 centered on the building of a causeway between Prince Edward Island and the Canadian mainland that is expected to effect a marked improvement in the island's tourist trade.

Causeway. The federal government is financing the building of a nine-mile link between Prince Edward Island and New Brunswick on the mainland that will consist of three units: a causeway, a bridge, and a tunnel. The \$148 million complex is scheduled for completion in 1970.

The first sod for the causeway approaches was turned in November 1965 at Cape Jourimain on New Brunswick. Construction of other units will begin in 1966. The three-mile tunnel section will permit the passage of ships and floating ice.

Politics. In the federal elections of November 8, the island returned Progressive Conservatives to all four of its seats in the federal Parliament at Ottawa. Previously the seats were divided evenly between Liberals and Progressive Conservatives.

Education. Prince of Wales College in Charlottetown, which since 1834 has been a junior college, was raised to the status of a full degree-granting university.

Festivals. The second of the island's summer festivals was held in the Confederation Center

PRISONS

On Dec. 31, 1964, U.S. penal institutions held 214,356 adult prisoners. This figure was 1.3% less than the 217,283 prisoners confined at the end of 1963, marking the third consecutive year of decline in the year-end prison population. The year-end population in state institutions decreased from 194,155 in 1963 to 192,647 in 1964, and the federal prison population decreased from 23,128 to 21,709 in the same period.

More than half of the state prison population was accounted for by eight states—California (13.7%), New York (9.2%), Texas (6.4%), Ohio (6.2%), Illinois (4.5%), Michigan (4.2%), Pennsylvania (4.0%), and Georgia (3.8%). Exclusive of Alaska, the prison population was 112.5 per 100,000 civilian population.

In 1964 the courts committed 87,578 offenders to state and federal institutions—a decrease of 0.3% from the preceding year and the third straight year that court commitments had declined. The decrease occurred exclusively in federal court commitments, which dropped from 12,882 in 1963 to 12,482 in 1964—a decrease of 3.1%. State court commitments increased slightly for the first time since 1961, from 74,944 in 1963 to 75,096 in 1964.

During 1964 there was a total of 106,633 conditional and unconditional releases from state

PRISONERS in Menard State Prison, Chester, Ill., surrender to guards on November 23 after a four-hour riot.

and federal penal institutions, an increase of 1.5% over 1963. State institutions released 91,533 prisoners by conditional and unconditional means in 1964, and federal institutions recorded 15,100 releases. The number of releases returned to state and federal institutions for violating their parole or other conditional release increased by 3.4% in 1964 over the preceding year.

Capital Punishment. Fifteen executions, the fewest since 1930, were carried out by civil authorities dur-

ing 1964. From 1930 through 1964, a total of 3,849 prisoners were executed.

During 1965 the death penalty was abolished in Oregon, Iowa, Vermont, West Virginia, and in New York (except for those convicted of killing a police officer on duty, and for convicts under life sentence who commit murder in prison or while attempting to escape). The death penalty remains legal in 37 states and for federal crimes.

From 1960 through 1964 there were decreases both in the annual number of prisoners received from court under sentences of death and in the number of prisoners executed under civil authority. In the same period there were increases in the number of prisoners under sentence of death who received a disposition other than execution, and the number awaiting execution at year's end. Also, the time span between imposition of the death penalty and the date of execution increased during this five-year period.

Prison Riots. A rash of prison violence struck the nation in the fall of 1965. On October 18, demonstrations by inmates occurred in the Southern Michigan State Prison, Jackson, Mich., and at Maryland State Penitentiary, Baltimore, Md. During the electric power blackout in the Northeast on November 9-10, about 300 inmates of Walpole State Prison, Walpole, Mass., rioted for three hours. A bloody four-hour riot occurred at Menard State Prison, Chester, Ill., on November 23.

New Prison Facilities. As a result of increasing prison populations and overcrowding, several state prison systems undertook further expansion of their facilities in 1965. Georgia completed a \$500,000 vocational rehabilitation center for the Georgia Industrial Institute in Alto. The center, used for testing, evaluating, diagnosing, and counseling the more than 1,000 youth residents at the institute, is equipped with the best modern facilities and is staffed by specialists.

Maryland began construction of prerelease and work release units for 200 inmates at the Maryland penitentiary. The state also has an extensive program to relieve overcrowding by building a multi-unit facility for 1,000 adult men at Hagerstown.

California opened its 13th major adult correctional institution, the 1,200-man Sierra Conservation Center, near Sonora. This center and two similar institutions provide basic training for inmates selected for later assignment to 80-man conservation camps. The first of two new institutions, each designed to house 400 boys, was under construction in 1965 at Stockton.

Alaska began construction of a Juvenile Diagnostic and Treatment Center at Anchorage. New Jersey reduced the problem of insufficient work and overcrowding by planning and building new industrial facilities, and by expanding the use of satellite work units and camps. Minnesota expanded the development of multiple-placement foster homes, known as group homes, for juvenile offenders. Ohio allocated \$30,000,000 for the construction of two new adult institutions that will eventually eliminate the overcrowded and antiquated Ohio Penitentiary in Columbus.

The Federal Prison System announced plans for a new National Training School for Boys, to be located at Morgantown, W.Va. The new facility will replace the present outmoded institution in Washington, D.C.

PRIZES AND AWARDS

The number of prizes and awards increased again in 1965, as foundations and industry competed to reward excellence in their respective fields of interest. The 1965 award list, however, did omit some notable prizes that had been given in past years. Some awards, such as the Balzan Peace Award, were discontinued for lack of funds. Others, such as the Presidential Medals of Freedom, were temporarily suspended. Guggenheim Foundation funds previously used for art prizes were redirected to the sponsorship of exhibitions, a practice that will be continued in the future.

On the other hand, many prizes, notably the Arches of Science Award, were introduced in 1965. Others were presented after a long absence, including the Howells Medal for American fiction, given every five years by the American Academy of Arts and Letters.

The UN Children's Fund won the 1965 Nobel Peace Prize—the fourth time that this award has gone to a unit of the United Nations. A Russian author, Mikhail Sholokhov, won the Nobel Prize in literature. Boris Pasternak, the only other Russian to win the Nobel literature prize, refused to accept the honor in 1958, but Sholokhov accepted it. (See NOBEL PRIZES.)

The Pulitzer Prize Committee restored the awards for fiction and drama in 1965 after a one-year hiatus but, for the second year, did not give a music award. The three-member music jury disbanded after the Pulitzer advisory board rejected its suggestion that a special citation be given to Edward K. (Duke) Ellington, jazz musician and composer.

The National Institute of Arts and Letters and the American Academy of Arts and Letters jointly announced a number of awards in the arts and in literature for 1965. Although the individual awards are given separately by each society, they were presented at a single ceremony sponsored by both organizations.

Among other noteworthy events, the Bennington (Vt.) *Banner*, with a circulation of about 5,000, received the Ayer Cup for newspaper excellence—the first time that so small a newspaper has won this prestigious award. National Book Awards were given posthumously for the first time, to poet Theodore Roethke (d. 1963) and scientist-writer Norbert Wiener (d. 1964).

The following is a selected list of the prizes and awards announced in 1965:

PULITZER PRIZES

Winners of the Pulitzer Prizes were announced by the trustees of Columbia University on May 4, 1965. Fiction and drama awards, omitted in 1964, were given in 1965. However, neither the music prize (which was omitted in 1964) nor the editorial cartoon prize were included. Recipients of awards are as follows:

Journalism. Gold medal for meritorious public service rendered by a United States newspaper—Hutchinson (Kans.) *News*, for its successful effort to bring about reapportionment in Kansas. International reporting—Joseph Arnold Livingston of the Philadelphia (Pa.) *Bulletin*, for coverage of Soviet-satellite countries. National reporting—Louis M. Kohlmeier of the *Wall Street Journal*, for articles on President Johnson's personal fortune. Special local reporting—Gene Goltz of the Houston (Texas) *Post*, for his exposé of municipal corruption in Pasadena, Texas. General local reporting—Melvin H. Ruder of the *Hungry Horse News* (Columbia Falls, Mont.), for his coverage of the floods in northwestern Montana. Editorial writing—John R. Harrison of the Gainesville (Fla.) *Sun*, for his campaign to improve local housing. News photography—Horst Faas of the Associated Press, for his pictures of the war in Vietnam.

Letters. History—Irwin Unger, for *The Greenback Era*; biography—Ernest Samuels, for *Henry Adams*; poetry—John Berryman, for *77 Dream Songs*; fiction—Shirley Ann Grau, for *The Keepers of the House*; nonfiction—Howard Mumford Jones, for *O Strange New World*; drama—Frank D. Gilroy, for *The Subject Was Roses*.

All journalism awards, with the exception of the medal for public service, carry stipends of \$1,000. Literary prizes are \$500 each.

ARTS

American Institute of Architects, New York Chapter, Award of Merit—David Rockefeller, president of the Chase Manhattan Bank, for "demonstrating what a private citizen can do to give beauty, life, and new hope to his city."

Architectural League of New York national gold medals: architecture—Sert, Jackson, and Gourley, for the Francis Greenwood Peabody Terrace at Harvard University; engineering—Armstrong and Whitney, for an assembly hall at the University of Illinois; sculpture—Isamu Noguchi, for the Beinecke Rare Book and Manuscript Library of Yale University; design and craftsmanship—Frederick Kiesler and Armand Bartos, for the Shrine of the Book at the D.S. and R.H. Gottesman Center for Rare Manuscripts, in Jerusalem.

Aspen Institute for Humanistic Studies, R.O. Anderson Award in the humanities (\$30,000)—Martha Graham.

Brevort-Eickemeyer art prize of Columbia University (\$1,000)—Edwin Dickinson.

Capezio Dance Award (\$1,000)—Maria Tallchief of the New York City Ballet Company.

Chopin piano competition (Poland)—Martha Argerich of Argentina, and Arturo Moreira-Lima of Brazil.

Dance Magazine silver medallions—Edward Villella, Peter Gennaro, and John Butler.

Laurel Leaf Award of the American Composers Alliance—Elizabeth Ames, Avery Clafin, and Henry Cowell.

Leventritt international piano competition—Tong Il Han of Korea.

Michaels Memorial Music Award (\$1,500)—Daniel Domb.

National Institute of Arts and Letters awards (\$2,500): graphic art—Sigmund Abeles and Joyce Roepels; painting—Lee Gatch and Richard Mayhew; sculpture—David V. Hayes, Elliot Offner, and Thomas Stearns; music composition—Mario Davidovsky, Gerald Humel, Earl Kim, and Harvey Sollberger; Marjorie Peabody Waite Award (\$1,500)—Paul Burlin, for continuing integrity in art; Arnold W. Brummer Award in Architecture (\$1,000)—Kevin Roche.

National Institute of Arts and Letters Gold Medal for Painting—Andrew Wyeth; Richard and Hinda Rosenthal Award (\$2,000)—Marcia Marcus, painter.

R.S. Reynolds Memorial Award, administered by the American Institute of Architects (\$25,000)—James Stirling and James Gowan, for an engineering school building at

PRESIDENT HARRY S. TRUMAN (at left), winner of Freedom Award for 1965, receives the congratulations of former Freedom Award winner Willy Brandt, mayor of West Berlin.

VICE ADM. HYMAN G. RICKOVER (center) accepts the Enrico Fermi Award of the U.S. Atomic Energy Commission from President Lyndon B. Johnson at the White House.

WIDE WORLD

J.A. LIVINGSTON, for his international reporting.

FRANK D. GILROY, for the best dramatic play.

HORST FAAS, for Vietnamese war photography.

HOWARD M. JONES, for the best nonfiction book.

Leicester University, Leicester, England.

Sonning Prize of Denmark (50,000 kroner, or \$7,250)—Leonard Bernstein.

JOURNALISM

American Newspaper Guild Heywood Brown Memorial Award (\$500)—Gene Goltz of the Houston (Texas) Post. F. Wayland Ayer Cup for mechanical excellence in journalism—The Bennington (Vt.) Banner.

Maria Moors Cabot Gold Medals for "distinguished journalistic contributions to the advancement of international friendship and understanding in the Americas"—Gesford F. Fine, Latin-American editor for United Press International; Roberto Marinho, director of the newspaper O Globo of Rio de Janeiro, Brazil; Paul Sanders, Latin-American editor for the Associated Press; and Victoria Ocampo, founder and editor of Sur, a literary magazine of Buenos Aires, Argentina.

Foreign journalism awards of the University of California at Los Angeles: for distinguished achievement in journalism—Niels Norlund of the Birlingske Tidende, Copenhagen, Denmark, for "an appraisal of Martin Luther King"; for distinguished magazine reporting—Guido Gerosa of Epoca magazine, Rome, Italy, for "This Is Lyndon," an appraisal of President Lyndon B. Johnson; for newspaper reporting—Maarten C. Bolle of Het Vrije Volk, the Netherlands, for "Johnson's Popularity and Personality"; for distinguished radio/television reporting—John David Hamilton of the Canadian Broadcasting Corporation, for "The Southern Moderates."

Albert Lasker Medical Journalism Awards (\$2,500): newspaper—Alton L. Blakeslee, science writer for the Associated Press; and Dr. Jeremiah B. Stamler, director of the heart control program of the Chicago Board of Health, for the series entitled *Your Heart Has Nine Lives*; magazine writing—Matt Clark, medical editor of Newsweek magazine, for his cover story on *Birth Control: The Pill and the Church*; television—Fred W. Friendly and Jay McMullen, for their program *The Business of Heroin* on CBS Reports; special citations—Edgar T. Bell of station KWTW, Oklahoma City, Okla., for his program *The Twilight World*, a study of mental retardation, and Jack Nelson, reporter in Atlanta, Ga., for the Los Angeles Times, for his series on the care of the mentally ill.

Long Island University, George Polk Memorial Awards for 1964: foreign reporting—Malcolm W. Browne, Saigon correspondent for the Associated Press; national reporting—Paul Hope and John Barron of the Washington (D.C.) Star; metropolitan reporting—A.M. Rosenthal of the New York Times; community service—Samuel F. Marshall, labor reporter for the Cleveland (Ohio) Plain Dealer; criticism—Robert Brustein, drama critic of the New Republic magazine; radio reporting—Edward P. Morgan of the American Broadcasting Company; television reporting—Ted Yates, producer and director of a special report on Vietnam for the National Broadcasting Company; special award—Oron J. Hale, for his book *The Captive Press in the Third Reich*.

George Jean Nathan Drama Criticism Award (\$4,000)—Elliot Norton of the Boston (Mass.) Record American and Sunday Advertiser.

Overseas Press Club Awards for 1964: George Polk Memorial Award—George Clay of NBC (posthumously); interpretation of foreign affairs for a newspaper or wire service—Max Frankel of the New York Times; interpretation of foreign affairs in television—Marvin Kalb of CBS; interpretation of foreign affairs on radio—Bill Sheehan of ABC; interpretation of foreign affairs in magazines—Norman Cousins of the Saturday Review; daily newspaper or wire service reporting from abroad—Saul Pett of the Associated Press; still photography reporting from abroad—Akihiko Okamura of Tokyo; television reporting from abroad—Frank Bourgholtzer of NBC; radio reporting from abroad—Dean Breis of NBC; magazine reporting from abroad—Sports Illustrated; book on foreign affairs—Robert Trumbull of the New York Times, for *The Scrutable East*; Robert Capa Award for photography—Horst Faas of the Associated Press; Ed Stout Award for Latin American reporting—Bernard L. Collier of the New York Herald Tribune; E.W. Fairchild Award for business news reporting from abroad—Don C. Winston of McGraw-Hill's World News Bureau; special awards for outstanding journalistic achievement—John Scali of Station KTLA, Los Angeles, Calif.; Baldwin Baker, Jr.

LITERATURE

Academy of American Poets Fellowship Award (\$5,000)—Marianne Moore.

American Academy of Arts and Letters, Howells Medal for American fiction (given every five years)—John Cheever, for *The Wapshot Scandal*; traveling fellowship in literature (\$5,000 to \$6,500)—Cormac McCarthy.

American Academy of Arts and Sciences Emerson-Thoreau Medal for distinguished achievement in the field of literature (\$1,000)—Lewis Mumford.

American Library Association awards: Newbery Medal—Maia Wojciechowska, for *Shadow of a Bull*; Caldecott Medal—Beni Montresor, for *May I Bring a Friend?*; Scarecrow Press Award for library literature—Roberta Bowler, editor of *Local Public Library Administration*; Lippincott Award—Frances Clarke Sayers, former lecturer at the School of Library Service of the University of California at Los Angeles; Grolier Society Award—Sarah Lewis Jones, chief library consultant for the Georgia State Department of Education; Clarence Day Award—Elizabeth Nesbit, former senior lecturer at the Graduate School of Library and Information Sciences of the University of Pittsburgh; Melcher scholarship (\$1,500)—Mary Ann Stevenson, specialist in television storytelling at Ann Arbor, Michigan.

Bancroft Prizes Columbia University for distinguished writing in American history, diplomacy, for international relations during 1964 (\$4,000)—Dorothy Borg, for *The United States and the Far Eastern Crisis of 1933-38*; Bradford Perkins, for *Castlereagh and Adams: England and the United States*; and William B. Willcox, for *Portrait of a General: Sir Henry Clinton in the War of Independence*.

Catholic Book Awards: fiction—Paul Horgan, for *Things as They Are*; biography—Priest and Worker: *The Autobiography of Henri Perrin*; spiritual writing—Karl Rahner, for *The Eternal Year*; Christian living—Louis Evelyn, for *That Man Is You*; scriptural and theological writing—Rev. Hans Küng, S.J., for *Structures of the Church*; writing for youth—Andrew Greeley, for *And Young Men Shall See Visions*; general nonfiction—Pierre Teilhard de Chardin, for *The Future of Man*.

Carey-Thomas Award for a distinguished project of creative book publishing—Sierra Club of San Francisco, Calif., for its exhibit Format Series, as represented by two 1964 books, *Time and the River Flowing* and *The Last Redwoods*.

Formentor Prize (Prix Formentor) for the best unpublished new work of fiction (\$10,000)—Stephen Schneck, for *The Nightclerk*.

Goncourt Prize in literature (Prix Goncourt)—Jacques Borel, for his first novel, *L'Adoration*.

Governor-General's Awards (Canadian) for 1964: English fiction—Douglas LePan, for *The Deserter*; English poetry—Raymond Souster, for *The Colour of the Times*; English biography—Phyllis Grosskurth, for *John Addington Symonds*; French drama—Pierre Perrault, for *Au cœur de la rose*; French nonfiction—Fr. Réjean Robidoux, for *Roger Martin du Gard et la religion*; French fiction—Jean-Paul Ponsineault, for *Les terres sèches*.

International Non-fiction Prize (\$12,500)—Walter Sullivan, for *We Are Not Alone*.

International Prize for Literature (Prix International de Littérature, \$10,000)—Saul Bellow, for *Herzog*.

Irita Van Doren Award (\$2,000)—Robert Penn Warren, for *Who Speaks for the Negro?*

Kalinga Prize, an international literary award (£1,000; about \$2,800)—Warren Weaver.

Mystery Writers of America, Edgar Allan Poe awards for 1964: best mystery novel—John Le Carré, for *The Spy Who Came in from the Cold*; best first mystery novel—Harry Kemelman, for *The Rabbi Slep Late*; best fact crimewriting—Anthony Lewis, for *Gideon's Trumpet*; best juvenile mystery—Marcella Thum, for *Mystery at Crane's Landing*; best mystery short story—Lawrence Treat, for *H as in Homicide*; best mystery book jacket design—Doubleday and Bantam Books, publishers; best motion-picture mystery—Hush, Hush, Sweet Charlotte; best television mystery—*The Fugitive*.

National Book Awards for 1964 (\$1,000): fiction—Saul Bellow, for *Herzog*; arts and letters—Eleanor Clark, for *The Oysters of Locomotives*; poetry—Theodore Roethke (posthumously), for *The Far Field*; history and biography—Louis Fischer, for *The Life of Lenin*; science, philosophy, and religion—Norbert Wiener (posthumously), for *God and Golem, Inc.*

National Book Committee, National Medal for Literature (\$5,000)—Thornton Wilder.

National Institute of Arts and Letters, Rosenthal Award (\$2,000)—Thomas Berger, for *Little Big Man*; gold medal for essays and criticism—Walter Lippmann.

National Institute of Arts and Letters literary awards (\$2,500)—Ben Belitt, poet; Robert Bly, poet and critic; Denise Levertov, poet; Joseph Mitchell, local historian; Pier M. Pasinelli, novelist; Henry Roth, novelist; and Harvey Swados, novelist.

Netherlands State Literary Prize for 1964 (the P.C. Hooft Award)—Leo Vroman, American-born Dutch poet.

Poetry Society of America Awards: Shelley Memorial Award (\$1,475)—Ruth Stone; Melville Cane Award (\$500)—Jean H. Hagstrum; awards for collections of poems still in progress (\$3,500)—Barbara Overmyer and Paul Roche.

Somerset Maugham Award (£500, or \$1,400)—Peter Everett, for his novel *Negatives*.

Woodrow Wilson Foundation Book Awards of the American Political Science Association—Robert Agger, Daniel Goldrich, and Bert Swanson, for *The Rulers and the Ruled: Political Power and Impotence in American Communities*, and Samuel J. Eldersveld, for *Political Parties: A Behavioral Analysis*.

PUBLIC SERVICE

Anisfield-Wolf Awards for the best scholarly work concerned with the problem of race relations (\$750)—James McPherson, for *The Struggle for Equality*; Milton M. Gordon, for *Assimilation in American Life*; James M. Silver, for *Mississippi: The Closed Society*; and Abram L. Sachar, for *A History of the Jews*.

Anti-Defamation League of B'nai B'rith, America's Democratic Legacy Award—President Lyndon B. Johnson.

Criss Award of the Mutual of Omaha Insurance Company for rehabilitative work with persons who are physically handicapped from cancer of the larynx (\$10,000)—William Gargan.

Four Freedoms Award—President John Fitzgerald Kennedy (posthumously).

Freedoms Foundation George Washington Award (\$5,000)—Lila and deWitt Wallace, publishers of the *Reader's Digest* magazine, for "building a magazine invaluable in the continuing fight for the freedom and dignity of every individual."

Theodor Herzl Award of the Zionist Organization of America—former President Harry S. Truman, for being the "first to recognize Israel reborn."

Human Rights Award—Vice President Hubert Horatio Humphrey, for his "distinguished record as a champion of human rights."

Kurt Lewin Memorial Award of the Society for the Psychological Study of Social Issues—Kenneth B. Clark.

Herbert H. Lehman Medal—David Samoff, board chairman of the Radio Corporation of America.

National Brotherhood Award of the National Conference of Christians and Jews—Agnes E. Meyer, chairman of the National Committee for the Support of the Public Schools.

Paderewski Foundation Award—Francis Cardinal Spellman, for his moral and financial assistance to the starving people of Poland after World War I.

Rockefeller Public Service Awards for outstanding long-time service to the federal government (\$10,000)—U. Alexis Johnson, deputy undersecretary of state for political affairs; Margaret Armstein of the U.S. Public Health Service; Bertrand M. Harding of the U.S. Internal Revenue Service; and William B. McLean, China Lake, Calif., technical director of the U.S. Naval Ordnance Station.

Stephen S. Wise Award of the American Jewish Congress—Arthur J. Goldberg, chief U.S. representative at the United Nations, for his work in advancing the cause of human freedom.

RADIO AND TELEVISION

Academy of Television Arts and Sciences ("Emmy") Awards; programs of the year—*The Louvre* (NBC) and *I, Leonardo da Vinci* (ABC); outstanding entertainment programs—*The Sonata Form*, New York Philharmonic Young People's Concerts (CBS), and its conductor, Leonard Bernstein; *The Magnificent Yankee*, Hallmark Hall of Fame (NBC), and its costars Alfred Lunt and Lynn Fontanne; *The Dick Van Dyke Show* (CBS), and its star Dick Van Dyke; *My Name is Barbra* (CBS), and its star Barbra Streisand; writing, public affairs—Sidney Carroll, for *The Louvre* (NBC); music, public affairs—Norman Dello Joio, for *The Louvre* (NBC); film editor, public affairs—Aram Boyajian, for *The Louvre* (NBC); cinematography, public affairs—Tom Priestley, for *The Louvre* (NBC); international award—*Le Barbier de Séville*, La Société Radio-Canada (Canadian Broadcasting Corporation); station award, regional—*The Ku Klux Klan*, WDSU-TV, New Orleans, La.; writing achievement—David Karp, for *The 700 Year-Old Gang*, *The Defenders* series (CBS); lighting director—Phil Hynes, for *The Magnificent Yankee*, Hallmark Hall of Fame (NBC); technical director—Clair McCoy, for *The Wonderful World of Burlesque* (NBC); special photographic effects—L.B. Abbott, for *Voyage to the Bottom of the Sea* (ABC); art, set decoration—Tom John and Bill Hays, for *My Name is Barbra* (CBS), and Warren Clymer, for *The Holy Terror*, Hallmark Hall of Fame (NBC); makeup—Robert O'Bradovich, for *The Magnificent Yankee*, Hallmark Hall of Fame (NBC); color consultant—Edward Ancona, for the *Bonanza* series (NBC); cinematography—William Spencer, for *12 O'Clock High* (ABC); conception, choreography, and staging—Joe Layton, for *My Name is Barbra* (CBS); direction—Paul Bogard, for *The 700 Year-Old Gang*, *The*

BARBRA STREISAND holds Emmy from Television Academy of Arts and Sciences for outstanding individual achievement.

Defenders series (CBS); music director—Peter Matz for *My Name is Barbra* (CBS); achievement in news, documentary, information, and sports—John H. Secondari and Helen Jean Rogers, for *I, Leonardo da Vinci* (ABC); producers—Lucy Jarvis and John J. Sughrue, for *The Louvre* (NBC).

George Foster Peabody Awards for distinguished achievement in 1964: television—CBS Reports, *Profiles in Courage* (NBC), and *The Louvre* (NBC); Burr Tillstrom, puppeteer, for his appearances on *That Was the Week That Was* (NBC); Joyce C. Hall, president of Hallmark Cards, Incorporated, "for being television's consistent and practical champion of the theater"; *The French Chef*, a cooking program with Julia Child, WGBH, Boston, Mass.; *Off the Cuff*, a program on station WBKS, Chicago, Ill.; documentaries produced by the International Television Federation; New York City FM radio station WVRV; William H. Lawrence, White House correspondent and political news editor, ABC, for individual excellence as a reporter and as a representative of the corps of White House correspondents; and the networks and the broadcasting industry, for "inescapably confronting the American public with the realities of racial discontent."

SCIENCE AND TECHNOLOGY

Albert Lasker Medical Research Awards (\$10,000)—Albert B. Sabin, for the development of a live oral poliomyelitis vaccine, and Robert W. Holley, for helping to decipher the code to the chemistry of life.

Alfred P. Sloan Foundation Awards for cancer research (\$10,000)—Irwin H. Krakoff, Henry T. Randall, and C. Chester Stock.

American Association for the Advancement of Science Award (\$1,000)—John Papaconstantinou of the University of Connecticut.

American Chemical Society (ACS) Awards: Alpha Chi Sigma Fraternity Award in pure chemistry—Ronald Breslow; ACS award for the advancement of inorganic chemistry (\$1,000)—George H. Cady; James T. Grady Award for science writing (\$1,000)—Frank Carey; Fisher Award in analytical chemistry—Lyman C. Craig; ACS Award for creative work in synthetic organic chemistry—William von E. Doering; Fritsch Award (\$1,000)—Albert J. Eschenmoser; Frederic Stanley Kipping Award in organosilicon chemistry (\$1,000)—Gerhard Fritz; Irving Langmuir Award in chemical physics—Herbert S. Gutowsky; James Flack Norris Award in physical organic chemistry (\$1,000)—Louis P. Hammett; Kendall Company Award in colloid chemistry (\$1,000)—Robert S. Hanes; Peter Debye Award in physical chemistry (\$1,000)—J.O. Hirschfelder; ACS Award in chromatography and electrophoresis (\$1,000)—Kurt A. Kraus; ACS Award in the chemistry of milk (\$1,000)—Bruce L. Larson; Garvan Medal (and \$1,000)—Mary L. Petermann; ACS Award in chemical education (\$1,000)—W. Conway Pierce; ACS Award in biological chemistry (\$1,000)—Phillips W. Robbins; ACS Award in chemical instrumentation (\$1,000)—Leonard T. Sketis; ACS Award in polymer chemistry (\$1,500)—Walter H. Stockmayer; ACS Award for nuclear applications in the field of chemistry (\$1,000)—Arthur C. Wab; ACS Award in petroleum chemistry (\$5,000)—James Wei; ACS Award in industrial and engineering chemistry (\$1,000)—Richard H. Wilhelm; ACS Award in inorganic chemistry (\$1,000)—Geoffrey Wilkinson; ACS Award in enzyme chemistry (\$1,000)—Samuel B. Weiss; Priestley Medal—W.O. Baker.

American Geographical Society Awards for 1965: Cullum Geographical Medal—Kirtley F. Mather, professor emeritus, Harvard University; Charles P. Daly Medal—William S. Cooper, professor emeritus; David Livingstone Centenary Medal—Bassett Maguire, New York Botanical Garden.

American Heart Association Research Achievement

Award (\$10,000)—John H. Gibbon, Jr., of the Jefferson Medical College, Philadelphia.

American Institute of Aeronautics and Astronautics Goddard Award (\$10,000 and gold medal)—Sir Frank Whittle of England, for his patent (1930) on the jet propulsion engine.

American Institute of Aeronautics and Astronautics: Louis W. Hill Space Transportation Award—Wernher von Braun; flight test engineering fellowship—James Austin Franklin of General Dynamics Corp.

American Society of Metals: William Hunt Eisenman Award—George A. Nelson, Berkeley, Calif.; Albert Sauveur Achievement Award—Clarence Cener, of the Westinghouse Research Laboratories, Pittsburgh; Albert Easton White Distinguished Teacher Award—John Wulff, of the Massachusetts Institute of Technology; Henry Marion Howe Medal—W.A. Backofen, I.R. Turner, and D.H. Avery, of the Massachusetts Institute of Technology; Marcus A. Grossmann Award—E.T. Stephenson and G.H. Karchner, of the Bethlehem Steel Corporation, and Philip Stark of General Precision, Inc.

Archives of Science Award for outstanding contributions to the public understanding of science (\$25,000 and gold medal)—Warren Weaver.

Oliver E. Buckley Solid State Physics Prize of the American Physical Society (\$1,000 and medal)—Ivar Giaever, of the General Electric Research Laboratory.

Dannie Heineman Prize for mathematical physics (\$2,500)—Freeman J. Dyson of the Institute for Advanced Study, Princeton, N.J.

Enrico Fermi Award of the United States Atomic Energy Commission for engineering and administrative leadership in the development of safe and reliable nuclear power (\$25,000 and medal)—Vice Adm. Hyman G. Rickover.

Flight Safety Foundation: Barbour Award for major contributions to the safety of air transport—Arthur E. Jenks.

Geological Society of America: Penrose Medal for achievement in the field of geology—Philip B. King of the U.S. Geological Survey; Arthur L. Day Medal for outstanding contributions to geologic knowledge—Walter H. Munk, of the University of California at San Diego.

Harmon International Aviation Trophies for 1965: aviator—Max Conrad; woman flier—Joan Merrian Smith.

John Scott Scientific Awards, administered by the Philadelphia Board of City Trusts, to "ingenious men who make useful inventions" (\$2,000, a medal, and a scroll)—Alexander Koln of the University of California, for an electromagnetic method of measuring the flow of liquids; Sir Howard W. Florey of London, England, for extending the uses of penicillin; John T. Cuthrie and Wilson Reeves, of New Orleans, La., for a process of flameproofing cellulosic textiles; and Frank I. McClure of the Johns Hopkins University, Baltimore, Md., for a new method of navigation using signals from special orbiting satellites.

Lederle Medical Faculty Award (\$30,000)—Richard Kikuni Blaisdell of the University of Chicago for his superior talents as a teacher.

Irving Langmuir Award for studies in chemical physics (\$5,000)—John H. Van Vleck of Harvard University.

National Academy of Sciences: Agassiz Medal—Sir Edward Bullard of England for his "significant investigation of the earth from its surface to its core."

National Aeronautics and Space Administration Medal for outstanding leadership—Lt. Gen. Walter K. Wilson, Jr., chief of engineers, U.S. Army.

National Association for Industry-Education Cooperation Award—The American Petroleum Institute.

National Medals of Science for 1965—Hugh L. Dryden, deputy administrator of the National Aeronautics and Space Administration (posthumously); John Bardeen, professor of physics and electrical engineering at the University of Illinois; Peter J.W. Debye, professor emeritus of chemistry at Cornell University; Clarence Leonard Johnson, vice president for advanced development projects for the Lockheed Aircraft Corporation; Warren Kendall Lewis, emeritus professor of chemical engineering at the Massachusetts Institute of Technology; Francis Peyton Rous, medical researcher at the Rockefeller Institute, New York City; William Walden Robey, professor of geology and geophysics at the University of California in Los Angeles; George Gaylord Simpson, Agassiz professor of vertebrate paleontology at Harvard University; Donald Dexter Van Slyke, research chemist at the Brookhaven National Laboratory; Oscar Zariski, professor of mathematics at Harvard University; and Leon Max Lederman, professor of physics at Columbia University.

National Space Club Robert H. Goddard Memorial Trophy—William H. Pickering, director of the jet propulsion laboratory at Pasadena, Calif.

Saint-Vincent International Prize for medical science, given by the Turin Academy of Medicine, Italy (\$6,000)—Michael Ellis deBakey of Baylor University.

James Craig Watson Medal of the National Academy of Sciences—Paul Herget of the University of Cincinnati Observatory.

THEATER AND MOTION PICTURES

Academy of Motion Picture Arts and Sciences ("Oscar") Awards for 1964: best film—*My Fair Lady*; best foreign-language film—*Yesterday, Today, and Tomorrow* (Italian); best actress—Julie Andrews, for her role in *Mary Poppins*; best actor—Rex Harrison, for his role in *My Fair Lady*; best supporting actress—Lila Kedrova, for her role in *Zorba, the Greek*; best supporting actor—Peter Ustinov, for his role in *Topkapi*; best director—George Cukor, for *My Fair Lady*; best screenplay based on material from another medium—

Edwin Anhalt, for his adaptation of *Becket*; best original screenplay—Peter Stone and Frank Tarloff, for *Father Goose*; best musical score—Richard M. Sherman and Robert B. Sherman, for *Mary Poppins*; best original song—*Chim Chim Cher-ee*, from *Mary Poppins*, by Richard M. Sherman and Robert B. Sherman; best art direction, color—Gene Allen and Cecil Beaton, for *My Fair Lady*; best art direction, black and white—Zassilis Photopoulos, for *Zorba, the Greek*; best cinematography, color—Harry Stradling, for *My Fair Lady*; best cinematography, black and white—Walter Lassally, for *Zorba, the Greek*; best costume design, black and white—Dorothy Jeakins, for *The Night of the Iguana*; best costume design, color, Cecil Beaton, for *My Fair Lady*; best special effects—Peter Ellenshaw, for *Mary Poppins*; best sound effects—Norman Wanstall, for *Goldfinger*; best sound—Warner Brothers Sound Department, for *My Fair Lady*; best feature documentary—Jacques-Yves Cousteau, for *World Without Sun*; best short documentary—Guggenheim Productions, for *Nine from Little Rock*; best film editing—Cotton Warburton, for *Mary Poppins*; best live-action short subject—Edward Schreiber, for *Casals Conducts—1964*; best cartoon short subjects—*The Pink Phink*, by David H. DePatie and Friz Freleng, best scientific or technical achievement—Peter Vlahos, Wadsworth E. Pohl, and Ub Iwerks; best set decoration, black and white—George J. Hopkins, for *Zorba, the Greek*; best makeup—William Tuttle, for *The Seven Faces of Dr. Lao*.

American National Theater and Academy (ANTA) Award—Joseph Papp.

American Theater Wing, Antoinette Perry ("Tony") Awards for 1964-65: best drama—*The Subject Was Roses*, by Frank D. Gilroy; best musical—*Fiddler on the Roof*, based on the short stories of Sholem Aleichem; best musical star and actor—Zero Mostel, in *Fiddler on the Roof*; best musical star and actress—Liza Minnelli, in *Flora, the Red Menace*; best dramatic actor—Walter Matthau, in *The Odd Couple*; best dramatic actress—Irene Worth, in *Tiny Alice*; best dramatic supporting actor—Jack Albertson, in *The Subject Was Roses*; best dramatic supporting actress—Alice Ghostly, in *The Sign in Sidney Brustein's Window*; best musical supporting actor—Victor Spinetti, in *Oh, What a Lovely War*; best musical supporting actress—Maria Kani-lova, in *Fiddler on the Roof*; best dramatic director—Mike Nichols for *Luw and The Odd Couple*; best musical director—Jerome Robbins, for *Fiddler on the Roof*; best dramatic author—Neil Simon, for *The Odd Couple*; best musical author—Joseph Stein, for *Fiddler on the Roof*; best composer and lyricist—Jerry Bock and Sheldon Harnick, for *Fiddler on the Roof*; best scenic designer—Oliver Smith, for *Baker Street, Luu, and The Odd Couple*; best costume designer—Patricia Zippord, for *Fiddler on the Roof*; best choreographer—Jerome Robbins, for *Fiddler on the Roof*; special award for distinguished contribution to the theater—Gilbert Miller.

Cannes International Film Festival Awards: Gold Palm Grand Prix—*The Knack* (British); special jury prize—*Kwaidan* (Japanese); actress—Samantha Eggar (American), in *The Collector*; actor—Terence Stamp (British), in *The Collector*; scenarios—*The Hill* (British) and *The 317th Section* (French); director—Liviu Ciulei (Rumanian), for *Forest of the Hanged*.

Clarence Derwent Awards for the best nonfeatured performances of 1964-65 (\$500)—Elizabeth Hubbard, in *The Physicists*, and Jaime Sanchez, in *Conerico Was Here to Stay*.

Drama Desk-Vernon Rice Awards for outstanding achievements in the Off-Broadway theater: playwrights—Robert Lowell, for *The Old Glory*, and Harold Willis, for *A Sound of Silence*; director—Ulu Grosbard, for *A View from the Bridge*; actor—James Earl Jones, for *Othello*; actresses—Barbara Ann Teer, for *Home Movies*, and Susan Towers, for *Shout from the Rooftops*.

New York Drama Critics Circle Theater Awards for 1964-65: drama—*The Subject Was Roses*; musical—*Fiddler on the Roof*.

New York Film Critics Awards for 1965: best English language picture—*Darling*; best actor—Oskar Werner, in *Ship of Fools*; best actress—Julie Christie, in *Darling*; best director—John Schlesinger, for *Darling*; best foreign-language film—*Juliet of the Spirits* (Italian) by Federico Fellini.

Screen Producers Guild Awards: Best produced motion picture of the year—*My Fair Lady*; best produced television show of the year—*Slattery's People*; annual Milestone Award—Alfred Hitchcock, in honor of his "historic contributions to the American motion picture."

Venice International Film Festival awards: Golden Lion of St. Mark for the best film—*Vaghe Stelle dell' Orsa* (Italian), directed by Luchino Visconti and starring Claudia Cardinale, Jean Sorel, and Marie Bell; Volpi Cup for the best performance by an actress—Annie Girardot in *Trois chambres à Manhattan* (French), directed by Marcel Carne; Volpi Cup for the best performance by an actor—Toshiro Mifune in *Akahige* (Japanese); special jury prizes—shared by the Mexican film *Simon del Desierto*, directed by Luis Buñuel, and the Russian film *I Am Twenty Years Old*, directed by Marlen Tutsiev; award for outstanding initial work in films—Pietr Toderovski (Russian) for his comedy drama of young Soviet soldiers training for battle, *Fedelta*; Roman Catholic Film Office Award—*Akahige* (Japanese).

PSYCHOLOGY

The interests and activities of psychologists in 1965 were reflected in the proceedings of the 73rd annual convention of the American Psychological Association (APA), held in Chicago on Sept. 3-7, 1965. APA President Jerome Bruner, of Harvard University, addressed the convention on the subject "The Growth of Mind." The address not only dealt with the growth of mind as such, but also with the growth of psychology in its efforts to understand mind. Nicholas Hobbs of George Peabody College is president-elect of the APA, and Gardner Lindzey of the University of Texas is the new president-elect.

Concern with Current Human Interests. A number of sessions at the convention were devoted to socio-political behavior. These sessions dealt with such matters as the correlation between personality traits and preference for political candidates, the relation between extensive frustration and aggressive behavior at the national level, and attitudes toward controversial campus speakers. Other symposia discussed "The International Man," as exemplified by UN delegates, Peace Corps volunteers, and interpreters; "The Legitimation of Evil," which explored the effects of the conflict between legal institutions, when these institutions sanction evil, and the drive to eliminate evil (for example, civil disobedience); and "Youth in Revolt around the World."

Also relevant to current interests was a session devoted to the topic "Biological and Psychological Effects of Magnetic Field." This is an old concern under a new guise. The notion of emanations guiding individual personality and destiny has long been classed as superstition. However, the interest in space exploration has led some scientists to take a new look at the possible influence on man of changes in the magnetic field around him.

Methodological and Ethical Problems. APA conventions devote themselves to many matters of professional interest besides scientific findings and conjectures. One matter discussed in 1965, stemming from the increasing sophistication of the methods used in social psychology, was the ethical problems involved in experiments with human beings. The convention also studied the conflicting rights, responsibilities, and expectations of textbook authors, publishers, editors, and readers, and the legal problems connected with psychological services in schools, industry, and civil rights affairs.

Expansion of Subject Matter. The APA convention program and *Annual Review of Psychology* give the most compact overview of trends and emphases in psychology, although even these cannot present a complete picture of current developments. The 1965 *Annual Review of Psychology*, a 600-page volume that discusses current contributions to psychology, included three chapters on sensory-perceptual problems—"Audition," "Visual Acuity," and "The Chemical Senses"—and chapters entitled "Hypnosis" and "Psychological Aspects of Aging in Man." The 1966 volume will include chapters entitled "Engineering Psychology," "Behavior Genetics," and "Electrophysiology and Behavior."

Michigan State University

PUBLIC HEALTH

Landmark legislation and further progress in the prevention and treatment of disease characterized public health in the United States in 1965. A notable event was the White House Conference on Health in November, at which distinguished leaders called together by President Johnson considered new health goals for the nation. In September, President Johnson appointed Dr. William H. Stewart to be surgeon general of the Public Health Service, principal health agency of the federal government. Dr. Stewart is the 10th surgeon general in the 167-year history of the service.

Legislation. In an historic action, Congress amended the Social Security Act to provide a health insurance program for persons aged 65 and over, beginning July 1, 1966. The program will help some 19,000,000 Americans meet the cost of hospital, nursing home, and home health care. (See MEDICARE.)

The Heart Disease, Cancer, and Stroke Amendments of 1965 authorized federal grants to aid in the establishment of regional medical centers to combat these diseases, which kill more than 1,000,000 Americans annually.

Acting upon the report of the Surgeon General's Advisory Committee on Smoking and Health, Congress passed the Federal Cigarette Labeling and Advertising Act. It requires that all cigarette packages sold in the United States after Jan. 1, 1966, be labeled: "Caution: Cigarette Smoking May Be Hazardous to Your Health."

In a year notable for health legislation, Congress also established a new program of grants to accomplish the following: (1) strengthen the nation's health libraries; (2) continue federal matching grants for construction of health research facilities in universities and other institutions; (3) extend the Health Professions Educational Assistance Act of 1963 and broaden it with new improvement grants to schools of medicine, dentistry, osteopathy, and optometry, and for student scholarships; (4) continue federal participation in such community health programs as immunization campaigns; and (5) authorize grants to help community mental health centers meet staffing costs.

Environmental Health. New legislation reinforced efforts to curb pollution of air, water, and earth. The Clean Air Act was amended to authorize the Department of Health, Education, and Welfare to establish federal standards for exhaust control on new motor vehicles. The Solid Waste Disposal Act authorized a national research program in methods of waste disposal, and provided for aid to state, community, and interstate agencies to develop disposal programs. (See also POLLUTION.)

The Federal Water Quality Act of 1965 created a new administration of water pollution control within the Department of Health, Education, and Welfare, and provided for the establishment of federal water quality standards in cooperation with the states. The act also authorized accelerated programs of federal aid to states and communities to build sewage treatment plants and to conduct research in water pollution control. (See also WATER SUPPLY.)

The Public Health Service established an Office of Pesticides, which has initiated the first major investigations of the long-term relationships between use of pesticides and human health.

Communicable Diseases. No major nationwide epidemics occurred in 1965, but local areas had problems. Gastrointestinal diseases were active; for ex-

PUBLIC ASSISTANCE. See CHILD WELFARE; OLD AGE; SOCIAL SECURITY.

PUBLIC DEBT. See BUDGET, U.S.

ample, California experienced a water-borne outbreak of salmonellosis, the first of its nature in public health records. Encephalitis reached its highest peak in 10 years and extended into areas never before affected. Outbreaks were concentrated in Texas, New Jersey, and Colorado.

Research. Scientists continued to add to our understanding of the life processes and of the cause and treatment of diseases. The first successful field-testing of a live oral vaccine against adenovirus 4, which had caused epidemics of respiratory disease among military trainees, brightened the prospect for preventing other such diseases.

Cancer scientists continued their intensive investigation of the role of viruses in leukemia. In heart research, a cooperative study was launched by the Public Health Service and other research institutions throughout the country to assess the effectiveness of various lipide-lowering drugs and hormones in reducing recurrences of heart attacks and in decreasing mortality. Development of an artificial heart received high priority. (See HEART DISEASE.)

Valuable advances were made also in research on such topics as arthritis, diabetes, neurological diseases, and human development.

Vital Statistics. In 1964, a total of 4,054,000 births was registered in the United States. This rate, 21.2 per 1,000 population, represents a decline from the most recent peak of 25.0 in 1957.

Infant mortality and maternal death rates were the lowest on record for the United States. About 40 infants per 1,000 live births died within a year of birth.

In 1964, life expectancy at birth was 70.2 years, compared with 69.9 years in 1963. In recent years, life expectancy has been increasing at a faster rate for men than women, and at a faster rate for non-whites than for whites.

There were 1,801,000 deaths in 1964, an estimated rate of 9.4 per 1,000 population. The death rate was higher than in any other recent year in which the country was relatively free of influenza. The major cardiovascular-renal diseases, cancer, and accidents were the leading causes of death. The relative importance of cardiovascular-renal diseases and cancer as causes of death has not changed greatly since 1954. However, the death rate from cancer of the respiratory system rose in this decade from 17.1 to 25.3 per 100,000 population. (See also DEATH RATES; MEDICINE.)

WILLIAM H. STEWART
Surgeon General, U.S. Public Health Service.

PUBLIC OPINION SURVEYS

Two anniversaries in 1965 provided occasions for public opinion researchers to review their short but significant history.

The Gallup Poll. Just 30 years ago, the first Gallup Poll report appeared in U.S. newspapers, introducing the notion that a small cross section of carefully chosen individuals can accurately represent the views of all. In October 1965, in a special newspaper release marking the anniversary, the Gallup Poll reviewed its work and concluded that (1) the collective judgment of the people is extraordinarily sound, (2) the public is willing to make great sacrifices for the national good in times of crisis, and (3) the will of the people is translated into law sooner or later.

Organization Activities. The American Association

for Public Opinion Research (AAPOR) held its 20th annual conference in Groton, Conn., in May 1965. The association, which now has 1,000 members, was founded in 1946 in an effort to bring together the diverse practitioners of market and opinion research, the users of survey findings, and the academic disciplines that contribute to survey techniques. The AAPOR award for distinguished achievement in public opinion research was presented posthumously to Harry H. Field, who in 1941 founded the first nonprofit polling agency and who in 1946 called the conference from which the association emerged.

The World Association for Public Opinion Research, an international group similar to AAPOR, held its general conference in Dublin, Ireland, in September 1965, and the second of a series of regional conferences in Dubrovnik, Yugoslavia, in May. At the latter conference, 180 participants from both eastern and western Europe discussed mutual problems and findings. It is apparent that surveys of radio listening, consumer attitudes and behavior, and public opinions and values are becoming commonplace in Yugoslavia, Czechoslovakia, Rumania, Hungary, Poland, and the Soviet Union.

Anti-Poverty Surveys. The use of public opinion research was spurred by the anti-poverty legislation passed by Congress in 1964. The legislation requires an evaluation of the effectiveness of the new programs. For example, a number of Job Corps applicants who were not admitted to the program are being given the same battery of tests that is administered to incoming corpsmen. The noncorpsmen will be checked annually for the next two years; their employment history and personality development will then be compared with those of the corpsmen in an effort to determine the effects of the Job Corps training.

Collation of Data. With hundreds of thousands of questions being asked of millions of people all over the world, more and more attention is being given to organizing and storing those surveys that have been made public and to providing ready access to their findings. A new journal, *Polls*, published in Amsterdam, the Netherlands, will attempt to provide a quarterly digest of survey results. Its first two issues presented data from more than 20 countries. Since establishment in 1957 of the Roper Center for Public Opinion Research at Williams College, other archives of poll data have been established at universities in the United States and abroad. Efforts are now in progress to coordinate the work of these archives.

PUERTO RICO

The second governor of Puerto Rico to be elected by the free vote of the people, Roberto Sánchez Vilella, was inaugurated on Jan. 2, 1965. The first such governor, Luis Muñoz Marín (took office Jan. 2, 1949), had served four terms of four years each.

Status Commission. The United States-Puerto Rican

ROBERTO SÁNCHEZ VILELLA took office as governor of Puerto Rico in January 1965. A soft-spoken civil engineer, he was groomed for the governorship by Luis Muñoz Marín, under whom he served as secretary of state from 1952 through 1964. In his first year as governor, Sánchez continued Muñoz' policies of retaining Puerto Rico's commonwealth status and improving its economy through industrial expansion.

Born in Mayagüez, Puerto Rico, on Feb. 19, 1913, Sánchez received a degree in civil engineering from Ohio State University in 1934. He began his political career in Puerto Rico as assistant commissioner of the interior in 1941. He was director of the island's transportation authority from 1942 to 1945, when he became mayor of San Juan. In 1946 he resigned as mayor to serve as special assistant to Muñoz, who was then president of the Senate. Sánchez served in several cabinet posts during Muñoz' governorship, and in 1952 was named secretary of state, a position equivalent to vice governor of the island.

Commission on the status of Puerto Rico, created by Congress in 1964, held a number of public hearings in San Juan during the year. The purpose of the hearings was to give Puerto Rican citizens the opportunity to state their reasons for preferring continued commonwealth status, statehood, or independence as Puerto Rico's ultimate political status.

Caribbean Corporation. During the year the government of Puerto Rico organized the Caribbean Economic Development Corporation (CODECA) to stimulate trade and the exchange of ideas and technical help throughout the Caribbean area. The earlier Caribbean Organization was liquidated in June 1965.

Industrialization. In 1965 new factories were

opened on the island at an average rate of approximately two per week. The number of such plants promoted or aided by the government since 1947 totaled more than 1,200.

The Commonwealth Oil Refining Company added a \$45 million petrochemical plant to its refinery near Ponce on Puerto Rico's south coast. The plant will manufacture various products from the refinery's byproducts. Representing a total investment of \$150 million, the complex is rated as the largest of its kind in the world.

Copper Development. Puerto Rico, long believed to have no important mineral resources, was electrified in 1965 by the announcement that deposits of copper ore in the interior are large enough to warrant development. Two United States corporations expressed interest in investigating the possibilities of establishing a copper mining and refining industry.

Tourism. The tourist industry continued to grow during the fiscal year 1964-65. Five new hotels and four guest houses were inaugurated. Nonresident guests in San Juan hotels during the year numbered 337,649, as compared with 298,000 in the previous year. Their expenditures in Puerto Rico were estimated at \$119.3 million, as against \$96.5 million in 1964.

QUEBEC

Quebec's efforts to achieve an independent role in national and international affairs received a major boost in 1965 when the provincial government signed a cultural cooperation agreement with France. The Canadian government also signed an agreement with France confirming the right of Quebec—and of all other Canadian provinces—to conclude such pacts with the French government. These new ties with France have long been sought by the French Canadians, who feel a spiritual kinship with the French. Late in 1964, Premier Jean Lesage had announced that he and President Charles de Gaulle had discussed an agreement for closer union.

Cultural Exchanges. An initial agreement between Quebec and France, signed on February 26, provided for an exchange of professors, research workers, and students. A more formal agreement on November 24 extended the exchange to include

PUERTO RICO · Information Highlights

Area: 3,423 square miles.

Population: 2,626,100 (July 1, 1965 est.).

Chief Cities (July 1, 1965 est.): San Juan, the capital (506,000); Bayamón (95,800); Ponce (156,000); Mayagüez (88,200); Caguas (73,300); Arecibo (82,100).

Government: Chief Officers—governor, Roberto Sánchez Vilella (Popular Democratic party); secy. of state, Dr. Carlos J. Lastra (PDP); attorney general, Rafael Hernández Colón (PDP); secy. of treasury, Jorge Font Saldaña (PDP); secy. of education, Angel G. Quintero Alfaro (PDP); chief justice, Luis Negrón Fernández (PDP). Legislature—(convened Jan. 29, 1965): Senate, 32 members (9 Republicans, 23 Popular Democrats); House of Representatives, 64 members (17 R, 47 PDP).

Education: Total school enrollment (Jan. 1965)—722,968 (public elementary 406,333 pupils, 10,043 teachers; public secondary 212,258 pupils, 6,767 teachers; nonpublic schools, 67,543 pupils, 2,689 teachers; college and university, 1964-65, 36,834 students, 1,940 teachers). Public school expenditures (1963-64)—\$99,700,000 (\$163 per pupil); average teacher's salary, \$3,424.

Public Finance (fiscal year 1965): Revenues, \$436,004,190 (motor fuel tax, \$22,778,502; federal funds, \$92,933,854). Expenditures, \$501,000,000 (chiefly education, \$138,000,000; health, welfare, and safety, \$168,000,000; highways, \$37,487,604). Total Commonwealth debt, \$261,500,000 (June 30, 1964).

Personal Income (1964): \$2,100,800,000; average annual income per person, \$832.

Public Assistance (fiscal year 1965): \$15,626,306 to 101,613 persons (aged, \$3,147,430; dependent children, \$9,892,256).

Labor Force (1965): Employed persons: Agriculture, 124,000; nonagriculture (wage and salary earners), 461,000 (18.6% manufacturing, 18.0% trade, 12.6% government). Unemployed persons, 84,000.

Manufacturing (1963): Value added by manufacture, \$620,815,000 (primary metals, \$5,788,000; nonelectric machinery, \$7,651,000; electrical machinery, \$50,856,000; fabricated metals, \$16,753,000; food and products, \$189,680,000).

Agriculture (1963-64): Cash farm income, \$279,282,000 (livestock, \$107,043,000; crops, \$167,786,000). Chief crops—sugarcane, 9,802,224 tons; molasses, 64,382,368 gallons; tobacco, 321,656 cwt.; coffee, 315,000 cwt.

Mining (1965): Production value, \$41,800,000. Chief minerals—cement, 7,800,000 barrels; sand and gravel, 7,800,000 tons; crushed stone, 5,353,000 tons; clay, 250,000 tons; lime, 10,000 tons; salt, 5,000 tons.

Fisheries (1964): Commercial catch, 10.5 million pounds.

Transportation: Roads (1963), 3,549 miles (3,215 paved); motor vehicles (1964), 285,516; railroads, none; airlines (1965), 12 (6 airports).

Communications (1965): Telephones, 181,613; television stations, 9; radio stations, 52; newspapers, 4 (daily circulation in March 1965, 195,430).

GENERAL MOTORS OF CANADA, LTD.

QUEBEC'S FIRST AUTOMOTIVE ASSEMBLY PLANT opened officially for production in the city of Ste. Thérèse in 1965.

artists, films, expositions, and television and radio broadcasts. On the same day, with an exchange of letters between Paul Martin, the Canadian secretary of state for external affairs, and François Leduc, the French ambassador to Canada, the provincial pact with France received the federal government's official sanction.

Quebec already had opened an informal provincial cultural embassy, called Quebec House, in Paris, London, and New York. On Oct. 23, 1965, a fourth

Quebec House was opened in Milan, Italy, and others were contemplated. In addition, the provincial Department of Health has affiliations with the UN World Health Organization, and the Department of Labour maintains contact with the International Labor Organization.

Economy. The Quebec economy, which in 1964 achieved a growth rate of 7.4%, maintained a similar rate of expansion in 1965, and this rate was expected to continue at least through the spring of 1966. Capital investments of \$4.1 billion accounted for 24.7% of Quebec's share of the gross national product in 1965. Employment was up 5% over 1964, and labor income, which represents more than 68% of total personal income in the province, was up 10%. Shipments of manufactured goods showed a marked increase, and spending for goods and services by Quebecers reached a record figure of \$8 billion in 1965.

Provincial Investment Policy. In recent years Quebec has become more aware of its economic strength and has dynamically affirmed itself in the field of economic development. Hydro-Quebec, a government-owned corporation, controls the province's power resources. The General Investment Corporation, also government directed, made an initial investment of \$25 million in a \$224 million integrated steel center to be built on the south side of the St. Lawrence River, halfway between Montreal and Quebec City. The center will have a first-year capacity of 600,000 tons. The government also has acquired the assets of Volcano Limited, Forano Limited, and Marine Industries Limited. This industrial complex, the largest controlled by French Canadians, has sales totaling over \$50 million annually. The Quebec Deposit and Investment Fund, also provincially controlled, was created to channel local funds into development projects.

New Automotive Industry. On Oct. 13, 1965, Quebec's first automobile assembly plant was opened. The new industry, operated by the General Motors Corporation, is located at Ste. Thérèse, near Montreal. The French automotive firm of Peugeot-Renault also located a new plant near Montreal.

The Quebec government welcomed the arrival of these industries to the province, although it would have preferred to have them locate outside the Montreal area, which already has an overconcentration of industry. Through the efforts of the Economic Advisory Council, the government is encouraging other new industries to build in less-crowded sections of the province.

Provincial Cabinet. Four changes in the provincial cabinet were made in October. Eric Kierans, minister of provincial revenue, was moved to the post of minister of health; René Lévesque, minister of natural resources, added the portfolio of minister of family and social welfare to his duties; Richard Hyde was named to the post of minister of provincial revenue; and Dr. Alphonse Couturier, minister of health, became minister of tourism, fish, and game.

Tourist Resorts. Resort areas of Quebec near the city of Montreal are engaged in a major building program in anticipation of the tourist influx for Expo '67. To facilitate easy access to these areas, the Quebec Autoroutes Authority is constructing a system of expressways radiating from Montreal that will bring most of them within an hour's ride of the city.

LIONEL LA BERGE
Director, "Quebec Year Book"

QUEBEC Information Highlights

Area: 594,860 square miles.

Population: 5,692,000 (Oct. 1, 1965 est.).

Chief Cities (1961 census): Quebec, the capital (171,979); Montreal (1,191,062); Verdun (78,317); Sherbrooke (66,554); Trois Rivières (53,477); Hull (56,929).

Government: Chief Officers—Lieutenant governor, Paul Comtois; premier and min. of finance, Jean Lesage (Liberal); prov. secy., Bona Arsenaault (L); atty. gen., Claude Wagner (L); min. of educ., Paul Gérin-Lajoie (L); chief justice, Lucien Tremblay. **Legislature** (convened Jan. 21, 1965)—Legislative Council, 24 members (appointive); Legislative Assembly, 95 members (30 Union Nationale, 62 Liberal, 1 Independent; 2 vacancies).

Education: School enrollment (1963-64 est.)—Catholic elementary and secondary, 1,125,500 pupils (48,007 teachers); Protestant, 125,128 (5,736); other religious schools, 13,625 (1,000); private, 106,786 (7,125); Indian, 3,072 (127); college and university, 98,924 students. School expenditures (1963)—\$450,850,000.

Public Finance (fiscal year 1965 est.): Revenues, \$1,129,310,000 (sales tax, \$487,530,000; income tax, \$282,200,000; federal funds, \$114,468,000). Expenditures, \$1,256,310,000 (education, \$361,010,000; health and welfare, \$347,730,000; transportation and communications, \$246,570,000).

Personal Income (1964): \$8,945,000,000; average annual income per person, \$1,598.

Public Assistance (fiscal year 1965 est.): \$136,980,000 (aged and blind, \$20,530,000; dependents and unemployed, \$58,950,000).

Labor Force (1961 census, agricultural and manufacturing only): Agricultural, 132,576; manufacturing, 460,087.

Manufacturing (1962): Value added by manufacture, \$3,658,921,000 (transportation equipment, \$204,634,000; primary metals, \$257,404,000; nonelectrical machinery, \$76,371,000; electrical machinery, \$266,243,000; fabricated metals, \$225,368,000; food and products, \$518,475,000).

Agriculture (1964 est.): Cash farm income, \$456,635,000 (livestock, \$390,970,000; crops, \$48,810,000). Chief crops (cash receipts)—vegetables, \$14,044,000 (ranks 2nd among the provinces); fruits, \$9,746,000 (rank, 3rd); potatoes, \$6,461,000 (rank, 4th); tobacco, \$4,046,000 (rank, 2nd); barley, \$24,000 (rank, 6th).

Mining (1964 est.): Production value, \$671,881,571. Chief minerals (tons)—Iron ore, 15,417,069 (ranks 1st among the provinces); asbestos, 1,245,442 (rank, 1st); copper, 160,288 (rank, 3rd); zinc, 228,580 (rank, 4th); stone, 32,510,262 (rank, 5th); cement, 2,582,781 (rank, 6th).

Fisheries (1964): Commercial catch, 125,726,000 pounds (\$5,371,000). Leading species—cod, 51,021,000 (\$1,805,000); lobster, 3,163,000 (\$1,547,000); redfish, 20,142,000 (\$556,000); herring, 38,246,000 (\$401,000).

Transportation: Roads (1962), 54,477 miles (39,574 surfaced); motor vehicles (1964), 1,565,952; railroads (1963), 5,361 miles; airlines (1963), 7 (53 airports).

Communications (1963): Telephones, 1,815,331; television stations, 15; radio stations, 63; newspapers, 15 (daily circulation, September 1964, 1,069,057).

PIGGYBACK SHIPMENTS by vans tied to flatcars are growing in efficiency. More than one million piggyback loads were transported by U.S. railroads in 1965. The vans can be refrigerated or warmed to fit the season.

RAILROADS

During 1965, Class I railroads¹ in the United States continued the trend of improved freight traffic volume, operating revenues, and net income. The progress, while modest, was encouraging because all three indicators moved ahead. However, many problems remained, especially for carriers in the East.

Legislation. In 1965, President Johnson proposed to the Congress that "heavier reliance on competition in transportation was necessary "to keep the economy growing." He said that one step in this direction would be to "revise the traditional government programs of regulation and operating subsidies." Accordingly, he suggested charging users of publicly owned transportation facilities "a greater share of the costs incurred on their behalf." Included in the proposal were user-charge increases for air and highway carriers, and the first user charge ever to be collected from domestic waterway operators. These policies, if put into effect, would move in the direction of competitive equality between railroads and the subsidized carriers. However, no action was taken on these proposals.

A high-speed ground transportation research project—a program authorizing \$90 million for research and development—was passed by Congress during 1965. When President Johnson signed the bill, he announced that tests of 125-mile-an-hour passenger trains for the Washington to Boston run were expected to begin in 1966. The other major transport legislation passed in 1965 was the "gray area" bill strengthening the enforcement of regulations against illegal motor carriers.

Mergers. The merger movement among Class I railroads continued. Some mergers were completed, some were blocked, and some were under consideration.

The merger of the Pacific Electric into the Southern Pacific, and the merger of three subsidiaries of the Atchison, Topeka and Santa Fe into the parent corporation, were completed during 1965.

The previously approved merger of the Atlantic Coast Line and Seaboard Air Line railroads, which had been challenged, was remanded to a lower court by the U.S. Supreme Court. The effective date of control of the Chicago and Eastern Illinois Railroad by the Missouri Pacific was put off by a court order, though control had been approved by the Interstate Commerce Commission (ICC).

During 1965, ICC examiners recommended approval of the merger of the Pennsylvania and New York Central railroads, and control of the Western Maryland Railway by the Chesapeake and Ohio-Baltimore and Ohio railroads.

The ICC denied separate applications of the Southern Pacific and the Atchison, Topeka and Santa Fe railroads to control the Western Pacific Railroad. This action reversed the examiner's report, which recommended approval of the Atchison, Topeka and Santa Fe proposal.

At the end of the year the ICC was processing the following merger and control proposals involving Class I railroads: the Texas and Pacific and the Missouri Pacific merger; proposals by the Chicago and North Western and the Union Pacific, respectively, to control the Chicago, Rock Island and Pacific; merger of the Great Northern, the Northern Pacific, and the Chicago, Burlington and Quincy, along with the lease of the Spokane, Portland and Seattle Railroad; the merger of the Chicago and North Western and the Chicago Great Western; the merger of the Norfolk and Western, Chesapeake and Ohio, Erie-Lackawanna, Delaware and Hudson, Boston and Maine, Reading, and the Central Railroad of New Jersey; and the merger of the Erie-Lackawanna, Delaware and Hudson, and Boston and Maine into the Norfolk and Western under provisions of the previously consummated Norfolk and Western and New York, Chicago, and St. Louis merger.

Research and Development. Railroads continued to make progress in technical developments and economic research. Cars of greater capacity and economy were added to the fleet—for example, a prototype of a hopper car with a carrying capacity of 260 tons was introduced—and a new generation of more powerful and efficient locomotives appeared.

Unit trains, moving loads of 10,000 or more tons in rapid round-trip service at substantial rate reductions, became more numerous during 1965. It was estimated that 25% of all coal moved by rail is transported by such trains. This type of service is spreading to other commodities.

Railroads continued to introduce modern communication and data-processing procedures. Improved techniques speeded yard operations, and the instal-

¹ All data herein refer to Class I railroads only: that is, those grossing over \$5 million annually. The number of Class I railroads was reduced from 98 to 77 in 1965, when the minimum limit was raised from \$3 million to \$5 million. The 1965 data (but not the 1964 figures) reflect this change, especially in the mileage-operated statistics (a decrease of approximately 1.4%). The new group of Class I railroads accounted for 96% of 1965 railroad operating revenues. All data for 1965 are partly estimated.

lation of additional centralized traffic-control systems promoted more efficient use of main-line facilities.

Rates and Fares. In 1965 there were no general freight rate or passenger fare increases. Following the practice of recent years, railroads made competitive rate adjustments where regulations permitted. In this way, carriers endeavored to increase traffic volume and net income from freight operations and to reduce their large passenger deficit.

Finances. American railroads in 1965 had total operating revenues of \$10.1 billion—the first \$10 billion year since 1957—for a gain of approximately 3% over 1964. Mainly because of increased wage and fringe benefit costs, however, operating expenses rose by about 1%, to \$7.75 billion. Net railway operating income was approximately \$925 million, compared with \$818 million in 1964. The return on investment was only 3.5%—one of the lowest returns earned by any major U.S. industry.

Freight Traffic. Railroad freight carloadings in 1965 increased 1.5% over 1964, for a total of 29.5 million cars—the first time since 1960 that this figure was attained. Heavier loads per car, longer hauls, and the increased number of carloadings resulted in a 5% growth in ton-miles. In 1965, 690 billion revenue ton-miles were recorded. This figure exceeded the performance of any year since World War II, but it merely matched the output of the year 1945. The latter fact indicated that rail freight traffic has not increased in step with the rapid postwar growth of the American economy in general.

Table 1—FREIGHT TRAFFIC

Year	Revenue ton-miles	% increase over 1939
1939	333,438,000,000	...
1944 (peak war year)	737,246,000,000	121.1
1947	654,728,000,000	96.4
1964	659,327,000,000	97.7
1965 (est., peak peacetime year)	690,000,000,000	107.0

Trailer-on-flatcar (piggyback) loadings increased for the 12th consecutive year. The continuing growth of this service demonstrates the inherent economy of long-haul transport by rail. Piggyback volume in 1965 exceeded 1,000,000 cars for the first time, and was more than 15% greater than in 1964. Shipments of new motor vehicles on multideck rail cars surpassed the record year of 1964, with the railroads hauling over 45% of total shipments in 1965, compared with barely 8% in 1959.

Passenger Traffic. Railroad passenger-miles declined in 1965 for the 14th consecutive year. The annual total was 17.3 billion, or 5% below 1964. With the exception of the depression years of 1932 and 1933, no year since 1900 has recorded such a low level of railroad passenger service. The passenger deficit reached approximately \$400 million.

Table 2—PASSENGER TRAFFIC

Year	Passenger-miles	% increase over 1933
1933 (modern record low)	16,341,000,000	...
1944 (peak war year)	95,549,000,000	484.7
1964	18,248,000,000	11.7
1965 (est.)	17,300,000,000	5.9

Facilities. American railroads spent a record \$1.6 billion for new plant and equipment in 1965. Of this total, \$1.3 billion was spent for equipment and \$300 million for new plants and other facilities. At the end of the year, Class I railroads owned or leased approximately 213,000 miles of road, 28,000 locomotives, 1,490,000 freight cars (supplemented

by about 300,000 owned by private car lines and other than Class I carriers), and 22,000 passenger-train cars (including those operated by the Pullman Company).

During 1965, approximately 85,000 new and rebuilt cars were added by Class I roads and private car lines, with the former providing more than 83% of the total. Class I railroads also installed 1,500 new diesel locomotive units in 1965—the highest number since 1953.

Employment. Railroad employment declined in 1965 for the 14th consecutive year. The 1965 average employment of 640,000—the lowest figure for the 20th century—was attributable to increased efficiency, continued separation of firemen in accord with the 1964 arbitration award in the dispute on work rules, and the effect of reclassifying 21 former Class I railroads as Class II carriers. Wage and fringe benefit increases and protective provisions for displaced employees again exerted an upward force on railroad expenses.

World Statistics. Statistics on railway traffic in selected countries of the world are provided below in Table 3.

Table 3—WORLD RAILWAY TRAFFIC BY MAJOR COUNTRIES

(In millions of passenger-kilometers and freight net ton-kilometers; 1 kilometer equals 0.62137 mile)

BURTON N. BEHLING
Vice-President
Association of American Railroads

REAPPORTIONMENT AND REDISTRICTING

Almost every state was involved with some aspect of reapportionment or redistricting during 1965. The U.S. Supreme Court had ruled in 1964 that congressional districts must be as nearly equal in number of inhabitants as is practicable (*Wesberry v. Sanders*, Feb. 17, 1964), and that both houses of a state legislature must be apportioned on the basis of population (*Reynolds v. Sims*, June 15, 1964). A few states complied with court orders to redistrict in time for the 1964 election, but most legislatures tackled the problem in their 1965 sessions.

Efforts to Comply With Court Rulings. At the time of the *Reynolds* decision, four states—Kentucky, Massachusetts, Oregon, and West Virginia—already had state legislative apportionments essentially in conformity with the “one man-one vote” doctrine. Five other states—Colorado, Delaware, Michigan, Oklahoma, and Wisconsin—used new population-based apportionment in the 1964 election.

During 1965, Georgia, New York, and Vermont conducted special legislative elections under new apportionments. Population-based districts also went into effect in the regular 1965 legislative elections in New Jersey and Virginia. By the end of the year, 34 states had adopted new plans and eight others were under court orders to institute new apportionments in time for the November 1966 elections. Cases were still pending in two states. In many instances, states that had completed reapportionment were required to do so again in order to meet objections raised in subsequent litigation.

As of Jan. 1, 1966, 20 states had redrawn their congressional district lines and three more were under orders to do so. Representative Emanuel Celler (D, N.Y.), introduced a bill in 1965 to require all states having two or more representatives in Congress to create districts that are within 15% of the statewide average in population size. Celler's bill contained a requirement that the districts be composed of compact and contiguous territory. Until 1929 a similar law had been in effect, although it did not specify the permissible amount of variation in population. The Celler bill passed the House in 1965, but the Senate did not act.

Reapportionment of Local Government Units. Another type of reapportionment action accelerated during 1965 as a result of court rulings on local government boards or councils. All counties in California and Wisconsin were required to realign their districts for the county boards of supervisors, and similar rulings were made for individual counties in several states, including Michigan, New York, and South Dakota.

Court decisions also affected some cities. Baltimore and Cleveland were obliged to adjust city council district lines, and court challenges were instituted in New York and other cities. As of Jan. 1, 1966, the Supreme Court had made no ruling on local government issues except for dismissal, on Oct. 11, 1965, on procedural grounds, of an appeal from a federal district court decision involving Suffolk County, New York (*Griffing v. Bianchi*).

Constitutional Amendment Proposed. Opposition to the sweeping changes brought about by the Supreme Court rulings on state legislatures resulted in drives, both in Congress and in the state legislatures, for a national constitutional amendment.

Senator Everett M. Dirksen (R, Ill.) introduced an amendment that would permit any state to apportion one house of a bicameral (two-house) legis-

lature on factors other than population. The nation's only unicameral (single-house) state legislature, in Nebraska, would be permitted to use factors other than population in its apportionment. On Aug. 4, 1965, the proposed amendment was supported by the Senate, 57 to 39, but fell short of the necessary two-thirds majority.

State legislatures sought to use another method to amend the U.S. Constitution by calling a national constitutional convention. This procedure has never been successfully used. Under the procedure, two thirds (34) of the states must petition Congress for a convention, and Congress must pass a call for a convention, by a majority vote. Any action of the national constitutional convention must be ratified by three fourths of the states. Since this procedure has never been successful, constitutional authorities have disagreed over the many technicalities involved, even the determination as to which states have passed valid resolutions and submitted petitions to Congress. There does appear to be agreement, however, that during 1965, 26 states passed resolutions calling for a constitutional convention, that four other states petitioned Congress to pass the Dirksen amendment, and that 20 states either defeated all antireapportionment resolutions or deliberately failed to act on them.

Apportionments Upheld by Court. Although many appeals from lower court rulings came before the U.S. Supreme Court in 1965, little refinement of the population doctrine emerged. The court did approve a system adopted by Georgia in which some members of the state Senate are elected from multimember districts and others from single-member districts. The original plaintiffs in the case (*Fortson v. Dorsey*) had contended that the system was discriminatory. The court held that under the particular circumstances of the Georgia case, the state's plan was valid. However, the court left open the question of whether such mixed systems would be upheld in the future. Similarly, the Supreme Court sanctioned the use of a combination district in Virginia in which the city of Richmond and the county of Henrico will elect several legislators at large from the combined Richmond-Henrico areas (*Burnette v. Davis and Thornton v. Davis*).

The reapportionment decisions of the Supreme Court have been based on the clause in the 14th Amendment that guarantees each citizen “the equal protection of the law.” On Oct. 25, 1965, the Supreme Court dismissed a contention by Kansas that the amendment had not been validly adopted.

WILLIAM J.D. BOYD
Senior Associate, National Municipal League

RECORDINGS

In classical music, an important development in 1965 was the success of budget-priced records. During the year a new popular music—“folk-rock”—emerged, and the jazz world welcomed the return from obscurity of the great Earl “Fatha” Hines. This article reviews the outstanding developments of the year under the following headings: (1) Classical Records; (2) Popular Records; (3) Jazz Records.

CLASSICAL RECORDS

The importance to the record industry of budget-priced records increased in 1965, with Nonesuch, a division of Elektra Records, emerging as the budget record leader. Although it introduced its first records in the spring of 1964, Nonesuch did not

WHITESTONE PHOTO

LEOPOLD STOKOWSKI (right) and assistant conductors discuss problems of recording Charles Ives' Fourth Symphony.

really make its impact felt until 1965, when the company sold more than a million discs.

There were several reasons for this success. One was the company's choice of a currently popular repertoire consisting largely of baroque music, especially the works of Telemann, Vivaldi, and their contemporaries. Another was the attractive presentation of their product, featuring eye-catching cartoon-drawn covers and extremely well-written program notes. And a third was the low price (\$2.50 per

COMPOSER-CONDUCTOR IGOR STRAVINSKY, shown during a rehearsal in London's Festival Hall, conducted a number of his own works for Columbia Records in 1965.

UPI

disc for either mono or stereo records). Like a number of other budget labels—Turnabout, Music Guild, Musical Heritage, Vanguard Everyman—None-such drew from a great many small European record companies with no direct distribution in the United States. This practice completely eliminated costly recording expenses and made it possible to cut the cost of record production by more than half.

Live Recordings. Perhaps the most exciting of the live recordings made in 1965 was Columbia Records' presentation of the historic return of pianist Vladimir Horowitz to the concert platform on May 9. Another important musical event of 1965 was the world premiere of Charles Ives' reconstructed Fourth Symphony, and although the work was not recorded live, Columbia did tape the symphony a few days later with the original performers, the American Symphony Orchestra under Leopold Stokowski. (See Music.)

Deutsche Grammophon's well-received recordings of the stage performances at Munich's National-theater of Richard Strauss' *Arabella* and *Die Frau ohne Schatten*, which were brought out in 1964, prompted Deutsche Grammophon to lease the same composer's *Daphne*, recorded at Vienna's Theater an der Wien during the 1964 Vienna Festival. Philips Records released two Wagner operas—*Parsifal* and *Tannhäuser*—recorded live at the 1962 Bayreuth Festival.

Modern Music. Contemporary composers were well represented by 1965 recordings. Columbia continued its Stravinsky series by releasing a half-dozen discs with the 83-year-old composer conducting his own music. Columbia also announced its intention to record virtually all the works of Aaron Copland, with the composer appearing either as conductor or piano soloist. London Records (British Decca), performing a similar service for Benjamin Britten, in 1965 added Britten's recordings of a number of his own compositions, including the opera *Albert Herring*. Columbia released the third volume in Robert Craft's investigation into Arnold Schönberg's music, and RCA Victor continued its Prokofiev project with the Boston Symphony Orchestra under Erich Leinsdorf. RCA also announced its intention to add to its catalog of contemporary music.

The "Ring" Cycle. The first recording of Wagner's gigantic *Ring* cycle as an integrated unit came one opera nearer to completion in 1965 when London-Decca released its recording of *Die Götterdämmerung*, made in Vienna. Georg Solti conducted the Vienna Philharmonic Orchestra, and an impressive array of the most noted Wagnerian artists performed the roles. The future of similarly ambitious large-scale recording projects may hang on the success or failure of this one.

Other Classical Releases. Following is a sampling of notable classical record releases in 1965, in addition to those already mentioned. All are available in both stereophonic and monophonic versions.

- Bach, *Brandenburg Concertos* (6); *Suites for Orchestra No. 2 in B minor, No. 3 in D*: Berlin Philharmonic Orchestra, Herbert von Karajan, conductor (Deutsche Grammophon, 3 discs).
- Bach, *Christmas Oratorio*: Gundula Janowitz, Christa Ludwig, Fritz Wunderlich, and Franz Crass, soloists; Munich Bach Choir and Orchestra, Karl Richter, conductor (Archive, 3 discs).
- Beethoven, *Sonatas for Piano, Op. 10 (complete)*: Glenn Gould, piano (Columbia).
- Berg, *Wozzeck*: Evelyn Lear, Dietrich Fischer-Dieskau, and other soloists; Chorus and Orchestra of the Deutsche Oper (Berlin), Karl Böhm, conductor (Deutsche Grammophon, 2 discs).
- Berlioz, *Requiem, Op. 5*: Cesare Vailletti, tenor; Temple University Choirs; Philadelphia Orchestra, Eugene Ormandy, conductor (Columbia, 2 discs).

Bernstein, *Chichester Psalms*: Camerata Singers; New York Philharmonic, Leonard Bernstein, conductor (Columbia).
 Bizet, *Carmen*: Maria Callas, Nicolai Gedda, and other soloists; Choeurs René Duclos, Orchestre du Théâtre National de l'Opéra (Paris), Georges Prêtre, conductor (Angel, 3 discs).
 Brahms, *Concerto for Piano and Orchestra No. 2 in B flat, Op. 83*: Eugene Istomin, piano; Philadelphia Orchestra, Eugene Ormandy, conductor (Columbia).
 Brahms, *Quintet in B minor*: Gertrude de Peyer, clarinet; Emanuel Hurwitz and Ivor McMahon, violins; Cecil Aronowitz, viola; Terence Weil, cello (Angel).
 Brahms, *German Requiem*, Op. 45: Gundula Janowitz and Eberhard Wächter, soloists; Wiener Singverein; Berlin Philharmonic Orchestra, Herbert von Karajan, conductor (Deutsche Grammophon, 2 discs).
 Britten, *Symphony for Cello and Orchestra*, Op. 68: Mstislav Rostropovich, cello; English Chamber Orchestra, Benjamin Britten, conductor (London).
 Britten, *Cantata Misericordiam*: Peter Pears and Dietrich Fischer-Dieskau, soloists; London Symphony Orchestra and Chorus, Benjamin Britten, conductor (London).
 Chopin, *Ballades*: Vladimir Ashkenazy, piano (London).
 Copland, *A Lincoln Portrait*: Adlai Stevenson, narrator; Philadelphia Orchestra, Eugene Ormandy, conductor (Columbia).
 Debussy, *Pelléas et Mélisande*: Erna Spoorenberg, Camille Maurane, George London, and other soloists; L'Orchestre de la Suisse Romande, Ernest Ansermet, conductor (London, 3 discs).
 Diamond, *Quartet No. 4: Beaux-Arts String Quartet* (Epic).
 Dvořák, *Slavonic Dances* (Op. 46, 72): Cleveland Orchestra, George Szell, conductor (Columbia).
 Dvořák, *Rusalka*: Soloists, Chorus, and Orchestra of the Prague National Theater, Zdeněk Chalabala, conductor (Artia).
 Dvořák, *Quintet for Strings in E flat, Op. 97*: European String Quartet (Westminster).
 French and Russian Arias: Nicolai Ghiaurov; London Symphony Orchestra, Edward Downes, conductor (London).
 Gounod, *Messe solennelle à Sainte-Cécile*: Pilar Lorengar, Heinz Hoppe, and Franz Crass, soloists; Choeurs René Duclos, Orchestre de la Société des Concerts du Conservatoire de Paris, Jean-Claude Hartemann, conductor (Angel).
 Haydn, *Quartets for Strings*, Op. 1, 20, 33: Dekany Quartet (Vox, 6 discs).
 Haydn, *Symphonies Nos. 57 in D and 86 in D*: Cincinnati Symphony Orchestra, Max Rudolf, conductor (Decca).
 Janáček, *Glagolitic Mass*: Evelyn Lear, Hilde Rössl-Majdan, Ernst Häflicher, Franz Crass, and other soloists; Chorus and Orchestra of the Bavarian Radio, Rafael Kubelik, conductor (Deutsche Grammophon).
 Mahler, *Symphony No. 9 in D minor*: Berlin Philharmonic Orchestra, Sir John Barbirolli, conductor (Angel, 2 discs).
 Mozart, *Concertos Nos. 21 in C (K. 467) and 24 in C minor (K. 491)*: Robert Casadesu, piano; Cleveland Orchestra, George Szell, conductor (Columbia).
 Mozart, *Concertos* (K. 412, K. 417, K. 447, K. 495): Mason Jones, French horn; Philadelphia Orchestra, Eugene Ormandy, conductor (Columbia).
 Mozart, *Symphonies Nos. 35, 36, 38, 39, 40, 41*: Philharmonia Orchestra, Otto Klemperer, conductor (Angel, 3 discs).
 Mozart, *Die Zauberflöte*: Evelyn Lear, Roberta Peters, Fritz Wunderlich, Dietrich Fischer-Dieskau, Franz Crass, and other soloists; RIAS Chamber Chorus; Berlin Philharmonic Orchestra, Karl Böhm, conductor (Deutsche Grammophon, 2 discs).
 Pergolesi, *Stabat Mater*: Judith Raskin and Maureen Lehane, soloists; Orchestra Rossini di Napoli, Franco Caracciolo, conductor (London).
 Ravel, *Concertos for Piano and Orchestra* (in D, for the left hand, and in G): Monique Haas, piano; Orchestre National de Paris, Paul Paray, conductor (Deutsche Grammophon).
 Rimski-Korsakov, *Scheherazade*, Op. 35: Erich Gruenberg, violin; London Symphony Orchestra, Leopold Stokowski, conductor (London).
 Scarlatti, *12 Sonatas for Piano*: Vladimir Horowitz, piano (Columbia).
 Schönberg, *Gurrelieder*: Inge Borkh, Herbert Schachtsschneider, and other soloists; Chorus and Orchestra of the Bavarian Radio, Rafael Kubelik, conductor (Deutsche Grammophon, 2 discs).
 Schubert, *Octet in F, Op. 166*: Berlin Philharmonic Octet (Deutsche Grammophon).
 Schubert, *Sonata for Piano No. 17 in D, Op. 53 (D. 850)*: Clifford Curzon, piano (London).
 Schumann, *Novelette*: Beveridge Webster, piano (Dover).
 Sibelius, *Symphony No. 5 in E flat, Op. 82*: Berlin Philharmonic Orchestra, Herbert von Karajan, conductor (Deutsche Grammophon).
 Stravinsky, *The Rake's Progress*: Judith Raskin, Alexander Young, John Reardon, and other soloists; Sadler's Wells Opera Chorus; Royal Philharmonic Orchestra, Igor Stravinsky, conductor (Columbia, 3 discs).
 Twenty Songs from "Carmina Burana": Soloists and Ensemble of Ancient Instruments (Telefunken).

PETER G. DAVIS

Assistant Editor, "High Fidelity" Magazine

POPULAR RECORDS

The popular record industry in the United States fought its own "battle of Britain" in 1965 and won a draw. Although British groups such as The Beatles, The Rolling Stones, Herman's Hermits, and the

Dave Clark Five continued to enjoy huge popularity among teenagers in the United States, young people also began to get the "message" in songs written and sung by new American composers and performers. They included Bob Dylan, Sonny & Cher, Barry McGuire, The Byrds, Chaglin' Times, Jody Miller, and The Spokesmen.

Folk-Rock. The emergence of "folk-rock"—a mixture of folk music, protest songs, and urban blues with the rock 'n' roll beat—broke the preeminence that Britain's singing groups had enjoyed in the American record market in 1964.

Much of the folk-rock music sailed at the so-called Establishment, the potential horrors of the atomic age (*Eve of Destruction*), and Negro discrimination (*Selma, Alabama*), or joined the anti-protest movement (*Hello, Vietnam*). These songs were in effect lyrical editorials on current events.

Other Popular Music. Many of the industry's best sellers continued to be supplied by the perennial stars of the pop field—The Supremes, The Beach Boys, Frank Sinatra, and Elvis Presley. Then, toward midyear, Herb Alpert introduced his Tijuana Brass, an amalgamation of Dixieland jazz and Mexican Mariachi, which was dubbed Ameriachi. There was also a tremendous upsurge in the popularity of country music, highlighted by the success of singer-composer Roger Miller.

Show Music. Broadway and Hollywood contributed mightily to the industry's overall sales volume, which promised to hit an all-time high of more than \$600 million in retail sales. Best-selling soundtrack

FOLK SINGER BOB DYLAN, one of 1965's most popular recording artists, composes and sings his own "message" and "folk-rock" songs in recording session at Columbia Records.

and original-cast albums included *Mary Poppins, The Sound of Music, My Fair Lady, Hello, Dolly!, Goldfinger, and Fiddler on the Roof*.

Gold Record Award. The Record Industry Association of America in 1965 certified 11 single records and 36 long-playing albums for Gold Record Awards, the highest total since the awards certification program was inaugurated in 1958. To qualify for an RIAA certification, a single must have sold at least a million units, and an album must have accounted for at least \$1 million in factory billing.

Among the best-selling single records in 1965 were the following: *Satisfaction*, Rolling Stones (London); *You Lost that Lovin' Feelin'*, Righteous Brothers (Philles); *Downtown*, Petula Clark (Warner Brothers); *Can't You Hear my Heartbeat?*, Herman's Hermits (MGM); and *Help!*, The Beatles (Capitol).

Best-selling albums included *Beatles' 65* (Capitol); *Dear Heart*, Andy Williams (Columbia); *Introducing Herman's Hermits* (MGM); and *Beatles VI* (Capitol).

Popular Favorites. The 1965 results of the annual public poll by *Down Beat*, a jazz magazine, of favorite performers, and the listing by *Billboard*, a trade newspaper, of the top ten artists of singles and albums, were as follows:

Down Beat

Male vocalist—Frank Sinatra (Reprise)
Female vocalist—Ella Fitzgerald (Verve)
Vocal group—Double Six of Paris (Philips)
Big jazz band—Duke Ellington (Reprise)
Big dance band—Count Basie (Reprise, Verve)
Jazz combo—Dave Brubeck (Columbia)
Hall of fame—John Coltrane (Impulse)

JAZZ RECORDS

The newest jazz, the oldest jazz, and the emergence from years of obscurity of one of the formative giants of jazz provided the highlights in jazz recording during 1965.

Earl Hines. The resurgent figure was Earl ("Fatha") Hines, who in the 1920's had been credited with bringing the piano into the mainstream of jazz development. Hines' playing was based not on ragtime, the source of most jazz pianists of that period, but on the solo styles of men who played wind instruments, particularly Louis Armstrong. During the 1930's and 1940's, Hines led one of the outstanding big jazz bands. After 1951 he lived on the west coast, playing with small Dixieland groups, rarely recording, and gradually disappearing into the mists of the past.

Then, in March 1964, Hines was flown to New York to give a concert—the first concert of his own that he had ever given. Critical and audience reactions verged on the ecstatic, and the result was a series of recordings that began to flood into the stores in 1965. The discs, which comprised a survey of the Hines style in a variety of circumstances, included a taping of part of Hines' New York concert, *The Real Earl Hines* (Focus); a set of unac-

companied solos recorded the same weekend as the concert, *Spontaneous Explorations* (Contact); studio recordings by the trio with which he played the concert, *"Fatha"* (Columbia); and such other recordings as *Up to Date* (RCA Victor), *Grand Reunion* (Limelight), and *The Grand Terrace Band* (RCA Victor, reissue).

Avant-Garde. Exponents of avant-garde jazz began to make more records in 1965, thanks largely to the establishment of a recording company devoted to their work—ESP-Disk. During the year, this label released performances by such experimental jazz musicians as Albert Ayler, Giuseppe Logan, Paul Bley, the New York Art Quartet, and Bob James. Previously only Ornette Coleman and Cecil Taylor, among avant-gardists, had been heard on nonspecialist labels, but in 1965 Fantasy released performances by Ayler that had been recorded originally for a Danish radio program. Archie Shepp, a tenor saxophonist, made two discs for Impulse—*Four for Trane* and *Fire Music*.

Traditionalists. There were also unusual stirrings at the other end of the jazz spectrum. Jazz traditionalists, playing repertoires largely developed during the first three decades of the 20th century, appeared on an increasing number of specialist labels of their own. Among the traditionalists were the *Hall Brothers Jazz Band* (GHB); *Jazzology Poll Winners* (Jazz Crusade); the *Happy Jazz Band* (Happy Jazz); *Sweet Emma Barrett* (Preservation Hall); the *El Dorado Jazz Band* (Epitaph); *Tony Parenti's Downtown Boys* (Jazzology); *Crawford-Ferguson Night Owls* (New Orleans Originals); and *Bob Havens* (Southland).

Other Jazz Releases. Other 1965 jazz releases of special interest included:

George Barnes and Carl Kress, *Guitars, Anyone* (Carney 202).
Ray Charles, *Live in Concert* (ABC-Paramount 500; stereo S-500).
Eric Dolphy, *Memorial Album* (Vee Jay 2503).
Friedrich Gulda, *From Vienna with Jazz* (Columbia CL 2251; stereo CS 9051).
Paul Horn Quintet, *Cycles* (RCA Victor LPM 3386; stereo LSP 3386).
Thelonious Monk, *Monk* (Columbia CL 2291; stereo CS 9091).
Oz Smith, *Wizardry* (Capitol 2288; stereo S-2288).
Clark Terry—Bob Brookmeyer, *Tonight* (Mainstream 56043; stereo 6043); *The Power of Positive Swinging* (Mainstream 56054; stereo 6054).

The year's reissues included:

Chu Berry, *Sittin' In* (Mainstream 56038).
Benny Goodman, B.G., *The Small Groups* (RCA Victor LPV 521).
Coleman Hawkins, *Meditations* (Mainstream 56037).
Coleman Hawkins and Lester Young, *Classic Tenors* (Contact 3).
Shelly Manne, *And Company* (Contact 4).
Jelly Roll Morton, *Jelly Roll Morton* (Mainstream 56020); *Stomps and Joys* (RCA Victor LPV 508).
Pee Wee Russell, *A Legend* (Mainstream 56026).
Tenor Hierarchy (Mainstream 56019).
Town Hall Concert, Vol. 2 (Mainstream 56018).

REFUGEES

Official definitions of a "refugee" vary, and any count of refugees depends on the application of that term. For the United Nations High Commission for Refugees, the principal international agency concerned with resettling displaced persons, refugees are only those persons whom the agency is charged with helping under its limited mandate. These are persons "who, owing to a well-founded fear of persecution for reasons of race, religion, nationality, or political opinion, are outside their country of origin and cannot, or, owing to such fear, do not

wish to avail themselves of the protection of that country." The U.S. Committee for Refugees, however, which compiles data from international, governmental, and voluntary agencies, extends its definition to include not only the formal status of displaced persons, but also their well-being.

Refugees numbered some 9.8 million in 1965—an increase of about 1.9 million over the 1964 figure. The increase was due partly to broader coverage, but even the 1965 figure manifestly does not include all persons forced to flee their homes and not fully established elsewhere.

Cuba. The greatest potential surge in the refugee movement is from Cuba. (From the beginning of 1959, a total of 335,000 persons, or nearly 5% of Cuba's population, had gone into exile to escape Communist rule. In mid-1965, they included approximately 190,000 Cubans living in the United States, about 13,800 in Spain, and some 26,000 in various Latin American countries.) On Sept. 28, 1965, Cuban Premier Fidel Castro announced a new policy, whereby Cubans with relatives in the United States could join them. During October, more than 3,000 persons left Cuba by boat, not waiting for the more orderly airlift that began in December. Males aged 15 through 26 were forbidden to leave, and physicians and skilled technicians were subject to delays. If the program develops as projected, informed sources estimated that from 3,000 to 4,000 Cubans would depart monthly, up to an estimated total of 250,000. (See also CUBA; IMMIGRATION.)

Vietnam. After the Geneva agreements partitioned Vietnam in 1954, almost one million refugees fled into South Vietnam from the Communist regime in the north. Progress was made in resettling these refugees, but with the increased tempo of the war in 1965, the number of refugees increased rapidly. In mid-1965, some 380,000 persons listed officially as refugees were eligible for aid from the U.S. government, the Agency for International Development (AID), or the many American voluntary agencies operating in South Vietnam.

Africa. Perhaps the most pressing refugee problem in 1965 was in sub-Sahara Africa, where a total

WIDE WORLD PHOTOS

CUBAN REFUGEES arrive in Miami, Fla., on the first plane of the U.S. airlift which began on Dec. 1, 1965.

of some 700,000 displaced persons have not been fully integrated in their new locality. The refugees fled the Congo (Léopoldville) because of political strife, the Sudan because of conflict between Muslims and non-Muslims, Rwanda because of tribal wars, and the three Portuguese colonies of Angola, Mozambique, and Portuguese Guinea because of the rebel movements operating there. The countries that have accepted substantial numbers of refugees include Burundi, the Central African Republic, Senegal, Tanzania, and Uganda.

Southeast Asia. Tibetan refugees in India (42,000), Nepal (8,000), and Sikkim and Bhutan (9,000) continued to receive assistance from various agencies in 1965. The Indian-Pakistani dispute over Kashmir intensified communal hostilities, and some 60,000 persons fled the war zone in Kashmir, adding 250,000 to the approximately 2 million refugees already in East Pakistan.

RELIGION

RELIGION

This article sums up a history-making year in the annals of the world's religious bodies, under the following headings: (1) A General Survey; (2) Protestantism; (3) Roman Catholicism; (4) Judaism; (5) Eastern Orthodoxy; (6) Islam; and (7) Oriental Religions. A table of membership of major U.S. churches is also included. A number of churches of the United States and Canada are treated in separate articles. See, for example, BAPTIST CHURCHES; EPISCOPAL CHURCH.

A GENERAL SURVEY

Religious bodies of the world in 1965 intensified their efforts to come to grips constructively with the secularization of world culture. Most religions were concerned with reappraising the meaning and relevance of classical beliefs and institutions, and many groups adopted changes in their ideology and organization. At the same time, many religious groups were actively involved in social and political conflict.

Adjustment to the Modern World. Studies presented at the 11th annual congress of the International Association for the History of Religions, which met at Claremont, Calif., in September, revealed widespread interest among scholars of Asian religions in assessing the significance of major concepts and practices of Eastern faiths in the light of scientific historical research and contemporary intellectual change. In various conferences and publications, younger Protestant theologians radically questioned the continuing relevance of many ideas traditionally considered basic to the Christian faith. And in sessions of the Ecumenical Council Vatican II in Rome,

liberal theologians expressed dissatisfaction with some of the reformulations of faith and practice emerging from that body. In most religions, laymen were challenged to take a greater part in religious affairs.

Involvement in Politics. In Japan the Komeito party, the political arm of the Soka Gakkai, a laymen's organization of the Nichiren Buddhist sect, emerged as the country's political "third force." While its aims are not yet fully clarified, it seeks to combine communal religious loyalty with social reform. Renewed interest in the traditional Shinto faith was also evident.

Hindus and Muslims of India and Pakistan came to new religious self-consciousness as a result of the military conflict between these two countries over Kashmir. Leaders of both groups affirmed peace and brotherhood as goals of their traditions, but claimed that extraneous forces had led followers of the opposing tradition to thwart those aims.

In the United States, churches and churchmen continued to play a significant role in the civil rights struggle. In February, 2,000 educational, cultural, and political leaders from many countries gathered in New York for a discussion of ethical and religious principles in relation to political life, centering on the views expressed by the late Pope John XXIII in the encyclical *Pacem in Terris*.

Interfaith Cooperation. These ideological and political developments were accompanied by new approaches to interfaith understanding and cooperation. The Central Committee of the World Council of Churches, meeting in Nigeria in January, voted to establish a joint working committee with the Vatican to identify areas of cooperation. In July

ECUMENICAL COUNCIL VATICAN II, in plenary session at St. Peter's Basilica in Rome, opens on September 14 with a Mass celebrated by Pope Paul VI and 24 cardinals.

KEYSTONE

the World Council sponsored a consultation at Boissey, Switzerland, of Jewish and Christian spokesmen, to explore areas of common concern and to reach a better understanding of points of difference between the two faiths. The Lutheran World Federation also approved plans to establish a joint working group with the Roman Catholic Church to review problems of mutual concern.

Of central importance for the discussion of religious liberty and interfaith relations was the approval by the Second Vatican Council of a declaration affirming that no man should be forced to act against his conscience, and stating that nations should neither impose religion nor prohibit freedom of religious belief and association. The Council also specifically condemned anti-Semitism and commended appreciation of other religious faiths.

The Pope's Visit to America. The most dramatic symbol of the renewed concern of the Roman Catholic Church—and, indirectly, of the concern of many religious bodies—for the affairs of the world, was the visit of Pope Paul VI to the United Nations in New York on October 4. Having visited Palestine and India in 1964, he became the first pontiff in history to visit the Western Hemisphere. Pope Paul brought to the United Nations, at the invitation of Secretary General U Thant, an eloquent plea for peace, and for the translation of man's spiritual aspirations into world order and civilization. He also met with President Johnson and with representatives of various religious faiths, and offered a Mass for Peace before some 90,000 persons at Yankee Stadium.

Union Theological Seminary*

PROTESTANTISM

Protestantism in 1965 lost two of its theological giants through natural death: Albert Schweitzer and Paul Tillich. Two lesser-known men, the Rev. James J. Reeb and Jonathan M. Daniels, a young seminarian, were killed while participating in the struggle for Negro voting rights and equal employment opportunities in the South.

Social Awareness. The Sixth World Order Conference, sponsored by the International Affairs Commission of the National Council of Churches, met in St. Louis, October 20-23. The theme of the conference was "Man Amid World Change: Christian Imperatives."

Ministry. The recruitment, education, and ordination of ministers continued to be a major concern of Protestants. The controversial movement toward the ordination of women pastors gained momentum when, in May, Dr. Rachel Henderlite became the first woman to be ordained a minister of the Presbyterian Church, U.S. (Southern). Also, as professor-elect of Christian education at the Austin (Texas) Theological Seminary, she became the first woman professor in a major Presbyterian seminary. Similar official actions to include women in the full ministry of the church were taken by the French Reformed Church and the Church of Scotland, the latter having approved the admission of women to the eldership.

Financial and recruitment problems continued to hamper ministerial education. The announcement that the historic Oberlin (Ohio) School of Theology would close by 1968 indicated how serious those problems had become.

Denominational Assemblies. Many of the churches met in denominational conclaves to effect policies and strategies. The 177th General Assembly of the

POPE PAUL VI (l.) presents Brief of Reconciliation to Metropolitan Heliopolis of the Eastern Orthodox Church on December 8, marking a new accord between the two churches.

UPI

United Presbyterian Church in the U.S.A. took the first step toward adopting a new confessional statement of faith. The "Confession of 1967," representing this church's attempt to broaden its doctrinal basis and state its beliefs in contemporary language, proposes the first major change in the Presbyterian position in the 320 years since the adoption of the Westminster Confession in 1647.

At its triennial session, the Lutheran Church-Missouri Synod broke down its traditional wall of isolation and voted to join three other major Lutheran churches in the formation of the Lutheran Council in the U.S.A. This agency brings together 95% of American Lutherans in a program of cooperative study and witness.

In Miami, the World Baptist Alliance, composed of 15,000 delegates from 80 countries, elected as president Dr. William R. Tolbert, Jr., a Negro from Liberia.

Ecumenical Relations. The Central Committee, the 100-member policy-making body of the World Council of Churches, met in January in Enugu, Nigeria. The WCC received five churches into membership, increasing its family to 214 Protestant and Orthodox churches. It agreed to set up a 14-member group to work with the Roman Catholic Church in exploring the possibilities of greater mutual understanding and cooperation.

Throughout the Protestant world, 39 negotiations toward church union were at varying stages of progress. They involved 100 churches in 29 countries and all continents, except Antarctica. In the United States, the Consultation on Church Union, which involves one third of the country's Protestants, held its 4th plenary meeting in Lexington, Ky.,

April 5-8. Two significant actions were taken: the approval of a consensus report on the ordained ministry, one of the most controversial barriers to full church unity; and the decision to form a special commission to draw up "the outline of a possible plan of union."

Good relations between Protestants and Roman Catholics were strengthened in 1965. An unprecedented number of Protestant observers attended the fourth and final session of the Ecumenical Council Vatican II in Rome. In Spain, a country once known for its oppression of Protestants, Roman Catholics and Protestants came together for the first time in the public observance of the Week of Prayer for Christian Unity, celebrated throughout the world from January 18 to 25. In France, work was begun on a joint translation of the Bible. In the United States, Lutherans and Presbyterians separately engaged in official theological dialogue with Roman Catholics.

and his Mass at Yankee Stadium, was broadcast internationally by television. His plea for peace and his later call for peace in Vietnam, received the respectful attention of world leaders.

Close of the Ecumenical Council. Ecumenical Council Vatican II, which opened in 1962, held its fourth and final session from Sept. 14 to Dec. 8, 1965. The Ecumenical Council met to effect an *aggiornamento*, an adjustment to the 20th century world, and to promote Christian unity. Its deliberations resulted in the publication of 16 documents, 11 of which were proclaimed during the final session. They included a constitution on divine revelation and another on the church and the modern world, and decrees concerning the pastoral office of bishops, members of religious orders, seminary training, priestly life and ministry, missions, and the lay apostolate. There were also three declarations, one dealing with Christian education, one with religious liberty, and another with the relations between the church and non-Christian religions. This last declaration condemned anti-Semitism and absolved the Jews as a people from collective guilt in the Crucifixion.

In response to the wishes of the Council, Pope Paul VI issued (September 15) a *motu proprio*, *Apostolica sollicitudo*, which created on a permanent basis a synod of bishops in Rome. Most of the members of the synod will be Latin rite bishops elected by episcopal conferences throughout the world on a proportional system according to the number of bishops in a country. Eastern rite Catholics and religious orders will also send representatives. The synod's functions will be mostly consultative but at times deliberative. The pope, to whom the synod will be responsible directly and immediately, will convoke meetings (general, extraordinary, or special) on opportune occasions. He will indicate the problems to be discussed, ratify the selection of members, and preside at gatherings himself or through a representative.

Progress of the Ecumenical Movement. The Catholic Church became more intimately involved in the ecumenical movement, which progressed notably during 1965 and resulted in increased dialogue, better understanding, and more cordial relations between Christian churches, if not in doctrinal unity. Metropolitans Melito of Heliopolis and Chrysostomus of Myra, who had served respectively as president and secretary of the Panorthodox Conference at Rhodes (November 1964), came to Rome as delegates of Athenagoras I, Ecumenical Patriarch of Constantinople, and were received in solemn audience by the pope (February 15). Cardinal Bea, president of the Secretariat for Christian Unity, returned the visit by traveling to Constantinople (Istanbul, Turkey), where Athenagoras welcomed him (April 3). On December 7 the pope and the patriarch advanced a step toward reunion by expressing publicly their regrets at the mutual excommunications in 1054 of Michael Cerularius, Patriarch of Constantinople, and Cardinal Humbert, the papal legate, and the resultant separation of the Eastern from the Western Church.

Increase in the College of Cardinals. Twenty-seven new cardinals received their red hats on February 22. There were 17 from Europe, 4 from Africa, 3 from Asia, 1 from South America, and 2 from North America. Among them were Archbishops John Heenan of Westminster, England; William Conway of Armagh, Ireland; Maurice Roy of Quebec; and Lawrence Sheehan of Baltimore. This con-

WIDE WORLD

EPISCOPAL CHURCH in the United States installed the Rt. Rev. John Elbridge Hines as its presiding bishop in ceremony at the Washington National Cathedral on January 27.

sistory raised the membership in the sacred college to 103, the highest total in its history. As of February 22, Italy had 32 cardinals; France and Spain, 7 each; the United States, 6; Germany and Brazil, 4 each; and Canada, 3. The death of Cardinal Meyer of Chicago in April lowered the American representation to five.

Change in the Roman Curia. A significant change in the organization of the Roman Curia occurred on December 6 when The Sacred Congregation of the Holy Office became the Congregation for the Doctrine of the Faith. Along with the change of name came a diminution of its powers, a loss of its preeminence among the congregations, and an alteration in its procedures to make them less secret and to provide defendants an opportunity to present their case before having judgments passed on their writings or actions.

Staff Editor, "The New Catholic Encyclopedia"

JUDAISM

In 1965 the Jewish community in the United States worked toward the implementation of social legislation passed by Congress while continuing its efforts to assure the commitment of young Jews to Judaism. Of great concern to Jews throughout the world were the fate of the Roman Catholic Church's declaration on the Jews at the Ecumenical Council and the situation of the Jews in Soviet Russia.

The American Jewish Community. In the United States there are an estimated 1,600 Orthodox con-

gregations, organized in the Union of Orthodox Jewish Congregations; 770 Conservative, organized in the United Synagogue of America; and 660 Reform, which belong to the Union of American Hebrew Congregations. The National Jewish Welfare Board serves as coordinating body of the Jewish community centers and the Young Men's and Women's Hebrew Associations. Among the community relations agencies, the American Jewish Committee, American Jewish Congress, and Anti-Defamation League have the largest membership. The physical needs of the community are served by the Council of Jewish Federations and Welfare Funds and its many affiliated agencies.

A problem widely discussed among American Jews is the tendency among second- and third-generation Jews to disassociate themselves from the community, a tendency which can be counteracted by proper guidance. Many of the agencies concerned with Jewish affairs assert that young people must be imbued with the importance of participating in the activities and responsibilities of the Jewish community. These agencies place on the Jewish leadership the responsibility to provide programs to encourage both commitment to Judaism and full participation in American society.

In 1965, communal agencies continued a policy of extending their work on a nonsectarian basis to the total community, in cooperation with Catholic, Protestant, and nonreligious organizations. They are involved in programs such as vocational rehabilitation, and helping school dropouts.

The educational needs of children in low-income families moved a large segment of the organized Jewish community to support the Elementary and Secondary Education Act of 1965, which provides for certain forms of federal aid to all students, including those in religious schools. This support was a departure from a hitherto unanimous stand against any measures tending to violate the principle of separation of church and state.

Jewish organizations also pledged themselves to do all within their power to achieve the purposes of the Voting Rights Act of 1965—to implement fair employment, school integration, and fair housing. To demonstrate their participation, representatives of Jewish agencies of all types and rabbis of all denominations flocked to Alabama for the five-day protest march from Selma to Montgomery in August.

The Catholic Declaration on the Jews. Of deep interest to the Jews was the action of the final session of Ecumenical Council Vatican II on the declaration on the "Relationship of the Church to non-Christian Religions," which contained the much-debated declaration on the Jews, exonerating them of collective guilt in the crucifixion of Jesus.

On October 15, by a vote of 1,763 to 250, the Council gave final approval to the declaration. It was proclaimed by Pope Paul as one of five decrees in a ceremony on October 28. The decree is a "doctrinal" not a "disciplinary" statement and, as such, it is irreversible. Although not so forceful as the original text, the document is considered by leading Catholic and Jewish circles in the United States to have achieved its essential aim—the removal of any theological justification for anti-Jewish discrimination.

Anti-Semitism in the Soviet Union. Jews all over the world, and non-Jews as well, continued to demonstrate serious concern over the situation of Soviet Russia's Jews. There were some indications of a

growing sensitivity on the part of the Soviet government to the flood of protests. The government permitted a delegation of the Orthodox Rabbinical Council of America to visit Moscow in July and to address worshippers in the Central Synagogue. The delegation received official assurances that some of the grievances of Soviet Jews were being redressed. An unusual occurrence was the publication of an editorial in the official newspaper *Pravda* in September that discussed Communist doctrine and its rejection of anti-Semitism. However, only minor concessions were made, and the American Jewish Conference on Soviet Jewry went ahead with the Eternal Vigil for the Soviet Jews in Washington on September 19. More than 7,500 persons, including prominent non-Jews, took part in this week-long demonstration of interfaith solidarity.

Anti-Semitism in Latin America. In the Latin American countries, too, the position of the Jews has been precarious. Although, in the latter part of 1964, the Argentine government finally began taking steps to curb anti-Jewish activities, overt anti-Semitism is still rampant. Another problem is the complete inadequacy of communal organizations. There is a critical shortage of qualified rabbis, teachers, social workers, educational materials, and guidance in communal activities. As a beginning, the Jewish Institutes in Argentina and Brazil, with the cooperation of the American Jewish Committee, set up a new cultural and religious community-service program.

The World Jewish Community. At the beginning of 1965, there were 5,612,000 Jews in the United States and an additional one million in the rest of the Western Hemisphere, together constituting close to half of the world Jewish population of 13,210,000. An estimated 3,933,000 Jews lived in Europe, 2,345,000 in Asia, and 264,000 in Africa.

EASTERN ORTHODOXY

Implementation of the decisions of the Third Pan-Orthodox Conference of Rhodes (1964) was a main concern of the Orthodox Churches in 1965. The Orthodox churches behind the Iron Curtain showed a stronger will for freedom from the Communist governments of their countries. The desire for the coming together of the Christian churches of the world became evident not only in the Roman Catholic and the Protestant churches, but also in the ancient churches of the East—the Monophysites, the Armenians, and the Copts.

Moves Toward Unity of the Churches. Evidences of the spirit of unity were found in the exchange of congratulatory letters between Pope Paul VI and the Ecumenical Patriarch Athenagoras I upon the first anniversary of their historic meeting in Jerusalem (Jan. 5–6, 1964); the presence of Orthodox and Protestant observers at Ecumenical Council Vatican II late in 1965; and the meeting of Pope Paul VI with Archbishop Iakovos, primate of the Greek Orthodox Church of North and South America, in New York on October 4. During the year a dialogue began between Orthodox, Anglican, and Old Catholic churches. On December 7, 1965, the mutual excommunications of the Churches of Rome and Constantinople (Istanbul), which took place in the year 1054, were simultaneously nullified in Rome and Constantinople through mutual agreement of Pope Paul VI and Patriarch Athenagoras I.

The Roman Catholic Church, the World Council

of Churches, and the National Council of Churches of Christ in America came forward with strong protests against the persecutions of the Ecumenical Patriarchate by Turkey.

Orthodox Churches in the Americas. In the United States the ethnic Orthodox churches have approximately 7 million members. The largest body is the Greek Orthodox Archdiocese of North and South America. Archbishop Iakovos, its primate, is also a president of the World Council of Churches.

The Orthodox Churches in America have established the Standing Conference of Canonical Orthodox Bishops in America, whose president is Archbishop Iakovos. The members of the conference are the following Orthodox churches: Albanian Orthodox Diocese of America, Bulgarian Orthodox Church in America, American Carpatho-Russian Greek Orthodox Diocese of America, Russian Orthodox Greek Catholic Church in America, Patriarchal Exarchate of the Russian Orthodox Church in the Americas, Holy Ukrainian Autocephalic Orthodox Episcopate, Ukrainian Orthodox Church of America, Syrian Antiochian Orthodox Archdiocese of New York and North America, Serbian Orthodox Church in the United States and Canada, and the Romanian Orthodox Episcopate.

The Greek Orthodox Archdiocese of North and South America commemorated the closing of its first centennial celebration in 1965. The Standing Conference of Canonical Orthodox Bishops in America decided to begin a dialogue with Roman Catholic theologians and to be represented at all future meetings of the World Council of Churches and the National Council of Churches of Christ in America.

ISLAM

A religious faith finding expression in political events was again the characteristic phenomenon of the Islamic world in 1965. In the United States, the split in the Black Muslim movement was exacerbated by the murder of dissident leader Malcolm X.

Muslim Countries. Border incidents between India, which is predominantly Hindu, and Pakistan, which is predominantly Muslim, developed into open warfare in September. After a number of clashes, an uneasy truce under United Nations auspices went into effect. The Indian-Pakistani dispute resulted from conflicting claims to the state of Kashmir. The Pakistanis insist that Kashmir should be allowed to decide its own fate by means of a plebiscite. Kashmir has a largely Muslim population, and Muslim Pakistan is confident that a plebiscite would result in separation of Kashmir from India.

In Indonesia, a country with more than 85,000,000 Muslims, the influence of religion on politics was evident in 1965. During the fall an attempted coup, believed to have been led by Communists, resulted in an army-directed attack on Indonesia's Communists. Muslim groups played a leading role in anti-Communist activity.

In the Arab world, the Vatican Council's stand against anti-Semitism caused a considerable outcry. The Council's move is interpreted as a prelude to Vatican recognition of Israel.

The quest for Arab unity remained far from realization in 1965. Habib Bourguiba, president of Tunisia, was branded a traitor to the cause when he suggested the possibility of compromise and coexistence with Israel.

Zionism and missionary work were central themes

of the second World Muslim Conference, held at Mecca in April. King Faisal of Saudi Arabia called for an Islamic conference leading to the creation of a united Muslim bloc.

In the United Arab Republic the long-suppressed Muslim Brotherhood, which the Egyptian government considers a reactionary force in the country, rose to the surface with an elaborate, but unsuccessful, bid (discovered in August) to assassinate President Nasser.

The Black Muslims. In the United States, the split in the Black Muslim movement was made worse by the murder of Malcolm X, leader of a dissident group. Supporters of Malcolm X threatened vengeance against the followers of Elijah Muhammad (founder of the Black Muslims), whom they believed responsible for the murder.

ORIENTAL RELIGIONS

The impact of the Hindu and Buddhist religions on national affairs was demonstrated again in India and in Southeast Asia in 1965. Hindu-Muslim rivalry contributed to an undeclared war between India and Pakistan in September. Buddhists took an active part in politics in Ceylon, Vietnam, and other countries.

Hinduism. Differences in religious beliefs and customs have divided Hindus and Muslims for centuries and have often led to violence. At the time of the partition of India in 1947, nearly a million members of these faiths were killed in riots, and tension persisted between the new state of India, with its Hindu majority, and Pakistan, a Muslim country. Serious fighting broke out in 1965 over the rivalry between India and Pakistan for control of Kashmir. In May, India detained Sheikh Abdullah of Kashmir because of his contacts with Chinese Communists, and this provoked a one-week general strike by Kashmir Muslims. During this period both India and Pakistan complained of constant violations of the cease-fire line on the border between India and both sections of Pakistan. An open clash occurred in the Rann of Kutch in May, clashes took place in Kashmir in July, and a large-scale undeclared war broke out along the whole border in September. The United Nations ordered a cease-fire which became more or less effective late in September.

EVANGELIST BILLY GRAHAM preaches the concluding sermon of a ten-day crusade in 1965 at the Houston (Texas) Astrodome. President and Mrs. Johnson attended the event.

KEYSTONE

WORLD JEWISH CONGRESS Governing Council, headed by (l. to r.) Israel M. Sieff, vice president, Dr. Gerhard Riegner, secretary general, and Dr. Nahum Goldmann, president, held its first meetings in London on December 16 and 17.

ber, and India and Pakistan agreed to withdraw their troops in January 1966.

In a minor incident of the year, the Hindu Cow Servicing Society threatened a civil-disobedience campaign if the government failed to ban all cow slaughter. The cow is sacred to orthodox Hindus.

Buddhism. In Ceylon, Buddhist monks reentered politics, after an eight-year abstention, to oppose the drift to the left of Mrs. Sirimavo Bandaranaike, who was forced to resign as prime minister after the election of March 22. The leader of the United National party, Dudley Senanayake, succeeded her and began a more pro-Western course.

In April, Burmese Buddhist monks staged anti-government demonstrations throughout the country to protest a purge of politically active clergy.

Reports from Tibet indicated that Communist China had accused the Panchen Lama of "activities against the people's motherland and socialism" and had removed him to Peking, where he would be given a chance to "make a fresh start if he reforms." In India, the exiled Dalai Lama spread a report that all Tibetans between 18 and 45, including women and monks, were being forced to undergo guerrilla training for a possible war with India.

Buddhist leaders in South Vietnam continued to urge an implicitly anti-U.S. neutralism. The year began with Buddhist demonstrations against the military government and U.S. support of it. A Buddhist girl committed suicide during the demonstrations. When Nguyen Khanh was ousted as premier, to be succeeded by Nguyen Cao Ky, Buddhist opposition to the government subsided slightly. Yet tension between Catholics and Buddhists continued.

The religious scene in Japan was still dominated in 1965 by the burgeoning Buddhist sect, Soka Gakkai. In the July elections its political arm, Komeito (Clean and Fair Party), obtained 20 seats in the Upper House of the Diet, an increase of five. Soka Gakkai professes a neutralist pro-Japan policy which is not militarist nor fascist but a pursuit of "Buddhist democracy," freed of foreign entanglements, whether American or Chinese.

RESPIRATORY DISEASES

In recent years significant advances have been made in establishing the causes of acute respiratory infections. Research has established that 90% of acute respiratory infections are due to viruses. Since 1955, over 150 new viruses, comprising several groups, have been isolated and shown to be important causes of acute respiratory disease. These virus groups are adenoviruses, parainfluenza viruses, enteroviruses, rhinoviruses, syncytial viruses, and other filterable agents not yet classified. Mycoplasma organisms (PPLO), which cause severe pneumonias, have also been identified and characterized.

Viral Infections. Because virus infections of the respiratory tract do not confer a permanent immunity, children have an average of six respiratory infections annually, and adults have an average of four. Some infections may be due to the same virus strain, but more frequently they are caused by different strains or types of the same virus group, or by strains of different virus groups. Each strain of virus may produce infections of different degrees of severity in a given group because of such factors as age, the "immune state" of the individual, and the nature of the infecting dose. Thus, in different individuals infections by a single viral agent may manifest themselves as a simple cold with a runny nose, sore throat, pharyngitis, laryngitis, tracheitis, bronchitis, bronchiolitis, or fatal pneumonia.

Acute nonbacterial respiratory infections are responsible each year for 50,000 to 60,000 deaths in the United States. Of these, from 10,000 to 15,000 are estimated to occur in infants under one year of age. In all age groups, respiratory infections from the newer respiratory viruses, from epidemic influenza, and from pneumonia due to bacterial agents rank fourth as the cause of death from diseases. The highest mortality occurs among the very young and the aged.

Chronic Respiratory Disease. Recent studies indicate that a relationship exists between acute respiratory illnesses and chronic pulmonary diseases. Lung specialists generally agree that one of the major underlying causes of chronic bronchitis and emphysema is recurrent infections (inflammation) of the lower air passages. This view of the genesis of chronic bronchitis is supported by recent studies which show that a number of the newly recognized viral agents, particularly the parainfluenza and syncytial viruses, are frequently the cause of repeated acute respiratory infections in adults with chronic lung disease.

Although cigarette smoke and other air pollutants may irritate the respiratory mucosa, the primary significant damage to the lungs is considered to be brought about by viruses which grow in and destroy the cells lining the air passages. Each acute respiratory infection may result in only a small degree of destruction and scarring, but it has been postulated that accumulative infections over a lifetime can cause permanent and extensive lung changes characteristic of chronic bronchitis with and without emphysema.

Chronic respiratory disease is one of the fastest-rising causes of disability and death among adults. From July 1961 to June 1963 over 5 million individuals were estimated to have chronic bronchitis, emphysema, or both. According to mortality data,

deaths from pulmonary emphysema and chronic bronchitis have quadrupled in the past 10 years. Only cancer equals this rapid rise as a cause of death by disease.

Prevention. Because there is no specific treatment for virus infections of the respiratory tract, prevention is important. Effective vaccines are available only for the prevention of epidemic influenza. Further control of acute and chronic respiratory diseases must await the development of equally effective vaccines against adenovirus, parainfluenza, syncytial viruses, and mycoplasma infections. Once available, such vaccines may prevent thousands of deaths annually. They also may reduce accumulative lung tissue damage, which leads to the "respiratory cripple" in later life.

A large number of effective antibiotics for the treatment of bacterial infections of the respiratory tract are available. Successful results depend on early treatment.

Hastings Professor of Medicine
University of Southern California

RETAIL STORE SALES

In the first half of 1965, retail store sales in the United States were at a record annual rate of \$277 billion, after seasonal adjustment. This was 8% higher than in the first half of 1964. Continued sales advances were expected for the balance of the year 1965.

Sales remained stable in 1960 and 1961. They then advanced 5% to 8% per year in 1962, 1963, and 1964. Rising consumer income and federal tax cuts were the major factors in the sales advance. Retail prices increased only 5% from 1960 to mid-1965.

Sales. Consumers spent 60% of their income (after taxes) at retail stores in the first half of 1965: 20% at durable goods stores and 40% at nondurable goods stores. Per capita purchases reached a seasonally adjusted annual rate of \$1,435, and increased about 30% between 1955 and 1965.

SALES OF RETAIL STORES, 1963-65

	1963	1964	First half 1965 ¹
	(Millions of dollars)

Department stores.....	16,683	18,631	20,376

¹ Seasonally adjusted annual rate. ² Includes estimates for other retail stores not shown separately. Source: U.S. Department of Commerce.

In the first half of 1965 about \$33 billion at a seasonally adjusted annual rate was spent at chain stores with 11 or more outlets. This figure represented an increase of 6.5% over the corresponding total for the first half of 1964. One fourth of retail purchases were made at chain stores. Food and general merchandise stores with 11 or more outlets accounted for \$24 billion, or three fourths of the chain store volume.

All major businesses recorded gains from mid-1964 to mid-1965. Sales of automotive stores rose 15%; general merchandise, 11%; eating and drinking

places and gasoline service stations, 8.5% each; drug stores, 7.5%; and food stores, 5.5%.

Inventories. Retailers held \$33 billion in inventories at mid-1965, an addition of \$2.2 billion since mid-1964. In both mid-1964 and mid-1965, the value of the stocks was equivalent to 1.4 months of sales.

RHODE ISLAND

Rhode Island's economy moved ahead to new levels of prosperity in 1965. In June the Providence-Pawtucket area, which since May 1960 had received almost \$17 million in special federal aid funds was removed from the list of depressed areas. The ratio of unemployed in the state was down to 4.1% by September—the lowest ratio since the compilation of unemployment records began in 1947. The average hourly earnings of workers in the state amounted to \$2.21 in October, as compared with \$2.12 in October 1964.

Tourism. In 1965, Rhode Island enjoyed the best and longest tourist season in years. To promote tourism further, the Rhode Island Travel-Tourist Association was formed in August. Also, Rhode Island Recreation Building Authority, with the

Area: 1,214 square miles.
Population: 897,000 (1965 est.).
Chief Cities (1965 est.): Providence, the capital (195,000); Pawtucket (80,500); Warwick (75,500); Cranston (72,000); Newport (50,500); Woonsocket (46,500); East Providence (44,500); West Warwick (22,300).
Government: Chief Officers—governor, John H. Chafee (Republican); lt. gov., Giovanni Folcarelli (Democrat); secy. of state, August P. LaFrance (D); atty. gen., J. Joseph Nugent (D); treas., Raymond H. Hawkesley; comm. of educ., Dr. William P. Robinson, Jr.; chief justice, Thomas H. Roberts. Legislature—General Assembly (convened Jan. 4, 1966); Senate, 46 members (30 Democrats, 15 Republicans, 1 Republican Independent); House of Representatives, 100 members (76 D, 24 R).
Education: School enrollment (1964-65)—public elementary, 86,106 pupils (3,289 teachers); public secondary, 64,595 pupils (3,068 teachers); nonpublic schools, 60,300 pupils (2,130 teachers); college and university (fall 1964), 28,706 students. Public school expenditures (1964-65)—\$70,000,000 (\$514 per pupil); average teacher's salary, \$6,251.
Public Finance (fiscal year 1965): Revenues, \$153,011,460 (3.5% sales tax, \$36,971,862; motor fuel tax, \$19,309,980; federal funds, \$22,756,777). Expenditures, \$150,386,073 (education, \$33,603,947; health and welfare, \$58,220,016; highways, \$10,647,476). State debt, \$117,045,971 (June 30, 1965).
Personal Income (1964): \$2,298,000,000; average annual income per person, \$2,514.
Public Assistance (fiscal year 1965): \$24,977,721 to 39,975 recipients (aged, \$6,834,112; dependent children, \$11,516,414).
Labor Force (employed persons, August 1965): Agricultural, 3,000; nonagricultural (wage and salary earners), 313,700 (38% manufacturing, 18% trade, 15% government). Unemployed persons (August 1965)—17,400.
Manufacturing (1963): Value added by manufacture, \$949,756,000 (textile mill products, \$161,838,000; primary metals, \$98,292,000; nonelectrical machinery, \$88,562,000; electrical machinery, \$54,957,000; fabricated metals, \$63,753,000; food and products, \$61,887,000).
Agriculture (1964): Cash farm income, \$20,711,000 (livestock, \$11,791,000; crops, \$8,836,000; govt. payments, \$84,000). Chief crops (tons)—potatoes, 48,800; hay, 30,000; apples, 4,300; peaches, 300.
Mining (1964): Production value, \$2,549,000 (ranks 49th among the states). Chief minerals (tons)—sand and gravel, 1,647,000; stone, 450,000.
Fisheries (1964): Commercial catch, 36,393,778 pounds (\$3,641,558). Leading species—scup, 8,673,021 pounds (\$527,849); yellowtail flounder, 8,249,208 pounds (\$470,568); blackback flounder, 4,080,536 pounds (\$215,822); whiting, 3,904,515 pounds (\$103,999).
Transportation: Roads (1964), 4,508 miles (3,585 surfaced); motor vehicles (1964), 424,028; railroads (1963), 158 miles; airlines (1965), 6 (12 airports).
Communications: Telephones (1965), 413,000; television stations (1964), 2; radio stations (1964), 20; newspapers (1965), 7 (daily circulation, 312,579 in 1964).

power to insure mortgages for recreational facilities up to \$5 million, was established by the General Assembly.

Strikes. The state was plagued by a series of strikes in 1965. These included walkouts of workers at the U.S. Rubber Company, the Narragansett Brewing Company, the Grinnell Company, nine moving firms, and a number of construction projects.

Transportation. The completion of Interstate Highway 95 through Providence eased traffic jams in that city. In November, construction began on the \$30 million Narragansett Bay Bridge between Newport and Jamestown.

Fair-Housing Law. The General Assembly's 69-day session that ended on May 15, 1965, was the most productive in years. Legislation included a fair-housing act, adopted after six years of controversy. The measure, which had been defeated by a vote of 61 to 32 in the House of Representatives in 1964, was passed by a 54 to 42 vote in 1965. Rhode Island thus became the 14th state to prohibit discrimination in the sale and rental of housing.

Other Legislation. New measures also included an increase in the sales tax, from 3.5% to 4%, to help finance the state's record \$137 million budget. Business benefited from a new merit-rating law that changed the unemployment compensation tax from a flat 2.7% to a flexible rate having a possible low of 1.6% for employers with stable employment records. The Assembly also authorized a state census to provide a basis for reapportioning Assembly seats, and extended medical care for the aged.

Chairman, Department of History
University of Rhode Island

RHODESIA

Prime Minister Ian Douglas Smith declared Rhodesia's independence from Britain on Nov. 11, 1965—the first declaration of its kind since the American colonies broke away in 1776. In British eyes and world opinion, Rhodesia became an outlaw nation, whose 220,000 white citizens had illegally seized political control over the country's 4,000,000 Africans. Though long rehearsed and aggressively pressed, Rhodesia's actual break shocked the world. The worst fear was that an explosive African nationalist invasion from without, or a revolt from within, or both, might precipitate racial warfare.

RHODESIA'S PRIME MINISTER IAN D. SMITH proclaims his nation's independence of Britain, reading the historic declaration of independence in a broadcast on Nov. 11, 1965.

British Retaliation. While Prime Minister Smith was broadcasting his historic independence statement, British Governor Sir Humphrey Gibbs, acting on orders of the queen, declared Smith and his cabinet dismissed for an unconstitutional act. British Prime Minister Harold Wilson retaliated swiftly by expelling Rhodesia from the sterling area, freezing Rhodesian funds in British banks, stopping British purchase of Rhodesia's annual \$112 million tobacco crop and most other exports, ending British aid, and suspending trade preferences. Wilson was under pressure from Britain's Conservative party not to take harsher measures, while African states were urging British military intervention in Rhodesia. On December 17 he announced an embargo on oil shipments to Rhodesia—the strongest economic sanction yet imposed.

African Reaction. In Africa, Britain was severely criticized for not taking stronger action. On December 3, at the request of Zambia's President Kaunda, Britain sent a token unit of the Royal Air Force to guard the Zambian side of the Kariba Dam, but refused to move troops to the Rhodesian side. The Organization of African Unity, impatient with economic sanctions, resolved on December 5 to break

UPI

relations with Britain on December 15 if the Rhodesian rebellion was not crushed by that date. However, only nine states—the Congo (Brazzaville), Guinea, Senegal, Niger, Tanzania, Ghana, Mauritania, the United Arab Republic, and Algeria—complied.

Rhodesian Africans, with their political parties banned and their leaders detained, put up little resistance. In Bulawayo, Africans demonstrated on November 22 and 23, calling for a general strike, but the Rhodesian police soon gained control.

World Response. Most nations rallied to support Britain's campaign of economic warfare. On November 12 the UN Security Council condemned Rhodesia's rebellion and called on all states to deny recognition to the Rhodesian government. On November 20 the council proposed strong economic sanctions, including the oil embargo. The United States, Canada, France, and Italy agreed to enforce the oil embargo, but Portugal was noncommittal. When Rhodesia retaliated by stopping oil shipments to Zambia on December 18, Britain and the United States began an airlift to supply oil to Zambia.

Only Portugal and the Republic of South Africa maintained something like normal diplomatic relations with Rhodesia, and even they stopped short of actual recognition.

Background. Founded as a British territory in 1890, Rhodesia was granted self-government in 1923. Britain retained veto power over legislation affecting Africans and continued to control foreign affairs. As scores of African territories received independence under African rule, white Rhodesians clung to their 1961 constitution, under which dual voting rolls assured them of 50 seats in the 65-seat legislature. Fear on the part of the whites that a British-imposed liberalization of the constitution would lead to African rule and the loss of their property and privileges resulted in the election of successively more conservative, anti-African governments. On April 14, 1964, Ian Smith was elected prime minister after he had promised to declare Rhodesia's independence. Tension heightened when Britain granted independence under African rule to nearby Malawi on July 6, 1964, and to adjoining Zambia on Oct. 24, 1964.

Negotiations. In a national referendum held on Nov. 5, 1964, registered voters overwhelmingly approved a unilateral declaration of independence, and in the election on May 7, 1965, Smith's Rhodesian Front party made a clean sweep of all 50 white seats. Thus armed, Smith prepared for a week of

tough talks with Wilson in London from October 4 to 11, but the talks ended in deadlock. Back in Salisbury, Smith held daily cabinet meetings, weighing possible British countermeasures to a Rhodesian declaration of independence. Meanwhile, on October 11, the UN General Assembly approved a resolution urging Britain to prevent Rhodesia's independence.

Having ruled out armed British intervention, Wilson warned Smith of the grave economic consequences of illegal independence. Wilson's offer of arbitration by a mission of senior Commonwealth prime ministers was rejected by Smith on October 18 on the ground that such a mission would include Afro-Asians biased against white Rhodesian interests.

Hoping to turn Rhodesia from the brink, Wilson flew there on October 24. He talked to 120 leaders of both races, including Joshua Nkomo, the restricted African nationalist leader of the banned Zimbabwe African People's Union. Before departing on October 30, Wilson proposed that a royal commission draw up a constitution leading to independence. Unable to agree on terms by which the commission would reach a decision, Rhodesia declared a state of

ROMAN CATHOLIC CHURCH

Paul VI became the first reigning pope to visit the United States or the Western Hemisphere, when he flew to New York on Oct. 4, 1965, to address the United Nations. During his one-day visit, he also conferred with President Johnson, celebrated Mass and preached in English at Yankee Stadium and traveled with his motorcade through the city. See also RELIGION—Catholicism.

In conformity with the growing ecumenical spirit, Catholics engaged in numerous interfaith dialogues in 1965. At one meeting in Washington, D.C., in June, three Catholic and three Protestant Episcopal bishops, together with their theological advisers, discussed obstacles in the path of improved relations. Catholic seminarians and priests occasionally attended lectures at Protestant seminaries, where Catholic priests sometimes delivered the lecture. A similar phenomenon occurred in Catholic seminaries.

The Revised Standard Version of the New Testament, with few variations in text, was published by a Benedictine press, after receiving an *imprimatur* for private reading by Catholics.

Priests, seminarians, and sisters participated actively in many of the civil rights demonstrations that highlighted the year 1965. See CIVIL RIGHTS.

In 1965 the estimated 45.6 million Roman Catholics in the United States constituted almost one fourth of the total population of the 50 states. The number represented an increase of 12 million in the past decade. About one third of the Catholics resided in the ten largest sees. These centers, in descending order of size, were: Chicago, New York, Boston, Los Angeles, Brooklyn, Newark, Detroit, Philadelphia, Pittsburgh, and Buffalo.

United States representation in the College of Cardinals in 1965 remained at five: Francis Cardinal Spellman of New York, Richard Cardinal Cushing of Boston, Joseph Cardinal Ritter of St. Louis, James Francis Cardinal McIntyre of Los Angeles, and Lawrence Cardinal Shehan of Baltimore. The

latter received the red hat on Feb. 22, 1965. Albert Cardinal Meyer of Chicago died on April 9, 1965 (see NECROLOGY).

Harold R. Perry, who was named auxiliary bishop of New Orleans in October, was the first Negro to be raised to the episcopate in the United States in the 20th century. The only other one was James Healy, bishop of Portland, Me., in 1875–1900.

In 1965 there were 17,637 Roman Catholic parishes in the United States. During 1964, converts to Catholicism numbered 126,000, or about 2,000 more than in 1963. The new converts included Luci Baines Johnson, daughter of the president, who became a convert on her 18th birthday. The number of baptisms in 1964 totaled 1,436,000; the number of deaths, 388,000.

For Latin rite Catholics there were 27 archdioceses (all metropolitan sees except Washington, D.C.), 114 dioceses, and one abbey *nullius dioceseos* (Belmont Abbey). The Washington archdiocese became a metropolitan see in October 1965, with the prelate nullius of the Virgin Islands as its suffragan. For the 600,000 Eastern rite Catholics there were two dioceses of the Ukrainian rite, and one archdiocese and two dioceses of the Byzantine rite.

In 1964, bishops, including titulars, numbered 212. There were 58,630 priests (35,925 diocesan, and 22,705 religious in 160 orders or congregations). Between 1954 and 1964 the number of priests increased by 10,000. Within this decade diocesan and religious seminarians increased from 34,000 to 49,000, and brothers, from 8,870 to 12,270. Religious women increased from 160,000 to 180,000, in 448 institutes by 1963, but with 60 less members than in 1964.

Catholic education continued its rapid expansion. Between 1954 and 1964, colleges and universities increased in number from 254 to 304, and enrollment rose from 242,000 to 385,000. In the same period high schools increased from 2,383 with 672,000 students to 2,465 with 1,095,000 students. Catholic elementary schools rose from 9,568 with an enrollment of 3.54 million to 10,931 with an attendance of 4.56 million. The full-time teaching staffs in all schools mounted in number from 135,000 to nearly 200,000 (104,000 sisters, 75,000 lay persons, 12,000 priests, 5,900 brothers, and 1,100 scholastics preparing for the priesthood).

In the decade 1954–64 the number of Catholic hospitals and sanatoria rose from 931 institutions with 138,000 beds to 952 with 161,000 beds. Orphanages and infant asylums, on the other hand, declined in number from 317 in 1954 to 257 in 1964, and in resident children from 34,000 to 23,000.

Circulation figures for the Catholic press exceeded 27 million in 1964. Some 20 million persons subscribed to 300 periodicals, 4.5 million to 121 weekly newspapers, and 380,000 to 53 diocesan directories.

Staff Editor, "The New Catholic Encyclopedia"

ROWING. See SPORTS.

RUBBER

In 1965, consumers in the United States used a record 2,020,000 long tons of rubber. (One long ton equals 2,240 pounds.) Synthetic rubber accounted for 75% of the total volume. Consumption of styrene-butadiene types (those primarily used in tires) totaled 1,080,000 long tons. The types de-

POPE PAUL VI greets crowd outside St. Patrick's Cathedral during his October 5 visit to New York and the United Nations. Francis Cardinal Spellman is at the right.

veloped for specific end uses, with stereo elastomers heading the list, accounted for 435,000 long tons.

U.S. Tire Production. Domestic factories produced 174,400,000 pneumatic tires during the year, up 8,000,000 units from 1964. All-time highs were set as passenger cars required 50,000,000 tires in original equipment and 93,000,000 for replacement. Other requirements were 19,700,000 tires for trucks and buses, 4,500,000 for farm tractors and implements, and 4,500,000 for industrial vehicles.

World Rubber Consumption. Rubber consumed in the free world, plus imports by Soviet-bloc countries, totaled 5,300,000 long tons in 1965. This figure included 2,960,000 tons of synthetic rubber, or 55.8% of the total. For the third consecutive year world consumption of synthetic rubber exceeded that of natural rubber. Soviet-bloc imports were estimated at 500,000 tons of natural rubber and 60,000 tons of synthetic.

World Rubber Production. World production of synthetic rubber accounted for 57.3% of total rubber output in 1965, compared with 55.7% in 1964. For four consecutive years synthetic rubber production has exceeded natural rubber output.

New Products and Materials. Polyester cord passenger tires became available commercially in 1965, and construction of new plants for processing the cord began. Radial-ply tires were part of the original equipment on several 1966-model cars. Researchers experimented with polyisoprene rubber for commercial purposes and with fiberglass cord for radial-ply tires.

RUMANIA

Rumania continued during 1965 to follow a policy of strict neutrality in the Sino-Soviet conflict. It boldly reorganized its party, government, and economy, without asking either China or the USSR.

Leadership. President Gheorghe Gheorghiu-Dej, who died of cancer on March 19, had been the Rumanian most responsible for the collapse of Mos-

EASTFOTO

RUMANIAN COMMUNIST LEADER Gheorghe Gheorghiu-Dej died on March 19. Gheorghiu-Dej was largely responsible for Rumania's growing independence of the Soviet Union.

cow's grand design for eastern Europe. In 1962-63, Gheorghiu-Dej had won from Soviet Premier Nikita Khrushchev a recognition of Rumania's right to develop its economy along strictly nationalist lines. Gheorghiu-Dej had also taken advantage of the struggle between Moscow and Peking to chart a middle course that combined neutrality in regard to the Communist feud with a stubborn assertion of Rumania's interests. By the time of his death, a quiet campaign of de-Russification and withdrawal from satellite status had taken place in Rumania. Despite the dangerous steps Gheorghiu-Dej had taken, both Soviet President Anastas Mikoyan and Communist Chinese Premier Chou En-lai attended his funeral. (See NECROLOGY for a biographical sketch of Gheorghe Gheorghiu-Dej.)

Regular elections to the Grand National Assembly and to the People's Councils were held on March 7. In the election, 99.96% of the eligible voters cast 99.85% of their ballots for the single list of candidates. The assembly elected Ion Gheorghe Maurer, the closest associate of Gheorghiu-Dej, as chairman of the Council of Ministers (premier), and named Chivu Stoica, another loyal follower, as president of the State Council.

The man who emerged as Gheorghiu-Dej's successor in the powerful post of secretary general of the Rumanian Communist party (changed from

Rumanian Workers' party in July) was Nicolae Ceausescu (pronounced chow-shess'coo), a 47-year-old party official of peasant origin.

Party Congress. Before the 9th party congress was held on July 19–23, party rules were liberalized to give seniority of membership to former Socialists and to those who had struggled against the pre-Communist regime but had not joined the party until after the Communist takeover. At the congress itself, which Soviet Communist party leader Leonid Brezhnev and Chinese delegates attended, Rumania was declared a "socialist republic," replacing the term "people's republic." Ceausescu stressed increased industrialization as the only way to ensure independence, national sovereignty, equal rights among nations, and noninterference in internal affairs by other countries. Rumania would remain in COMECON (the Communist bloc's equivalent of the Common Market) on its own conditions, but would continue to develop economic relations with other states regardless of their social systems.

The party also authorized a realistically slower pace for the new five-year plan (1966–70) in order to guarantee a 65% increase in output by that date, and a reduction in the strength of the armed forces, which may weaken the tottering Warsaw Pact (the Communist counterpart of NATO). Before the congress adjourned, it approved a policy of less rigid supervision of intellectual activities. The party also approved the draft of a new state constitution, which the assembly ratified in August.

Foreign Relations. Rumanian leaders visited the Soviet Union in September to hear Brezhnev concede all the main points over which former Premier Khrushchev had quarreled with the Rumanians. The Rumanians also visited Bulgaria and were accorded similar support. Thus Rumania, enjoying the highest rate of industrial development in eastern Europe, secured approval of its independent line, which may lead it out of the Soviet bloc and into a status comparable to that of Tito's Yugoslavia.

In January the Firestone Rubber Co. and Universal Oil Products Corp. arranged to construct a synthetic rubber plant and a catalytic petroleum-cracking unit in Rumania—a venture that would have been the first entry of American industry into a Communist-controlled country since 1941. However, Firestone backed out in July after the Goodyear Rub-

ber Co. and the conservative Young Americans for Freedom undertook a campaign to wreck the plan.

RURAL ELECTRIFICATION ADMINISTRATION. See AGRICULTURE—Farm Services.

RUSK, (David) Dean

U.S. secretary of state: b. Cherokee County, Georgia, Feb. 9, 1909.

To Dean Rusk and the Department of State in 1965 fell the wearisome and often frustrating tasks of explaining U.S. policy in Vietnam and of seeking an indication that the Communists were interested in negotiating an end to the war there.

Vietnam. Although the Johnson administration remained firm in its resolve to avert a Communist takeover in South Vietnam, its policies vacillated between accelerating the war and seeing negotiations.

SECRETARY OF STATE RUSK (left) confers with Soviet Foreign Minister Gromyko in New York on October 1. The war in Vietnam strained U.S.-Soviet relations in 1965.

As a result, Secretary Rusk often saw his statements contradicted by events. On January 3 he said that the United States planned no major expansion of the war, but the conflict escalated throughout the year. On February 25 he said that the United States would not negotiate until North Vietnam indicated that it was "prepared to stop what it is doing," but six weeks later President Johnson called for "unconditional discussions." On April 17, Rusk joined the president in defending U.S. air strikes in Vietnam, asserting that "our best judgment tells us [that a halt in the bombings] would only encourage the aggressor and dishearten our friends. . . ." A month later the United States briefly halted the bombings as a gesture for peace.

When college professors and students protested U.S. "aggression," Rusk called their arguments "nonsense." He deplored "the gullibility of educated men and the stubborn disregard of plain facts. . . ." When it was revealed in November 1965 that the United States had passed up a chance to negotiate with North Vietnam in 1964, Rusk replied that the "so-called feelers" were aimed only at permitting the United States to leave Vietnam under face-saving circumstances, and that "we are not interested in saving face but in saving South Vietnam."

Rusk apparently was pessimistic about chances for successful negotiations. He felt that the central issue was not easily negotiable: "Hanoi either leaves South Vietnam alone or does not."

North Atlantic Treaty Organization. In a speech on March 6, Rusk indicated that he hoped western Europe would assume a greater share of the burdens and responsibilities of NATO defense. At a NATO meeting in London in May, Rusk sought support for U.S. military activities in Vietnam, but French opposition prevented a reference to Vietnam in the final communiqué. On December 14, Rusk told NATO delegates in Paris that the war was important to them because the Communists, if successful in Asia, might seek new adventures elsewhere.

Latin America. The U.S. intervention in the Dominican Republic revolt stirred widespread criticism in Latin America. Rusk proposed on May 8 that the Organization of American States create a standby force that could act promptly in any future emergency. At the Special Inter-American Conference in Rio de Janeiro in November, Rusk renewed his call for a permanent inter-American peacekeeping force.

Schlesinger's Memoirs. In 1965, Arthur M. Schlesinger, Jr., a historian and an assistant to President John Kennedy, published his account of the Kennedy administration, *A Thousand Days*. He wrote that Kennedy had planned to dismiss Rusk after the 1964 election. Schlesinger was critical of Rusk, writing that his mind, "for all its strength and clarity, was irrevocably conventional," and that he lived under fear of inadequacy and humiliation.

Many persons contended that Schlesinger had undermined Rusk's effectiveness at a time when he was engaged in delicate diplomatic activities. President Johnson quickly praised Rusk, who refused to be drawn into a dispute with Schlesinger. But he did note, on August 13, that recent criticism of the State Department dealt with its alleged lack of daring and imagination: "Now there are times when some wish us to act with more drama, but there are problems about dramatizing issues, if drama gets in the way of settlement. . . . The department's purpose is to try to bring about what some people will call a boring situation, that is, a period of peace."

RWANDA

AFRICA

RWANDA · Information Highlights

Area: 10,169 square miles.

Population: 3,018,000 (June 30, 1964, est.).

Chief City (1964 est.): Kigali, the capital, 7,000.

Government: President and Premier—Grégoire Kayibanda (took office Oct. 9, 1961). Parliament—National Assembly, 44 members; party seating (1965)—Parmehutu, 35; others, 9.

Religious Faiths: Roman Catholics, 30% of population; others, including tribal religions, 70%.

Education: Total school enrollment (1962–63)—319,495 (primary, 315,852; secondary, 3,475; higher, 168).

Finance (1963): Revenues, \$9,420,000; expenditures, \$13,120,000; monetary unit, RB franc (50 francs equal U.S.\$1).

Gross National Product (1962): \$114,000,000.

Crops (metric tons, 1962–63 crop year): Sweet potatoes (1963–64), 421,000; cassava, 290,000; dry beans, 170,000; dry peas, 39,000.

Minerals (metric tons, 1964): Tin, 1,707 (ranks 10th among world producers); amblygonite (lithium), 295; beryl (1963), 228; tungsten, 48; columbium and tantalum (1963), 30; gold, 500 troy ounces.

Foreign Trade (1962): Exports, \$21,000,000 (chief exports: coffee, \$12,384,000; cassiterite, \$3,590,000; cotton and cottonseed oils, \$1,272,000); imports, \$36,000,000 (chief imports: clothing and textiles, \$7,652,000; foodstuffs, \$7,408,000; fuels and lubricants, \$3,344,000). Chief trading partners (1960): Tanganyika (took 51% of exports, supplied 7% of imports); Belgium (took 31% of exports, supplied 21% of imports); U.S. (took 13% of exports, supplied 10% of imports).

Transportation: Roads (1963), 3,362 miles; motor vehicles (1963), 4,698 (automobiles, 2,841); principal airport, Kigali.

Communications: Telephones (1964): 712.

The political situation in Rwanda was relatively peaceful during 1965 following counterrevolutionary attempts against the government in 1964 by the dispossessed Watusi (or Tusi) aristocracy.

Refugee Problem. More than 200,000 Watusi refugees from Rwanda live in neighboring countries. Those in the Congo who were believed to have supported the rebellion of 1964 were threatened with expulsion by the Léopoldville government if they did not cease agitating against the Rwanda government. In accordance with a suggestion by the United Nations High Commissioner for Refugees, the government in Léopoldville agreed to have some 3,000 of the exiles resettled in Tanzania.

Foreign Relations. Rwanda retained a decidedly pro-Western foreign policy. Nevertheless, it relaxed its rigid anti-Communist position by establishing diplomatic relations on the ambassadorial level with Poland and Rumania. At the same time, Rwanda remained on excellent terms with Nationalist China, which offered technical aid for agricultural development. Most of Rwanda's foreign aid, however, came from Belgium, West Germany, and France.

ST. LOUIS

St. Louis (1965 est. pop.: city, 710,000; metropolitan area, 1,690,000) continued to celebrate its 200th anniversary in 1965 and completed the commemorative Gateway Arch on the riverfront. St. Louis voters made six separate trips to the polls during the year. They chose a new city administration, defeated and then passed a major increase in the tax levy for schools, registered opinions on three state constitutional amendments, and approved a bond levy for the district junior colleges.

Gateway Arch. The highlight of the St. Louis bicentennial celebration was the completion on Oct. 28, 1965, of the 630-foot Gateway Arch on the Mississippi riverfront. Designed by the late Eero Saarinen, the steel arch commemorates the Louisiana Purchase and the westward expansion movement. It is part of the Jefferson National Expansion Memorial, a 40-block area on the city's riverfront.

The Spanish Pavilion of the New York World's Fair will be brought to the city and reconstructed near the arch. The transporting of the pavilion will be financed by private contributions, and the building will be managed by a private foundation.

Elections. In city primary elections held in March, Alfonso J. Cervantes, former president of the board of aldermen, defeated incumbent Mayor Raymond Tucker for the Democratic nomination for mayor. Tucker, who had been mayor of St. Louis since 1953, was seeking an unprecedented fourth term. In the April general election, Cervantes defeated the Republican nominee by a margin of 99,869 to 47,179. Democratic candidates also won all contested seats for the board of aldermen.

City voters were twice asked to grant approval to proposed tax increases to help finance the city's school system. On May 11, city voters failed to grant approval to a tax proposal, leaving city schools with a potential financial crisis. A second proposal, presented to the voters in June, was approved. Voters in the St. Louis area, in a special election on November 16, approved a \$47,200,000 bond issue for the construction of permanent facilities for the three St. Louis District junior colleges.

Higher Education. The two private universities in the city received multimillion dollar awards from the Ford Foundation. St. Louis University received a \$5 million unrestricted grant, and Washington University was awarded a \$15 million gift, the third largest ever awarded any educational institution by the foundation.

In January, Washington University initiated a major fund-raising drive to obtain by 1970 a total of \$70 million for scholarships and other purposes.

Cultural Events. The bicentennial celebration brought the city an unusually busy cultural schedule. Special events included performances in St. Louis by the Metropolitan Opera Company and the New York City Ballet. In October, Shaw's Garden was the scene of an outside display of sculpture, featuring pieces from local collections. The 1965-66 season of the St. Louis Symphony was temporarily delayed by a wage dispute between players and management. The season was temporarily cancelled, but finally got under way on November 6.

Public Finance. The city budget for the 1964-65 fiscal year called for expenditures of \$79,494,152. St. Louis' long-term debt (1965) was \$122,369,000, and the city tax rate (1965) was \$4.85 per \$100 assessed valuation. In June 1965, the consumer price index was 110.2 (1957-59=100).

SALVATION ARMY

In 1965 the Salvation Army maintained operations in 69 countries and geographical areas, and preached the Gospel in 142 languages. There were 25,418 commissioned officers, 1,696 cadets, 31,684 full-time employees, and about 1 million soldiers, or lay members. General Frederick Coutts, international leader, directed operations from his headquarters in London.

The Salvation Army's worldwide services in 1965 included 142 hospitals, dispensaries, and clinics, which treated 166,528 inpatients and 756,205 outpatients; 927 day schools, which taught 129,636 pupils; and several employment bureaus, which placed 162,379 applicants in jobs. In addition the Salvation Army operated 154 children's homes and 86 homes for unwed mothers, 205 shelters and workshops for men, 134 goodwill centers and slum posts, 6 leprosariums, and 10 institutes for the blind.

Under the command of Commissioner Holland French, the Salvation Army in the United States had four regional commissioners in 1965: William Davidson (Eastern); Samuel Hepburn (Central); Paul J. Carlson (Southern); and Glenn Ryan (Western). There were 8,650 centers of operation in the United States. These centers, administered by 5,087 officers and employing 14,318 persons, included 6,463 service extension units.

The Salvation Army's social institutions included 127 treatment centers aiding 63,577 homeless men; 58 camps affording camping experiences for 25,257 children and adults; and 15 Evangeline residences providing homes for businesswomen. The 287 boys' and girls' clubs and community recreation centers had a total attendance of 7,571,493. The Salvation Army also furnished care for 16,735 unwed mothers in 34 homes and hospitals, for 18,257 patients in general hospitals or related institutions, and for 39,313 outpatients.

A Centenary Congress convened in London in June 1965 to celebrate the 100th anniversary of the founding of the Salvation Army. A U.S. postage stamp issued in July honored the centennial.

SAMOA. See PACIFIC ISLANDS; WESTERN SAMOA.

SAN FRANCISCO

San Francisco (1965 est. pop.: city, 756,900; metropolitan area, 3,000,000) struggled in 1965 with the transportation and urban development problems characteristic of a fast-changing city.

Transportation. Contracts were let to build the first units of the \$1 billion Bay Area Rapid Transit project. The 75-mile system of surface lines and subways, including a 6½-mile tunnel beneath the bay, will link San Francisco and the east bay communities with frequent, fast interurban trains. The first trains are expected to begin operating early in 1970, and the entire system is scheduled for completion in 1971.

Plans to relieve mounting congestion in downtown streets were again delayed by the failure of the Board of Supervisors and the State Highway Commission to agree on the location and design of projected freeways. The controversial freeways, which will be financed in part by the state gasoline tax, are intended to speed the movement of vehicles within the city by diverting through traffic from the crowded downtown area.

Urban Development. Work on the city's urban development program continued throughout the year. Three lofty apartment buildings, with some 700 living units, were completed in the Golden Gateway Center, which occupies the former wholesale produce district. Work began on another Golden Gateway structure, the 25-story Alcoa office building and its adjoining plaza, shops, and garage. The entire Golden Gateway project, representing an investment of \$85 million, is expected to be completed in 1968.

Other Construction. Although new construction tapered off slightly during 1965, particularly in residential areas, building activity was noticeable throughout the financial district. The newest addition is the 43-story head office of the Wells Fargo Bank. The building will be ready for occupancy in the fall of 1966. In July the Bank of America made public its plans for a new world headquarters building. Work on this 52-story structure, which will be the tallest building on the west coast, will begin early in 1966.

Newspaper Merger. A major change in the city's newspapers took place in mid-September when the *Examiner*, the original unit of William Randolph Hearst's newspaper empire, abandoned the morning field to its longtime rival, the *Chronicle*. The *Examiner* was consolidated with the Hearst-owned afternoon paper, which became the *Examiner, News Call Bulletin*. Thus, for the first time in well over a century, the city had only two daily papers of general circulation. The two papers publish a joint Sunday edition, the *Examiner & Chronicle*.

Municipal Election. In the municipal election on November 2, in which only 61.5% of the registered voters participated, the five city supervisors whose four-year terms were expiring were reelected. Of seven city propositions on the ballot, all but one were rejected by the voters. The exception was Proposition A, which authorized a bond issue of \$33.67 million for a new medical center to replace the San Francisco General Hospital.

The most hotly contested issue of the campaign was Proposition B, which would have authorized a \$29 million bond issue to rehabilitate the city-owned Opera House and Veterans Memorial Building and to build a new musical arts center. The

measure fell far short of the two-thirds majority needed for passage.

Finances. For the 1965-66 fiscal year, the tax rate on real and personal property was \$10.168 per \$100 assessed valuation—an increase of \$0.94 over the 1964-65 rate. Of the tax rate, \$7.24 was for general municipal expenses and \$2.82 went for support of the city schools. The budget for fiscal 1966 was set at \$383,350,102—a slight increase over the previous year's budget.

Unemployment. In 1964, unemployment averaged 5.3% of the civilian work force.

SASKATCHEWAN

While the economy made notable gains during 1965, it was the celebration of Saskatchewan's diamond jubilee of admission to confederation that highlighted provincial news during the year.

Jubilee. Festivities were organized by a corporation that promoted activities recalling provincial history and honoring Saskatchewan's pioneers. These included competitions to select outstanding pioneers and choose a jubilee flag, district talent contests, with winners competing for final honors at Regina and Saskatoon, production of a film on the province, and publication of a magazine, pamphlets, and a source book of historical documents. Vacation trails were developed and historic parks were opened at Cannington Manor and Wood Mountain.

Finance. Rising revenues produced a budgetary surplus of almost \$8 million as of March 31, 1965, compared with a budgeted surplus of \$500,000. The additional funds enabled the provincial government to extend highway building activities and provide tax relief. A \$50 grant was promised to each homeowner to ease the heavy burden imposed by local taxation on real estate. In addition, the report of the Royal Commission on Government Administration heralded changes in administrative procedures that are expected to yield large savings as they are introduced.

Economy. The economy continued at unprecedented high levels on the strength of further mineral development. The mining of potash, in particular, yielded 2.6 million tons of muriate valued at \$57 million in 1965, compared with 1.4 million tons valued at \$30.7 million in 1964. Plans were announced for a new potash development near Saskatoon.

The agricultural outlook was also promising in 1965. After planting was delayed due to spring rains, a heavy wheat crop came quickly to maturity in the August heat, only to be trapped in the fields by one of the earliest snowfalls on record in the province. Good weather returned in early October, however, and most of the grain was harvested without serious damage. As Canada's leading wheat producer, the province profited from continued demand for wheat in international markets.

The reservoir of the South Saskatchewan River Dam project began to fill in 1965, initiating power,

SASKATCHEWAN · Information Highlights

Area: 251,700 square miles.

Population: 953,000 (Oct. 1, 1965 est.).

Chief Cities (1964 est.): Regina, the capital (124,000); Saskatoon (107,900); Moose Jaw (34,800); Prince Albert (26,100); Swift Current (13,000); North Battleford (12,100); Yorkton (10,756).

Government: *Chief Officers*—Lt. gov., Robert L. Hanbidge; premier and prov. treas., W.R. Thatcher (Liberal party); prov. secy. and atty. gen., Darrel V. Heald (L); min. of educ., G.D. Trapp (L); chief justice, E.M. Culliton. *Legislature*—Legislative Assembly (convened Feb. 4, 1965), 59 members (32 Liberals, 25 Cooperative Commonwealth Federation members; 1 Progressive Conservative; 1 vacancy).

Education: *School enrollment* (1963-64 est.)—public elementary and secondary, 225,197 pupils (9,657 teachers); private, 4,665 (276); Indian, 5,165 (219); college and university (1962-63), 7,024 students. *Public school expenditures* (1963)—\$96,886,000; average teacher's salary, \$5,055.

Public Finance (fiscal year 1965 est.): Revenues, \$223,020,000 (sales tax, \$77,820,000; income tax, \$29,801,000; federal funds, \$27,873,000). *Expenditures*, \$221,590,000 (health and welfare, \$87,650,000; education, \$57,440,000; transportation and communications, \$35,020,000).

Personal Income (1964): \$1,587,000,000; average annual income per person, \$1,678.

Public Assistance (fiscal year 1965 est.): \$17,440,000 (aged and blind, \$4,600,000; dependents and unemployed, \$8,330,000).

Labor Force (1961 census; agricultural and manufacturing only): *Agricultural*, 119,580; *manufacturing*, 13,208.

Manufacturing (1962): *Value added by manufacture*, \$128,359,000 (including transportation equipment, \$199,000; non-electrical machinery, \$1,980,000; fabricated metals, \$6,386,000; food and products, \$52,667,000).

Agriculture (1964 est.): *Cash farm income*, \$838,345,000 (livestock, \$165,619,000; crops, \$670,764,000; government payments, \$1,634,000). *Chief crops* (cash receipts)—wheat, \$474,065,000 (ranks 1st among the provinces); barley, \$20,974,000 (rank, 2nd); flaxseed, \$17,389,000 (rank, 2nd).

Mining (1964, est.): *Production value*, \$279,995,723. *Chief minerals* (tons)—copper, 20,688 (ranks 5th among the provinces); zinc, 28,429 (rank, 7th); cement, 240,000 (rank, 6th); crude petroleum, 81,040,229 barrels (rank, 1st); uranium, 1,792,987 pounds (rank, 2nd); natural gas, 40,941,000 mcf (rank, 4th).

Transportation: *Roads* (1962), 124,066 miles (44,899 paved); *motor vehicles* (1963), 382,190; *railroads* (1963), 8,577 miles; *airlines* (1963), 3 (33 airports).

Communications: (1963): *Telephones*, 215,436; *television stations*, 6; *radio stations*, 16; *newspapers*, 4 (daily circulation, September 1964, 116,778).

irrigation, and recreation development in the area. The dam's vast rolled earth embankment, one of the world's largest, is scheduled for completion in 1966, and the first power will go on line in 1967.

Urban Renewal. Saskatoon is one of the first Canadian cities to have the opportunity to rebuild its downtown area. The Canadian National Railway yards are being removed, leaving a large area for development as an urban center, to include new buildings, a freeway, and parks.

Regina's building activity centered in Wascana Centre. Two University of Saskatchewan buildings for its Regina campus were completed, and the library—feature building of the Regina campus—was begun. Ground was broken also for a centennial auditorium.

Politics. In the only by-election of the year, the Liberals retained the Moosomin seat vacated when A.H. McDonald, former deputy premier and provincial minister of agriculture, was appointed to the federal Senate. A further by-election loomed with the death of Sam Asbell, member of the Legislative Assembly for Bengough, on October 10.

SAUDI ARABIA

Saudi Arabia made notable progress in both the foreign and domestic fields in 1965, the first full year of King Faisal's reign. An agreement with the United Arab Republic (Egypt) for settling the Yemeni civil war appeared to have some chance for success, thereby strengthening Saudi Arabia's position on the international scene. Economic development augured well for the future at home.

Yemeni Civil War. After the failure of the attempt in 1964 by Saudi Arabia and Egypt to settle the Yemeni problem, relations between the two countries deteriorated. In July and early August 1965 they openly threatened to go to war. This trend was reversed in late August, however, when President Gamal Abdel Nasser of Egypt met with King Faisal in Jiddah. The two leaders concluded a new agreement for a cease-fire embracing two points considered essential by Saudi Arabia: the withdrawal of the whole Egyptian expeditionary force from Yemen, and the holding of a national plebiscite there, with the Royalists participating on an equal basis with the Republicans. (See YEMEN.)

Economic Development. Saudi Arabia's budget for the fiscal year beginning in October 1965 was balanced at \$800 million, for an increase of \$188 million over the previous fiscal year. About \$77 million of the increase came from unspent funds allocated previously, and from other sources not connected with regular revenues. Also, nearly \$48 million came from a royalty agreement signed with the Arabian American Oil Company (Aramco) in January. Funds allocated for development projects amounted to about \$370 million. (Unlike other developing countries, Saudi Arabia depends largely on its own resources rather than on aid from abroad.)

Diversification of the nation's economy was promised by a contract with an American company for building an ammonia plant costing \$20 million, and by a contract with an Italian concern to make preparatory studies for a plastics plant costing about \$55 million. An oil concession for areas in the Red Sea was granted to a French company on terms favorable to Saudi Arabia.

The roadbuilding program, particularly important for a country with such great distances and rugged terrain, moved ahead. The most spectacular achievement in the area was the completion of a road

linking Mecca with Taif, the summer capital in the mountains above the Red Sea. The project, with 103 bridges, cost more than \$40 million.

Because Saudi Arabia is mainly a desert land in desperate need of water, the government retained American and French companies to carry out extensive hydrological surveys. A French company was hired to explore for minerals other than oil.

New Crown Prince. Ex-King Saud pledged allegiance to King Faisal in January and then left the kingdom, apparently to reside abroad. In March the government achieved greater stability when King Faisal appointed his younger half-brother, Prince Khalid (born 1913), as heir apparent. The appointment was ratified by popular approval. Prince Khalid is also deputy prime minister.

Boundaries. Saudi Arabia, which has long been plagued with boundary problems on almost every frontier, took steps in 1965 to settle some of these questions. One agreement gave Jordan a somewhat longer stretch of coast south of 'Aqaba in return for concessions of territory in the interior to Saudi Arabia. An agreement with Iran fixed a median line in the Persian Gulf in regard to resources in the seabed. An agreement with Qatar set mainland and offshore boundaries.

Saudi Arabia and Kuwait partitioned the Neutral Zone between them for administrative purposes, but arrangements for equal profits from the zone's mineral resources remained unchanged. The agreement on the Neutral Zone, however, did not settle the offshore boundary or the sovereignty over islands near the zone.

In the east, Saudi Arabia's dispute with Muscat and Oman and with Abu Dhabi over the Buraimi Oasis and adjacent territories continued. However, Saudi Arabia's improved relations with Britain, the strong supporter of Muscat and Oman and Abu Dhabi, indicated that an accommodation might be reached. The boundary with the British Protectorate of South Arabia was still undefined.

SCHWEITZER, Albert

Alsatian Nobel Peace Prize-winning philosopher, physician, theologian, teacher, and organist: b. Kayersberg, Alsace, Jan. 14, 1875; d. Lambaréné, Gabon, Sept. 4, 1965.

The guiding principle of Albert Schweitzer the philosopher was: "I am life that wills to live in the midst of other life that wills to live." His ethical principle was Reverence for Life—a boundless system of ethics, embracing all forms of life, high and low.

In January 1965 the world celebrated with him his 90th birthday. His hospital at Lambaréné, Gabon, was treating over 7,000 patients a year and caring for an additional 200 lepers in a nearby leper village. Before he died, he made known his wishes concerning the running of the hospital after his death, thus ensuring that his life's work at Lambaréné would go on.

Early Life. Albert Schweitzer was the son and grandson of preachers. With a family tree full of musicians, teachers, and pastors, the child seemed destined to enter one of these professions. In the end he entered all three, and became a physician as well. He learned to play the piano in his father's parsonage and the organ in his father's church. At Mulhouse, where Schweitzer attended the *gymnasium*, Eugène Munch, the father of conductor Charles Munch, introduced him to the organ music of Johann Sebastian Bach.

Schweitzer spent a few weeks in Paris in 1893, taking organ lessons from the great organist and composer, Charles Marie Widor. Later in the year he entered the University of Strasbourg to study theology and philosophy. In theology he investigated the significance of the Last Supper. In philosophy he was primarily interested in Immanuel Kant.

After a year at the Sorbonne in Paris and another at the University of Berlin, he took his Ph.D. in philosophy (1899) and his licentiate in theology (1900) at the University of Strasbourg. Ordained a curate in the Church of St. Nicholas in Strasbourg in 1900, he was appointed principal of the University of Strasbourg's Protestant Theological Seminary in 1903.

ALBERT SCHWEITZER THE MUSICIAN was recognized as a world authority on the life and music of Johann Sebastian Bach and a skilled interpreter of Bach's organ music.

COLUMBIA RECORDS

His first important books included *The Religious Philosophy of Kant* (1899) and *The Mystery of the Kingdom of God* (1901). With the encouragement of Charles Widor he wrote *J.S. Bach, the Musician-Poet* (1905), and an enlarged version of the same book in German, *Johann Sebastian Bach* (1908).

Medical Student. Schweitzer had decided as early as 1896 that when he reached the age of 30 he would begin to devote his life to the service of humanity. When his 30th birthday came (1905), he revealed his intention to become a missionary doctor in Africa. He entered the University of Strasbourg medical school in 1905, but remained curate of St. Nicholas' Church and continued to study the history of early Christianity. His *Quest of the Historical Jesus* (1907) brought him a measure of fame, and was followed by *Paul and his Interpreters* (1911).

He made many European concert tours as an organist while he was a medical student. His *German and French Organ Building and Organ Playing* (1910) revealed his mastery of that difficult instrument.

First African Mission. On June 18, 1912, Schweitzer married Hélène Bresslau, the daughter of a Strasbourg historian. In 1913 he received his medical degree, and on Good Friday of that year, he and his wife set out from his childhood home in Günsbach for a life of service in Africa. With the money he had earned from his concerts and books, he founded a hospital at the Lambaréné station of the Paris Missionary Society on the Ogowé River in the jungles of French Equatorial Africa. His work began in an old chicken house; at the end of a few months he was treating as many as 40 patients a day in this improvised hospital. With the outbreak of World War I, the Schweitzers, because they were German citizens, were first placed under house arrest, then sent back to Europe to be interned.

Postwar Period. After the war ended, Schweitzer toured Europe giving concerts and lectures to finance his work in Africa. He continued his writing, bringing out the first two volumes (1923) of his major philosophical work, *Philosophy of Civilization*. He also worked on books that were not published until later, including *The Mysticism of Paul the Apostle* (1930) and *Indian Thought and Its Development* (1934).

Return to Africa. On April 19, 1924, Schweitzer reopened his hospital in Lambaréné. It soon proved to be too small and had to be rebuilt at a new location upstream. Eventually, the hospital complex was to contain more than 70 buildings, with doctors and nurses from many countries on its staff.

In Africa, Schweitzer began to write the autobiographical books on which much of his literary fame is based: *On the Edge of the Primeval Forest* (1921), *Memoirs of Childhood and Youth* (1924), *More From the Primeval Forest* (1931), and *From My African Notebook* (1938).

Last Years. Schweitzer's closing years were marked by the many distinctions heaped upon him—honorary degrees, medals, and prizes. In 1953 he was awarded the 1952 Nobel Peace Prize (originally no prize was awarded for 1952). His Nobel acceptance speech, *The Problem of Peace in the World Today* (1954), warned that man is becoming increasingly inhuman and that "the horror of this . . . must arouse us out of our stupor so we can direct our wills and our hopes" toward the abolition of war.

In his later years he gave up surgery because of poor eyesight, but he continued his administrative

ALBERT SCHWEITZER THE HUMANITARIAN gave his medical skill to the people of Africa in the hospital he started at Lambaréné (Gabon) in 1913.

duties to the end. Increasingly in these closing years, Schweitzer, especially sensitive to the terrible menace of nuclear warfare, devoted himself to the cause of peace.

SELECTIVE SERVICE

On July 28, 1965, President Johnson announced that draft calls would be increased to 35,000 a month. Both a decline in enlistments and an increased need for men to build up United States forces in Vietnam made this move essential. From November 1964 through December 1965, the number of inductees reached 258,214. For the first time since 1955 the Navy requisitioned men through Selective Service, asking for 4,600 in October. The Marine Corps requested 4,050 inductees in November and 5,024 in December—the first Marine draft calls since the Korean War.

As of midnight, Aug. 26, 1965, a new regulation put men 19 to 26 years of age who married after August 26 in the same category as single men aged 19 to 26. The status of men in this group who had married before August 26 was not immediately affected. They will be notified for induction only if the quota cannot be met with single men or men 19 to 26 years old who married after Aug. 26, 1965.

Inductions since 1948 totaled 3,326,074, including Department of Defense requisitions through October 1965. Of these, 3,209,076 were inducted into the Army, 84,365 into the Marine Corps, 32,164 into the Navy, 413 into the Air Force, and 56 into the Coast Guard.

Men are registered by the Selective Service at age 18, classified as to availability for military service, and selected to fill calls issued by the Department of Defense. Exemptions are provided for ministers, divinity students, some aliens, and sole surviving sons. Those disqualified for any military service are placed in Class IV-F; those qualified only in case of war or a national emergency, in Class I-Y. Temporary deferments are permitted under special circumstances—for example, satisfactory participation in the Army Reserve or the National Guard, or engagement in study or other civilian activities vital to the nation.

The U.S. Selective Service has centers in each state, and in New York City, the District of Columbia,

Guam, Puerto Rico, the Virgin Islands, and the Canal Zone. About 40,000 volunteers man the nearly 4,000 local boards.

SENEGAL

France's decision in 1964 to stop buying Senegal's peanut crop at subsidized prices helped to account for the country's depressed economic state in 1965. A threat to national security by armed Communist guerrillas was put down with their arrest and public conviction.

Economy. Even though France agreed in 1964 to a one-year extension of its subsidy on peanut prices, the knowledge that France would not continue to pay more than world market prices had a depressing effect on the Senegalese economy. The atmosphere of economic deterioration was increased by a reduction of French troops stationed in Senegal and an accompanying closing of support facilities, and by the exodus of French shopkeepers catering to the military. In the face of decreasing tax receipts, the government announced an austerity program and a second four-year development plan, emphasizing

crop diversification and a tightening of administrative costs.

Assistance in the agricultural sector will be supplied over the next five years by \$46.7 million promised by the European Economic Community to compensate producers and promote crop diversification. The Soviet Union offered credit to assist Senegal in purchasing a tuna fishing fleet and equipment for a tuna cannery. Further hope for future development was seen in the establishment of the Senegal River Valley Commission, which met in March in St.-Louis, Senegal, the organization's headquarters.

In November, the United States agreed to lend Senegal \$1.2 million to complete financing of five regional teaching centers, and made a gift of movie projectors for the Dakar Arts Festival.

Domestic Politics. Twenty-seven political subversives were publicly tried and convicted in June for having plotted to overthrow the government. These armed guerrillas were reportedly part of a "small Communist cell" operating under the banned Parti Africain de l'Indépendance (PAI).

Foreign Affairs. Although Senegal and Gambia signed agreements to cooperate in matters of defense and foreign affairs when Gambia received its independence on Feb. 18, 1965, chances of eventual federation between the two countries seemed dim.

On November 9, Senegal and Rumania agreed to establish diplomatic relations.

Senegal has repeatedly complained about border incursions from Portuguese Guinea. On May 19, 1965, the UN Security Council unanimously adopted a resolution asking Portugal to "take all effective actions to prevent any violation of Senegal's sovereignty and territorial integrity."

The number of refugees in Senegal from the Portuguese colony continued to grow in 1965, when they were estimated to number between 40 and 50 thousand. They placed a severe strain on the country's weak economy, despite substantial donations of foodstuffs from the United States and additional assistance from the UN High Commissioner for Refugees in helping Senegal to feed and care for the refugees.

SENEGAL · Information Highlights

Area: 75,750 square miles.

Population: 3,400,000 (July 1, 1964, est.).

Chief Cities (1963 est.): Dakar, the capital, 382,980; Kaolack, 81,631; Thiès, 69,000; Saint-Louis, 58,000.

Government: President—Léopold Sédar Senghor (took office Sept. 5, 1960); *Parliament*—National Assembly, 80 members, all belonging to the Senegal Progressive Union.

Religious Faiths: Muslims, 90% of population; Roman Catholics, 5%; others, 5%.

Education: Literacy rate (1961)—6% of population aged 14 and over. Total school enrollment (1962)—192,249 (primary, 172,751; secondary, 13,149; technical, 4,343; higher, 2,006).

Finance (1963-64): Revenues, \$134,000,000; expenditures, \$126,000,000; monetary unit, CFA franc (246.85 CFA francs equal U.S.\$1).

Economic Indexes (1964): Industrial production, 139 (1958=100); cost of living, 124 (1958=100).

Manufacturing (metric tons): Cement (1964), 205,000; wheat flour (1961), 105,000; meat (1963), 31,000; cotton yarn (1964), 360; beer (1963), 108,700 hectoliters.

Crops (metric tons, 1963-64 crop year): Peanuts (1964-65), 990,000 (ranks 4th among world producers); cassava, 153,000; palm kernels, 5,500; bananas, 4,000.

Minerals (metric tons): Phosphate rock (1964), 798,000; zirconium (1963), 3,069; titanium concentrates (1964), 1,928; crude petroleum (1962), 3,000 barrels.

Foreign Trade (1964): Exports, \$123,000,000 (chief exports: peanuts and peanut oil, \$95,300,000; imports, \$172,000,000 (chief imports, 1963: woven cotton fabrics, \$15,000,000; rice, \$11,000,000; sugar and honey, \$10,000,000). Chief trading partners (1963): France (took 86% of exports, supplied 63% of imports); West Germany (took 2% of exports, supplied 5% of imports); U.S. (took 0.1% of exports, supplied 4% of imports).

Transportation: Roads (1964), 8,080 miles (755 paved); motor vehicles (1964), 41,651 (automobiles, 24,973); railways (1963), 242 miles; principal airport, Dakar.

SHIPPING

On Jan. 1, 1965, the United States merchant fleet comprised 45,579 documented vessels totaling 26.5 million gross tons (excluding yachts) in river, lake, and harbor service and in oceanborne foreign and domestic trade. Their sizes ranged from five-ton freight boats on the inland waterways to the 65,740-gross-ton S.S. *Manhattan*, one of the world's largest oceangoing tankers. More than half the vessels (about two thirds of the tonnage) were engaged in service from river and ocean ports along the Atlantic and Gulf coasts.

Of the total number of vessels, 16,086 were in the fishing service operating out of ports on the Atlantic, Gulf, and Pacific coasts, northern lakes, and western rivers; 11,516 were in the freight service, of which 3,924 (averaging 640 gross tons) were employed on western rivers; and 5,862 were passenger vessels in service from ports on

the Atlantic, Gulf, and Pacific coasts, northern lakes, and western rivers.

The U.S. oceangoing fleet of 1,000 gross tons or more comprised 2,529 ships as of Jan. 1, 1965.

Ship Construction. A total of 39 oceangoing merchant ships (of 1,000 gross tons or more) were on order or under construction in the United States on July 1, 1965. Thirty-eight were freighters, and one was a tanker. In addition, ten ships were being built for government account by the Maritime Administration, nine for the Coast and Geodetic Survey, and one for the Military Sea Transportation Service.

The long-range replacement program undertaken by U.S. shipping companies receiving government help totaled some 300 ships to be completed by the late 1970's. By July 1, 1965, 99 ships had been delivered and 38 others were under construction.

The demonstration phase of the nuclear ship *Savannah* was completed in 1965, and arrangements were made to begin commercial operation to evaluate further the ship's performance. Also, research continued to determine the feasibility of employing oceangoing surface-effect ships to transport

cargo of high value at speeds of 100 to 150 knots.

U.S. Oceangoing Ships in Foreign Trade. Fifteen U.S. flag shipping companies have contracted with the government to service the 30 essential trade routes of the United States. On July 1, 1965, there were 312 ships subsidized in part by the U.S. government. Of these, 57 ships were idle during the marine engineers' strike from June 16 to Sept. 1, 1965. An additional 110 nonsubsidized ships—tramp ships, industrial carriers, and tankers—were engaged in foreign trade.

The seaborne foreign trade of the United States in 1964 amounted to 341.6 million long tons of commercial cargoes. U.S. flag ships carried 28.3 million long tons, or 8.3% of the total U.S. commercial sea trade.

PICTORIAL PARADE

SIERRA LEONE

Sierra Leone, now a constitutional monarchy with Queen Elizabeth II of Britain as sovereign, took a step in 1965 toward achieving the status of a republic. On May 17, its parliament passed a government-sponsored bill making royal assent unnecessary before a republican constitution can be introduced. A general election must take place before the change can take place.

Economy. In May, parliament approved an "Africanization" bill which restricts activities in certain trades to Sierra Leoneans. These activities are the manufacture and sale of cement blocks; the transport of people and goods for hire; the opening of new bakeries, pharmacies, and soft-drink plants; and the operation of gas stations not attached to garages.

A 13,200-kilowatt, \$5 million diesel power plant at King Tom, near Freetown, was completed in June. In March the government signed an agreement with the Haifa Refining Company, an Israeli government corporation, to construct a \$4.2 million oil refinery near Freetown.

Sierra Leone took part in talks regarding the

possibility of establishing a free-trade zone between Sierra Leone, Guinea, Ivory Coast, and Liberia. At a meeting held in Freetown, the capital, on May 29, the four countries agreed to set up an interim organization with a view to founding a permanent Organization for West African Economic Cooperation.

Foreign Affairs. From April 16 to 26 a Sierra Leone trade and aid mission visited Moscow and signed two agreements, one for cultural and scientific cooperation, and the other for increased trade. The mission also initiated a protocol providing for the sale of Soviet machinery to Sierra Leone, and also arranged for Soviet experts to visit Sierra Leone to study possible assistance projects. In July a Sierra Leone delegation signed a \$2 million agreement with Nationalist China that provides for agricultural and technical assistance over a five-year period.

The U.S. assistant secretary of state for Africa, G. Mennen Williams, visited Sierra Leone from September 23 to 25.

SILK

In 1964, world production and consumption of raw silk showed moderate increases over the preceding year. The increases were due principally to a more reasonable and more stable price level of raw silk. Furthermore, the demand for mixed fabrics, combining silk with wool, cotton, or a variety of man-made fibers, increased considerably.

U.S. Consumption. The consumption of raw silk in the United States in 1964 amounted to 36,547 standard bales (132,275 pounds), according to statistics compiled by the American Silk Council, Inc. This was an increase of 11.2% over the 32,572 bales consumed in 1963. Imports into the United States in 1964 amounted to 37,103 bales, for an increase of 7.5% over 1963.

The following seven major producers furnished 80.2% of the total: Mexico, 41.9 million ounces; Peru, 37.04; United States, 37.0; Canada, 30.3; Soviet Union (est.), 27.0; Australia, 18.3; and Japan, 8.6 million ounces.

United States. Mine output of recoverable silver increased from 35,243,000 troy ounces in 1963 to 36,334,000 ounces in 1964. Minted silver production increased from 35,000,000 ounces in 1963 to 37,000,000 in 1964. This comprised 14.8% of the world output. In the first nine months of 1965, output from U.S. mines totaled 28,895,592 ounces, compared with 26,801,296 ounces in the comparable period of 1964. (See also MINING; MONEY.)

BERENICE B. MITCHELL
Supervisory Statistical Officer, Division of International Activities, U.S. Bureau of Mines.

SINGAPORE

Singapore, formerly a state in the Malaysia federation, abruptly acquired independent status on Aug. 9, 1965. On that date, Singapore's Prime Minister Lee Kuan Yew reluctantly yielded to the demands of Malaysia's Prime Minister Abdul Rahman and withdrew Singapore from the federation.

Relations between the Malay-dominated federal government and the state government in heavily Chinese Singapore had been stormy during the two years of federation. In the spring of 1964, Lee's People's Action Party (PAP) moved aggressively to expand its political base to the mainland, thereby accentuating Malayan fears of eventual Chinese political domination. Severe communal rioting between ethnic Chinese and Malays took place in Singapore during August and September 1964. Tensions increased in 1965, and, partly to prevent a recurrence of racial strife, Rahman decreed that Singapore withdraw.

The New Nation. The PAP government assumed independence in a strong internal position, with both opposition parties enfeebled. The pro-Communist Barisan Sosialis had lost an important July by-election in a radical constituency, and the Singapore branch of the United Malays National Organization was dependent on the parent organization in Malaya for tactical inspiration and funds.

After independence, Prime Minister Lee reshuffled his cabinet. The key posts of foreign minister and defense minister went to veteran cabinet officials Sinnathamby Rajaratnam and Dr. Goh Keng Swee.

The Lee government quickly received diplomatic recognition from most major nations. Singapore was admitted to the United Nations on September 21 and to the Commonwealth of Nations on October 16.

Foreign Policy. In contrast to the pro-Western stance of Malaysia, Singapore quickly adhered to a policy of nonalignment. However, the government decided to retain the British military bases, chiefly

PIX

LEE KUAN YEW, prime minister of Singapore, unexpectedly and reluctantly found himself the leader of an independent nation on Aug. 9, 1965, when Malaysia's Prime Minister Rahman decreed that Singapore must leave the Malaysia federation. Lee was stunned by the move, although it was his attempt to extend political power to mainland Malaya and the resulting racial tension that had provoked Rahman's decision. "My dream is shattered," he told reporters, but, rebounding, he set about to establish a national identity and nonaligned foreign policy for Singapore.

Lee was born to a wealthy Chinese family in Singapore on Sept. 16, 1923. Staunchly anticolonial, he graduated from Cambridge University and returned to enter Singapore politics. In 1954 he helped found the Socialist People's Action Party, and became its secretary general. When Singapore achieved self-government in 1959, Lee became prime minister. Despite opposition from the left wing of his party, he brought Singapore into Malaysia in 1963.

because the island state would be virtually defenseless without them, but also because their premature dismantling would hurt the economy. Prime Minister Lee indicated that Britain could use the bases to support Malaysia against Indonesia's policy of "confrontation," pending a renegotiation of the Anglo-Malaysian Defense Treaty. Although retention of the bases gave Indonesia an excuse for applying to Singapore the same "neocolonialist" charges it had lodged against Malaysia, Indonesia's internal difficulties ensuing from the abortive pro-Communist coup of October 1 averted a showdown.

The Singapore government attached special importance to becoming a member of the Afro-Asian bloc. Foreign Minister Rajaratnam headed a goodwill mission to Asian and African states in the fall.

Taking an anti-American position, Prime Minister Lee in late August revealed a 1960 bribe offer by the U.S. Central Intelligence Agency (CIA) to forestall the disclosure of CIA activities in Singapore. The prime minister warned that his government would prohibit American use of Singapore bases if the United States should inherit Britain's responsibility for defending Malaysia, and alternatively would consider offering the bases to the Soviet Union. He indicated willingness to establish diplomatic ties with Communist China, provided Peking respected Singapore's policy of nonalignment.

Relations with Malaysia remained troubled. Lee favored an aggressive trade policy without regard for political orientations of trading partners, but Malaysia's Prime Minister Rahman warned Singapore not

to establish close relations with Indonesia. Malaysia and Singapore placed heavy import restrictions on each other's goods on August 9, but in October agreed in principle to lift them.

Prospects. Newly independent Singapore enjoyed certain advantages: governmental stability, enhanced by able leadership; an industrious population with marked commercial acumen; and a prosperous, if vulnerable, economy. Its external position was less promising. Malaysia, still suspicious of PAP ambitions, could cut off Singapore's water supply in a period of tension. Nearby Indonesia apparently retained its expansionist tendencies. Finally, there remained the continuing threat of Peking's attempt to establish regional hegemony. (See also ASIA; MALAYSIA.)

SOCIAL SECURITY

The 30th anniversary of the passage of the Social Security Act was reached in 1965. The act and its amendments authorize insurance plans that help American workers meet the economic risks of old age, unemployment, disability, and death. The 30th anniversary year was marked by additions to the program that were expected to affect every American family. After years of controversy, Congress in 1965 extended the social security program to provide health insurance for men and women aged 65 and over.

New Legislation. Medicare—health insurance for the aged—was included in the Social Security Amendments of 1965, signed by President Johnson on July 30. The new amendments made the following 10 changes in the social security system:

(1) The hospital insurance part of the program provides for payment of specified costs of hospital and posthospital care of persons 65 and over. Benefits are to begin July 1, 1966, except that payments for care in a nursing home or other extended care facility will begin January 1967. To finance these benefits, beginning in 1966, workers, their employers, and self-employed persons will pay 0.35% each on earnings up to \$6,600 (the maximum taxable amount under the 1965 amendments). The tax will increase gradually until it is 0.8% in 1987 and thereafter.

SINGAPORE · Information Highlights

Area: 224 square miles.

Population: 1,844,000 (Dec. 31, 1964, est.).

Chief City (1957 census): Singapore, the capital, 925,241.

Government: Head of State—Inche Yusof bin Ishak; prime minister—Lee Kuan Yew. Parliament—Legislative Assembly, 51 members; party seating (1965)—People's Action Party, 38; Barisan Socialis, 13.

Education: Literacy rate (1957)—50% of population aged 15 and over. Total school enrollment (1961)—381,509 (primary, 302,070; secondary, 66,478; higher, 11,582).

Finance (1964 est.): Revenues, \$38,000,000; expenditures, \$30,000,000; monetary unit, Malaysian dollar (3.07 dollars equal U.S.\$1).

Cost of Living Index (1964): 104 (1961=100).

Manufacturing (metric tons, 1963): Cement, 194,000; meat, 20,000; beer, 271,000 hectoliters.

Fish Catch (metric tons, 1963): 12,300.

Foreign Trade (1964): Exports, \$903,000,000 (chief exports, 1963, including reexports): crude rubber, \$319,000,000; petroleum products, \$123,000,000; imports, \$1,136,000,000 (chief imports, 1963: crude rubber, \$267,000,000; petroleum products, \$141,000,000; rice, \$56,000,000). Chief trading partners (1963): Malaysia (took 35% of exports, supplied 21% of imports); Indonesia (took 8% of exports, supplied 15% of imports); Britain (took 6% of exports, supplied 10% of imports).

Transportation: Roads (1964), 520 miles; motor vehicles (1964), 115,334 (automobiles, 93,427); railways (1964), 16 miles.

Communications: Telephones (1964): 73,879; television sets (1963), 31,000; radios (1961), 149,000; newspapers (1963), 9 (daily circulation, 497,000).

SOCIAL SECURITY TAXES, in terms of dollars paid by individuals, increased about 900 percent between 1937 and 1966. This chart shows the rise in contributions since the start of the system, with projections into the future.

PFIZER SCENE • EMPLOYEE PUBLICATION OF CHAS. PFIZER & CO. INC.

(2) Those aged 65 and over can enroll in the voluntary medical insurance part of the program, which provides for payment of part of the charges for physicians' and surgeons' services, home health services, and certain other medical and health services. Persons enrolling pay a \$3 monthly premium; the federal government also contributes \$3 a month for each person enrolled. (See also MEDICARE.)

(3) The cash benefits under old-age, survivors, and disability insurance were increased by 7%.

(4) Social security coverage was extended to self-employed physicians.

(5) Tips were included as wages.

(6) The retirement test, the definition of disability, and the insured-status requirement of persons aged 72 or over were liberalized.

(7) Payment of cash benefits to eligible children aged 18-21 who are in school was authorized.

(8) Widows were allowed the option of starting cash benefits at age 60 on a reduced basis.

(9) The amount of earnings taxable and creditable for benefit purposes was increased to \$6,600.

(10) The contribution rate scheduled for the cash benefits under the program was increased.

In 1965, Congress also amended the Railroad Retirement Act. The maximum earnings and tax base were raised to \$6,600, the tax rate was lowered, a provision relating to spouse's benefits was liberalized, tips were covered, and relationships with the hospital insurance provisions of the Social Security Act were established.

The 1965 amendments to the Social Security Act also made improvements in the welfare provisions of the act.

Administration of the Program. The Social Security Administration, headed by the commissioner of social security, administers the federal social insurance program under the Social Security Act—old-age, survivors, disability, and health insurance. It also administers operations under the Federal Credit Union Act. The administration, which is a constituent unit of the U.S. Department of Health, Education, and Welfare, is charged with studying and making recommendations for advancing economic security through social insurance.

Since January 1963, the Welfare Administration, which is another unit of the Department of Health,

Education, and Welfare, has been responsible for the Social Security Act programs for the needy and for child health and welfare services.

Unemployment insurance is provided under a federal-state system. The states operate their own programs according to standards set by federal law. Federal funds pay the administrative costs of the state operations.

Benefits and Contributions. In the 12 months ended June, 1965, the social security system paid out more than \$16,618,200,000 in monthly cash benefits and lump-sum payments. In July 1965, monthly benefits were paid to 20,243,272 persons, about two thirds of them aged 65 and over. The average monthly check for a retired worker was \$78.06 (excluding payments for his dependents). For a disabled worker, the average monthly payment from social security funds was \$91.16.

During 1965, employers and employees paid contributions at a rate of 3.625%, and self-employed workers paid at a rate of 5.4%, on earnings up to \$4,800. For 1966, the total employer and employee rate (including the contribution for hospital insurance) is 4.2%, and the rate for self-employed is 6.15%, on earnings up to \$6,600.

Federal Credit Unions. The Social Security Administration is responsible for the chartering and supervision of credit unions organized under the Federal Credit Union Act. These unions are co-operative organizations designed to promote thrift among their members and create a source of loans for provident and productive purposes. Membership is limited to groups having a common bond of association, occupation, or residence.

The credit unions are subject to periodic examinations by the Social Security Administration's Bureau of Federal Credit Unions, which prescribes standard bylaws and provides operating manuals.

At the end of June 1965, there were about 11,400 credit unions in operation. Their total membership was nearly 8,200,000, and their total assets amounted to \$4,770,000,000.

SOCIAL WELFARE. See CHILD WELFARE; OLD AGE; SOCIAL SECURITY.

SOCIALISM

The democratic Socialist movement continued in 1965 to exert its greatest political influence in western Europe. The movement advocated strengthening the European Common Market and increasing political and economic integration among European countries.

Socialist International. The Bureau of the Socialist International, with more than 40 Socialist and labor party affiliates, urged ending hostilities in Vietnam and the immediate opening of peace negotiations. The bureau also welcomed the cooperation of numerous democratic progressive parties in Africa, Asia, and Latin America in the work of the Socialist International. It planned a high-level conference for 1966 on the economic and political problems of the world's new nations, and urged that these nations receive increased economic and social aid from the more-developed nations.

Britain. The Labour party of Britain, a member of the Socialist International, remained in control of Parliament with a slim majority. Under Prime Minister Harold Wilson, the government, through its new Department of Economic Affairs, initiated economic programs for increasing British production 25% by 1970, for combating inflation, and for evolving a rational income policy. The Labour party secured parliamentary approval to submit to the House of Commons a plan for the renationalization of the steel industry. In November the Labour government instituted an economic boycott against Rhodesia after the white-controlled Rhodesian government declared its independence from Britain.

Continental Europe. Socialist and labor parties continued to wield power in the governments of Austria, Italy, Switzerland, Denmark, and Sweden.

Socialists in Norway and Belgium suffered setbacks in elections in 1965. The Labor party in Norway suffered its first election defeat in 30 years when it returned only 68 of its members to parliament. The Belgian Socialist party lost 20 of its 80 parliamentary seats in the 1965 elections, and formed a coalition government with the Social Christian party.

The Socialist party of France supported François Mitterrand in the presidential election after Gaston Defferre, Socialist mayor of Marseille, withdrew from the contest.

In West Germany, the Social Democrats were unsuccessful in their efforts to elect Mayor Willy Brandt of West Berlin as chancellor. The party, however, increased its vote to 39.3% of the total, and won 202 parliamentary seats.

Austrian Socialists elected Franz Jonas, mayor of Vienna, as the new president of the country after the death of Socialist President Adolf Schärf. The Socialists again formed a coalition government with the Catholic People's party.

United States. The Socialist party of the United States, the American affiliate of the Socialist International, nominated few party members for public office in 1965. The party favored many of the federal government's proposals in the areas of racial integration, civil rights, and the social services, and urged the peaceful settlement of international disputes.

Canada. The New Democratic party, led by T.C. Douglas, emerged from the November 1965 elections holding the balance of power in the Canadian Parliament. The party increased its seats in the House of Commons by 4, for a total of 21.

Asia and Africa. Socialists made gains during 1965 in elections in several countries. In Israel the moderate Socialist coalition party, Mapai-Achdut Ha'Avoda, led by Premier Levi Eshkol, won 45 seats in the Israeli Knesset, as against the 10 seats won by the Rafi party of former Premier David Ben-Gurion. In the Malagasy Republic, President Philibert Tsiranana was overwhelmingly returned to office when his Social Democratic party received 97% of the votes.

The Socialist party of Japan elected 73 members (a gain of 8 seats) in the House of Councillors, and the Democratic Socialists elected 7 members (a loss of one seat).

SOCIETIES AND ORGANIZATIONS

This article presents a selected list of some of the principal societies, associations, foundations, and trusts of the United States and Canada. The information in each case is supplied by the organization concerned, and includes membership figures, date of annual meeting, officers, and headquarters location or address.

Adult Education Association of the U.S.A.—Membership: 3,800. Annual meeting: New York City, Nov. 18–23, 1965. President, Wilson B. Thiede; secretary, Hamilton Stillwell. Headquarters: 1225 19th St. NW, Washington, D.C.

Alcoholics Anonymous (The General Service Board of A.A., Inc.)—Membership: approximately 350,000 in more than 12,000 affiliated groups. Annual conference: New York City, April 18–24, 1966. Chairman, John L. Norris, M.D. Headquarters: 305 East 45th St., New York, N.Y., 10017.

American Academy of Arts and Letters—Membership: 50. Annual meeting: New York City, December 1965. President, Lewis Mumford; secretary, John Hersey. Headquarters: 633 West 155th St., New York, N.Y., 10032.

American Academy of Arts and Sciences—Membership: 2,050. Annual meeting: Boston, Mass., May 11, 1966. President, Paul A. Freund; secretary, Sanborn C. Brown. Headquarters: 280 Newton St., Brookline Station, Boston, Mass., 02146.

American Academy of Political and Social Science—Membership: 19,600, including 5,000 libraries. Annual meeting: Philadelphia, Pa., April 15–16, 1966. President, James C. Charlesworth; business mgr., Ingeborg Hessler. Headquarters: 3937 Chestnut St., Philadelphia, Pa., 19104.

American Association for Health, Physical Education, and Recreation—Membership: 45,000. National meeting: Chicago, Ill., March 18–22, 1966. President, Reuben B. Frost; exec. secy., Carl A. Troester, Jr. Headquarters: 1201 Sixteenth St. NW, Washington, D.C., 20036.

American Association for the Advancement of Science—Membership: 95,200 and 302 affiliated groups. Annual meeting: Washington, D.C., Dec. 26–30, 1966. President, Alfred S. Romer; secretary, Dael Wolfe. Headquarters: 1515 Massachusetts Ave. NW, Washington, D.C.

American Association of University Professors—Membership: 78,000. Annual meeting: Atlanta, Ga., April 29–30, 1966. President, Clark Byse; gen. secy., William P. Fidler. Headquarters: 1785 Massachusetts Ave., NW, Washington, D.C.

American Association of University Women—Membership: over 167,000. National convention: Miami Beach, Fla., June 19–23, 1967. President, Blanche H. Dow; gen. dir., Pauline Tompkins. Headquarters: 2401 Virginia Ave. NW, Washington, D.C., 20037.

American Automobile Association—Membership: over 9,000,000 in 782 affiliated groups. Annual meeting: San Francisco, Calif., Oct. 5–6, 1965. President, Paul R. Ginger; secretary, William B. Spencer. Headquarters: 1712 G St. NW, Washington, D.C.

American Bankers Association—Membership: 18,295 commercial banks and branches. Annual meeting: San Francisco, Calif., Oct. 23–26, 1966. Board chairman, Archie K. Davis; secretary, Henry M. Sommers. Headquarters: 90 Park Av., New York, N.Y., 10016.

American Bar Association—Membership: 120,000. Annual meeting: Montreal, Canada, Aug. 8–12, 1966. President,

Edward W. Kuhn; secretary, Gibson Gayle, Jr. Headquarters: 1155 E. 60th St., Chicago, Ill.

American Bible Society.—Membership: 424,000. Annual meeting: New York City, May 12, 1966. President, Everett Smith; general officers, Robert T. Taylor, Laton E. Holmgren; treasurer, Charles W. Baas. Headquarters: Broadway at 61st St., New York, N.Y.

American Book Publishers Council.—Membership: 188. Annual meeting: New York City, May 10, 1965. President, Raymond C. Harwood; managing director, Dan Lacy. Headquarters: One Park Ave., New York, N.Y., 10016.

American Cancer Society, Inc.—Membership: 176 voting members; 58 chartered divisions. Annual meeting: New York City, Oct. 18–20, 1966. President, Leonard W. Larson, M.D.; secretary, Charles R. Ebersol. Headquarters: 219 East 42nd St., New York, N.Y., 10017.

American Chemical Society.—Membership: 100,000. National meetings, 1966: Phoenix, Ariz., Jan. 16–21; Pittsburgh, Pa., March 22–31; New York City, Sept. 11–16. President, William J. Sparks; executive secretary, B.R. Stanerson. Headquarters: 1155 16th St. NW, Washington, D.C., 20036.

American Civil Liberties Union.—Membership: 80,000. Biennial conference: Stony Brook, New York, June 19–22, 1966. Exec. dir., John de J. Pemberton, Jr.; board chairman, Ernest Angell. Headquarters: 156 Fifth Avenue, New York, N.Y., 10011.

American Council on Education.—Membership: 1,113 colleges and universities, and 230 educational organizations. Annual meeting: New Orleans, La., Oct. 12–14, 1966. President, Logan Wilson; executive secy., Charles G. Dobbins. Headquarters: 1785 Massachusetts Ave. NW, Washington, D.C.

American Dental Association.—Membership: 103,929. Annual meeting: Dallas, Texas, Nov. 14–17, 1966. President, Maynard K. Hine, D.D.S.; secretary, Harold Hillenbrand, D.D.S. Headquarters: 211 East Chicago Ave., Chicago, Ill., 60611.

American Economic Association.—Membership: 13,025 and 4,791 subscribers. Annual meeting: New York City, Dec. 28–30, 1965. President, Joseph J. Spengler; secretary, Harold F. Williamson. Headquarters: 629 Noyes St., Evanston, Ill., 60201.

American Farm Bureau Federation.—Membership: 1,647,455 families. Annual meeting: Chicago, Ill., Dec. 13–16, 1965. President, Charles B. Shuman; secretary, Roger Fleming. Headquarters: Merchandise Mart Plaza, Chicago, Ill.

American Geographical Society.—Membership: 4,200. Annual dinner: New York City, Dec. 2, 1965. President, Walter A. Wood; director, Charles B. Hitchcock. Headquarters: Broadway at 156 St., New York, N.Y., 10032.

American Geophysical Union.—Membership: 8,059 and 81 organizations. Annual meeting: Washington, D.C., April 19–22, 1966. President, George P. Woollard; gen. secy., A. Nelson Sayre. Headquarters: 1145 Nineteenth St. NW, Washington, D.C., 20036.

American Heart Association.—Membership: 64,000 in 55 affiliates and 1,400 local organizations. Annual meeting: New York City, October 1966. President, Dr. Helen B. Taussig; secretary, Ross Reid. Headquarters: 44 East 23rd St., New York, N.Y., 10010.

American Historical Association.—Membership: 13,000. Annual meeting: San Francisco, Calif., Dec. 28–30, 1965. President, Frederic C. Lane; exec. secy., Paul L. Ward. Headquarters: 400 A St. SE, Washington, D.C.

American Hospital Association.—Membership: 7,520 personal; 8,639 institutional. Annual meeting: Chicago, Ill., Aug. 29–Sept. 1, 1966. President, Philip D. Bonnet, M.D.; executive vice president, Edwin L. Crosby, M.D.; secretary, James E. Hague. Headquarters: 840 N. Lake Shore Drive, Chicago, Ill.

American Institute of Aeronautics and Astronautics.—Membership: 36,000. Annual meeting: Boston, Mass., Nov. 28–Dec. 2, 1965. President, Richard Horner; executive secy., James J. Harford. Headquarters: 1290 Avenue of the Americas, New York, N.Y.

American Institute of Architects.—Membership: 17,600. National convention: Denver, Colo., June 27–July 1, 1966. President, Morris Ketchum, Jr.; secretary, Oswald H. Thorson. Headquarters: 1735 New York Ave. NW, Washington, D.C., 20006.

American Institute of Chemical Engineers.—Membership: 26,677. Annual meeting: Philadelphia, Pa., Dec. 5–9, 1965. President, Dr. S.W. Churchill; secretary, F.J. Van Antwerpen. Headquarters: 345 East 47th St., New York, N.Y., 10017.

American Institute of Mining, Metallurgical, and Petroleum Engineers, Inc.—Membership: 38,885. Annual meeting: New York City, Feb. 27–March 3, 1966. President, William B. Stephenson; executive director and secretary, R. William Taylor. Headquarters: 345 East 47th St., New York, N.Y.

American Legion, The.—Membership: 2,600,000. National convention, Portland, Ore., Aug. 20–26, 1965. National commander, L. Eldon James; national adjutant, E.A. Blackmore. Headquarters: 700 Pennsylvania St., Indianapolis, Ind., 46206.

American Library Association.—See separate article.

American Mathematical Society.—Membership: 11,280. Annual meeting: Chicago, Ill., Jan. 24–28, 1966. President, A.A. Albert; secretary, J.W. Green. Headquarters: P.O. Box 6248, Providence, R.I., 02904.

American Medical Association.—Membership: 206,544. Annual meeting: New York City, June 20–24, 1965. President, James Z. Appel, M.D.; secretary-treasurer, Raymond M. McKeown, M.D. Headquarters: 535 N. Dearborn St., Chicago, Ill., 60610.

American National Red Cross.—Adult membership: 28–200,000 in 3,400 chapters. National convention: San Diego, Calif., May 8–11, 1966. Chairman, E. Roland Harman; president, James F. Collins. Headquarters: 17th and D Sts. NW, Washington, D.C., 20006.

American Newspaper Publishers Association.—Membership: 950. National convention: New York City, April 25–28, 1966. President, Gene Robb; secretary, St. Clair Balfour. Headquarters: 750 Third Ave., New York, N.Y., 10017.

American Nurses Association.—Membership: 170,000 in 54 state and territorial associations. National convention: San Francisco, Calif., June 13–17, 1966. President, Jo Eleanor Elliott; exec. dir., Judith G. Whitaker. Headquarters: 10 Columbus Circle, New York, N.Y.

American Philosophical Association.—Membership: 2,267. Annual meeting: Eastern Division—New York City, Dec. 27–29, 1965; Western Division—Minneapolis, Minn., May 5–7, 1966; Pacific Division—San Francisco State College, Calif., Dec. 27–29, 1965. President, Charles A. Baylis; secretary, Lewis A. Hahn. Headquarters: Southern Illinois University, Carbondale, Ill., 62903.

American Physical Society.—Membership: 22,000 American and foreign members. Annual meeting: New York City, Jan. 28–29, 1966. President, Dr. John A. Wheeler; secretary, Karl K. Darrow. Headquarters: Pupin Physics Laboratories, Columbia University, N.Y.

American Political Science Association.—Membership: 12,000. Annual meeting: Washington, D.C., Sept. 7–11, 1965. President, Gabriel A. Almond; exec. dir., Evron M. Kirkpatrick. Headquarters: 1726 Massachusetts Ave. NW, Washington, D.C.

American Psychiatric Association.—Membership: 14,341 district branches in U.S. Annual meeting: Atlantic City, N.J., May 9–13, 1966. President, Harvey J. Tompkins, M.D.; secretary, Robert S. Garber, M.D. Headquarters: 1700 18th St. NW, Washington, D.C.

American Psychological Association.—Membership: 23,000. Annual meeting: New York City, Sept. 2–6, 1966. President, Nicholas Hobbs; exec. officer, Arthur H. Brayfield. Headquarters: 1200 17th St. NW, Washington, D.C.

American Society for Microbiology.—Membership: 9,000 and 34 local branches. Annual meeting: Atlantic City, N.J., April 25–29, 1965. President, R.D. Housewright; secretary, Philipp Gerhardt. Headquarters: 115 Huron View Blvd., Ann Arbor, Mich.

American Society of Civil Engineers.—Membership: 55,000. Annual meeting: Philadelphia, Pa., Oct. 17–21, 1966. President, William J. Hedley; secretary, William H. Wisely. Headquarters: 345 East 47th St., New York, N.Y., 10017.

American Society of Composers, Authors, and Publishers.—Membership: 7,970 composers and authors; 2,624 publishers. Annual meeting: New York City, March 1966. President, Stanley Adams; secretary, Paul Creston. Headquarters: 575 Madison Ave., New York, N.Y.

American Society of Mechanical Engineers, The.—Membership: 59,710. Annual meeting: Chicago, Ill., Nov. 7–11, 1965. President, Henry N. Muller; executive director, O.B. Schier, II. Headquarters: 345 East 47th St., New York, N.Y., 10017.

American Sociological Association.—Membership: 9,250. Annual meeting: Miami Beach, Fla., Aug. 29–Sept. 1, 1966. President, Wilbert E. Moore; secretary, Robin M. Williams, Jr. Headquarters: 1001 Connecticut Ave. NW, Washington, D.C. See also article SOCIOLOGY.

American Youth Hostels, Inc.—Membership: 30,000 in 22 AYH Councils. Annual meeting: Chicago, Nov. 13–14, 1965. President, Stephens Dietz; secretary, Betty Bierer. Headquarters: 14 West 8th St., New York, N.Y., 10011.

Arthritis Foundation, The.—Membership: 78 chapters. Annual meeting: New York City, Oct. 4, 1965. President, William S. Clark, M.D.; secretary, Hayden N. Smith. Headquarters: 1212 Avenue of the Americas, New York, N.Y., 10036.

Association of Better Business Bureaus International.—Membership: 130 bureaus in U.S., Canada, Israel, Mexico, Puerto Rico, and Venezuela. Annual meeting: San Fran-

cisco, May 23-26, 1966. President, Victor H. Nyborg. Headquarters: Chrysler Building, New York, N.Y., 10017.

Association of the Junior Leagues of America, Inc.—Membership: 92,000 in 209 member leagues. Annual conference: Bal Harbour, Fla., May 8-12, 1966. President, Mrs. Warner Marsden; secretary, Mrs. John F. Tyler. Headquarters: Waldorf-Astoria Hotel, New York, N.Y., 10022.

Benevolent and Protective Order of Elks.—Membership: 1,361,455 in 2,049 lodges. National convention: Miami Beach, Fla., July 11-15, 1965. Grand exalted ruler, R. Leonard Bush; grand secretary, Franklin J. Fitzpatrick. Headquarters: 2750 Lake View Ave., Chicago, Ill., 60614.

B'nai B'rith.—Membership: 500,000 in 4,900 local groups. President, William A. Wexler; exec. vice-president, Rabbi Jay Kaufman. Headquarters: 1640 Rhode Island Ave. NW, Washington, D.C.

Boy Scouts of America.—Membership: 5,585,700 in 524 scout councils. Annual meeting: Bal Harbour, Fla., May 20-21, 1965. President, Thomas J. Watson, Jr.; chief scout exec., Joseph A. Brunton, Jr. Headquarters: New Brunswick, N.J.

Boys' Clubs of America.—Membership: 675,000 in 671 clubs. National convention: New York City, May 1-5, 1966. President, Albert L. Cole; national dir., John M. Gleason. Headquarters: 771 First Ave., New York, N.Y. 10017.

Camp Fire Girls, Inc.—Membership: 600,000 in 370 local councils. Annual meeting: Chicago, Ill., Nov. 7-9, 1965. President, Birden Smith; secretary, Mrs. Anthony J. Celebrezze. National headquarters: 65 Worth Street, New York, N.Y. 10013.

Canadian Library Association (Association Canadienne des Bibliothèques).—Membership: 2,079 persons and 669 organizations. Annual conference: Calgary, Alberta, June 19-24, 1966. President, William Rentoul Castell; exec. dir., Elizabeth H. Morton. Headquarters: 63 Sparks St., Ottawa, Ontario.

Canadian Medical Association.—Membership 17,295. Annual meeting: Edmonton, Alberta, June 13-17, 1966. President, Dr. R.O. Jones; gen. secy., A.D. Kelly, M.D., D.Sc., L.L.D. Headquarters: 150 St. George St., Toronto 5, Ontario.

Daughters of the American Revolution (National Society).—Membership: 2,881 chapters. Continental congress: Washington, D.C., Apr. 18-22, 1966; Apr. 17-21, 1967. President general, Mrs. William Henry Sullivan, Jr. Headquarters: 1776 D St. NW, Washington, D.C., 20006.

4-H Clubs.—Membership: 2,221,119 in 95,977 local clubs. National conference: Washington, D.C., April 17-22, 1966. Director, Mylo S. Downey. Address: Federal Extension Service, U.S. Dept. of Agriculture, Washington, D.C.

Freemasonry, Ancient Accepted Scottish Rite of (Northern Masonic Jurisdiction): Supreme Council, 33°.—Membership: 499,742 in 384 affiliated groups. Annual meeting: Cleveland, Ohio, Sept. 28-30, 1965. Sovereign grand commander, George E. Bushnell; grand secy. gen., Herbert N. Faulkner; exec. secy., Stanley F. Maxwell. Headquarters: 1117 Statler Bldg., Boston, Mass.

Freemasonry, Ancient and Accepted Scottish Rite of (Southern Jurisdiction): Supreme Council, 33°.—Membership: 535,000 in 206 affiliated groups. National convention: Washington, D.C., Oct. 16-20, 1967. Sovereign grand commander, Luther A. Smith; secy. gen., Claud F. Young. Headquarters: 1733 16th St. NW, Washington, D.C., 20009.

Future Farmers of America.—Membership: 454,516 in 50 state associations. National convention: Kansas City, Mo., Oct. 13-16, 1965. National adviser, A.W. Tenney; exec. secy., William Paul Gray. Headquarters: U.S. Office of Education, Washington, D.C., 20202.

General Federation of Women's Clubs.—Membership: 11,000,000 in 16,000 affiliated groups. National convention: New Orleans, La., June 6-11, 1965. President, Mrs. William H. Hasebrook; exec. secy., Mrs. Stephen J. Nicolas. Headquarters: 1734 N St. NW, Washington, D.C.

Geological Society of America.—Membership: 6,638. Annual meeting: San Francisco, Calif., Nov. 14-16, 1966. President, Robert F. Leggett; secretary, Agnes Creagh. Headquarters: 231 East 46th St., New York, N.Y., 10017.

Girl Scouts of U.S.A.—Membership: 3,647,000. National convention: Detroit, Mich., October 1966. National president, Mrs. Holton R. Price, Jr.; exec. dir., Louise A. Wood. Headquarters: 830 Third Ave., New York, N.Y., 10022.

Holy Name, Fraternity of the.—Membership: 5,000,000 in 19,000 affiliated groups. National dir., Dennis B. McCarthy. Headquarters: 141 E. 65th St., New York, N.Y., 10021.

Institute of Electrical and Electronics Engineers, Inc.—Membership: 160,000. International convention: New York City, March 22-26, 1966. President, Dr. Bernard M. Oliver;

secretary, Haraden Pratt. Address: 345 East 47th St., New York, N.Y.

International Council of Scientific Unions (Conseil International des Unions Scientifiques).—Membership: 57 national societies. General assembly: India, 1966. President, H.W. Thompson; secy.-gen., D. Blaskovic. Headquarters: 2 Via Sebenico, Rome, Italy.

International Society of Christian Endeavor.—Membership: 1,000,000. Biennial convention: Detroit, Mich., July 3-7, 1967. President, Arch J. McQuilkin; secretary, Harold E. Westerhoff. Headquarters: 1221 E. Broad St., Columbus, Ohio, 43216.

Kiwanis International.—Membership: 275,000 in 5,400 clubs in U.S., Canada, Mexico, Japan, Philippines, Caribbean, and western Europe. Annual convention: New York City, July 4-8, 1965. President, Edward C. Keefe; secretary, O.E. Peterson. Headquarters: 101 E. Erie St., Chicago, Ill.

Knights of Columbus.—Membership: 1,173,116. Annual meeting: Miami Beach, Fla., Aug. 16-18, 1966. Supreme knight, John W. McDevitt; supreme secy., D. Francis Sullivan. Headquarters: 71 Meadow St., New Haven, Conn.

Knights of Pythias.—Membership: 200,000 in 2,000 affiliated groups. Biennial meeting: Indianapolis, Ind., Aug. 8-12, 1966. Supreme chancellor, James C. Bayley; supreme secy., Joseph B. Hacker. Headquarters: 1202 Third St. SE, Cedar Rapids, Iowa.

League of Women Voters of the United States.—Membership: 145,500. National convention: Denver, Colo., May 2-6, 1966. President, Mrs. Robert J. Stuart; first vice-pres., Mrs. William H. Wood. Headquarters: 1200 Seventeenth St. NW, Washington, D.C.

Lions International.—Membership: 755,357 in 19,491 clubs in 132 countries. International convention: Los Angeles, Calif., July 7-10, 1965. President, Dr. Walter H. Campbell; vice-pres., Edward M. Lindsey. Headquarters: 209 N. Michigan Ave., Chicago, Ill., 60601.

Loyal Order of Moose.—Membership: 1,039,081 in 3,756 units. National convention: Chicago, Ill., June 12-16, 1966. Dir. gen., Paul P. Schmitz; supreme secy., Carl A. Weiss. Headquarters: Moosehart, Ill.

Modern Language Association of America.—Membership: 19,405. Annual meeting: Chicago, Dec. 27-29, 1965. President, Howard Mumford Jones; secretary, John Hurt Fischer. Headquarters: 4 Washington Place, New York, N.Y.

National Academy of Sciences.—Membership: 697. Annual meeting: Washington, D.C., April 25-27, 1966. President, Frederick Seitz; exec. officer, John S. Coleman. Headquarters: 2101 Constitution Ave. NW, Washington, D.C., 20418.

National Association for Mental Health, Inc.—Membership: 800 state and local organizations. Annual meeting: New York City, Nov. 17-20, 1965. President, Mrs. Winthrop Rockefeller; exec. dir., Philip E. Ryan. Headquarters: 10 Columbus Circle, New York, N.Y., 10019.

National Association for the Advancement of Colored People.—Membership: 500,000 in 1,800 units. National convention: Denver, Colo., June 28-July 3, 1965. President, Kivie Kaplan; exec. dir., Roy Wilkins. Headquarters: 20 W. 40th St., New York 18, N.Y.

National Association of Manufacturers.—Membership: 15,000. Annual meeting: New York City, Dec. 7-9, 1966. President, W.P. Gullander; secretary, John McGraw. Headquarters: 277 Park Ave., New York, N.Y.

National Audubon Society.—Membership: 44,000. Annual meeting: Sacramento, Calif., November 1966. President, Carl W. Buchhiester; secretary, Dr. Olin S. Pettingill, Jr. Headquarters: 1130 Fifth Ave., New York, N.Y.

National Conference of Christians and Jews, Inc.—Membership: 85,000 contributors. Annual meeting: New York City, Nov. 14-15, 1965. President, Dr. Sterling W. Brown; secretary, Oscar M. Lazrus. Headquarters: 43 West 57th St., New York, N.Y., 10019.

National Congress of Parents and Teachers.—Membership: 11,791,431 in 46,217 PTA's. National convention, Albuquerque, N.Mex., May 16-19, 1965. President, Mrs. Jennelle Moorhead; secretary, Mrs. Leon S. Price. Headquarters: 700 North Rush St., Chicago, Ill., 60611.

National Council of the Churches of Christ in the U.S.A.—Membership: 30 Protestant, Anglican, and Orthodox denominations. Triennial general assembly: Miami, Fla., Dec. 4-10, 1966. President, Bishop Reuben H. Mueller; gen. secy., R.H. Edwin Espy. Headquarters: 475 Riverside Dr., New York, N.Y., 10027.

National Council of the Young Men's Christian Associations.—Membership: 4,237,777 in 1,839 organizations. Annual meeting: Pittsburgh, Pa., May 7-9, 1965. President, W. Walter Williams; secretary, James F. Bunting. Headquarters: 291 Broadway, New York, N.Y.

National Education Association of the U.S.—Membership: 943,581, with affiliated statewide units in every state and

8,275 local affiliates. Annual meeting: Miami Beach, Fla., June 26-July 1, 1966. President, Richard D. Batchelder; exec. secy., William G. Carr. Headquarters: 1201 Sixteenth St. NW, Washington, D.C., 20036.

National Federation of Business and Professional Women's Clubs, Inc.—Membership: 175,000 in 3,650 clubs. National convention: Washington, D.C., July 25-29, 1965. President, Helen Krauss Leslie; acting exec. dir., Ellen C. Hermans. Headquarters: 2012 Massachusetts Ave. NW, Washington, D.C.

National Federation of Music Clubs.—Membership: 600,000 in 4,300 clubs and 13 national affiliates. Annual meeting: Minneapolis, Minn., August 1966; biennial convention, New York City, April 1967. President, Mrs. Clifton J. Muir; admin. dir., Lois Winterberg. Headquarters: 600 S. Michigan Ave., Chicago, Ill., 60605.

National Foundation—March of Dimes, The.—Membership: 3,100 chapters. President, Basil O'Connor; senior vice-pres., Joseph F. Nease. Headquarters: 800 Second Ave., New York, N.Y., 10017.

National Geographic Society. See the separate article GEOGRAPHY.

National Industrial Conference Board, Inc.—Membership: 3,900 subscribing associates. Annual meeting: New York City, Sept. 19-21, 1966. President, H. Bruce Palmer; secretary, Herbert S. Briggs. Headquarters: 845 Third Ave., New York, N.Y., 10022.

National Recreation and Park Association (formerly National Recreation Association).—Membership includes citizens interested in recreation, parks, and conservation, professional recreation leaders, and park executives. Annual congress: Washington, D.C., Oct. 10-15, 1966. President, Laurence S. Rockefeller; secretary, Joseph Prendergast. Headquarters: 8 West 8th St., New York, N.Y.

National Research Council of Canada.—Membership: council, 21; laboratory staff, 2,629. Annual meeting: Ottawa, Ontario, March 1966. President, Dr. B.G. Ballard; secretary, Dr. J.B. Marshall. Headquarters: Montreal Road, Ottawa, Ontario.

National Safety Council.—Membership 9,000. National Safety Congress and Exposition: Chicago, Ill., 25-28, 1965. President, Howard Pyle; secretary, R.L. Forney. Headquarters: 425 N. Michigan Ave., Chicago, Ill.

National Society for Crippled Children and Adults, Inc.—Membership: 52 state and territorial societies. National convention: Chicago, Ill., Nov. 19-22, 1965. President, J.P.W. Brown; exec. dir., Sumner G. Whittier. Headquarters: 2023 W. Ogden Ave., Chicago, Ill.

National Travelers Aid Association.—Membership: 87 local societies. President, Paul L. Mullaney; gen. dir., Savilla Mills Simons. Headquarters: 44 East 23rd St., New York, N.Y., 10010.

National Tuberculosis Association.—Membership: 2,000 affiliated groups. Annual meeting: San Francisco, Calif., May 22-25, 1966. President, Albert W. Dent, LL.D.; secretary, James C. Stone. Headquarters: 1790 Broadway, New York, N.Y.

National Urban League, Inc.—Membership: 25,000. President, Lindsley F. Kimball; secretary, Dorothy Hirshon; exec. dir., Whitney M. Young, Jr. Headquarters: 14 East 48th St., New York, N.Y., 10017.

National Woman's Christian Temperance Union.—Membership: 275,000 in 6,000 local unions. National convention: Chicago, Ill., Aug. 6-11, 1965. President, Mrs. Fred J. Tooz; secy., Mrs. Herman Stanley. Headquarters: 1730 Chicago Ave., Evanston, Ill.

Phi Beta Kappa.—Membership: 175,000 in 176 chapters and 63 associations. President, Whitney J. Oates; secretary, Carl Billman. Headquarters: 1811 Q St. NW, Washington, D.C., 20009.

Planned Parenthood-World Population (Planned Parenthood Federation of America).—Membership: 129 organizations. Annual meeting: New York City, Oct. 17-21, 1965. President, Alan F. Guttmacher, M.D.; secretary, Mrs. Stowe C. Phelps. Headquarters: 515 Madison Ave., New York, N.Y., 10022.

Rotary International.—Membership: 580,200 in 12,155 clubs. International convention: Denver, Colo., June 12-18, 1966. President, C.P.H. Teenstra; gen. secy., George R. Means. Headquarters: 1600 Ridge Ave., Evanston, Ill.

Special Libraries Association.—Membership: 6,000. National convention: Minneapolis, Minn., May 29-June 2, 1966. President, Alleen Thompson; exec. dir., Bill M. Woods. Headquarters: 31 East 10th St., New York, N.Y.

United Community Funds and Councils of America, Inc.—Membership: 1,277 communities representing approximately 2,200 local United Funds, Community Chests, and Community Health and Welfare Councils. Biennial conference: Toronto, Ontario Feb. 6-11, 1966. President, Ralph Lazarus; secretary, Mrs. M. Edmund Lunken. Headquarters: 345 East 46th St., New York, N.Y., 10017.

United States Jaycees, The.—Membership: 280,000 in 5,800 affiliated groups. Annual meeting: Detroit, Mich.,

June 27-30, 1966. President, James A. Skidmore, Jr.; exec. vice-pres., Jack A. Friedrich. Headquarters: Boulder Park, Box 7, Tulsa, Okla.

Veterans of Foreign Wars of the United States.—Membership: 1,703,000. National Convention: Chicago, Ill., Aug. 15-20, 1965. Commander-in-chief, Andy Bldg; adj. gen., Julian Dickenson. Headquarters: V.F.W. Bldg., Broadway at 34th St., Kansas City, Mo., 64111.

World Council of Churches (United States Conference).—Membership: 30 churches or denominations in U.S. Annual meeting: Buck Hill Falls, Pa., April 20-22, 1966. Chairman, Charles C. Parlin; exec.-secy., Eugene L. Smith. Headquarters: 475 Riverside Dr., New York, N.Y., 10027.

Young Women's Christian Association of the U.S.A.—Membership: over 2,000,000. National convention: Boston, Mass., April 1967. President, Mrs. Lloyd J. Marti; gen. secy., Edith M. Lerrigo. Headquarters: 600 Lexington Ave., New York, N.Y., 10022.

Zionist Organization of America.—Membership: 100,000 in 600 districts. National convention: New York City, July 1-4, 1965. President, Jacques Torczyner; national secretary and executive director, Leon Ilutovich. Headquarters: 145 East 32d St., New York, N.Y., 10016.

SOCIOLOGY

In the field of sociology in 1965, new studies were published on race relations and on the contributions of Max Weber, Émile Durkheim, and Georg Simmel. Sociologists gave increased study to the use of computers in digesting and evaluating sociological data. The year also saw further development in the fields of transnational and applied sociology.

The Sociology of Max Weber. Five major papers on the contributions of Max Weber to sociology were published in the *American Journal of Sociology* (April 1965) in commemoration of the centenary of Weber's birth in 1864. Although Weber "consummated virtually no finished studies in any field," according to Paul Lazarsfeld, and although significant portions of his work are controversial, Weber receives widespread attention today by leading sociologists. According to Talcott Parsons, Weber's significance is found in the direction that he gave to "the development of sociology and related disciplines," and because he "laid out a large part of the macroscopic interests of social science as they come to focus in sociology."

Durkheim and Simmel. A new picture of Émile Durkheim's sociology in terms of five "constitutive ideas" or "unit ideas," is presented by Robert A. Nisbet in the introduction to *Émile Durkheim* (Englewood, N.J., 1965), a collection of selected essays on Durkheim by Merton, Alpert, Ginsberg, Selvin, and Bellah. These unit ideas are: personality, authority, the religio-sacred influences, and development. The concept of development is viewed as more than a process, and involves "the search for origins, the recapitulation of stages, the causes of development, and the direction of the assumed development."

In *Georg Simmel* (Englewood, N.J., 1965), the editor, Lewis A. Coser, assembled 12 views, past and present, of Simmel's ideas about sociology as a study of the forms of human association. Five essays discuss Simmel's sociology as seen "through the eyes of his contemporaries, namely, Durkheim, Tönnies, Von Wiese, Bouglé, and Mamelet," and seven represent current appraisals of Simmel's work, including those of Heberle, Sorokin, and Salomon.

Race Studies. Ten studies dealing with racial problems have been published in *Sociological Inquiry* (Winter, 1964-65). In the lead articles, Robin M. Williams finds that "racial distinctions have moved into a more central position in the total societal structure" of the United States. Reviewing race relations in the United States from 1944 to

1964 in terms of the relationship between prejudices and social structure, the article sees protest movements as emerging from the development of collectivities that have acquired "a sense of common fate." Minority groups are created to a significant degree "by the action of dominant groups." As a result, social systems in the United States are moving "toward an integrated mass society" that involves the breaking down of "segmented local structures, particularistic local structures, and categorical ethnic-racial divisions."

Intersociety Comparisons and Transnational Sociology. Intrasociety studies are being extensively supplemented by "systematic cross-societal comparisons." According to Robert M. Marsh ("The Bearing of Comparative Analyses on Sociological Theory," *Social Forces*, December 1964) hundreds of cross-societal comparisons have been made since 1950, and their influence on sociological theory is substantial. Comparisons of social data from different parts of the world represent the beginning of what has been called transnational sociology.

Applied Sociology. The increasing employment of sociologists in government, industry, international relations, education, religion, and social welfare is resulting in the development of applied sociology. Sociologists working in this area diagnose problems of particular social institutions by applying clinical methods in their study.

Sociological Methods. In 1965, sociologists continued to use computers as a more rapid means of making mathematical calculations to obtain standard deviations, partial and multiple correlations, variances and co-variances, linear least squares, and *t*-tests of sample means. A more advanced development is the use of high-speed electronic computers for retrieving specific information quickly from large amounts of computerized social data. For example, if the facts from several thousand articles and research reports on the many aspects of crime are properly selected, encoded, and fed to an electronic computer, a social researcher can later quickly obtain from the computer all the available references on any specific aspect of crime. Computers can also serve to test hypotheses deduced from theory, and to perform other "explorative functions." This increased use of computers requires the training of numerous sociologists in computer methods.

American Sociological Association. The association held its 60th annual meeting in Chicago from Aug. 30 to Sept. 2, 1965, under the general direction of the president, Pitirim A. Sorokin of Harvard University. Two hundred and fifty papers were presented on specialized sociological research. The 1966 annual meeting will be held in Miami Beach, Fla., from August 29 to September 1, with President Wilbert E. Moore presiding. Charles P. Loomis of Michigan State University was chosen president-elect for 1967.

SOMALIA

Following several parliamentary crises in the Somali Republic in 1965, Prime Minister Abdirizak Hagi Hussein pledged himself to solving the country's political problems by revamping his cabinet. He also promised to move ahead to realize the objec-

AFRICA

Area: 246,201 square miles.
Population: 2,350,000 (1964 est.).
Chief City (1963 est.): Mogadiscio, the capital, 120,649.
Government: President—Aden Abdullah Osman (took office July 1, 1960); Prime Minister—Abdirizak Hagi Hussein (took office June 7, 1964). **Parliament**—National Assembly, 123 members; party seating (1965): Somali Youth League, 90; Somali National Congress, 15; others, 18.
Religious Faiths: Sunni Muslims, 99% of population; Roman Catholics, 0.1%; others, 0.9%.
Education: Literacy rate—10% of population. Total school enrollment (1962)—58,113 (primary, 56,519; secondary, 1,060; university, 534).
Finance (1965 est.): Revenues, \$25,200,000; expenditures, \$27,300,000; monetary unit, Somali shilling (7.143 shillings equal U.S.\$1).
Gross National Product (1962): \$77,000,000.
Economic Index (1964): Cost of living, 142 (1958=100).
Manufacturing: Sugar (1963), 9,000 metric tons.
Crops (metric tons, 1962–63 crop year est.): Bananas (1963–64), 110,000; maize, 46,500; sesame, 4,500.
Mineral: Salt (1964), 6,400 metric tons.
Foreign Trade (1964): Exports, \$36,100,000 (chief export: bananas, \$15,800,000); imports, \$54,700,000 (chief imports, 1963:—woven cotton fabrics, \$3,600,000; rice, \$3,000,000; agricultural machinery, \$2,200,000). Chief trading partners (1963): Italy (took 49% of exports, supplied 27% of imports); Aden, incl. Arabia (took 40% of exports, supplied 3% of imports); USSR (supplied 14% of imports).
Transportation: Roads (1964), 8,004 miles (396 paved); motor vehicles (1964), 8,500 (automobiles, 3,800); merchant vessels (1964), 1 (7,000 gross registered tons); principal airport, Mogadiscio.
Communications: Telephones (1964), 2,500; radios (1963), 26,000; newspapers (1959), 1 (daily circulation, 2,000).

tives of Somalia's five-year economic plan.

Relations with Ethiopia. Somalia's tense relations with Ethiopia flared into violence several times during 1965. Border clashes between Somali nomads and Ethiopian forces occurred in the Ogaden region. Each country accused the other of massing troops on its frontier in violation of the Khartoum agreement of March 1964, at which time they had pledged to withdraw their troops from the border and to refrain from hostile radio and press propaganda.

On October 27 the Somali and Ethiopian governments announced that they again had agreed to cease their hostile press and radio propaganda. The accord was reached at a meeting of the Organization of African Unity (OAU), in Ghana, October 21–25.

Relations with Kenya. Somalia's relations with Kenya also worsened during 1965. The deterioration resulted mainly from the militant acts of Somali nationals residing in Kenya. In October the Somali foreign ministry announced that Somali nationalists in Kenya's Northeastern Province had killed 108 Kikuyu and Meru tribesmen "in retaliation against the inhuman atrocities committed by Kenyan police and army units against innocent Somali people" in the area. Somalia claims that Kenya's Northeastern Province belongs to Somalia; Somalis living there have formed a "liberation army" to fight for the province's secession from Kenya.

Relations with Other Nations. In its relations with other countries, Somalia continued in 1965 to maintain a nonaligned position despite the fact that aid

to Somalia from the Soviet Union exceeded that from Western nations.

Economy. In April the Somali government announced that West Germany had agreed to cover partially Somalia's recurring budgetary deficit of nearly \$3 million. The republic's overall trade imbalance increased by \$8.8 million between 1960 and 1964. President Aden Abdullah Osman called for greater consumption of local products as one means of relieving the adverse balance of payments.

SOUTH AFRICA

For South Africa, the year 1965 was one of moderate industrial growth and general economic prosperity. In the political field, it was a year in which further steps were taken to implement the government's policy of separate development for different races.

Elections. In preparation for the next general election, to be held no later than October 1966, the membership of the House of Assembly, the center of legislative power, was enlarged by the Constitutional Amendment Bill of March 3, 1965, from the original 150 to 160 seats for the republic, plus 6 seats for South West Africa. The 160 members are to be chosen in electoral divisions as follows: Cape of Good Hope, 54; Natal, 18; Transvaal, 73; Orange Free State, 15. In addition, 4 whites will be elected by qualified Colored voters in the Cape Province.

At the provincial council elections on March 24, 1965, the National party raised its number of seats in predominantly English-speaking Natal from 4 to 8, and gained 6 others. On November 26 these gains led to an increase to 30 for the Nationalist majority

in the Senate, of which 43 of its 54 members are selected by provincial electoral colleges. Although the Progressive party finished last in the white constituencies it contested in March 1965, it won the Cape Provincial Council's two Colored constituencies, necessarily with white candidates.

Separate Development. The government in 1965 continued to promote separate institutions for the different racial groups in the country. In 1964 a provisional National Indian Council was convened to serve as a body through which the Department of Indian Affairs could consult on matters affecting that community. This council will be replaced eventually by a partially elected body. For Colored voters, who already had a nominated Council for Colored Affairs, provision was made in 1964 for a Colored Representative Council of 46, including 16 appointed members and 30 elected members chosen by universal franchise of all Colored persons. The first election is scheduled to be held in 1966.

Separate institutions for Africans are being established by tribal groups. The national African organizations, the African National Congress (established in 1912) and the Pan-Africanist Congress (which broke away from the former in 1959), have been banned since the Sharpeville incident of 1960, during which African demonstrators against the government's policy of requiring identity cards were fired upon by the police. The rural areas of the Transkei were the first to receive semiautonomous status under an all-African Legislative Assembly composed of 64 chiefs who were government endorsed and paid, and 45 members elected by universal franchise by Africans inside and outside that territory who qualify for its citizenship. The next area for which similar status to that of the Transkei is planned is Tswanaland, near Bechuanaland, although this territory has not had the long experi-

SOUTH AFRICA'S FIRST NUCLEAR REACTOR was opened at research station near Pretoria on August 5. Prime Minister Verwoerd (at left, inset) spoke at ceremony.

SOUTH AFRICAN INFORMATION SERVICE

Area: 471,444 square miles.

Population: 17,474,000 (July 1, 1964 est.).

Chief Cities (1960 census): Pretoria, the administrative capital, 303,684; Cape Town, the legislative capital, 508,341; Johannesburg, 595,083; Durban, 560,010.

Government: President—Charles R. Swart; Prime Minister—Hendrik F. Verwoerd. Parliament—House of Assembly (160 representatives); party seating (1965): National Party, 107; United Party, 48; Progressive Party, 1; 4 representing the Colored voters of the Cape Province. Senate, 54 senators.

Religious Faiths: Protestants, 66% of population; Roman Catholics, 6%; others, 24%.

Education: Literacy rate (1960) 32% of Bantu population. Total school enrollment (1960)—2,758,797 (primary, 2,266,556; secondary, 365,886; teacher-training, 13,624; technical, 60,783; higher, 51,948).

Finance (1965 est.): Revenues, \$1,384,000,000; expenditures, \$1,898,000,000; public debt (1964), \$4,150,000,000; monetary unit, rand (0.7143 rand equals U.S.\$1).

Gross National Product (1964): \$10,383,800,000.

National Income (1964): \$8,749,000,000; average annual income per person, \$500.

Economic Indexes (1964): Manufacturing production (1958=100), 160; agricultural production, 127 (1956-57=100); cost of living, 110 (1958=100).

Manufacturing (metric tons, 1964): Cement, 3,456,000; crude steel, 3,096,000; pig iron, 2,904,000; tin, 1,032,000; processed meat (1962), 574,000; wheat flour, 526,800; refined copper, 12,000.

Crops (metric tons, 1964-65 crop year): Maize, 4,172,000 (ranks 9th among world producers); citrus fruit, 416,000 (world rank, 11th); wool, greasy (1963), 145,500 (world rank, 5th); wheat, 1,059,000; potatoes (1963-64), 405,000; peanuts, 252,000; oats, 134,000; barley, 39,000.

Minerals (metric tons, 1964): Coal, 44,917,000 (ranks 13th among world producers); iron ore, 4,830,000 (world rank, 19th); manganese, 1,320,193 (world rank, 2nd); copper, 59,492 (world rank, 13th); uranium, 4,032 (world rank, 3rd); gold, 29,136,542 troy ounces (world rank, 1st); gem diamonds, 1,790,000 carats (world rank, 1st).

Foreign Trade (1964): Exports, \$1,490,000,000 (chief exports: wool, \$171,500,000; diamonds, \$133,000,000); imports, \$2,350,000,000 (chief imports: textile yarn, fabrics, 1962, \$188,440,000; automobile chassis with engines, 1963, \$112,434,000; petroleum products, 1963, \$76,440,000). Chief trading partners (1963): Britain (took 30% of exports, supplied 30% of imports); U.S. (took 9% of exports, supplied 17% of imports); West Germany (took .5% of exports, supplied 11% of imports).

Transportation: Roads (1964), 206,000 miles (17,500 paved); motor vehicles (1964), 1,560,000 (automobiles, 1,250,000); railways (1963), 13,650 miles; merchant vessels (1964) 42 (221,000 gross registered tons); national airline, South African Airways; principal airports, Bloemfontein, Cape Town, Durban, Johannesburg.

Communications: Telephones (1964) 1,069,612; radios (1962), 1,151,000; newspapers (1961), 21 (daily circulation, 912,000).

ence with quasi-representative institutions of the Transkei.

The Transkei has two political parties: the Transkei National Independence party, led by Chief Minister Kaiser Matanzima, which supports separate development, the elimination of whites from the Transkei, and ultimate independence; and the Democratic party, led by Paramount Chief Victor Poto

(who is supported by a majority of the elected members), which upholds principles of multiracialism for the Transkei and South Africa as a whole. With the support of both parties, the Transkei has abandoned after the first two years of primary school the "mother-tongue" instruction of the government's "Bantu education" system, and nearly all of its 1,600 schools have chosen English rather than Afrikaans as the major medium of instruction.

Poverty and lack of resources remain the Transkei's chief problem. Thus far, economic development in the African reserves and border areas has created fewer than 4,000 jobs a year, only a minute proportion of those now held in the so-called white areas by African migratory and domiciled workers. Private white capital may now invest in the government-controlled corporation established for the Transkei, but the Republic government maintains its ban on white entrepreneurs investing directly in Bantu "homelands," although Matanzima would welcome them.

South West Africa. In 1965 the International Court of Justice conducted oral proceedings on the South West Africa case, which was brought before it in 1960 by Liberia and Ethiopia, acting as former members of the League of Nations and on behalf of the independent African-controlled states. The plaintiffs ask the court to rule that the United Nations has inherited from the League of Nations the rights and responsibilities of supervising the mandate for South West Africa and that the practices of apartheid, enforced in that territory, are incompatible with South Africa's obligation to "promote to the utmost the material and moral well-being and social progress" of its inhabitants. Their objective is to force South Africa to change its policies of racial discrimination in South West Africa or to give up the territory.

In its defense, South Africa has maintained that its policies of racial separation are not only best for South West Africa but have worldwide validity.

MODEL OF DAM for Orange River hydroelectric project is examined by engineer testing structure's spillway design.

"THE TIMES," LONDON

UNITED NATIONS

PROTESTING SOUTH AFRICAN RACIAL POLICIES, many delegates left UN General Assembly when Foreign Minister Muller spoke on September 29.

Earlier, South Africa had invited the court to visit South West Africa for an on-the-spot inspection of the situation, but the court decided on November 29 to decline the invitation.

Racial Policies. Since Jan. 1, 1965, African (Bantus) are considered "temporary sojourners" in urban areas in terms of the Bantu Laws Amendment Act of 1964, although in practice their numbers may increase and their conditions improve. Since July 1, 1965, the rule has been in effect that only one servant may live on the premises of a white household, although there will be exemptions until alternative housing is available. Racially mixed audiences at sports events and public entertainment have been officially banned, though this also is subject to exemption.

Internal Security. The most publicized trial in 1965 was that of Abram Fischer, member of a distinguished Afrikaner family, and 13 others for activity in the banned Communist party. Twelve of the accused were found guilty. Fischer jumped bail in January 1965 and remained in hiding until re-arrested in November. Hundreds of other trials in remote centers have involved little-known members of the banned African nationalist movements who are accused of sabotage and violence.

The Liberal party, which is nonracial and non-Communist, has been disorganized through the banning of more than 30 of its leaders. Other critics of the government, such as the Defense and Aid Fund (which seeks to support the dependents of those on trial or in prison), local offices of the liberal Institute of Race Relations, the Christian Institute, and the Durban office of the Progressive party, have been subject to police raids, confiscation of material, and questioning.

Despite strict regulations governing the reporting of conditions in prisons, the *Rand Daily Mail* published three articles by Harold Strachan describing brutal practices he had witnessed while a political prisoner. These were followed with descriptions of the use of electric torture. While such reports

were not new, these led to raids on the newspaper, the loss of his passport by the editor, Laurence Gandar, and a series of trials for perjury that continued at the end of the year.

International Relations. South Africa maintains diplomatic relations with the British territories of Basutoland, Swaziland and Bechuanaland, all of which are rapidly approaching independence. Rhodesia's unilateral declaration of independence on Nov. 11, 1965, and British, U.S., and United Nations sanctions against its white regime, confront South Africa with a most delicate diplomatic situation.

South Africa's own ability to withstand sanctions, such as have been called for by the anti-apartheid African states, has been underscored by the UN Security Council's Expert Committee. In a 6-4 report on March 2, 1965, this body emphasized the necessity of a naval blockade to make such measures effective, pointed out the losses that the United Kingdom, in particular, would incur in the process, and raised the possibility that sanctions would lead to revolutionary chaos inside South Africa. Although the United Kingdom, in response to a United Nations resolution, has tightened its arms embargo on South Africa, and the United States has disallowed arms and aircraft sales to that country, other states—particularly France—have been meeting South Africa's demands.

Economic Development. The most economically advanced country in Africa, the Republic of South Africa accounts for 22% of the total production value of the African continent and nearly 50% of Africa's industrial output. About half of the total capital investment in Africa is centered in the republic. Each year South Africa produces about three fourths of the continent's steel, two thirds of its electric power, and four fifths of its coal. The country's modern transportation network annually carries half of all Africa's freight traffic, and its roads are traveled by over two fifths of all automobiles in Africa.

The economic boom that had been so striking

since mid-1961 showed signs of slowing down in 1965, and the government took measures to fight inflation and to discourage imports in order to avoid a balance-of-payment crisis. The gross national product in 1964 totaled \$10,383,800, representing an economic growth rate in real terms of 6.76%. While slightly below the impressive rate of 7.5% attained in 1963, the 1964 rate was well ahead of the 5.5% average annual rate planned under the country's first economic development program for 1965-69.

Planning continued on the giant \$630 million, 30-year Orange River hydroelectric project. Bids were offered in 1964 for construction of two pivotal dams on the Orange River.

Mining and Manufacturing. South Africa, which produces more than half of the world's gold, increased its gold production by about 4% to 29,136,542 troy ounces in 1964. The total value of gold output exceeded \$1 billion a year for the first time. Income from other mining operations, chiefly the production of diamonds, coal, iron ore, copper, and uranium oxide, rose by 17%.

Manufacturing industries operated at full capacity in 1964, and total manufacturing income rose by 19% over 1963. The important iron and steel industry increased production of pig iron over the previous year by 18% (to 3 million tons), of steel ingots by 10% (to 3 million tons), and steel castings by 13% (to 105,000 tons). Other metal industries reported similar increases.

Agriculture. Agricultural production failed to keep pace with the rest of the economy in 1964-65. Farm income fell in 1964 by 4.5% from the 1963 level because of lower crop production caused by poor weather.

SOUTH CAROLINA

The principal events in South Carolina in 1965 were political. The governor resigned to fill the U.S. Senate seat left vacant by the death of Olin Johnston. Also, a South Carolina congressman bolted the Democratic party and won reelection as a Republican. Registration of Negro voters increased, but not to the degree expected.

Political Leadership. U.S. Senator Olin D. Johnston died on April 18. He had served the state as governor for 6 years, as U.S. senator for 20 years, and as the chief political leader for three decades. Donald S. Russell, after resigning as governor, was appointed to fill the vacant Senate seat, and was succeeded as governor by Robert E. McNair.

Following the example of U.S. Senator J. Strom Thurmond, who had bolted the Democratic party in 1964 to support Republican presidential candidate Barry Goldwater, Representative Albert Watson switched from the Democratic to the Republican party in 1965. He resigned his seat in the U.S. House of Representatives, and won easy reelection against Democratic opposition.

Both political parties began revamping their organizations, looking toward 1966, which, with elections for both U.S. Senate seats and for the governorship, will be a major political year for the state.

Voting Rights. South Carolina was named by the U.S. Census Bureau as one of seven Southern states in which less than 50% of the population over 21 has voted. By the end of 1965 there were about 175,000 Negroes registered in the state. Negro reg-

SOUTH CAROLINA'S Donald Russell (r.), who entered U.S. Senate in 1965, is congratulated by (from left) Vice-President Humphrey, Governor McNair, and Senator Thurmond.

istration increased after enactment of the federal Voting Rights Act of 1965, but not so greatly as expected. The state is testing the constitutionality of the act by an appeal to the U.S. Supreme Court.

— SOUTH CAROLINA · Information Highlights —

Area: 31,055 square miles.
Population: 2,524,000 (1965 est.).
Chief Cities (1965 est.): Columbia, the capital (100,000); Charleston (79,500); Greenville (67,000); Spartanburg (47,000); Anderson (41,000); Rock Hill (31,800); Charleston Heights (24,500); Florence (24,000).
Government: Chief Officers—governor, Robert E. McNair (Democrat); secy. of state, O. Frank Thornton (D); atty. gen., Daniel R. McLeod (D); treas., Jeff B. Bates (D); supt. of education, Jesse T. Anderson (D); chief justice, Claude A. Taylor; Legislature—General Assembly (convened Jan. 12, 1965); Senate, 46 members (46 Democrats, 0 Republicans); House of Representatives, 124 members (123 D, 1 R).
Education: School enrollment (1964-65)—public elementary, 408,800 pupils (13,100 teachers); public secondary, 250,900 pupils (10,334 teachers); nonpublic schools, 18,200 pupils (850 teachers); college and university (fall 1964), 39,033 students. Public school expenditures (1964-65)—\$170,350,000 (\$289 per pupil); average teacher's salary, \$4,450.
Public Finance (fiscal year 1965): Revenues, \$578,642,659 (3% sales tax, \$93,288,138; motor fuel tax, \$63,951,915; federal funds, \$99,424,154). Expenditures, \$561,244,676 (education, \$173,943,400; health, welfare, and safety, \$63,967,450; roads and highways, \$98,146,761). State debt, \$173,573,500 (June 30, 1965).
Personal Income (1964): \$4,229,000,000; average annual income per person, \$1,655.
Public Assistance (fiscal year 1964): \$36,493,000 (aged, \$13,258,000; dependent children, \$5,823,000).
Labor Force (employed persons, July 1965): Agricultural, 153,000; nonagricultural (wage and salary earners), 670,400 (43.5% manufacturing, 16.7% trade, 15.4% government). Unemployed persons (July 1965)—36,600.
Manufacturing (1963): Value added by manufacture, \$2,117,387,000 (transportation equipment, \$7,472,000; primary metals, \$11,175,000; nonelectrical machinery, \$74,142,000; electrical machinery, \$33,715,000; fabricated metals, \$33,493,000; food and products, \$97,665,000).
Agriculture (1964): Cash farm income, \$421,196,000 (live-stock, \$111,714,000; crops, \$288,046,000; govt. payments, \$21,436,000). Chief crops (tons)—cottonseed, 228,000 (ranks 10th among the states); oats, 104,000 (rank, 20th); tobacco, 77,000; (rank, 4th); peaches, 26,400 (rank, 8th); sweet potatoes, 26,000 (rank, 9th); rye, 15,000 (rank, 14th).
Mining (1964): Production value, \$38,713,000 (ranks 42nd among the states). Chief minerals (tons)—stone, 6,109,000; sand and gravel, 4,622,000; clays, 1,743,000.
Fisheries (1964): Commercial catch, 21,723,000 pounds (\$3,001,000). Leading species—Hard blue crabs, 9,436,000 pounds (\$375,000); spot fish, 3,166,800 pounds (\$213,000); shrimp, 2,632,000 pounds (\$861,000); oysters, 2,511,000 pounds (\$997,000).
Transportation: Roads (1965), 56,523 miles (34,713 surfaced); motor vehicles (1964), 1,015,000; railroads (1963), 3,266 miles; aircraft (1964), 855 (99 airports).
Communications: Telephones (1965), 733,900; television stations (1964), 10; radio stations (1964), 104; newspapers (Jan. 1, 1965), 17 (daily circulation, Sept. 30, 1964: 513,809).

Legislature. The General Assembly enacted very little significant legislation during the year. It did, however, strengthen the state's safety laws, grant small salary raises to state employees and teachers, give additional support to higher education, and establish a number of agencies to administer federal Economic Opportunity Act programs. A number of committees were created to study many of the state's most pressing questions, including small-loan problems, election laws, reapportionment, services for the blind, job classification and pay of state employees, and various phases of education. The legislature appropriated \$254 million for general purposes and \$67 million for highways.

A federal court order directed that the South Carolina Senate be reapportioned by April 1, 1966. A special session of the General Assembly met in December to work out a plan to ensure representation on the basis of population instead of the present system of one per county.

Education. Most of South Carolina's school district plans for integration have been approved, and integration progressed rapidly during the year. The validity of the state's tuition grant program to students in private schools is being tested in the federal courts. The state continued to emphasize programs designed to reduce dropouts and to train persons without a high school education.

Economy. All major indicators of economic growth showed a rise in 1965, chiefly as the result of general industrial development and wage increases in textile and other manufacturing. Over \$600,000,000 was invested in industrial expansion, with major expansions occurring in the textile and chemical industries. The rate of unemployment was well below the national average.

University of South Carolina

SOUTH DAKOTA

Nils Boe, a Republican, was inaugurated as the 23rd governor of South Dakota on Jan. 5, 1965. He began his term with a Republican-dominated Legislature, which convened on January 19 for a 45-day session.

Reapportionment. The major problem facing the Legislature was the reapportionment of both houses in accordance with the "one-man, one-vote" decision of the U.S. Supreme Court. The initial plan put forward by the Republicans was opposed by the Democrats, who used the added strength of their increased representation in the Legislature to block passage of the measure.

To satisfy both parties, adjustments were made in the reapportionment bill before it was passed on the eve of adjournment. Under the plan agreed upon, the boundary line dividing the 1st and 2nd congressional districts was moved eastward in order to equalize the populations of the two districts.

Legislation. The Legislature appropriated a total of \$116,683,452 for the fiscal year 1965. The sales tax was broadened and raised from 2% to 3%. Although \$6 million of the general appropriations bill was struck down by the State Supreme Court as unconstitutional, the rest of the bill and the sales tax bill were found to be constitutional by the court.

The Legislature also broadened the authority of county commissioners and provided compromise legislation concerning the jurisdictions of the rival

rural electric cooperatives and private power companies.

Education. State aid to public schools was increased from \$10,000,000 to \$15,000,000, and a new division of vocational education was created. Appropriations for state-supported institutions of higher learning were increased by \$7,000,000—20% over the amount for the previous biennium.

On June 29 the State Board of Regents raised entrance requirements for the seven state-supported colleges and universities. Only resident students from the upper two thirds of their graduating classes, and nonresident students from the upper one half of their graduating classes, will be eligible to enter the institutions.

Politics. On September 8, Charles A. Howard, Jr., was chosen Republican state chairman. Richard Murphy, an attorney, announced his candidacy for the Republican nomination for U.S. senator in the June 1966 primary election.

Floods. Flooding caused considerable damage in South Dakota in 1965. During the first two weeks of April, streams in the eastern part of the state overflowed, and in the middle of May, flash floods in the northern Black Hills caused damages estimated at \$6 million.

SOVIET LITERATURE

The 1965 Nobel Prize in literature was awarded on October 15 to Mikhail Sholokhov, whose epic novel *The Silent Don* (1928-40) reflects the first years of the 1917 revolution and the havoc of the civil war that followed. The Moscow press interpreted the award as a recognition of Soviet literature and its most glorious representative. Many people in the West wondered whether the decision of the Swedish Academy was purely nonpolitical. Previous Russian winners of the literary prize had been Ivan Bunin (1933), an anti-communist exile, and Boris Pasternak (1958), a nonpolitical writer who had not been allowed to have his novel *Doctor Zhivago* published in the Soviet Union. The academy may have wanted to stress its objectivity by honoring a Russian writer who is a member of the Communist party and a deputy of the Supreme Soviet. (See NOBEL PRIZES.)

Government Controls. Rigid government control of the arts alternated throughout 1965 with various signs of liberalization. The liberation of Joseph Brodsky, a Leningrad poet who had been sent to a work camp in 1964 as "an idler and a parasite," was followed by the arrest of the literary critic Andrei Sinyavski in September 1965. He was to be placed on public trial for allegedly writing anti-Soviet literature and for smuggling it to the West. Earlier, a large volume of Pasternak's poems, with an introductory essay by Sinyavski, had been cleared by government censors. For the first time, translations of works by Franz Kafka were allowed to be published in book form. Bunin's collected works, in a new revised edition, were hailed by the critics. Works of another émigré, the poet Marina Tsvetayeva (who committed suicide in 1941 on her return to Russia), were scheduled for publication in 1966. At the same time, however, several good writers were reduced to silence by preventive censorship. Among them was Aleksandr Solzhenitsyn, who had won international recognition for his tale of Stalinist concentration camps, *One Day in the Life of Ivan Denisovich* (1962). Moscow intellectuals greatly resented these inconsistencies.

War Literature. The 20th anniversary of the end of World War II (1945) gave rise to numerous books. Among the memoirs, the most vivid was *The Struggle for the Second Front* by Ivan Maiski, Soviet ambassador to Britain during the war. The most informative, although badly written and burdened with technical details, was 1945 by Marshal Ivan Konev. The best works of war fiction were *The Bonfire* by the veteran novelist Konstantin Fedin; *The Last Two Weeks* by Aleksandr Rozen, who depicts the period just preceding Hitler's invasion of the USSR; and *July 1941*, a moving realistic narrative of the first weeks of the Nazi invasion, by Grigori Baklanov.

Other Fiction. *Seven Under the Same Roof*, by a newcomer, Vitali Syomin, created a stir in literary circles. An account of the dull and harsh life led by young people in a provincial town, the novel does not shy away from reporting grim episodes such as murder. The tone and form of this realistic narrative differ from the optimism and standard slogans of conventional Soviet prose. Anatoli Rybakov's

KEYSTONE

MIKHAIL SHOLOKHOV was awarded the Nobel Prize in literature for 1965.

Summer in Sosnyaki portrays unusual characters and discloses dark aspects of Communist reality that are rarely mentioned by officially approved writers. Another interesting work is *I Am Responsible for Everything*, the last part of a trilogy by Yuri Gherman. Within an involved and romantic plot, it presents emotions and adventures of peoples who return from the war and have great difficulties fitting into life in a small town.

Off the beaten track are Vladimir Chivilikhin's *The Reeling Pines*, about a forest-fire brigade, and Vadim Andreyev's *The Wild Field*, a first-hand account of French underground resistance against the Nazis during World War II. The author of *The Wild Field* is the son of the prerevolutionary writer Leonid Andreyev.

Shield and Sword, a pseudo-thriller by Vadim Kozhevnikov, was met with approval in the Communist press because it glorifies Soviet spies who infiltrated Nazi ranks during the war. It is a ridiculous, inflated, and artificial attempt to create an "anticapitalist espionage novel." Nataliya Ilina's *The Return* is not much better. It depicts Russian exiles in the Far East who repent and become loyal Communist party members. However, this kind of ready-made literature is diminishing in quantity and is losing popularity.

Mikhail Bulgakov's *The Theatrical Romance*, a lively and hilarious satire on the Moscow Art Theatre, was not published until 1965, although the author died in 1940. This unfinished work could not have been published in the period when Stalin was in power.

Poetry. Yevgeni Yevtushenko's series of poems, *The Power Station of Bratsk*, tries to convey the sense of Russian history and to link the nation's past and present, but only a few parts of this ambitious project are successful. *The Knot*, a collection of lyrical poems by Olga Berggolts, is particularly poignant when she speaks of her husband who was executed during the Stalinist purges. Poems by Andrei Voznesenski and Bella Akhmadullina were among the best of the year.

SPACE EXPLORATION

SPACE "WALK" by astronaut Edward White highlighted the flight of Gemini 4 in June.

SPACE EXPLORATION

Intense activity by the United States and the Soviet Union in the development of manned space flight, the exploration of space by unmanned vehicles, and the use of unmanned spacecraft for transmitting weather and communications data highlighted space exploration in 1965. Questions concerning possible hazards to astronauts arising from energetic radiations, weightlessness, and close confinement still cause concern in planning for longer flights.

This article discusses developments in space exploration under the following headings: (1) Manned Space Flight; (2) Earth Satellites and Space Probes; (3) Astronautics: Space Science and Technology.

MANNED SPACE FLIGHT

The American manned space flight program in 1965 was centered on a series of Gemini flights of increasing complexity. These flights dealt with space flight questions for which answers could be obtained only by placing man in the space environment.

In preparation for his flight in space, each Gemini

astronaut spent more than 100 hours of training with mission simulators and participated in detailed briefings concerning the ship, the flight, and the tasks to be performed. Each crew participated in, or monitored, the systems checks and the other preparations for flight, and each practiced as many of the flight tasks as possible.

Gemini Flights. The Gemini spacecraft, an enlarged version of the Mercury vehicle, is launched by the Titan 2 rocket, which is larger than the Atlas rocket used for Mercury flights. The spacecraft, which weighs about 7,100 pounds at launching, is 18 feet 5 inches long, 10 feet across at the big end, and 39 inches across at the small end.

The equipment section at the big end holds batteries, fuel for control and maneuver systems, and oxygen. The next inner section holds the retrograde rockets used for reentry. The equipment section is jettisoned just before the rockets are fired for reentry; the retrograde section is jettisoned after they have been fired. What is left of the Gemini craft constitutes the reentry module, a vehicle 11 feet long and 7½ feet across at the big end. It contains

three sections: the cabin for the astronauts, the adjoining section housing the reentry control system, and a section at the small end for parachutes and rendezvous radar.

The astronauts' section, which has 50% more room than the Mercury cabin, holds two men who sit side by side. Experimental instruments and support equipment for the astronauts are nearby. There is a hatch above each astronaut for entry or escape. The compartment is pressurized, but each crew member wears a pressurized suit during all or part of the flight.

Each Gemini spacecraft is tracked around the world by a manned space flight network consisting

RECOVERY. (Left) Helicopter picks up astronaut James Lovell after Gemini 7 flight in December. (Below) Gemini 6 astronauts Walter Schirra and Thomas Stafford prepare to leave the capsule after space rendezvous with Gemini 7.

of seven primary land stations and three ships. An additional six stand-by land stations are ready if needed. Primary mission control is located in the Manned Spacecraft Center in Houston, Texas. Real-time (no-delay) computing centers are in Greenbelt, Md., and Houston, Texas.

All Geminis were launched from Cape Kennedy, Fla., and made their descent into the Atlantic Ocean southeast of Florida. They were recovered by ship, as were the Mercury vehicles.

Gemini 3. The first manned Gemini flight, Gemini 3, had a perfect launching on March 23, 1965, with astronauts Virgil I. Grissom and John W. Young aboard. Grissom was the first man to have been

launched twice into space, and this flight was the first time an American had a companion in space.

The Gemini 3 flight probably also marked the first time that any astronaut significantly changed the orbit of a spacecraft. Using small rocket thrusts, the astronauts maneuvered the spacecraft by changing its attitude (angular orientation) and its translational motion (along a straight line). This capability to maneuver was used for the first controlled reentry into the earth's atmosphere. Reentry was nearly perfect, except for being off target by 60 miles. Gemini 3, which made 3 orbits and was in flight for 4 hours and 53 minutes, showed that spacecraft could be maneuvered for rendezvous and dock-

ing operations, which are needed for the Apollo project to make a round trip to the moon.

Gemini 4. Gemini 4, launched on June 3, carried James A. McDivitt and Edward H. White II on a record-shattering 62-orbit flight that lasted 97 hours and 48 minutes.

During the first orbit, an attempt was made to achieve a rendezvous by maneuvering Gemini 4 toward the upper stage of the Titan 2 rocket. This first test of achieving rendezvous by visual sightings was not completed successfully because the supply of gas for maneuvering had to be conserved.

Walk in Space. An important step toward interplanetary space flight was taken during the Gemini 4 flight. On June 3, at the beginning of the third orbit, White emerged from the capsule and stepped out into space. He was the first American—and the second man—to perform this feat. His excursion followed a similar one made by Aleksei A. Leonov of the USSR on March 18. For White's maneuver, the pressure in the Gemini cabin was reduced to vacuum conditions to enable the astronaut to emerge directly from his capsule hatch. During the walk in space, both White and McDivitt were in a vacuum environment from which they were protected only by their pressurized suits.

When White left the Gemini 4, it was traveling at a speed of about 17,000 miles per hour relative to the earth's surface. White, traveling at the same speed, continued in the same orbit as his craft. He was not directly aware of the high speed, however.

Outside the Gemini, White remained attached to the spacecraft by a 25-foot gold-colored cord that contained lines for his oxygen supply, communications, and medical data. An emergency oxygen supply was strapped to his chest. To be able to maneuver and change his own personal orbit, he also carried a small jet gun that released bursts of oxygen gas from small bottles attached to the gun. These

short bursts enabled him to move about. In addition, he was able to pull on a strong nylon safety line that was part of the tether.

The world kept in touch with White via his tether. It was estimated that 50 million Americans listened to broadcasts while the first American to walk in space talked as he tested his new position. At the same time, pictures were being taken by McDivitt from inside the cabin, and by a 16-mm. movie camera mounted by White on the spacecraft at the beginning of his walk. White found his sojourn in space so thrilling that he remained out of Gemini 4 for 20 minutes—eight minutes longer than scheduled.

After White had safely reentered the capsule, the hatch resisted efforts to lock it shut, but the astronaut was able to close it. The cabin, again sealed against space, was then repressurized, and the planned duration of the flight was fulfilled.

White's walk is significant because similar movements of men in space, very likely without tethers, will be necessary to assemble the equipment needed for long-distance flights and heavy spacecraft. The separate parts, which will be placed in orbit by a number of rockets, will be assembled while in earth orbit. Interplanetary flights will begin from an earth orbit, not from the earth.

Living Conditions. Living in a cabin in space for a number of days is still in the experimental stage. During every 24 hours of the Gemini 4 trip, McDivitt and White were supplied with four meals stored in separate packages. The meals included freeze-dried products, dehydrated foods, and compressed bite-sized bits. The dehydrated foods were reconstituted by adding water. To prevent unpleasant odors from spoiled left-over food, a disinfectant tablet was put into each used food pouch before it was reclosed. All the other essential needs of a human being were meticulously taken care of.

It was feared that the men might suffer from inertness in a confined space, boredom, and prolonged weightlessness. Part of the astronauts' program during their waking periods consisted of taking special exercises with a flexible cord. In order to avoid boredom, the astronauts had a busy schedule of work activity that included reading instruments, reporting to ground stations, and performing scientific and technological experiments. Many important tests and measurements were made of the physical condition and reactions of the astronauts; for example, pulse and temperature data were obtained continuously.

Reentry. The Gemini 4 computer system necessary for calculating reentry data did not function. All pertinent information for landing had to be transmitted by radio from the spacecraft to the ground, where results were computed and radioed back to the ship. The procedures worked successfully, and the reentry was excellent, demonstrating once again the importance of the crew's judgment in space flight.

Gemini 5. On August 21, Gemini 5 rocketed into space, carrying L. Gordon Cooper, Jr., and Charles Conrad, Jr., for a 120-orbit ride that lasted 190 hours and 56 minutes. This was the longest manned space flight that had ever been made. It was Cooper's second ride in orbit, and he set a new world record for the total time spent by an astronaut in space. The Gemini 5 orbit had the highest apogee of any American manned flight—an altitude of 219 miles.

Gemini 5's eight-day flight time was roughly equal to the time required for a flight to the moon and back. An important purpose of the flight was to clarify questions concerning man's ability to survive and

TITAN 2 BOOSTER ROCKET for Gemini 5 space flight is salvaged in Atlantic Ocean after lift-off on August 21.

RENDEZVOUS IN SPACE between Gemini 6 and 7 on Dec. 15, 1965, is shown in this schematic diagram.

carry out purposeful activity in the space environment for periods long enough for a lunar expedition. The most significant result of the Gemini 5 flight was to demonstrate that astronauts can endure eight days in orbit and perform work assignments in good physical condition and in good spirits.

Power Failure. Before the second orbit of Gemini 5 was completed, trouble developed in the craft's electrical power supply. The power source was new; it consisted of two fuel cells that replaced conventional batteries. In a fuel cell, gaseous hydrogen and oxygen combine chemically to form water and to generate electricity directly. The saving in weight gained by use of fuel cells instead of batteries

permitted Gemini 5 to carry the first radar equipment for a rendezvous operation.

Improvement in the power supply began on the second day of the flight and continued until full electrical power was achieved. Consequently, significant parts of most scheduled tasks were performed. The only complete failure was the planned effort to achieve a rendezvous with a 76-pound pod ejected from the Gemini. By the time sufficient power was available for radar transmission, the pod and the spacecraft had drifted too far apart to attempt a rendezvous. Instead, a simulated rendezvous was substituted, wherein the spacecraft maneuvered to a new position after radar contact with the ground.

GEMINI RENDEZVOUS marked a major step forward in the U.S. effort to place a man on the moon by 1970. These photos of Gemini 7 were taken from Gemini 6 while the spacecraft flew together on Dec. 15.

UPI

NASA

VIRGIL IVAN GRISSOM, an Air Force lieutenant colonel, was born in Mitchell, Ind., on April 3, 1926. A World War II veteran (1944-45), he graduated from Purdue University in 1950, re-joined the Air Force, and flew missions in Korea. After aeronautical engineering study and test pilot duty, he was selected to be an astronaut in 1959. He made a suborbital flight in 1961. Grissom married Betty L. Moore; they have two sons, Scott and Mark.

WIDE WORLD

JAMES ALTON MCDIVITT, an Air Force lieutenant colonel, was born in Chicago, Ill., on June 10, 1929. He entered the Air Force in 1951 and flew jet fighter missions in Korea. In 1959 he graduated first in his class from the University of Michigan. He was a test pilot and logged about 3,000 hours of flying before being selected for training as an astronaut in 1962. McDivitt married Patricia Haas; they have three children, Michael, Ann, and Patric.

UPI

CHARLES CONRAD, JR., a Navy lieutenant commander, was born in Philadelphia, Pa., on June 2, 1930. After graduating from Princeton University in 1953, he entered the Navy, became a pilot, and worked as flight instructor, safety officer, test pilot, and pilot instructor. He logged 1,500 hours in jet planes before being selected for astronaut training in 1962. Conrad married Jane DuBose; they have four sons—Peter, Thomas, Andrew, and Christopher.

UPI

WALTER MARTY SCHIRRA, JR., a Navy captain, was born in Hackensack, N.J., on March 12, 1923. After graduating from the U.S. Naval Academy in 1945, he took flight training, and then flew 90 combat missions in Korea. He was a test pilot before being selected for training as an astronaut in April 1959. On Oct. 3, 1962, he made a six-orbit flight in *Sigma 7*. Schirra married Josephine C. Fraser; they have two children, Walter III, and Suzanne.

PICTORIAL PARADE

FRANK BORMAN, an Air Force colonel, was born in Gary, Ind., on March 14, 1928. After graduating from the U.S. Military Academy in 1950, he took pilot training and served with fighter squadrons for five years. He earned a master's degree and became an instructor at West Point. He was an instructor at a pilot's school before being selected as an astronaut in 1962. Borman married Susan Bugbee; they have two sons, Frederick and Edwin.

CENTRAL PRESS

PAVEL IVANOVICH BELYAYEV, a Soviet air force colonel, was born in Chelischevo, USSR, on June 26, 1925. He had ten years of schooling and worked in a war plant. After training to be a pilot in 1943, he flew with an air squadron in the Far East, 1945-56. He went to the Soviet Air Force Academy in Moscow in 1956, graduated in 1959, and was selected to be an astronaut. Belyayev and his wife, Tatiana, have two daughters, Irina and Ludmila.

JOHN WATTS YOUNG, a Navy lieutenant commander, was born in San Francisco, Calif., on Sept. 24, 1930. A graduate of the Georgia Institute of Technology (1952), he entered the Navy (1952) and logged more than 3,000 hours of flying. He served as test pilot for the F-4H jet fighter, and set new records with this plane. He was selected for training as an astronaut in 1962. Young married Barbara V. White; they have two children, Sandra and John.

UPI

EDWARD HIGGINS WHITE II, an Air Force lieutenant colonel, took a "walk" in space from Gemini 4 on June 3, 1965. White was born in San Antonio, Texas, on Nov. 14, 1930. A graduate of the U.S. Military Academy (1952), he joined the Air Force, flew fighters, and earned a master's degree in 1959. After being a test pilot, he was selected as an astronaut in 1962. White married Patricia Finegan; they have two children, Edward and Bonnie Lynn.

UPI

LEROY GORDON COOPER, JR., an Air Force lieutenant colonel, was born in Shawnee, Okla., on March 6, 1927. After Marine Corps service (1945-46), he attended the University of Hawaii, entered the Air Force, and then flew for four years. He earned an engineering degree (1956), went to flight test school, was selected as an astronaut (1959), and made a 22-orbit flight (1963). Cooper married Trudy Olsen; their children are Camala and Janita.

NASA

THOMAS PATTEN STAFFORD, an Air Force lieutenant colonel, was born in Weatherford, Okla., on Sept. 17, 1930. After graduating from the U.S. Naval Academy in 1952, he transferred to the Air Force and became a pilot. He was a test pilot, an author of Air Force manuals, and an aviation school administrator before being selected for training as an astronaut in 1962. Stafford married Faye L. Shoemaker; they have two daughters, Diane and Karin.

NASA

JAMES ARTHUR LOVELL, JR., a Navy captain, was born in Cleveland, Ohio, on March 25, 1928. After graduating from the U.S. Naval Academy in 1952, he took flight training and served for three years as test pilot. He completed aviation safety courses, was a flight instructor and safety officer, and was selected to be an astronaut in 1962. Lovell married Marilyn L. Gerlach; they have four children—Barbara, James, Susan, and Jeffrey.

UPI

RUSSIAN COSMONAUTS

ALEKSEI ARCHIPOVICH LEONOV, a lieutenant colonel in the Soviet air force, left Voskhod 2 and "walked" in space on March 18, 1965. Leonov was born in Listvyanka, Siberia, on May 30, 1934. After ten years of school, he went to aviation school for four years and graduated in 1957. He was a fighter pilot and an expert parachutist before being selected for training as an astronaut in 1959. Leonov and his wife, Svetlana, have a daughter, Viktoria.

Observations from Space. Throughout the flight, Cooper and Conrad were kept busy with tasks involving observations and measurements. Considerable attention was given to an attempt to evaluate the visual ability of the human eye in space. Human vision in space has been of interest since the first Mercury was in orbit. Astronauts have reported observing objects on the surface of the earth that were believed to be too small to be seen. For the Gemini 5 flight, an effort was made to resolve the problem. Patterns of 400- by 100-foot rectangles were laid out on the plains of Texas for identification. Although Cooper spotted the patterns, questions about man's visual acuity in space are still being investigated.

Photographs taken from Gemini spacecraft have provided wide-area coverage, good definition, good perspective, and repeated observations of the same area during successive orbits. Photographs taken from Gemini already have been of unexpected value in geology. For example, a hitherto unrecognized field of volcanoes was found in northern Mexico. In meteorology, cloud photographs obtained from Gemini spacecraft have revealed details not visible in pictures from Tiros satellites.

Gemini 6 and Gemini 7. The United States established new records and achieved important steps in preparing for a flight to the moon when the Gemini 6 and 7 spacecraft accomplished rendezvous and endurance missions in December 1965. Gemini 6, launched into a nearly perfect orbit on December 15, rendezvoused with Gemini 7 and then returned to earth after a flight of 25 hours, 51 minutes. Earlier, Gemini 6 had remained grounded during two unsuccessful mission starts. Gemini 7, launched on December 4, established a record for manned space flight. The 206-orbit flight lasted 330 hours 35 minutes and covered a distance of 5,903,000 statute miles (5,129,400 nautical miles).

On December 15, Walter M. Schirra, Jr., and Thomas P. Stafford flew Gemini 6 through a series of orbital changes that increased its altitude, decreased its speed, and closed the gap between Gemini 6 and Gemini 7. At the time, Gemini 7, with astronauts Frank Borman and James A. Lovell, Jr., was maintaining a circular orbit at an altitude of 184 miles. Gemini 6, after a brief series of maneuvers begun in its fourth orbit, flew in the same orbit as Gemini 7. The two spacecraft flew nose to nose at a distance of 10 feet or less—perhaps as little as 1

* Not available. ** Surveyor Dynamic Model.

foot—and they could have made contact. A fly-around maneuver was performed almost immediately after the close nose-to-nose position was established. In this maneuver, Gemini 6 circled Gemini 7 at distances of from 40 to 60 feet. The two spacecraft then flew in formation for nearly four hours at distances varying from 20 to 100 feet. Gemini 6 finally broke away from rendezvous, and on December 16 splashed down in the Atlantic Ocean 700 miles from Bermuda and within 15 miles of the carrier *Wasp*.

Borman and Lovell continued their long endurance flight in Gemini 7. They alleviated minor body discomforts by taking off their space suits and wearing only underwear part of the time. The men and equipment held up well during the 14-day flight, and most of the planned experiments were conducted successfully. On December 18, Gemini 7 splashed down within 15 miles of the *Wasp*, once again showing improved landing accuracy. The two-week flight of Gemini 7 proved that man can endure travel in space without injury.

Soviet Manned Spacecraft. The only manned space flight made by the USSR in 1965 was a spectacular flight by Voskhod 2. (Voskhod 1, launched on Oct. 12, 1964, carried three men into orbit.) Voskhod 2, launched on March 18, 1965, carried Col. Pavel I. Belyayev and Lt. Col. Aleksei A. Leonov on a 17-orbit journey that lasted 26 hours. The crew reportedly rode in orbit in a pressurized cabin and did not wear pressurized suits.

At the beginning of the second orbit, Leonov emerged from the spaceship and became the first man to move about in space outside of a spacecraft. He wore a pressurized space suit with an autonomous life-support system that included a power supply, an oxygen supply, and an air-conditioning unit. A cord between Leonov and the spaceship permitted him to move about freely to a distance of 16.4 feet from Voskhod 2. His excursion into space lasted for 20 minutes, but for only 10 minutes was he completely outside Voskhod 2 and moving freely. The

other 10 minutes were used to make his departure.

Voskhod 2, unlike Gemini 5, was not depressurized for the walk in space. An air lock was built into the craft, and Leonov made his exit through it and its two hatches. Belyayev, who remained inside, was not exposed to the vacuum of space.

In space, Leonov carried no propulsion devices to aid his movements. He relied on his reaction to his own movement when he tugged on the lifeline or touched the spacecraft. His experiments with motion in gravity-free space—tumbling, somersaulting, and drifting—were photographed by a camera and transmitted to the ground. These pictures were shown on Soviet television during the flight.

EARTH SATELLITES AND SPACE PROBES

In 1965, unmanned space vehicles of the United States achieved spectacular successes, including the detailed photographing of the planet Mars and the moon. The world's first commercial communications satellite was placed in orbit, and advanced scientific satellites provided a variety of data on conditions near the earth and in interplanetary space. The Department of Defense launched about 50 satellites, including Sentry and Snapshot vehicles.

During the year the Soviet Union successfully launched 52 Cosmos satellites, as well as lunar probes, deep-space probes, communications satellites, and a new type of heavy spacecraft.

Mariner 4. The most spectacular space exploration by an unmanned spacecraft in 1965 was achieved by the U.S. vehicle Mariner 4, which flew past Mars, took 21 pictures of its surface, and successfully transmitted them to the earth.

Mariner 4, launched on Nov. 28, 1964, was guided by means of sightings on the stars, with its sights fixed on the sun and the bright star Canopus. For 228 days before taking its historic photographs of Mars, the craft traversed space, overcame hazards, and maintained contact with the earth. Mariner 4 set new records for a useful spacecraft trajectory

PEGASUS 1 SATELLITE (left) extended 48-foot wings when it was placed in orbit by Saturn 1 launch vehicle (right) on February 16. Pegasus recorded hits by micrometeorites against aluminum sheets on its wing panels, thus furnishing data on hazards to spacecraft from cosmic debris.

away from the earth and for distance of human communication—134 million miles from earth when it passed Mars and about 191 million miles when communications ended by command on Oct. 1, 1965.

Mariner 4 performed two missions. First, it secured better information about the planet Mars, and second, it investigated interplanetary space. For space investigations, it carried six experiment packages to detect and measure solar wind, cosmic rays, radiation trapped in the earth's magnetosphere, dust particles and micrometeorites, and magnetic fields. The cosmic-ray detector was the only one that failed during the journey. Two additional experiments were designed only for study of Mars. One used a single television camera that was limited to taking pictures of only 200 lines to the frame. The other used the spacecraft transmitter to obtain information on Mars' atmosphere.

When Mariner 4 neared Mars on July 14, the camera began taking pictures from a distance of 10,500 miles; the closest approach was 6,118 miles. During the 25-minute encounter, the camera took 21 pictures. The path of photography began at the limb (edge) of the planet, crossed the equator, and ended at the terminator line (the dividing line between the day side and the night side). The 4,000-mile track curved slightly but did not enter a polar region. Each frame covered an area of the Martian surface that was about 150 miles square. The pictures, which showed objects three miles across, had a resolution that was about 30 times better than that obtained with the best ground-based telescope.

The results of the photography were stored until the spacecraft had passed beyond the planet, and then were transmitted to earth. Travel time of a signal to earth was 12 minutes, and the time needed to transmit a single photographic frame was about eight hours. The complete photographic data were transmitted between July 15 and July 24.

The results of the Mariner 4 flight provided important information about Mars and space beyond the orbit of the earth. The strip of Mars that was photographed—about 1% of the planet's surface—is covered with craters similar to those on the moon. No clearly defined canals were observed. The transmission experiment showed that the Martian atmosphere is very thin and has a pressure of 10 to 20 millibars or less, about equal to that in the earth's atmosphere at an altitude of 20 miles. An ionosphere exists on the sunward side of Mars at an altitude of 100 miles. Other measurements showed that the equatorial radius is 10 to 20 miles greater than the value determined from the earth, and the mass of the planet is somewhat less than the expected value. No Van Allen radiation belt was observed, and no concentration of micrometeorites in the space about Mars was found. The magnetic field of the planet, if any, was too small to be measured by Mariner 4. The data provided by Mariner 4 indicate that Mars is not similar to the earth, but is very much like the moon. (See also ASTRONOMY.)

Mariner 4's successor, Voyager, will be able to place instruments on the surface of Mars.

Ranger Moon Probes. Ranger 8 and Ranger 9 crashed on the moon in 1965 and completed the successful lunar photography program begun with Ranger 7 in 1964. All three spacecraft had the identical mission of photographing limited areas of the lunar surface while in flight close to the moon. Each Ranger carried six cameras to photograph the surface and a telemetry system to transmit the pictures while they were being taken.

Ranger 7 landed in the Sea of Clouds on July 31, 1964, after transmitting 4,308 pictures. Ranger 8, launched on Feb. 17, 1965, landed in the Sea of Tranquility on February 20 after taking 7,137 pictures in 23 minutes. The impact trajectory of Ranger 8 was less steep than the trajectory of Ranger 7, and allowed Ranger 8 more time to take a greater number of pictures. The target area for Ranger 8 was closer to the terminator line, and the Ranger 8 pictures therefore showed longer shadows cast by the lunar terrain. (Shadow length indicates elevation.) Ranger 8 pictures were taken from altitudes of 1,553 miles to 1,700 feet.

Ranger 9, launched on March 21, 1965, landed in the crater of Alphonsus on March 24. The trajectory of Ranger 9 was so accurate that the spacecraft was only a few miles off its target point. A sequence of 5,814 pictures was taken in 18 minutes 47 seconds, at altitudes from 1,300 miles to about 4,000 feet, before Ranger 9 landed 180 miles from the terminator line in a region selected for roughness of terrain. (See also ASTRONOMY.)

A total of 17,259 pictures of a very small part of the lunar surface was obtained from the three Ranger flights. The best resolution was 2,000 times better than the best resolution obtained by telescopes on earth. The pictures show that craters are the dominant feature of the lunar surface. The surface shows a surprising smoothness, and most structures have an unexpected roundness of detail.

Collectively, the pictures have not given conclusive evidence that it is safe for a manned spacecraft to land on the moon. Consequently, the Surveyor and Lunar Orbiter series of spacecraft will follow the Ranger program. Surveyor missions will place instruments on the lunar surface for investigations. Lunar Orbiter will make extensive observations of the lunar surface while orbiting the moon.

Orbiting Solar Observatory. The second Orbiting Solar Observatory, OSO 2, was launched on Feb. 3, 1965. (OSO 1 had been put into orbit on March 7, 1962.) OSO 2 consists of two parts: a nine-sided box, 9 inches high and 44 inches across, that rotates at 30 rpm, to stabilize the orientation of the satellite; and a rough semicircle, called the sail, with a diameter of 44 inches that could be oriented toward the sun with an accuracy of one minute of arc. The sail carried solar cells to provide power.

OSO 2 carried eight experiment packages to study solar phenomena and their influence on the interplanetary and terrestrial environment. Three packages on the sail pointed steadily at the sun. They included an ultraviolet spectrometer and spectroheliograph, a monitor for bursts of solar X-rays, and a coronagraph. The five packages on the spinning box functioned well. They included equipment to study polarized zodiacal light, gamma rays, and cosmic rays; two ultraviolet spectrophotometers; and specimens to determine the radiative stability of surface coatings. Communications with OSO 2 were terminated on Nov. 29, 1965.

Orbiting Geophysical Observatory. OGO 2 was successfully orbited on Oct. 14, 1965, but excessive amounts of jet gas were required to maintain stability while in orbit. The power supply was practically depleted, and by October 27 the satellite was tumbling. OGO 1, which was launched on Sept. 4, 1964, had failed to stabilize as planned, but it maintained sufficient stability so that most of its experiments worked successfully.

OGO 2, like OGO 1, is basically a box 3 feet square by 6 feet long that houses most of the ex-

periment packages and equipment. OGO 2 deploys booms to hold antennas and magnetometers away from disturbances in the spacecraft body. Side panels carry the solar cells that generate the power. A short boom carries experiment packages that face the direction of motion. The stabilization system is designed to rotate the body and the solar cell panels so that the solar cells view the sun steadily.

The power available for the 20 experiment packages on OGO 2 varies because OGO 2 tumbles. When sufficient power is available, equipment is turned on to make measurements of the geomagnetic field and the earth's upper atmosphere.

Explorer. Six Explorer satellites were launched in 1965. Explorer 27 was put into orbit on April 29 to acquire information on irregularities in the earth's gravitational field and to investigate the electron count below the altitude of the satellite. Explorer 28 was launched on May 29 to investigate the environment of space beyond the earth's magnetosphere and the Van Allen radiation belts. Its orbit reaches to a distance of 164,000 miles from earth. Explorer 29, launched on Nov. 6, 1965, carries five systems of instrumentation to obtain improved reference data for geodetic surveying. Foreign countries are cooperating in making the needed observations of Explorer 29. Explorer 30 was launched on Nov. 19, 1965, to advance the solar studies of scientists at the Naval Research Laboratory. Explorer 31 and Alouette 2, launched by a single rocket on November 27, are making studies of the ionosphere of the earth, particularly in the polar regions. Alouette 2 is the second Canadian-built satellite.

Pioneer. Pioneer 6, launched into a heliocentric orbit on Dec. 16, 1965, marks a return to the use of small spacecraft to make measurements in interplanetary space. Pioneer 5 was launched on March 11, 1960.

Tiros. The National Aeronautics and Space Administration (NASA) launched the Tiros 9 satellite on January 22 to obtain more photographs of the cloud cover of the earth. In shape, the Tiros satellites resemble a hat box. Tiros 9 rolls like a wheel in its orbit and uses two cameras to photograph the earth through the sides of the box. Tiros 9 was placed in a near-polar orbit that was selected to bring the satellite to the daylight side of the earth in each revolution. This was the first time that NASA had put a satellite into a polar orbit from the launch site at Cape Kennedy, Fla.

Tiros 10 was launched by NASA on July 1. Like the earlier members of the Tiros group, it photographs the clouds through the bottom of the box. A magnetic attitude control is used to change the spin-axis direction so that the earth is retained in the field of view of the cameras throughout the orbit.

Tiros 10, the last of the experimental weather satellites, will be followed by six similar Tiros operational satellites that will be used by the U.S. Weather Bureau for worldwide weather forecasting services. (See also WEATHER.)

Early Bird. Early Bird, launched by NASA on April 6, is the world's first commercial satellite. It is used for transatlantic communications. Early Bird provides 240 two-way channels for telephone, telegraph, or television service. It has redundant equipment to ensure reliability. The satellite, which is similar to Syncom 3 in shape and function, was placed in a synchronous orbit at an altitude of 22,300 miles in a position over the equator at longitude 27.5° W.

For about six weeks Early Bird was subjected to

a series of tests of various modes of transmission between Europe and America. One important objective of the tests was to determine the human reaction to the 0.6-second delay observed by a speaker before receiving an answer—a delay caused by the long route of transmission. Early Bird, owned by the Communications Satellite Corporation, was formally placed in commercial service on June 28. The service was inaugurated by a 25-minute call by President Johnson, who talked with Prime Minister Harold Wilson of Great Britain, West German Chancellor Ludwig Erhard, and other European leaders.

Pegasus. Three Pegasus satellites were put into orbit in 1965 by the Saturn 1 launch vehicle. Pegasus 1 was launched on February 16, Pegasus 2 on May 25, and Pegasus 3 on July 30. Their mission is to evaluate the danger of a puncture of a spacecraft by micrometeorites and dust in the vicinity of the earth. The Pegasus satellites extended two huge "wings," each 48 feet long by 14 feet wide, when orbit was achieved. The wings are covered on both sides with 208 panels that are protected by aluminum sheet. A micrometeorite is counted when it penetrates a sheet. Pegasus found that the danger of penetration of a spacecraft by particles in the vicinity of the earth is less than had first been estimated.

Oscar. The Oscar 3 satellite went into orbit on March 9, 1965. It was one of eight satellites put into orbit by a single Thor-Agena rocket. This is a record number of satellites simultaneously placed in orbit. Oscar 3 was designed by radio amateurs for their use as a communications satellite. Oscar 4 was placed in orbit on Dec. 21, 1965.

Snapshot. The 970-pound Snapshot, roughly conical in shape, was 12 feet long and 5 feet in diameter. It was put into orbit on April 3, 1965, to test the performance of the SNAP 10-A (systems nuclear auxiliary power) system under space conditions. This was the first known launch of a nuclear-fission

FRENCH SATELLITE A-1 (inset) was placed in orbit by Diamant rocket from test site in Algeria on November 26. France became the third nation to launch its own satellite.

reactor into earth orbit. The fuel was uranium-235. Nuclear energy was converted into heat, which was converted into electrical energy by means of thermoelectric elements. The unit developed about 565 watts of electrical power within four hours after the nuclear reactor was activated by command. The unit ceased to function after 48 days in orbit.

Snapshot carried a number of experiments to make use of the electrical energy. One was a 2.2-pound ion engine that used vaporized cesium ions. The ions were accelerated to high speeds by an electrical field to generate a small thrust of 0.002 pound. In this case, operation of the ion engine was suspended because it interfered with other equipment. The ion engine is a possible source of thrust for extremely long-range spacecraft. (See also *ATOMIC ENERGY*.)

Sentry. Two 524-pound Sentry satellites, launched on July 20, 1965, were maneuvered into a circular orbit at an altitude of about 65,000 miles. The satellites, which were positioned diametrically opposite each other in the circular orbit, will make a limited survey of nuclear explosions in space. The great separation of the pair is used to protect the system from false alarms, such as might arise from solar flares or cosmic-ray showers. The satellites carry detectors for X-rays, gamma rays, neutrons, and nuclear-fission particles.

Soviet Cosmos Satellites. The Soviet Union launched 52 Cosmos satellites into orbit in 1965. They were always reported to be scientific satellites. On several occasions as many as five Cosmos satellites were put into orbit by a single launch vehicle. It was announced that nuclear-fission power sources were tested in satellites that were launched in clusters on September 3 and 18.

Molniya. Molniya 1, the first satellite identified as a communications satellite by the Soviet Union, was launched on April 23. It is in a highly elliptical orbit with an apogee of 24,828 miles and a perigee of 340 miles. It was moved to place the apogee over Siberia so that the satellite spends most of its time over the USSR. Molniya 2 was placed in a similar orbit on October 14. A press announcement stated that a communications system of satellites was being developed.

Luna. Four lunar probes—Luna 5, 6, 7, and 8—were launched by the Russians in 1965, but all failed to achieve their apparent mission of a soft landing to place instruments on the moon's surface. Luna 8, reported to weigh 3,421 pounds, started its

journey from a parking orbit about the earth. The other Lunas were similar. Luna 5, launched on May 9, reportedly made a crash landing on the moon. Luna 6, launched on June 8, was reported to have missed the moon by 100,000 miles. Luna 7, launched on October 4, made an unsuccessful landing on the moon, as did Luna 8, launched on December 3.

Zond. The Soviet space probe Zond 2, launched on Nov. 30, 1964, on a course to Mars, was reported on May 5 to have ceased transmission. Zond 3, launched from a parking orbit on July 18, passed the far side of the moon on July 20 and photographed the surface at distances of 6,500 to 7,200 miles. The eight pictures that were published were greatly superior to those taken by Luna 3 on Oct. 7, 1959. Objects about six miles across can be resolved. It has been claimed that the photographs of Luna 3 and Zond 3 cover most of the lunar surface not visible from the earth.

Venus Probes. The Russians sent two spacecraft on a 3½-month journey toward the planet Venus. The 2,123-pound Venus 2 was launched from a parking orbit on Nov. 12, 1965. The 2,123-pound Venus 3 was launched on Nov. 16, 1965. The 1,418-pound Venus 1 had failed in flight in 1961.

Proton. The Russians launched Proton 1, the heaviest satellite ever to be put into orbit, on July 16, 1965. This new type of spacecraft weighs about 26,000 pounds. It carries a spectrometer for cosmic rays, a telescope for gamma rays, equipment for measuring the energy of cosmic particles, and instrumentation for high-energy electrons. Proton 2 was launched on Nov. 3, 1965.

French Satellites. France became the third nation to launch a satellite by its own means when it placed an 88-pound satellite in orbit with the French Diamant rocket and French launch facilities in Hamaguir, Algeria. The satellite, called A-1, was launched on Nov. 26, 1965. Britain, Canada, and Italy have had national satellites in orbit, but they were launched with American rockets.

The first French satellite to be launched jointly by France and the United States was placed in orbit from Vandenberg Air Force Base, Calif., on Dec. 6, 1965. The 135-pound scientific satellite, called FR-1, went into a nearly polar orbit.

National Aeronautics and Space Administration

MONSTER ROCKET, the world's largest solid-propellant type, was fired successfully Sept. 25 at Homestead, Fla., in a static (tie-down) test. Rocket attained a thrust of 3.5 million pounds.

ASTRONAUTICS: SPACE SCIENCE AND TECHNOLOGY

Momentous events in the relatively short history of American space technology occurred in 1965. The United States took some giant steps forward in the development of launch vehicles, rocket propulsion systems, and ancillary spacecraft and hardware.

Monster Rocket. Perhaps the most portentous event related to the future of space operations occurred on September 25 when the Aerojet-General Corporation, in a static (tie-down) test, successfully fired a solid-propellant rocket that has a 260-inch diameter. The monster rocket, the largest unit of its kind in the world, represents a triumph of the U.S. chemical and rocket industry. A special steel case 260 inches in diameter and about 60 feet long (half the design length) had to be fabricated to withstand the pressure of 600 pounds per square inch that builds up during the burning process. New machinery for pouring and casting the propellant in its liquid state had to be devised, and the igniter system had to be designed and modified. A huge \$20 million test facility had to be constructed south of Miami, Fla., in flat, muddy ground away from residential areas. After two years of effort, all of these goals were achieved in 1965.

In January 1965, NASA authorized the money for pouring and casting 1.8 million pounds of propellant. By early August the solid-propellant grain was cast in a cloverleaf form and cured (hardened) in place in the rocket case. The monster test booster rocket was ready for firing. The igniter for this solid-propellant rocket was a smaller rocket that exhausts its flame downward into the nozzle of the 260-inch-diameter rocket to fire the propellant surface. Ignition was achieved successfully, and the rocket attained a maximum thrust of 3.5 million pounds. The total firing time was 2 minutes 4 seconds.

This test was scheduled to be repeated in February 1966, and enough information should be available by mid-1966 to enable engineers to design a flyable booster that will have a much lighter steel case and an improved type of exhaust nozzle. If the technology for a 260-inch-diameter solid-propellant rocket can be improved so that flight hardware can be built, then a booster several times the size of Saturn 5 may become available during the early 1970's. This booster will be capable of launching a payload of 500,000 pounds.

MARTIN-MARIETTA

TITAN 3 BOOSTER ROCKET, launched on June 3, placed a 21,000-lb test load in orbit 100 miles above the earth.

Titan 3. Another major breakthrough was achieved on June 18 when a Titan 3 booster rocket was launched successfully from Cape Kennedy. The Titan 3 rocket has three stages; the first and second stages are a Titan 2 rocket, and the third stage is called a transtage. Each of these stages has liquid-propellant engines. The Titan 3 rocket was boosted by two 92-foot-long, 120-inch-diameter solid-propellant rockets strapped to its sides. This was the first time that large solid-propellant rockets had been used to lift a huge rocket.

The Titan 3 was launched to a high altitude by the strapped-on rockets, and the critical separation of the solid-propellant rockets from Titan 3 was achieved. The three liquid-propellant stages of Titan 3 then fired successfully, and the transtage and a

MARTIN-MARIETTA

TITAN 3 rocket is shown being made ready for launching from Cape Kennedy, Fla. In 1966-67 the Titan 3 will launch experimental spacecraft as part of a program aimed at developing a manned orbiting laboratory.

21,000-pound test load were placed in orbit 100 miles above earth. A second Titan 3 was launched in a similar way on October 15. The solid-propellant rockets and the first and second stages of Titan 3 operated successfully, but the transtage broke apart in orbit, and the payload of two small satellites was lost.

The Titan 3 rocket will be used by the Air Force during 1966 and 1967 for launching experimental spacecraft as part of the development of a manned orbiting laboratory (MOL). The Titan 3 will be able to place a 26,000-pound payload into a 300-mile-high orbit across the equator. Later in this decade a somewhat smaller payload will be launched across the North Pole into a polar orbit. Another version of the Titan 3 to be developed will have longer and stronger fuel tanks than the present Titan 3, and longer strapped-on solid-propellant rockets.

The Titan 3, like the Titan 2 rocket, has an advantage over NASA's Saturn launch vehicles because its propellants can be kept for long periods in the launch vehicle tanks without boiling off or freezing, either of which can occur when liquid oxygen or liquid hydrogen propellants are used.

Saturn 1 Launch Vehicles. NASA continued to develop the Saturn 1 class launch vehicles. The two-stage Saturn 1 has eight engines in the first stage and six engines in the second stage. The first-stage engines provide 1.5 million pounds of thrust, and the second-stage engines, 90,000 pounds. Several Saturn 1 rockets were fired during 1964 and 1965, and the rocket has shown remarkable reliability and versatility. However, its weight-carrying capability is restricted by its relatively small second stage, which uses a cluster of six liquid-propellant RL-10 engines with a thrust of 15,000 pounds each. Consequently, a Saturn 1B rocket is being developed with a new second stage. This second stage has a J-2 liquid-hydrogen, liquid-oxygen engine that provides a thrust of 200,000 pounds. The first flight of the Saturn 1B is scheduled for 1966.

It appears that NASA will phase out the Saturn 1 class vehicles sooner than expected. The Saturn 5 rockets may be used for unmanned space missions, such as the planned flight of Voyager spacecraft toward Mars in 1971, as well as for manned space missions, such as the Apollo program. However, some further development of the smaller Saturn 1B will continue, and a number of Apollo test flights in earth orbit will be made by using the Saturn 1B rocket. The Apollo spacecraft, which includes the lunar excursion module, the service module, and the command module, will be launched into earth orbit by the Saturn 5 rocket. The spacecraft will then travel toward the moon.

Saturn 5. Production of the first-stage package of the Saturn 5 rocket began at NASA's Michoud plant near New Orleans, La., in 1965. The associated Mississippi Test Facility buildup also continued, and this facility will be ready to begin static tests of Saturn 5 engines in 1966. A five-engine complex of the first stage of this huge rocket underwent static tests at the Marshall Space Flight Center (MSFC) in Huntsville, Ala., at least seven times in 1965. The five F-1 engines, which provide a thrust of 7.5 million pounds, passed their tests successfully. The firing lasted for times that ranged from 6.5 seconds to a full-duration firing of 2½ minutes on August 5. The noise level of this firing is so high that MSFC has to take account of wind direction and velocity before a test firing is made so that the sound will not disturb nearby residents.

Successful tests were made of the J-2 liquid-propellant engine produced by the Rocketdyne Corporation. These tests led to qualification and flight readiness. The package for the second stage of the Saturn 5 rocket also was completed and satisfactorily checked; it will use five J-2 engines for propulsion. The third stage of Saturn 5, which has a single J-2 engine, also passed many of its early engineering tests.

The Saturn 5 rocket has passed its thorniest development phase; the first stage F-1 engines have fired successfully enough times to demonstrate flight capability, and initial problems of combustion and stability have been overcome. A test model of the Saturn 5 will be transported to Cape Kennedy in 1966. At Cape Kennedy the vertical assembly building, which will house the Saturn 5 during preliminary checkout and attachment of hardware, was completed. This building, one of the tallest and biggest structures in the world, is 716 feet long, 518 feet wide, and 526 feet high (52 stories). It can house four Saturn 5 rockets.

Considerable difficulties were encountered with the transportation vehicles that are to move the assembly tower and the Saturn-Apollo space vehicle from the building to the launch site. The tower is used during assembly, transport, and launch. Difficulties with the wheels and bearings of the transportation vehicles were cleared up, and the launch complex was almost ready in late 1965 to receive the first giant Saturn 5 rocket. A test flight of the Saturn 5 may be made late in 1966.

A launching of a test-model Apollo spacecraft was attempted from the White Sands Missile Range in New Mexico on May 19. The Apollo spacecraft model was launched by a Little Joe 2 solid-propellant rocket. However, the rocket malfunctioned, and the test was not successful. The purpose of the test was to evaluate the launch escape system of the Apollo spacecraft, which will be launched by the Saturn 5 rocket.

Centaur. NASA attempted to launch a Centaur vehicle on March 2 as part of a continuing series to develop this important Atlas-based launch vehicle. The launching was a failure, and it caused a critical re-examination of the entire Centaur program. The Congressional Science and Astronautics Committee, however, recommended continuation of the Centaur program, and another launching occurred on August 11. This firing, which was the first major success for the Centaur vehicle, gave the entire program a considerable boost. If later tests indicate that the Centaur, an upper-stage vehicle, is ready for operational tasks, then it will be used for some deep-space missions, including lunar Surveyor missions and possibly another Mariner launching to Venus. The Surveyor spacecraft, which will weigh 2,500 pounds, will make important preliminary unmanned explorations of the lunar surface before a manned landing is attempted.

Fluorine-Hydrogen Engine. The Pratt & Whitney Aviation Division of United Aircraft Corp. was given a contract to develop prototype fluorine-hydrogen rocket engines. The corporation previously had demonstrated the practicality of combining fluorine, a reactive gas, with hydrogen in a rocket propulsion chamber. One problem is to find a suitable application for such a high-energy rocket engine, which is at least 20% more efficient than an equivalent oxygen-hydrogen engine. Some thought has been given to using a fluorine-hydrogen engine for the lunar Surveyor program.

Nuclear-Electric Propulsion. On April 3, 1965, the Air Force launched and orbited a Snapshot spacecraft that carried a SNAP 10-A nuclear reactor to produce power for electrical circuits within the spacecraft. (SNAP stands for "systems nuclear auxiliary power.") The Snapshot spacecraft also had an ion electric engine to produce small amounts of thrust. When the spacecraft was in orbit, the nuclear reactor was started, and it successfully produced electric power. The ion engine also was started successfully, and it produced a 0.002-pound thrust. However, the ion engine was shut down by command after garbled telemetry data were received.

Further tests with ion engines are continuing at various U.S. facilities, including NASA's Lewis Research Center in Cleveland, Ohio. There are still two prime contenders for a practical ion propulsion system: the bombardment ion engine developed at the Lewis Research Center, and the contact ion engine developed by Electro-Optical Systems, Inc. The latter ion engine was used in connection with the Snapshot project.

Applications for ion engine systems will have to await the successful development of a SNAP system that will generate hundreds of thousands of kilowatts of electric power and will have a very low weight-to-power ratio. In 1965, NASA began a number of studies to evaluate nuclear-electric power requirements for future deep-space missions, including trips to the five planets beyond Mars.

Nuclear-Thermal Propulsion. The tempo of work to develop nuclear-thermal propulsion for space vehicles increased during 1965. Several successful full-duration firings were completed at the Atomic Energy Commission-NASA nuclear propulsion test facility at Jackass Flats, Nev. Severe materials and radiation difficulties had slowed down the project in 1964, but many of these difficulties were overcome during 1965. NASA hopes to produce more than one billion watts of thermal power in the NERVA (nuclear engines for rocket vehicle applications) reactor before the end of 1965. A firing time of several minutes has been achieved at a thrust level exceeding 100,000 pounds. Three more firings were made at thrust levels of 120,000 to 150,000 pounds, and a static firing in November was successful. However, the NERVA project faces at least three years of determined development effort to achieve the low weight (the shielding alone may require several tons of material) and reliability necessary for a flight-ready upper-stage rocket engine.

Improved Materials. The constant trend toward higher heat fluxes and temperatures in nuclear-propulsion reactors and the advent of high-energy chemical engines, including fluorine-hydrogen engines, indicate the need for improved materials. A steady research and development program is being conducted under the auspices of the Department of Defense and NASA to improve materials for new applications. Sizable strides have been made in developing boron fibers. These fibers are pressed or glued together with certain ceramics to provide a material that is lightweight, very strong, and capable of withstanding temperatures up to 5,000°F for extended periods without provisions for cooling the material. A considerable advance was made in 1965 in developing new rocket-engine liners and sheathing materials for high-temperature nuclear reactors.

and Consultant to NASA*

SPAIN

On several occasions in 1965 the Spanish government reiterated its policy of liberalizing political controls. The cabinet underwent its first major reorganization since February 1957, and although the purpose was to solve economic problems, the new cabinet did promise political reforms. However, the long-awaited press censorship bill fell short of eliminating government control, and the government discouraged efforts by university students to gain control of state-directed student unions.

Spain expanded its trade with Communist nations while maintaining a staunchly anti-Communist position. Trade with Britain, Spain's most important market, apparently was unaffected by the Spanish-British conflict over sovereignty of Gibraltar.

Government Reorganization. In the face of rising food prices and general inflation, Generalissimo Francisco Franco reshuffled his cabinet on July 7, 1965. Five ministers were shifted in the areas of economic policy, but the total number of ministers remained at 19, and the balance between political and economic factions was retained. New ministers were appointed to the departments of commerce, agriculture, finance, and public works. Laureano López Rodo, the former planning commissioner, replaced Pedro Gual Villalbi as minister without portfolio to coordinate government economic policies. In addition, a new minister of justice was named. The principal person dropped from the cabinet was Alberto Ullastres Calvo, the minister of commerce, who had played an important role in stabilizing the currency and liberalizing the economy.

A statement of government aims, released on July 9 after the first meeting of the new cabinet, promised Spaniards a more representative political system. It indicated that the government would "emphasize the representative character of the political order, to assure continuity in the future, completing and perfecting our fundamental laws cemented in the principles of the national movement." The statement also declared that public opinion would be considered in the framing of a new press law, and that agricultural marketing would be improved for the benefit of both the farmer and the consumer. Late in the year the government drafted a bill that eliminated direct censorship of the press, but left room for government control.

Student Protest. Students at the large Spanish universities achieved some success in their efforts to organize democratically elected student unions in opposition to the government-controlled student syndicate. On February 24, 4,000 students clashed with policemen at the University City campus of the University of Madrid. The students, led by four professors, had begun a protest march to present their demands to the university rector, but were intercepted by policemen using hoses and rubber truncheons. They retaliated by hurling stones at the policemen. Many students were arrested, and the professors were detained and suspended.

On the following day, some 2,000 students voted to stage a classroom sit-in strike until three of the four professors were reinstated and the charges against the student demonstrators were dropped. The Madrid students continued their protest in March, and sympathy movements were reported at universities in Barcelona, Granada, and other cities.

Finally, on April 7, after six weeks of agitation in all 13 university centers, the official student syndicate was reorganized by government decree. Stu-

dents were permitted to elect all representatives to the governing councils of the student union. However, political activity outside the student organization was prohibited.

Prior to the start of the fall term, the government, in an effort to prevent disturbances, ordered new restrictive measures on students. Those with questionable political records were declared ineligible as delegates to the student union. Furthermore, university chancellors were empowered to dismiss students suspected of agitation without the customary trial by a faculty board. Late in November, students at the large universities boycotted the elections for the government-controlled unions and set up their own clandestine organizations.

Labor Protest. On March 12, some 1,000 coal miners launched an attack on police headquarters in the Asturian mining center of Mieres. Authorities claimed that the violence had been instigated by Communists, and one alleged Communist was arrested. The miners had assembled from various points in the province to discuss union problems. Their violent action was precipitated by reports that some of their representatives had been detained by police. Another demonstration of 2,000 workers was dispersed by police armed with clubs on April 7.

Religious Freedom. Late in January, Generalissimo Franco conferred with leaders of the Jewish communities of Madrid and Barcelona concerning the status of the 5,000 Jews in Spain. It was the first time the head of the Spanish state had admitted Jews to an audience since their expulsion from Spain in 1492. The Jewish representatives asked that the Spanish Jewish communities be listed in the official Register of Associations so that they would have corporate identity and thus would be able to hold property and participate in legal proceedings. Franco promised to examine the request. The government was also preparing a bill to extend legal recognition to Spanish Protestants.

Communist Trade. Despite the strong anti-Communist tradition of the Spanish regime, the govern-

ment decided in January that it would expand cultural and economic exchanges with the Soviet bloc. While it had no intention of reestablishing formal diplomatic relations with the Soviet Union or the other Communist nations of eastern Europe, the government did indicate its sympathy toward the policy of peaceful coexistence. The cabinet decided to permit the Bolshoi Ballet or another prominent Soviet dance group to perform in Spain. In return, Spanish dancers would visit the Soviet Union. Trade between the countries also was expanded.

Trade with Communist Cuba increased five times in 1964, and a new accord signed on Feb. 9, 1965, was expected to accelerate it. During the 1965 negotiations, Spain demanded—and may have been granted—the release of Spanish nationals detained in Cuban prisons for acts against the Castro regime, compensation for the Cuban seizure of Spanish property, and guarantees against further seizures. Cuba is the only Communist country with which Spain maintains diplomatic relations. Spain has historic and cultural ties with her former colony, and there are 40,000 Spanish nationals residing in Cuba.

Gibraltar Issue. A long-term dispute between Spain and Britain over Gibraltar was intensified in 1964 and 1965. In August 1964, Britain granted Gibraltar a new constitution providing for internal self-government. Thereupon Spain imposed severe restrictions on the Spanish-Gibraltar trade on the ground that the sovereignty that was surrendered to Gibraltar should have been ceded to Spain. On March 7, 1965, border passes for all foreigners living in Spain and working in Gibraltar were revoked. The trade restrictions assumed the proportions of a small-scale blockade later in the year, and in December, Spain threatened to close all communications with Gibraltar unless Britain agreed to negotiate the status of the colony.

Economy. Spain's progress toward industrialization was evident in the January announcement that Chrysler International and the Barreiros Diesel company of Spain would begin production of the Dodge

SPAIN · Information Highlights

Gross National Product (1964): \$17,717,000,000.

National Income (1964): \$15,417,000,000; average annual income per person, \$492.

Economic Indexes (1964): Industrial production, 171 (1958=100); agricultural production, 134 (1956-57=100); cost of living, 137 (1958=100).

Manufacturing (metric tons, 1964): Cement, 8,220,000; wheat flour, 3,096,000; wine, 2,780,000; crude steel, 2,737,000; meat, 672,000; sugar, 468,000; gasoline (1963), 457,000; olive oil, 150,000.

Crops (metric tons, 1964): Grapes, 4,600,000 (ranks 3rd among world producers); wheat, 3,958,000 (rank, 12th); potatoes, 3,945,000 (rank, 10th); sugar beets, 3,397,000 (rank, 13th); barley, 1,610,000 (rank, 11th); citrus fruits, 1,411,000 (rank, 3rd); maize, 1,130,000 (rank, 18th); oats, 381,000 (rank, 19th).

Minerals (metric tons, 1964): Iron ore, 5,231,000 (ranks 18th among world producers); gypsum, 3,863,000 (rank, 6th); anthracite coal, 2,647,000 (rank, 12th); salt, 1,696,000 (rank, 14th); zinc, 89,356 (rank, 13th); lead, 57,362 (rank, 12th); copper, 26,034 (rank, 19th); uranium, 45 (rank, 6th); silver (1963), 4,955,201 troy ounces (rank, 8th).

Foreign Trade (1964): Exports, \$954,000,000 (chief exports: citrus fruits, \$142,000,000; olive oil, \$56,000,000); imports, \$2,259,000,000 (chief imports, 1963: nonelectrical machinery, \$363,000,000; crude petroleum, \$193,000,000; iron and steel, \$110,000,000). **Chief trading partners (1963):** U.S. (took 11% of exports, supplied 16% of imports); Britain (took 16% of exports, supplied 10% of imports); West Germany (took 12% of exports, supplied 13% of imports).

Transportation: Roads (1964), 49,121 miles (25,841 paved); motor vehicles (1964), 946,136 (automobiles, 635,640); railways (1963), 8,400 miles; merchant vessels (1964), 330 (1,603,000 gross registered tons); national airline, Iberia; principal airports, Barcelona, Madrid, Seville, Valencia.

Communications: Telephones (1964), 2,283,465; television stations (1964), 12; television sets (1964), 1,200,000; radios (1963), 4,000,000; newspapers (1963), 105 (daily circulation, 4,740,000).

EUROPE

ASIA

AFRICA

Area: 194,883 square miles.

Population: Spain (July 1, 1965 est.) 31,604,000; African provinces (1964 est.) 511,000 (Spanish North Africa, 155,000; Ifni, 51,000); Spanish Sahara, 42,000; Equatorial Region, 263,000.

Chief Cities (1963 est.): Madrid, the capital, 2,443,152; Barcelona, 1,633,921; Valencia, 503,358; Seville, 459,786; Zaragoza, 343,468; Bilbao, 317,639; Málaga, 307,162.

Government: Chief of State and Premier—Gen. Francisco Franco (officially assumed power Aug. 4, 1939; life tenure granted July 6, 1947); Parliament—Cortes, 595 members. **Religious Faiths:** Roman Catholics, 99% of population; others, 1%.

Education: Literacy rate (1960)—87% of population aged 15 and over. Total school enrollment (1961)—4,625,589 (pre-school and primary, 3,706,739; secondary, 564,111; teacher-training, 43,103; technical, 220,486; higher, 91,150).

Finance (1964 est.): Revenues, \$2,014,000,000; expenditures, \$2,016,000,000; public debt, \$2,336,000,000; monetary unit, peseta (60 pesetas equal U.S.\$1).

Dart compact car at the Barreiros plant near Madrid. It was also announced that a second Spanish nuclear power plant would be established near Burgos. The first was under construction near Madrid by the Westinghouse Electric Corporation.

Under Spain's first economic development plan (1964-67) the cities were becoming more prosperous, but the rural areas were becoming poorer and more stagnant. As the result of unfavorable weather, poor soil, archaic farming methods, and inadequate marketing systems, many farmers fled to the cities or across the Pyrenees in search of employment in other nations of western Europe.

An indictment of the rural situation in Spain was contained in a pastoral letter by Bishop Añoveros of Cádiz and Ceuta published in the Catholic periodical *Ecclesia* in September. He charged that land holdings were either too small for economic cultivation or too large for just exploitation, and that living conditions on the farms were neither "Christian" nor "human."

Professor of History, Rollins College

SPANISH LITERATURE

Spanish literature appears to be in a period of reassessment. The continued dominance of established writers is of real concern to critics. Although the abundance of literary prizes has stimulated young writers, no new movement has been defined. The overwhelming number of awards and charges of favoritism have led to demands for reforms.

Fiction. The National Novel Prize for 1964 was declared vacant. The most important novelists continue to be such prolific and talented veterans as Camilo José Cela and Juan Antonio de Zunzunegui. Cela has no serious rivals as Spain's leading novelist. His collected short stories and novelettes appeared in 1965 as volumes 3 and 4 of his completed works, and in recent years he has published a series of gifted satires on social ills.

Ana María Matute, one of the best of the younger writers, was highly praised for a children's book, *El polizón de Ulises*. Alejandro Núñez Alonso received the Critics' Prize for his *Gloria en subasta*. The Gabriel Miró Prize, one of the newest and most important, went to the youthful Gregorio Javier for *Siglo XX*, a novel portraying youth of different nationalities who are obsessed by the same contemporary problems. José Antonio Mases produced *La invasión*, a realistic fictional narrative of Fidel Castro's rise to power.

Two important collections of short novels appeared in 1965. Ignacio Aldecoa's *Los pájaros de Baden Baden* gives four vivid portrayals of modern society, and Arturo del Hoyo's *Primera caza* consists of eight works reflecting the human response to the impact of external events. Carlos Murciano's short story *El viejo*, was widely praised. Its author is one of the best of the younger generation.

Poetry. The veteran Vicente Aleixandre published *Presencias*, an anthology of his objective, less personal poems, which shed new light on a figure widely regarded as a leader of the hermetic school. Blas de Otero, one of the leading younger figures, was represented by *Que trata de España*. José Luis Cano's *Poesía 1942 1962* (1964) demonstrates the author's technical versatility and skill in creating mood. Ramón de Garciasol's *Fuente serena* is a traditional combination of Franciscan contemplation and ethical commitment.

The Adonais Prize went to Diego Jesús Jiménez for *La ciudad*, a nocturnal contemplation of the city in which the poet's meditation is contrasted with the actions of others. The strength of the Catalan literary movement is attested by *L'estrella d'en Perris*, by J.V. Foix, a finalist in the competition for the 1965 International Literature Prize. The 1964 National Prize for Literature was awarded to Federico Muelas for *Rodando entre silencio*.

Guillermo de Torres and Aurora de Albornoz edited the *Obras: Poesía y Prosa* of Antonio Machado. The collection makes available nearly all the work of one of the giants of 20th century literature.

Theater. The theater is heavily dominated by a combination of foreign works and plays by the established Spanish dramatists. Younger playwrights are strongly influenced by Antonio Buero Vallejo, and there are few signs of a trend away from their realistic approach, even though Buero himself has gone beyond mere realism in his recent works.

Among established figures, Miguel Mihura added to his stature with *Ninette y un señor de Murcia*; his apparently facile comic flair often serves to make his satirical approach acceptable to a wide audience. Recent French productions of his works have brought him acclaim among French critics who see in his works strong resemblances to the avant-garde theater.

The general weakness of the Spanish stage was visible in the large number of productions of works by Alejandro Casona (d. 1965), whose plays were authorized for commercial productions only after his recent return from exile. In spite of the obsessive insistence of his basic themes, Casona's works virtually monopolized the stage. The majority of such new work as is being done takes place in the university theaters, but there are serious obstacles to innovation in the professional theater.

Nonfiction. The Fastenrath Prize for Criticism was awarded to Pedro de Lorenzo for his study of the Spanish monk, scholar, and poet Fray Luis de León (1527-1591). José Olivio Jiménez' *Cinco poetas del tiempo* and Carlos Leal's *La poesía de [Pedro] Salinas* were important contributions to the study of contemporary poetry. Francisco Umbral studied the romantic satirist and playwright Mariano José de Larra (1809-1837) in *Anatomía de una dandy*.

Alfonso Sastre continued his provocative theoretical works in *Anatomía del realismo*, and Domingo Paniagua published the first volume of his important study of cultural periodicals, *Revistas culturales contemporáneas* (1897-1912). Américo Castro's polemical approach to Spanish cultural history, which stresses the contribution of the Jewish and Moorish formative elements, produced "*La Celsitina*" como *contienda literaria*, which relates this provocative late 15th century work to the expulsion of the Jews in 1492.

Translations. Important translations in English during the year 1965 included: P.A. de Alarcón's *The Three-Cornered Hat*, tr. by H.F. Turner; Francisco Ayala's *Death as a Way of Life*, tr. by Joan MacLean; Julio Caro Baroja's *The World of the Witches*, tr. by Nigel Glendinning; Camilo José Cela's *The Family of Pascual Duarte*, tr. by Anthony Kerrigan; the *Collected Works of St. John of the Cross*, tr. by Kieran Kavanaugh and Otilio Rodríguez; Ana María Matute's *The Lost Children*, tr. by Joan MacLean; Juan Valera's *Pepeita Jiménez*, tr. by Harriet de Onís; Benito Pérez Galdós' *Miau*, tr. by J.M. Cohen; and Antonio de Villegas' *El Abencerraje*, tr. by John E. Keller.

SPORTS

THE SPORTS WORLD lost a major figure in 1965 when Casey Stengel (r.) retired as manager of the New York Mets. With him in press box is Mets' President George Weiss.

SPORTS

Although some facets of their sports were deemed to be in such critical condition as to require congressional and federal court inspection, American fans acclaimed excellent teams and several great performers in 1965.

The U.S. Senate, perturbed by criticism of the Cassius Clay-Sonny Liston heavyweight championship fight in May, conducted hearings with an idea of establishing federal boxing control. Although the House did pass legislation toward that end, the proposal fizzled out.

Later, another Senate committee aired the dispute between the Amateur Athletic Union (AAU) and the National Collegiate Athletic Association (NCAA) over control of amateur sports, especially track and field. The controversy was magnified by the first Soviet track victory over the United States in Kiev in August. The Russians won partly because the NCAA had barred its members from competing in AAU championship meets, which are the basis for picking members of the team. At the committee's orders, a panel of five was named by Vice President Hubert Humphrey to arbitrate the differences.

As the year ended, baseball awaited the disposition of suits in Wisconsin to negate the transfer of the Milwaukee Braves to Atlanta.

On the playing fields, the fans who came in greater numbers than ever thundered their ovations to the triumphs of the Boston Celtics, the University of California at Los Angeles (UCLA), and Bill Bradley in basketball; the Detroit Red Wings, Montreal Canadiens, Gordie Howe, and Bobby Hull in hockey; the Los Angeles Dodgers, the Minnesota Twins, Sandy Koufax, Willie Mays, and Jim Maloney

in baseball; the Green Bay Packers, Cleveland Browns, Baltimore Colts, Buffalo Bills, San Diego Chargers, Gale Sayers, Jim Brown, and Don Chandler in pro football, as well as a host of college football teams and players.

There were also the fine achievements of Roy Emerson, Fred Stolle, Margaret Smith, Arthur Ashe, and Manuel Santana in tennis; Gary Player, Jack Nicklaus, Dave Marr, Billy Casper, and Kathy Whitworth in golf; Jim Clark, who startled the auto racing world by outspeeding American drivers at Indianapolis in a sensational run, as well as outdriving the European drivers in Grand Prix competition until he had the world's championship won; Ron Clarke, Michel Jazy, and Randy Matson in track and field; Steve Clark, Roy Saari, and a score of girl swimmers; the Harvard, Navy, and Vesper crews; Johnny Longden, who rode his 6,000th winning race horse; and Mrs. Jeanne Omelenchuk, who won all six senior women's races in both the national outdoor and open outdoor speed skating events.

There were fine tributes, too, for those who withdrew from active participation in sports. Casey Stengel left baseball because of a broken hip just before his 75th birthday. Al Lopez, who had managed the two teams (Cleveland in 1954 and the Chicago White Sox in 1959) that had taken the pennant away from Stengel when he managed the New York Yankees, moved to the White Sox front office. Ford Frick completed the last stage of his retirement as commissioner of baseball, and Gen. William D. Eckert was named to replace him. Bob Pettit ended his pro basketball career with a record of 20,880 points. Sugar Ray Robinson hung up his boxing gloves permanently, and Su Mac Lad was sent to pasture with earnings of \$884,755, the most ever won by a harness horse.

ARCHERY

World Championships

(Vaasteraas, Sweden, July 20-23)

Men—Matti Haikonen, Finland (2,313 pts.)

Women—Marie Lindholm, Finland (2,214)

Team—Men: United States (Joe Thornton, Ben Walker, Dick Tone, 6,792); women: United States (Grace Amborski, Helen Thornton, Ardelle Mills, 6,358)

National Archery Association Championships

(Lafayette, Ind., August 2-6)

BADMINTON

All-England Championships (Wembley, England, March 24-27)—

Men's singles: Erlend Kops, Denmark; women's singles—Ursula Smith, England; men's doubles: Ng Boon Bee and Tan Yee Khan, Malaysia; women's doubles: Mrs. Ulla Rasmussen Strand and Mrs. Karin Jorgensen, Denmark; mixed doubles: Finn Kobbero and Mrs. Ulla Strand, Denmark.

Among the more enduring achievements were the winning by the Boston Celtics of the National Basketball Association championship for the 7th consecutive year, tying the monopoly mark of the 1949-55 Detroit Red Wings in winning the National Hockey League championship; the pitching of a perfect game by Sandy Koufax, the ninth in baseball history; the kicking of six field goals in one game by Charlie Gogolak, of Princeton, for a collegiate record which tied the pro mark of Gino Cappeletti, of the Boston Patriots; Michel Jazy's 3:53.6 mile run; and Randy Matson's 70-foot, 7-inch shot put.

Baseball became an indoor game in Houston, where the Astros played in a new domed stadium that had constant temperatures and required no rain checks.

The chief fascinations, aside from baseball, were golf, where tournament courses were too small for the tremendous galleries, and football, especially the professional leagues, which attracted hordes to the stadiums or kept them glued to their TV sets.

Part of the fascination, too, was in watching the battle between the pro leagues to sign gifted college seniors who were hiring tax lawyers before receiving their diplomas. Joe Namath, Alabama quarterback, topped the 1965 class by receiving a contract reportedly assuring him over \$400,000 from the New York Jets. As 1965 action officially ended with the bowl games on New Year's Day of 1966, Donny Anderson, Texas Tech back reportedly refused an \$887,000 package from Houston of the American Football League and accepted a \$600,000 deal with Green Bay of the National Football League. Possibly a dozen more players were getting pay packages in six figures and two of the NFL teams—St. Louis and Chicago—had given up attempts to sign their top-rated draft choices.

SANDY KOUFAX delivers one of his highly effective pitches that shut out the Minnesota Twins as his Los Angeles Dodgers won the final game of the 1965 World Series, 2-0.

U.S. Championships (New Orleans, April, 13-17)—Men's singles—Erlend Kops, Denmark; women's singles: Mrs. Judy Devlin Hashman; men's doubles: Bob McCoig, Scotland, and Tony Jordan, England; women's doubles: Mrs. Margaret Barrand, England, and Jennifer Pritchard, England; mixed doubles: Bob McCoig and Mrs. Margaret Barrand.

BASEBALL

Major league baseball produced several surprises in 1965—a new champion, a new commissioner, and a second-division New York Yankee team. Performing as expected, however, were Sandy Koufax, Los Angeles Dodger pitcher, and Willie Mays, San Francisco Giant outfielder, who continued to amass records that eventually will place them in the Hall of Fame.

The Los Angeles Dodgers, playing old-fashioned baseball because they lacked power hitters, overcame the teams favored to win the National League pennant with their pitching, then outlasted the Minnesota Twins to win a seven-game World Series. The Twins succeeded to the American League title that the Yankees had won in the five previous years.

After some delay, the club owners, in November, selected William D. Eckert, a retired Air Force general with no previous baseball connections, as commissioner. Appointed as Eckert's chief assistant in a proposed cabinet of five deputies was Lee MacPhail, then general manager of the Baltimore Orioles, who was given the title of administrator. Eckert was given a seven-year contract, and he replaced Ford Frick, who retired after holding the post for 15 years.

Another retirement was that of ever-popular Casey Stengel. The "Old Professor" suffered a broken hip in a fall on July 25, a few days before his 75th birthday. He resigned as manager of the New York Mets on August 30, ending his active baseball career after 55 years. Wes Westrum, one of Casey's coaches, became interim manager, and was given the job permanently after the season's end.

The Mets finished in the cellar as usual, but achieved one big victory—they finally defeated Koufax after losing to him 13 times. Sandy was beaten only seven other times in league play as he won 26 games, although afflicted with an arthritic elbow that required treatment before and after each game. Pitching a perfect game against Chicago on September 9, he became the first man to pitch four no-hitters in his career. In the game he struck out 14 batters—a feat that helped him set a major league season record of 382 strikeouts. Koufax won the Cy Young Award as the year's outstanding pitcher, but the National League's most valuable player honor went to Mays. Willie's batting kept the Giants in pennant contention. He hit 52 home runs, setting a record for a month with 17 in August, and raising his lifetime total to 505, second only in the National League to Mel Ott's 511.

SANDY KOUFAX of the Los Angeles Dodgers won the Cy Young Award as the best pitcher of 1965, by the unanimous choice of the 20-member committee of the Baseball Writers' Association of America. Sandy made the writers' choice easy by building an extraordinary series of accomplishments during the year—26 regular-season victories, his fourth no-hitter in four years (a perfect game in which he set down 27 Chicago Cubs in a row), seven other regular-season shutouts, an all-time season record of 382 strikeouts, the lowest earned run average in the National League, and two shutouts in the World Series, one of them in the deciding game.

Sanford Koufax was born in Brooklyn on Dec. 30, 1935. He attended the University of Cincinnati on a basketball scholarship for a year before joining the Dodgers, then in Brooklyn. Standing 6 feet, 2 inches, and weighing 205 pounds, the lefthander suffers a chronic arthritic condition in his left elbow. Yet, he did not miss a starting turn during the 1965 season.

The Giants and Dodgers put together long winning streaks in their closing battle for the pennant. The Giants won 14 in a row early in September, taking over first place from the Dodgers. However, when $4\frac{1}{2}$ games behind and in third place, the Dodgers countered with a 13-game winning string behind the pitching of Koufax and Don Drysdale. The Dodgers won the championship on the next-to-last day of the season.

By this time Minnesota had long since established itself as the champion of the American League. The Twins broke a tie for the lead with Cleveland on July 5, and won going away. They were inspired by the infield play and timely hitting of shortstop Zoilo Versalles, and the pitching of Jim Grant, who led the league in victories with 21. Tony Oliva, their right fielder, won the batting title for the second year in a row. Versalles was voted the American League's most valuable player.

The baseball world, however, focused much of its attention on the Yankees, trying to discover what was wrong with them. The perennial champions started slowly, never got untracked, and wound up in sixth place. The New Yorkers finally rose to the .500 level on August 14, but they lost more than they won from there on in and finished with a percentage of .475, 10 games out of the first division and 25 behind the Twins. It was their most dismal showing since 1925, and was brought about in part because Mickey Mantle spent much of the season on the bench with injuries, as did Elston Howard and Roger Maris.

The Twins routed Drysdale in the first game of the World Series at the Metropolitan Stadium in Bloomington, Minn., and, surprisingly, continued winning against Koufax in the second for a 2-0 lead in games. Grant and Jim Kaat were the winning pitchers. However, when play switched to Los Angeles, the Dodgers, using the bunt, the steal, and the hit-and-run in the style that had brought them the pennant, won the next three games behind the excellent pitching of Claude Osteen, Drysdale, and Koufax.

Back in Minnesota, the Twins blasted Osteen, tying the Series again, with Grant homering to help win his own game. Koufax, of course, was called on to pitch the deciding game, and he responded with a three-hit shutout as the Dodgers beat Kaat, 2-0, to regain the world championship they had held in 1963.

The year was also marked by two unusual incidents on the field. Sam Mele, the Twins' manager, became upset by a decision against his team and apparently took a swing at umpire Bill Valentine; he was fined \$500 and suspended for five days. In a more serious dispute, Juan Marichal, Giant pitcher, hit Dodger catcher John Roseboro on the head with a bat. Marichal accused the Dodger of throwing at him. He was fined \$1,750 and suspended for eight days.

There were other notable pitching performances. Jim Maloney, of Cincinnati, pitched two no-hitters but got credit for only one. On June 14, he held the New York Mets hitless until the 11th inning, when Johnny Lewis' homer beat him, 1-0. On August 19, he pitched 10 hitless innings before his teammates got a run against the Chicago Cubs. Dave Morehead, of Boston, pitched the American League's only no-hitter, beating Cleveland, 2-0, on September 16.

In addition to Westrum, new managers named at the end of the season included Ed Stanky, who replaced Al Lopez, with the latter moving into the Chicago White Sox front office; Leo Durocher, who took over the managerial job with the Chicago Cubs; Don Heffner, a Met coach, who went to Cincinnati in place of Dick Sisler; and Grady Hatton, who became Houston's field manager after both general manager Paul Richards and field manager Luman Harris were separated from further supervision in the Astros' new domed arena.

Three physical changes are scheduled for the 1966 season. The Angels, who officially changed their name from Los Angeles to California in September 1965, will operate out of Anaheim; the St. Louis Cardinals will play in a new stadium; and Atlanta will enter the National League with the Braves, formerly a Milwaukee team. The switch of the

IN 1965 WORLD SERIES, Minnesota Twins shortstop Zailo Versalles (r.) steals second base against Dodger shortstop Maury Wills (l.) in sixth game on October 14. The play later was disallowed, but Twins won 5-1, tying series at three games each.

Braves' franchise to Atlanta, authorized by the league after the 1964 season, was being contested in the courts. The city and county of Milwaukee and the state of Wisconsin were alleging illegal use of monopoly powers by the National League and baseball in general in denying them a franchise. They were hoping to force the Braves' owners to return the team to Milwaukee.

UPI

PROFESSIONAL BASKETBALL'S Bill Russell (l.), of Boston Celtics, stops Happy Hairston (r.), of Cincinnati Royals, from completing a layup shot in a league game on Oct. 28.

BASKETBALL

Basketball's champions, UCLA and the Boston Celtics, rolled on to greater glory in 1965, but much of the spotlight fell on the accomplishments of one player—Princeton's Bill Bradley.

UCLA retained the National Collegiate Athletic Association championship for a second season and the Celtics chalked up an unprecedented 7th consecutive National Basketball Association championship.

William Warren Bradley, 6-foot, 5-inch, 200-pound son of a Crystal City (Mo.) banker, led Princeton to its 3rd straight Ivy League title and to 3rd place in the NCAA tournament. Bill drew crowds as if he were a high-salaried pro star, and became player of the year—possibly one of the greatest ever. A first-rate student as well, Bradley won a Rhodes Scholarship, disdained a high-priced offer to turn professional, and continued his studies at Oxford University in the fall. Bradley completed his collegiate career by scoring 58 points—an NCAA tournament record—as Princeton rolled up a record 118 points to triumph over Wichita State for 3rd place.

Top honors in the NCAA were swept up again by the UCLA Bruins, who defeated Michigan in the final, 91 to 80. The Bruins, beaten only by Iowa and Indiana during the season, completed a two-year record of 58 victories in 60 games.

The Celtics romped to an early NBA lead, set a record in winning 62 of their 80 league games, and then defeated Philadelphia and Los Angeles in the play-offs. Their big guard, Bill Russell, again was voted the most valuable player. New York's Willis Reed was named rookie of the year.

Midway through the season, Wilt Chamberlain was sold to the Philadelphia 76ers, in his home town, by San Francisco (which lost a record 17 straight games) for three players and cash estimated at about \$150,000. During the summer Chamberlain signed a three-year contract with the 76ers calling for more than \$100,000 a year, and the Celtics agreed to sign Russell on similar terms.

Johnny Kerr, of Baltimore, finally had to sit out a game on November 5—the first since he started league play in 1954. His consecutive game streak thus ended at 834 regular-season games.

BILL RUSSELL gathered in professional basketball's 1965 most valuable player honors—the Sam Davis Award—with as much ease as he gathers in rebounds for the Boston Celtics. The 6-foot 9-inch center won the award by unanimous vote of the Metropolitan Basketball Writers Association. So sure is his basketball sense, and so fast are his reflexes, that Russell blocks opponents' layup shots with ease. Opposing teams have made it virtually standard procedure to assign two rebounders to Russell, but he continues to dominate the boards.

Russell was born in Monroe, La., on Feb. 12, 1934. He led the University of San Francisco through an unbeaten season in 1955-56, and helped the 1956 U.S. Olympic team sweep to victory in Australia. Russell teamed with Bob Cousy to give the Celtics their first championship in 1957. Although Cousy retired in 1963, Russell—regarded by many as the best defensive basketball player of all time—kept the Celtics rolling to eight titles in nine years.

Bowling Proprietors Association of America Champions—Singles, Dick Weber, St. Louis; doubles, Dave Soutar, Detroit, and Tom Harnisch, Buffalo; team, Hamm's Beer, Chicago; Women: singles, Mrs. Ann Slattery, Salt Lake City; doubles, Janet Harman and Donna Zimmerman, Norwalk, Calif.; team, Gossard Girls, Chicago.

National Duckpin Bowling Congress Tournament—Singles, Norwood Heselbach, Baltimore (486); doubles, Frank Caruso and John Ferrando, Stratford, Conn. (901); all events, Al Grandy, Waterford, Conn. (1,323); team, Bowl America, Baltimore (2,104). Women: singles, Ruth King, Washington, D.C. (428); doubles, Patsy Stroessner and Betty Mooney, Baltimore (813); all events, Betty Powers, Richmond, Va. (1,190); team: Crestlanes Five, Lynchburg, Va. (1,840) mixed doubles, Betty Mooney and Earl Hartman, Baltimore (830); mixed team: Buddy's Horseshoe Club, Richmond, Va. (1,894).

Professional Bowlers Association Championship (Detroit)—Dave Davis, Phoenix Ariz. (681 final series).

BOXING

Boxing wound up 1965 with two heavyweight champions—one by popular acclaim, the other by edict.

The dual championships developed after the World Boxing Association (WBA) declared the title vacant in late 1964 because the reigning champion, Cassius Clay, had agreed to a return bout with the dethroned Sonny Liston. This was against the new rules, so the WBA decreed that the title would go to the winner of an elimination series among other high-ranked heavyweights. Ernest Terrell, of Chicago, outpointed Eddie Machen for the championship in New York on March 5.

On May 25, Clay and Liston went through with their bout, fighting in Lewiston, Me., because authorities banned the fight in Boston. Clay knocked out Liston in one minute of the 1st round with a punch that few viewers saw.

The reaction prompted the U.S. Senate to begin hearings to determine whether a federal boxing commission should be established. The hearings lasted many rounds and came to no decision. One state—Connecticut—banned boxing altogether.

In November both champions saw action. Terrell defeated George Chuvalo, of Toronto, in Chuvalo's home town on November 1. On November 22, Clay whipped two-time titleholder Floyd Patterson in Las Vegas in a bout that the referee stopped in the 12th round. The bout had been set up by the new president of the WBA, Jim Deskin, who was also Nevada's boxing commissioner and had sanctioned the fight in his latter capacity. WBA rules extend to all states except New York and Massachusetts. The fight was billed as a title bout, but afterward the WBA said it simply classed Clay as the No. 1 contender for Terrell's crown.

A title vacancy popped up in the flyweight class. Champion Salvatore Burrini, of Italy, who dethroned Pone Kingpetch, of Thailand, in April, was shorn of his title for failing to defend it. Burrini then knocked out Rocky Gattellari in Sydney on December 2.

In other classes, there was action and no debating. Welterweight Emile Griffith, the busiest and most successful champion, fought four bouts, two of them with his crown at stake. In title bouts he defeated José Stable and Manny Gonzalez, who had won a decision over Emile in a nontitle fight in January.

Lightweight Carlos Ortiz lost his crown in 1965 but got it back. Ortiz, beaten by Ismael Laguna, of Panama, in May, reversed the result in November. Dick Tiger, of Nigeria, battered Joey Giardello, of Cherry Hill, N.J., to regain the middleweight title that he had lost to Tiger in 1963, and José Torres, of New York, took the light heavyweight title away from Willie Fastrano of New Orleans. Eder Jofre, of Brazil, lost the bantam title to Masahiko (Fighting) Harada, of Japan. Vicente Saldiver, of Mexico, featherweight champion, successfully defended his title twice.

World Professional Champions

Heavyweight—Cassius Clay, Louisville
(World Boxing Association—Ernest Terrell, Chicago)
Light Heavyweight—José Torres, New York
Middleweight—Dick Tiger, Nigeria
Junior Middleweight—Nino Benvenuti, Italy
Welterweight—Emile Griffith, New York
Junior Welterweight—Carlos Hernandez, Venezuela
Lightweight—Carlos Ortiz, New York
Junior Lightweight—Flash Elorde, Philippines

Featherweight—Vicente Saldivar, Mexico
 Bantamweight—Masahiko (Fighting) Harada, Japan
 Flyweight—Salvatore Burrelli, Italy

*Title declared vacant by World Boxing Association in November

National AAU Senior Championships (Maumee, Ohio, March 25-27)

112 Pounds—Sam Goss, Trenton, N.J.
 119 Pounds—George Colon, New York City
 125 Pounds—Lawrence Hines, Philadelphia
 132 Pounds—Herb Dolson, Washington
 139 Pounds—Ray Garay, Houston
 147 Pounds—Hedgeman Lewis, Detroit
 156 Pounds—Conrad Williams, Homestead, Pa.
 165 Pounds—George Cooper, Oakland, Calif.
 178 Pounds—Roger Russell, Philadelphia
 Heavyweight—Boone Kirkman, Seattle

BRIDGE, CONTRACT

World Team Championship (Buenos Aires, May 15-23)—Italy (Walter Arevelli, Giorgio Belladonna, Massimo D'Alelio, Pietro Forquet, Benito Garozzo, and Camillo Pazzi Ticci, with Sergio Osella and Carlo Alberto Perroux, nonplaying co-players) defeated United States, Argentina, and Britain.

Spring Nationals (Cleveland, March 12-21)

Harold S. Vanderbilt Cup Team—Oswald Jacoby and Dr. John Fisher, Dallas; Jim Jacoby, Richardson, Tex.; Albert Weiss, Chicago; Ira Rubin, Fair Lawn, N.J.; and Phil Feldesman, New York.
 Men's Pairs—Lawrence Rosler, Murray Hill, N.J., and Jeff Rubens, New York
 Women's Pairs—Mrs. John Gruver, Ellicott City, Md., and Mrs. David Sachs, College Park, Md.
 Men's Teams—Harry J. Fishbein, Roger Stern, and Jeff Rubens, New York, and Charles J. Solomon, Philadelphia
 Women's Teams—Jacqui Mitchell and Betty Kaplan, New York; Virginia Heckel, Chicago, and Edith Kemp, Miami Beach, Fla.
 Mixed Pairs—Mr. and Mrs. Herbert Beyer, Lakeville, Mich.
 Open Pairs—John Biddle and James Wisemiller, Columbus, Ohio
 Individual—Baron Wolf Lebovic, Toronto

Summer Nationals (Chicago, August 6-15)

Masters Mixed Teams—Mr. and Mrs. Tobias Stone, Waldemar von Zedwitz, and Alvin Roth, New York, and Barbara Brier, Miami Beach, Fla.
 Mixed Teams (second flight)—Mrs. Ida Bennett and Charles Coon, New York; Mrs. Stanley Smith, Detroit; Paul Hodge, Abilene, Tex.; Helen Portugal, Los Angeles; and Eric Murray, Toronto
 Life Masters Pairs—Victor Mitchell and Sam Stayman, New York
 Life Masters Pairs (Right B)—Muriel Levin and Delle Levinson, Skokie, Ill.
 Masters Knockout Teams (Spingold)—Eric R. Murray, Sammy Kehela, and Percy Sheardown, Toronto, and C. Bruce Elliott, Weston, Ont.
 Men's Pairs—David Cox, Michigan City, Ind., and Jack Mathis, Chicago
 Women's Pairs—Mrs. Louise Mark, Toronto, and Mrs. Helen Utegaard, Bethesda, Md.

Fall Nationals (San Francisco, November 19-28)

Board-a-Match Teams—Edwin Kantar, Los Angeles; Marshall Miles, San Bernardino, Calif.; Michael Lawrence, Berkeley, Calif.; and Lew Stansby, Oakland.
 Blue Ribbon Pairs—Chuck Henke, Shelby, Mont., and John Moran, Pacifica, Calif.
 Life Master Men's Pairs—Alex Tschekaloff and Paul Soloway, Los Angeles
 Life Master Women's Pairs—Mrs. Tobias Stone, New York, and Ann Shear, Scarsdale, N.Y.
 Mixed Pairs—Mr. and Mrs. Edgar Kaplan, New York

CHESS

Men's World—Tigran Petrosian, USSR (Boris Spassky, USSR, won the right to challenge Petrosian in 1966)
 Women's World—Nana Gaprindashvili, USSR
 U.S. Men—Robert J. Fischer, New York
 U.S. Women—Gisela Kahn Gresser, New York
 U.S. Men's Open—Pal Benko, New York, and William Lombardy, New York
 U.S. Women's Open—Kathryn Slater, New York, and Mary Bain, New York
 U.S. Men's Amateur—Frank Street, Washington
 U.S. Women's Amateur—Ecclesia Cestone, West Orange, N.J.

CROSS-COUNTRY

AAU (10,000 Meters)—Ron Larriev, Los Angeles (31:11.8); team: Toronto Olympic Club (40 pts)
 U.S. Track and Field Federation (6 miles)—John Lawson, Jayhawk Track Club (28:50); team: Jayhawk Track Club, Lawrence, Kans. (42 pts)
 NCAA (6 miles)—John Lawson, Kansas (29:24); team: Western Michigan (81 pts); college division: Gene Takle, Luther (Iowa) (19:38.9); team: San Diego State (55 pts)
 IC4-A (5 miles)—University Division: Eamon O'Reilly, Georgetown (24:24.2); team: Georgetown (59 pts). College Division: Jim O'Connell, City College of New York (25:26.3); team: St. Joseph's, Philadelphia (81 pts)
 NAIA (4 miles)—Pat McMahon, Oklahoma Baptist (20:28.5); team: Fort Hays State (43 pts)

CURLING

Scotch Cup (World)—Superior, Wis. (Raymond Somerville, skip)
 U.S. Men's C.A. Championship—Superior, Wis.
 U.S. Women's C.A. Championship—Indian Hill C.C., Winnetka, Ill. (Mrs. John Bulger)
 Canadian (Dominion C.A.) Championship—Winnipeg (Terry Braustein)

Ardley Medal (at Hastings-on-Hudson, N.Y.)—Montreal Caledonia

(Gerry Boyd)

Calder Trophy (at Norfolk, Conn.)—Albany C.C. (P. Anderson)
 Douglas Medal (at Hastings-on-Hudson)—Brae Burn (Bud Chandler)
 Dykes Memorial Medal (at Brookline, Mass.)—Schenectady (R. M. Breault)
 Governor's Bowl (at Albany, N.Y.)—Albany (Green Rand)
 Granite State Trophy (at Nashua, N.H.)—Petersham (V.J. Purple)
 Lord Elgin Trophy (at Montreal)—Montreal Caledonia (J. McCormick)
 Mitchell Gold Medal (at Utica, N.Y.)—Utica (C.P. Raehm, Jr.)
 Nutmeg Stone (at Darien, Conn.)—New York Caledonia (E.M. Slaybaugh)
 Royal Victoria Jubilee (Trois Rivières, Que.)—Hudson C.C. (George Smart)
 Stockton Cup (at Brookline, Mass.)—Royal Montreal C.C. (I. Ibbotson)
 Wicks Trophy (at Hastings-on-Hudson)—Hamilton (Ont.) Thistles (Arthur Burns)
 Winchester Bowl (at Winchester, Mass.)—Fredericton, New Brunswick (A.M. Limerick)

DOG SHOWS

Westminster Kennel Club Show (New York, February 15-16)—best in show: Scottish Terrier, Ch. Carmichael's Fanfare, owned by Mr. and Mrs. Charles Stallor, Woodcliff Lake, N.J. (2,573 dogs shown).
 International Kennel Club Show (Chicago, April 3-4)—best in show: Doberman pinscher, Ch. Ru-Mar's Tushima C.D., owned by Mrs. Margaret Carveth, Portola, Valley, Calif. (2,982 dogs shown).

FENCING

World Championships (Paris, July 2-12)

Individual—foil: Jean-Claude Magnan, France; épée: Ferenc Némere, Hungary; saber: Jerzy Pawlowski, Poland; women's foil: Gaiina Gorkhova, Russia.
 Team—foil: Russia; épée: France; saber: Russia.

United States Championships (Los Angeles, June 18-27)

Individual—foil: Robert Russell and Salle Santelli, New York; épée: Joe Elliott, Los Angeles; saber: Alex Urban, New York A.C.; women's foil: Mrs. Janice Romary, Salle Vince, Los Angeles.
 Team—foil: Fencers Club of New York; épée: Salle Caizar, Philadelphia; saber: New York A.C.; over-all: New York A.C.; women: Salle Santelli, New York.

National Collegiate (NCAA) Championships (Detroit, March 18-20)

Individual—foil: Joe Nalven, Columbia; épée: Paul Pesthy, Rutgers; saber: Howard Goodman, New York University
 Team (3-weapon)—Columbia

FOOTBALL

Football, traditionally an autumn sport, played to jammed stadiums all over the country from August 1965 through the turn of the year. The early off-season clamor was for the professionals, who were so much in demand that they lengthened their exhibition program before regular-season play.

At the finish only one champion remained from the previous year—Buffalo of the American Football League. The Bills were not extended in retaining the championship of the Eastern Division, and in the title game they again routed the Western leader, San Diego, by a score of 23-0.

In the National Football League the defending Cleveland Browns breezed to the Eastern Conference championship but, mired in the mud at Green Bay, Wis., lost the league title to the Green Bay Packers, 23-12. In regaining the championship, Green Bay first had to get through a play-off with Baltimore for the Western Conference title. This they did on their home field, winning on a field goal by Don Chandler in an extra "sudden death" period, 13-10.

Meanwhile, the upheavals in college football began early as Alabama, Ohio State, UCLA, and Auburn lost their openers, and Notre Dame, Georgia Tech, and Syracuse came a cropper in their second games. By the end of the regular season only Arkansas, Michigan State, Nebraska, and Dartmouth remained unbeaten and untied among the major teams. Arkansas, with a string of 22 straight victories, cried for recognition as the nation's leading team. The National Football Foundation and United Press International polls, however, awarded this honor to Michigan State.

With the playing of the year-end bowl games, the undefeated list was cut to one—Dartmouth, which was prohibited by Ivy League rules from post-season activity. On Jan. 2, 1966, Louisiana State ended the Arkansas streak, 14-7, in the Cotton Bowl; UCLA jolted Michigan State, 14-12, in the Rose Bowl, reversing an early season result; Alabama outlasted Nebraska, 39-28, in an Orange Bowl scoring spree; and Missouri nipped Florida, 20-18, in the Sugar Bowl. These final upheavals raised Alabama to the No. 1 spot in the Associated Press poll.

The year wound up with the usual uproar as professional teams signed the college players for fantastic bonuses. Two new teams had to be stocked for 1966—the Atlanta Falcons in the NFL and the Miami Dolphins in the AFL.

Items of historic import were: (1) the kicking of six field goals in one game by Charlie Gogolak, of Princeton, bringing the collegiate record even with the pros; (2) the ending of a 43-game nonwinning string by Rensselaer Polytechnic Institute, which defeated Middlebury, 28-14, on October 23, but switched back to losing a week later; (3) the feats of the NFL rookie of the year, Gale Sayers, of the Chicago Bears, in breaking the league record for touchdowns with 22, one more than the great Jim Brown, of Cleveland, and in scoring six touchdowns in one game, equalling the mark set by Ernie Nevers, of the Chicago Cardinals, in 1929.

JIM BROWN, often called the greatest ball carrier in the history of football, collected additional honors in 1965 as he led the Cleveland Browns to the Eastern Conference championship of the National Football League. A United Press International poll named him as the league's player of the year, and Associated Press sports writers chose him as the league's most valuable player. A marked man because Cleveland relies on his running ability, Brown nevertheless won NFL rushing honors for the eighth time in nine seasons. The hard-driving fullback, standing 6 feet 2 inches and weighing 228 pounds, advanced 1,544 yards in 289 carries, and he scored 21 touchdowns.

James Nathaniel Brown was born in 1936 on St. Simons Island, off the Georgia coast. His family moved to Manhasset, N.Y., where he won places on all-state high school teams in football, basketball, and track. At Syracuse University, he led the Orangemen to the Lambert Trophy as the best Eastern team in 1956. He joined the Browns in 1957 as their No. 1 draft choice.

 AFL Star Bowl (Houston, Jan. 15, 1966)—Stars 30, Buffalo Bills 19
 NFL Pro Bowl (Los Angeles, Jan. 16, 1966)—East 36, West 7

GOLF

Although Jack Nicklaus, the portly gentleman from Columbus, Ohio, broke his own record for earnings, 1965 was a rough year for American golfers. They lost two international trophies, had to share a third, and even saw their National Open championship go to a foreigner for the first time since 1920.

Gary Player, of South Africa, became the National Open champion, defeating Kel Nagle, of Australia, by three strokes in an 18-hole playoff. He was so elated that he gave his winnings of \$26,000 to charity and his caddy. The 5-foot, 7-inch golfer is the third man ever to win the world's four

main pro titles. Only Gene Sarazen and Ben Hogan previously had taken the U.S. and British Opens, the Masters, and the Professional Golfers' Association (PGA) during their careers.

The 29-year-old South African and Arnold Palmer, who had a disappointing year, tied for second behind Nicklaus in the Masters. But in September, in the World Series of Golf—limited to the year's winners of the world's four major golf titles—Player defeated Nicklaus; Peter Thomson, of Australia, the British Open champion; and Dave Marr, the PGA titleholder. Player also beat out Nicklaus for the individual honors in the Canada Cup competition and bested Thomson for the Piccadilly world match title.

Nicklaus piled up total earnings of \$167,246. Dave Marr, however, was voted PGA player of the year, and Billy Casper won the Vardon Trophy for his low average of 70.586 strokes per round. Kathy Whitworth took the Vare Trophy with a 72.61 average.

In International cup competition, South Africa (Player and Harold Henning) won the Canada Cup. Canada took the America's Cup for the first time, and the British gained a tie with the American amateurs for the Walker Cup. The U.S. pros, however, retained the Ryder Cup.

The U.S. amateur championships went to Robert J. Murphy, of Nichols, Fla., playing in his first tourney, and Jean Ashley, a Chanute, Kans., elementary schoolteacher. Carol Mann took the women's National Open. Twenty-one-year-old Arne Dokka, of Studio City, Calif., won the U.S. Public Links title.

Men's Individual Champions

U.S. Open—Gary Player, South Africa
 U.S. Amateur—Robert J. Murphy, Nichols, Fla.
 PGA—Dave Marr, Larchmont, N.Y.
 Masters—Jack Nicklaus, Columbus, Ohio
 U.S. Public Links—Arne Dokka, Studio City, Calif.
 British Open—Peter Thomson, Australia
 British Amateur—Michael Bonallack, England
 Canadian Open—Gene Littler, San Diego, Calif.
 Canadian Amateur—George Henry, Valdosta, Ga.
 Canadian PGA—Wulf Homenuik, Winnipeg
 French Open—Ramon Sata, Spain
 French Amateur—Gaelan Mogue d'Algue, France
 Eastern Amateur—George Boutell, Phoenix, Ariz.
 North-South Amateur—Tom Draper, Birmingham, Mich.
 Southern Amateur—Billy Joe Patton, Morgantown, N.C.
 Trans-Mississippi—George Boutell
 Western Amateur—Bob Smith, Sacramento, Calif.
 U.S. Senior—Fred Brand, Pittsburgh, Pa.
 USGA Senior—Robert B. Kiersky, Oakmont, Pa.
 World Senior Amateur—Jack Barkel, Australia
 American Classic—Al Geiberger, Santa Barbara, Calif.
 Carling World Open—Tony Lema, San Leandro, Calif.
 National Challenge—Gary Player
 Thunderbird Classic—Jack Nicklaus
 Tournament of Champions—Arnold Palmer, Latrobe, Pa.
 Western Open—Billy Casper, Bonita, Calif.
 World Match Play—Gary Player
 World Series—Gary Player
 National Senior Open—Chandler Harper
 PGA Senior—Sam Snead
 World Senior—Sam Snead
 NCAA—Marty Fleckman, Houston; college division: Larry Gilbert, Middle Tennessee

GARY PLAYER, the South African golfer who won the 1965 U.S. Open championship, contributes showmanship for the galleries as well as shotmaking skill. He imparted an unusual additional touch of drama when, after winning the U.S. Open, he gave \$20,000 to promote junior golf in the United States and \$5,000 to assist cancer research. "I am doing this because I am so indebted to this country for the privileges given me in golf," he explained.

Born in Johannesburg on Nov. 1, 1935, Player turned professional at 17. Two years later, he was skillful enough to earn his expenses on a tour of English tournaments. Instructed by South Africa's great Bobby Locke and also by Ben Hogan, Player improved swiftly. By 1959 he had become the youngest winner of the British Open in 91 years; in 1960 he became a leading money-winner in the U.S.; and in 1961 he added the Masters to his laurels. His 1965 earnings included \$50,000 for winning the World Series of golf.

UPI

PROFESSIONAL GOLFERS Gary Player (l.) and Jack Nicklaus (r.), playing in the World Series of Golf in Akron, Ohio, Sept. 12, 1965, concentrate on "reading" the green. Player, winner of 1965 U.S. Open, also took first place and \$50,000 in this tournament, and 1965 Masters winner Nicklaus took second place.

Women's Individual Champions

U.S. Open—Carol Mann, Towson, Md.
 U.S. Amateur—Jean Ashley, Chanute, Kans.
 LPGA—Sandra Haynie, Fort Worth, Tex.
 British Amateur—Brigitte Varangot, France
 Canadian Open Amateur—Jacelyn Bourassa, Quebec
 Eastern Amateur—Nancy Roth Syms, Hollywood, Fla.
 North-South Amateur—Barbara McIntire, Colorado Springs
 Southern Amateur—Phyllis (Tish) Preuss, Pompano Beach, Fla.
 Trans-Mississippi—Sharon Miller, Battle Creek, Mich.
 Western Amateur—Barbara Fay White, Shreveport, La.
 U.S. Senior—Mrs. Allison Choate, Rye, N.Y.
 USGA Senior—Mrs. Hulet P. Smith, Pebble Beach, Calif.
 North-South Senior—Mrs. Reinert M. Torgerson, Forest Hills, N.Y.
 National Intercollegiate—Roberta Albers, Miami (Fla.) University

Team Champions

America's Cup (amateur)—Canada 22, United States 19½, Mexico 12½
 Canada Cup (professional)—South Africa 571, Spain 579, United States 582, Canada and England 585; (high individual, Gary Player 281)
 Ryder Cup (professional)—United States 19½, Britain 12½
 Walker Cup (amateur)—United States 11, Britain 11 (tie)

Intercollegiate Team Champions

NCAA—Houston
 NAIA—East Texas State
 College Conference—Athletic Association of Western Universities: Southern California; Atlantic Coast: North Carolina; Big Eight: Oklahoma State; Big Ten: Purdue; Central Intercollegiate AA: Winston-Salem State; Ivy: Yale; Mid-American: Ohio University; Mid-Atlantic: Dickinson; Missouri Valley: North Texas; Southeastern: Georgia; Southern: Virginia Tech; Southwestern: Texas; Western: New Mexico; Yankee: Rhode Island

GYMNASTICS**National AAU Championships**

(Lakewood, Ohio, July 1-3)

Men

All-Around—Makoto Sakamoto, Los Angeles (112.60 pts)
 Floor Exercises—Makoto Sakamoto (18.75)

HARNESS RACING

Bret Hanover, who gained the 1964 Harness Horse of the Year title as a precocious two-year-old pacer, won almost everything he attempted in 1965. His victories included the triple crown of pacing and renewal of his horse of the year title accompanied by acclaim.

The colt, owned by Richard Downing of Shaker Heights, Ohio, and affectionately dubbed "Big Bum" by his driver-trainer, Frank Ervin, was not perfect, however. He lost three times to Adios Vic on a mile track. But on half-mile tracks, he was unbeatable and had run up a string of 35 victories (24 as a 2-year-old) before he was defeated in a

heat at Springfield, Ill., in August. Bret won the next heat and the race. Adios Vic nailed him in the Horseman Futurity at Indianapolis even though Bret had equaled the world record of 1:55 for the mile in winning the first heat. Adios won the next two heats and for the first time Bret had lost a race.

Bret won the Cane Futurity at Yonkers and the Little Brown Jug at Delaware, Ohio, before he took the Messenger Stakes at Roosevelt Raceway in November to complete the triple crown. The only other pacer to achieve the triple crown was Adios Butler in 1959. In two years, Bret had won 45 of 48 starts and \$514,274.

Armbo Flight, owned by the Armstrong Brothers of Brampton, Ont., became the three-year-old trotting champion as the result of late-season victories, and was ranked second to Bret Hanover among standardbreds. The 16.3-hand filly won the Dexter Cup and the Kentucky Futurity (the latter race is the third part of the triple crown). Trotting's triple crown was divided three ways, for Egyptian Candor captured the Hambletonian, and Noble Victory won the Yonkers Futurity. Race Time, rated third in the harness horse of the year contest, completed an unusual triple by being named best pacer of the year; in the previous two years he had been named best pacer as a two-year-old and as a three-year-old.

In winning the two-year-old trotter championship, Kerry Way set a record for juvenile fillies by taking in \$116,549. Romeo Hanover, the leading two-year-old pacer, was even more rewarding to his owners; the little colt cost only \$8,500, and he won \$146,947.

HOCKEY

Three players—a fine rookie goalie, Roger Crozier; a 10-year player enjoying his best season, Norm Ullman; and the great Gordie Howe—led the Detroit Red Wings to the National League championship in the biggest surprise of the hockey season.

With Crozier guarding the nets and center Ullman leading the league in goals by scoring 42, the Red Wings won their first title since 1957. However, they were eliminated in the semifinals of the championship play-offs by the Chicago Black Hawks, and the Stanley Cup wound up with the Montreal Canadiens. To win the final round, the Canadiens were forced to go a full seven grueling games against the Black Hawks.

Boasting an average increase in attendance of 715 per game, the National Hockey League used the 1965 off-season to begin expansion. In June, St. Louis and Los Angeles were approved as sites for a second six-team division. San Francisco-Oakland and Vancouver were added in October to the new circuit, which is scheduled to begin operations in 1967.

Detroit opened the season briskly, jumping into first place and holding it for five weeks. Then the Red Wings dropped back to fourth place—the spot consigned them in early forecasts. With Bobby Hull and Stan Mikita staging scoring rampages, the Black Hawks hit an undefeated streak of 13 games (11 victories, 2 ties) and raced to the top in January.

TWO OF HOCKEY'S FINEST PLAYERS, Bobby Hull (l.), Chicago Black Hawks, and Gordie Howe, Detroit Red Wings, scramble for puck in game at Chicago on March 3. Their teams tied in this game, but the Red Wings later won the league championship.

BOBBY HULL, muscular left wing of the Chicago Black Hawks, skated off with the Hart Memorial Trophy and \$1,250 as the most valuable player in the National Hockey League in the 1964-65 season. The 27-year old Hull also received the Lady Byng Memorial Trophy and \$1,000 as the player who "exhibited the best type of sportsmanship and gentlemanly conduct combined with a high standard of playing ability." A brawny 193-pounder who avoids fights on the ice, Hull bears down hard on the fundamentals of his craft. He scored 39 goals during the season, second only to the 42 tallied by Norm Ullman of the Detroit Red Wings. Hull is the league's hardest shooter, firing the puck at the net at 118 mph, and also its fastest skater, being able to attain a top speed of 29 mph.

A native of Point Anne, Ont., Hull is a veteran of nine years' league competition. In 1965 he became the Hawks' foremost career pointmaker by lifting his total of goals and assists above 550. He shares the NHL season record of 50 goals.

NATIONAL HOCKEY LEAGUE (Final Standings, 1965)

United States Intercollegiate

NCAA—Michigan Tech (defeated Boston College in final, 8-2)
ECAC—Boston College (defeated Brown in final, 6-2)
Ivy League—Brown (8-2-0)

But Hull suffered knee injuries, missed seven games, and lost his scoring touch, and the Hawks fell behind.

Montreal, getting consistent play from all its lines, was always in contention for the title but was left in second place when the Wings put on a final burst to win 14 consecutive victories on their home ice.

Bobby Hull won two awards—the Hart Trophy for the most valuable player and the Lady Byng Trophy for sportsmanship. Crozier took the Calder Trophy for the best rookie; Mikita, the Art Ross Trophy as the leading scorer; and Pierre Pilote, of Chicago, the James Norris Trophy for the best defenseman. Terry Sawchuk and Johnny Bower, of Toronto, shared the Vezina Trophy awarded the goalies scored upon least.

Howe, third to Mikita and Ullman in season scoring and the holder of all NHL scoring records, netted his 600th regular-season goal in November.

The sputtering New York Rangers fired coach Red Sullivan in December, and general manager Emile Francis took over.

HORSE RACING

A big, two-year-old chestnut filly, Moccasin, charged to the top in a confused racing season in which some of the best horses had trouble getting to the starting gate. Unbeaten Moccasin, owned by Arthur B. Hancock and W. Haggin Perry, took the horse of the year honors away from Kelso, champion for the preceding five seasons, by one vote in the Thoroughbred Racing Association poll. In third place was Roman Brother, handicap horse of the year, and in fourth, Tom Rolfe, the leading three-year-old colt. In a *Morning Telegraph* vote, Roman Brother edged Tom Rolfe for the top honor by one vote, and Moccasin and Kelso tied for a distant fourth, behind Buckpasser.

Moccasin won all eight of her races and wound up the season with smashing victories in the Gardenia at Garden State, the Matron at Aqueduct, and the Selima at Laurel. She did not begin her season until August at Saratoga and yet won \$319,731.

The vote for Kelso was mainly sentimental. The old campaigner also started the season late. Mrs. Richard du Pont's eight-year-old gelding won the Whitney at Saratoga and the Stymie at Aqueduct, and was well on his way toward becoming the first horse to win \$2 million when an eye infection forced him out of action in the fall. Kelso boosted his record winnings to \$1,997,396.

Among other horses withdrawn from competition for injuries were the 1964 juvenile leaders—Bold Lad, Sadair, and Queen Empress—along with Gun Bow and Quadrangle.

Roman Brother, with Kelso out of action, took the big handicap tests—the Woodward, Manhattan, and Jockey Club Gold Cup.

Tom Rolfe was syndicated for about \$1.6 million by his owner, Raymond Guest, who retained 10 shares. The son of Ribot was out of the money only once in 13 starts and made the best showing in triple crown events. He ran third in the Kentucky Derby (won by Lucky Debonair), won the Preakness, and was a nose behind Hail to All in the Belmont.

Bon Nouvel climaxed a successful bid for steeplechase honors by winning the Temple Gwathmey Handicap by 30 lengths while carrying a fantastically heavy 170 pounds.

 Fours with Coxswain—Vesper B.C. (6:41.2)
 Fours without Coxswain—Vesper B.C. (6:40.2)
 150-Pound Eights—Detroit B.C. No. 2 (6:47.2)
 Intermediate Eights—Toronto Argonauts (6:30)
 Championship Eights—Vesper B.C. (6:28.4)
 Team (Barnes Trophy)—Vesper B.C. (157.5 pts)

Intercollegiate Team Champions

I.R.A. Regatta (Syracuse, N.Y., June 19)—Varsity (3 mi): Navy (16:51.3); junior varsity (3 mi): Navy (17:07.5); freshmen (2 mi): Navy (11:03.4); Ten Eyck Trophy: Navy (20 pts)
 Eastern Association (Worcester, Mass., May 15; all races 2,000 meters)—Varsity: Harvard (6:10.4); junior varsity: Harvard (6:19.4); freshmen: Harvard (6:22.8); varsity lightweight: Cornell (6:21.2); junior varsity lightweight: Harvard (6:27.6); freshmen lightweight: Harvard (6:25.3); Rowe Cup (heavyweights): Harvard (28 pts); Jope Cup (lightweights): Harvard (23 pts)
 Harvard-Yale—Harvard (4 mi, 19:41.6)
 Metropolitan N.Y. Intercollegiate—Iona (2,000 meters, 7:06.8)
 Oxford-Cambridge—Oxford (4½ mi, 18:07)
 Sobel (National)—LaSalle College H.S., Philadelphia (1 mi, 5:01.1)
 Washington-California—California (¾ mi, 14:10.2)
 Western Intercollegiate—Washington (2,000 meters, 6:34.2)
 Cups and Trophies—Adams Cup: Harvard (1¾ mi, 8:53.5); Atlanta Cup: Brown (1¼ mi, 8:09); Bill Cup: Rutgers (2,000 meters, 7:06.5); Blackwell Cup: Yale (1¾ mi, 7:38.7); Carnegie Cup: Cornell (2 mi, 10:36.6); Childs Cup: Princeton (1¾ mi, 8:52.5); Cochrane Cup: Massachusetts Institute of Technology (2,000 meters, 6:53.7); Compton Cup: Harvard (1¾ mi, 8:15); Dad Vail Trophy: Northeastern (1¾ mi, 6:45.8); Fox Trophy: Amherst (1 mi, 6:22); Goes Trophy: Cornell (2 mi, 10:27); Grimaldi Cup: Howard University (2,000 meters, 6:38.3); Madeira Bowl: Cornell (2,000 meters, 6:36.4); Packard Cup: Syracuse (2 mi, 10:01); President's (Marist College) Cup: Northeastern (2,000 meters, 7:00.8)

American Henley

(Worcester, Mass., June 12;

All events except dashes at 2,000 meters)

Single Sculls (Quarter-Mile)—Don Spero, New York A.C. (1:06.6)
 Veteran Singles—Jerome Olrich, Cambridge B.C. (2:55)
 Championship Singles—Don Spero (7:40)
 Doubles—Polomac B.C., Washington (6:54)
 Pairs without Coxswain—Vesper B.C. (8:31.6)
 Pairs without Coxswain—Vesper B.C. (6:55.2)
 Fours with Coxswain—Vesper B.C. (6:49.4)
 Championship Eights (Steward's Cup)—Vesper B.C. (6:07.8)

British Henley

(Henley-on-Thames, June 30-July 3;

All races at one mile, 550 yards)

Diamond Sculls (Singles)—Don Spero, New York A.C. (7:42, course record)
 Silver Goblets (Pairs)—East Germany (7:42)
 Double Sculls—Switzerland (7:01, course record)
 Prince Philip Cup (Coxed Fours)—Leander Club's Americans at Oxford (7:03, course record)
 Princess Elizabeth Cup (Schools)—Tabar Academy, Marion, Mass. (6:44, ties course record)
 Thames Challenge Cup (Lightweight Eights)—Isis Club of England (6:37)
 Steward Challenge Cup (Fours without Cox)—Quinton Boat Club of Britain (6:55, course record)
 Grand Challenge Cup (eights)—Ratzeburg of West Germany (6:16, course record)

Canadian Henley

(St. Catharines, Ont., July 28-31)

Open Singles Dash—Frank Sulger, New York A.C. (time, 1:30.5)
 Championship Singles—Bill Maher, Detroit B.C. (8:02)
 Association Singles—Dave Robinson, Fairmount B.C., Philadelphia (7:26.7)
 Doubles—Fairmount R.A., Philadelphia (7:54)
 Pairs—Potomac B.C., Washington (7:43)
 Four with Coxswain—Vesper B.C., Philadelphia (6:42)
 Four without Coxswain—Vesper (7:24)
 Championship Eights—Vesper (6:12.2)
 Maple Leaf Team Trophy—St. Catharines B.C. (254 pts)

SHOOTING

National Rifle and Pistol Championships

(Camp Perry, Ohio, July 30-August 29)

Pistol

3-Weapon Aggregate—PO1 Donald L. Hamilton, U.S. Navy (2,649-133X); regular service: W.B. Blankenship, Jr., U.S. Army (2,643-122X); Air Force: Capt. F.C. Green (2,637-130X); Navy: PO1 D.L. Hamilton (2,649-133X); Army Reserve: S/Sgt M.G. Baum (2,608-99X); Reserves: S/Sgt P.E. Malaragno, USAR (2,601-94X); police: J.W. Hurst, (2,610-95X); National Guard: Sgt. J.C. Forman (2,598-83X); senior: Col. W.R. Walsh, USMC (2,573-80X); women: Mrs. Gertrude P. Schlenitzner, Lowell, Mich. (2,554-76X); collegiate: Cadet J.A. Dickens, USMA (2,568-78X); civilian: J.E. Clark (2,618-119X); team: U.S. Air Force Blue (3,514-157X).

GIANT SLALOM WINNER
Bill Marolt of Aspen, Colo., speeds down National Alpine course at Crystal Mountain, Wash., on April 4, 1965, to take U.S. men's giant slalom title. In winning the event, he was clocked at 2:49.99.

WIDE WORLD

Smallbore Rifle

3-Event Prone—M/Sgt. W.E. Krilling, USA (4,788-337X); regular service: M/Sgt. W.E. Krilling (4,788-337X); civilian: L.A. Wilkens (4,781-356X); senior: R.D. Triggs (4,780-331X); women: Marianne M. Jensen (4,775-301X); collegiate: L.V. Anderson (4,769-301X); junior: D.B. Wood (4,768-316X).

4-Position—Capt. Lones W. Wigger, Jr., U.S. Army (1,558-91X); service: Capt. L.W. Wigger (1,558-91X); civilian: P.D. Bahman (1,528-55X); women: Lt. Margaret L. Thompson (1,499-39X); collegiate: J.H. Writer (1,533-72X); junior: T.J. Whitaker (1,532-62X); team (metallic sight): Stinknik Gentlemen (1,580-87X); team (any sight): U.S. Army International Blue (1,531-55X).

High-Power Rifle

Bolt (7-Match Aggregate)—Civilian: J.A. Clerke, Santa Monica, Calif. (793-91V); senior: E.J. Shook (788-77V); women: Mrs. Miralotte S. Ickes (779-64V); collegiate: M.W. Tompkins (781-79V); junior: T.D. Malham (785-78V).

Service (7-Match Aggregate)—Lt. David H. Meredith, USA (796-79V); regular service: Lt. D.H. Meredith (796-79V); Navy: PO2 M.D. Nalta (786-73V); Army Reserve: Lt. H.N. Clark (787-73V); National Reserve: Lt. Col. S.C. Burkhalter (786-83V); National Guard: Lt. A.M. Dapp (792-80V); civilian: C.R. Umbach (789-60V); women: Lt. Margaret L. Thompson (783-60V); collegiate: R. Beard (787-65V); senior: Col. W.R. Walsh (780-52V); junior: B.D. Goldsby (784-63V).

Trap

Grand American Championships (Vandalia, Ohio, August 23-28)

Grand American Handicap—Daniel C. Pautler, Jr., Alden, N.Y. (20 yards, 99x100)

Women's Grand American Handicap—Nancy Krebs, Ripon, Wis. (20 yards, 94x100—24x25 shoot-off)

Junior Grand National Handicap—Daniel C. Pautler, Jr. (20 yards, 99x100)

Veterans Grand National Handicap—Earl C. Thompson, Peoria, Ill. (24 yards, 93x100)

Champion of Champions—Edgar Kyle, Colorado Springs, Colo. (100x100—125x125 shoot-off)

Clay Target—Gene Sears, El Reno, Okla. (200x200—50x50 shoot-off)

Double Targets—J. Hood Nichols, Jefferson City, Tenn. (97x100)

High Over-all—Hiram Bradley, Greenville, Ohio (959x1,000); women: Sara Bourgeois, Jackson, Miss. (932x1,000); junior: Doug Bedwell, Brazil, Ind. (956x1,000); professional: Richard Baldwin, Danbury, Conn. (950x1,000)

All-Around—Buford Bailey, Big Springs, Neb. (387x400); women: Sara Bourgeois (368x400); junior: Doug Bedwell (379x400); professional: Richard Baldwin (381x400)

Skeet

World Championships

National Skeet Shooting Association (Savannah, Ga., July 31–August 8)

All-Around—Open: James A. Bellows, Encino, Calif. (544x550, 4-gun aggregate); 12-gauge: James Prall, Lackland AFB, Tex. (250x250); 20-gauge: Vernie Surber, Wichita, Kan. (100x100); 28-gauge: Robert Rodale, Allentown, Pa. (100x100); .410-gauge: Capt. Strother Shumate, Jr., Lackland AFB, Tex. (98x100); women: Mrs. Evelyn Jones, Dallas (542x550); veterans: Carl B. Stutzman, Peoria, Ill. (531x550); seniors: T.V. Hannaford, Warren, Mich. (540x550); sub-seniors: Claude W. Purbough, Monrovia, Calif. (541x550); juniors: Vernie Surber (543x550); industry: Kenneth Sedlecky, Alvo, Neb. (549x550)

Teams—Two-man: Al and Robert Shuley, Roselle, Ill. (1,083x1,100); five-man: USAF Internationals, Lackland AFB, Tex. (Robert Reay, Jack Johnson, James Prall, Douglas Fessler, David Bywater, 2,704x2,750)

Champion of Champions—CWO George A. Young, Burton, S.C. (100x100)

SKIING

United States Championships

Alpine (Crystal Mountain, Wash., April 2-4)—Men's downhill: Loris Werner, Steamboat Springs, Colo. (2:14.78); men's slalom: Rod Hebron, Canada (2:00.30); men's giant slalom: Bill Marolt, Aspen, Colo. (2:49.99); men's combined: Peter Duncan, Montreal, Can.

76.03 pts); women's downhill: Nancy Greene, Rossland, B.C., Canada (2:09.61); women's slalom: Nancy Greene (1:40.87); women's giant slalom: Nancy Greene (2:05.36) women's combined: Nancy Greene (.00 pts)

Nordic (Steamboat Springs, Colo., Feb. 12-14)—15-kilometer cross country: Mike Elliott, Durango, Colo. (59:49); jump: Tom Upham, Auburn, Me. (256.2 pts); combined: Tom Upham (484.60 pts) Jumping (Berlin, N.H., Feb. 28)—seniors: David Hicks, Duluth, Minn. (225.4 pts); veterans: Bill Olson, Eau Claire, Wis. (220.3 pts)

National Collegiate (NCAA) Championships

(Crystal Mountain, Wash., March 25-27)

Alpine—Slalom: Rick Chaffee, Denver U. (1:48.25); downhill: Bill Marolt, Colorado (2:11.89); combined: Chaffee

Nordic—Cross-Country: Mike Elliott, Ft. Lewis College, Colo. (55:34); jump: Erik Jansen, Denver U. (219.8); combined: Matz Jensen, Utah (451.65)

Skimeister—Loris Werner, Western Colorado State (356.6) Team—Denver University (380.5)

SOCCER

United States Champions

National Challenge Cup—New York Ukrainians
National Amateur Cup—German-Hungarians, Philadelphia
National Junior Cup—Immaculate Heart of Mary, St. Louis
American League—Hartford, Conn.

Intercollegiate—NCAA: St. Louis University; NAIA: Trenton State
International League—First Section: New York; second Section: Polonia
Bytom, Poland; play-off: Polonia; Challenge Cup play-off: Polonia
defeated Dukla

Foreign Champions

English League—Manchester United
English Cup—Liverpool
English League Cup—Chelsea
Scottish League—Kilmarnock
Scottish Cup—Glasgow Celtics
Scottish League Cup—Glasgow Rangers
European Cup of Nations—Internazionale di Milan
European Cup of Cup Winners—West Ham United, England

SOFTBALL

Amateur Softball Association Champions

Men—Aurora (Ill.) Sealmasters
Women—Orange (Calif.) Lionettes
16-Inch—Chicago Bobcats
Slow Pitch (open)—Skip A.C., Pittsburgh
Slow Pitch (industrial)—E.L. Wiegand, Pittsburgh
Slow Pitch (women)—Art's Aces, Omaha

International
Team—Australia 1, Stratford (Conn.) Raybestos Brakettes, 0

SQUASH RACQUETS

National Champions

Men's Singles—Steve Vehslage, New York
Veteran's Singles—Vic Seixas, Philadelphia Open and U.S. Professional
—Mohibullah Khan, Boston

Men's Doubles—G. Diehl Mateer, Jr., Philadelphia, and Ralph Howe, New York

Men's Senior Doubles—William T. Ketcham, Jr., and James Ethridge, New York

Women's Singles—Joyce Davenport, Philadelphia
Women's Doubles—Mrs. Charles Classen, Merion, Pa., and Mrs. F.A.C. Vosters, Jr., Wilmington, Del.

Women's Senior Singles—Mrs. Baba Lewis, Boston
Women's Senior Doubles—Mrs. H.L.G. Clement, Merion, Pa., and Mrs. F.A.C. Vosters, Jr.

United States Team—New York
Lapham Cup—United States
Grant Cup—Canada

Canadian Champions—Singles: Robert Hetherington, Boston; Doubles: Sam Howe, Philadelphia, and William Danforth, Pittsburgh

SWIMMING

Because the Yale pool is only 25 yards long, what may have been the finest swimming achievement of 1965 could not be submitted for world record status. Steve Clark swam 100 yards freestyle in 45.6—the first time the distance was ever covered in less than 46 seconds. Swimmers rank this feat with a 4-minute mile or a 17-foot pole-vault. However, achievements in pools less than 50 meters or 55 yards long are not considered for world recognition. Clark, a senior at Yale, had twice hit 46.1 before his great effort in the final of the AAU indoor championships in April.

There were, however, enough excellent performances by young American swimmers to wash several records from the books. Foremost among the young swimmers was Patty Caretto, a 14-year-old, ninth-grade student from Whittier, Calif. She set world marks of 18:23.7 for 1,500 meters freestyle, 9:56.2 for 880 yards, and 18:51.1 for 1,650 yards. The first two records were set at Cardiff, Wales, where a U.S. team, in a dual meet with Britain in August, bettered five world marks and 12 additional American records.

Because of their fantastic showing in the 1964 Olympics, American swimmers were in demand all over the world for competition and exhibitions in 1965. Some nations were eager to copy the AAU age-group program that had developed so many excellent swimmers.

Among other world-record performances by girls, who shattered most of the American marks in AAU meets, were Martha Randall's 400-meter freestyle in 4:38 and Claudia Kolb's 100-meter breaststroke in 1:17.1 as she won three national titles. Kendis Moore swam the 200-meter butterfly in 2:26.3, but lost her world mark six days later to Ada Kok, of the Netherlands, who swam the distance in 2:25.8.

Steve Krause, of Seattle, was the only American man to set a world record that could be accepted. He swam the 1,500-meter freestyle in 16:58.1, breaking Roy Saari's mark. Saari won three freestyle events in helping the University of Southern California to win the NCAA championship, and he beat Clark in the 200-yard freestyle.

Don Schollander, winner of four Olympic gold medals and the Sullivan Award as America's outstanding athlete in 1964, was almost inactive. Burdened by studies at Yale, he then contracted mononucleosis while on a swimming tour in Switzerland in July.

Men's AAU Outdoor Championships

- (Maumee, Ohio, August 11-15)
 100-Meter Freestyle—Don Roth, Santa Clara (Calif.) S.C. (time, 0:53.8)
 200-Meter Freestyle—Gary Ilman, Santa Clara S.C. (1:59)
 400-Meter Freestyle—John Nelson, Pompano Beach, Fla. A. (4:14.1)
 1,500-Meter Freestyle—Steve Krause, Cascade S.C. (16:58.6)
 100-Meter Breaststroke—Tom Tretheway, Indiana A.C. (1:08.3)
 200-Meter Breaststroke—Chet Jastrzemski, unattached (2:30.7)
 100-Meter Backstroke—Thompson Mann, North Carolina A.C. (1:00.5)
 200-Meter Backstroke—Thompson Mann (2:12.4)
 100-Meter Butterfly—Luis Nicolao, Santa Clara S.C. (0:57.8)
 200-Meter Butterfly—Carl Robie, Vesper B.C., Philadelphia, (2:07.7)
 200-Meter Individual Medley—Dick Roth, Santa Clara S.C. (2:14.9)
 400-Meter Individual Medley—Dick Roth (4:49.2)
 400-Meter Medley Relay—Indiana Aquatic Club (Pete Hammer, Tom Tretheway, Kevin Berry, Robert Windle, 4:01.8)
 400-Meter Freestyle Relay—Santa Clara S.C. Team A (Luis Nicolao, Greg Buckingham, Dick Roth, Gary Ilman, 3:36.1)
 800-Meter Freestyle Relay—Santa Clara S.C. Team A (Dick Roth, Don Roth, Mike Wall, Gary Ilman, 8:04.6)
 One-Meter Springboard Diving—Bernie Wrightson, Dick Smith S.G., Phoenix (494.50 pts)
 3-Meter Springboard Diving—Bernie Wrightson (550.65)
 Platform Diving—Bernie Wrightson (452.40)
 Team Champion—Santa Clara Swim Club (182 pts)

Men's AAU Indoor Championships

- (New Haven, Conn., April 1-3)
 100-Yard Freestyle—Steve Clark, Yale (0:45.6)
 200-Yard Freestyle—Don Schollander, Yale Freshmen (1:41.7)
 500-Yard Freestyle—Carl Robie, Ann Arbor, Mich. (4:44.1)
 1,650-Yard Freestyle—Roy Saari, Southern California (16:40.8)
 100-Yard Breaststroke—Paul Scheerer, Ann Arbor, Mich. (1:00.4)
 200-Yard Breaststroke—Ken Merten, Los Angeles, (2:11.8)
 100-Yard Backstroke—Thompson Mann, North Carolina A.C. (0:52.5)
 200-Yard Backstroke—Thompson Mann (1:56.8)
 100-Yard Butterfly—Luis Nicolao, Santa Clara, Calif. (0:50.9)
 200-Yard Butterfly—Carl Robie (1:42.7)
 200-Yard Individual Medley—Roy Saari (1:56.2)
 400-Yard Individual Medley—Greg Buckingham, Atherton, Calif. (4:08.9)
 400-Yard Freestyle Relay—Southern California A Team (Bob Bennett, Jim McGrath, Rich McGeath, Roy Saari; 3:07.4)
 400-Yard Medley Relay—Southern California (Bob Bennett, Bill Craig, Rich McGeath, Roy Saari; 3:31.9)
 One-Meter Dive—Kenneth Sitzberger, Bloomington, Ind. (519.65 pts)
 3-Meter Diving—Richard Gilbert, Bloomington, Ind. (562.55 pts)
 Team—Southern California (74 pts)

Men's AAU Indoor Platform Diving Championships

- (Pittsburgh, Pa., April 5)
 Senior—Chuck Knorr, Santa Clara, Calif. (472.25 pts)
 Junior—Mike Finneran, Rolling Hills, Calif. (387.50 pts)

Women's AAU Outdoor Championships

- (Maumee, Ohio, August 11-15)
 100-Meter Freestyle—Pokey Watson, Santa Clara (Calif.) Swim Club (time, 1:00.7)
 200-Meter Freestyle—Martha Randall, Vesper B.C., Philadelphia (2:12.3)
 400-Meter Freestyle—Martha Randall (4:39.2)
 1,500-Meter Freestyle—Patty Caretto, City of Commerce (Calif.) S.C. (18:23.7)

- 100-Meter Breaststroke—Claudia Kolb, Santa Clara S.C. (1:17.1)
 200-Meter Breaststroke—Claudia Kolb (2:48.6)
 100-Meter Backstroke—Christine Caron, France (1:08.1)
 200-Meter Backstroke—Judy Humbarger, Fort Wayne (Ind.) Olympia, and Cathy Ferguson, Los Angeles A.C., tie (2:28)
 100-Meter Butterfly—Sue Pitt, Scarlett Jets S.C., East Brunswick, N.J. (1:06.2)
 200-Meter Butterfly—Kendis Moore, Arizona Desert Rats, Phoenix (2:26.3)
 200-Meter Individual Medley—Claudia Kolb (2:30.8)
 400-Meter Individual Medley—Mary Ellen Olcese, Vesper B.C. (5:19.6)
 400-Meter Freestyle Relay—Santa Clara S.C. (Terri Stickles, Jana Haroun, Linda Hildreth, Pokey Watson, 4:08.6)
 800-Meter Freestyle Relay—City of Commerce A Team (Patty Caretto, Dolores Pfeiffer, Mary Campbell, Jeanne Hallock, 9:00.1)
 400-Meter Medley Relay—Santa Clara S.C. Team A (Pokey Watson, Claudia Kolb, Linda Hildreth, Terri Stickles, 4:38.4)
 1-Meter Springboard Diving—Joel O'Connell, Santa Clara S.C. (450.95 pts)
 3-Meter Springboard Diving—Micki King, Ann Arbor (Mich.) S.C. (463.05)
 Platform Diving—Lesley Bush, unattached (345.65)
 Team Championship—Santa Clara Swim Club (196 pts)
 Synchronized Swimming—Stunt: Patty Willard, San Francisco Merionettes; Solo: Pam Morris, Merionettes; Duet: Pam Morris and Patty Willard; Team: San Francisco Merionettes (119.69)

Women's AAU Indoor Championships

- (Commerce, Calif., April 8-11)
 100-Yard Freestyle—Jeanne Hallock, City of Commerce (Calif.) A (0:54.5)
 200-Yard Freestyle—Penny Estes, Miami, Fla. (1:58.2)
 500-Yard Freestyle—Patty Caretto, City of Commerce Swim Club (5:15.6)
 1,650-Yard Freestyle—Patty Caretto (18:03.6)
 100-Yard Breaststroke—Cynthia Goyette, Detroit (1:09.0)
 200-Yard Breaststroke—Cynthia Goyette (2:26.4)
 100-Yard Butterfly—Sharon Stouder, City of Commerce S.C. (0:58.0)
 200-Yard Butterfly—Sue Pitt, East Brunswick, N.J. (2:09.6)
 100-Yard Backstroke—Cathy Ferguson, Los Angeles (1:00.9)
 200-Yard Backstroke—Cathy Ferguson (2:13.2)
 200-Yard Individual Medley—Jeanne Hallock (2:14.2)
 400-Yard Individual Medley—Sharon Finneran, Santa Clara S.C. (Calif.) (4:47.4)
 400-Yard Freestyle Relay—City of Commerce A (Sharon Stouder, Dolores Pfeiffer, Mary Campbell, Jeanne Hallock; 3:40.8)
 400-Yard Medley Relay—City of Commerce A (Mary Campbell, Sandy Nitta, Sharon Stouder, Jeanne Hallock; 4:06.8)
 1-Meter Diving—Joel O'Connell, Santa Clara (415.15)
 3-Meter Diving—Joel O'Connell (438.25)
 Platform Diving—Micki King, Ann Arbor (Mich.) S.C. (304.55)
 Team—City of Commerce S.C. (159 pts)

AT INTERNATIONAL MEET IN BUDAPEST in August, Cary Dille, U.S. (.), won 200-meter backstroke, with V. Mazanov, USSR (I.), 2nd, and Thompson Mann, U.S. (r.), 3d.

KEYSTONE

Mixed Doubles—Dell Swearis, Grand Rapids, and Connie Stace
Seniors—Sol Schiff, New York

TENNIS

Just when it seemed that two Australians, Roy Emerson and Fred Stolle, had a complete lock on all major tennis titles, two American college boys threw their racquets into the works. The stoppage came at the U.S. championships at Forest Hills. Neither of the collegians, Arthur Ashe and Charles Pasarell, teammates at UCLA, went through to the final, but they ended the Australian monopoly and cleared the way for Manuel Santana, of Spain, to achieve his finest triumph. Santana defeated Cliff Drysdale, of South Africa, in four sets in the finals.

Emerson, generally acknowledged as the world's leading amateur, had come to Forest Hills possessing the Australian and Wimbledon titles. Stolle held the one title Emerson missed—the French championship—and was runner-up in the others. They were rated one-two. In the quarter-finals, however, Ashe, the first Negro chosen to the U.S. Davis Cup team, overpowered Emerson in four sets. And Pasarell, a Puerto Rican, blasted Stolle out of the tournament in a three-set rout.

Santana had been the dominant factor in leading Spain to a 4-1 victory over the United States in Davis Cup interzone play at Barcelona and on to the challenge round against Australia. In the closing days of December, Australia captured the Davis Cup, symbol of tennis supremacy, for the second year in a row by whipping Spain, 4-1, in the final at Sydney. Santana defeated Emerson to register Spain's lone point.

In women's tennis, the Australian champion, Margaret Smith, also held a near monopoly. However, she, like Emerson, was defeated in Paris in the spring and lost the French title to her teammate, Lesley Turner. Miss Smith beat Billy Jean Moffitt King, of California, in the U.S. singles final at Forest Hills.

The U.S. men's indoor singles championship also went abroad. It was taken to Sweden by Jan-Erik Lundquist.

The year 1965 ended with a gleam of hope for Americans, however. As the collegians competed in Australian tours, Ashe beat Emerson twice. In addition, Marty Riessen and Clark Graebner won over top-rated Aussies in both singles and doubles.

Major Amateur Tournaments

Davis Cup—Australia (defeated Spain, 4-1, at Sydney, Australia, Dec. 26-27)
Wightman Cup (Women)—United States (defeated Britain, 5-2, at Cleveland, Aug. 6-9)
Stevens Cup (Seniors)—United States (defeated Canada 3-2, at Forest Hills, Oct. 2-3)
U.S. Doubles (Brookline, Mass.; finals Aug. 29)—Roy Emerson and Fred Stolle, Australia; women: Mrs. Carole Graebner, Beechwood, Ohio, and Nancy Richey, Dallas
U.S. Singles and Mixed Doubles (Forest Hills, N.Y.; finals, Sept. 12)—Manuel Santana, Spain; women: Margaret Smith, Australia; mixed doubles: Fred Stolle and Margaret Smith, Australia; senior: Robert Sherman, Temple City, Calif.
U.S. Clay Court (River Forest, Ill.; finals, July 18)—Dennis Ralston; women: Nancy Richey; men's doubles: Clark Graebner, Beechwood, Ohio, and Marty Riessen, Evanston, Ill.; women's doubles: Nancy Richey; and Mrs. Carole Graebner
U.S. Men's Indoor (Salisbury, Md.; finals, Feb. 21)—Jan-Erik Lundquist, Sweden; doubles: Dennis Ralston, Bakersfield, Calif., and Chuck McKinley, Port Washington, N.Y.
U.S. Women's Indoor (Brookline, Mass.; finals, Feb. 13)—Nancy Richey; doubles: Mary Ann Eisel and Mrs. Carol Hanks Auchamp, St. Louis.
Australian National (Melbourne; finals, Jan. 31-Feb. 1)—Roy Emerson; women: Margaret Smith; men's doubles: John Newcombe and Tony Roche; women's doubles: Margaret Smith and Lesley Turner
French International (Paris; finals, May 29-30)—Fred Stolle, Australia; women: Lesley Turner; men's doubles: Roy Emerson and Fred Stolle; women's doubles: Margaret Smith and Lesley Turner; mixed doubles: Ken Fletcher and Margaret Smith
Wimbledon (England; finals, July 2-3)—Roy Emerson; women: Margaret Smith; men's doubles: Tony Roche and John Newcombe; women's doubles: Maria Bueno, Brazil, and Billie Jean Moffitt, Long Beach, Calif.; mixed doubles: Ken Fletcher and Margaret Smith

Other Championships

American Tennis Association (Wilberforce, Ohio; finals, Aug. 21)—Louis Glass, New York; women: Bonnie Logan, Detroit

Professional

U.S. Grass Court (Brookline, Mass.)—Ken Rosewall
U.S. Indoor (New York)—Rod Laver
Masters (Los Angeles)—Rod Laver

Intercollegiate

NCAA—Arthur Ashe, UCLA; doubles: Ashe and Ian Crookenden, UCLA; team: UCLA; mixed college: Gary Johnson, Los Angeles State; doubles: John Yeomans and Bill Schoen, Redlands; team: Los Angeles State

NAIA—George Kan, Pan American; doubles: Delfev Nitsche and Sherwood Stewart, Pan American; team, Pan American
Women—Mimi Henreid, UCLA; doubles: Nancy Falkenburg and Cynthia Goelet, Mary Baldwin College

Intercollegiate Team Champions

NCAA—University of California at Los Angeles (UCLA)
NAIA—Pan American
College Conferences—Athletic Association of Western Universities: UCLA; Atlantic Coast: North Carolina; Big Eight: Kansas; Big Ten: Michigan; Central Intercollegiate AA: Hampton Institute; Ivy: (tie) Harvard, Penn, Princeton; Mid-American: Western Michigan; Mid-Atlantic: Swarthmore; Missouri Valley: Wichita; Southeastern: Mississippi State; Southern: Davidson; Southwestern: Rice; Western: Utah; Yankee: Vermont

WIDE WORLD

U.S. TENNIS FANS watched Arthur Ashe, UCLA student, rise to world stardom in 1965 by upsetting Roy Emerson at Forest Hills on Sept. 10. Here, Ashe serves against Emerson.

National Collegiate (NCAA) Championships

(Ames, Iowa, March 25-27)
50-Yard Freestyle—Steve Clark, Yale (time, 0:21.2)
100-Yards Freestyle—Steve Clark (0:46.1)
200-Yard Freestyle—Roy Saari, Southern California (1:42.9)
500-Yard Freestyle—Roy Saari (4:43.6)
1,650-Yard Freestyle—Roy Saari (16:39.9)
100-Yard Breaststroke—William Craig, Southern California (1:00.3)
200-Yard Breaststroke—Tom Tretheway, Indiana (2:10.4)
100-Yard Backstroke—Gary Dilley, Michigan State (0:52.6)
200-Yard Backstroke—Gary Dilley (1:56.2)
100-Yard Butterfly—Fred Schmidt, Indiana (0:51)
200-Yard Butterfly—Fred Schmidt (1:51.4)
200-Yard Individual Medley—Robert Hopper, Ohio State (1:58.1)
400-Yard Individual Medley—Carl Robie, Michigan (4:16.6)
400-Yard Medley Relay—Indiana (Glen Hammer, Tom Tretheway, Fred Schmidt, Robert Williamson, 3:30.7)
400-Yard Freestyle Relay—Yale (David Lyons, Doug Kennedy, Ed Townsend, Steve Clark 3:07.2)
1-Meter Diving—Ken Sitzberger, Indiana (511.25 pts)
3-Meter Diving—Ken Sitzberger (565.05)
Team—Southern California (285 pts)

Intercollegiate Team Champions

NCAA—Southern California

NAIA—Macalester

College Conferences—Athletic Association of Western Universities: Southern California; Atlantic Coast: Maryland; Big Eight: Oklahoma; Big Ten: Indiana; Central Intercollegiate AA: Howard; Ivy: Yale; Mid-American: Ohio University; Mid-Atlantic: Bucknell (University); Franklin and Marshall (College); Missouri Valley: Cincinnati; Southeastern: Florida; Southern: Virginia Military Institute; Southwestern: Southern Methodist; Western AC, Utah.

TABLE TENNIS

World Championships

(Ljubljana, Yugoslavia, April 15-25)
Men's Singles—Chuang Tse-tung, Communist China
Women's Singles—Naoko Fukazu, Japan
Men's Doubles—Chuang Tse-tung and Hsu Yin-sheng, Communist China
Women's Doubles—Lin Hui-ching and Cheng Min-chin, Communist China
Mixed Doubles—Koji Kimura and Masako Seki, Japan
Swaythling Cup and Corbillon Cup—Communist China

United States Championships

(Detroit, March 19-21)
Men's Singles—Erwin Klein, Los Angeles
Women's Singles—Patty Martinez, San Diego
Men's Doubles—Erwin Klein and Bernie Bukiet, New York
Women's Doubles—Connie Stace, Grand Rapids, Mich.
Women's Doubles—Connie Stace, Grand Rapids, Mich., and Donna Chaimson, Cheverly, Md.

MICHEL JAZY, of France, is shown setting a 2-mile run record of 8:22.6 at Melun, France, on June 23, 1965. Two weeks earlier he cut the mile record to 3:53.6.

TRACK AND FIELD

The spotlight in track focused on record-shattering performances by three distance runners from three continents.

Foremost of the records to fall was that for the mile, which Michel Jazy, of France, lowered to 3:53.6 at Rennes on June 9. Two weeks later he ran two miles in a record 8:22.6 and simultaneously was clocked at 7:49 for 3,000 meters—a time that lowered his own previous mark. In this race he beat Ron Clarke, of Australia, who was on a record-breaking spurge, too.

In June, in Los Angeles, Clarke ran three miles in a record 13:00.4 while he was cutting his own February record for 5,000 meters to 13:25.8. On July 10, in London, he lowered the three-mile mark to 12:52.4. Four days later, in Oslo, he set records for six miles at 26:47 and for 10,000 meters at 27:39.4.

Meanwhile, in Helsinki, Jazy beat Clarke in a 5,000-meter race. Also ahead of Clarke was Kipchoge Keino, of Kenya. In August, Keino shattered the 3,000-meter record with a clocking of 7:39.5 in Sweden—just three weeks after Siegfried Herrmann of East Germany had established a record of 7:46.0 for the distance. By November, Keino also had acquired the 5,000-meter record, bettering Clarke's mark with 13:24.2 in New Zealand.

Americans were busy breaking field records, too. Randy Matson set a phenomenal mark of 70 feet, 7 inches for the shot put; Hal Connolly raised his hammer throw record to 233 feet, 9½ inches, before Gyula Zsivotsky, of Hungary, broke it with a throw of 241 feet, 11 inches. Ralph Boston added another half-inch to his long jump record with a leap of 27 feet, 5 inches.

During 1965 the U.S. Senate investigated a jurisdictional dispute between the Amateur Athletic Union (AAU) and the National Collegiate Athletic Association (NCAA). The Senate was drawn into the controversy because of threatened disciplinary action by the U.S. Track and Field Federation—created by the NCAA—against college athletes who might participate in the AAU championships. The American team, made up of AAU champions, subsequently lost to the USSR, 118-112, in Kiev in August—the first time the men had been defeated in a dual meet with the Russians. The Senate hearings led to the appointment of an arbitration panel of five men, named by Vice President Hubert Humphrey, to seek a solution. Despite a so-called truce, the wrangling between the groups had not abated when the indoor season arrived.

Men's AAU Outdoor Championships

(San Diego, Calif., June 26-27)

- 100-Yard Dash—George Anderson, unattached (0:9.3)
- 220-Yard Dash—Adolph Plummer, Southern California Striders (0:20.6)
- 440-Yard Dash—Ollon Cassell, unattached (0:45.1)
- 880-Yard Run—Morgan Groth, Oregon State T & F Club (1:47.7)
- Mile Run—Jim Ryan, unattached (3:55.3)
- 3-Mile Run—Bob Schul, unattached (13:10.4)
- 6-Mile Run—Billy Mills, U.S. Marine Corps (27:11.6)
- 2-Mile Walk—Ron Laird, New York A.C. (14:04.2)
- 3,000-Meter Steeplechase—George Young, unattached (8:50.6)
- 120-Yard High Hurdles—Willie Davenport, U.S. Army (0:13.6)
- 440-Yard Low Hurdles—Rex Cawley, Pasadena A.A. (0:50.3)
- Long Jump—Ralph Boston, Southern California Striders (26 ft 3½ in)
- High Jump—Otis Burrell, Southern California Striders (7 ft)
- Pole Vault—John Pennel, unattached (17 ft)
- Triple Jump—Art Walker, U.S. Army (53 ft 1 in)
- Shot Put—John McGroth, Pasadena A.A. (63 ft)
- Javelin—William Florke, Kansas City Olympic Club (258 ft 7 in)
- Discus—Ludvik Danek, Czechoslovakia (205 ft 7 in)
- Hammer Throw—Harold Connolly, Culver City A.C. (232 ft 1 in)
- Team—Southern California Striders (102 pts)

U.S. Track and Field Federation Outdoor Championships

(Bakersfield, Calif., June 11-12)

- 100 Yards—Lynn Headley, Nebraska (0:9.5)
- 220 Yards—Tommy Smith, San Jose (0:20.9)
- 440 Yards—Don Payne, Kansas State (0:46.2)
- 880 Yards—Charles Christmas, Abilene Christian (1:50.1)
- 120-Yard High Hurdles—Paul Kerry, Southern California (0:13.7)
- 440-Yard Hurdles—Larry Livers, Villanova (0:51)
- Mile—Bob Day, Bruin T.C., Los Angeles (3:56.4)
- 3-Mile Run—Doug Brown, Montana (13:29.1)
- 6-Mile Run—Gerry Lindgren, Washington State (28:21.7)
- 3,000-Meter Steeplechase—Darnell Clibborn, Bruin T.C., Los Angeles (9:22.9)
- 440-Yard Relay—San Jose State (0:40)
- Mile Relay—Iowa (3:08.7)
- 2-Mile Relay—Villanova (7:20.4)
- High Jump—Otis Burrell, Nevada (6 ft 10¼ in)
- Pole Vault—Bill Fosdick, Southern California (15 ft 6 in)
- Long Jump—Wellesley Clayton, Southern California (24 ft 2¾ in)
- Triple Jump—Charles Craig, Fresno State (50 ft 10 in)
- Shot Put—Roger Orrell, Abilene Christian (59 ft 3 in)
- Discus—Bob Stoecker, Stanford (186 ft 9½ in)
- Javelin—John Tuskaus, Arizona (249 ft 2½ in)
- Hammer Throw—Bill Corsetti, Northeastern (192 ft 3 in)
- Team—Southern California (62 pts)

National Collegiate (NCAA) Outdoor Championships

(Berkeley, Calif., June 17-18)

- 100 Yards—Charles Greene, Nebraska (0:09.4)
- 220 Yards—Earle Horner, Villanova (0:21.1)
- 440 Yards—Jim Kemp, Kentucky State (0:46.2)
- 880 Yards—Tom Farrell, St. John's N.Y. (1:48.1)
- 120-Yard High Hurdles—Paul Kerry, Southern California (0:13.9)
- 440-Yard Hurdles—Larry Godfrey, San Diego State (0:51.5)
- Mile—Bob Day, University of California at Los Angeles (4:01.8)
- 3-Mile Run—Doug Brown, Montana (13:40.2)
- 6-Mile Run—Doug Brown (27:59.2)
- Steeplechase—Bruce Mortenson, Oregon (9:00.8)
- 440-Yard Relay—San Jose State (Wayne Herman, Lloyd Murad, Maurice Compton, Tommy Smith; 0:40.5)
- Mile Relay—California (Chuck Glenn, Dave Fishback, Forrest Beatty, Dave Archibald; 3:07.5)
- Long Jump—Clarence Robinson, New Mexico (25 ft 10½ in)
- High Jump—Frank Costello, Maryland (6 ft 11 in)
- Triple Jump—Clarence Robinson (50 ft 2 in)
- Pole Vault—Bill Fosdick, Southern California (15 ft 8½ in)
- Shot Put—Neal Steinhauer, Oregon (62 ft 6 in)
- Hammer Throw—John Fiore, Boston College (200 ft 10 in)
- Discus—Bob Stoecker, Stanford (183 ft 7½ in)
- Javelin—John Tuskaus, Arizona (250 ft 5½ in)
- Team—Oregon and Southern California, tie (32 pts)

Men's AAU Indoor Championships

New York, February 19-20

- 60 Yards—Sam Perry, Fordham (0:6.0)
- 60-Yard High Hurdles—Ralph Boston, Southern California Striders (0:7.2)
- 600 Yards—Jack Yerman, Santa Clara (Calif.) Youth Village (1:11.3)
- 1,000 Yards—Ted Nelson, Southern California Striders (2:10.5)
- Mile—James Grelle, Los Angeles (4:07.4)
- 3 Miles—Billy Mills, U.S. Marine Corps (13:25.4)
- Mile Walk—Ronald Zinn, Cambridge, Mass. (6:25.7)
- Mile Relay—Camp Pendleton Marines (Dick Edmunds, Dick Metzger, Ron Freeman, Jim Heathy; 3:16)
- 2-Mile Relay—Villanova (James Orr, Al Adams, Tom Sullivan, Noel Carroll; 7:28.2)
- 1,060-Yard Medley Relay—Southern California Striders (Ron Whitney, Larry Dunn, Don Webster, Adolph Plummer; 1:54.4)
- High Jump—Valery Brumel, USSR (7 ft 2 in)
- Long Jump—Igor Ter-Ovanesyan, USSR (26 ft 2¼ in)

WIDE WORLD

RANDY MATSON, of Texas A. & M. University, sets world record (70 feet, 7 inches) for the shot put, during Southwest Conference meet at College Station, Texas, on May 8.

35-Pound Weight Throw—Hal Connolly, Culver City (Calif.) A.C. (70 ft ½ in)

Shot Put—John McGrath, Pasadena (Calif.) A.A. (62 ft 10¼ in)

Pole Vault—Billy Pemerton, Dallas (16 ft)

Team—Southern California Striders (26 pts)

National Collegiate (NCAA) Indoor Championships (Detroit, March 12-13)

60 Yards—Charlie Greene, Nebraska (0:06.1)

60-Yard High Hurdles—Gene Washington, Michigan State (0:07.2)

440 Yards—Theron Lewis, Southern Univ. (0:47.8)

600 Yards—Leland Albright, Louisiana State (1:10)

880 Yards—Tom Van Ruden, Oklahoma State (1:51.8)

1,000 Yards—Robin Lingle, Missouri (2:09.9)

1-Mile—Chris Johnson, Southern California (4:08)

2-Mile Run—Herald Hadley, Kansas, (8:56.4)

1-Mile Relay—Morgan State (Dennis Edgehill, Herman Hawthorne, Tim Johnson, Nick Lee) 3:15.6

Two-Mile Relay—Oklahoma State (Jim Metcalf, John Perry, Tom Van Ruden, Dave Perry; 7:27.9)

High Jump—Frank Costello, Maryland (6 ft 10 in)

Long Jump—Mike Cole, Maryland (25 ft 1 in)

Pole Vault—Bob Yard, Washington State (15 ft 8½ in)

Shot Put—Randy Matson, Texas A. & M. (63 ft 2¼ in)

Team—Missouri (14 pts)

Women's AAU Outdoor Championships (Columbus, Ohio, July 2-3)

100 Yards—Wyomia Tyus, Tennessee State (0:10.5)

220 Yards—Edith McGuire, Tennessee State (0:23.6)

440 Yards—Janell Smith, Fredonia, Kan. (0:55.1)

880 Yards—Morie Mulder, Sacramento, Calif. (2:11.1)

1,500 Yards—Morie Mulder (4:36.5)

100-Meter Hurdles—Charrie Sherrard, San Francisco (0:13.7)

200-Meter Hurdles—Jennifer Wingerson, Toronto (0:27.5)

440-Yard Relay—Tennessee State B (Mattiline Render, Calantha Rallings, Evelyn Harvey, Wyomia Tyus; 0:46.5)

880-Yard Relay—Cleveland Recreation (Gloria Woods, Debbie McDonald, Nathalie Allen, Madeline Manning; 1:43.9)

High Jump—Eleanor Montgomery, Cleveland Recreation (5 ft 7 in)

Long Jump—Willie White, Chicago Mayor Daley Youth Foundation, Chicago (20 ft 5½ in)

Discus—Lynn Graham, Los Angeles Mercurettes (157 ft 9 in)

Shot Put—Lynn Graham (47 ft 7 in)

Javelin—RaNaee Bair, San Diego T.C. (175 ft ½ in)

Team—Tennessee State (68 pts)

Women's AAU Indoor Championships (New York, February 19-20)

60 Yards—Wyomia Tyus, Tennessee State (0:6.8)

60-Yard Hurdles—Chi Cheng, Taiwan and Los Angeles Mercurettes (0:7.9)

200-Yards—Edith McGuire, Tennessee State (0:21.9)

880 Yards—Abby Hoffman, Toronto Olympic Club (2:11.8)

440 Yards—Janell Smith, Fredonia, Kan., and Norma Harris, Chicago, tie (0:56.5)

640-Yard Relay—Tennessee State (Wyomia Tyus, Essie Crews, Lorraine Dunn, Edith McGuire; 1:11.7)

1,060-Yard Relay—Major Daley Youth Foundation, Chicago (Caroline

Fumbanks, Willie White, Mary Hodge, Norma Harris; 2:14)

High Jump—Iolanda Balas, Rumania (5 ft 9 in)

Long Jump—Mrs. Mary Rand, England (20 ft 4 in)

Shot Put—Tamara Press, Russia (57 ft 2½ in)

Basketball Throw—Barbara Friedrich, Spring Lake, N.J. (107 ft 11 in)

Team—Tennessee State (20 pts)

AAU Long-Distance Events

15,000 Meters—Merle McGee, Santa Monica, Calif (45:59.0)

20,000 Meters—Larry Furnell, New York A.C. (1:05:37)

25,000 Meters—Tom Osler, South Jersey T.C. (1:27:08)

30,000 Meters—Lou Castagnola, American U.T.C. (1:41:37.1)

Marathon (Yankers, N.Y., May 23)—Gar Williams, Arlington, Va. (2:33:50.6)

1-Hour Run—Norman Higgins, Santa Monica, Calif. (11 mi 1,286 yds, 1 ft)

10,000-Meter Walk—John Mortland, Columbus, Ohio (48:19.6)

15,000-Meter Walk—Ron Laird, New York A.C. (1:13:24.8)

20,000-Meter Walk—Ron Laird (1:38:38)

25,000-Meter Walk—Ron Laird (2:01:42)

30,000-Meter Walk—Ron Laird (2:41:17)

35,000-Meter Walk—Ron Laird (3:07:09)

40,000-Meter Walk—Paul Schell, North Medford (4:17:38)

50,000-Meter Walk—Dean Rasmussen, Merchant Marine Academy (5:03:33)

1-Hour Walk—Ron Laird (7 mi 1,432 yds)

Other Events

AAU Decathlon—Bill Toomey, Los Angeles (7,764 pts)

USTIF Decathlon—Phil Mulkey, Birmingham, Ala. (7,008)

AAU Pentathlon—Jim Miller, Colorado U. (3,095 pts)

AAU All-Around—Bill Urban, New York A.C. (7,481 pts)

AAU 56-lb Weight Throw—Bob Backus, New York A.C. (43 ft 9½ in)

1-Mile Relay—N.Y. Pioneer Club (Vincent Mathews, John Davis, Carl Richardson, Frank Bowens; 3:11.9)

440-Yard Relay—N.Y. Pioneer Club (Lionel Urgan, Willie Pendergast, Julio Meade, Melvin Blenheim; 0:41.9)

2½-Mile Medley Relay—New York A.C. (T. Cracovia, David Perry, Reto Cavelti, John McDonnell; 10:05.3)

Boston Marathon (April 19)—Morio Shigematsu, Japan (2:16:33)

International Competition

U.S.-Russia—men: USSR 118, U.S. 112; women: USSR 63½, U.S. 43½

U.S.-Poland—men: U.S. 118, Poland 93; women: U.S. 59, Poland 57

U.S.-West Germany—men: U.S. 142, West Germany 91; women: U.S. 62, West Germany 55

U.S.-Britain (indoor)—men: U.S. 70, Britain 47; women: 38½, Britain 33½

U.S.-West Germany (indoor)—men: U.S. 101, West Germany 56; women: U.S. 61, West Germany 52

Intercollegiate Team Champions

NCAA—Oregon and Southern California (tie)

NAIA—Southern University

College Conferences—Athletic Association of Western Universities:

Oregon; Atlantic Coast: Maryland; Big Eight: Kansas; Big Ten:

Michigan State; Central Intercollegiate AA: North Carolina College;

Ivy: Harvard; Mid-American: Western Michigan; Mid-Atlantic: La

Salle; Missouri Valley: Drake; Southeastern: Tennessee; Southern:

Furman; Southwestern: Rice; Western: New Mexico; Yankee: Maine

WEIGHT LIFTING

National AAU Championships (Los Angeles, June 11-12)

123.5-Pound—Gary Hanson, New York (665 lbs)

132.3-Pound—Walter Imahara, New Orleans (790)

148.8-Pound—Homer Brannum, Dallas (820)

165.4-Pound—Tony Garcy, York, Pa. (880)

181.9-Pound—Gary Cleveland, Minneapolis (985)

198.4-Pound—Bill March, York, Pa. (1,020)

Heavyweight—Norbert Schemansky, Dearborn, Mich. (1,555)

World Championships

(Teheran, Iran, October 27-November 2)

Bantamweight—Imre Foldi, Hungary (793 lbs)

Featherweight—Yoshinobu Miyake, Japan (847½)

Lightweight—Waldemar Baszanowski, Poland (940½)

Middleweight—Viktor Kurentsov, Russia (963½)

Lightweight—Norbert Ozimek, Poland (1,040)

Middle Heavyweight—Louis Martin, Great Britain (1,074)

Heavyweight—Leonid Zhabotinsky, USSR (1,217)

WRESTLING

World Championships

(Manchester, England, June 1-3)

114.5 Pound—Yoshitsa Yoshida, Japan

125.5 Pound—Mohamed Ibrahim Saifpour, Iran

138.5 Pound—Tamiaki Furukada, Japan

154 Pound—Abdullah Mahaved, Iran

171.5 Pound—Guzam Sagaradze, USSR

191.5 Pound—Mansour Mehdizadeh, Iran

213.5 Pound Light Heavyweight—Ahmet Ayik, Turkey

Heavyweight—Aleksandr Ivanitski, USSR

Team—Iran (30½ pts)

Greco-Roman

(Tampere, Finland, June 6-8)

114.5 Pound—Sergei Rybalko, USSR

125.5 Pound—Ion Cernea, Rumania

138.5 Pound—Yury Grigoriev, USSR

154 Pound—Anatoli Kolesov, USSR

171.5 Pound—Gennady Sapunov, USSR

191.5 Pound—Anatoli Kolesov, USSR

213.5 Pound—Rimantes Bogdanas, USSR

Heavyweight—Valery Annismov, USSR

Team—Russia (42 pts)

KEYSTONE

ROBERT MANRY (lower right) receives a big welcome as he arrives at Falmouth, England, in his small sailboat, the *Tinkerbelle*. Manry, a Cleveland Plain Dealer copy editor, crossed the Atlantic Ocean alone, from Falmouth, Mass., in 78 days.

National AAU Championships (San Francisco, April 13-17)

Free-Style

- 114.5 Pound—Ray Sanchez, Cheyenne, Wyo.
- 125.5 Pound—Dick Sanders, Multnomah A.C., Portland, Ore.
- 138.5 Pound—Chick Murano, New York A.C.
- 154 Pound—Jim Burke, Olympic Club, San Francisco
- 171.5 Pound—Russ Camilleri, Olympic Club
- 191.5 Pound—Wayne Baughman, U.S. Air Force
- 213.5 Pound—Jerry Canone, Multnomah A.C.
- Heavyweight—Larry Kristoff, Chicago Wrestling Club
- Outstanding Wrestler Award—Russ Camilleri
- Team—Multnomah A.C., Portland, Ore.

Greco-Roman

- 114.5 Pound—Rich Heniyaji, Multnomah A.C.
- 125.5 Pound—Clem Crow, New York, A.C.
- 138.5 Pound—Chick Murano, New York, A.C.
- 154 Pound—Bob Douglas, Oklahoma State U.
- 171.5 Pound—Russ Camilleri, Olympic Club
- 191.5 Pound—Wayne Baughman, U.S. Air Force
- 213.5 Pound—Art Makinster, Oregon State U.
- Heavyweight—Garry Stensland, Multnomah A.C.
- Team—Olympic Club, San Francisco
- Outstanding Wrestler Award—Wayne Baughman

National Collegiate (NCAA) Championships (Laramie, Wyo., March 25-27)

- 115 Pounds—Tadaaki Hatta, Oklahoma State
- 123 Pounds—Mike Caruso, Lehigh
- 130 Pounds—Yojiro Uetake, Oklahoma State
- 137 Pounds—Bill Stuart, Lehigh
- 147 Pounds—Veryl Long, Iowa State
- 157 Pounds—Bob Kopnisky, Maryland
- 167 Pounds—Greg Ruth, Oklahoma
- 177 Pounds—Tom Peckham, Iowa State
- 191 Pounds—Jack Brisco, Oklahoma State
- Heavyweight—Jim Nance, Syracuse
- Team—Iowa State (87 pts)

YACHTING

North American Yacht Racing Union Champions

- Men (Mallory Cup)—Cornelius Shields, Jr., Larchmont, N.Y.
- Women (Adams Trophy)—Timothea S. Larr, New York
- Junior (Sears Cup)—Robert Doyle, Marblehead, Mass.
- Singlehanded (O'Day Trophy)—Colin Park, North Vancouver, B.C.

Distance Races

- Annapolis-Newport—Clayton Ewing's yawl Dyna, Easton, Md.
- Buenos Aires—Rio de Janeiro—Sumner A. Long's yawl Ondine, Larchmont, N.Y.

Chicago-Mackinac—Bill and Tom Schoendorf's cutter *Blitzen*, Milwaukee
Fastnet (England)—Richard Carter's sloop *Rabbit*, Nahant, Mass.
Marblehead-Halifax—Morton H. Engle's yawl *Huntress*, Mamaroneck, N.Y.

Miami-Montego Bay—Robert F. Johnson's ketch *Ticonderoga*, Portland, Ore.

Miami-Nassau—W.C. Byars yawl *Doubloon*, Tampa, Fla.
Port Huron-Mackinac—Charles Kotovic's sloop *Gypsy*, Milwaukee
Transpacific—Don Salisbury's sloop *Psyche*, Los Angeles

Southern Ocean Racing Conference Championship—William Snait's yawl *Figaro IV*, Stamford, Conn.

One-Design Class Championships

(National unless designated otherwise)

- Aqua Cat—Bill LaFontaine, East Norwalk, Conn.
- Atlantic—Joseph C. Olson, Cedar Point, Conn.
- Blue Jay—Ron Egan, Westport, Conn.
- Comet—Bob Seidelmann, Cherry Hill, N.J.
- Gougar Catamarans—Warren Cruden, Cedarhurst, L.I.
- Day Sailer—Wendell Davis, Boston
- Dragon (North American)—Buddy Friedrichs, New Orleans
- Ensign—Dr. George Brazill, Larchmont, N.Y.
- Finn (North American)—Capt. Dick Tillman, Wright AFB, Dayton, Ohio
- 5-0-5 (North American)—John Marshall, Greenwich, Conn.
- 5.5 Meter (World)—Agostino Straulino, Italy
- 5.5 Meter—H.R.H. Crown Prince Harald, Norway
- Flying Dutchman—Harry Sindle, Gloucester, Va.
- Highlander (International)—Orville Wood, Cleveland
- Lightning (World)—Tom Allen, Buffalo, N.Y.
- Luders 16 (International)—Barton Jahncke, New Orleans
- Moth (World)—Jean Pierre Roggo, Switzerland
- Moth—George Kranich, Ocean City, N.J.
- Mercury—Roger Roessler, Santa Barbara, Calif.
- National One Design (World)—Matt Haglund, Tawas, Mich.
- One Ton—Ron Dougherty, San Diego
- Penguin (North American)—Bruce Goldsmith, Skokie, Ill.
- Rainbow—George Page, Wilmette, Ill.
- Raven—Timothea Schneider Larr, New York
- Snipe (World)—Axel and Eric Schmidt, Brazil
- Snipe—Harry Levinson, Indianapolis
- Star (World)—Donald Bever, Vermillion, Ohio
- Star (North American)—John Albrechtson, Sweden
- Thistle—Peter Bordes, Brooklyn
- Tiger Cat—Douglas McGregor, Cottage Park, Mass.
- Two Men—Freeman Chase, Hingham, Mass.
- Victory—Jerry Pinckney, Mission Bay, Calif.
- Wood Pussy—Stimpson Brown, Oceanport, N.J.

BILL BRADDOCK

Sports Department "New York Herald Tribune"

STAMP COLLECTING

Philatelic records were set in 1965 in the number of new stamps issued by existing and newly created governments. Many neophyte collectors were confused by a market flooded with multicolored stickers from virtually all of the nations that came into existence in the last five years. These included many tiny states, notably in the Arabian Gulf area, which do not have postal services of their own.

There were so many king-size adhesives of unusual shapes and so many stamps with popular-theme designs (for example, space conquest, sports, flora, fauna, Churchill, and John F. Kennedy) that the Universal Postal Union joined the world's serious philatelic organizations in condemning what it described as "scandalous production of paper in the guise of postage stamps." Most of these issues were available only to privileged professionals, however, and were not sold at postoffices.

Exhibitions. The greatest stamp show in history was staged in June in Austria. Nearly 500,000 philatelists converged on Vienna to see treasures that filled the Hofburg Palace and National Fair Hall. In New York in February and March, the Pepsi-Cola Company sponsored an unprecedented type of show in which exhibits focused on the variety of postal services employed to carry mail, from ancient Egypt's pigeon-post to modern missiles. The year's philatelic climax was a show in Manila that was part of the observance of the 400th anniversary of the introduction of Christianity in the Philippines.

United Nations. Twentieth-anniversary commemoratives issued by the UN on June 26, 1965, were so popular that a limit of \$1.05 worth was imposed. A speculator, trying to corner the market, sent in about 4,000 requests, each with a check for \$1.05, but UN postal authorities refused to send the stamps.

New U.S. Issues. The United States issued 16 commemoratives, plus other stamps and postal stationery as follows: 5¢ stamped envelope for regular service (Jan. 5); 1¼¢ and 4¢ stamped envelopes (Jan. 6); 8¢ airmail envelope (Jan. 7); 5¢ Battle of New Orleans sesquicentennial (Jan. 8); 5¢ Sokol commemorative (Feb. 15); 25¢ Paul Revere coil stamp for regular service (Feb. 25); 5¢ Cancer Campaign stamp (April 1); 5¢ Appomattox centennial (April

HERBERT C. HOOVER, 31st president of the United States, who died in 1964, was honored by stamp issued in 1965 that shows the official photograph from the 1932 presidential campaign.

STEEL

World steel production increased in 1965, largely as the result of plant modernization and changes in steelmaking processes, particularly the increased use of the basic oxygen process.

Production. Crude steel production in the United States in 1965 totaled 131,200,000 net tons—a record and a gain of 4,124,000 tons, or 3.2%, over 1964. The U.S. steel industry planned to spend a record \$1.9 billion in 1965 on modernization and expansion programs.

World production of crude steel in 1964 totaled 478,222,000 net tons, up from 422,239,000 tons in 1963.

¹ Figure includes data for Luxembourg. ² Estimate. ³ Includes the Saar. ⁴ Included under Belgium. ⁵ United States data exclude 1,380,224 net tons of steel produced by foundries which reported their output to the Bureau of the Census but did not report to American Iron and Steel Institute. ⁶ Detail does not necessarily add to totals because of rounded figures. Sources: Statistical Quarterly Report for Iron and Steel Industry, West Germany Iron and Steel Federation, Düsseldorf; American Iron and Steel Institute; New York.

Basic Oxygen Process. In January 1965, the annual capacity for steelmaking by the basic oxygen process, also known as the LD (Linz-Donawitz) process, totaled 68,168,000 metric tons in 29 countries. In 1965, an additional capacity of 54,090,000 metric

tons by that process was under construction or planned.

Taconite Production in Minnesota. Minnesota's annual capacity to produce taconite pellets containing 60 to 70% iron is expected to reach 30 million tons by December 1968. This increase was made possible by the passage in 1964 of an amendment to the state constitution under which for 25 years the taconite mining industry will not be taxed at a higher rate than that imposed on other industries.

U.S. Technical Developments. In the United States, the U.S. Steel Corporation and the Jones and Laughlin Steel Corporation reported new processes for coating steel with aluminum and other metals by vapor deposition in a vacuum chamber. In addition, U.S. Steel installed a mill at its Gary, Ind., plant to roll steel foil down to 0.001 inch in thickness.

The American Can Company developed a tinless steel can for beverages. Inland Steel Company reported a low-carbon steel product, called Martensitic steel. It was claimed that in sheet form for can manufacture, this product is the strongest type of steel (100,000 to 230,000 pounds per square inch tensile strength) produced outside the laboratory. (See also CHEMISTRY.)

Canada. In 1965, the Steel Company of Canada began a \$100 million plant expansion to increase its pig iron and steelmaking capacity. The company also announced a major development in the basic open hearth process by which 15 heats of steel, totaling 2,310 net tons, can be produced in one day in a dual hearth furnace.

Western Canada's first completely integrated steel-making plant was under construction at Kimberley, B.C., by Consolidating Mining & Smelting Company of Canada. A new iron ore concentration plant was tested by Wabush Mines at Wabush Lake, Labr. The plant was designed to process 13,300,000 long tons of ore annually, yielding 5,300,000 long tons of iron concentrate containing at least 66% iron.

Australia. On Feb. 1, 1965, American Metal Climax announced an agreement to sell, through an Australian affiliate, 100 million tons of high-grade Australian ore to Japanese steel producers. The sale, to continue over a 22-year period, amounts to almost \$1 billion. The company also planned to develop the 270-million-ton Mount Newman iron ore deposits in northwestern Australia, in which it has a 55% interest, at an estimated cost of \$160 million.

Belgium. In Belgium, at Marchienne-au-Pont, the Centre National de Recherches Métallurgiques and the S.A. des Forges de la Providence developed a new 35-metric-ton converter which combines features of the LD and Kaldo steelmaking converters. The new converter is in the LD vertical position during high-speed refining, after which it is inclined and rotated like the Kaldo converted for close control of the finishing operation.

Britain. In England, the English Steel Corporation disclosed a process for making steel from scrap by means of a plasma arc.

Labor-Management Agreement. On Sept. 6, 1965, the United Steelworkers of America and 10 steel companies signed new labor contracts to run until at least August 1968. The new contract provided for an hourly employment cost increase of over 48 cents over the next three years. (See LABOR.)

UPI

AMBASSADOR ADLAI E. STEVENSON stands outside the UN General Assembly building in 1961, shortly after his appointment to head the U.S. delegation to the United Nations.

STEVENSON, Adlai E(wing)

U.S. political leader and diplomat: b. Los Angeles, Calif., Feb. 5, 1900; d. London, England, July 14, 1965.

Stevenson's significance lay chiefly in his efforts to raise the level of political debate in the United States. His approach was to shun emotionalism and expediency and to appeal to reason. As a speaker, he had an unusual command of language and a sharp and subtle wit. His eloquent speeches and statements were directed toward educating Americans on the nature of the world in which they lived and the challenges that faced them in it. Unsuccessful in two presidential campaigns, Stevenson never dominated United States politics, but he did affect the ways in which Americans viewed and discussed public affairs.

TWICE NOMINATED for the presidency by the Democratic National Convention, Stevenson is shown (below) in 1952 with his running mate, Sen. John Sparkman of Alabama, and (right) in 1956 with running mate Sen. Estes Kefauver of Tennessee.

WIDE WORLD

WIDE WORLD

Family Background. Stevenson's family background made participation in politics almost inevitable. His grandfather, the first Adlai E. Stevenson, had served as vice president in Grover Cleveland's second administration. Pride in family achievements, talk of politics, and the presence of politicians were features of the Bloomington, Ill., home in which the second Adlai was raised. He traveled extensively in America and Europe and was educated at the Choate School and at Princeton (B.A. 1922), Harvard, and Northwestern (L.L.D. 1926) universities. His marriage in 1928 to Ellen Borden was terminated by divorce in 1949; the couple had three sons.

Early Government Service. Stevenson's government career began with federal agency posts in the New Deal era. But even in the early 1930's, his chief interest was foreign affairs. During World War II he served as assistant to the secretary of the navy, and in 1945 he joined the State Department and participated in the preparatory conferences leading to the foundation of the United Nations. He was a UN delegate in 1946 and 1947.

Governor of Illinois. Stevenson was elected Democratic governor of Illinois in 1948. In this first candidacy for public office, he achieved his only victory at the polls, winning by a margin far greater than Harry S. Truman, the party's presidential candidate, got in Illinois. During his four-year administration, Stevenson drew able people into the state government and improved the police, highways, educational, and welfare systems.

First Presidential Campaign. Stevenson's electoral triumph and his record as governor aroused national interest in him as a prospective Democratic presidential candidate for the 1952 election. Although he preferred to serve a second term as governor, he accepted a draft to oppose the Republican candidate, Dwight D. Eisenhower.

Stevenson's campaign enlarged his circle of enthusiastic followers, but failed to produce victory. He defended Truman's foreign policy of containment, but rejected the president's "give 'em hell" political technique in favor of "talking sense" to the American people. His earnest speeches, however, could not compensate for his opponent's advantages: Eisenhower was a national hero, and there was widespread confidence in his ability in foreign affairs, whereas Truman's foreign policy was unpopular. Stevenson captured only nine states, which accounted for 89 of the 531 electoral votes. Defeated, Stevenson said that he felt as Abraham Lincoln had

UPI

YOUNG STEVENSON was photographed (above) in 1900 on the lap of his grandfather, Adlai E. Stevenson, vice president of the U.S. in 1893-97, and (left) while on a Canadian camping trip in 1925.

on a similar occasion: "like a little boy who had stubbed his toe in the dark . . . he was too old to cry, but it hurt too much to laugh."

After the election, Stevenson continued to play a large political role as titular leader of the Democratic party. He traveled widely, spoke frequently, and criticized the Eisenhower administration vigorously. He maintained that the administration was weakening the vital Western alliance and not doing enough to promote economic development and to combat Communist influence in the underdeveloped areas. "There are no magic, cheap, short solutions to global conflicts long in the making," he advised.

Second Campaign. In 1956, Stevenson was not a reluctant candidate. He vigorously pursued the nomination in state primaries and secured it on the first ballot at the Democratic National Convention. Against Eisenhower, however, he was less successful than in 1952, capturing only 73 electoral votes. Rejecting advice to stress domestic issues, he based his campaign on foreign policy, only to find that confidence in Eisenhower had not declined. Even more than in 1952, Stevenson lost despite the popularity of his party and because he could not match Eisenhower's personal appeal. In 1952 the Republicans had won the congressional elections by a small margin; in 1956 they lost their majority in

Congress even though Eisenhower's margin of victory was larger than before.

Despite defeat, Stevenson remained a man of influence. He expressed the sense of crisis that many Americans felt after 1956: "Our Russian competitors are much tougher than most of us have yet realized—and . . . this time we might get licked," he warned, "unless we are willing to change our habits, our political behavior and our complacent outlook on the world." He emphasized two themes—halting the arms race and promoting economic development in Asia and Africa.

By 1960, Stevenson's ideas were widely accepted, and many admirers sought his third nomination. Reluctant to engage in political battles again, he bowed to pressure and became a candidate for the Democratic nomination, but was defeated by the hard-driving John F. Kennedy.

Ambassador to the United Nations. Stevenson, who had helped his party return to the White House, was rewarded, not with the office of secretary of state that he wanted, but with appointment as ambassador to the United Nations. He accepted with the understanding that he would help shape policy. In 1963 the Kennedy administration took a step he had long advocated by signing a treaty banning nuclear testing in the atmosphere.

For four and one-half years, Stevenson battled to strengthen the world organization. While employing his prestige as spokesman for the American position, he also brought the United Nation's point of view to his own government.

Stevenson played a secondary role in policy making under the administrations of Presidents Kennedy and Lyndon B. Johnson. Although some American policies troubled him, he resisted pressure from admirers to resign, and publicly defended them. One of his last acts before his sudden death of a heart attack in London was to defend U.S. involvement in the war in Vietnam in a BBC broadcast.

Writings. Stevenson's eloquence and wit are evident in his publications, which include: *Call to Greatness* (1954), *What I Think* (1956), *The New America* (1957), *Putting First Things First: A Democratic View* (1960), and *Looking Outward* (1963).

UPI

STEWART, Michael. See biographical sketch under GREAT BRITAIN.

STOCKS AND BONDS

Stock prices generally advanced in 1965, continuing the long upswing that began in 1962. However, the rise was not as smooth as that of recent years, as evidenced by a sharp but temporary decline in May and June. While stocks advanced, the bond market for the most part exhibited weakness during the year.

Stock Prices. Stock prices, as measured by the Standard & Poor's index of 425 industrial companies, rose, with only minor interruptions, between January and May, when record levels were reached. Prices then suddenly turned downward for a brief period, dropping by an average of about 10% before resuming their advance. By October, the industrial price index again reached a record high.

Market action in 1965, in terms of the Standard & Poor's stock price indexes (1941-43=100), is shown in the following table (which includes 1964 ranges for comparative purposes):

Date ¹	Indus- trials	Rails	Utili- ties	500 stocks
1964 low.....Jan. 2	79.74	40.54	66.36	75.43
1964 high.....Nov. 20	91.29	49.87	74.97	86.28
1965 low.....June 28	86.43	41.06	72.03	81.60
1965 high.....Nov. 15	98.55	51.09	78.20	92.63
1965 close.....Dec. 31	98.47	51.28	75.51	92.43

¹ Dates are for industrials. Rail and utility highs and lows in some instances occurred on other dates.

Although the stock price indexes recorded new highs in 1965, some issues failed to participate in the advance. Of 1,640 issues traded on the New York Stock Exchange, 904 posted net gains for the year, while 519 scored net declines.

The volume of trading on the New York Stock Exchange reached a new record of 1,556,266,481 shares, 26% higher than in 1964. Total trading by the first week of November exceeded the 1,236-,565,000 shares traded in all of 1964.

NUMBER OF SHARES LISTED ON NEW YORK STOCK EXCHANGE

Stock Purchases. Preliminary evidence indicated that institutions continued to make sizable net increases in their common stock holdings in 1965. At the same time, the odd-lot figures, which show dealings in less than 100-share lots, indicated that the public was rather consistently on the selling side of the market.

The favorable earnings performance of most companies contributed to the general upward trend of the stock market. Many industries operated at high levels of capacity, and corporate earnings rose substantially. In terms of the industrial stock price index, net income (partly estimated) was approximately \$5.50 per share, a new record high and almost 14% above the \$4.83 per share of 1964.

In addition, there was widespread confidence that 1966 would bring further gains. This view was attributable in part to the belief that the nation's economy would be bolstered by increased federal government expenditures for the military commitment in Vietnam and by additional appropriations for new domestic programs.

Another factor of strength in the market was the absence of competition from new stock offerings. In the first nine months of 1965, \$1.2 billion of new common stocks were offered—only half the total for the same period in 1964.

Dividends. Dividends also increased in 1965, reaching the equivalent of approximately \$2.90 per share on the Standard & Poor's index, compared with \$2.60 per share in 1964. At the 1965 high, common stocks were sold at an average price 17.9 times their earnings, with an average dividend return of slightly less than 3%.

Bond Prices. In contrast to the buoyancy exhibited by most stock prices, bond prices were generally weak in 1965. Long-term government bonds, for example, moved from an average 4.16% yield basis early in the year to about 4.49% in early December. During the same period, yields on high-grade utility bonds rose from 4.37% to 4.75%.

Credit and Interest Rate Influences. The primary factor responsible for the higher interest rates was the surge in demand for credit. Consumer optimism was high, and individuals borrowed freely. Corporations turned increasingly to external financing to support their expanded plant and equipment outlays, larger inventories, and receivables.

Loans of Federal Reserve member banks rose \$9.5 billion in the first nine months of 1965, nearly twice the gain for the same period of 1964. Two thirds of this increase was for advances to commercial and industrial borrowers. The volume of corporate bond offerings reached \$10.2 billion in the period through Sept. 30, 1965, a gain of 32% over the offerings in the comparable period of 1964.

Along with demand influences, other factors exerted pressure on the money market. Net free reserves of the banking system were allowed to contract from positive levels early in the year to a net borrowed position ranging from \$100 million to \$200 million later in the year. In December the Federal Reserve raised its discount rate to 4½%. This action caused the prime bank rate to advance to 5%. The expectation that the federal government might find it necessary to borrow additional funds in 1966 also had the effect of boosting interest rates.

STRIKES AND WALKOUTS. See LABOR.

ON A VISIT TO SUDAN in February, Queen Elizabeth II of Britain inspects honor guard at Roseires. The queen toured the site of Roseires Dam, which was nearing completion on the Blue Nile River.

SUDAN

Relations between the predominantly Muslim-Arab northern region and the pagan- or Christian-African southern region of the Sudan deteriorated in 1965. Although there were efforts at negotiation and compromise early in the year, by summer the guerrilla warfare in the south had reached its most dangerous stage in the 10-year rebellion.

Negotiation Efforts. In December 1964 a government delegation went to Uganda to negotiate an amnesty with exiled leaders of the Sudan African National Union (SANU), the principal spokesmen for southern aspirations, and to arrange a conference to discuss southern problems. Although originally scheduled to meet at Juba in February 1965, the conference was postponed until March and moved to Khartoum because of the government's failure to arrange a cease-fire with the Anya Nya, a southern Sudanese terrorist organization.

The Khartoum conference of March 16-29 was attended by all principal groups from the north and south, as well as observers from other African states. The conference exposed not only the differences between north and south but also those among the southerners, some of whom demanded separation from the Sudan and others, autonomy within it. The northerners insisted upon national unity, although they were willing to accept some devolution of power. Despite the intransigence of both sides, the conferees agreed to send a peace commission to the south.

New Government. Although the north-south controversy remained unresolved, the transitional gov-

ernment of Premier Sir-el-Khatim el-Khalifa decided to hold elections for the Constituent Assembly in the north, while postponing them in the south. Anti-election riots in the eastern Sudan claimed 18 lives, but the voting took place between April 21 and May 8. The results gave the right-wing Umma party 74 of the 171 seats and the National Unionist party (NUP) 49 seats, with the rest split among minor parties.

When the new assembly convened on June 10, the two leading parties formed a coalition and elected former Foreign Minister Mohammed Ahmed Mahgoub of the Umma party as premier. Early in December a Communist's blasphemous public statement about the prophet Mohammed gave the government a pretext for outlawing the Communist party, the largest of the minority parties, and banning Communist deputies.

Civil War Resumes. The fragile truce achieved during the spring negotiations was shattered by July, and clashes between government forces and rebels were reported almost daily during the summer. After the elections, the mood of conciliation disappeared as both sides hardened their positions. The leadership of SANU passed from the more moderate William Deng to the militant Aggrey Jaden, and a new separatist group, the Azania Liberation Front, was formed by other radical southerners. The government resolved to step up its offensive against the guerrillas.

Aid to Insurgents. On a goodwill tour in early August, Premier Mahgoub received assurances from Kenya, Tanzania, and Ethiopia that they would prevent Sudanese insurgents from operating in their

Area: 967,498 square miles.

Population: 13,540,000 (July 1, 1965 est.).

Chief Cities (1964 est.) Khartoum, the capital, 138,000; Omdurman, 171,000.

Government: President of Supreme Council—Ismail al-Azhari (took office June 10, 1965); Premier—Mohammed Ahmed Mahgoub (took office June 10, 1965). Parliament—Constituent Assembly, 233 members; party seating (1965)—Umma, 85; National Unionist, 56; Communists, 11; others, 21; vacant, 60.

Religious Faiths: Muslims, 65% of population; Animists, 25%; Roman Catholics, 4%; others, 6%.

Education: Total school enrollment (1961)—411,203 (primary,

335,079; secondary, 67,696; teacher-training, 961; technical, 2,821; higher, 4,646).

Finance (1965 est.): Revenues, \$211,000,000; expenditures \$257,000,000; monetary unit, Sudanese pound, (0.3482 pound equals U.S.\$1).

Gross National Product (1963): \$1,322,000,000.

National Income (1963): \$1,175,000,000; average annual income per person, \$92.

Cost of Living Index (1964): 120 (1958=100).

Manufacturing (metric tons): Cement (1964), 100,000; sugar (1963), 19,000; beer (1963), 70,000 hectoliters.

Crops (metric tons, 1963-64 crop year): Cottonseed (1964-65), 309,000 (ranks 9th among world producers); peanuts, 273,000 (rank, 10th); sesame (1964-65), 174,000.

Minerals (metric tons): Salt (1964), 37,000; iron ore (1962), 20,000; chromite (1963), 17,000; gypsum (1963), 4,520; manganese (1962), 1,016; vermiculite (1962), 50; gold (1964), 877 iron ounces.

Foreign Trade (1964): Exports, \$196,000,000 (chief exports: cotton, \$93,000,000; gum arabic, \$19,000,000); imports, \$268,000,000 (chief imports, 1963: nonelectrical machinery, \$28,000,000; refined sugar, \$21,200,000; motor vehicles, \$21,200,000). Chief trading partners (1963): Britain (took 13% of exports, supplied 27% of imports); West Germany (took 11% of exports, supplied 7% of imports).

Transportation: Roads (1964), 5,032 miles (132 paved); motor vehicles (1964), 33,000 (automobiles, 18,000); railways (1963), 2,954 miles; merchant vessels (1964), 3 (14,000 gross registered tons); government airline, Sudan Airways; principal airport, Khartoum.

Communications: Telephones (1964): 32,746; television stations (1964), 1; television sets (1964), 10,000; radios (1960), 11,000; newspapers (1962), 7 (daily circulation, 64,000).

territories. However, the government believed that rebels were still receiving weapons by way of the Congo (Léopoldville) and Uganda. At one point, the Sudan threatened to break relations with the United States, Britain, and Belgium for allegedly aiding the Sudanese rebels.

Economy. In January 1965 the Agency for International Development agreed to help finance road construction in the Sudan. In the same month Czechoslovakia granted \$10 million in credit for the purchase of irrigation and construction equipment. A poor 1964 cotton crop had led to a decline in Sudan's exports to \$196 million, from \$226 million in 1963. In 1965, Sudanese cotton found markets in Communist China and eastern European countries. Nevertheless, the International Monetary Fund had to make \$11 million available to help the Sudan meet its payment difficulties.

SUGAR

Sugar production in the mainland United States declined in 1965, following four consecutive record crops. Preliminary estimates placed the output of sugar beets and sugarcane at 34,042,000 tons, or 9% below the 1964 crop of 37,749,000 tons, but 20% above the 1959-63 average of 28,339,000 tons. The total 1965 crop, including that of Hawaii, was 44,782,000 tons, or 8% below 1964, but 18% above the 1959-63 average.

Sugar beet production, estimated at 20,935,000 tons, was 10% below the record crop of 23,389,000 tons harvested in 1964, but 13% above average. The mainland sugarcane crop of 13,107,000 tons was down 9% from the 14,360,000-ton record set in 1964, but 24% above average. Including the Hawaii crop, the 1965 total was 23,847,000 tons, or 5% below the 1964 record of 25,053,000 tons, but 23% above average.

U.S. SUGAR PRODUCTION: BEETS AND CANE (In tons)

State	Average 1959-63	1964	Preliminary 1965
<i>Sugar beets:</i>

United States.....	19,436,000	25,053,000	23,847,000

Increases in average 1965 yields were not great enough to offset acreage reductions. Mainland sugarcane was harvested from an estimated 506,000 acres, or 11% less than the 1964 acreage, but 34% more than the 1959-63 average. Hawaii's 115,900 acres brought total U.S. sugarcane acreage to 621,900, or 9% below 1964. Harvested sugar beet acreage of 1,251,900 dropped 10% below 1964, but exceeded the 1959-63 average of 1,055,500 acres by 19%.

The sugar beet yield per acre was estimated at 16.7 tons, down from 16.8 tons in 1964 and down from the 1959-63 average of 17.6 tons. The sugarcane yield, including that of Hawaii, averaged 38.3 tons, compared with 36.6 tons in 1964 and the 1959-63 average of 39.8 tons.

CENTRIFUGAL SUGAR PRODUCTION BY MAJOR COUNTRIES: (In tons, raw value)

Country	Average 1955-56 to 1959-60	1964-65	Preliminary 1965-66

¹ Centrifugal sugar includes cane and beet sugar produced by the centrifugal processes, and is the principal kind used in international trade. The production of each country is credited to the May-April year in which harvesting and sugar production began. ² Cane and beet sugar. ³ Beet sugar.

World sugar production for the 1965-66 crop year was estimated at 70 million short tons (raw value), second only to the 72 million tons produced in 1964-65. Larger crops were indicated for Mexico, Brazil, India, and the Philippines. Production was down in the Soviet Union, West Germany, and the Republic of South Africa.

SUPREME COURT

Justice Arthur J. Goldberg, who was appointed to the Supreme Court by President Kennedy in 1962, resigned on July 20, 1965, to accept appointment by President Johnson as ambassador to the United Nations. He was succeeded on October 4 by Justice Abe Fortas, a member of a Washington, D.C., law firm.

Other members of the present Supreme Court are: Chief Justice Earl Warren, 74, appointed by President Eisenhower in 1953; Hugo L. Black, 79, the senior associate justice, who was appointed by President Roosevelt in 1937; William O. Douglas, 67, appointed by President Roosevelt in 1939; Tom C. Clark, 66, appointed by President Truman in 1949; John Marshall Harlan, 66, appointed by President Eisenhower in 1954; William Brennan, 59, appointed by President Eisenhower in 1956; Potter Stewart, 50, appointed by President Eisenhower in 1958; and Byron R. White, 48, appointed by President Kennedy in 1962.

U.S. SUPREME COURT members in 1965: (back row, l. to r.) Associate Justices White, Brennan, Stewart, and Fortas; (front row) Associate Justices Clark and Black, Chief Justice Warren, and Associate Justices Douglas and Harlan.

ABE FORTAS succeeded Arthur J. Goldberg as an associate justice of the U.S. Supreme Court on Oct. 4, 1965. A close friend and adviser of President Johnson, Fortas had come to public attention as a lawyer after winning two landmark decisions in criminal cases. One was a federal court ruling in 1954 that "an accused is not criminally responsible if his unlawful act was the product of mental disease or defect." This ruling led many states to broaden their tests of responsibility. The other decision, made by the Supreme Court in 1963, was that states must provide free counsel to poor defendants in criminal cases.

Fortas, a native of Memphis, Tenn., was born on June 19, 1910. After graduating from Yale Law School in 1933, he was an attorney for several federal agencies. From 1942 to 1946 he was undersecretary of the interior. He is a cofounder of an important Washington law firm which specializes in advising large corporations and in representing them before appellate courts. Fortas married Carolyn Eugenia Agger in 1935. She is also a lawyer.

During the term which began in October 1964 and ended in June 1965, the court handed down 122 opinions, of which 17 were *per curiam* (opinions unsigned by a justice, and usually shorter than regular opinions). There were 58 dissenting opinions, of which the most (12 each) were filed by Justices Black and Harlan. Chief Justice Warren and Justice Brennan filed no dissenting opinions. Justice Harlan wrote the most opinions of the court (12); Justice Stewart wrote nine opinions, and each of the other justices wrote ten. The court disposed of 2,180 cases during the 1964-65 term, leaving 482 cases on the docket at the end of the term. For a review of the Supreme Court's principal decisions in 1964-65, see LAW.

RICHARD L. HIRSHBERG
Attorney at Law

SURGERY

The successful removal of President Lyndon B. Johnson's gall bladder attracted national attention in 1965. The operation also included the removal of a kidney stone. Four surgeons, two physicians, a heart specialist, and an anesthesiologist formed the medical team that operated on the president at the Bethesda Naval Hospital, Bethesda, Md.

Significant developments in surgery during the year included further progress in combating coro-

nary artery disease, stomach ulcers and injuries, liver damage, and burns.

Coronary Artery Disease. In 1965 the President's Committee on Heart Disease, Cancer, and Stroke, in a report preparatory to a national program to conquer these illnesses, noted that 546,813 persons died of coronary artery disease in 1963. A surgical operation to combat this disease has been under development since 1946, when Dr. Arthur M. Vineberg of McGill University described a procedure for bringing arterial blood into the coronary arterial circuit. Under this procedure as presently used, the left internal mammary artery, which lies just behind the breastbone on the left side of the body, is implanted within the anterior wall of the muscle in

ARTIFICIAL HEART for use in humans is a goal of medical research. One type of experimental artificial heart (l.) was implanted in calves to study its performance. Heart shown above was implanted in dog at Baylor University.

NATIONAL INSTITUTES OF HEALTH

SURGEONS and medical team at Boston City Hospital (right) hooked up a pig's liver to a woman's circulatory system to try to save her life. She received five porcine liver perfusions and was kept alive for 18 days. Diagram (above) shows method used by U. of Kentucky Medical Center. Blood is pumped from artery in arm to an isolated pig's liver, passed through the liver to remove poisons, and then returned to the patient through a vein in the arm.

WIDE WORLD

the left side of the heart. This is done by inserting the artery through a hole made in the wall of the heart. After the tip of the artery is fixed in place with a suture, the entire area is covered with a fat pad from the sac (pericardium) surrounding the heart.

The operation is performed on a patient who meets three conditions: (1) he is suffering from angina pectoris; (2) most of the damage to his coronary arteries is near the anterior wall of the left side of the heart; and (3) no nearby scar tissue from a prior heart attack is present.

Recently, Dr. Vineberg has reduced the mortality rate for this operation to 1.8%. Some 83% of the persons successfully operated on showed an improved condition, and 80% resumed their occupations.

In August 1965, Dr. Richard Warren and an associate, B.J. Brenner, both of the Harvard Medical School, reviewed the information on patients treated by Vineberg's procedure. They concluded that the arterial channels remain open in nearly all cases. (See also HEART DISEASE.)

Stomach Surgery for Infants and Children. In 1965, Dr. Thomas C. Moore of the University of Kentucky Medical Center published a report on gastrectomy in infancy and childhood. Dr. Moore collected information from 17 countries on 113 patients who were less than 12 years old. Most of these patients had ulcers; others had stomach tumors, birth defects, infections, and stomach damage from ingesting acids and caustics. In three cases, the entire stomach was removed. Each of these patients was still alive $4\frac{1}{2}$ to 9 years after the operation. The overall mortality rate for this group of 113 infants and children was 10%. Patients less than six years old accounted for most of the deaths.

The most significant finding of Dr. Moore's survey was that normal growth and development of the patient occurred consistently after removal of either the distal portion of the stomach or the entire stomach. When only the proximal portion of the stomach was removed, the patient's growth and development were highly retarded.

Liver Research. Although it is difficult to find ways to help support a failing or damaged liver in a patient with a reversible disease, efforts are worthwhile because this organ has a particularly remarkable natural regenerative ability that can be aided by giving it temporary support.

Laboratory scientists have made experimental studies of animal livers for many years. In recent decades, the heart-lung machine (pump-oxygenator) has been used to study animal livers, but there is a large gap between these animal experiments and actual operations on human beings. Another problem is that fresh, undiseased human liver is rarely available for immediate transfer to a patient.

In 1965, Dr. Ben Eisenman, Dr. D.S. Liem, and Dr. F. Raffucci of the University of Kentucky Medical School reported results of experiments with pig livers. They studied pig livers that were placed in a sterile chamber and were perfused with human blood to which an anticoagulant had been added to prevent clotting. The production and flow of bile from the liver was used as the best means for measuring liver function. Both blood and bile flow decreased 30% every five hours until both stopped. The reasons for this stoppage are unknown.

These studies showed the feasibility of using this technique on patients with failing livers. At least eight patients have been treated by using a pig liver as an auxiliary liver. All of these patients were

comatose and were considered to be hopelessly ill. Their survival after treatment varied from 8 hours to 12 days. No patient was harmed by the treatment, and five awakened and were able to respond to commands. This improvement suggests that further trial of the treatment is warranted for desperately ill patients.

Skin Grafts for Burned Patients. There is only a minimal opportunity for the quick removal of burned, destroyed skin, and its replacement by means of skin grafts. Unremoved burned skin readily becomes infected. Therefore, many recent investigations of burns have been aimed at preventing and treating infections in burned skin. This work has been accompanied by efforts to cover the burned area as early as possible in order to permit the growth of normal skin.

In 1965, four surgeons at the Washington University School of Medicine in St. Louis found that a 0.5% silver nitrate solution is a safe antiseptic for use on burns. The burned areas of more than 25 patients were treated by applying thick cotton gauze dressings that were kept continuously wet with the silver nitrate solution. The dressings were changed once or twice daily. Septicemia (the invasion of the blood stream by bacteria) did not occur in any burn, no bacterial strains became immune to the silver nitrate, and there were no harmful effects on patients.

The use of the dressing over burned tissue does not prevent the death of burned tissue, and therefore skin grafting is still necessary. This is accomplished by placing thin strips of skin on the body, especially in flexure areas in order to prevent contracture. When the silver nitrate dressing is used, much less skin grafting is necessary than was previously required because of the marked regeneration of skin from nearby normal tissues. (See also BLINDNESS).

ROBERT W. BUXTON
Professor of Surgery

University of Maryland School of Medicine

SWEDEN

While pursuing a policy of neutrality, Sweden continued to search for new avenues to world peace and disarmament. The most serious problems facing the Social Democrats, who remained in firm control

EUROPE

AFRICA

ASIA

of the government, were posed by the country's economy, which was increasingly subjected to inflationary pressures.

Foreign Policy. The annual debate in the Riksdag (parliament) on Sweden's foreign policy took place in the early part of the year. Most of the members pressed for further world disarmament negotiations. The four major parties expressed interest in the ultimate merger of Europe's two trade blocs, the Common Market and the European Free Trade Association. Sweden belongs to the latter.

National Defense. The question of whether Sweden's own military defenses should include a nuclear arsenal was debated in the Riksdag but not resolved. At the time of the debate, the Swedish Institute of Public Opinion Research announced that 69% of the persons it had polled felt Sweden should not obtain atomic weapons for its defense. This represented a substantial shift in public opinion; in a similar poll taken in 1957, only 36% opposed the acquisition of atomic arms.

Political Party Changes. Gunnar Heckscher resigned as chairman of the small Conservative party at the party congress in June. The choice of Yngve Holmberg to replace him came as a surprise since he was relatively young and had only recently entered politics. Another young politician made a swift rise in 1965: Olof Palme, the popular cabinet minister without portfolio, was appointed minister of communications in the fall.

Economy. Although Sweden continued to rank as the richest Scandinavian country, there were signs that the economy was "overheating," and the threat of a serious inflation caused general concern. The gross national product for 1964 had shown a 6.5% increase, a high percentage even for prosperous

Foreign Trade (1964): Exports, \$3,674,000,000 (chief exports: wood pulp, \$439,000,000; paper, \$371,000,000; wood, \$278,000,000; iron ore, \$210,000,000); imports, \$3,855,000,000 (chief imports, 1963: nonelectrical machinery, \$398,000,000; petroleum products, \$348,500,000; transport equipment, \$348,100,000). Chief trading partners (1963): West Germany (took 14% of exports, supplied 22% of imports); Britain (took 13% of exports, supplied 15% of imports); U.S. (took 6% of exports, supplied 10% of imports).

Transportation: Roads (1964), 59,869 miles (12,148 paved); motor vehicles (1964), 1,696,000 (automobiles, 1,556,000); railways (1963), 8,970 miles; merchant vessels (1964), 470 (3,969,000 gross registered tons); airlines, SAS, Linjeflyg; principal airports, Göteborg, Malmö, Stockholm.

Communications: Telephones (1964), 3,222,699; television stations (1964), 87; television sets (1964), 1,965,000; radios (1963), 2,950,000; newspapers (1963), 121 (daily circulation, 3,791,000).

Sweden. It was predicted that this rate would drop to about 4.5% in 1965, partly as a result of a shortage of labor and capital.

The head of the Labor Market Board predicted in 1965 that Sweden would need from 50,000 to 60,000 new workers annually for several years to supplement the regular labor force. It was hoped that Swedish women could be drawn into the labor force in greater numbers to fill some of the need for more workers.

Over the past four years, construction industries have expanded at an annual rate of 8% to 10%. The rate is expected to drop to 2% in 1965 as a result of an increase in the discount rate to 5.5% (the highest point since 1932) and a reduction in government investment in the industries. The discount rate was raised to check inflation and slow down the economy in order to prevent further strains on it.

On January 12, Minister of Finance Gunnar Sträng called for a 9% increase in the general sales tax to check the high level of consumption. Labor responded by demanding higher wages. Negotiations for a new two-year wage agreement between management and labor were begun in November. There is general concern that if labor costs go much higher, Sweden's exports will be priced out of the world market. Such a development would be extremely damaging to Sweden because the health of its economy depends on maintaining a high level of exports.

Education. In addition to the new university planned for Umeå, the committee on higher education proposed four new university centers: Stockholm Uni-

versity in Linköping; Uppsala, in Örebro; Göteborg, in Karlstad; and the University of Lund, in Växjö.

The committee also suggested the adoption of a new type of instruction, to replace in some instances the familiar lecture pattern with new methods, including instructional television. Increases in student housing facilities were also recommended.

Public debate on the advisability of sex education in the schools and in the public media continued, with no abatement in its intensity. The curriculum of the schools and the views of church leaders remained unchanged.

Deaths. Death took two members of the royal family in 1965. Queen Louise, wife of King Gustaf VI Adolf, died in March at the age of 75, and was given a state funeral. On June 5, Prince Wilhelm, brother of the king, died at the age of 80. (See NECROLOGY.)

SWITZERLAND

Switzerland, in spite of its general prosperity, was faced with a number of problems in 1965, including inflation and the foreign-labor market.

Measures to Prevent Inflation. Two restrictive economic measures were approved by substantial majorities in a popular referendum held in February. The first, dealing with credit policy, was designed to reduce the inflow of foreign capital; the second was aimed at slowing the pace of the construction industry.

Foreign Labor. To meet the continuing need for unskilled labor, the federal government for some time has permitted the importation of workers from other European countries. In 1965 there were 475,000 Italian, 82,000 Spanish, and 79,000 German workers in Switzerland, a slight reduction in the total from the previous year.

The presence of so many foreign residents with different cultural backgrounds has produced social tensions as well as complaints about lower standards of quality. (For example, foreign labor has been blamed for the proverbially punctual Swiss trains sometimes falling behind schedule.) Consequently, there have been demands that the number of foreign workers be reduced. However, since their presence is an economic necessity, it is likely that they will remain for the immediate future. The government has made some concessions to the foreign workers, and their living conditions have improved. Present government policy is to stabilize their numbers, and discussions continue as to the best method to allocate them to various sectors of

the national economy where they are most needed.

Minority Unrest. In 1959 the French-speaking Catholic minority in the Jura Mountains protested against the German-speaking Protestant administration of Canton Berne. The minority problem continued to make news in 1965, although it appeared to be less acute than before. After forming the Free Jura party, some of the dissatisfied group asked a statesman from a neighboring country to intercede in their behalf—a step that the

average Swiss resented. Following disturbances at the Lausanne exposition in 1964, local and federal government authorities made some efforts to conciliate the Jurassiens. However, it is unlikely that sufficient support could be obtained to approve the constitutional amendment required for the creation of a separate Jura canton.

Banking Scandal. Early in 1965 it was disclosed that two banks, the Spar- und Kreditbank of St. Gallen and the Banque Genévoise de Commerce et de Crédit, were involved in doubtful business practices after they came under the control of a Spanish financier. The scandal reached the Swiss Banking Commission, whose chairman, Max Hommel, was suspended and replaced by a former federal president, Hans Streuli. Both banks subsequently took corrective managerial measures.

Avalanche. In August, at Saas-Fee in southern Switzerland, near the Italian border, millions of tons of ice broke loose from a glacier and caused an avalanche that killed at least 88 Swiss and Italian workers. The avalanche delayed construction of the Mattmark hydroelectric dam.

The Syrian economy was extensively nationalized during the early months of 1965 as the ruling Baath party pushed forward its Socialist program. In August-September and again in late December the provisional government was reorganized to give wider representation to the various economic and social elements of the population, but firm control by the Baath party and the dominant position of Gen. Amin el-Hafez in the party and the state were maintained. Tension over the Palestine issue remained high as Syria adopted the most active anti-Israeli policy of any Arab country.

Nationalization Program. By a series of decrees issued between Dec. 23, 1964, and May 3, 1965, the government wholly or partially nationalized the major manufacturing and processing plants, privately owned public utilities, domestic and foreign oil companies, and many export-import firms. Owners were compensated in government bonds redeemable over a 15-year period and paying 3% interest.

Efforts of the business community and conservative religious leaders to arouse the public against the initial nationalization measures resulted in rioting in Damascus on January 23 and 24. Stringent measures of repression restored order, and by January 29 overt opposition had been crushed.

Economic Development. In spite of the confusion caused by hurried efforts to organize a centrally planned economy made up of a fully nationalized sector, a mixed sector, and a private enterprise sector, the government moved ahead with a long-range development plan. The development budget for 1965 called for expenditures of \$105,644,000.

Several agreements providing for development by foreign companies were concluded during 1965. On March 31 a contract was signed with a group of French companies for the construction of a new \$25 million jet airport near Damascus. Late in May agreement was reached with a British consortium for the construction of a 400-mile oil pipeline from the as yet unexploited oilfields at Karachuk in northeast Syria to the new port of Tartus on the Mediterranean Sea.

Political Developments. The disturbances caused by the implementation of the nationalization program and political factionalism within the Baath party delayed promised constitutional changes, but on August 23 an enlarged National Revolutionary Council of 95 members was established. It included members of the Council of the Revolutionary Command, which had seized power in 1963; the Syrian members of the international directorate of the Baath party; the directorate of the Syrian Baath party; and representatives of peasant, trade union, and professional organizations.

On September 2 the National Council elected a new five-member Presidency Council, with General Hafez again serving as chairman. Hafez relinquished the premiership, which he had held since October 1964, and on September 23 a new Baathist cabinet was installed under the leadership of Dr. Youssef Zayyen. On December 21, following rumors of an abortive coup against President Hafez by young Baathist army officers with close ties to the Zayyen government, the international directorate of the Baath party forced the resignation of the cabinet. Salah el-Bitar, a moderate Baath leader who had served as premier in 1964, was asked to form a government, and on Jan. 2, 1966, he announced the formation of a predominantly civilian cabinet.

Foreign Affairs. Friction with Israel, which had resulted in serious border clashes late in 1964, continued throughout 1965. The usual frontier disputes were compounded by activities of the Palestine-Arab refugee organization, Al Fatah, which made some of its raids into Israel from Syria, and by construction on the initial stages of Syrian diversionary works to carry the waters of the Baniyas River away from the Jordan River in order to prevent their use by Israel. Israeli and Syrian border forces clashed on February 17 and 18, between March 2 and 21, and on May 13, July 18, August 12, and December 2.

As the only Baath-controlled Arab state, Syria remained somewhat isolated within the Arab League, although it cooperated in the work of the organization and on January 1 became a charter member of the Arab Common Market.

Syria maintained its role of nonalignment between the Communist states and the West. Early in the year relations with the United States became somewhat strained when, on February 16, the Damascus government expelled Walter S. Snowdon, second secretary in the American embassy, for alleged involvement in the activities of a Syrian spy ring.

TANZANIA

The United Republic of Tanzania, founded in 1964 by the merger of the independent states of Tanganyika and Zanzibar, sought in 1965 to unite its people by appeals to a nationalism that would transcend their loyalties to the former countries. President Julius K. Nyerere seemed determined to sacrifice inherited political and economic institutions in order to build a genuinely African society. His nationalistic program received a strong mandate on September 21, when 96.5% of the voters confirmed his nomination to a second five-year term. To forge national unity, a new interim constitution establishing a one-party state was adopted in July.

Tanzania in effect withdrew from East African monetary institutions by providing for a national bank and currency and for higher protective tariffs in its budget for fiscal year 1966. Although frustrating plans for an East African political federation, Nyerere remained firmly committed to African unity. When the Organization of African Unity (OAU) resolved to break relations with Britain on December 15 if Britain failed to crush Rhodesia's white supremacist government, Tanzania complied with the resolution at the risk of losing some \$10,000,000 in annual aid from Britain.

Government. In March, President Nyerere announced that the Tanganyika African National Union (TANU) would merge with the Afro-Shirazi Party (ASP) of Zanzibar, and on May 11 the Zanzibar Revolutionary Council voted to abolish all parties on the island but the ASP. In a special June meeting, TANU decided that a joint TANU-ASP conference would select one candidate for the fall presidential election. On July 5 the National Assembly approved the Interim Constitution of Tanzania, which set up a one-party state, and the Presidential Elections Bill, which provided for the nomination of a single presidential candidate.

Elections for the 107 members of the National Assembly from mainland Tanganyika were held on September 21. Although TANU was the only political party represented, it put up two or more candidates each for 101 of the constituencies, and competition was lively. On the same day, Nyerere was reelected unopposed in a presidential plebiscite. A

week later he reshuffled his cabinet, taking the key post of minister of external affairs for himself and moving the incumbent, Oscar Kambona, to the new post of minister of regional administration.

Foreign Affairs. Relations with the United States worsened in 1965 as an aftermath of Tanzania's accusations in November 1964 that the Americans were conspiring with the Portuguese to attack Tanzania. In January, two U.S. diplomatic officials were expelled for alleged subversive activities. The United States retaliated by requesting the recall of Tanzanian diplomats in Washington, and later both nations temporarily recalled their ambassadors.

Meanwhile, the growing friendship between Communist China and Tanzania was climaxed by an exchange of state visits. President Nyerere visited China in February, and Prime Minister Chou En-lai came to Tanzania in June. After Chou's visit, President Nyerere defended Tanzania's expanding links with China, but sought to improve relations with the United States. Affirming his policy of non-alignment, he said, "Try to understand that by ex-

PRESIDENT NYERERE (right) toasts Premier Chou En-lai of China at a state banquet in Dar es Salaam on June 5.

JULIUS K. NYERERE, president of Tanzania, once regarded as a friend of the West, was less than friendly toward Western policies in 1965. He concluded trade pacts with Communist China, broke relations with Britain, and transformed his nation into a one-party state. However, after his reelection on September 21, he restated his adherence to nonalignment: "We stand ready to remain friends with all nations on the basis of equality and mutual respect."

Nyerere was born in Tanganyika about 1921. The first Tanganyikan to study at a British university, he took an M.A. degree at Edinburgh in 1952. Returning home, he founded the Tanganyika African National Union, the country's only political party, in 1954. He became prime minister in 1961, but resigned shortly after the nation won independence from Britain on Dec. 9, 1961. When Tanganyika became a republic on Dec. 9, 1962, Nyerere was elected president. In 1964 he negotiated the union of Tanganyika and Zanzibar (Tanzania), and assumed the presidency.

tending a hand of friendship to the Chinese I don't intend to be an enemy of the Americans."

The trade and aid agreements with China also dealt a blow to the East African Common Services Organization and to relations between Tanzania and neighboring Kenya and Uganda. Since China would be supplying many of the consumer goods Tanzania imports from its neighbors, it was an opportune time for Tanzania to declare its financial independence in the budget announced on June 10.

On December 15, Tanzania, in compliance with the OAU resolution, became the first member of the Commonwealth of Nations to break relations with Britain. However, it was expected that British aid would continue.

West Germany withdrew its military aid in February, after President Nyerere agreed to allow an East German consulate in Dar es Salaam.

Economy. With foreign assistance, the Tanzanian economy continued to expand under its five-year plan (1964-69). Large development loans were made by Communist China, Britain, West Germany, the Netherlands, and Israel.

In Zanzibar, officials continued to nationalize factories, confiscate private plantations, and control processing plants for the island's exports. On June 28 a land redistribution program was begun to apportion confiscated land in three-acre plots to some 900 persons.

TARIFFS. See INTERNATIONAL TRADE.

TAXATION

In spite of lower federal income tax rates approved by Congress in 1964, and the termination or reduction of certain excise taxes in 1965, tax receipts continued to rise in 1965.

Excise Taxes. The Excise Tax Reduction Act of 1965 (Public Law 89-44), signed by President Johnson on June 21, terminated or reduced many excise taxes. Retail excise taxes on jewelry, furs, toilet preparations, and luggage were repealed as of June 22. Certain manufacturers' excise taxes also were repealed. These included taxes on household refrigerators; self-contained air conditioners; electric, gas, and oil household appliances; television and radio sets; musical instruments; most sporting goods; photographic equipment; and business machines.

On June 22 the manufacturers' excise tax on passenger automobiles was cut from 10% to 7%, and on Jan. 1, 1966, to 6%. Furthermore, it was scheduled to be cut to 4% on Jan. 1, 1967, to 2% on Jan. 1, 1968, and to 1% on Jan. 1, 1969. The tax on most trucks, buses, tractors, and trailers remained at 10%.

The taxes on admission to theaters, sporting events, musical performances, and cabarets were repealed as of noon on Dec. 31, 1965. The 10% federal excise tax on local and long distance telephone service will drop to 3% in 1966, 2% in 1967, and 1% in 1968, and will end in 1969.

Other Tax Measures. Public Law 89-243 (Oct. 9, 1965) extended the Interest Equalization Tax until July 31, 1967, with a few modifications. This law seeks to improve the balance of payments position of the United States by discouraging investments in foreign securities.

President Johnson's Executive Order No. 11,216 (April 24, 1965) designated Vietnam as a combat zone, beginning Jan. 1, 1964. This entitles enlisted men to exclude from taxable income all compensation received for service in that area from that date, or during hospitalization resulting from such service. Estates of eligible servicemen are also entitled to a special estate tax exemption.

(For changes in the income tax law to implement Public Law 89-97—the Social Security Amendments Act of July 30, 1965, popularly known as the Medicare law—see MEDICARE; SOCIAL SECURITY.)

Court Decisions. Court rulings in 1965 in the field of taxation were relatively unspectacular. The Supreme Court held that accidental death insurance, such as airplane flight insurance, is equivalent to straight life insurance for estate tax purposes. A lower federal court ruled that although a state court refuses to recognize the validity of Mexican and Florida divorces as applied to its own residents, these divorces are valid where federal income taxes are concerned.

Treasury Rulings. The discount given by insurance companies to persons who prepay their life insurance premiums for a number of years is no longer tax-free to the policy owners. The discount will be prorated over the years covered by the prepayment, and the policyholder will add to his taxable income the portion of discount allocated for a particular year.

Various Internal Revenue offices announced that, as a rule of thumb, taxpayers who are unable to provide proof of the exact amounts of their chari-

table contributions but can satisfy the agent that contributions have in fact been made are allowed deductions ranging between \$50 and \$80.

A liberalization of the "reserve ratio" limitation on Treasury Guideline Depreciation saved businessmen some \$700 million in taxes.

Many states passed laws permitting members of various professions to carry on their practice in special corporate form in order to enable them to qualify for important federal tax benefits ordinarily available only to employees of corporations. The Treasury nullified the effect of this legislation by refusing to recognize these corporations as true corporations for federal tax purposes.

The method of valuing property for gift and estate taxes was changed to include a "retail" valuation method which will generally increase taxable values for both taxes. Savings and Loan Associations were told to classify their dividends to depositors as interest when reporting the annual amounts paid or credited to depositors.

Revenue Collections. Despite the individual and corporate rate cuts made by the Revenue Act of 1964, federal internal revenue collections for fiscal year 1965 reached a new record of \$114,429,000,000. This compares with \$112,260,000,000 collected for fiscal 1964, during which higher income tax rates were in effect.

State tax collections rose to a new peak of \$26,104,000,000 for fiscal year 1965, compared with \$24,243,000,000 collected in fiscal year 1964. Although corporation net income taxes produced the greatest percentage increase among the various state taxes—13.9%—general sales taxes continued to provide 25% of the total taxes collected.

The average per capita state tax increased from \$127.25 for fiscal year 1964 to \$135.24 for fiscal year 1965. Delaware had the highest—\$239.50—followed by Hawaii, with \$217.73. Nebraska had the lowest—\$78.01, and New Jersey was next lowest, with \$80.24.

Local government tax collections for fiscal year 1964 soared to a record high of \$23,542,000,000. Property taxes produced \$20,519,000,000, and sales and gross receipts taxes, \$1,806,000,000.

Tax Developments in Other Countries. Argentina increased its withholding taxes on interest and dividends paid to foreigners and raised the profits tax on Argentine branches of foreign companies from 46.03% to 61.07%.

Canada cut its personal income taxes by 10% and extended to the end of 1966 the fast write-offs of

amounts expended on new machinery and equipment.

Colombia imposed a surcharge of 15% on total income tax payments for 1964, payable in 1965, and a surcharge of 10% on total income tax payments for 1965, payable in 1966.

El Salvador repealed its 50% consumption tax on cosmetic and toilet articles.

Great Britain raised its basic income tax rate from 38.75% to 41.25%; boosted taxes on liquor, cigarettes, and automobile licenses; and barred any business entertainment deductions except for entertaining overseas buyers. It also imposed a tax on capital gains for the first time, with a 41.25% rate on gains realized within a year after the acquisition of an asset, and a 30% rate if the asset is held longer than a year.

Indonesia adjusted business tax rates so that businesses earning less than 2.5 million rupees pay only a 10% tax, and businesses earning more than 500 million rupees pay the top rate of 52.5%. It also modified its personal income tax schedule to exempt many more individuals entirely and to lower the top rate from 75% to 40%.

Italy reduced registration, government concession, and mortgage taxes on business mergers occurring between March 28, 1965, and Dec. 31, 1967.

Jordan enacted a new income tax law to achieve a more progressive rate and bracket structure. The maximum rate on incomes over \$22,400 is 50%, corporate profits are taxed at a flat rate of 25%, and dividends to stockholders are not taxable.

Malaysia imposed a turnover tax rate of 0.5% on businesses with turnovers in excess of \$12,000 a year. It also levied a 10% income tax on tin mining earnings in addition to the standard income tax.

Nationalist China imposed new commodity taxes on refrigerators and air conditioners at a 15% rate, and on television sets at a 10% rate.

Norway raised its general turnover tax rate from 10% to 12%.

Panama adopted a new income tax schedule ranging from 5% to 45%. Under this schedule, individuals in lower income brackets pay less tax than before while those in medium and higher brackets pay more. It also abolished the previous capital gains tax exemption on real property held for more than two years.

Paraguay imposed an annual tax of 0.5% on the capital and accumulated reserves of corporations and certain other firms, including branches of foreign firms. The law expires at the end of 1968.

Peru raised general income tax rates and the tax rate on mining profits. It also boosted the sales tax rate from 4.5% to 5%.

Sweden increased the general turnover tax rate from 6.4% to 10% and abolished specific taxes on sugar, phonograph records, playing cards, and toothpaste.

TEA

World production of tea continued upward in 1965. Plantations on three continents yielded 2,416,200,000 pounds, an increase of 20,900,000 pounds over the record 1964 harvest.

Continuation of the upward trend is attributed to expanding acreage, increased use of fertilizers, and the replanting of existing estates with higher-yielding bushes. Thus far, rising consumption has

been able to absorb the increasing production.

Asia grew 92% of the world's tea in 1965, with production estimated at 2,236,000,000 pounds. Africa followed with 135,200,000 pounds, and South America with 45,000,000 pounds.

Chief Producers. India continued to be the world's largest producer; its output of 825,000,000 pounds was slightly above the 1964 record. Ceylon retained its No. 2 position, with a record crop of 490,000,000 pounds—about 8,200,000 pounds more than in 1964. Communist China produced about the same amount of tea—350,000,000 pounds—as in 1964. Japan's production rose slightly, to 185,000,000 pounds. The Soviet Union's crop of 100,000,000 pounds was about the same as in 1964.

TEA PRODUCTION IN PRINCIPAL COUNTRIES

Country	(In pounds)		
	Average, 1955-59	1964	Forecast, 1965
India.....	695,900,000	823,800,000	825,000,000
Ceylon.....	395,900,000	481,800,000	490,000,000
China, Communist.....	279,800,000	350,000,000	350,000,000
Japan.....	163,200,000	183,600,000	185,000,000
USSR.....	63,700,000	100,000,000	100,000,000
Indonesia.....	100,200,000	100,000,000	100,000,000
Pakistan.....	53,500,000	63,200,000	70,000,000
Taiwan.....	33,200,000	40,300,000	42,000,000
Kenya.....	23,100,000	44,500,000	45,000,000
Argentina.....	5,200,000	27,500,000	27,000,000
Malawi.....	20,700,000	27,300,000	26,000,000
Mozambique.....	15,200,000	22,200,000	22,000,000
World total.....	1,908,900,000	2,395,300,000	2,416,200,000

South America continued its rapid increase in tea production. Brazil produced about 15,000,000 pounds, or nearly five times the 1955-59 average.

U.S. consumption of tea per person in 1965 was estimated at 0.70 pounds, up from the 0.69 pounds consumed in 1964 and the 1957-59 average of 0.60 pounds.

President, Farm Business, Inc.

TELEPHONE

By the end of 1965 there were 93.6 million telephones in the United States—an increase of almost 5 million during the year. Of these, almost 76 million were operated by the Bell System. Use of telephones also increased with some 92.3 billion local and long-distance calls carried over Bell System facilities, compared with 86.8 billion in 1964.

At the end of 1965, more than 87% of Bell System customers could dial long-distance calls directly, and almost 4 million phones had expanded direct long-distance dialing for person-to-person, collect, and credit card services. This service became possible when new cordless switching consoles were installed as part of the record \$3.9 billion construction program for 1965.

New Cables. Work started on the installation of a second blast-resistant underground cable which will add 18,740 voice-grade channels between Massachusetts and Chicago when it is completed in 1966. Work also began on a new coaxial cable between Miami and Boston. Both of these hardened cable routes—with all amplifier stations and manned communications centers underground—are built to withstand natural disasters and other crises, including peripheral nuclear blasts.

The fourth transatlantic cable went into full operation between New Jersey and France in 1965. This cable, which is almost 3,600 nautical miles in length, adds 128 voice-grade circuits to existing channels.

Communications Satellite. Commercial telephone service via the Early Bird communications satellite was inaugurated between the United States and 12 European countries on June 28. International communications companies use the satellite to transmit phone calls, television and radio programs, data, and photographs. By year-end, U.S. telephones were connected with phones in 188 foreign countries.

Electronic Switching. The first electronic central office went into regular commercial service on May 30 at Succasunna, N.J. The operation inaugurated a \$12 billion, 35-year program of changing the entire Bell System's switching equipment from electromechanical to electronic operation. Electronic switching permits new services. In Succasunna these included: dialing only one to four digits to make both local and distance calls; transferring calls from one's own phone to that in another home or office; interconnecting three or four telephones for conference calls; and dialing a code to transfer incoming calls to a particular phone. Similar services were introduced in electromechanical offices in Sioux City (Iowa) and Wellesley (Mass.).

Mobile Telephones. Dial Mobile Service, introduced in 1965, provides improved transmission and other features to make mobile phones part of the nationwide dial network. Transistorized units give automatic channel selection and eliminate push-to-talk operation. There are mobile phones in 100 areas.

Source: The World's Telephones 1965, American Telephone and Telegraph Company.

Pushbutton Telephones. Touch-tone phones, being introduced gradually, are available in more than 40 states. These phones, with pushbuttons instead of dials, give greater ease and speed of calling. In addition, they are used as data-input devices. Several banks began using touch-tone phones to make credit and debit entries and to check on account balances. Small businesses began using them to send data to central billing services.

Introduced in 1965, the Trimline phone, with the dial in the handset, was offered in six states.

Excise Tax. Congress voted to reduce the federal excise tax on telephone service from 10% to 3%, effective Jan. 1, 1966, and to phase out the tax by 1969; however, President Johnson asked Congress on Jan. 12, 1966, to restore the 10% tax.

Interstate long-distance rates were reduced for evening and night calls on Feb. 1, 1965, and for station-to-station day calls after April 1.

TELEVISION AND RADIO

CBS

INTERNATIONAL TELEVISION COMMUNICATION began on commercial basis in 1965 with launching of "Early Bird" satellite. In control room (above) director chooses program from panel of monitors.

TELEVISION AND RADIO

Television's programming and technical developments in 1965 were both dominated by the advances made in color television. But there were few surprises among the new programs, and surprisingly little use was made of the new communications satellite in its first year of commercial operation. This article reviews the major developments of 1965 in two sections: (1) Television and Radio Programs; (2) Television and Radio Engineering.

TELEVISION AND RADIO PROGRAMS

The face of the television tube underwent a remarkable change from black and white to color in 1965. The major development in the industry was that color programs were presented at all times of the day and night. Of nearly equal importance, however, was the fact that, in 1965, television was at its most rewarding when it covered major news events as they happened.

Color. At the end of the normal broadcasting season, in May 1965, NBC-TV and its parent company, RCA, were still mounting a lonely struggle to persuade the American consumer to buy enough color sets to make color broadcasting economically feasible. By summer it was clear that the rush to color was on. During the entire year 1964, manufacturers sold only 1,366,301 color TV sets to distributors; but in the first nine months of 1965, they sold 1,783,952 sets. Color TV sets in these nine months represented 24% of all TV set sales.

In response, the networks greatly increased their color broadcasts. By the fall between 40% and 50% of the nighttime programs on CBS and ABC were in color. On NBC the black and white program was the exception. The NBC peacock spread its colorful tail at 7:30 A.M., and thereafter presided over all

but a few programs. The exceptions were chiefly news programs and an occasional black and white motion picture. NBC announced in August that by the end of the year most of its news programs would also be in color. The majority of the new fall entertainment programs were in color.

News Coverage. Operating with the skills learned from their superb coverage of the 1964 presidential election, the television networks added luster to their image in 1965 with their coverage of the Gemini space flights, and of Pope Paul VI's visit to the United States. For the Gemini flights, the networks set up teams at the Manned Spacecraft Center in Houston (Texas), at Cape Kennedy (Fla.), and in their own so-called space centers. Using the best of their talent, they covered the launchings and recoveries in minute detail. Fred Friendly, the president of CBS News, thought the coverage of the Gemini 5 flight (August 21-29) was too detailed and too long. In an open letter to his counterpart at NBC, William McAndrew, he stated this view. McAndrew disagreed, but when the time came for the launching of Gemini 7 (December 4), both networks gave it somewhat less, although still extensive, coverage. NBC employed a split-screen technique to cover both the countdown and its regularly scheduled program (a football game).

Pope Paul's visit to New York and the United Nations on October 4 was covered in great detail, from his airport arrival to his departure, and including his visit to St. Patrick's Cathedral, his meeting with President Johnson, his address to the United Nations, his papal Mass at Yankee Stadium, and his brief visit to the Vatican pavilion at the New York World's Fair.

Other important events of the year—all well covered by the network news departments—included the Ranger spacecraft moon photos, especially those

CBS

NATIONAL DRIVER'S TEST, first seen in May, gave viewers a chance to measure driving skill and knowledge.

CBS

NATIONAL CITIZENSHIP TEST used dramatic scenes to illustrate test questions on citizen's knowledge of rights.

taken by Ranger 9 on March 24 and televised as they were taken; the close-up pictures of Mars transmitted by Mariner 4, which were seen on the home screen late in July; the inauguration of President Johnson (January 20); and the funeral of Sir Winston Churchill (January 30).

A platitude of the television industry that news programming doesn't pay was contradicted by NBC's *Today* show and its *Huntley-Brinkley Report*. They were among the network's top moneymakers. It is expected that the *Huntley-Brinkley Report* will soon be earning as much as \$28 million annually for the network.

Two other news programs are worthy of special note: NBC's 3½-hour *American White Paper: United States Foreign Policy*, and CBS' *The National Driver's Test*. Although *American White Paper* was criticized for being too long and too uncritical, it served to give its audience a thorough survey of U.S. foreign policy in the past 20 years, and represented a courageous step in broadcasting. *The National Driver's Test* was by all odds the year's most unusual and freshest program. First presented in prime time on May 24 (it was repeated on August 30), *The National Driver's Test* drew 31 million viewers. In one hour it offered viewers a number of driving situations and a method of measuring their own driving skills against groups of drivers in several cities across the country. As the television industry is quick to capitalize on any success, the 1965-66 season may see a rash of similar programs. NBC News, for instance, announced a series of five such programs, testing the aptitudes

and interests, political beliefs, prejudices, observation-perception, and reading abilities of the American people. CBS, following up its earlier triumph, televised *The National Citizenship Test* on November 23, and again scored a major success.

The New TV Season. Although ABC stole a march on its competitors in 1964 by offering its new programs early in the fall, all the networks agreed to start the 1965 season in the same week. As a result, viewers had from September 12 through September 19 in which to sample the 33 new offerings as well as their old favorites. The new programming offered few surprises and little that was fresh or venturesome. It was soon apparent that many programs would not survive the first two national Nielsen ratings.

One third of the new programs were situation comedies; several of these, following the lead of last season's *Man from U.N.C.L.E.*, were of the "spying is fun" school. There were three or four Westerns, but the pronounced trend was toward either comedy or drama based on World War II. The success in past seasons of such programs as *McHale's Navy*, *Combat*, and *12 O'Clock High* made it inevitable that others would follow. Of the four new programs, *Hogan's Heroes*, a highly farcical comedy of life in a German prisoner-of-war camp, achieved a high degree of acceptance. Other successes of the season were *Get Smart*, *Green Acres*, and *Shenandoah*, all placing well within the first 20 programs, according to early Nielsen ratings. Movies on television increased with the addition of the CBS *Thursday Night Movie* and NBC's *Tuesday Night at the Movies*.

MY NAME IS BARBRA, an hour-long special televised in April, featured Barbra Streisand, who sang children's songs in a toy-house setting, accompanied by a quintet of young "musicians."

CBS

JULIE ANDREWS SHOW in November had Julie Andrews and Gene Kelly singing and dancing to medley of umbrella songs.

By December, the ratings picture had changed slightly. Two new television shows were in the top 10, and only one third of the 33 new shows were in the top 50 in popularity. These included, in addition to the four named above, *F Troop*, *Wild Wild West*, *Laredo*, *I Dream of Jeannie*, *Legend of Jesse James*, *Lost in Space*, and *The FBI*.

Another trend in program planning was toward serialization. Following the success in the 1964-65 season of ABC's twice- and thrice-weekly *Peyton Place*, NBC changed the format of *Dr. Kildare* from a weekly one-hour program to two half-hour programs presented on consecutive nights, with stories continuing over three or four segments.

Daytime television, once the sole domain of the serial story, became in 1965 the chief source of network profits, because of the increasing costs of nighttime production. In that year the three networks acquired more than 60% of their total profits from daytime revenues. CBS' long domination of daytime television was seriously challenged by the other networks in 1965.

Sports. Television and radio continued in 1965 to devote a large part of their schedules to sports events. Football coverage made financial news. According to *Broadcasting* magazine, college and professional football earned from radio and television broadcasting rights a total of \$37 million, an increase of at least \$6 million over the 1964 figure. As the magazine pointed out, "on the first weekend in August, deep in the heart of the baseball season, a true football fanatic in New York, Washington, or Houston could have watched—if he had the endurance and blessings of his spouse—about 12 to 13 hours of professional football on television." *Broadcasting* said that in 1965, sponsors were expected to pay \$92 million to promote their products on football programs.

Awards. The National Academy of Television Arts and Sciences, which had faced a revolt by CBS and ABC over categories of its so-called Emmy awards—as well as over voting methods—in 1964, overhauled the system, simplifying the categories and placing the judging in the hands of panels. "The resulting 1965 *Emmy Awards Show*, by general agreement among viewers, critics, and people in the television industry, was disastrous. Playwright Rod

NBC

Serling, president of the academy, freely granted that the program had been a failure and promised format revisions in order to recapture showmanship values. (See also **PRIZES AND AWARDS**.)

Educational TV. Financial problems continued to plague educational television and radio, although there were indications during the year that state and federal funds might be made available. New stations were started, and by the year's end 112 ETV stations were operating.

Personnel. There were significant changes in management at the networks. At CBS the powerful, financially successful president of CBS television, James T. Aubrey, made news when he resigned

THE HOLY TERROR, an April program, starred Julie Harris in a historical drama about Florence Nightingale.

abruptly on March 1. In September, Robert W. Sarnoff, board chairman of NBC, announced that at year's end he would move to the presidency of the parent company, RCA. He was to be succeeded by Robert E. Kintner, who, in addition to becoming NBC board chairman, would retain the NBC presidency. In December it was announced that Kintner would in fact become board chairman of NBC, but that Walter D. Scott, president of NBC Television Network, would become NBC president and chief executive officer. And, in December, it was announced that the American Broadcasting Company would merge with the International Telephone and Telegraph Corporation, but would retain its present management.

Federal Communications Commission (FCC). The FCC, early in the year, proposed that networks be banned from any ownership interest in more than 50% of the programs broadcast in prime time. The results of this proposal may become clear in 1966.

Radio. Radio enjoyed a continuing boom in 1965. The popularity of radio programs was so great that FCC figures as of the end of September showed 342 applications for new AM radio stations. The trend away from music as the programming mainstay to talk and telephone-answering shows—a feature of radio stations in large cities in 1964—was extended into smaller communities in 1965.

JOHN M. GUNN

Television Producer

Formerly Acting Director, Office of Radio and Television, Columbia University

The most striking technical development in television in 1965 concerned color television. Other developments included the growth of Community Antenna Television systems and television stations, the launching of the first commercial communications satellite, and the attempt by the Federal Communications Commission (FCC) to regulate the loudness of radio and television commercials.

Color Television Explosion. New color receivers featured both improved circuitry and much brighter picture tubes. The new tubes employed phosphors derived from rare-earth minerals. The present system of color television broadcasting dates back to 1954, but its growth had been slow. In 1965, however, new color studio cameras were introduced for both live and film pickups, with improved resolution and definition, as well as more faithful color rendition. The result was that color television rapidly found unprecedented public acceptance.

Community Antenna Television (CATV) Systems. These systems, which receive television signals and deliver them to subscribers' homes by cable, continued to expand at an increasing pace in 1965. Recent developments include origination of local programs, and microwave relay systems to bring in distant stations. Furthermore, modern systems have a 12-channel capacity, compared with the 3- to 5-channel capacity of earlier systems. CATV systems, at first intended to serve small communities, are under construction in larger cities, even cities that are already well served by television broadcasting stations.

During 1965, an estimated 100 new CATV systems went into operation, bringing the total to approximately 1,600 systems serving 2 million homes.

Television Station Growth. UHF (ultra-high frequency, channels 14-83) television stations experienced a renewed growth in 1965. Because only a small number of VHF (very high frequency, channels 2-13) channel assignments remain unused, virtually all future expansion of television broadcasting will have to take place in the UHF band. All new television receivers are now required by law to provide all-channel reception.

The total number of commercial stations on the air increased in 1965 from 586 to 600, 11 of which were new UHF stations. Educational stations increased from 89 to 100, 8 of which were new UHF stations. At the year's end, the FCC had a backlog of 156 UHF applications.

Throughout the rest of the world, television broad-

OUTSTANDING U.S. TELEVISION PROGRAMS OF 1965

(Excluding news events)

Abortion and the Law (CBS Reports)—A presentation of the legal, moral, psychiatric, and medical attitudes toward abortion, and the problem in the United States as compared with the problem in several other countries. CBS, April 5.

American White Paper: United States Foreign Policy—A 3½-hour review of U.S. foreign policy since World War II. NBC, Sept. 7.

Berkeley Rebels, The—A documentary about the ferment on American college campuses, narrated by Harry Reasoner. CBS, June 14.

Cinderella—A revival of Rodgers and Hammerstein's musical version of the fairy tale, written for television in 1957. CBS, Feb. 22.

Custer to the Little Big Horn—A documentary about Gen. George Custer and his ill-fated meeting with Sitting Bull, narrated by John Secondari. ABC, April 9.

Decision to Drop the Bomb, The (NBC White Paper)—The 135 days between the death of President Franklin D. Roosevelt and the decision to drop the first atomic bomb on Hiroshima, narrated by Chet Huntley. NBC, Jan. 5.

FDR Remembered—An affectionate look at the late President Franklin D. Roosevelt as a father and a friend, on the 20th anniversary of his death. CBS, April 12.

Frank Sinatra—A Man and his Music—A special with Frank Sinatra singing the songs most closely associated with him during the past 25 years. NBC, Nov. 24.

French Revolution, The—A documentary covering the years of French history between the convening of the Estates-General and the rise of Napoleon. NBC, Jan. 26.

Grand Canyon: A Journey With Joseph Wood Krutch—A mule trip to the bottom of the Grand Canyon, and a voyage down the Colorado River rapids, with naturalist-author Joseph Wood Krutch as a guide. NBC, June 1.

Hollow Crown, The—The kings and queens of England as seen by themselves and others in poetry, speeches, and letters, starring British stage performers Dorothy Tutin and Max Adrian. CBS, Part I, Feb. 16; Part II, June 20.

Holy Terror, The (Hallmark Hall of Fame)—Julie Harris as Florence Nightingale in an original television drama about the great nurse's efforts to bring sanitation and compassion into British army hospitals. NBC, April 7.

I, Leonardo da Vinci (Saga of Western Man)—The life and career of the great Renaissance artist, narrated by Fredric March. ABC, Feb. 23.

Inherit the Wind (Hallmark Hall of Fame)—A television adaptation of the stage play based on the Scopes "monkey trial" of the 1920's, starring Melvyn Douglas and Ed Begley. NBC, Nov. 18.

It's What's Happening, Baby!—Disc jockey Murray the K hosting a musical special for teenagers, aimed at the rehabilitation of dropouts. CBS, June 28.

¹ Experimental. ² A number of low-power satellite transmitters in operation are not included in this figure. ³ Plus 18 relays. ⁴ Estimate unavailable. ⁵ Closed-circuit cable system. ⁶ Receives programs from neighboring countries. ⁷ A number of low-power repeaters in operation are not included in this figure. ⁸ Receives programs from Italy. Source: *Television Factbook*.

casting continued to grow. The accompanying table lists the number of transmitters and home receivers in various countries in 1965.

Commercial Communications Satellites. The Communications Satellite Corporation (COMSAT) launched the Early Bird communications satellite for commercial use in 1965, and television relaying was begun between the United States and Europe. Early Bird is stationed over the equator at longitude 27.5°W at a synchronous altitude of 22,300 miles above the earth's surface, where it appears to hang motionless. Early Bird commands a view of all of the eastern United States, western Europe, South America, and Africa. (See SPACE EXPLORATION.)

Proposals have been made for direct television broadcasting from communication satellites into homes. However, there are formidable technical problems that must be surmounted before this can be achieved. Present studies indicate that even experimental broadcasting from communications sat-

ellites to homes is probably a great many years away.

Loud commercials. In 1965, the FCC issued to radio and television broadcasters technical guidelines for minimizing excessive loudness in the presentation of commercials. These guidelines are complicated by the fact that because loudness is largely a subjective phenomenon, no simple set of engineering rules can be laid down to define it.

Under the new FCC policy, broadcasters are encouraged to use various measures to minimize the loudness of commercials. These include the simple avoidance of excessive volume, and any unnecessarily drastic changes in sound level. Broadcasters are also urged to avoid rapid, strident deliveries by announcers, and the use by audio engineers of special filters and reverberation chambers to increase loudness.

Home Video-Tape Recorders. Early in 1965, videotape recorders were perfected for recording and playing back television pictures in the home. Simpli-

Jimmy Durante Meets the Lively Arts—The veteran comedian presenting such "long-hair" artists as ballet dancer Rudolf Nureyev and opera singer Roberta Peters. ABC, Oct. 30.

Journals of Lewis and Clark, The—A documentary following the route of the explorers of the American Northwest, with a narration based on excerpts from their diaries. NBC, Feb. 23.

Julie Andrews Show, The—An hour-long special starring singer Julie Andrews and Gene Kelly, with the New Christy Minstrels. NBC, Nov. 28.

KKK—The Invisible Empire (CBS Reports)—Charles Kurlat reporting on the Ku Klux Klan's strength, methods, leaders, and purposes. CBS, Sept. 21.

Magnificent Yankee, The (Hallmark Hall of Fame)—Enmet Lavery's play about Supreme Court Justice Oliver Wendell Holmes, starring Alfred Lunt and Lynn Fontanne. NBC, Jan. 28.

Making of the President, 1964, The—A documentary based on Theodore White's book about the 1964 presidential campaign and election, narrated by Martin Gabel. CBS, Oct. 19.

Martin's Lie—A religious opera by Gian Carlo Menotti, commissioned by CBS and written expressly for television. CBS, May 30.

My Name Is Barbra—Barbra Streisand singing, dancing, and clowning in her first hour-long special. CBS, April 28.

Mystery of Stonehenge, The—An explanation of Stonehenge, England, as an astronomical observatory rather than a Druid temple. CBS, Feb. 1.

National Citizenship Test, The—A test for home viewers on the rights and responsibilities of the American citizen. CBS, Nov. 23.

National Driver's Test, The (CBS Reports)—A simulated driving test that viewers could take in their own living rooms. CBS, May 24.

Oswald and the Law (NBC White Paper)—With the Lee Harvey Oswald case as a point of departure, an examination of criminal justice in the United States; narrated by Chet Huntley. NBC, Feb. 9.

Pope and the Vatican, The—Pope Paul VI and current trends in the Roman Catholic Church, a documentary narrated by Irving R. Levine. NBC, March 2.

Some Friends of Adlai Stevenson—An international tribute to the late U.S. ambassador to the United Nations, transmitted via Early Bird satellite, with Vice President Hubert Humphrey, Prime Minister Harold Wilson, and poet Archibald MacLeish. CBS, July 19.

Some Friends of Winston Churchill—A tribute to the late prime minister by men who knew him well, including Lord Ismay, Churchill's closest military adviser in World War II, and former President Dwight D. Eisenhower. CBS, Jan. 25.

Spanish Armada, The (Of Men and Freedom)—A documentary tracing the 16th century struggle for world domination between Britain and Spain that culminated in the destruction of the Spanish Armada. NBC, Nov. 14.

Visit to Washington with Mrs. Lyndon B. Johnson—A special program on behalf of a more beautiful America, with Mrs. Johnson as narrator and guide on a tour of national landmarks. ABC, Nov. 25.

fied versions of these recorders were put on the market at prices under \$1,000, and some employed simple home television cameras priced as low as \$300.

Radio Station Growth. AM and FM radio broadcasting continued to expand in 1965. The number of AM stations increased from 4,000 to 4,042, and the number of FM stations from 1,244 to 1,423. The number of radio receivers in use likewise increased during 1965, and more than 30 million radio receivers were produced and sold during the year.

Consulting Radio Engineer

TENNESSEE

A deadlock between Democratic factions in the election of a Senate speaker delayed for several days the organization of the legislature which convened in January 1965. Finally, the Republican minority helped to elect the governor's administration candidate as speaker.

Legislative Actions. The General Assembly enacted a record-breaking budget, which increased support of education and included provisions for three new junior colleges and many vocational training schools.

TENNESSEE · Information Highlights

Area: 42,244 square miles.
Population: 3,737,000 (1965 est.).
Chief Cities (1965 est.): Nashville, the capital (261,000); Memphis (525,000); Knoxville (181,000); Chattanooga (127,500); Jackson (34,400); Kingsport (34,000); Johnson City (33,800); Oak Ridge (30,000).
Government: Chief Officers—governor, Frank G. Clement (Democrat); lt. gov., Senator Jared Maddux (D); secy. of state, Joe C. Carr (D); atty. gen., George F. McCanness; treas., James Alexander (D); supt. of pub. instr., J. Howard Warf (D); chief justice, Hamilton S. Burnett. **Legislature**—General Assembly (convened Jan. 4, 1965); Senate, 33 members (25 Democrats, 8 Republicans); House of Representatives, 99 members (74 D, 24 R, 1 other).
Education: School enrollment (1964-65)—public elementary, 588,000 pupils (19,215 teachers); public secondary, 310,000 pupils (11,315 teachers); nonpublic schools, 36,000 pupils (1,610 teachers); college and university (fall 1964), 87,726 students. **Public school expenditures** (1964-65)—\$245,800,000 (\$300 per pupil); average teacher's salary, \$4,850.
Public Finance (fiscal year 1964): Revenues, \$706,179,000 (3% sales tax, \$147,289,000; motor fuel tax, \$89,311,000; federal funds, \$198,186,000). Expenditures, \$658,856,000 (education, \$217,525,000; health, welfare, and safety, \$79,911,000; highways, \$220,053,000). **State debt**, \$149,430,000 (1964).
Personal Income (1964): \$7,061,000,000; average annual income per person, \$1,859.
Public Assistance (fiscal year 1965): \$52,884,905 to 136,598 recipients (aged, \$24,436,712; dependent children, \$19,141,985).
Labor Force (employed persons, July 1965): Agricultural, 161,000; nonagricultural (wage and salary earners), 1,109,900 (34.7% manufacturing, 19.7% trade, 16.7% government). **Unemployed persons** (July 1965)—47,400.
Manufacturing (1963): Value added by manufacture, \$3,343,790,000 (transportation equipment, \$102,554,000; primary metals, \$167,569,000; nonmetallic machinery, \$111,483,000; electrical machinery, \$230,145,000; fabricated metals, \$144,453,000; food and kindred products, \$362,969,000; chemicals and allied products, \$821,989,000; apparel and related products, \$276,087,000; textile mill products, \$183,342,000; stone, clay, and glass products, \$176,700,000).
Agriculture (1964): Cash farm income, \$620,185,000 (livestock, \$275,523,000; crops, \$313,454,000; govt. payments, \$31,209,000). **Chief crops** (tons)—corn for grain, 1,331,000 (ranks 15th among the states); cottonseed, 277,000 (rank, 7th); tobacco, 72,000 (rank, 5th); sweet potatoes, 18,000 (rank, 12th); hay, 1,856,000; wheat, 131,000; oats, 39,000; potatoes, 23,000; barley, 71,000; sorghum grain, 15,000; apples, 9,600; peaches, 5,300; rye, 5,000.
Mining (1964): Production value, \$173,965,000 (ranks 27th among the states). **Chief minerals** (tons)—coal, 5,990,000 (rank, 9th); phosphate rock, 2,734,000 (rank, 2nd); zinc, 115,943 (rank, 1st); copper, 13,889 (rank, 7th); silver, 91,000 troy ounces (rank, 12th); gold, 133 troy ounces (rank, 13th).
Fisheries (1963): Commercial catch, 12,669,000 pounds (\$1,227,000).
Transportation: Roads (1965), 76,034 miles (74,001 surfaced); motor vehicles (1963), 1,734,899; railroads (1964), 3,400 potatoes, 23,000; barley, 17,000; sorghum grain, 15,000; **Communications** (1965): Telephones, 1,352,000; television stations, 17; radio stations, 164; newspapers (1965), 28 (daily circulation, 1,071,957 in 1964).

Other legislation provided for expanding the highway program and the state park system, and for expanding and modernizing mental health facilities and procedures. A new law outlawing obscene literature replaced previous legislation which had been declared unconstitutional, and a law banning nudist colonies resulted in a court test which had not been decided by the end of the year.

Reapportionment. At a special session in May, the General Assembly revised legislative and congressional districts in an effort to conform to recent court decisions. In accordance with the U.S. Supreme Court's "one-man, one-vote" ruling, urban counties were subdivided into individual districts for both houses of the legislature, even though the state constitution prohibits dividing any county into senatorial districts.

A three-judge federal court accepted the legislative reapportionment, stating that the division of counties for senatorial representation did not violate the national Constitution. The court objected to the congressional reapportionment, but gave the legislature until June 1967 to correct the inequities.

Constitutional Convention. A state constitutional convention convened in July and reconvened in November to act on reapportionment. It proposed apportionment of the Senate according to population, and the House of Representatives "according to law." Other amendments proposed by the convention provide for annual pay for legislators, longer legislative sessions, an increase of state senatorial terms from two to four years, and the requirement that senators be qualified voters of their districts and that representatives be residents of theirs. The proposed amendments will be voted on in November 1966.

TVA. The Tennessee Valley Authority became involved in a controversy over its proposal to build a dam near the mouth of the Little Tennessee River. The dam, intended to bring industries into the area, would result in flooding bottom lands, fishing grounds, and historic sites. Congressman J.L. Evins succeeded in getting Congress to substitute an appropriation for the projected Tims Ford Dam across the Elk River in central Tennessee.

Education. Commissioner of Education J.H. Warf announced in December that nearly 30,000 Negro children were attending racially mixed public schools in the state, and that Tennessee ranked second highest among 11 Southern states in the rate of school integration. Also, considerable progress was being made in integrating Negro teachers as well as pupils in the schools.

Economy. Tennessee's economy continued to reflect the longest boom period in the modern history of the United States. In 1965, cash receipts of farmers and nonagricultural employment, after temporary declines, outstripped the records of the preceding year.

TEXAS

The Texas Legislature's biennial session in 1965 was highlighted by the redistricting of seats in the state House of Representatives, the state Senate, and the U.S. House of Representatives, in compliance with federal court reapportionment orders.

The redistricting, which greatly increased representation from the major metropolitan areas, went far toward equalizing the population among districts. However, a controversy over certain inconsistencies in the redistricting acts for the state and the U.S. House of Representatives led to a renewal of litigation.

At the end of the year, federal courts in Texas had under consideration a suit brought by the U.S. attorney general's office challenging the constitutionality of the poll tax as a prerequisite for voting in state elections.

Amendment Defeats. Of 11 constitutional amendments presented to the voters in 1965, six were defeated. Among the defeated amendments were proposals to increase the size of the state Senate and to provide four-year terms for members of the House. Voters also rejected a proposed amendment giving the governor and other state officials four-year terms. Gov. John Connally was the chief backer of the latter proposal, but its defeat was not expected to damage seriously his chances for reelection to a third term in 1966.

Politics. On the political front, acrimonious disputes between conservative Democrats, led by Governor Connally, and liberal Democrats, led by U.S. Sen. Ralph Yarborough, accented the division in the Texas Democratic party. Similarly, Texas Republicans, as they attempted to recover from their election defeat in 1964, were split into ultra- and moderate-conservative groups.

Governor Connally dominated the legislative scene in 1965. Although he held the state to a course of moderate conservatism, there were important developments in several areas involving both substantive policy and administrative organization.

Education. The spotlight was on education in 1965. In an attempt to revitalize the state's colleges and universities, the Legislature enacted almost all of the governor's program for these institutions. Measures enacted included establishing an 18-member Coordinating Board and granting an increase in appropriations. Two constitutional amendments approved by the voters set up a \$75 million college student loan fund and extended and increased a property tax levy for college building programs.

Primary and secondary education also received at-

BLACK STAR

THE HOUSTON ASTRODOME, an air-conditioned, domed stadium for Houston sports teams, was completed in 1965.

tention. Governor Connally won legislative approval for a commission to study the conditions and needs of the public schools. Pressure from the Texas State Teachers' Association produced sizable increases in teachers' salaries, financed mainly by higher taxes on cigarettes.

Conservation. The long-overdue Mineral Pooling Act of 1965 authorized the State Railroad Commission to take action to reduce the unnecessary drilling that has burdened the oil industry. A gesture was made toward curbing air pollution by the passage of a limited Clean Air Act, and the power of the Texas Water Pollution Control Board was strengthened somewhat. The state moved to expand its water development program by creating a new Texas Water Development Board and by authoriz-

TEXAS Information Highlights

Area: 267,339 square miles.

Population: 10,669,000 (1965 est.).

Chief Cities (1965 est.): Austin, the capital (220,000); Houston (1,100,000); Dallas (790,000); San Antonio (645,000); Fort Worth (360,000); El Paso (309,000); Corpus Christi (195,000); Amarillo (164,000).

Government: Chief Officers—governor, John Connally (Democrat); Lt. gov., Preston Smith (D); secy. of state, Crawford Martin (D); atty. gen., Waggoner Carr (D); treas., Jesse James (D); comm. of educ., J.W. Edgar; chief justices—Supreme Court for Civil Cases, Robert W. Calvert; Court of Criminal Appeals for Criminal Cases (presiding judge), W.T. McDonald. Legislature (convened Jan. 12, 1965)—Senate, 31 members (31 Democrat, 0 Republicans); House of Representatives, 150 members (149 D, 1 R).

Education: School enrollment (1964-65)—public elementary, 1,433,359 pupils (54,873 teachers); public secondary, 1,026,705 pupils (42,403 teachers); nonpublic schools, 171,300 pupils (5,690 teachers); college and university (fall 1964), 261,041 students. Public school expenditures (1964-65)—\$880,000,000 (\$396 per pupil); av. teacher's salary, \$5,461.

Public Finance (fiscal year 1965): Revenues, \$2,643,762,547 (2% sales tax, \$221,987,958; motor fuel tax, \$229,174,517; federal funds, \$439,371,149). Expenditures, \$2,520,712,126 (education, \$699,094,282; health, welfare, and safety, \$399,733,926; roads and highways, \$435,984,851). State debt, \$313,315,043 (Aug. 31, 1965).

Personal Income (1964): \$22,749,000,000; average annual income per person, \$2,168.

Public Assistance (fiscal year 1965): \$225,706,890 to 339,913 recipients (aged, \$159,175,410; dependent children, \$20,722,987).

Labor Force (employed persons, Aug. 31, 1965): Agricultural, 343,200; nonagricultural (wage and salary earners), 3,466,700 (16.9% manufacturing, 26.3% trade, 14.3% government).

Unemployed persons (Aug. 31, 1965)—141,000.

Manufacturing (1965): Value added by manufacture, \$7,053,797,000 (transportation equipment, \$609,822,000; primary metals, \$381,757,000; nonelectrical machinery, \$501,640,000; electrical machinery, \$295,649,000; fabricated metals, \$312,763,000; food and products, \$923,362,000).

Agriculture (1964): Cash farm income, \$2,477,950 (livestock, \$1,033,809,000; crops, \$1,270,602,000; govt. payments, \$173,539,000). Chief crops (tons)—sorghum grain, 6,044,000 (ranks 1st among the states); hay, 2,753,000 (rank, 18th); wheat, 1,855,000 (rank, 8th); cotton lint, 990,000 (rank, 1st); cottonseed, 1,738,000 (rank, 1st); rice, 982,000 (rank, 1st); sugar beets, 539,000 (rank, 11th); oats, 391,000 (rank, 11th).

Mining (1964): Production value, \$4,533,078,000 (ranks 1st among the states). Chief minerals (tons)—petroleum, 989,525,000 barrels (rank, 1st); natural gas, 6,525,649,000,000 cubic feet (rank, 1st); salt, 6,410,000 (rank, 1st); sulfur (Frasch process), 3,501,000 (rank, 1st); lime, 1,350,000 (rank, 4th); gypsum, 1,131,000 (rank, 4th).

Fisheries (1964): Commercial catch, 145,070,000 pounds (\$29,528,000). Leading species—shrimp, 66,053 pounds (\$26,144,000); menhaden, 66,686,000 pounds (\$822,000).

Transportation: Roads (1965), 202,132 miles (76,896 surfaced); motor vehicles (1965), 5,891,340; railroads (1964), 20,504 miles; aircraft (1964), 11,093 (812 airports).

Communications (1965): Telephones, 4,277,800; television stations, 45; radio stations, 326; newspapers, 121 (daily circulation, 3,015,562).

ing another \$100 million in state funds for financing water projects. The long-sought federal Trinity River project was finally authorized and given initial funding by Congress.

Minority Groups. The pressures of federal legislation, court orders, and administrative action on behalf of civil rights continued to produce positive results in Texas. An estimated 72,000 Negro children were attending classes with white pupils in the fall of 1965, and desegregation in part or in whole became the official policy of most if not all of the state's school districts.

The municipal government of Crystal City, controlled by persons of Mexican descent since 1963, changed hands in the 1965 elections. Although the Mexican ticket was defeated, Mexicans were not excluded from the city government. The victorious faction represented a coalition of Mexican and other groups. (See also HOUSTON.)

CLIFTON McCLESKEY
Associate Professor of Political Science
University of Houston

TEXTILE INDUSTRY

The United States textile industry in 1964 imported or produced enough materials to provide each person in the country with about 22.6 pounds of cotton, 15.8 pounds of man-made fibers, and 2.5 pounds of wool. These figures, based on the fiber consumption of U.S. textile mills, excluded exports but include imports of fabricated products.

Fiber Consumption. U.S. mill consumption of fibers continued to rise in 1965. The annual rate of consumption in the first six months was 8,380,000,000 pounds, or 9% more than in 1964. In turn, the 1964 consumption ran 7.5% ahead of 1963. The 1965 annual rates of mill consumption, based on half-year data, showed raw cotton up 7% over 1964, man-made fibers up 12%, wool up 8%, and silk down 13%.

Cotton continued to lead all textile fibers in pounds consumed, accounting for 54% of total fiber consumption in the first half of 1965, as compared with 55% in the full year 1964. The man-made

¹ Clean basis. ² U.S. producers' domestic shipments plus imports for consumption. ³ Includes acrylic, nylon (polyamide), olefin (polyethylene and polypropylene), saran, spandex, vinyon (polyvinyl chloride), and TFE-fluorocarbon fiber. ⁴ Includes acrylic and modacrylic, nylon, olefin, polyester, and vinyon. ⁵ Excluding chafar fabric. ⁶ Except tire fabric. ⁷ Excluding carpets, rugs, and felts.

fibers share of total consumption in the first six months of 1965 was 41%, as compared with 40% in the full year 1964. Raw wool accounted for 5% of the total in both 1965 and 1964.

Man-made fibers led in dollar value. In 1964, the mill consumption of man-made fibers was valued at \$2,460,000,000 (59% of the total value for all fibers), as compared with an estimated \$1,170,000,000 (28% of the total) for raw cotton, \$495,000,000 (12%) for raw wool, and \$25,000,000 (1%) for silk.

Tire Cord and Fabric Production. For the first half of 1965, production of tire cord and fabric was 239,000,000 pounds, or 10% more than in the same period of 1964. Nylon shared the market equally with rayon in 1963, but nylon increased to 53% of the total in both 1964 and the first half of 1965.

Broad Woven Fabric Output. Based on data covering the period January-June 1965, the year's output will exceed the 1964 total by 7%, with cottons up 5.5%, man-made fiber fabrics up 11%, and wool up 7%. U.S. production of broad woven goods in 1964 totaled 12,744,000,000 yards, an increase of 5% over 1963. The corresponding percentage change in yardages was as follows: cotton fabrics, up 2.5%; man-made fiber fabrics, up 15%; woolen and worsted fabrics, down 10%; and silk and other fabrics, down 15%.

Prices. Under the federal plan to stabilize cotton prices (effective April 11, 1964), a subsidy equivalent to 6.5 cents per pound of cotton is payable to exporters and domestic mills. Including this payment, the price of 1-inch middling raw cotton averaged 24.2 cents per pound during the first eight months of 1965. The average for the same period in 1964 was 29.2 cents.

For the first eight months of 1965 the average price of raw wool (clean basis, at Boston) was \$1.24 per pound, or 16 cents lower than the average for the year 1964. Listed prices of rayon staple and acetate staple remained at 28 and 40 cents per pound, respectively.

Employment and Earnings. Employment in U.S. knitting and weaving mills and in finished textile products plants averaged 2,016,000 workers in the first half of 1965, a small increase over the average for 1964. During the same period, the average weekly gross earnings of mill workers was \$76.31, or 4.5% above the 1964 average. For workers in apparel cutting and related trades, weekly wages averaged \$65.89, or 2.5% above the 1964 level.

International Trade. In 1964, the U.S. textile industry had an export balance of \$289,000,000. The value of exports of all textile fibers and products totaled \$1,501,000,000. Imports of textile fibers and products totaled \$1,212,000,000. The years 1962 and 1963 showed import balances, due mainly to increased cotton textile imports, with the 1963 import balance of \$289,000,000 being the largest ever recorded.

Over the first six months of 1965 the import balance stood at \$4,000,000. The year's exports were projected at \$1,293,000,000, and imports at \$1,301,000,000.

Flax and Linen Imports. Imports of raw flax and linen yarns totaled 10,400,000 pounds in 1964, compared with 9,300,000 pounds in 1963. Total imports of linen and chiefly-linen fabrics amounted to 25,800,000 pounds in 1964, up 7.5% over 1963.

Canadian Textiles. Industry shipments of cotton fabrics in Canada totaled 315,000,000 square yards in 1964, up 1,000,000 square yards over 1963. Wool fabric output increased 1,000,000 square yards, to 37,000,000 square yards. Man-made fiber fabric

shipments totaled 189,000,000 square yards, a rise of 16,000,000 square yards, or 9%. Total 1964 shipments of these fabrics showed an increase of 5%.

Canadian production of rayon and acetate yarn and staple in 1964 was 108,000,000 pounds, an increase of 11,100,000 pounds, or 11%, over 1963. Noncellulosic fiber output totaled 65,600,000 pounds in 1964, up 13% over the 1963 output of 58,000,000 pounds.

Employment in the Canadian textile industry in December 1964 totaled 84,450 workers, an increase of 3,252 over the December 1963 total.

THAILAND

Thailand was the target of a major effort of subversion by Chinese Communists in 1965. Although the effort proved unsuccessful, the Communist threat remained as the greatest danger to the Thai community. The government of Field Marshal Thanom Kittikachorn remained stable amid modest economic prosperity and development.

The Communist Threat. Early in 1965, Communist China's foreign minister, Chen Yi, was reported to have promised guerrilla warfare in Thailand within a year. Later in the year, Peking announced the merger of two Communist-supported groups, the Thailand Independent Movement and the Thailand Patriotic Front, which are dedicated to the overthrow of the Thai government and to the eviction of all U.S. forces from Thailand.

The Communists concentrated their efforts primarily in northeastern Thailand, particularly in economically depressed Nakhon Phanom province along the southern Laotian border. The population in that area was subjected to a heavy Communist propaganda campaign, and some of the pro-Laotian Thais there were supplied with arms. In addition, approximately 40,000 Vietnamese inhabit the area, and most of them seem to be sympathetic to the North Vietnamese government. It was estimated that several thousand Thais have defected to the Communists in recent years.

Government Reactions. To combat these subversive forces, the Thai government instituted police and military action to destroy arms caches. The government also took action to eliminate clandestine radio broadcasts of the Voice of the People of Thailand, which broadcasts subversive programs believed to originate in either North Vietnam or Communist China.

The Thai government also combated the threat by emphasizing economic development for the northern and northeastern sections of the country. The U.S.-built Friendship Highway, connecting Bangkok with Udon (about 50 miles from Vientiane, Laos), was completed in January. The highway brought

with it increased prosperity for the Udon area.

A number of Mobile Development Unit (MDU) teams—largely U.S. civilian civil engineers—and construction teams from the U.S. Navy's Seabees were sent into the Nam Pat, Sa, and Terng areas of northern Thailand to spearhead construction of schools, wells, and bridges. These construction efforts also were directed toward developing these isolated and economically depressed areas.

Foreign Relations. Thailand remained a close ally of the United States in 1965 and supported a "tough" policy in the Vietnam conflict. A U.S. military mission is stationed in Thailand. The headquarters of the Southeast Asia Treaty Organization is in Bangkok.

Thailand's relations with Cambodia remained clouded. In the summer of 1965, the Thai government announced that more than 200 Cambodian soldiers had invaded Trad Province in Thailand. Sharp fighting took place between the invaders and Thai soldiers.

Economy. Thailand's economy attained a modest growth in 1965. The country's gross national product continued at a rate of 6% annually. Export commodities were largely rice, rubber, teak, and tin, with rice supplying 35% of the country's total exports.

Manufacturing and industry continued to be practically nonexistent in the country, as Thailand still lacked raw materials and fuels.

Tourism, a major source of foreign exchange, has increased about 15% in recent years.

THAILAND · Information Highlights

Area: 198,455 square miles.
Population: 30,591,000 (July 1, 1965 est.).
Chief Cities (1963 urban est.): Bangkok, the capital, 1,608,305; Thabua, 459,555.
Government: King—Bhumidol Adulyade (b. Dec. 5, 1927; acceded June 9, 1946); Premier—Thanom Kittikachorn (took office Dec. 8, 1963). *Parliament*—Constituent Assembly, 240 members (all appointed by the king).
Religious Faiths: Buddhists, 93% of population; Muslims, 3%; Confucianists, 2%; others, 2%.
Education: Literacy rate (1960)—68% of population aged 15 and over. Total school enrollment (1962)—4,605,389 (primary, 4,180,282; secondary, 294,621; teacher-training, 12,115; technical, 67,937; higher, 50,434).
Finance (1965 est.): Revenues, \$503,000,000; expenditures, \$593,000,000; monetary unit, baht (20.83 bahts equal U.S.\$1).
Gross National Product (1963): \$3,269,000,000.
National Income (1963): \$2,784,000,000; average annual income per person, \$97.
Economic Indexes (1964): *Agricultural production*, 155 (1956=100); *cost of living*, 101 (1958=100).
Manufacturing (metric tons, 1964): Cement, 1,043,000; sugar, 252,000; crude steel, 7,300.
Crops (metric tons, 1964): Rice, 9,625,000 (ranks 6th among world producers); cassava (1963), 2,000,000 (world rank, 3rd); rubber, 223,200 (world rank, 3rd); maize, 980,000; jute and kenaf (1963), 219,000; sweet potatoes and yams (1962), 190,000; peanuts, 125,000; soybeans, 27,000.
Minerals (metric tons, 1964): Tin, 15,845 (ranks 6th among world producers); salt, 249,000; lignite, 103,000; fluor spar (1963), 29,230; iron ore, 15,200; manganese, 11,054; lead, 3,656.
Foreign Trade (1964): *Exports*, \$599,000,000 (chief exports: rice, \$214,000,000; rubber, \$99,000,000; tin, \$46,000,000); *imports*, \$667,000,000 (chief imports, 1963): nonelectrical machinery, \$70,000,000; motor vehicles, \$53,100,000; petroleum products, \$53,000,000. *Chief trading partners* (1963): Japan (took 19% of exports, supplied 32% of imports); U.S. (took 7% of exports, supplied 17% of imports); Indonesia (took 8% of exports, supplied 6% of imports).
Transportation: *Roads* (1964), 7,130 miles (3,005 paved); *motor vehicles* (1964), 145,466 (automobiles, 69,450); *railways* (1963), 2,235 miles; *merchant vessels* (1964), 9 (17,000 gross registered tons); *national airlines*—Thai Airways, Thai International Airways; *principal airport*, Bangkok.
Communications: *Telephones* (1964): 55,219; *television stations* (1964), 5; *television sets* (1964), 200,000; *radios* (1960), 163,000; *newspapers* (1960), 27 (daily circulation, 286,000).

THANT, U

Burmese statesman and secretary-general of the United Nations: b. Pantanaw, Burma, Jan. 22, 1909.

In the fourth year of his five-year term as secretary-general of the United Nations, U Thant was occupied chiefly with attempts to preserve world peace and to prevent the United Nations Organization itself from disintegrating. He tried to dissuade Indonesia's President Sukarno from withdrawing his country from the United Nations. He journeyed to India and Pakistan for talks with the leaders of those states, hoping to persuade them to make a peaceful settlement of their dispute over Kashmir. And he lent his influence to the unsuccessful efforts to bring about a negotiated settlement of the war in Vietnam.

A Year of Crises. A crisis that carried over from 1964 and threatened to destroy the United Nations in 1965 concerned the procedures under which the United Nations operates. With the United States and the Soviet Union—the United Nations' two most powerful members—at loggerheads over the financing of certain peacekeeping operations, Thant was barely able to keep the organization intact. It was forced to function on Thant's so-called consensus plan until late in the year when the issue was resolved.

The new year had hardly begun when Indonesia, objecting to the seating of Malaysia in the Security Council, threatened to leave the United Nations. Thant, in the Virgin Islands recuperating from an ulcer attack when informed of this development, cabled Indonesian President Sukarno, begging him not to jeopardize the future of the United Nations. However, on January 7, Malaysia became a member of the Security Council; and on January 21, Indonesia withdrew from the United Nations.

Thant achieved somewhat better results in the India-Pakistan dispute. He traveled to both countries (September 7–16) and held separate conferences with their leaders—President Ayub Khan and Prime Minister Shastri. Although his trip seemed to have been a failure, the United Nations eventually persuaded the two states to agree to a cease-fire, and Thant was instrumental in negotiating a temporary settlement of the issues.

The year's most nagging problem for U Thant, as well as for the rest of the world, was the impasse in Vietnam and the escalation of the war there. Throughout the year Thant made informal moves to bring both sides together for peace talks. In February he announced his plan whereby seven nations, including the United States and the Soviet Union, would discuss conditions for ending the war, but the plan was turned down. After the North Vietnamese government had ignored new mediation proposals put forward by Thant toward the end of 1965, there was some feeling among Asian members of the United Nations that Thant's influence as a peacemaker may have been damaged by the Vietnam failures. (See also ASIA; UNITED NATIONS.)

Early Life. Thant was educated at University College, Rangoon, Burma. He became a teacher of English and modern history and, finally, headmaster at the National School at Pantanaw. He was made director of broadcasting in Burma in 1948, and from 1957 was Burma's permanent representative at the United Nations. After the death of UN Secretary-General Dag Hammarskjöld in September 1961, Thant was elected acting secretary-general on Nov. 3, 1961, and was confirmed in the post on Nov. 30, 1962.

PETER DANESS

VIVIAN BEAUMONT THEATER, the new home of the Repertory Theater of Lincoln Center in New York, opened October 21 with Georg Büchner's drama, *Danton's Death*.

THEATER

In 1965 the American theater gave cause for dismay at the same time that it held out a pleasing promise for the future. The 1964-65 season in New York was among the most disappointing—in the number of plays produced, as well as in their quality—of the past quarter of a century, and the new season beginning in the fall of 1965 seemed even less fortunate. But if Broadway was sinking to an astonishing low, the theater as an institution in the United States was rising swiftly in public esteem. Fully professional companies throughout the country performed excellent living drama.

Broadway. As always, money was at the core of Broadway's troubles. Producers have been so burdened in recent years by rocketing costs that they have been forced to choose, for the most part, bland plays of wide popular appeal, but to set the prices of tickets far beyond the range of all but a small percentage of entertainment seekers. Throughout the year, as one insipid play after another opened in New York, persons concerned for the future of the arts were heard to observe that the theater and the movies had exchanged their traditional functions. For more than a generation, Hollywood had supplied the all-purpose variety of entertainment, which seldom raised a question relevant to the life of the intellectual community; suddenly Hollywood films had become a source of vivid, provocative drama. The Broadway theater, on the other hand, had so geared its productions to accord with the tastes of the average man, or at least the average man of means, that it could only seldom satisfy those persons searching for mental stimulation.

Yet the method of securing a hit by conceding everything to average tastes was by no means foolproof. For every such success as William Goodhart's *Generation*, starring Henry Fonda, or Bob Fisher and Arthur Marx's *The Impossible Years*, starring Alan King—two mild comedies of family problems—one could count half a dozen failures. The most striking of them was *Kelly*, a musical by Eddie Lawrence and Moose Charlap. Worried by unenthusiastic out-of-town notices for this somewhat offbeat work, the

producers, headed by David Susskind, fretted for weeks on the road to turn *Kelly* into a standard, old-fashioned song-and-dance show. The result was a shattering failure which played on Broadway for one night only, and at a cost of \$650,000.

As for box office prices, the second factor contributing to the loss of the Broadway audience to film theaters, the upward climb continued through the year. In the fall, a record top price of \$11.90 was set for the musical *On a Clear Day You Can See Forever* by Alan Jay Lerner and Burton Lane, and a new high of \$9.40 for a nonmusical play was established for John Whiting's *The Devils*. Unhappily, neither work offered the exemplary display of wit and taste necessary to sell out at such figures.

As these plays were preparing for their opening nights, John F. Wharton, a lawyer retained as consultant-director of the Legitimate Theater Industry Exploratory Commission, advanced a plan to more than double ticket prices. The commission had been established earlier in the year by the Broadway theater owners and producers to study the industry's financial problems and to improve its code of ethics. Wharton, in his widely publicized plan, recommended that the best seats be sold for \$25 after the opening of a hit, but that a few seats at the back of the house be kept for last-minute sales at very low figures. To save the average play from rapid extinction, he recommended also that its tickets be sold at prices cut from week to week in accordance with demand. It remains to be seen whether producers will adopt the Wharton plan, which evidently is intended to prevent the sale of tickets at bootleg prices and to give ordinary citizens a chance to buy some seats, if not the best, at prices they can afford.

Distressing though the Broadway scene may have been in its banality and poor attendance, the year was not without a few notable productions. No new works by outstanding American playwrights were presented during 1965, but the year was kept from being a total loss artistically by some holdovers from the last weeks of 1964—two revivals of American plays, four or five foreign plays, and three new plays of merit by American writers. However, few of the

NANCY PALMER

DRAMATIC SENSATION of the 1965-66 Broadway season was a German import—Peter Weiss' *The Persecution and Assassination of Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade*.

productions turned out to be financially successful.

Late in 1964 the Repertory Theater of Lincoln Center, which then was operating in its temporary home off Washington Square in Greenwich Village, added Arthur Miller's *Incident at Vichy* to a list of productions which also included his *After the Fall*. In *Incident at Vichy*, Miller placed the blame on every individual for the problems of man in general, as instantiated in the plight of French Jews during World War II. The work received mixed notices, but it was substantial enough to attract large audiences.

Edward Albee offered in *Tiny Alice*, which opened on Broadway shortly before the end of 1964, a work which confused many by the vagueness of the religious allegory that it unfolded, and irked others with its sensational language and action. No other play of the 1964-65 season provoked quite so much comment. The performances by Sir John Gielgud as the lay secretary to a cardinal of the Catholic Church and of Irene Worth as Miss Alice, the richest woman on earth, were among the season's most outstanding.

In the opinion of many observers, the most re-

freshing play of 1965 was a 29-year-old comedy about an eccentric New York family: George S. Kaufman and Moss Hart's *You Can't Take It with You*. Originally scheduled by its producers for a limited engagement, it quickly became a sellout. Although Tennessee Williams had no new play to offer, an all-star revival of his *The Glass Menagerie* opened in the spring of 1965 for a good run.

A highlight of the year was the visit of the distinguished Moscow Art Theater, which had last played New York in 1924. For almost the entire month of February the company performed at the New York City Center in a repertory of four plays. As the stage's most famous exponents of the technique of acting developed by Konstantin Stanislavski and now popularly known as "the method," the company proved as fascinating to actors and directors as to the regular New York audience. Inevitably, the production of Chekhov's *The Three Sisters* was compared in the press to the production of the same play given in 1964 by the Actors Studio, and to the disadvantage of the New York organization.

The spring brought three new American plays of more than routine interest. James Baldwin's *The*

ANTHONY PARADE

IRENE WORTH won a Tony award for the best female dramatic performance of the 1964-65 Broadway season. The Nebraska-born British actress played the role of Miss Alice—the richest woman on earth—in Edward Albee's *Tiny Alice*. Miss Worth's American appearances have been infrequent but notable. In 1950 she was acclaimed in T.S. Eliot's *The Cocktail Party* as Celia Coplestone, the role she had created the year before at the Edinburgh Festival. Later she played the title role in Schiller's *Maria Stuart* (1957), Albertine Prine in Lillian Hellman's *Toys in the Attic* (1960), and Goneril in *King Lear* (1964, on tour with the Royal Shakespeare Theatre).

Miss Worth was born on June 23, 1916. She graduated from UCLA and taught school briefly before turning to the stage. Although she has made her theatrical career in Britain, her debut was in New York as Fenella in *Escape Me Never* (1942). In 1959 she won the British Film Academy Award as best actress for her performance in the motion picture *Orders to Kill*.

ALSO ON BROADWAY: (left) *On a Clear Day You Can See Forever*—John Cullum and Barbara Harris; (center) *You Can't Take It with You*—l. to r., Donald Moffat, Richard Woods, Keene Curtis; (right) *Cactus Flower*—Barry Nelson and Lauren Bacall.

Amen Corner, in a production brought in from Los Angeles, proved disappointing but attracted interest. The study of the effort of a woman minister of a store-front church in Harlem to achieve peace of mind and self-respect, it differed markedly from Baldwin's *Blues for Mister Charlie*, a bitter play of race relations, produced in 1964. Neil Simon's *The Odd Couple* was not only a very funny play but an intelligent study of two men, both recently divorced, who set up housekeeping together, only to find that the traits which drove their spouses away now disrupt their new domesticity.

In a year of weak musicals, something could be said for *Flora, the Red Menace*, a brightly scored spoof of Communist activity in the United States in the 1930's. The show had a book by George Abbott and Robert Russell, and music by John Kander with lyrics by Fred Ebb. It starred Liza Minnelli, a capable young performer with touches of the quality of her famous mother, Judy Garland.

Among the many English imports of 1965 were Joe Orton's *Entertaining Mr. Sloane*, Peter Shaffer's *The Royal Hunt of the Sun*, John Whiting's *The Devils*, Michael Dyne's *The Right Honourable*

Gentleman, and John Osborne's *Inadmissible Evidence*—all presented in the fall to mixed reviews. More popular than any of them was the English musical *Half a Sixpence*, starring the young, engaging Tommy Steele.

It was, however, a German play—as produced by an English company—that drew highest praise of the imports: Peter Weiss's explicitly titled *The Persecution and Assassination of Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade*. The play's theme, that revolutions inevitably disintegrate, was not new, but the breathtaking expertness of Peter Brook's direction and the performances by the Royal Shakespeare Company made the very most of Weiss' Brechtian style.

But of all the events on Broadway, the most important occurred some 15 blocks north of the theater district, at Lincoln Center for the Performing Arts. In January the news broke that Elia Kazan and Robert Whitehead were to be replaced as directors of the center's Repertory Theater by Herbert Blau and Jules Irving, founders (in 1952) of the San Francisco Actor's Workshop. In the spring the new direc-

WALTER MATTHAU won a Tony award in 1965 for his first Broadway starring role, the loutish sportswriter, Oscar, in Neil Simon's comedy *The Odd Couple*. Matthau had played a variety of smaller parts in 20 Broadway plays and had appeared often in films and on television. Theatergoers saw him portray a playwright in *Will Success Spoil Rock Hunter?* (1955), a concert impresario in *Once More, with Feeling* (1958), and a French aristocrat in *A Shot in the Dark* (1961). He received his first Tony in 1962—as best supporting actor—for his role in *A Shot in the Dark*.

Matthau was born in New York City on Oct. 1, 1920. His acting career began with bit parts in Yiddish plays. After graduation from high school and three years in the Army, he studied acting at the New School Dramatic Workshop. In 1948 he got his "first real job on Broadway"—as a candelabrum carrier in *Anne of the Thousand Days*. Then followed a small part in *The Liar* and the succession of character roles that established his name in the theater.

THE BROADWAY THEATER IN 1965

BROADWAY OPENINGS

- All in Good Time**, a play by Bill Naughton; directed by Donald McWhinnie; with Donald Wolfst; February 18-March 27.
- The Amen Corner**, a play by James Baldwin; directed by Frank Silvera; with Bea Richards and Frank Silvera; April 15-June 26.
- And Things That Go Bump in the Night**, a play by Terrence Heckart; directed by Michael Cacoyannis; with Eileen Heckart; April 26-May 1.
- Anya**, a musical with book by George Abbott and Guy Bolton based on *Anastasia*, a play by Marcelle Maurette and Mr. Bolton; music and lyrics by Robert Wright and George Forrest, based on themes by Rachmaninoff; directed by Mr. Abbott; with Lillian Gish and Irja Petina; November 29-December 11.
- Baker Street**, a musical based on adventures of Sherlock Holmes, with book by Jerome Coopersmith adapted from stories by Sir Arthur Conan Doyle; music and lyrics by Marian Grudeff and Raymond Jessel; directed by Harold Prince; with Fritz Weaver and Inga Swenson; February 16-November 14.
- Boeing-Boeing**, a comedy by Marc Camoletti, adapted by Beverley Cross; directed by Jack Minster; with Ian Carmichael; February 2-20.
- Cactus Flower**, a comedy by Abe Burrows, based on a play by Pierre Barillet and Jean-Pierre Gredy; directed by Mr. Burrows; with Lauren Bacall, Barry Nelson; December 8-.
- Catch Me If You Can**, a comedy by Jack Weinstock and Willie Gilbert, based on the play *Piège pour un homme seul* by Robert Thomas; directed by Vincent J. Donohue; with Dan Dailey, Tom Bosley, and Bethel Leslie; March 9-June 5.
- The Devils**, a play by John Whiting based on *The Devils of Loudun* by Aldous Huxley; directed by Michael Cacoyannis; with Jason Robards and Anne Bancroft; November 16-.
- Diamond Orchid**, a play by Jerome Lawrence and Robert E. Lee; directed by José Quintero; with Jennifer West, Bruce Gordon, and Finlay Currie; February 10-13.
- Do I Hear a Waltz?**, a musical with book by Arthur Laurents, based on his play *The Time of the Cuckoo*; music by Richard Rodgers and lyrics by Stephen Sondheim; directed by John Dexter; with Elizabeth Allen, Sergio Franchi, Carol Bruce, and Madeleine Sherwood; March 18-September 25.
- Draft the Cat!**, a musical with book by Ira Levin; music by Milton Schafer and lyrics by Mr. Levin; directed by Joe Layton; with Elliott Gould and Lesley Ann Warren; October 10-16.
- Entertaining Mr. Sloane**, a comedy by Joe Orton; directed by Alan Schneider; with Sheila Hancock and Dudley Sutton; October 12-23.
- Fade Out—Fade In**, a musical with book and lyrics by Betty Comden and Adolph Green and music by Jule Styne; directed by George Abbott; with Carol Burnett, Dick Shawn, and Lou Jacobi; February 15-April 17 (return).
- The Family Way**, a play by Ben Starr; directed by Michael Gordon; with Collin Wilcox; January 13-16.
- Flora, the Red Menace**, a musical with book by George Abbott and Robert Russell, based on the novel *Love Is Just Around the Corner* by Lester Atwell; music by John Kander and lyrics by Fred Ebb; directed by Mr. Abbott; with Liza Minnelli and Bob Dishy; May 11-July 31.
- Generation**, a comedy by William Goodhart; directed by Gene Saks; with Henry Fonda; October 6-.
- The Glass Menagerie**, a revival of the play by Tennessee Williams; directed by George Keathley; with Maureen Stapleton, George Grizzard, Piper Laurie, and Pat Hingle; May 4-October 2.
- La Grosse Valise**, a musical with book by Robert Dhéry; music by Gerard Calvi and lyrics by Harold Rome; directed by Mr. Dhéry; with Victor Spinetti; December 14-18.
- Half a Sixpence**, a musical with book by Beverley Cross, based on the novel *Kippis* by H.G. Wells; music and lyrics by David Heneker; directed by Gene Saks; with Tommy Steele; April 25-.
- The Impossible Years**, a comedy by Bob Fisher and Arthur Marx; directed by Arthur Storch; with Alan King, Terrence Logan, and Jane Elliot; October 13-.
- Inadmissible Evidence**, a play by John Osborne; directed by Anthony Page; with Nicol Williamson; November 30-.
- Kelly**, a musical with book and lyrics by Eddie Lawrence and music by Moose Charlap; directed by Herbert Ross; with Don Francks, Anita Gillette and Wilfrid Brambell; February 6 (one performance).
- Man of La Mancha**, a musical with book by Dale Wasserman suggested by the life and works of Cervantes; music by Mitch Leigh and lyrics by Joe Darion; directed by Albert Marre; with Richard Kiley, Joan Diener, Ray Middleton, and Robert Rounseville; November 22-.
- Mating Dance**, a comedy by Eleanor Harris Howard and Helen McAvity; directed by Ronny Graham; with Van Johnson, Marian Winters, and J.D. Cannon; November 3 (one performance).
- Maurice Chevalier at 77**, a one-man show; April 1-May 1 (limited engagement).
- Me and Thee**, a comedy by Charles Horine; directed by Perry Bruskine; with Durward Kirby and Barbara Britton; December 7 (one performance).
- Minor Miracle**, a play by Al Morgan; directed by Howard Erskine; with Lee Tracy, Pert Kelton, and Dennis King; October 7-9.
- Moscow Art Theater in Dead Souls**, a comedy by Mikhail Bulgakov adapted from the novel by Gogol; Konstantin Stanislavski's production directed by V.G. Sakhnovski, E.S. Teleshava, and Gregori Kanski; *The Cherry Orchard* by
- Anton Chekhov, directed by Victor Stanitsyn; *The Three Sisters* by Anton Chekhov, original staging by Vladimir Nemirovich-Danchenko, restaged by Iosif Rayevski; and *Kremlin Chimes* by Nicolai Pogodin, directed by Vladimir Nemirovich-Danchenko, Leonid Leonidov, M.O. Knebel, Iosif Rayevski, and Vassili Markov; February 4-28 (limited engagement).
- Mrs. Dally**, a play by William Hanley; directed by Joseph Anthony; with Arlene Francis and Ralph Meeker; September 22-November 6.
- Music Theater of Lincoln Center** in revivals of *Kismet* (June 22-July 31) and *Carousel* (August 10-September 18); limited engagements.
- New York City Center Light Opera Company** in revivals of *Guys and Dolls* (April 28-May 9), *Kiss Me, Kate* (May 12-30), *South Pacific* (June 2-13), and *The Music Man* (June 16-27); limited engagements.
- The Odd Couple**, a comedy by Neil Simon; directed by Mike Nichols; with Walter Matthau and Art Carney; March 10-.
- Oliver!**, a musical based on Dickens novel *Oliver Twist*; with book, music, and lyrics by Lionel Bart; with Robin Ramsey, Maura K. Wedge, and Victor Stiles; August 2-September 25 (return).
- On a Clear Day You Can See Forever**, a musical with book by Alan Jay Lerner; music by Burton Lane and lyrics by Mr. Lerner; directed by Robert Lewis; with Barbara Harris and John Cullum; October 17-.
- The Persecution and Assassination of Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade**, a play by Peter Weiss; English version by Geoffrey Skelton; verse adaptation by Adrian Mitchell; directed by Peter Brook; with members of the Royal Shakespeare Company, December 27-.
- Peterpat**, a comedy by Enid Rudd; directed by Joe Layton; with Dick Shawn and Joan Hackett; January 6-23.
- Pickwick**, a musical with book by Wolf Mankowitz based on *The Pickwick Papers* by Charles Dickens; music by Cyril Ornadel and lyrics by Leslie Bricusse; directed by Peter Coe; with Harry Secombe, Charlotte Rae, and Roy Castle; October 4-November 20.
- The Playroom**, a play by Mary Drayton; directed by Joseph Anthony; with Peter Kastner, Karen Black; December 5-.
- Polish Mime Theater** in a program of eight pantomimes by Henryk Tomaszewski; directed by Mr. Tomaszewski; January 5-17 (limited engagement).
- Postmark Zero**, a play by Robert Nemiroff, based on Burton C. D'Ugoff's *Letters from Stalingrad*; directed by Peter Kass; with Hardy Kruger and Viveca Lindfors; November 1-6.
- A Race of Hairly Men!**, a comedy by Evan Hunter; directed by Elaine Perry; with Brandon de Wilde; April 29-May 1.
- Repertory Theater of Lincoln Center** in *Tartuffe* by Molière, translated by Richard Wilbur and directed by William Ball (January 14-May 22); *Danton's Death* by George Büchner, directed by Herbert Blau (October 21-November 28); and *The Country Wife* by William Wycherley, directed by Robert Symonds (December 9-).
- The Right Honourable Gentleman**, a play by Michael Dyne; directed by Frith Banbury; with Charles D. Gray, Sarah Badel, and Coral Browne; October 19-.
- The Roar of the Greasepaint—the Smell of the Crowd**, a musical with book, music, and lyrics by Anthony Newley and Leslie Bricusse; directed by Mr. Newley; with Anthony Newley and Cyril Ritchard; May 16-December 4.
- The Royal Hunt of the Sun**, a play by Peter Shaffer, directed by John Dexter; with Christopher Plummer, George Rose, and David Carradine; October 26-.
- Skyscraper**, a musical with book by Peter Stone, based on the play *Dream Girl* by Elmer Rice; directed by Cy Feuer; music by James Van Heusen and lyrics by Sammy Cahn; with Julie Harris, Charles Nelson Reilly, and Peter L. Marshall; November 13-.
- A Very Rich Woman**, a comedy by Ruth Gordon, based on a play by Philippe Hériat; directed by Garson Kanin; with Ruth Gordon, Madge Kennedy, Ethel Griffies, and Raymond Walburn; September 30-October 23.
- The World of Charles Aznavour**, a program by Mr. Aznavour of his own songs; October 14-30 (limited engagement).
- Xmas in Las Vegas**, a play by Jack Richardson; directed by Fred Coe; with Tom Ewell, Shannon Bolin, Heywood Hale Broun, and Judy Frank; November 4-6.
- The Yearling**, a musical with book by Herbert Martin and Lore Noto, based on the novel by Marjorie Kinnan Rawlings; music by Michael Leonard and lyrics by Mr. Martin; directed by Lloyd Richards; with David Wayne, Dolores Wilson, and Steve Sanders; December 10-11.
- You Can't Take It with You**, a revival of the comedy by George S. Kaufman and Moss Hart; directed by Ellis Rabb; with Rosemary Harris, Donald Moffat, and Clayton Corzatt; November 23-.
- The Zulu and the Zayda**, a play with music; book by Howard Da Silva and Felix Leon, based on the story by Dan Jacobson; music and lyrics by Harold Rome; directed by Dore Schary; with Menasha Skulnik and Ossie Davis; November 10-.

BROADWAY HOLDOVERS FROM PREVIOUS YEARS

- Any Wednesday* (opened Feb. 18, 1964)
- Barefoot in the Park* (Oct. 23, 1963)
- Fiddler on the Roof* (Sept. 22, 1964)
- Funny Girl* (March 26, 1964)
- Golden Boy* (Oct. 20, 1964)
- Hello, Dolly!* (Jan. 16, 1964)
- Luv* (Nov. 11, 1964)
- The Subject Was Roses* (May 25, 1964)

tors announced a program of four plays for the first season: Georg Büchner's *Danton's Death*, William Wycherley's *The Country Wife*, Bertolt Brecht's *The Caucasian Chalk Circle*, and Jean-Paul Sartre's *The Condemned of Altona*. On October 21 the company opened in its permanent home, the superbly equipped Vivian Beaumont Theater, in Büchner's tragedy of the French Revolution. Reviews were unfavorable; the acting of almost the entire company, many members of which had come from the Actor's Workshop, was below Broadway standards, and the director, Blau, had made excessive use of the theater's moving stages. *The Country Wife*, which followed in December, was equally graceless. But audiences hoped that Blau and Irving would be given a fair chance to prove themselves.

Off Broadway. Like Broadway itself, off-Broadway suffered a decline in 1965. Among the few notable representations were Leroi Jones' *The Toilet* and *The Slave* (a double bill which opened late in 1964), a revival of Miller's *A View from the Bridge*, Bertolt Brecht's *Baal*, Donald Hall's *An Evening's Frost*, and William Alfred's *Hogan's Goat*. The pieces by Jones, a Negro writer, were shockingly outspoken commentaries on the Negro's place in American life. *An Evening's Frost*, conceived and directed by Marcella Cisney, evoked the life story of the late Robert Frost from his verse, letters, and conversations with friends. *Hogan's Goat*, a melodrama of Brooklyn politics in 1890, was one of perhaps six commendable plays on view in the city at the year's end.

Summer and Community Theater. Shakespeare is now the chief summer theatrical commodity. Traveling from coast to coast, one may see all his great plays and many of his minor ones. In the three major Shakespeare festivals in North America, the most admired productions were *Coriolanus* (Central Park, New York), *Henry IV*, Part II (Stratford, Ont.), and *King Lear* (Stratford, Conn.).

It was community theater which brought the year's most encouraging news. In 1965, 24 American cities other than New York had professional resident companies that were recognized by Equity (the actors' union) and had good attendance records. Among the country it was possible to see, among many plays of great value, Goldsmith's *She Stoops to Conquer* in Cincinnati, Shaw's *Major Barbara* in Princeton, Brecht's *Edward II* in San Francisco, Wilder's *The Skin of Our Teeth* in Washington, O'Neill's *Long Day's Journey into Night* in St. Paul, Chekhov's *The Cherry Orchard* in Seattle, and Molière's *The Miser* in Minneapolis.

THE ODD COUPLE, by Neil Simon, was the hit comedy of Broadway in 1965. It starred Art Carney (l.) and Walter Matthau (r.). Matthau won Tony Award for his performance.

FRIEDMAN-ABELES

It has been no easy matter for these regional theaters to develop audiences, but there is evidence that local interest is increasing, because established repertory groups have been able to continue. The waning respect for touring companies is in part attributable to the new theaters' excellence. The establishment of the American Playwrights Theater to provide good new plays for them is yet another sign of their importance. This organization offered its first script in 1965: Robert Anderson's *The Days Between*. After a production in Dallas in June, it became available to some 50 theaters.

Awards. Frank D. Gilroy's first Broadway play, *The Subject Was Roses*, won the top three dramatic awards of 1965. Named best play of the 1964-65 season by the New York Drama Critics Circle (April 27), it won its author the Pulitzer Prize for drama (May 3) and received the American Theater Wing's Antoinette Perry ("Tony") Award as best play of 1964-65 (June 13). The Tony award to *Fiddler on the Roof* as best musical also confirmed the choice of the drama critics. Both plays were running at the end of 1965.

Tony awards for performances in nonmusical plays went to Walter Matthau (*The Odd Couple*) and Irene Worth (*Tiny Alice*). For leading roles in musicals, the award winners were Zero Mostel (*Fiddler on the Roof*) and Liza Minnelli (*Flora, the Red Menace*). (See also PRIZES AND AWARDS.)

Theater Abroad. Productions in the European capitals were varied and numerous in 1965. Paris, fortunate in having its perennial Théâtre des Nations, enjoyed visits by troupes from most of Europe, including even Rumania, which offered a production of the Rumanian-born Eugène Ionesco's *Rhinoceros*. From Italy came Anna Magnani in Giovanni Verga's *The She-Wolf*. Other stimulating plays of the year were Jean-Louis Barrault's adaptation of Kafka's *Amerika*, and a very broadly directed version of Shakespeare's *A Midsummer Night's Dream* at the Comédie Française.

In Berlin the Freie Volksbühne gained ground, under Erwin Piscator, as the West's answer to the more famous Berliner Ensemble of East Berlin. Piscator's latest find among playwrights was Heinar Kipphardt, whose *In the Affair of J. Robert Oppenheimer* highlighted the season. In the fall, Piscator's theater and 13 others in West and East Germany staged simultaneous openings of Peter Weiss' *The Investigation*, which is about the recent war crimes trials of Nazi officials.

London audiences enjoyed, among much other fare, a visit of the Berliner Ensemble in four productions of works by Brecht. Two new plays by John Osborne, *A Patriot for Me* and *Inadmissible Evidence*, played to crowded houses. In its London theater, the Royal Shakespeare company offered, among other plays, Harold Pinter's *The Homecoming* and Brecht's *Pantula*. At Stratford the season's novelty was Christopher Marlowe's *The Jew of Malta*. Eric Porter, who took the title part, also played Shylock in *The Merchant of Venice*. In Chichester the National Theatre delighted audiences with another, and far gentler, novelty: Arthur Wing Pinero's 19th century sentimental comedy of actors and actresses, *Trelawny of the Wells*.

TOBACCO

World production of tobacco (excluding Communist China) declined from 10,042,629,000 pounds in 1964 to an estimated 9,781,285,000 pounds in 1965, according to the Foreign Agricultural Service of the U.S. Department of Agriculture.

U.S. tobacco output declined 14%, from 2,227,347,000 pounds in 1964 to 1,913,206,000 in 1965. Most of the reduction resulted from a 9% drop in plantings in response to tighter acreage controls.

Canada's production increased to 177,000,000 pounds, up 15% from the 153,711,000 pounds harvested in 1964. Larger harvests of flue-cured and cigar tobaccos more than offset the sharp drop in burley and slight declines in other tobaccos.

Among the principal tobacco-producing countries, Brazil, India, and Pakistan harvested larger crops, while production declined in the USSR, Japan, the Philippines, Rhodesia, Turkey, and Greece.

The 1965 European harvest of 1,478,548,000 pounds was 5% less than in 1964, but 29% above the 1955-59 annual average of 1,142,000,000 pounds.

TOBACCO PRODUCTION IN MAJOR COUNTRIES

Country	(In pounds)		
	Average, 1955-59	Preliminary, 1964	Preliminary, 1965
Brazil.....	306,009,000	302,409,000	420,859,000
Canada.....	165,770,000	153,711,000	177,000,000
China, Communist.....	1,687,600,000		
France.....	120,416,000	95,813,000	98,016,000
Greece.....	199,945,000	298,894,000	254,161,000
India.....	596,366,000	784,870,000	790,000,000
Indonesia.....	153,267,000	169,975,000	184,305,000
Italy.....	168,220,000	173,912,000	173,500,000
Japan.....	315,506,000	467,746,000	448,746,000
Pakistan.....	238,568,000	228,400,000	242,100,000
Philippines.....	95,277,000	169,754,000	155,424,000
Rhodesia.....	150,310,000	304,085,000	239,794,000
Turkey.....	261,081,000	386,249,000	264,000,000
USSR.....	438,715,000	509,263,000	427,692,000
U.S.....	1,913,757,000	2,227,347,000	1,913,206,000
World total.....	8,519,109,000	10,257,437,000	9,858,485,000

U.S. exports of unmanufactured tobacco in 1965 totaled about 470,000,000 pounds (equivalent to about 530,000,000 pounds at farm-sales weight), or about 9% less than in 1964.

Cigarettes produced in the United States in 1965 numbered a record 561,000,000,000, or about 4% more than in 1964, and 2% more than the previous record of 550,600,000,000 in 1963. The average number of cigarettes smoked per person 18 years and over in 1965 was estimated at 4,300, or 3% above 1964 and slightly below the 1963 record.

The 1965 consumption of cigars and cigarillos by U.S. smokers was about 8,800,000,000—3% below the record 1964 level, but 21% above that of 1963.

TOGO

The National Assembly of Togo approved the country's first five-year development plan (1966-70) on July 19, 1965. The plan, initiated on Jan. 1, 1966, provides for a total private and public investment of \$114.3 million. A major portion of the expenditures is earmarked for communications, transportation, housing, and investment. The plan, which envisions a gross growth rate of 30% over the five-year period, is under the supervision of a High Commission for the Development Plan, which was created by the Council of Ministers.

TOGO · Information Highlights

Area: 21,853 square miles.
Population: 1,642,000 (July 1, 1965 est.).
Chief City (1962 est.): Lomé, the capital, 80,000.
Government: President—Nicolas Grunitzky (took office May 5, 1963); Vice President—Antoine Meatchi (took office May 5, 1963). Parliament—National Assembly, 52 members; party seating: Togolese Popular Movement, Juvento; Democratic Union of Togolese Peoples, and Togolese Unity Party, 13 seats each.
Religious Faiths: Tribal religions, 70% of population; Roman Catholics, 16%; Muslims, 5%; others, 9%.
Education: Total school enrollment (1962-63)—134,486 (primary, 126,881; secondary, 6,880; technical, 725).
Finance (1965 budget): Revenues, \$17,700,000; expenditures, \$20,100,000; monetary unit, CFA franc (246.85 francs equal U.S.\$1).
Gross National Product (1962): \$107,000,000.
Crops (metric tons): Cassava (1963-64), 1,088,000 (ranks 7th among world producers); cocoa beans (1964-65), 15,000 (world rank, 11th); palm kernels (1963-64), 10,400 (world rank, 13th); green coffee (1964-65), 12,000; peanuts (1962-63), 10,000; cottonseed (1964-65), 3,000.
Chief Mineral (metric tons exported, 1964): Phosphate rock, 778,000.
Foreign Trade (1964): Exports, \$30,200,000 (chief exports: coffee, \$10,200,000; phosphates, \$7,900,000; cacao, \$6,600,000; palm nuts, \$1,800,000); imports, \$41,600,000 (chief imports, 1963: woven cotton fabrics, \$4,700,000; nonelectrical machinery, \$1,800,000; iron and steel, \$1,700,000). Chief trading partners (1963): France (took 52% of exports, supplied 33% of imports); Japan (took 3% of exports, supplied 9% of imports); Britain (took 2% of exports, supplied 10% of imports).
Transportation: Roads (1964), 2,933 miles (137 paved); motor vehicles (1964), 3,500 (automobiles, 2,500); railways (1963), 274 miles; civil airline, Air Afrique; principal airport, Lomé.
Communications: Telephones (1964), 2,610; radios (1961), 6,300; newspapers (1963), 2 (daily circulation, 14,000).

Foreign Affairs. The Togo-Ghana frontier, which had been closed since 1961, was reopened on July 27. The reopening, initially scheduled for January, was postponed when a Togolese frontier guard was slain by an intruding Ghanaian border policeman near Segbé, Togo, on January 16.

Dahomey's prime minister, Justin Ahomadegbé, visited Lomé, Togo, on March 17. The two governments agreed to create a joint Togolese-Dahomean commission to study cooperation in economic and social areas.

On July 24, Togo and the Soviet Union signed an agreement to increase the number of scholarships for Togolese students to study in the USSR.

On August 27 the United States and Togo signed a treaty of friendship and economic cooperation.

Military Affairs. On January 19, President Nicolas Grunitzky removed Major Emmanuel Bodjolle as chief of staff of the Togolese army and replaced him with Major Etoime Eyadema, who had assassinated former President Sylvanus Olympio in the coup d'état on Jan. 13, 1963.

Economic Developments. On July 15 the National Assembly enacted Togo's first law aimed at the promotion of foreign investment. The law provides various tax, customs, and labor and market benefits to investors, based on the type and amount of investment. The government particularly hoped to attract investments for light industry and processing of agricultural products.

The U.S.-sponsored Togolese National Rural Development Training Center at Tchitchao was inaugurated on January 9 by President Nicolas Grunitzky. The center is designed to instruct agricultural extension agents in various aspects of rural and civic development.

Public Health. A U.S.-sponsored measles immunization program was launched in Togo in January.

TORONTO

Toronto, the capital of Ontario and Canada's second largest city (est. 1965 pop.: city, 648,474; metropolitan area, 1,741,411), studied a report in 1965 recommending a revision of its metropolitan government. A new city hall was opened during the year, as were new educational institutions at the University of Toronto and York University.

Government. In 1965 the provincial royal commissioner, Carl Goldenberg, presented a report on the revision of Toronto's metropolitan government. His recommendations included: a four-city borough system to replace the present 13 governments; a separately elected metropolitan council; three-year terms for all elected officials; and uniform tax assessments and payments. The provincial government was expected to act on the report in the near future.

Toronto presently has a dual system of government, with responsibilities being divided between the Municipality of Metropolitan Toronto and the local governments of the city proper and the 12 suburbs. The metropolitan government council of 24 representatives is composed of the heads of councils from each of the 12 suburban municipalities and, from the city proper, the mayor (Philip C. Givens since 1963), two controllers, and nine aldermen. The council selects a chairman (William R. Allan since 1962) from outside its membership.

The Metropolitan Corporation is responsible for issuing debentures and for determining what local permanent financing should be done by the 13 municipalities. Except for the Metropolitan Police Commission, most metropolitan departments share functions with or duplicate those of corresponding local departments.

The general assessment value of metropolitan Toronto in 1965 was \$4,582,643,643.

New City Hall. Toronto's new \$30,000,000 city hall, designed by Viljo Revell, opened on Sept. 13, 1965. An adjacent court house is under construction, and the city plans to expropriate the area south of City Hall Square, which will be leased to a private developer on a 95-year basis.

Other Construction. Building construction in Toronto in 1965 was valued at \$167,667,617. Future projects include an \$85,000,000 downtown waterfront development.

New Educational Facilities. In 1965 the University of Toronto opened its suburban Scarborough College in temporary quarters in Toronto proper, and York University began operations at its new campus in the city. The provincial government announced that a 180-acre, \$14,000,000 science center and museum would be built in the Don Valley as its project for the Centennial of Canadian Confederation in 1967.

Transportation. Public transportation in the metro-

politan area is provided by the Toronto Transit Commission, which operates surface, underground, and ferry services. These services averaged 900,000 revenue passengers per day in 1965.

Completion of the Bloor-Danforth subway was scheduled for February 1966, and plans were begun for the northward extension of the Yonge subway.

TRAVEL

Despite the inroads made by airlines into the formerly ship-dominated market, and although lower fares meant a sizable increase in air travel into and out of the United States, the steamship industry staged a remarkable comeback in 1965 from its decline of preceding years. Six mighty cruise and transatlantic liners made their debuts, evidencing confidence by maritime management that the traveling public would continue to seek the pleasures of travel by sea, and particularly of cruises. The new ships—*Oceanic*, *Michelangelo*, *Raffaello*, *Sagafjord*, *Queen Anna Maria*, and *Europa*—were equipped so completely as to make them seaborne resort hotels. But none was American, and indeed, events within the U.S. maritime industry pointed darkly to the decline and eventual elimination of American vessels from the international passenger trade.

LUXURY LINERS AND FREIGHTERS stand at New York piers, ready to take more than 12,000 passengers on warm-weather cruises over the Christmas and New Year's holidays.

UPI

THE YARMOUTH CASTLE, a cruise ship en route from Miami to the Bahamas, burned to the waterline in the predawn hours of Nov. 13, 1965. Ninety persons lost their lives in this, one of the worst maritime disasters in the history of U.S. shipping.

WIDE WORLD

U.S. Shipping Activities. During the year the U.S. Lines' *America* was sold abroad, and a long and bitter strike cost the shipping industry more than \$100 million. (See **LABOR**.) A special presidential study group recommended the phasing out of the U.S. passenger ship over the next decade. (See **SHIPPING**.)

Lying within this controversial area, too, was legislation, not yet signed into law by the end of 1965, to bring stricter regulation of cruise activities from U.S. ports. This legislation was intended to prevent the recurrence of circumstances of the previous year in which thousands of cruise passengers had been left stranded by the sudden bankruptcy of unregulated cruise companies using foreign flag carriers.

Involved more tragically was the cruise ship *Yarmouth Castle*, owned by an American company but registered in Panama. It burned and sank on November 13 as it was en route from Miami, Fla., to the Bahamas, with the loss of 90 lives—the worst maritime disaster involving a U.S. vessel since the Ward liner *Morro Castle* burned to the waterline on Sept. 8, 1934.

Air Travel. On the other hand, international and U.S. domestic airlines did record business and had record profits in 1965, notwithstanding or perhaps because of the introduction of lower fares on most routes. Subsonic jet aircraft rapidly deposited piston equipment from major routes and there was talk about supersonic aircraft coming into service in the mid-1970's.

There were signs at year's end that air fares would drop further in 1966 and that the reduction, in combination with the magnificent opportunities for travel abroad presented by the new ocean liners, would take yet another record number of Americans to foreign shores. (See **AERONAUTICS**.)

Government Action. One aspect of the record travel business displeased the U.S. government—the continued decline in its gold reserves, reflecting among other things an imbalance in the tourism account between the United States and other countries. Of efforts made to redress the situation, two were significant: further restriction of the rights of U.S. citizens to make duty-free purchases abroad; and the formation of a special presidential, cabinet-level committee on tourism development, headed by Vice President Humphrey.

On June 30, Congress passed and President Johnson signed a bill reducing the amount of duty-free goods an American tourist could bring into the United States. Whereas before, the value of such goods could not exceed \$100 wholesale, it now can-

EXPENDITURES OF U.S. TOURISTS ABROAD

Other.....	125,000,000	129,000,000	124,000,000
Total.....	\$1,892,000,000	\$2,070,000,000	\$2,216,000,000

Source: 1965 Statistical Abstract of the United States.

not exceed \$100 retail. Duty-free importation of liquor was reduced from one gallon to one quart. Tourists returning from the U.S. possessions of Guam, American Samoa, and the Virgin Islands will be allowed to bring in \$200 in duty-free goods at the retail value, and a gallon of liquor.

Far more constructively, the Humphrey committee was instrumental in setting up the "Discover America" program, a wholly private enterprise designed to develop Americans' interest in seeing their own land, to facilitate the growth of tourist services and attractions in the United States, and to organize a tourism industry of the caliber of those in other parts of the world.

TRINIDAD AND TOBAGO

Faced with the prospect of a gradual depletion of oil, the islands' major natural resource, the government of Trinidad and Tobago sought to encourage diversification of industry in 1965. Many manufacturing plants were established, and the petroleum industry went ahead with plans for expansion of its facilities and diversification of its products.

Industry. As part of its efforts to encourage industrial development, the government in April

Area: 1,980 square miles.

Population: 949,000 (June 30, 1964 est.).

Chief Cities (1960 census): Port of Spain, the capital, 93,954; San Fernando, 39,830; Arima, 10,982; Siparia, 4,445.

Government: Governor General—Sir Solomon Hochoy; Prime Minister—Dr. Eric E. Williams. Parliament—Senate, 24 members (appointed by the governor general on the advice of the prime minister and the leader of the opposition); House of Representatives, 30 members; party seating (1965): People's National Movement, 17; Democratic Labor party, 6; Liberal party, 3; Independent, 1; vacant, 3.

Religious Faiths: Roman Catholics, 36% of population; Hindus, 23%; Anglicans, 21%; others, 20%.

Education: Literacy rate—80% of population aged 10 and over. Total school enrollment (1963)—237,813 (primary and secondary).

Finance (1963): Revenues, \$136,000,000; expenditures, \$134,000,000; public debt, \$92,000,000; monetary unit, West Indian dollar (1.714 dollars equal U.S.\$1).

Gross National Product (1963): \$580,000,000.

National Income (1963): \$466,700,000; average annual income per person, \$507.

Economic Index: Cost of living (1964), 114 (1958=100).

Manufacturing (metric tons, 1963): Gasoline, 2,262,000; sugar (1964), 249,000; cement (1964), 176,000; beer, 7,750; tobacco, 10.

Crops (metric tons, 1964–65 crop year): Citrus fruits, 30,000; cocoa beans, 4,500; coffee, 4,500.

Minerals (metric tons, 1963): Natural gas (1964), 42,114,000–000 cubic feet (ranks 17th among world producers); crude petroleum (1964), 49,724,000 barrels; limestone, 810,790; sand and gravel, 748,809; natural asphalt, 171,540; clays, 78,221; sulfur, 7,100.

Foreign Trade (1964): Exports, \$405,000,000 (chief exports, 1963: petroleum products, \$286,000,000; sugar, \$29,000,000; crude petroleum, \$22,000,000; cocoa, \$5,000,000); imports, \$426,000,000 (chief imports, 1963: crude petroleum, \$173,000,000; nonelectrical machinery, \$24,000,000; iron and steel, \$14,000,000). Chief trading partners (1963): U.S. (took 51% of exports, supplied 16% of imports); Britain (took 43% of exports, supplied 20% of imports); Venezuela (took 0.4% of exports, supplied 19% of imports).

Transportation: Roads (1964), 4,000 miles (2,700 paved); motor vehicles (1964), 57,681 (automobiles, 46,092); government railways (1963), 109 miles; civil airlines, British West Indian Airways; principal airport, Port of Spain.

Communications: Telephones (1964): 35,060; television station (1964), 1; television sets (1964), 20,000; radios (1964), 163,500; newspapers (1963), 2 (daily circulation, 77,000).

passed a law requiring that labor disputes come before a special court before a strike may be called. Protective tariffs also were used to encourage new industries. The islands' first automobile assembly plant, a shoe factory, and a flour mill were among the 34 industrial projects under construction in 1965.

In spite of dwindling local oil supplies, the petroleum industry expanded refinery facilities and planned new petrochemical plants. Plans were made to use more natural gas and imported crude oil to manufacture refined petroleum and petrochemical products. Industry leaders and government officials met in Port of Spain in January to discuss the trend toward diversification.

Agriculture. Sugar production in the islands increased in 1965 to an estimated 280,000 tons. Economists expressed concern over lack of diversification in agriculture which necessitates large food imports, a factor in the nation's chronic trade deficits. The economists also warned against the dangers of an economy too dependent on fluctuating world sugar prices.

Standard of Living. The per capita income in the islands was expected to reach \$680 in 1965, maintaining a standard of living in Latin America second only to that of Venezuela. Unemployment, however, averaged about 14% of the work force of 350,000. A rapidly expanding population has been adding about 10,000 new workers to the labor force annually.

Grenada Merger Plan. In June 1965, advocates of an eventual merger between Trinidad and Tobago and the island of Grenada lost an ally. Eric M. Gairy, leader of Grenada's opposition United Labour party and a former advocate of the union, came out

against the proposed merger. Gairy said that popular opinion in the islands was too firmly opposed to the merger to make the plan practical.

TUNISIA

President Habib Bourguiba survived several crises in 1965, and continued to lead the Tunisian Republic with a firm hand. His most dramatic move was to revive Tunisia's enmity toward the United Arab Republic (UAR) by suggesting that new talks be initiated to resolve the Arab-Israeli conflict. At home, he adopted new measures to restrain criticism of his economic development policies and to strengthen the grip of his Socialist Destour party.

President Bourguiba's Proposals. In February and March, President Bourguiba visited the UAR, Saudi Arabia, Jordan, Lebanon, Kuwait, Iran, Turkey, and

KEYSTONE PRESS

Yugoslavia. The original purpose of his trip was to raise support for Tunisian development. However, that goal shifted by the time he reached Lebanon, and on March 11 he proposed in a speech that the Arab world end its policy of refusing to recognize Israel and concede defeat in its efforts to annihilate that nation. On April 21, after his return to Tunis, Bourguiba proposed that talks be resumed between Israel and the Palestinian refugees under the terms of the 1948 United Nations truce. According to the proposed truce provisions, Israel would return to a Palestinian Arab state part of the territory it had been granted in 1948, and would allow Arab refugees who had fled from Israel in 1948 to return. Bourguiba suggested that the Arab nations would in return end their cold war with Israel.

UAR President Gamal Abdel Nasser, who has consistently pursued an anti-Israeli policy, bitterly denounced Bourguiba. Demonstrators attacked the Tunisian embassies in the UAR, Syria, and Iraq. Diplomatic relations between Tunisia and the UAR were broken off on April 27-28, and Bourguiba refused to attend the Arab League meetings held in Cairo on May 26-30 and in Casablanca on September 13-17.

Political Dissent. A conflict with the workers arose over the implementation of decisions made at the 7th congress of the Socialist Destour party, held in October 1964. Though consistently loyal to Bourguiba, the Union Générale des Travailleurs Tunisiens (UGTT) remained politically distinct from the party. The decision to organize professional cells in the party meant that UGTT would, in effect, lose its strength among the workers.

The UGTT had incurred official disfavor late in 1964 when it resisted the government's policy of fixing salaries and at the same time following deflationary policies. The government's action caused a drop in real income, which the workers opposed. Tension between the government and the UGTT came to a climax in April when an excursion boat belonging to a UGTT cooperative had a serious accident. The UGTT secretary general, Habib Achour, was charged with lax management, his parliamentary immunity was removed, and legal charges were brought against him. He was subsequently removed from office.

The dispute then shifted to the meetings of the International Confederation of Free Trade Unions (ICFTU), held in Brussels, where Ahmed Tilili, who had been removed in 1963 as secretary general of the UGTT because of his independent views, protested against Bourguiba's coercive tactics and refused to recognize a pro-Bourguiba delegation sent to replace the UGTT group. But the government finally prevailed; Achour was removed from office, and Tilili went into exile.

Cooperatives. President Bourguiba experienced resistance in implementing a highly centralized scheme for cooperatives. Under Ahmed Ben Salah, minister for plans and the national economy, the government embarked on an ambitious program of organizing producer, consumer, and agricultural cooperatives. Early resistance came from the UGTT, which had taken the initiative in this area and was running some of the most profitable cooperatives. These were now compelled to join the government system.

The government also met opposition in building agricultural cooperatives to exploit the 500,000 acres of land recovered from French farmers in 1964. At Msaken, once a party stronghold, several thousand olive farmers rioted, and there were 147 arrests. The government reacted forcefully, and some 70,000 farmers were enrolled in the farm cooperatives by the end of 1965.

TUNNELS

Construction's "underground" workers, the hard-rock tunnelers and sandhogs, continued to work on many major tunnels in 1965, some for automobiles and trains, and others for water and sewage.

Road and Rail Tunnels. Mont Blanc Tunnel, the world's longest highway tunnel, was opened on July 16. It completes the first all-season highway through the Alps between France and Italy, extending 7.25 miles through Mont Blanc and shortening the distance between Rome and Paris by 125 miles.

MONT BLANC TUNNEL, 7-mile link between France and Italy, became the world's longest road tunnel when it opened on July 16, 1965. Cars, shown entering from the Italian side, avoided 60 miles' travel on twisting highways across Alps.

RAPHO-GUILLEMETTE

Swiss tunnelers holed through another highway tunnel in the Alps, the 4.1-mile-long San Bernardino bore in Grisons Canton. The 3-mile Felber Tauern Tunnel in Austria is scheduled for completion in the fall of 1966.

Construction began during 1965 on a highway tunnel through the Pyrenees Mountains linking Bielsa, Spain, with Aragnouet, France. The \$2-million, 9,840-foot-long bore is being driven by a joint French-Spanish contractor group.

A \$12 million vehicular and pedestrian sunken-tube tunnel is scheduled for completion in Marseille in 1966. It will relieve a traffic bottleneck that has existed since retreating Germans blew up a bridge across the city's harbor in World War II.

Work continues on a tunnel to run from Montreal under the St. Lawrence River's north channel to Charron Island, where it will link up with a bridge over the south channel and form the \$75 million Louis Hippolyte Lafontaine Bridge-Tunnel complex. Construction crews have floated into place some of the biggest sunken-tube tunnel sections ever built. While constructing a cast-in-place section inside a vast cofferdam extending over a half mile into the river, the contractor precast seven three-celled units 120 feet wide and 360 feet long, each weighing 32,000 tons. A part of the cofferdam was then flooded and the big sections were floated out into the river and sunk in a trench, forming a tunnel 90 feet below water and nearly 50 feet below the river bed.

Denmark has announced an international design competition for a bridge or tunnel to link the islands of Zealand and Fyn in a 12.5-mile crossing of the Great Danish Belt. The cost of the crossing has been estimated at \$288 million.

Subway Tunnels. A growing awareness of the threat of automotive strangulation in urban areas around the world has spurred cities to improve their rapid transit systems or plan new ones. In Munich, West Germany, construction began on a 22-mile system scheduled to be finished in 1990. In Brussels, Belgium, ground was broken for the city's first six miles of subway. In Lyon, France, plans were announced to start a 24-mile subway in the near future. In Moscow, USSR, 12 miles of new subway were under construction, extending to 79 miles the new line built since 1959.

Despite difficult subsoil conditions, Hungarian subway builders progressed on a new 6-mile subway to tie in with a 2-mile line completed in 1896.

A delegation of Japanese engineers has begun investigations for a proposed 12-mile subway in Mexico City. However, because of its unstable soil conditions, the city may build instead a monorail or a conventional elevated line.

San Francisco's Bay Area Rapid Transit Project, a \$1 billion regional rail network, was scheduled to go into full-scale construction during 1966 with nearly \$350 million in funds appropriated. The project includes a 6-mile-long sunken-tube tunnel under San Francisco Bay.

In New York City, work continued on a \$100 million improvement program for the world's largest subway system, which is 237 route miles in length. A two-track extension of the Sixth Avenue line was being built by the cut-and-cover method, and another extension under Sixth Avenue neared completion.

Design work began during 1965 on a \$431 million, 25-mile rail rapid transit system for Washington, D.C. Plans were under way to form a metropolitan transit agency that will include the capital's suburban areas in Virginia and Maryland.

Rotterdam expects to open its new subway by the end of 1967. The \$40 million project includes spectacular sunken-tube tunnel construction in the heart of the city where huge concrete tunnel sections were built in the dry, then floated and moved along temporary canals.

Water Tunnels. Lebanon finally holed through its 9.9-mile Awali Tunnel after nearly eight years' construction difficulties, including a water strike that washed in the tunnel roof and filled nearly 10,000 feet of tunnel with eroded sandstone before it was

CONTROL ROOM of the new Mont Blanc Tunnel directs the flow of cars and trucks under a 15,771-foot Alpine mountain.

RAPHO-GUILLEMETTE

controlled. The tunnel will deliver 70.6 billion cubic feet of water annually.

In New York City, the Board of Water Supply completed about 40% of its 25,000-foot-long, 10-foot-diameter water tunnel deep under New York harbor. The big bore, running from Brooklyn to Staten Island, is being blasted more than 900 feet below ground level in hard rock.

Construction of impressive water tunnels as part of California's vast State Water Project got under way in 1965. Work began on the first of four big tunnels high in the Tehachapi Mountains north of Los Angeles, where the 444-mile-long California Aqueduct burrows under high peaks in its journey from northern California. A \$33.8 million contract for the 4.8-mile Carley V. Porter Tunnel was awarded in August. Construction was scheduled to begin soon on a 30-foot-diameter, 37,765-foot-long tunnel outside Los Angeles, to cost an estimated \$66 million.

TURKEY

Turkey's domestic affairs in 1965 were highlighted by elections and two major political changes. In foreign affairs, the Turkish government sought a rapprochement with the Soviet Union at the expense of Turkey's formerly close ties with the United States.

The Ürgüplü Government. The coalition government headed by Prime Minister İsmet İnönü was forced out of office on Feb. 13, 1965, by the united action of the Justice, Republican Peasants' Nation, New Turkey, and Nation's parties. The issue immediately responsible for the downfall of the İnönü government was the 1965-66 budget. A less apparent but more important cause was the Justice party's plan to prove that the Turkish army would tolerate a change of government in an election year and to assure a free election. On February 16, Sen. Suat Hayri Ürgüplü, a political independent, became

prime minister of a four-party coalition government.

Elections. On Oct. 10, 1965, Turkish voters turned out to elect the lower house of parliament. The election was generally conducted without serious incident, but the total vote of 9,275,481 represented only about 60% of the electorate—the lowest participation in a general election since Turkey's first contested election in 1947. The election gave the Justice party a working majority of 241 of 450 seats in the Assembly. The party also held a majority in the Senate, having won 79 of 150 seats in the 1964 senatorial election. In 1965 the Justice party received 4,913,186 votes (53% of the total); the Republican People's party won 2,663,195 (28.7%); the Nation's party, 583,842 (6.3%); the New Turkey

WIDE WORLD

SÜLEYMAN DEMIREL became prime minister of Turkey on Oct. 27, 1965, when the Justice party, which he heads, won a majority of the seats in the lower house of the Turkish parliament. He had served as deputy prime minister from February to October 1965, in a 4-party coalition government headed by Suat Hayri Ürgüplü, an independent.

Demirel was born in Isparta, Turkey, in 1924. He studied at the Istanbul Technical University, qualified as an engineer, and worked for a year (1949-50) in the United States. After returning to Turkey, he served as director-general of electrical studies in Ankara (1950-52), as director of several hydroelectric projects (1952-54), and as head of the Department of Dams and director-general of water control (1954-55). He received the first Eisenhower Fellowship for study in the United States in 1955. Demirel, who became active in Turkish politics in the early 1960's, was chosen to succeed Rağıp Gümüşpala as head of the Justice party in 1964.

party, 329,293 (3.5%); the Turkish Worker's party, 273,683 (3.0%); the Republican Peasants' Nation party, 211,266 (2.3%); and independents, 301,046 (3.2%).

The Demirel Government. On October 27 the head of the Justice party, Süleyman Demirel, formed a new cabinet. Most of the new ministers were relatively little known members of the moderate wing of the Justice party. A former provincial governor, İhsan Sabri Çağlangil, was named foreign minister. No dramatic departures from past policy were included in the program that the new government presented to parliament on November 3. The Demirel cabinet promised to work for close relations with the West and, simultaneously, for better relations with the Soviet Union.

The major question facing the Justice party was whether the various wings of the party would cooperate in implementing a program. A secondary issue was the degree of control the party leadership would maintain over some people in the party who might still feel the necessity to avenge those Democrats who had been ousted from the government in 1960. The membership of the five-year-old Justice party consists mostly of former members of the Democrat party, the party that was removed from power by the 1960 coup. The three top Democrat leaders were hanged and 450 of their followers were imprisoned.

Relations with the United States. United States refusal to support Turkey against Greece in the conflict over Cyprus during 1964 triggered a deterioration of U.S.-Turkish relations. Turkey, a member of NATO since 1952, notified the United States in December 1964 that it was not interested in participating in the mixed-manned nuclear fleet, which the United States had proposed for NATO's defense. The announcement was followed by disputes over rental payments for U.S.-manned bases in Turkey, U.S. hesitation in participating in the Keban Dam project, the manner in which U.S. firms were operating in Turkey, and Turkish support for Pakistan during the Kashmir crisis in September 1965. On Sept. 8, 1965, Pakistan appealed to Turkey for military assistance against India. Turkey, feeling obligated to respond as a comember of the Central Treaty Organization, airlifted an unknown quantity of military supplies. United States objections further impaired its relations with Turkey.

Relations with the Soviet Union. Soviet-Turkish relations improved considerably during 1965. The change began with the visit of Turkish Foreign Minister Feridün Cemal Erkin to Moscow in November 1964. During the visit the Russians convinced the Turks that they supported an independent Cyprus with full rights for the Turkish minority on the island, and they did not insist on Turkey's withdrawal from NATO. Out of the meetings came a cultural exchange agreement, an invitation for Soviet Foreign Minister Andrei Gromyko to visit Ankara, and an agreement to develop trade relations. The latter agreement culminated in a commercial protocol with provisions for increased trade and credit.

Cyprus. Although the Greek-Turkish dispute over Cyprus did not become critical during 1965, it continued to foster hostility between the two countries. In the spring, Turkey forced virtually all Greek nationals living in Turkey to leave the country.

Periodic fighting between the Greek and Turkish communities on Cyprus was reported during 1965. In July the Turkish government requested a conference with Greece and Britain to discuss action

KEYSTONE

TURKISH ELECTIONS, held on Oct. 10, 1965, gave Justice party a majority of seats in the lower house of parliament.

against the Cypriote government of Archbishop Makarios because of its attempt to eliminate parliamentary representation for the Turkish minority.

Economy. Industrial output increased considerably during 1965. In May the Ereğli Iron and Steel Works, Turkey's second steel plant, was opened. During the year the government also managed to mobilize \$120 million for the Keban Dam project on the Euphrates River. A larger cereal crop during 1965 provided a basis for optimism about the agricultural sector of the economy.

The foreign debt, which eats up about 40% of Turkey's foreign exchange earnings, continued to exert pressure on the country's balance of payments.

The situation was alleviated temporarily by a \$250 million credit from the Organization for Economic Cooperation and Development and by postponement of \$55 million in payments due in 1965.

UGANDA

Events in Uganda during 1965 were dominated by domestic issues, including the settlement of the 60-year-old dispute between the kingdoms of Bunyoro and Buganda, within Uganda. The settlement caused a further political crisis between Uganda's leading political parties. In international affairs, Uganda protested foreign intervention in the rebellion in the Congo (Léopoldville) and advocated an African solution to the problem.

Political Developments. In 1893 the British granted two counties of the Kingdom of Bunyoro to the Kingdom of Buganda in return for Buganda's support against Bunyoro. Since that time, Bunyoro had

sought the return of these "lost counties," Buyaga and Buganazzi. They finally were returned in November 1964 after the inhabitants of these areas overwhelmingly approved the change in a referendum. The result of the referendum was viewed as a victory for Prime Minister Milton Obote over President Edward Mutesa II, who, as kabaka (king) of Buganda, opposed returning the counties to Bunyoro.

The actual transfer of the lost counties precipitated a political crisis in Uganda. The Kabaka Yekka party, representing Buganda's interests, had dissolved its coalition with the ruling Uganda People's Congress (UPC) in August 1964, when the UPC agreed to the referendum. The break with the UPC created a split in the Kabaka Yekka between the neotraditionalists and the progressives. Many of the progressives deserted the Kabaka Yekka and joined the UPC. Prime Minister Obote, who heads the UPC, welcomed the defections from the Kabaka Yekka, for the defections strengthened his efforts to change Uganda into a one-party state.

Throughout 1965 the UPC continued to work for the dissolution of opposition parties and for the incorporation of defectors into the UPC. On February 1, Obote refused to grant official recognition to an opposition party. On April 30 the UPC secretary, Grace Ibingira, announced that the UPC would introduce legislation to ban the Kabaka Yekka in spite of the group's intention to expand from simply a Buganda party to a national one.

Foreign Affairs. In February, skirmishes occurred between Ugandan troops and Congolese rebels on the border between Uganda and the Congo (Léopoldville). In that same month, the Uganda government protested the American and Belgian bombings of two of its border villages. The Uganda government urged that the United States stop all aid to the Congolese government and allow the Organization of African Unity to find a solution to the problem. The tense situation improved with the final defeat of the Congolese rebels in April.

On October 28, Adoko Nekyungu, minister of planning, announced that trade would resume between Uganda and Congo (Léopoldville).

Economy. During 1965, Uganda's economy flourished. The economy was paced by a 25% increase in exports, from \$143,920,000 in 1963 to \$180,320,000 in 1964, while imports increased only 5%, from \$86,520,000 in 1963 to \$91,840,000 in 1964. Exports of coffee, Uganda's staple product, rose in value from \$75,000,000 to \$98,000,000. Economic aid, including a \$15,400,000 loan from the USSR for road construction and commitments for other development projects, also boosted the economy.

Other international economic agreements included a \$11,200,000 loan from Yugoslavia, \$15,000,000 in loans and gifts from Communist China, and \$16,800,000 from Britain for development projects. The International Finance Corporation agreed to invest \$7,728,000 in Uganda to construct an integrated cotton mill at Jinja.

The Uganda government prohibited imports of Japanese products in an effort to correct Uganda's adverse balance of trade with Japan. Imports from Japan in 1964 were valued at \$13,700,000 and exports at \$5,000,000.

UNION OF SOVIET SOCIALIST REPUBLICS

The Soviet Union seemed unusually subdued after Nikita Khrushchev's overthrow in October 1964. Gone were the threatening gestures toward the West, the bitter tirades against Communist China, the irrelevant remarks by the Kremlin leaders. Khrushchev's successors were two sober, serious bureaucrats, Leonid I. Brezhnev and Aleksei N. Kosygin. Methodically, they tried to solve the country's economic ills, while problems of foreign affairs, ideology, art,

literature, even religion and atheism, tended to fall into the background. The new Soviet leaders struggled with the agricultural tax, land reclamation, industrial slowdowns, small factory profits, and the slow sale of consumer goods.

The Soviet people responded well to this quiet regime, relieved that the Khrushchevian police terror of 1963-64 had definitely ended. It was no longer dangerous to listen to foreign radio broadcasts, for neither the Voice of America nor the British Broadcasting Corporation was jammed. Even

Government: President—Nikolai V. Podgorny; Premier—Aleksei N. Kosygin; Communist Party first secretary—Leonid I. Brezhnev; Parliament—Supreme Soviet: Soviet of the Union (791 deputies); Soviet of Nationalities (652 deputies).

Religious Faiths: Russian Orthodox, 50% of population; Muslims, 10%; Protestants, 5%; Roman Catholics, 4%; Jews, 1%.

Education: Literacy rate (1965)—97% of adult population. Total school enrollment (1965)—44,000,000 (nursery and kindergarten, 7,700,000; primary, 25,400,000; secondary, 4,500,000; technical/vocational, 3,500,000; university/higher, 2,900,000).

Finance (1965 est.): Budget revenues, \$109,600,000,000; expenditures, \$109,300,000,000; public debt, \$28,700,000,000; monetary unit, ruble (0.9 ruble equals U.S.\$1).

National Income (1964): \$197,800,000,000; average annual income per person, \$875.

Economic Indexes (1964): Industrial production (1958=100) 170 (heavy industry, 181; light industry, 151); agricultural production (1956-57=100), 121; taxation (1958=100), 144. Manufacturing (1964): Steel ingots and castings, 84,995,000 metric tons; cement, 64,900,000 metric tons; electricity, 509,000,000,000 kilowatt-hours; lumber, 260,000,000 cubic meters; tractors, 329,000; grain harvesting combines, 84,000.

Crops (metric tons, 1964): Potatoes, 93,000,000 (ranks 1st among world producers); sugar beets, 80,300,000 (world rank, 1st); wheat, 74,200,000 (world rank, 1st); barley, 28,500,000 (world rank, 1st); maize, 19,700,000 (world rank, 2nd); rye, 13,500,000 (world rank, 1st); sunflower seed, 5,990,000 (world rank, 1st); oats, 5,500,000 (world rank, 3rd); cottonseed, 3,480,000 (world rank, 2nd); millet, 3,470,000; grapes (1963), 2,572,000.

Minerals (metric tons, 1964): Petroleum (1965), 242,000,000 (ranks 2nd among world producers); iron ore, 146,000,000 (world rank, 1st); coal, 554,000,000 (world rank, 1st); salt, 8,800,000 (world rank, 3rd); manganese, 6,700,000 (world rank, 1st); bauxite, 4,400,000 (world rank, 2nd); gypsum, 4,300,000 (world rank, 4th); chromite (1963), 1,229,000 (world rank, 1st); asbestos, 1,200,000 (world rank, 2nd); copper, 699,000 (world rank, 2nd); zinc, 408,000 (world rank, 3rd); lead, 363,000 (world rank, 2nd); diatomite, 308,000 (world rank, 2nd); silver, 27,000,000 troy ounces (world rank, 5th); gold, 5,600,000 troy ounces (world rank, 2nd); natural gas, 130,000,000 cubic meters (world rank, 2nd).

Foreign Trade (1964): Exports, \$7,674,000,000 (chief exports: machinery, \$1,534,800,000; oil and coal, \$1,381,320,000; ore and metals, \$997,620,000); imports, \$7,729,000,000 (chief imports: machinery, \$2,705,150,000; consumer goods, \$1,391,220,000; food, \$1,004,770,000). Chief trading partners (1964): East Germany, 18% of total trade; Czechoslovakia, 13%; Poland, 9%.

Transportation (1965): Roads, 600,000 miles (187,000 paved); railways, 80,000 miles; inland waterways, 85,000 miles; merchant vessels, 1,200 (8,000,000 deadweight tons); principal airports, Moscow, Leningrad, Kiev, Tashkent.

Communications (1965): Telephones, 7,200,000; television stations, 130; television sets, 12,000,000; radios, 35,000,000; newspapers, 6,595 (daily circulation, 98,000,000).

PIX

LEONID ILYICH BREZHNEV, first secretary of the Soviet Communist party, ruled the Soviet Union jointly with Premier Aleksei Kosygin in 1965. Whether he would emerge as the sole dictator remained a question at the year's end.

The son of a steelworker, he was born in the Ukrainian town of Kamenskoye (later renamed Dneprodzerzhinsk) on Dec. 19, 1906. He graduated as an engineer from a metallurgical institute in 1935. In 1938 he became a functionary of the Ukrainian Communist party, which was then headed by Nikita Khrushchev, and he rose to power as Khrushchev's protégé. In 1952, Brezhnev was elevated to the real seat of Soviet power, the secretariat of the Soviet Communist party's Central Committee. He relinquished his position in the secretariat in 1960 to become president of the Soviet Union (chairman of the Presidium of the Supreme Soviet), but resumed his membership in the secretariat in June 1963. Resigning the presidency in July 1964, he became deputy party head only four months before helping to overthrow Khrushchev.

Communist party officials listened attentively to radio news from the outside world. But the Soviet man in the street, much as he enjoyed this compara-

gross earnings. Beginning in April, the debts of the poorer collective farms to banks and tractor repair stations were cancelled. The government assumed all costs for soil improvement, and pensions were established for former collective farmers now working on state farms.

Simultaneously, the government prices for collective farm produce were raised 36% for rice; 37% for millet; 50% for wheat, buckwheat, and rye; and 20% to 100% for cattle, sheep, and hogs. The collective farms were also told that their forced sale of grain to the state during each year from 1965 to 1970 would be only 85% of the forced sale in 1964. Any excess farm grain could be sold to the state at a higher price than that paid for the forced sale. Similarly, the forced sale of meat in 1965 was to be 5% lower than in 1964. During April, the prices for shoes and clothing in rural stores were reduced to the price level in city stores. Starting in May, collective farmers were allowed to set their own prices on garden produce sold in city markets, hunters and fishermen were permitted to sell their catch in the same markets, the tax on market sales was to be used only for improving market facilities, and closed markets were reopened at railway stations and river docks.

By June, officials and technicians on state farms were allowed bonuses as high as 10% of their salary for overfulfilling plans for production or sale of crops. Meanwhile, minimum salaries in rubles equivalent to \$165 per month were guaranteed for collective-farm chairmen, \$88 for collective-farm agronomists, and \$77 for collective-farm technicians.

These measures might improve the lot of the peasants over the next several years, and result in

tively relaxed atmosphere, apparently regarded Brezhnev and Kosygin as colorless men who could probably not last long.

ECONOMY

The post-Khrushchev regime tackled the Soviet Union's urgent agricultural problems, which had been aggravated rather than eased by Khrushchev's attempt to farm 100 million acres of marginal, drought-stricken land.

Agricultural Reforms. A series of major decrees were issued during the first half of 1965 for the purpose of raising farm income so that the peasants would perform better work. On January 1 the income taxes on collective farms were reduced 50% by levying them on net farm income rather than on

PICTORIAL PARADE

SOVIET FOREIGN MINISTER Andrei Gromyko, in address to UN General Assembly on Sept. 24, 1965, proposed treaty to prevent spread of nuclear weapons, especially through weapons-sharing systems such as the U.S.-backed Multilateral Force (MLF). He also submitted a draft declaration against interference in the internal affairs of other countries.

SOVFOTO

increased crop production. Even in 1965, the trade of food in the markets had increased 100% over the previous year.

The effect of these agricultural innovations was blunted in 1965 by adverse weather conditions, the worst for crops that the Soviet Union had experienced in 40 to 50 years. A searing drought struck three major grain-growing regions: the Volga valley, West Siberia, and Khrushchev's "new lands" of north central Asia. Another breadbasket, the Ukraine, was soaked by unusually heavy rains, which flattened much of the ripening grain. As in 1964, the USSR had to become a major importer of free-world grain. By the autumn of 1965 the Soviet Union had sold \$113 million worth of gold to the Bank of International Settlements in Switzerland, and \$100 million worth to the Bank of France, in order to obtain hard currency for the purchase of no less than 10,000,000 tons of grain. Most of the grain bought was Argentinian or Canadian, rather than high-priced U.S. grain. Some Soviet officials were embarrassed by the new agricultural failure, and confessed to tourists that poor crops gave the Soviet Union an unfortunate world-image. At the close of 1965, Brezhnev announced that future agricultural plans would stress the irrigation of deserts and the drainage of swamps, so that a crop failure in one part of the country due to adverse weather there could be offset by good harvests in other climatic zones.

The Consumer. In a move to aid city dwellers, the government, in April 1965, decreed store price reductions of 6% to 20% for clothing, 15% for herring (a common breakfast dish), 45% for cocoa, and 21% for cameras. In May, disabled war veterans were granted free rides on buses and trolleys, priority in obtaining apartments and entering sanitariums, and higher pensions. Clothing styles improved so much that a middle-class Russian would not appear ill-dressed if transplanted to Paris or New York. But crop failures frustrated many of these attempts to improve the consumers' lot. Food for the cities and farm products used in the manufacture of consumer goods were in short supply. Even the Soviet press complained about store shortages of meat, butter, vegetables, fruit, clothing, shoes, furniture, dishes, iceboxes, radios, television sets, cameras, and watches. Attractive window displays only increased the disappointment of shoppers who found that inside the stores the shelves were half empty. Like Khrushchev, the new Soviet leaders were providing an economy of scarcity.

Industrial Reform. All other economic reforms were overshadowed by the industrial changes decreed in October 1965. Premier Kosygin bluntly explained that since increasing capital investments had not

stopped the slowdown of industrial expansion, more drastic steps would have to be taken.

First, according to the premier's plan, factories and mines would no longer be judged efficient if they merely fulfilled production plans. Instead, they were to be rated by how much of the finished product was sold. Thus, for the first time in Soviet history, quality of output became more important than quantity. No longer, for example, could an auto factory manufacture cars without headlights or starters, and then claim it had fulfilled its production plan.

Second, Soviet industry would have to pay its own way. Previously, new plants had been built and old factories expanded at the expense of the state. These state funds were never repaid. Hereafter any money granted for expansion was to be a loan, not a gift. If a factory should lose money and needed a subsidy, the latter would be offered not as a grant, but as a loan. To repay these loans, factories would be allowed to retain more of their profits, instead of paying an 80% profits tax.

Third, an industrial manager would no longer receive from higher authorities a table of organization, ordering him to hire exactly so many engineers, foremen, and workers. Instead, the manager was to be told how much he could spend on wages. Within this framework, he could hire as many engineers, foremen, and workers as he needed. They were to be paid whatever wages the manager could afford. The first result of this reform will probably be unemployment, because the average manager will dismiss his incompetent personnel, then give the highest possible salaries to the remaining skilled staff.

Fourth, all of the 40 regional councils of industrial management created by Khrushchev were abolished, on the grounds that they fostered local favoritism and blocked the standardization of machinery parts. The government also did away with Khrushchev's Supreme Economic Council, the Soviet Economic Council, and inter-regional economic councils such as those in Central Asia, the Caucasus, and the Baltic states. In place of regional, inter-regional, and national economic councils, the government created 30 new industrial ministries, of which 7 were for production of munitions, 9 for machinery manufacture, and 14 for output of raw materials and consumer goods. Thus Khrushchev's decentralization of industrial management in 1957 was completely reversed, and the Soviet Union's economy was once again controlled from Moscow, as it had been in the time of Stalin. It remained to be seen whether this neo-Stalinism would reverse the post-Stalin slowdown of industrial growth.

Trade and Tourism. Soviet foreign trade continued

UPI

MOSCOW POLICE disperse Asian and Russian students who demonstrated against U.S. policy in Vietnam by attacking U.S. embassy on March 4, 1965.

to expand. In 1964 it had exceeded \$15 billion for the first time in Soviet history. As in previous years, about 70% of foreign trade was with countries in the Soviet orbit, 20% with Western industrial nations, and 10% with underdeveloped countries outside of the Communist bloc. In 1965 the Soviet Union accounted for about 5% of total world trade. Soviet foreign aid commitments to underdeveloped nations amounted to approximately \$3 billion, of which three fifths was promised to India, Indonesia, Egypt, Afghanistan, and Iraq. During the year the Soviet Union shipped fighter planes to India to strengthen Indian defenses against Pakistan and Communist China.

On July 1 the Soviet Union joined the International Patent Convention, thus extending to foreign inventors the same rights enjoyed by Soviet inventors. There were two Soviet motives: to buy foreign inventions more easily, and to sell Soviet inventions abroad.

More than a million foreign tourists visited the Soviet Union during 1965, mostly from nations within the Soviet orbit. To make tourism easier, the post-Khrushchev regime cut the time for issuing Soviet entry visas from two months to one week. It allowed tourists to convert rubles back into foreign currency when leaving the country, opened 100 Soviet cities to tourists, and established special stores where Russian beverages, confectionery, clothing, household appliances, and souvenirs were sold below cost if purchased with Western hard currency. Such foreign-currency stores had not existed in the Soviet Union since the early 1930's. Their revival indicated how desperate the government was to accumulate foreign exchange badly needed for trade expansion.

Manpower. The Soviet population, despite a declining birthrate, increased to 229 million in 1965. Of this total, 76 million (33%) were employees of the government—the world's largest bureaucracy.

Three of every four able-bodied Soviet women were working at salaried jobs. As industrial technology expanded, unemployment began to be a serious problem for unskilled youths, particularly in provincial cities where the rate of unemployment was as high as 8%.

THE NEW GOVERNMENT

It is usual for a new government in almost any country to sweep out the top bureaucrats of the previous government. Yet, after Premier Khrushchev's fall, the Brezhnev-Kosygin dictatorship was slow to fire or demote Khrushchev's favorites. During most of 1965 there were few high-level personnel changes. However, the replacement of the regional economic councils by the new central ministries in the autumn provided an opportunity for quietly demoting officials who were unsympathetic to the post-Khrushchev regime. The shift of officials from one post to another was more like a game of musical chairs than a brutal Stalinist purge.

One of the important promotions was that of Kiril T. Mazurov, who rose from first Communist party secretary of Belorussia and candidate member of the party Presidium to full Presidium member and first vice premier of the Soviet Union. Dmitri F. Ustinov, who had been head of the Supreme Economic Council before it was abolished, rose to the secretariat of the party's Central Committee. Vladimir V. Matskevich, who had been dismissed by Khrushchev as minister of agriculture, was restored to that ministry. Vladimir I. Stepanov, editor of the principal government newspaper, *Izvestia*, was made chief of all Communist party propaganda. Young, handsome Dmitri S. Polyanski, edged up from being vice premier to first vice premier.

Leonid I. Brezhnev, first secretary of the Soviet Communist party, assumed an additional role as member of the government's Presidium on October 2. (Both Stalin and Khrushchev, before becoming pre-

mier, negotiated with diplomats and leaders of capitalist nations in their capacity as members of the government's Presidium. Protocol required this because their positions as party leaders permitted them to deal only with foreign Communists, not with representatives of foreign governments.)

In December, Anastas I. Mikoyan retired as president of the Soviet Union. He retained his membership in the governmental Presidium. The 70-year old Mikoyan appeared to be bowing out because of his age and ill health. He was replaced as president by Nikolai V. Podgorny, a food-industry expert, whose local Communist party organization in the city of Kharkov had been under Soviet press attack for several weeks. In view of these attacks, it seemed likely that Podgorny had been kicked upstairs to this relatively ceremonial job, rather than given a true promotion.

The little-known Ivan V. Kapitonov was promoted to the post of Communist party secretary, and another obscure person—Vladimir V. Shcherbitsky—became a candidate member of the all-powerful party Presidium. The loser in the December shifts appeared to be the former police chief, Aleksandr N. Shelepin, who had to relinquish both his vice premiership of the government and the chairmanship of the Committee for Party-State Control. The committee, renamed "People's Control," was handed over to Pavel Kovanov, a complete unknown. However, Shelepin still remained a secretary of the Soviet Communist party.

There were important demotions during the year. Vladimir N. Novikov disappeared when his Supreme Economic Council was abolished. Vitali N. Titov was exiled from the Central Committee's secretaryship to become second party secretary of Kazakhstan. Trofim D. Lysenko, the pseudogenetics expert for both Stalin and Khrushchev, retired into oblivion from his directorship of the Soviet Genetics Institute. Ilichev, the ideological czar of Khrushchev's regime, sank from the party's Central Committee secretariat to an assistant ministership in the government's Ministry for Foreign Affairs. During the autumn, when the new economic ministries were created, no less than 25 ministers were dismissed from the government cabinet.

Most of these personnel changes involved officials whose names were largely unknown to the Western world. But obviously what was at stake was the future leadership of the Soviet Union. Just as in

the first two years after Stalin's death, leading Soviet newspapers in 1965 disagreed with one another, reflecting the conflicting opinions of the various top leaders. Speeches of the party Presidium leaders were rarely published in full, since each major newspaper deleted certain remarks it disliked. While the public believed that the Brezhnev-Kosygin team was not likely to last more than one year, local Soviet officials fearfully awaited a Stalinist-type purge, after the new Stalin or Khrushchev had won the battle for power.

FOREIGN AFFAIRS

The post-Khrushchev regime moved very cautiously in foreign relations, obviously desiring to avoid any risk of a major war. Besides wooing the underdeveloped nations of Asia and Africa, the Soviet Union sought closer ties with certain anti-Communist powers—France, Turkey, Japan, and others—who wished to assert greater independence of U.S. policy. The Soviet intent was to break up anti-Communist military alliances.

Relations with the West. Because of the war in Vietnam, Soviet-American relations continued to be strained. In January, Richard F. Stolz, the first secretary of the U.S. embassy in Moscow, was expelled from the Soviet Union for alleged espionage. On February 9, 2,000 Moscow students led by young Chinese and Vietnamese stoned the American embassy in Moscow, breaking about 200 windows while Soviet police watched without interfering. However, a similar student demonstration on March 4 was finally stopped by Soviet police and troops after 170 windows had been broken. Seven of the March demonstrators were arrested, and the Soviet government offered to pay for the damage to the embassy.

Soviet dislike for U.S. diplomats was reconfirmed on May 11 when Norris D. Garnett, a Negro cultural attaché of the American embassy in Moscow, was expelled from the country for allegedly spreading anti-Soviet propaganda among African students studying in Russia. During May the government newspaper *Izvestia* accused two other U.S. embassy officials, Malcolm Toon and Alan Logan, of being spies. Neither official, however, was expelled from the country. Meanwhile, the Soviet government created great difficulties for the cultural exchange program with the United States. Several American writers and scientists were forbidden to tour Russia

SOVfoto

PREMIER KOSYGIN is met on arrival in Peking on Feb. 5, 1965, by Chinese Prime Minister Chou En-lai. Kosygin stopped overnight in Peking on his way to Hanoi, North Vietnam, for talks with North Vietnamese officials on conduct of the Vietnamese war.

on the thin excuse that Soviet counterparts were unwilling to visit the United States. In the autumn the Soviet Union cancelled the Moscow engagement of the American musical comedy *Hello Dolly!*, and refused to accept a substitute stage show offered by the United States. In October, four U.S. army officers were roughed up by Soviet soldiers when an American military train was entering East Germany en route to West Berlin.

Speeches by Brezhnev and other Soviet leaders throughout 1965 claimed that U.S. military intervention in the Vietnamese war prevented any improvement in U.S.-Soviet relations. During the year Russia shipped a considerable quantity of arms and ammunition to North Vietnam, which was not required to pay for these military supplies.

In April a permanent delegation of the National Liberation Front of South Vietnam arrived in Moscow. The Soviet Union granted it diplomatic status, thereby recognizing the South Vietnamese Communist rebels as the legal government of South Vietnam. The Soviet Union publicly offered to send volunteer fighters to aid North Vietnam on three conditions: (1) if North Vietnam requested such aid; (2) if volunteers were needed; and (3) if U.S. "aggression" against North Vietnam were intensified. Apparently no volunteers were actually sent.

Uganda and the Soviet Union issued a joint statement denouncing U.S. "aggression" in Vietnam, and France and the Soviet Union jointly appealed for an end to foreign intervention in the Vietnamese war. India and the Soviet Union made a joint appeal in

May to the United States to stop bombing North Vietnam. On September 24, Foreign Minister Andrei Gromyko proposed that the United Nations adopt resolutions condemning outside interference in any nation's internal affairs and preventing the spread of nuclear weapons to any more countries. The first resolution was aimed against U.S. intervention in Vietnam, while the second was intended to prevent the formation of a NATO force armed with nuclear weapons.

Russia's fear of the proposed multilateral nuclear force also induced it to renew disarmament talks with the United States in the U.N. disarmament conference at Geneva, Switzerland. President Johnson suggested in July that disarmament negotiations be resumed, and the Kremlin accepted his proposal on July 12.

Soviet-British relations remained strained, largely because Britain supported U.S. policy in Vietnam. A major incident occurred in July when Gerald Brooke, a London professor of Russian literature, was sentenced by a Moscow court to five years' imprisonment for alleged espionage. He had been arrested by Soviet police while leading a British student tour through Russia. Relations between West Germany and the USSR were also unfriendly, although trade between the two nations did not decline.

Relations with Africa. As in the Khrushchev era, the new Soviet regime tried hard to establish close ties with the new African nations. A large Soviet program of cultural and educational exchange was directed toward African governmental leaders, rebel leaders, army officers, trade unions, and youth organizations. Aeroflot, the Soviet airline, made regular flights to nine African countries: Algeria, Congo (Brazzaville), Guinea, Mali, Morocco, Somalia, Sudan, Tunisia, and the United Arab Republic. Soviet policy in Africa suffered a setback when President Ben Bella of Algeria, a good friend of the Soviet Union, was overthrown. Russia condemned Rhodesia's declaration of independence in November, and proclaimed its support of Rhodesian Africans against Rhodesian whites.

Soviet efforts to woo Africa continued to be troubled by racial incidents between Russians and African students in the Soviet Union. In January, African students beat up a Soviet volunteer policeman in Leningrad. In March a student from Ghana was murdered in the Caucasian city of Baku. No less than 29 students were flown home to Kenya after staging a sit-down strike in the same city. African students complained to Western tourists that although the Soviet Union preached racial equality it did not practice it.

Relations with Asia. By late 1965, Soviet leaders were complaining publicly that a year of Soviet

COSMONAUTS Leonov and Belyayev after 1965 flight in which Leonov "walked in space," pay homage at the grave of Konstantin Tsiolkovsky (1857-1935), space science pioneer.

SOVfoto

efforts to achieve a reconciliation with Communist China had met with no Chinese response. Speaking through a lead editorial in *Pravda* on November 28, the Soviet leaders declared that China would destroy the unity of world communism if it persisted in its attacks on the Soviet Communist party and in its presumptuous claim to be the sole spokesman for the Communist world. Meanwhile, the Chinese press claimed that the post-Khrushchev Soviet leaders were worse than Khrushchev, and that the Kremlin was conspiring with the United States to obtain a Communist defeat in the war in Vietnam. China supported Pakistan in the brief undeclared war between Pakistan and India, while the Soviet Union tried to mediate the conflict. Russia expelled several Chinese students in March for fighting with Soviet police during a Moscow student demonstration against the U.S. embassy. Peking gave the expelled students a hero's welcome. Nevertheless, in April, the Soviet Union and Communist China concluded a trade agreement, providing for the exchange of Chinese cloth, shoes, food and minerals for Soviet metals, timber, chemicals, machinery, and airplanes. (See also COMMUNISM.)

Soviet-Israeli relations remained cool, especially after *Izvestia*, in April and May, criticized Israeli diplomats in the Soviet Union for allegedly insulting Soviet Jews.

SPACE EXPLORATION AND MILITARY AFFAIRS

Soviet rocketry continued to display its prowess in 1965 with several successful launchings. The most spectacular came on March 18 when Lt. Col. Aleksei A. Leonov "walked" in space as his co-pilot, Col. Pavel I. Belyaev, steered their spaceship. On April 23 the Soviet Union launched its first communications satellite, which promptly relayed a television program from eastern Siberia to Moscow. There were four unsuccessful attempts during the year to land rockets carrying scientific instruments on the moon. The first one, launched on May 12, and the third and fourth, dispatched on October 8 and December 3, destroyed themselves when they crashed into the moon at high speed. The second, sent up on June 8, went off course and missed the moon by 100,000 miles. (See SPACE EXPLORATION.)

Three rockets never before shown to the public were displayed in military parades in 1965: a 110-foot-long intercontinental missile using liquid fuel, another long-range 65-foot missile consuming solid fuel, and a short solid-fuel missile (mounted on a huge tractor) with a range of 1,100 miles. (See MISSILES.)

According to Western detection devices, the Soviet Union exploded a nuclear device underground on Jan. 15, 1965, and probably conducted two more underground atomic tests on March 3 and October 8. (See ATOMIC ENERGY.)

Soviet military history was rewritten in 1965 to reacknowledge the wartime achievements of Generalissimo Stalin. A retired marshal of tank troops described in his memoirs how Stalin had planned the capture of Berlin in 1945. Brezhnev won unexpected applause in May when he reminded his listeners in a Kremlin speech that Stalin had headed the State Defense Committee during World War II. By mid-year the army emphasized in its museum display that Stalin had also been war minister when the Soviet Army defeated Hitler's Wehrmacht.

An even more unusual revision of history was the posthumous rehabilitation of Corps Commander Dumenko, who had been executed by the Soviet

police for allegedly conspiring against the Communist regime. His execution had been ordered not by Stalin, but by Lenin. The Soviet high command thus dared to state that even the sacred Lenin could have been wrong on military matters.

The increasing independence of Soviet military leaders was also expressed by Marshal M.V. Zakharov, who had been dismissed as chief of the General Staff by Khrushchev and reinstated in the same post by the Brezhnev-Kosygin regime. In a long article published in February in a military newspaper, Zakharov wrote that henceforth Soviet military leaders must plan and direct the indoctrination and personnel work of the armed forces. Previously these functions had been performed by commissars of the Communist party.

CULTURE

During 1965 the struggle continued between neo-Stalinist critics, editors, and artistic leaders on the one hand, and artists and writers demanding more freedom of expression on the other. Beginning in February, the Communist party newspaper *Pravda* published a series of articles stating that writers and artists need not cater to the personal taste of Kremlin leaders as had been required during the dictatorships of Stalin and Khrushchev. *Pravda* attacked both the *October* literary magazine and the newspaper *Izvestia* for criticizing certain writers who did not conform to the official canons of art. Apparently the Kremlin disagreed, for in September the chief editor of *Pravda*, A.M. Rumyantsev, was abruptly dismissed. Three prominent Soviet writers were arrested in the autumn on charges of sending uncensored manuscripts out of the Soviet Union for publication in the West. Thus the Brezhnev-Kosygin regime, after initial hesitation, appeared to be backing the neo-Stalinists against the exponents of greater artistic freedom.

The Soviet press complained that Russian youth was being influenced by the criticisms of Soviet life broadcast by Western radio stations. Official complaints were also published that many Soviet youths had become apathetic, apolitical, individualistic, and uninterested in past Soviet achievements. Western tourists observed that the de-Stalinization campaign, followed by the downgrading of Khrushchev, had led to the disillusionment of Soviet youth, as well as of their elders.

The Brezhnev-Kosygin regime appeared to be more tolerant toward religion than the deposed Khrushchev had been. Few of the clergy were arrested or imprisoned during 1965. Religious congregations remained large, neither increasing nor decreasing. Many youths and upper-class citizens dared to worship in public. The Hebrew faith was no longer systematically persecuted. Soviet Jews were permitted to use state bakeries for the preparation of matzoh holy bread for the Passover holiday. The Soviet government promised in October that a Jewish memorial monument would be erected at Babi Yar, a valley near Kiev where many thousands of Soviet Jews had been butchered by the Nazis during World War II. Previously, various Soviet writers, particularly Yevgeni Yevtushenko, had asked why no monument existed to commemorate this wartime massacre. (See also SOVIET LITERATURE.)

ELLSWORTH RAYMOND

New York University

GAMAL ABDEL NASSER, president of the United Arab Republic (Egypt), was reelected on March 15, 1965, to his third six-year term, polling a record 99.999 percent of the popular vote. In October, in the wake of internal disturbances, a failing economic situation, and a series of diplomatic setbacks, Nasser replaced Prime Minister Aly Sabry with the former vice president and minister of the interior, Zakaria Mohieddin, and initiated a new campaign against subversive activities.

Nasser was born in Beni Mir, Upper Egypt, on Jan. 5, 1918. In 1938, at the age of 20, he began a career in the army, and by 1952 was one of the leaders of the military junta that deposed King Faruk. Nasser assumed the premiership in 1954 and proclaimed himself president of the Republic of Egypt in 1956. He was reelected in 1958. One of Nasser's chief goals was to bring about a union of the nations of the Arab world. A union of Syria and Egypt, called the United Arab Republic, lasted from 1958 until 1961. A proposal to unite Egypt and Iraq, discussed in 1963-64, was shelved in 1965.

UNITED ARAB REPUBLIC

The year 1965 was a difficult one for the United Arab Republic (Egypt) and for its president, Gamal Abdel Nasser. Internally, the government showed more instability than it had for a decade. The Communists reasserted themselves, and the outlawed extremist Muslim Brotherhood came into the open with attempts to assassinate Nasser. An overhaul of the government itself was initiated in October.

Egypt's relations with the United States, West Germany, Iran, and Pakistan were clouded at times. Within the Arab bloc, a serious quarrel erupted between Egypt and Tunisia over the question of Israel. Also, Egypt was forced to admit that its three-year support of the republican forces in the Yemeni civil war had been a failure, and to agree to withdraw its aid.

Government. In January, Nasser was nominated for a third presidential term of six years, and in the election of March 15, only 65 of the 6,950,163 valid ballots were cast against him. In the same week, exiled former King Faruk died of a heart attack in Italy. His body was returned to Cairo for burial. (See NECROLOGY.)

On September 29, Nasser dismissed the government of the somewhat pro-Communist premier, Aly Sabry. Three days later he appointed the more conservative Zakaria Mohieddin as premier. Mohieddin,

who formerly had been minister of the interior (1953-62) and vice president (1961-64), immediately began to remove some of the oppressive measures of the previous government and to clamp down on subversive activities within the country.

The activities of opposition groups during the year indicated a feeling of unrest in Egypt. Egyptian Communists attempted to form a political party, but were forced to give up an open organization for membership in Nasser's official party, the Arab Socialist Union. It is estimated that there are about 600 Communists and 2,000 closely aligned fellow travelers in the Arab Socialist Union.

The Muslim Brotherhood maintained its clandestine organization in Egypt and made several abortive attempts on Nasser's life in July and August. The resulting arrests—perhaps 6,000—indicated how widespread the organization had become and how seriously the government viewed its activities.

The War in Yemen. No other single event has shaken the Nasser regime as much as its failure to destroy royalist opposition forces in Yemen. By 1965 this effort had come to a stalemate. On August 24, Saudi Arabia's King Faisal and President Nasser met in Jeddah and initialed their third agreement to end the fighting in Yemen. Although Egypt undertook to remove its troops from Yemen by the fall of 1966, there remained some question as to whether the withdrawal would take place. (See YEMEN.)

UNITED ARAB REPUBLIC • Information Highlights

Area: 386,100 square miles.

Population: 28,900,000 (July 1, 1964, est.).

Chief Cities (1962 est.): Cairo, the capital, 3,518,200; Alexandria, 1,587,700; Giza, 276,200; Port Said, 256,100.

Government: President—Gamal Abdel Nasser (assumed office 1956; elected 1958); Premier—Zakaria Mohieddin (appointed Oct. 3, 1965); Parliament—National Assembly, 350 members. Religious Faiths: Muslims, 93% of population; Christians, 6%; others, 1%.

Education: Literacy rate (1960)—26% of population aged 15 and over. Total school enrollment (1962)—3,691,721 (primary 2,909,996; secondary, 482,408; teacher-training, 26,760; technical, 129,306; higher, 143,251).

Finance (1964 est.): Revenues, \$1,152,000,000; expenditures, \$1,100,000,000; public debt (1963), \$1,355,000,000; monetary unit, Egyptian pound (0.4348 pound equals U.S.\$1).

National Income (1960): \$3,266,000,000; average annual income per person, \$126.

Economic Indexes (1964): Industrial production (1961), 167 (1958=100); agricultural production, 141 (1956-57=100); cost of living, 103 (1958=100).

Manufacturing (metric tons, 1964): Cement, 2,384,000; wheat flour (1961), 1,989,000; gasoline (1963), 714,000; sugar, 400,000; crude steel, 249,000; meat (1963), 225,000; cotton yarn, 131,280.

Crops (metric tons, 1964): Maize, 1,676,000 (ranks 15th among world producers); cottonseed, 952,000 (rank 5th); citrus fruits, 428,000 (rank 10th); rice, 2,035,000; wheat, 1,600,000; dates (1963), 440,300; potatoes (1963), 420,000; grapes (1963), 105,000.

Minerals (metric tons, 1964): Salt, 675,000 (ranks 18th among world producers); gypsum, 470,000 (rank, 18th); phosphate, 600,000; iron ore, 447,000; kaolin, 62,796; manganese, 43,000; crude petroleum, 43,915,000 bbl.

Foreign Trade (1964): Exports, \$539,000,000 (chief exports: cotton, \$268,180,000; rice, \$69,460,000); imports, \$953,000,000 (chief imports, 1963: wheat, unmilled, \$72,266,000; whole meal and flour, \$69,276,000; crude petroleum, \$62,813,000). Chief trading partners (1963): U.S. (took 4% of exports, supplied 27% of imports); USSR (took 19% of exports, supplied 5% of imports); Greece (took 5% of exports, supplied 10% of imports).

Transportation: Roads (1964), 29,627 miles (5,862 paved); motor vehicles (1964), 112,284 (automobiles, 89,854); state railways (1963), 2,945 miles; merchant vessels (1964), 45 (201,000 gross registered tons); national airline, United Arab Airlines; principal airports, Alexandria, Cairo, Luxor, Mersa Matruh.

Communications: Telephones (1964): 264,400; television stations (1964), 20; television sets (1964), 250,000; radios (1963), 1,980,000; newspapers (1962), 33.

Foreign Relations. The UAR's relations with the United States changed markedly during 1965. In January-February, in response to the burning of the John F. Kennedy Memorial Library in Cairo in November 1964, the U.S. House of Representatives voted to suspend further aid to Egypt unless the U.S. president found such aid to be "in the national interest." By June 1965, diplomatic relations between the two countries had improved, and the United States released more than \$37 million in suspended food shipments to Egypt. Relations again became strained when, on July 21, Mustafa Amin, editor of the leading Egyptian newspaper, *Al Akhbar*, was arrested and accused of spying for the United States. But in November the Egyptian government initiated a turn for the better by purchasing \$6 million worth of corn from the United States and paying for the shipment in dollars.

The visit of East German leader Walter Ulbricht to Egypt in late February touched off a crisis in the UAR's relations with West Germany. Ulbricht's visit ultimately resulted in a diplomatic break between Cairo and Bonn. (See also GERMANY.)

The UAR continued to be a leading member of the nonaligned, or neutralist, bloc. Relations with both Pakistan and India were complicated by the Pakistani-Indian war over Kashmir in September. The UAR's relations with Iran deteriorated when the shah of Iran, during a television interview in London, accused Nasser of "trying to bring down other Middle Eastern governments."

Arab Unity. The year 1965 was not a propitious one for Egyptian efforts to unify the Arab world. Nasser's costly support of republican elements in the civil war in Yemen was a failure. A serious quarrel with Tunisia was precipitated by Tunisian President Habib Bourguiba's suggestion on March 11 that some sort of rapprochement be effected between Israel and the Arab states. The result was rioting and demonstrations in several Arab capitals and a certain degree of censure of Bourguiba by Arab leaders, although Libya, Morocco, and Saudi Arabia remained silent, presumably in tacit support of Bourguiba's proposal. By late summer, Nasser himself admitted that it would be some years before the Arabs would be prepared to attack Israel.

The friendly regime of Ahmed Ben Bella in Algeria was overthrown on June 19, leaving Nasser even more isolated than before. Egypt did make some effort to improve relations with the new Algerian government of Col. Houari Boumedienne.

In July, plans for incorporating the UAR and Iraq were quietly dropped.

Economy. In spite of increased industrialization and more efficient agricultural methods, the Egyptian economy continued to deteriorate in 1965.

With an annual population growth of nearly 3%, Egypt faces a serious shortage of consumer goods. Commercial imports have been reduced drastically. Foreign exchange and gold reserves are in extremely limited supply.

A government decree in July abolished most installment buying and coupled rigid price controls with a 20% increase in the price of most home appliances. The official cost-of-living index increased 14% between February 1964 and February 1965, and retail prices climbed some 30% between February 1963 and February 1965. In June the government instituted a system of forced savings.

University of Texas*

UNITED CHURCH OF CANADA

The United Church of Canada, a union of Congregational, Methodist, and Presbyterian churches, celebrated its 40th anniversary in 1965. Since its formation in 1925, membership rose from 609,729 to 1,063,951 in 1964, and donations increased from \$16,968,243 to \$61,437,861.

In 1965 the United Church had 5,488 congregations organized into 2,683 pastoral charges, with 3,396 ordained ministers, 180 laymen serving congregations, 185 deaconesses, and nearly 100 other professional workers. Of its 4,922 Sunday Schools, 90% follow the Bible Study curriculum introduced in 1964.

The United Church maintains four universities, eight theological colleges, a training college for laymen, and several residential colleges. It also operates 10 frontier hospitals, 24 senior citizen homes, and numerous clinical and guidance centers. An ecumenical center was opened in Montreal to encourage dialogue between French and English, and Roman Catholics and Protestants.

ERNEST E. LONG

Secretary of the General Council

UNITED CHURCH OF CHRIST

In 1965 the United Church of Christ, a union of Congregational Christian churches and the Evangelical and Reformed Church, had over 2 million members in nearly 7,000 churches. This year the church placed its emphasis on meeting problems of increased urbanization and of full human rights for all.

Its General Synod continued the United Church Committee for Racial Justice Now, and established a task force to coordinate programs for an all-out attack on poverty. The Office of Communication completed a 13-week television series called *Tangled World*. This production, to be released by the Broadcasting and Film Commission of the National Council of Churches, explored the ethical problems of modern man's relation to his environment.

The United Church Board for Homeland Ministries sponsored experimental ministries, including job training centers, a chaplaincy in Las Vegas, Nev., and services to night workers. It continued its work in church extension and in hospitals and homes for the elderly and the orphaned, and conducted a study of its 14 seminaries.

At the Consultation on Church Union, United Church delegates and representatives of the Methodist, Presbyterian, Episcopal, Disciples of Christ, and Evangelical United Brethren churches drew up a plan of union. This plan will be submitted to all local United Church congregations for study prior to adoption by the Consultation.

In 1965 the United Church Board for World Ministries had 507 missionaries and fraternal workers in 32 countries. They were engaged in relief, rehabilitation, social service, education, and evangelical work. Members of the board met with agencies of both the United Presbyterian Church of the U.S.A. and the Disciples of Christ to discuss ways of cooperating in mission work abroad.

The United Church launched "Breakthrough," a program to explain the national and world missionary enterprise. It includes an "Every Church Visitation" program conducted by United Church leaders.

UNITED NATIONS

UNITED NATIONS

The United Nations celebrated its 20th anniversary by holding commemorative meetings June 25 and 26 in San Francisco, Calif. The city had witnessed the meeting in 1945 when the original UN Charter was signed, and played host in 1955 to the organization's 10th anniversary celebration. President Lyndon B. Johnson was the principal speaker at the opening of the 1965 celebration.

On Nov. 21, 1963, the United Nations had designated 1965 as "International Cooperation Year," but there was little evidence of increased cooperation among UN members in 1965. The constitutional crisis over the financing of peacekeeping operations that had dominated the United Nations in 1964 and delayed the convening of the 19th session continued through the first eight months of 1965. The "no-vote" 19th session recessed on February 18 after creating a special committee to resolve the crisis. The deadlock between the Soviet Union and the United States was not resolved until August 31, when a consensus was reached not to force the issue over the implementation of Article 19 of the UN Charter.

In addition to this constitutional issue, the United Nations was faced in September with the conflict that broke out between India and Pakistan, and in November with the situation resulting from the unilateral declaration of independence by Rhodesia.

The United Nations also was concerned with the widening of the war in Vietnam and the civil war in the Dominican Republic.

In an unprecedented action, Pope Paul VI flew to New York on October 4 to address the UN General Assembly. This was the first visit to the Western Hemisphere ever made by a reigning pope. He was greeted at the United Nations by Secretary-General U Thant, Assembly President Amintore Fanfani, U.S. Secretary of State Dean Rusk, and Soviet Foreign Minister Andrei Gromyko. In a speech delivered in French to some 3,000 UN members and their guests, the pope stressed that the United Nations represents "the obligatory road of modern civilization and world peace." About 500 dignitaries were later presented to the pontiff.

By continuing the UN Force in Cyprus, the United Nations recognized the importance of its role in promoting the peaceful settlement of international disputes. The organization continued its efforts to grapple with the more difficult long-range problems of the developing nations.

The 20th session adopted an international convention on the elimination of all forms of racial discrimination—the first human rights convention of the United Nations to include provisions for implementation. It ratified the first formal amendments to the UN Charter, enlarging the membership of the Security and the Economic and Social councils. By the end of 1965 the United Nations appeared to

UNITED NATIONS AFRICAN DELEGATES walk out in protest against Great Britain's Rhodesian policy as British Prime Minister Wilson addresses the Assembly on Dec. 16, 1965.

WIDE WORLD

have gained strength from its survival of the constitutional crisis of 1964-65.

Because of its objections to the seating of Malaysia on the UN Security Council, Indonesia became the first state ever to withdraw from UN membership. On January 21 the Indonesian ambassador to the United Nations, Lambertus Palar, handed UN Secretary-General Thant a formal letter of withdrawal. At the same time, Indonesia declared its intention to remain in the World Health Organization (WHO) and other UN agencies it felt might be beneficial to the Indonesian people.

The withdrawal of Indonesia reduced UN membership to 114. With the addition on September 21 of three new members—The Gambia, the Maldives Islands, and Singapore—total membership rose to 117.

The principal activities of the United Nations in its 20th year are discussed under the following headings: (1) General Assembly; (2) Security Council; (3) Economic and Social Council.

GENERAL ASSEMBLY

The 19th session of the Assembly resumed its work on Jan. 18, 1965, continuing to function under the "no-vote" agreement that had limited its activities in 1964. The basic issue was the constitutional question of the obligation of states to pay for the operations of the UN Emergency Force (UNEF) in the Middle East and the UN Operation in the Congo (ONUC). The United States con-

tended that states had an obligation to pay their share of these peacekeeping operations. It argued that if they failed to do so, the Assembly should invoke Article 19 of the Charter, taking away the vote of states that are over two years in arrears on budget assessments. The Soviet Union and France held that these particular peacekeeping operations were not part of the regular budget, and that Article 19 was therefore not applicable.

The 19th session, which began late in December 1964, operated on a consensus basis. Efforts were made to prevent voting on any question, because a vote would open the possibility of challenging the voting rights of those states in arrears on payments for UNEF and ONUC. It was in this atmosphere that the Assembly resumed its 19th session on January 18.

The Assembly by consensus dealt with certain essential matters such as elections to the Economic and Social Council and other bodies. On February 16 the consensus formula was almost upset by Albania's demand that the Assembly "return to its normal procedure." All the efforts to prevent the issue from being forced appeared on the verge of collapsing, but both factions in the conflict were united at least to prevent the Albanian action from leading the Assembly to a situation that might be irreversible. The meeting was adjourned without voting on the Albanian proposal. On February 18 the Assembly met again and voted on the Albanian demand with the understanding that it was only a procedural question, and that there would be no challenge on the right to vote of states that were in arrears.

The Assembly was then able to continue operating on a consensus basis. It created a special committee to review all aspects of peacekeeping operations and to report to the Assembly with recommendations by June 15. Also by consensus, the Assembly made interim financial arrangements and authorizations for 1965, and provided for UN supervision of the elections to be held in the Cook Islands.

Between April 22 and June 15, the Special Committee on Peacekeeping Operations held 14 meetings but was unable to break the deadlock. The 19th session of the Assembly was unable to reconvene. Finally, on August 16, the new U.S. representative to the United Nations, Arthur J. Goldberg, who had assumed the post after the death of Adlai E. Stevenson, told the Special Committee that for the sake of the preservation of the organization, the United States would not insist on the application of Article 19, even though it felt that the article applied. As a consequence, on August 31, the Special Committee was able to arrive at a consensus that provided: (1) that the General Assembly will carry on its work normally in accordance with its rules of procedure; (2) that the question of the applicability of Article 19 of the Charter will not be raised with regard to the UN Emergency Force in the Middle East and the UN Operation in the Congo; and (3) that the financial difficulties of the organization should be solved through voluntary contributions by member states, with the highly developed countries making substantial contributions. The 19th session resumed on September 1, approved the consensus of the Special Committee, and adjourned.

The 20th session of the Assembly met from Sep-

SECRETARY-GENERAL U THANT (left) and Assembly President Amintore Fanfani shared the rostrum in November.

tember 21 to December 21. Its major achievements are summarized below.

Political and Security Questions. On November 19 the Assembly recommended (93-0, with 5 abstentions) that all states, and particularly the Eighteen-Nation Committee on Disarmament, give urgent attention to the drafting of a treaty on the nonproliferation of nuclear weapons. Three other disarmament resolutions were adopted on December 3. One (adopted 102-0, with 6 abstentions), urged the Eighteen-Nation Committee to continue efforts toward general and complete disarmament. A second (adopted 92-1, with 14 abstentions), stressed the urgent need for the suspension of nuclear and thermonuclear tests, and the third (adopted 105-0, with 2 abstentions), reaffirmed the principle (originally adopted in 1961) that the continent of Africa should be a nuclear-free zone as a practical step toward the prevention of the spread of nuclear weapons.

On December 15 the Assembly passed two resolutions on the apartheid policies of South Africa. One resolution (adopted 80-2, with 16 abstentions), continued and enlarged the special committee on the policies of apartheid of South Africa, and condemned South Africa for its refusal to comply with earlier resolutions of the Assembly. The other (adopted 95-1, with 1 abstention) established a voluntary UN trust fund to give assistance to refugees and the families of political prisoners of South Africa.

On December 18 the Assembly voted (43-26, with 22 abstentions) to deplore the continued violation of fundamental rights and freedoms of the people of Tibet, and called (47-5, with 54 abstentions) on all states to respect the independence and territorial integrity of the Republic of Cyprus. On December 21 the Assembly reaffirmed (61-13, with 34 abstentions) its previous resolutions urging the unification of Korea.

Economic and Financial Questions. On November 22 the Assembly established a UN Development Program by consolidating the Special Fund and the Expanded Program of Technical Assistance, the new program to take effect on Jan. 1, 1966. On December 8 the Assembly took steps to establish a UN Capital Development Fund and unanimously resolved

AMINTORE FANFANI of Italy was elected president of the UN General Assembly on Sept. 21, 1965, succeeding Alex Quaison-Sackey of Ghana. As Assembly president during Pope Paul VI's historic visit to the United Nations in October, Fanfani presented the pontiff to the UN delegates and guests.

Fanfani was appointed Italian foreign minister on March 5, 1965. He resigned the post on December 28 after he had become involved in alleged "peace feelers" from the North Vietnamese government to the U.S. government. His reason for resigning was that the affair had "cast doubts on the conduct of the foreign minister." (See also *Italy*.)

Fanfani was born in Pieve Santo Stefano, Arezzo, Italy, on Feb. 6, 1908. A specialist in economic history, he taught at several Italian universities. He became a member of the central committee of the Christian Democratic party in 1945. After holding a number of cabinet posts in the governments of Premier Alcide de Gasperi, he was prime minister in 1958-59 and from 1960 to 1963.

to promote a campaign for universal literacy. On December 20 the Assembly adopted resolutions providing for scientific and technological assistance to developing countries, the development and utilization of human resources, the UN Development Decade, the continuing work of the UN Conference on Trade and Development, activities in the field of industrial development, the role of the United Nations in training technical personnel to speed up the industrialization of the developing countries, the transfer of technology, and the confirmation of the allocation of funds for the Expanded Program of Technical Assistance.

On December 20 it also passed resolutions on transit trade of landlocked countries (81-0, with 12 abstentions), financing economic development (78-1, with 17 abstentions), the accelerated flow of capital and technical assistance to developing countries (83-0, with 15 abstentions), the conversion to peaceful needs of the resources released by disarmament (101-1), and the continuation of the World Food Program (93-0, with 10 abstentions).

Social, Humanitarian, and Cultural Questions. On November 1 the Assembly unanimously adopted resolutions to implement declarations on the elimination of all forms of racial discrimination and on the elimination of all forms of religious intolerance. At the same time it requested that member nations adopt certain principles on the consent to marriage, minimum age for marriage, and the registration of marriages.

The Assembly on December 7 passed resolutions to dedicate UN Day 1966 to the cause of refugees, and to provide assistance to refugees in Africa (89-9).

On December 16 the Assembly unanimously passed resolutions on UN assistance for improving the status of women; advisory services in the field of human rights; progress on a draft convention and declaration on freedom of information; consideration of the creation of the post of UN high commissioner for human rights; progress on the Draft International Covenants on Human Rights; and plans for the International Year for Human Rights in 1968.

On December 21 the Assembly adopted (106-0, with 1 abstention) an international convention on the elimination of all forms of racial discrimination, establishing new precedents in the international promotion of human rights. It provided for a commission to conciliate human rights complaints, and made it possible for individuals to make petitions of complaints. Before this resolution, only states could

NEW YORK TIMES

POPE PAUL VI, in historic speech to UN General Assembly on October 4, reminds organization that it is for many "the last hope of concord and peace."

complain of human rights violations.

Decolonization Questions. Throughout 1965 the Special Committee of 24 continued its active efforts to speed the implementation of the 1960 declaration on the elimination of colonialism. It adopted three resolutions (October 12, November 5, and November 11) relating to Rhodesia. On November 5 the Assembly urged (90-11, with 10 abstentions) that Britain abolish the state of emergency in Aden and cease all repressive actions against the people there. On December 16 the Assembly decided to establish a voluntary economic development fund to aid Basutoland, Bechuanaland, and Swaziland. It declared, after the elections in the Cook Islands, that they had achieved full internal government. The Assembly invited the United Kingdom and Argentina to seek a peaceful settlement of their dispute over the Falkland Islands (Malvinas). It reaffirmed the right of Mauritius to freedom and independence from Britain, and requested Spain to set an early date for the independence of Equatorial Guinea. It also requested the United Kingdom to repeal all discriminatory laws and to establish a "one-man, one-vote" system in Fiji.

The Assembly reaffirmed (91-0, with 10 abstentions) on December 16 the inalienable right to decide their constitutional status of the peoples of American Samoa, Antigua, Bahamas, Barbados, Bermuda, British Virgin Islands, Cayman Islands, Cocos (Keeling) Islands, Dominica, Gilbert and Ellice Islands, Grenada, Guam, Montserrat, New Hebrides, Niue, Papua, Pitcairn, St. Helena, St. Kitts-Nevis-Anguilla, St. Lucia, St. Vincent, Seychelles, Solomon Islands, Tokelau Islands, Turks and Caicos Islands, and the U.S. Virgin Islands. The resolution asked the administering powers of these territories to implement the declaration eliminating colonialism.

Also on December 16, in response to the recommendations of the Special Committee of 24, the Assembly, by a vote of 96-0, with 11 abstentions, urged Britain and Spain to discuss the status of Gibraltar; requested (81-0, with 19 abstentions) Britain to end the state of emergency in British Guiana; and requested (100-2, with 4 abstentions) Spain to end colonialism in Ifni and Spanish Sahara.

On December 17 the Assembly called upon the United Kingdom to take steps to remove British troops from Muscat and Oman, and condemned South Africa's policies on South West Africa. The

Assembly, on December 21, condemned (66-26, with 1 abstention) Portugal's colonial policies, urging all states to break off trade and diplomatic relations with Portugal. It asked (84-0, with 25 abstentions) the Australian-appointed administrator of Nauru to establish a legislative council there by Jan. 31, 1966, and to arrange for the independence of this Pacific island by Jan. 31, 1968. It also asked Australia, as the administering authority, to implement the declaration on the elimination of colonialism with respect to the Trust Territory of New Guinea and the territory of Papua.

Administrative and Budgetary Questions. On December 21 the Assembly approved a budget of \$108,472,800 for 1965 and of \$121,567,420 for 1966, and maintained the working capital fund at \$40 million for 1966. Also on December 21, the Assembly approved funds for UNEF of \$18,911,000 for 1965 and \$15 million for 1966. The Assembly also approved a number of technical administrative resolutions, ranging from a revision of the scale of assessments to appointments to the Board of Auditors.

Legal Questions. On November 5 the Assembly adopted (82-0, with 21 abstentions) a resolution on updating the nine general multilateral treaties concluded under the auspices of the League of Nations. On December 20 it adopted a resolution on assistance to promote the teaching, study, dissemination, and wider appreciation of international law. In the same meeting it unanimously adopted resolutions on the development of a draft declaration on the right of asylum, consideration of steps for the development of private international law (with a particular view to promoting international trade), and the consideration of principles of international law concerning friendly relations and cooperation among states, in accordance with the UN Charter.

Charter Amendments. The amendments to Articles 23, 27, and 61 of the UN Charter, which had been recommended for ratification on Dec. 17, 1963, came into force on Aug. 31, 1965, after having received the necessary number of ratifications. These amendments increased the membership of the Security Council from 11 to 15, the membership of the Economic and Social Council from 18 to 27, and altered the voting majority required in the Security Council from 7 to 9. The three amendments took effect on Jan. 1, 1966. As a result of these amendments the Assembly on December 20 unanimously recom-

INDIAN-PAKISTANI DISPUTE OVER KASHMIR is discussed in September by India's Ambassador G. Parthasarathi (l.) and Security Council (center), and in December by Pakistan's President Ayub Khan (r.) in General Assembly speech.

mended an amendment to Article 109 of the Charter, changing the Security Council vote requirement for Charter amendments from 7 to 9.

SECURITY COUNCIL

The most serious issues before the Security Council in 1965 were the conflict between India and Pakistan and the unilateral declaration of independence by Rhodesia. The Council also had to deal with a revolution in the Dominican Republic and continuing problems in Cyprus, South Africa, and the Portuguese territories.

India-Pakistan. On August 24, Secretary-General U Thant expressed his concern over increased violations of the cease-fire line that had been established between India and Pakistan in July 1949. As the situation deteriorated and armed conflict between India and Pakistan broke out, the Security Council met on September 4 at the urgent request of the United States. The secretary-general reported to the Council that the cease-fire agreement of 1949 had collapsed. The Security Council unanimously adopted a resolution on September 4 calling upon both India and Pakistan to cease fire and to withdraw to their own sides of the cease-fire line.

The Council met again on September 6 to consider a report from the secretary-general that neither India nor Pakistan had responded to the September 4 resolution. It also heard a report from Gen. Robert H. Nimmo (Australia), the chief military observer, indicating that the conflict was broadening and intensifying. The Council unanimously adopted a resolution calling for a cessation of hostilities and a withdrawal of all forces to the positions they had held on August 5. The secretary-general visited India and Pakistan (September 7-16) and talked with the leaders of the two countries, but was unable to obtain a cease-fire. The Security Council again considered the issue on September 17, and on September 20 adopted a resolution demanding that a cease-fire take effect on September 22, promising that the Council would then help the two states arrive at a political settlement.

On September 21 the secretary-general reported on steps he was taking to supervise a cease-fire line. These included the organization of the UN India-Pakistan Observation Mission (UNIPOM), with an initial team of 100 military observers and supporting staff, at a cost of \$1,645,000 for three months. He reported that while he had no reply from Pakistan to

the "demand" of the Council, India was willing to agree to the cease-fire if Pakistan would also agree. After a recess in a meeting of the Council on September 22, and discussions between U.S. Ambassador Arthur Goldberg (president of the Council) and the foreign minister of Pakistan, the cease-fire was agreed upon.

UN military observers reported on violations of the September 22 cease-fire, and the Council met in emergency meeting on September 27, adopted a resolution expressing grave concern that the cease-fire agreed to unconditionally by the two states was not holding, and again called upon the parties to withdraw their troops. After the cease-fire had taken effect, fighting broke out again and the issue was again considered by the Council, without action, on October 25, 27, and 28. On November 5 the Council adopted a resolution calling upon India and Pakistan to end violations of the cease-fire and demanding prompt and unconditional execution of a proposal on withdrawal of their forces. (See also ASIA; INDIA; PAKISTAN.)

Rhodesia. The movement of the Rhodesia white minority government of Prime Minister Ian Smith toward a unilateral declaration of independence was of increasing concern to the Security Council in 1965. Following a request by 35 African states that were concerned over the failure of the Smith regime to heed repeated resolutions of the Council and Assembly, the Council took up the question again on April 30 in an effort to prevent parliamentary elections in Rhodesia in May. On May 6 the Council adopted a resolution (7-0, with 4 abstentions) calling on Britain not to accept any unilateral declaration of independence by the minority government of Rhodesia.

The Smith government, however, did make a unilateral declaration of independence on Nov. 11, 1965. On November 12 the Council adopted (10-0, with 1 abstention) a resolution condemning this action and requested that no state recognize or give assistance to the "illegal" regime. It also adopted (10-0, with 1 abstention) a resolution on November 20 calling on states to desist from sending arms, equipment, and military material to the Smith regime and to do their utmost to break all economic relations with Rhodesia, including trade in oil and petroleum products. The African and Asian states had wanted the United Nations to use military force to break the white minority regime, but Britain

favored economic sanctions alone. In the face of this implied veto, the Council stopped short of military pressure. (See also COMMONWEALTH OF NATIONS; RHODESIA.)

Dominican Republic. The United States informed the Security Council on April 29 that it had ordered troops to the Dominican Republic on April 28 to protect Americans there and to escort them to safety. The United States explained that it took this action only after Dominican Republic military authorities had announced that they could no longer guarantee the safety of American lives "and that the assistance of U.S. military personnel was required." At about the same time the matter was considered by the Organization of American States (OAS), and on April 29 and 30 the secretary-general of the OAS informed the UN Security Council of its actions.

On April 30, Cuba protested the "illegal action" and the "invasion" of the Dominican Republic by the United States. The Soviet Union on May 1 asked for an urgent meeting of the Council to consider the question of "the armed intervention" of the United States in the "internal affairs" of the Dominican Republic. The matter was considered in 16 meetings between May 3 and 25. A resolution, adopted unanimously on May 14, called for a cease-fire in the Dominican Republic and directed the secretary-general to send a representative to the country. On May 15, Secretary-General U Thant sent his military aide, Maj. Gen. I.J. Rikhye (India), to the Dominican Republic, and named the executive secretary of the Economic Commission for Latin America, José Antonio Mayobre (Venezuela), as his representative.

On May 17, Mayobre arrived in the Dominican Republic, met with leaders of the various factions, and urged a suspension of hostilities to facilitate the work of the Red Cross, a proposal that the Security Council backed in a statement of the Council president on May 19. By May 21, through these efforts and those of the OAS, a 24-hour suspension of hostilities was agreed upon. On May 22 the Council adopted a resolution requesting that the suspension be extended into a cease-fire, which took effect.

At eight meetings between June 3 and 21 the Security Council again considered the situation at the request of the Soviet Union. Four meetings were held between June 21 and 26, following a letter of June 14 from the foreign minister of the constitu-

tionalist government in the Dominican Republic protesting the continued intervention of U.S. and inter-American forces. These discussions resulted in no action by the Council. (See also DOMINICAN REPUBLIC; LATIN AMERICA.)

Cyprus. The secretary-general on March 11 recommended that the Council continue the UN Peacekeeping Force in Cyprus (UNFICYP) for three more months in the hope of stabilizing the situation there. After three days of discussion, the Council on March 19 extended the mandate for UNFICYP for three months. On June 10 the secretary-general stated that while there was some easing of the tension on Cyprus, he felt that without the continued presence of UNFICYP, fighting between the two communities would break out again. He pointed out that it would be advisable to extend the mandate of the force for another six months. The Council unanimously extended the mandate of the force to Dec. 26, 1965.

In July and again in November, Turkey and Cyprus requested meetings of the Security Council to deal with the situation in Cyprus. On December 17, after the secretary-general reported that if the force were not continued the result might be "disastrous," the Security Council extended the mandate of UNFICYP for three more months, to March 26, 1966. (See also CYPRUS.)

Portuguese Territories. On July 28, 32 African states, pointing out that the Council had passed a resolution in July 1963 deploring the situation in the Portuguese-administered territories as a serious disturbance to the peace and asking Portugal to speed steps aimed at granting independence, argued that Portugal had not complied with the resolution and that the Council should again deal with the problem. After eight meetings on the question the Council adopted (17-0, with 4 abstentions) a resolution confirming its previous resolution asking Portugal to recognize the right of the peoples in these territories to achieve self-determination. The resolution also requested that all states refrain from offering Portugal any assistance "which would enable it to continue its repression" of the peoples in these areas. (See also PORTUGAL.)

Senegal-Portugal. On May 7, Senegal requested a meeting of the Council, arguing that Portugal had continued to violate its airspace, claiming that there had been 13 violations since the Council considered the question in April 1963; it further contended that Portugal had attacked border villages. On May 19 the Council unanimously adopted a resolution deploring the incursions by Portuguese military units, and asked Portugal to take "all effective and necessary steps" to prevent violations. (See SENEGAL.)

Yemen. On August 25 the secretary-general congratulated the UAR and Saudi Arabia for signing an agreement concerning peace in Yemen. During much of this dispute the presence of the UN peacekeeping forces in Yemen had helped to reduce tensions while the two countries moved toward a political settlement. (See also YEMEN.)

ECONOMIC AND SOCIAL COUNCIL

The Economic and Social Council, meeting on March 1 and 8, concluded the work of the resumed 37th session. It considered the work program for 1965, and elected members of the sessional committees and functional commissions. The Commission on International Commodity Trade was abolished and its functions transferred to the Committee on Commodities of the new Trade and Development Board.

ARTHUR J. GOLDBERG (r.), new U.S. ambassador to United Nations, confers in September with U.S. delegation.

PRESIDENT JOHNSON speaks on June 26, 1965, in the San Francisco (Calif.) Opera House at the opening ceremonies of a special meeting commemorating the 20th anniversary of the signing of the United Nations Charter.

The 38th session (March 22-26) reviewed and appraised the work of the Council, considered the problem of water desalination in developing countries, and noted reports from the International Bank and the International Monetary Fund.

The 39th session (June 30-July 31) evaluated the progress made in the first five years of the UN Development Decade, urged speedy implementation of the recommendations of the UN Conference on Trade and Development, and endorsed a long-range program to deal with the problem of the growth of the world's population and its effect on development. It recommended a continuation of the World Food Program, called for a world land reform conference in 1966, and endorsed recommendations on accelerating progress in the broad field of water desalination and its practical application to arid areas. It approved proposals by governments and international bodies on such crucial problems as the development and use of natural resources, the improvement of food supplies, world health, transportation and housing, and urban planning.

A resumed 39th session (November 22-23) elected 37 members to the governing council of the new UN Development Program, which had been created by the General Assembly by combining the Special Fund and the Expanded Program of Technical Assistance. It also adopted a resolution to continue the World Food Program.

The 39th session resumed again and concluded on December 21. It elected new members and reviewed the work of the intergovernmental committee of the World Food Program, enlarged the committee on industrial development, and reviewed the work program for 1966.

TRUSTEESHIP COUNCIL

The 32nd session of the Trusteeship Council, held May 28 to June 30, examined the annual reports of the three remaining trust territories—the Trust Territory of the Pacific Islands, New Guinea, and Nauru. It also considered the report of a visiting mission to New Guinea and Nauru, and petitions from the Trust Territory of the Pacific Islands. (See also PACIFIC ISLANDS.)

INTERNATIONAL COURT OF JUSTICE

In March and April the International Court of Justice resumed public hearings in the South West Africa cases—*Ethiopia v. South Africa* and *Liberia*

v. South Africa. (See also INTERNATIONAL LAW; SOUTH AFRICA.)

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION (UNESCO)

UNESCO, a specialized agency of the United Nations, with headquarters in Paris, France, had a membership of 120 countries at the end of 1965. Its policies are formulated by a biennial general conference of representatives from member nations and by an executive board of 30 members, responsible to their respective governments. UNESCO's activities are carried out by an international secretariat, by experts in the field, and by national commissions. Director-general of the international secretariat is René Maheu of France (elected Nov. 14, 1962). UNESCO's budget for 1965 and 1966 was set by the 1964 general conference at \$48,875,000.

Education. In 1965, UNESCO sent educational planning missions to Algeria, Tanzania, Iran, Pakistan, and Ecuador, and participated in 15 missions organized by the World Bank to help nations plan for educational development. In addition, UNESCO helped train teachers, write textbooks, and conduct school building research in Asia, Africa, and Latin America. It is involved in efforts to educate 250 million children in these continents by 1980.

UNESCO estimates that about two fifths of the world's population is illiterate. In 1965, UNESCO started planning pilot mass literacy projects in eight countries, part of its work to eliminate illiteracy on a worldwide scale. At the first World Congress of Ministers of Education on the Eradication of Illiteracy, held at Teheran in September, 88 nations agreed that national development plans should include literacy campaigns.

Science and Technology. UNESCO continued in 1965 to help developing countries establish their own na-

BIRNBÄCK

BIRNBÄCK

WIDE WORLD

NEW TEMPLE LOCATION

TEMPLES OF RAMESES at Abu Simbel, Egypt, are being raised, with UNESCO help, to a new location above the level of the lake that will form behind the Aswân Dam. Sketch above shows present and future temple sites. A coffer dam (outlined by pipes, top left) will retain the lake waters until the work is completed. Temples are buried in sand (below left) to protect them while coffer dam is built.

tional science programs. On January 1, UNESCO launched the International Hydrological Decade, a ten-year program to step up scientific research to meet the world water shortage. During the year UNESCO also sponsored international interdisciplinary meetings in such fields as cell biology and brain research, and continued to work in seismology, with particular emphasis on training sufficient experts to develop a worldwide warning system. The International Indian Ocean Expedition ended in 1965.

Social Sciences. As part of an effort to increase international understanding, UNESCO continued its research on racial problems, urbanization, and the effects of education, science, and culture on economic development.

Culture. UNESCO'S program to save the Egyptian monuments in the Nubian Valley, threatened by the Aswân High Dam Lake, drew to a close in 1965. The temples of Ramses II at Abu Simbel were cut into 30-ton blocks and lifted above the rising waters.

UNESCO's two copyright conventions—one to protect authors and literary materials, the other to protect performers, broadcasters, and recording companies—were extended in 1965 to a total of 52 and 30 countries, respectively. The number of countries participating in the free-flow agreement, which encourages duty-free circulation of educational and informational materials across frontiers, reached a total of 49. Fifty-two countries now belong to the International Convention on the Protection of Cultural Property, which protects national property of cultural significance in the event of war.

Mass Communications. A UNESCO survey showed that 70% of the world's people have inadequate information facilities. To help meet this need UNESCO in 1965 opened a field laboratory in Senegal to study the uses of radio, television, and the press in adult education. It also carried out training programs in journalism and encouraged the establishment of national news agencies.

UNITED STATES

Inaugural parade moves down
Pennsylvania Avenue in Wash-
ington, D.C., on January 20.

UNITED STATES

Congressional enactment of major features of President Lyndon B. Johnson's program for a Great Society made 1965 significant as a year that pointed toward increased participation by the government in social change. U.S. military actions in South Vietnam and in the Dominican Republic were fraught with long-range consequences. Although international responsibilities and tensions mounted, the nation continued to enjoy general prosperity. The domestic scene was marred, however, by outbursts of racial violence. In the realm of scientific achievement, the United States impressed the world with new records in space exploration.

CONGRESS

The first session of the 89th Congress, praised by President Johnson as "the greatest in the history of our nation," convened on January 4 and adjourned on October 23. The opening day found 295 Democrats and 140 Republicans in the House, and 68 Democrats and 32 Republicans in the Senate.

The president's televised State-of-the-Union message was delivered on the first evening to a joint session in the House chamber. His domestic program pointed toward three goals: "To keep our economy growing; to open for all Americans the opportunities now enjoyed by most Americans; to improve the quality of life for all." To attain them, he recommended such measures as medical care for the aged to be financed through Social Security, extended aid to education, expansion of the war on poverty, urban development programs, the elimination of obstacles to voting, reductions in excise taxes, and the prohibition of state right-to-work laws opposed by organized labor. In foreign affairs he reiterated policies of peace, security, expanded trade, international cooperation, and adherence to commitments against aggression.

Budget. The president's administrative budget, submitted on January 25, proposed expenditures of \$99.7 billion for fiscal year 1966. The budget, with an estimated deficit of \$5.3 billion, marked an increase of \$2.2 billion over the previous year. The consolidated cash budget, including all federal programs and trust funds, anticipated expenditures of \$127.4 billion and receipts of \$123.5 billion. During the session, Congress appropriated \$119,337,566,896—the largest total in any year since World War II. The administration had submitted requests totaling \$121,748,074,896. (See BUDGET, U.S.)

Anti-Poverty Programs. The first of the president's major domestic programs to be enacted in the session was the \$1.1 billion aid bill for the depressed areas of Appalachia. The bill passed the Senate by a vote of 62–22 on February 1, and the House by a vote of 257–165 on March 3. A bill to expand manpower training nationally and extend the program to 1969 was given final passage by the Senate on April 9 and by the House on April 13; it was signed by the president on April 26. A general bill for continuing aid to depressed areas for five years was passed, 264–138, by the House on August 12 and by voice vote in the Senate on August 16; it was approved by the president on August 26. The new law authorized \$710 million for grants and loans to stimulate business and employment for the first year, and \$760 million annually thereafter. Funds for the anti-poverty program were doubled for the fiscal year 1966 by legislation passed by a voice vote in the House on September 23 and by a 46–22 vote in the

Senate on September 24. The authorization was \$1.785 billion, or \$285 million more than requested. (See also ANTI-POVERTY PROGRAM.)

Education. The nation's first large-scale program of direct federal aid to elementary and secondary schools was enacted by a vote of 263–153 in the House on March 26, and 73–18 in the Senate on April 9. The \$1.3 billion measure, approved by the president on April 11, provided money to school districts on the basis of the number of needy children rather than state wealth. The bill skirted the problem of church-state relations by including funds for parochial or private pupils to be disbursed under public school supervision. The Higher Education Act of 1965, providing the first federal scholarships for general college undergraduates, as well as other college aid, was passed on October 20 by a 313–63 vote in the House and by voice vote in the Senate; it was approved by the president on November 8. Legislation creating a National Foundation on the Arts and the Humanities, to provide financial aid to artists, actors, dancers, musicians, and other persons in the arts, was signed on September 29. (See also EDUCATION.)

Excise Taxes. Administration proposals to reduce federal excise taxes by \$4.7 billion, graduated over a four-year period and intended to stimulate the economy, were enacted by voice votes in both houses on June 17 and signed by the president on June 21. Automobiles, appliances, amusements, and various luxury goods were among the major items affected. (See also TAXATION.)

Health Care. The long-discussed, administration-supported medical care program for the aged (Medicare), financed through the Social Security system, was passed in the House on July 27, 307–116, and in the Senate on July 28, 70–24, and was signed by the president on July 30. Effective on July 1, 1966, the new law provides basic hospital care for 60 days for most persons over 65 years of age, with the patient paying the first \$40 of costs. For 30 additional days of care, the patient will pay \$10 each day. A supplementary plan, optional for enrollees over 65, covers the cost of physicians, nurses, and supplies, including home visits, for a monthly premium of \$3, with the patient paying the first \$50 of annual costs and 20% of annual costs above \$50. Cash benefits under other Social Security programs were increased by the new law.

The new Social Security programs, estimated to cost \$6.5 billion in 1967, will be financed by anticipated revenues of \$4.5 billion from Social Security tax increases, by \$1.4 billion from general revenues, and by \$600 million from voluntary premiums. Maximum payroll earnings subject to the Social Security tax were increased from \$4,800 to \$6,600, and the tax paid by both employees and employers will rise in steps from 8.4% in 1966 to 11.3% in 1987. (See also MEDICARE; SOCIAL SECURITY.)

An earlier bill, passed by the Senate on June 23 and by the House on July 8, and approved by the president on July 15, empowered the secretary of health, education, and welfare to exercise tighter controls over drug distribution. On September 21, both houses passed the Water Quality Act of 1965, authorizing a federal antipollution program operating in cooperation with states. The president signed the bill on October 2. (See WATER SUPPLY.) A bill to set standards for automobile exhausts to help prevent air pollution was signed by the president on October 20. (See POLLUTION.)

Legislation for regional programs to treat heart

disease, stroke, and cancer, was approved on October 6. The bill authorized grants ranging from \$50 million to \$200 million over three years. On October 22, programs for financial aid for professional education in medicine and pharmacy were approved. (See **MEDICINE; PUBLIC HEALTH.**)

Housing. An omnibus housing bill supported by the administration was passed by a Senate voice vote on July 26 and by a 251-168 vote in the House the next day, and was signed by the president on August 10. The bill authorized extensive grants and loans, estimated at \$7.8 billion over four years, and contained a provision for paying rent supplements to landlords of low-income families. Appropriations for the rent subsidies were not voted during the session. (See also **HOUSING.**)

A new cabinet-level Department of Housing and Urban Development was created by voice votes in the Senate on August 30 and in the House on August 31, with approval by President Johnson on September 9. On Jan. 13, 1966, the president named Robert C. Weaver to the new Cabinet post.

Voting Rights. One of the most notable of the administration's measures—the authorization to use federal authority to prevent discrimination in voting rights—was passed by a 328-74 vote in the House on August 3 and by a 79-18 vote in the Senate on August 4, and was signed by President Johnson in the U.S. Capitol on August 6. "Today the Negro story and the American story fuse and blend," the president said, adding that "if any county anywhere in this nation does not want federal intervention it need only open its polling places to all of its people." The bill suspended literacy and other voter tests and authorized federal supervision of registration in states and individual voting districts where tests had been used and where fewer than half of the voting age residents were registered or had voted. (See also **CIVIL RIGHTS.**)

Immigration. Revision of the immigration laws to eliminate the national origins quota system was enacted with administration support on September 30 by a 320-69 vote in the House and by a voice vote in the Senate. The president signed the bill at the base of the Statue of Liberty in New York harbor on October 3. For the first time, the bill set an annual quota for the Western Hemisphere—120,000—without a specific limit for any country. For the rest of the world, a quota of 170,000 was set with no more than 20,000 admitted from any one nation. No limit was placed on spouses or immediate relatives of U.S. citizens, and priority was given to members of families, to skilled workers, and to refugees. (See also **IMMIGRATION.**)

Farm Bill. The administration's omnibus farm bill was approved by a vote of 219-150 in the House on October 8 and by a voice vote in the Senate on October 12. Signed on November 4, the measure provided a new program of acreage reduction and price support for cotton, giving the cotton farmer 65% to 90% of parity, and continued the policy of maintaining a single price for cotton, whether sold at home or abroad. It also provided for individual sales quotas for premium milk, a cropland retirement of 40 million acres, and a continuation of other major farm programs. The cost of the bill's provisions was estimated at \$4 billion. (See also **AGRICULTURE.**)

Highway Beautification. By a House vote of 245-138 on October 8 and by a Senate voice vote on October 13, the administration secured a compromise Highway Beautification Act. The president

VERNON MERRITT III, BLACK STAR

REGISTRATION by Southern Negroes was given great impetus as a result of the adoption of the Voting Rights Act of 1965. The president vigorously supported the measure.

signed the bill on October 22, commenting that "it is a first step." The bill authorized federal funds to help states eliminate billboards and junkyards near noncommercial sections of primary and interstate highways, with standards to be set cooperatively by the secretary of commerce and the states.

Pay Raises. An average increase of about 10% in basic pay for armed forces personnel was approved by an 89-0 vote in the Senate on August 11 and by a voice vote in the House on August 12. President Johnson signed the bill on August 21. The increases, (Continued on page 716)

THE KU KLUX KLAN, accused of acts of violence in the South, was investigated by Congress in 1965. Below, Klansmen parade around fiery cross during North Carolina rally.

WIDE WORLD

Area: 3,615,211 square miles.

Population: 194,583,000 (July 1, 1965, est.).

Chief Cities (1965 est.): Washington, D.C., the capital, 810,000; New York City, 8,080,000; Chicago, 3,520,000; Los Angeles, 2,695,000; Philadelphia, 2,030,000; Detroit, 1,600,000; Houston, 1,100,000.

Government: President—Lyndon B. Johnson; vice president—Hubert H. Humphrey. Congress—Senate, 100 members; party seating (Jan. 10, 1966): Democrats 68, Republicans 32. House of Representatives, 435 members; party seating (Jan. 10, 1966): Democrats 293, Republicans 140, vacancies 2.

Religious Faiths: Protestants, 55% of population (Baptists, 19%; Methodists, 11%; Lutherans, 7%; Presbyterians, 4%; Episcopalians, 3%; others, 11%); Roman Catholics, 37%; Jews, 5%; Greek Orthodox, 3%.

Education: Literacy rate (1960)—98% of population aged 14 and over. Total school enrollment (1964-65)—54,964,737 (elementary, 32,577,114; secondary, 17,107,603; higher, 5,280,020).

Finance (1965 est.): Revenues, \$119,742,000,000; expenditures, \$122,690,000,000; public debt (1964), \$312,500,000,000.

Gross National Product (1964): \$628,700,000,000.

National Income (1964): \$514,400,000,000; average annual income per person, \$2,679.

Economic Indexes (1964): Industrial production, 141 (1958=100); agricultural production, 118 (1956-57=100); cost of living, 107 (1958=100).

Manufacturing (metric tons, 1964): Crude steel, 115,901,000; cement (incl. Puerto Rico), 65,728,000; meat, 14,352,000; wheat flour, 12,048,000; plastics and resins, 4,284,000; sugar, 4,037,000; aluminum, 2,315,801.

Crops (metric tons, 1964): Corn, 90,138,000 (ranks 1st among world producers); wheat, 35,121,000 (world rank, 2nd); sugar beets, 21,032,000 (world rank, 2nd); soybeans, 19,048,000 (world rank, 1st); oats, 12,801,000 (world rank, 1st); sorghum, 12,453,000 (world rank, 1st); potatoes, 10,859,000 (world rank, 6th); barley, 8,776,000 (world rank, 2nd); citrus fruits, 6,883,000 (world rank, 1st); cottonseed, 5,647,000 (world rank, 1st); tomatoes, 5,047,000 (world rank, 1st); cotton lint, 3,305,000.

Minerals (metric tons, 1964): Coal, 457,384,000 (ranks 2nd among world producers); iron ore, 86,197,000 (world rank, 2nd); salt, 28,688,000 (world rank, 1st); gypsum, 9,692,000 (world rank, 1st); copper, 1,131,054 (world rank, 1st); crude petroleum, 2,805,125,000 barrels (world rank, 1st); zinc, 521,500 (world rank, 2nd); lead, 259,463 (world rank, 3rd); magnesium, 72,110 (world rank, 1st).

Foreign Trade (1964): Exports, \$26,582,000,000 (chief exports: nonelectrical machinery, \$4,703,000,000; electrical machinery, \$1,642,000,000; motor vehicles, \$1,664,000,000; wheat and wheat flour, \$1,533,000,000); imports, \$20,251,000,000 (chief imports: crude petroleum, \$1,080,000,000; coffee, \$1,200,000,000; nonelectrical machinery, \$861,000,000). Chief trading partners: Canada (took 19% of exports, supplied 23% of imports); Japan (took 8% of exports, supplied 9% of imports); Britain (took 6% of exports, supplied 6% of imports).

Transportation: Roads (1964), 3,620,457 miles (1,367,153 paved); motor vehicles (1964), 86,193,000 (automobiles, 71,864,000); railways (1963), 215,090 miles; merchant vessels (1964), 2,529 (21,748,000 gross registered tons).

Communications: Telephones (1965), 88,787,400; television stations (1965), 700; television sets (1965), 70,350,000; radios (1965), 242,000,000; newspapers (1965), 1,763 (daily circulation in 1964, 60,412,266).

UNITED STATES CABINET MEMBERS

(Note: Biographies of Secretary of State RUSK and Secretary of Defense McNAMARA appear under their own headings)

UPI

HENRY HAMILL FOWLER became secretary of the Treasury on April 1, 1965, succeeding Douglas Dillon. Although not a banker or a specialist in monetary policy, he was regarded as a conservative with respect to government spending and freedom for business. Born in Roanoke, Va., on Sept. 5, 1908, Fowler graduated from Roanoke College (1929) and Yale University (1933). He was a lawyer for the Tennessee Valley Authority between 1934 and 1939, when he became its assistant general counsel. During World War II and the Korean War, he served with several government agencies, including the Office of Production Management, the War Production Board, the Foreign Economic Administration, and the Defense Production Administration. Between periods of public service, he practiced law. He was assistant secretary of the Treasury, 1961-64.

WIDE WORLD

NICHOLAS deB. KATZENBACH, sworn in as attorney general on Feb. 13, 1965, drafted the Voting Rights Act. He was born in Philadelphia on Jan. 17, 1922. In World War II, he served in the U.S. Army Air Force, was shot down over the Mediterranean Sea, and was imprisoned by the Italians and the Germans. He graduated from Princeton University (1945), received a law degree from Yale (1947), and attended Oxford University. He taught at Yale and the University of Chicago, then became legal counsel for the Department of Justice in 1961, deputy attorney general in 1962, and acting attorney general in 1964. When the University of Mississippi was integrated in 1962, Katzenbach led U.S. marshals against rioting segregationists. He confronted Gov. George Wallace when the latter sought to bar Negroes from the University of Alabama in 1963.

WIDE WORLD

LAWRENCE FRANCIS O'BRIEN became postmaster general on Nov. 3, 1965. O'Brien, one of President Johnson's closest political advisers, was born in Springfield, Mass., on July 7, 1917. After graduating from Northeastern University in 1942, he served in the U.S. Army, then headed a realty firm, and in 1948 managed Foster Furcolo's successful campaign for Congress. He then became a public relations consultant, in the meantime managing John Kennedy's successful campaigns for the Senate in 1952 and 1958. Kennedy regarded O'Brien as a brilliant political strategist, and asked him to manage his 1960 presidential campaign. After his election Kennedy named O'Brien his special assistant for congressional relations. O'Brien continued in this capacity under President Johnson, and helped win passage for many administration bills.

STEWART LEE UDALL, secretary of the interior since Jan. 21, 1961, was by 1965 directing much of his attention to the shrinking supply of pollution-free water in the United States. Udall was born at St. Johns, Ariz., on Jan. 31, 1920. He was a Mormon missionary, served in the Air Force during World War II, and graduated from the University of Arizona (LL.B., 1948). He practiced law in Tucson until his election to the U.S. House of Representatives in 1954. In Congress, and later as secretary of the interior, he was to a large degree concerned with conservation, seeking to balance the needs of man against the importance of preserving America's natural heritage. In 1960, at the Democratic presidential convention, Udall swung Arizona's votes to John Kennedy. Elected to a fourth House term in 1960, he soon resigned to enter Kennedy's Cabinet.

JOHN MOSS—BLACK STAR

ORVILLE LOTHROP FREEMAN was sworn in as secretary of agriculture on Jan. 21, 1961. Farm production, income, and exports have risen, in some cases markedly, during his administration. He favors high price supports and production limitations. Freeman was born in Minneapolis, Minn., on May 9, 1918. He is a graduate of the University of Minnesota (B.A., 1940; LL.B., 1946). A member of the Marine Corps Reserve, he was called to duty in World War II, was wounded, and received the Purple Heart; he was discharged as a major. After the war, Freeman practiced law in Minneapolis and became active in the Minnesota Democratic-Farmer-Labor party. While state chairman, he managed Hubert Humphrey's successful campaign for the U.S. Senate in 1948. Freeman ran for governor of Minnesota five times, and was elected in 1954, 1956, and 1958.

UPI

JOHN THOMAS CONNOR became secretary of commerce on Jan. 18, 1965. He was born in Syracuse, N.Y., on Nov. 3, 1914. Connor graduated *magna cum laude* from Syracuse University (B.A., 1936), and then graduated from Harvard Law School (LL.B., 1939). He went to Washington in 1942 as general counsel for the Office of Scientific Research and Development, and set up a production program for penicillin. In 1944 and 1945, Connor was an air combat intelligence officer in the Marine Corps. Next he was an assistant to Secretary of the Navy James V. Forrestal. Sharing Forrestal's view that a well-rounded man should be experienced in both government and industry, Connor joined Merck & Company, Inc., a pharmaceutical firm, in 1947. In 1955 he became its president. He organized business support for the election of President Johnson in 1964.

PIX

WILLIAM WILLARD WIRTZ has served as secretary of labor since Sept. 25, 1962, a period marked by increasing government intervention in labor-management disputes and by the imposition by the government of wage-price guidelines to curb inflation. Wirtz, born in DeKalb, Ill., on March 14, 1912, is a graduate of Beloit College (B.A., 1933) and the Harvard Law School (LL.B., 1937). He taught law at the State University of Iowa and at Northwestern University before going to Washington in 1942 as assistant general counsel to the Board of Economic Warfare. He also served with the War Labor Board and as chairman of the National Wage Stabilization Board. He was a professor of law at Northwestern (1946-54) and a law partner of Adlai Stevenson (1955-60) before becoming undersecretary of labor on Jan. 30, 1961.

PICTORIAL PARADE

JOHN WILLIAM GARDNER became secretary of health, education, and welfare on Aug. 18, 1965. Regarded as the most influential behind-the-scenes figure in U.S. education, he had been chairman of the White House Conference on Education in July 1965. Gardner, born in Los Angeles on Oct. 8, 1912, has degrees from Stanford University (B.A., 1935; M.A., 1936) and the University of California (Ph.D., 1938). He taught psychology at Connecticut and Mount Holyoke colleges, and served as a Marine intelligence officer in World War II. He joined the Carnegie Corporation in 1946, and became its president in 1955. In the next decade the corporation dispensed more than \$100 million, mostly for educational research. Gardner's book, *Excellence: Can We Be Equal and Excellent Too?* called for high standards in everything from plumbing to philosophy.

FRED WARD—D.A. & S.A.R.

ROBERT CLIFTON WEAVER was sworn in on Jan. 18, 1966, as the first secretary of housing and urban development. He is the first Negro to serve in the Cabinet. Weaver was born in Washington, D.C., on Dec. 29, 1907. He earned three degrees at Harvard University (B.A., 1929; M.A., 1931; Ph.D., 1934). One of many young intellectuals who entered the government during the first administration of President Franklin Roosevelt, Weaver served with a number of agencies during the 1930's and 1940's, often as an adviser on minority problems. He fought discrimination in government, industry, and housing. He was with the United Nations (1946) and held several city and state housing posts in New York. In 1961-66 he was administrator of the Housing and Home Finance Agency. His two books deal with the Negro's problems in labor and housing.

UPI

effective September 1, totaled more than \$1 billion, compared with the \$447.6 million asked by Johnson. (See NATIONAL DEFENSE.)

Unsuccessful Legislation. Congress failed to approve several measures supported by the administration. One would have repealed the right-to-work provision—section 14(b) of the Taft-Hartley Act—that permits states to prohibit the union shop. Repeal of 14(b), strongly supported by labor unions, passed the House by a vote of 221–203 on July 28. It was shelved in the Senate after a motion was defeated on October 8 to shut off a filibuster conducted by Southern Democrats and by Republicans under the guidance of Everett M. Dirksen of Illinois, the Republican minority leader.

“Home rule” for the District of Columbia also failed to win approval. A District home rule bill was passed by the Senate on July 22. But the bill was laid aside by the House, which voted instead on September 20 to permit a local board to prepare a charter for a referendum, subject to final congressional approval.

CIVIL RIGHTS

The struggle to eliminate racial discrimination continued to stir the conscience of the nation. Passage by Congress of the Voting Rights Acts of 1965 (see above) provided new legal protection against the political barriers that Negroes often faced, particularly in the South. Education, better housing, and jobs were also crucial to efforts to eliminate inequality of opportunity because of race. (The unemployment rate for Negroes was about twice as great as that for whites.) Congress and the administration contemplated remedies to avoid the perpetuation of poverty among a minority of Americans. The anti-poverty programs were directed toward overcoming economic deprivations resulting from automation and other technical changes in industry and from educational or other social handicaps.

The pace of desegregation, though steady, was not universal, partly because the concentration of minorities in the cores of great cities have created a *de facto* segregation. The U.S. Office of Education reported on September 30 that 217,000 Negro pupils in the deep South were enrolled with whites in the fall school term. This figure represented 7.5% of all Negro students, compared with 2.6% a year before. On December 6 the Supreme Court moved to accelerate school desegregation by ruling that a grade-a-year plan at Ft. Smith, Ark., was inadequate. By December 31, the Department of Justice had sent

voting examiners to 36 Southern counties, under the provisions of the Voting Rights Act. The department continued to bring suits against various forms of discrimination under the Civil Rights Act of 1964.

Differing strategies of civil rights leaders tended to fragmentize the movement and dilute its impact somewhat. However, the pressure by Negroes for racial justice—“freedom now”—remained unabated. On March 28, after encountering violent resistance to racial demonstrations in Alabama, Dr. Martin Luther King, Jr., president of the Southern Christian Leadership Conference, appealed for a national economic boycott of Alabama and the withdrawal of federal funds. He declared that demonstrations in the South must continue until all Negroes could vote, until the end of “abuse of police power and police brutality,” and until Negroes participated in administering the anti-poverty program. On March 29, Whitney M. Young, Jr., executive director of the National Urban League, objected to a boycott, as did leaders of the Johnson administration, on the ground that it would hurt Negroes and make no distinction between friend and foe.

Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, said at the organization’s convention in Denver on June 28 that implementation of the Civil Rights Act was the chief task. On July 5 the Congress of Racial Equality, in convention at Durham, N.C., called for the immediate withdrawal of U.S. troops from Vietnam and the Dominican Republic. However, the delegates withdrew their resolution on the recommendation of James Farmer, the national director, who urged the organization to concentrate on civil rights activities.

Differences among the more extreme Negro nationalist movements culminated in the killing of Malcolm X in New York City on February 21. The murder was committed apparently because the victim had left the Black Muslims to found his own group.

Demonstrations. Both Negroes and whites demonstrated frequently in various cities throughout the country, including Cleveland, Boston, Springfield (Mass.), Milwaukee, Chicago, and many Southern communities, large and small. The most publicized activity—the demonstrations at Selma, Ala.—became a national symbol of protest and of sacrifice for conscience. The Selma demonstration developed in the weeks after an address there on January 2 by the Rev. Martin Luther King. Dr. King announced plans for massive street demonstrations if they became necessary to secure Negro voter registrations. As resistance to the registration campaign increased among local officials, civil rights leaders organized a protest march, set for March 7, from Selma to Montgomery, the state capital. The march was forcibly stopped by state troopers and sheriff’s deputies.

A second march, joined by white ministers from the North, was stopped without bloodshed on March 9, a day on which thousands of Negro and white marchers in many Northern and Western cities demonstrated in sympathy. James J. Reeb, a Unitarian minister from Boston, died on March 11, two days after he was attacked on a Selma street by whites. Nationwide protests continued, and a sit-in at the White House and a sit-down nearby were ended forcibly.

Meanwhile, on March 17, a U.S. court in Montgomery, Ala., ordered that a march from Selma to Montgomery be permitted and protected. On March 20, after Gov. George C. Wallace of Alabama disclaimed having adequate resources to protect the

PACIFISTS opposed to U.S. policy in South Vietnam manage to burn their draft cards in New York City on November 6 despite dousing from fire extinguisher held by spectator.

marchers, President Johnson placed the state's National Guard under federal authority for that purpose. Some 3,000 persons began the march to Montgomery on March 21. It ended without serious incident on March 25, with a rally by 25,000 persons at the state capitol. Later that day, Mrs. Viola Liuzzo, a civil rights worker from Detroit, was shot and killed while driving her car. A member of the Ku Klux Klan was arrested for her murder, but was acquitted by a jury on October 22. However, three members of the Klan were later found guilty of conspiracy.

Riots and Violence. The most devastating racial disturbance in the United States in decades shook the Watts section of Los Angeles from August 11 to 16. As many as 10,000 Negroes were involved in six days of looting, arson, and assault, during which 34 persons died, 1,032 were injured, and 3,952 were arrested. Property loss totaled more than \$40 million, with some 600 buildings damaged or destroyed. A commission appointed by Gov. Edmund G. Brown of California and headed by John A. McCone, former director of the Central Intelligence Agency, reported on December 6 that the riots, arising from a minor incident, were rooted in unemployment, insufficient schooling, and hatred of the police as a symbol of authority. The commission recommended programs for education and training, job development, and law enforcement. Violence in Chicago, Philadelphia, and other cities was less extensive.

In the South the violence was largely committed by whites. It took the form of clandestine bombings of homes, churches, and other buildings. Also, crosses were burned by the Ku Klux Klan, which was denounced by President Johnson on March 26 as a "hooded society of bigots."

At the urging of the president, the House Committee on Un-American Activities turned its attention to the Klan. On March 30, committee chairman Edwin E. Willis (D, La.) announced that a preliminary inquiry had revealed "shocking crimes . . . carried out by highly secret action groups within the Klans." The committee began public hearings on October 19; its chief investigator reported that there were 381 local Klan units in the South, of which 260 were in an organization headed by Robert M. Shelton, Jr., of Tuscaloosa, Ala. The investigation proved less sensational than expected, dealing to a great extent with the alleged personal use of Klan funds by certain Klan leaders. Imperial Wizard Shelton refused to answer the 158 questions put to him by the committee, claiming possible self-incrimination and violation of his rights. Many other witnesses also declined to answer the committee's questions. The committee believed that the investigation would at least mobilize Southern opinion against the Klan. The hearings, recessed on November 10, were resumed on Jan. 4, 1966.

Supreme Court Decisions. Again in 1965, the U.S. Supreme Court rendered important decisions in the field of civil liberties. On March 1 the court declared unconstitutional a Maryland film censorship law, holding that films can be censored only after judicial proceedings. On March 8 it broadly interpreted the rights of persons who are religious conscientious objectors to military service. It held on April 5 that the Constitution requires that defendants in state courts have the right to confront witnesses against them. On April 27 it ruled, 6-2, that state judges may not comment on a defendant's refusal to testify, and unanimously held unconstitutional a Virginia law requiring an affidavit of residence six months before a federal election unless

a poll tax had been paid. On May 3 it held, 6-3, that the secretary of state can refuse passports for travel to Cuba. On May 24 it held unconstitutional a federal law restricting mail delivery of Communist propaganda from abroad. On June 7 it held two laws to be unconstitutional: by a 5-4 decision, a law preventing Communist party members from serving as labor union officers, and by a 7-2 decision, a Connecticut law forbidding use of birth-control devices. On the same day, by a 5-4 vote, it held that the Constitution bars televising notable criminal trials in state courts. (See also LAW.)

Employment Opportunity. On Nov. 22, 1965, Franklin D. Roosevelt, Jr., chairman of the Equal Employment Opportunity Commission, announced guidelines against job discrimination because of sex, in accordance with the Civil Rights Act of 1964. State laws protecting women would be honored, but laws that raised barriers to women workers would not be upheld.

THE ECONOMY

Despite pockets of poverty, the American economy advanced to new peaks of prosperity in 1965. The gross national product (GNP) leaped upward to more than \$675 billion, compared with \$628.7 billion in 1964. President Johnson said on December 2 that unemployment had dropped to 4.2% of the civilian labor force, the lowest percentage in eight years. Personal income rose steadily to a new high of \$535.9 billion in the third quarter. Disposable (after tax) income was at a record annual rate of \$471.3 billion. Manufacturing operated at about 90% of capacity, close to the rate considered ideal.

However, there were signs of inflation that, in turn, led to a debate over fiscal policy. After May, the consumer price index averaged 1.8% higher than in the corresponding period of 1964. The increased cost of food between March and July was one of the main causes for the rise, but in October a price increase of 0.2% above the September level was the result of higher costs of all major items except food. Federal spending for Vietnam and other military commitments increased at a rate that would bring administrative budget expenditures in fiscal year 1966 to at least \$105 billion, with a deficit of about \$8 billion, compared with a \$3.5 billion deficit in fiscal year 1965.

Although President Johnson preferred that no immediate action be taken to tighten the money market, the Federal Reserve Board, under the leadership of Chairman William McChesney Martin, Jr., announced on December 5 that it had voted 4-3 to raise the interest rate charged commercial banks, from 4% to 4.5%—the highest level since 1930. The president expressed his regret that the board had not waited to take action until it learned more about the new federal budget and other data to be submitted in January 1966. It became clear that the cost of the war in Vietnam would increase the new budget and force reductions in domestic programs, "particularly in some of those passed by Congress this year," as John T. Connor, secretary of commerce, said on December 10. It was reported on December 14 that the administration would study the need for a tax increase and that Henry H. Fowler, secretary of the treasury, tended to favor higher taxes.

During the year, the administration sought to prevent inflationary rises in wages and prices. In November, price increases announced for aluminum and copper were rescinded by the industries after

the government released these metals from the national stockpile for sale in competition with industry. The administration also made efforts to enlist the cooperation of business in lowering investments abroad—a policy that reduced the outflow of dollars. (See also ECONOMIC REVIEW, U.S.)

LABOR

The administration sought to hold wage increases to no more than 3.2% of existing levels. To keep contracts within these guidelines, administration leaders participated actively in negotiations between labor and management. President Johnson himself took part in talks in the steel industry. In the final hours of negotiations before new contracts were announced on September 3, the president urged that remaining issues be compromised half and half.

The Executive Council of the AFL-CIO, meeting in Bal Harbour, Fla., from February 22 to March 2, proposed a \$2 billion federal program of grants for public works and urged an increase in the minimum wage from \$1.25 to \$2 an hour. The council announced plans to make permanent its Committee on Political Education to take an active part in election campaigns, and it renewed support for medical care for the aged and for reducing the work week to 35 hours.

At its annual convention, held in San Francisco in December, the AFL-CIO reelected President George Meany and approved his slate of younger men as replacements for eight council members. Resolutions adopted at the convention supported an extension of labor laws to farm workers, an income tax reduction for lower incomes, and federal financial assistance in meeting the economic effects of automation. (See also LABOR.)

FOREIGN AFFAIRS

American military involvement in Southeast Asia and the Dominican Republic, in the cause of peace and international security, had profound effects on foreign relations and domestic programs.

Vietnam. At the beginning of 1965, U.S. forces were serving as advisers to the South Vietnamese in their struggle against Vietcong (Communist) guerrillas and their allies from North Vietnam. On February 7, U.S. jet planes bombed military installations in North Vietnam in retaliation for a ground attack on an American airbase in South Vietnam. Both the Communist Chinese and Soviet governments denounced the American action. President Johnson asserted on February 17 that "we seek no wider war," but that U.S. policy would continue to be "the defense and protection of freedom of a brave people who are under attack that is controlled and directed from outside their country."

In a major speech at Johns Hopkins University on April 7, he said that the United States was prepared for "unconditional discussions" for peace in Vietnam and urged a cooperative economic development program in Southeast Asia for which he would recommend appropriations of \$1 billion in U.S. funds. He served notice that "we will not be defeated" and, as "essentials of any final settlement," specified "an independent South Vietnam . . . free from outside interference, tied to no alliance, a military base for no country."

Support by Congress was implicit in its grant of \$700 million for "whatever must be done" to protect South Vietnam. The money, requested on May 4, was voted by the House (408-7) on May 5, and by the Senate (88-3) on May 6.

The United States halted air action against North

Vietnamese targets from May 13 to 18, but this overture for negotiations brought no favorable reaction from North Vietnam. Thereafter, the United States stood ready to negotiate, while steadily increasing its military commitment throughout the year. U.S. troops, in association with South Vietnamese and Australian units, saw their first major action against Vietcong positions on June 28. By Jan. 12, 1966, American military personnel in Vietnam had been increased from 20,000 to 190,000, and costs were running at an annual rate of \$2.6 billion, with sharp increases expected. By Feb. 7, 1966, 2,005 Americans had been killed in action since 1961.

Escalation of the American role in Vietnam stemmed from the administration's determination to honor an American commitment to the South, and to impress the Communists with the high cost of aggression. Polls indicated that most Americans supported the Johnson administration's policy in Vietnam, although there was some vocal opposition. As selective service calls increased, a few young men burned their draft cards, and Congress voted to make this action unlawful. On November 27, some 20,000 marchers picketed the White House in opposition to American policy, and similar demonstrations took place elsewhere. Critics of U.S. policy questioned the morality of the U.S. commitment, the extent to which the administration really wanted a peaceful settlement, and alleged savagery against the civilian population.

Dominican Republic. A revolt in the Dominican Republic and the overthrow of its government resulted in the dispatch of American forces there on April 28, when President Johnson became convinced that "American lives are in danger" and that assistance to evacuate Americans and others was needed. It was apparent also that the administration would not tolerate the possibility of another Communist take-over, as in Cuba. By May 5, U.S. forces numbering almost 20,000 had been sent to the island.

On May 6 the foreign ministers of the Organization of American States (OAS) approved (14-5, with Venezuela abstaining) a U.S. resolution to establish an inter-American military force to restore order. Both the OAS and the United States sent peace missions, but fighting continued until an uneasy truce was established on May 21. The Inter-American Peace Force began its operations on May 23, and by June 18 an OAS peace committee had drawn up a formula for ending the impasse between the rebels and the military junta. It was not until September 3, however, that a provisional Dominican government was installed.

One effect of the American military action was increased tension between the United States and some Latin American governments. These difficulties were complicated on September 20 when the U.S. House of Representatives, without administration approval, passed, 312-52, a resolution endorsing the unilateral use of force by any country in the hemisphere to prevent Communist aggression in the Americas. At an OAS conference in Rio de Janeiro, Brazil, November 17-30, a United States proposal for a permanent inter-American force to assume peacekeeping duties met opposition, and no action was taken.

Panama. President Johnson announced on September 24 that the United States and Panama had agreed in principle to recognize the sovereignty of Panama over the Panama Canal, and that the United States and Panama would operate the canal jointly.

Cuba. Formal diplomatic relations with Cuba re-

PEACE MARCHERS stream past White House, in Washington, D.C., on November 27. Critics of U.S. Vietnamese policy ranged from more moderate demonstrators shown here to those who openly expressed hope for a Communist victory.

remained closed. On September 28, however, Premier Fidel Castro offered to permit refugees to leave Cuba for the United States—a proposal accepted by President Johnson on October 3. At first, some Cubans came by boat, but on November 6 an agreement was made through the Swiss embassy in Havana for a U.S. airlift of several thousand persons a month.

The World Scene. American responsibilities were not limited to specific crises, but also involved major leadership roles in the maintenance of economic and political stability throughout the world. Congress appropriated \$3,218,000,000 for foreign aid for the fiscal year ending June 30, 1966, and appropriated \$714 million for related programs, including \$102 million for the Peace Corps.

The sudden death on July 14 of Adlai E. Stevenson, ambassador to the United Nations, left a void in American diplomacy. Stevenson was replaced on July 20 by Arthur J. Goldberg, associate justice of the Supreme Court. (See STEVENSON; GOLDBERG.)

The United States and other powers, acting either directly or through the United Nations, used their good offices to bring an end to armed hostilities between India and Pakistan over Kashmir. However, they failed to dissuade Rhodesia from unilaterally declaring its independence from Britain.

Pope Paul VI became the first pontiff to visit the United States. Arriving in New York City on October 4, the pope spoke at the United Nations in the cause of peace, conferred with President Johnson, and toured parts of the city.

(See also FOREIGN POLICY, U.S.; UNITED NATIONS; and articles on individual countries.)

DEFENSE AND SPACE

Congress appropriated \$46.9 billion for the Department of Defense and showed no major disposition to interfere with the sometimes controversial policies of Secretary of Defense Robert S. McNamara, who placed strong reliance on the development of missiles, rather than on manned bombers.

The United States made great advances in space exploration in 1965. Maj. Virgil I. Grissom and Lieut. Comdr. John W. Young orbited the earth three times on March 23 and maneuvered a manned spacecraft for the first time. Maj. Edward H. White, 2nd, and Maj. James A. McDivitt completed 62 circuits on June 3-7, and White went outside the spacecraft for 20 minutes while it was in orbit. A third spaceship, carrying Lieut. Col. L. Gordon Cooper, Jr., and Lieut. Comdr. Charles Conrad, Jr., orbited 120 times on August 21-29. Lieut. Col. Frank Borman and Comdr. James A. Lovell, Jr., circled the earth 206 times on December 4-18. On December 15 they were joined in formation maneuvers by another craft carrying Capt. Walter M. Schirra, Jr., and Maj Thomas P. Stafford.

Lunar rocket probes sent photographs of the moon back to earth on February 20 and March 24. Another probe sped past Mars on July 14, and then transmitted some remarkable photographs to earth. (See also SPACE EXPLORATION.)

In somber contrast to these achievements, a power failure blacked out New York City and much of the Northeast on November 9. The blackout raised questions about the status of U.S. defenses.

UPPER VOLTA

ASIA

S. AMERICA

AFRICA

After a stormy political year in 1965, President Maurice Yaméogo of Upper Volta was ousted on Jan. 7, 1966, by Lt. Col. Sangoulé Lamizana, who took over as head of state. The coup followed a general strike in the capital, Ouagadougou, by labor unions protesting pay cuts ordered by the government in December.

Politics. Earlier, internal political readjustments in Upper Volta were evident from the dismissal of the ministers of commerce, national education, youth, and sports. Two former ministers, Maxime Ouedraogo and Bougouraoua Ouedraogo, received 10- and 2-year jail sentences, respectively, for fraud, forgery, and misappropriation of state funds.

President Yaméogo was nominated by the ruling Union Démocratique Voltaïque as the only presidential candidate in the October election. During the campaign, he denounced the clandestine opposition group, the National Liberation Movement, as being led by ambitious and selfish intellectuals. The National Assembly was reelected also without opposition in November.

International Affairs. As a prime mover in the Conseil de l'Entente and the Common Organization of African and Malagasy States (OCAM), President Yaméogo took the lead in refuting criticism of these organizations by other African leaders. President Yaméogo continued to accuse Ghana's President Nkrumah of fostering subversion among his neighbors and threatened to retaliate by depriving Ghana of water required for its Volta River dam. While attending a meeting of the *Rassemblement Démocratique*

UPPER VOLTA · Information Highlights

Area: 105,869 square miles.

Population: 4,763,000 (Dec. 31, 1964, est.).

Chief City (1962 est.): Ouagadougou, the capital, 63,000.

Government: Head of State—Lt. Col. Sangoulé Lamizana (seized power, Jan. 7, 1966). *Parliament*—National Assembly, 75 members, all belonging to the Volta Democratic Union.

Religious Faiths: Muslims, 26% of population; Roman Catholics, 4%; others, 70%.

Education: Total school enrollment (1962–63)—85,364 (primary, 81,072; secondary, 2,514; teacher-training, 1,012; technical, 766).

Finance (1965 budget): Revenues, \$37,200,000; expenditures, \$37,200,000; monetary unit, CFA franc (246.85 CFA francs equal U.S.\$1).

Gross National Product (1962): \$183,000,000.

Economic Index: Cost of living (1964), 150 (1958=100).

Manufacturing: Meat (1962), 8,000 metric tons.

Crops (metric tons): Peanuts (1964–65), 129,000 (ranks 14th among world producers); millet and sorghum (1962–63), 772,000; maize (1964–65), 110,000; sweet potatoes and yams (1963–64), 75,000; cottonseed (1963–64), 6,000.

Minerals (1964): gold, 33,200 troy ounces.

Foreign Trade (1963): Exports, \$8,100,000 (chief exports: beef and cattle, \$3,000,000; sheep, lamb, goats, \$951,000; hides and skins, undressed, \$470,000; peanuts, \$409,000); imports, \$37,000,000 (chief imports: crude vegetable material, \$3,700,000; woven cotton fabrics, \$3,600,000; machinery, \$3,200,000). Chief trading partners: France (took 16% of exports, supplied 49% of imports); Ivory Coast (took 29% of exports, supplied 19% of imports); Ghana (took 38% of exports, supplied 4% of imports).

Transportation: Roads (1964), 10,380 miles (40 paved); motor vehicles (1964), 7,500 (automobiles, 2,250); principal airport—Ouagadougou.

Communications: Telephones (1964) 1,900; television stations (1964), 1; television sets (1963), 100; radios (1962), 15,000.

cratique Africain (RDA) leaders in Bouaké, Ivory Coast, in June, President Yaméogo also launched a particularly bitter attack against President Touré of Guinea as a "petty trade unionist" who had forgotten the past aid received from fellow RDA leaders.

Economy. Upper Volta's economy continued to be dependent on the income received by its agricultural workers who made their living in the Ivory Coast, and on external aid. Among aid programs, France pledged a \$152,000 loan to modernize the Bobo-Dioulasso telephone system. Nationalist China promised assistance in land reclamation and water conservation projects. Upper Volta and the United States signed an agreement in June to provide guarantees to U.S. investors.

URBAN RENEWAL. See CITY PLANNING; HOUSING.

URBAN TRANSIT'S NEW LOOK is symbolized by these scale models of new cars which will go into service on San Francisco Bay Area's rapid transit system early in 1970. The cars will be operated automatically from a central computer. Interiors will feature wide upholstered seats, glare-free lighting, and tinted-glass windows.

BAY AREA RAPID TRANS.

URBAN TRANSIT

As of Jan. 1, 1965, the U.S. urban transit industry consisted of 1,152 operating companies. Of these, 1,129 were engaged exclusively in the operation of motor buses; 9 had composite trolley coach and motor bus fleets; 11 had composite fleets including motor buses, electric railway cars, and/or trolley coaches; and 3 used only railway facilities exclusively in passenger service. Six rapid transit systems (elevated and subway operations) are included in the foregoing statistics.

U.S. URBAN TRANSIT INDUSTRY

Operating statistics	1965 (preliminary)	1964 (final)
Operating revenues.....	\$1,427,000,000	\$1,408,100,000
Total passengers.....	8,262,000,000	8,328,000,000
Vehicle miles operated.....	2,015,000,000	2,015,800,000
Route miles operated.....	120,000	121,459
Passenger vehicles owned.....	61,000	61,689
Employees.....	143,400	144,800
Total payroll.....	\$ 946,400,000	\$ 916,900,000

¹ As of December 31.

During 1965 the transit industry carried 8.3 billion passengers a total distance of 2 billion vehicle miles. Some 120,000 miles of route were served by 61,000 passenger vehicles. The facilities to furnish the service required a total investment of slightly more than \$4 billion. Average annual earnings for each employee in 1965 was \$6,600, and wages and salaries of all employees amounted to \$946.4 million. (See also CITY PLANNING.)

ROBERT SLOAN

General Secretary, Urban Transit Association

URUGUAY

A decade of drift toward financial disaster brought Uruguay's inflationary economy to a point of crisis in 1965. The strongly democratic and paternalistic government took an unusually firm stand and declared a state of siege on October 7, after public employees threatened a mass strike. Constitutional guarantees were suspended and press and radio censorship was imposed. Dr. Washington Beltrán, president of Uruguay's 9-man National Council,

called for the adoption of a long-range economic stability program and urged that the council be abolished in favor of the presidential system.

Economy. Uruguay's inflationary wage-price spiral caused labor unrest and economic problems during 1965. On March 18 the government was forced to devalue the peso for the second time in four months. The peso's value dropped from 18.70 to 24.0 to U.S.\$1. The wage-price spiral, which increased 40% during 1964, was estimated to have risen by 60% to 70% by the end of 1965.

Short-term government debts amounting to about \$58 million fell due in 1965, but in August the National Council reached an agreement with U.S. banks to postpone payment of most of that sum. On July 22, pressured by a strike of 214,000 public employees, the government authorized the printing of 1,675 million pesos (\$67 million) to pay government salaries and buy food for soldiers and hospital patients.

Low wool prices on the international market hurt the economy, although increased exports of beef helped to offset losses. Uruguay withheld 100 million pounds of wool from the international market in 1964 in an effort to bolster sagging prices. Wool prices were less fluctuating in 1965.

Economic and Government Reforms Proposed. President Beltrán announced on June 12 an austerity program designed to stop inflation. However, strikes and labor protests during most of the year prevented implementation of the program. The government made an effort to restore a favorable balance of trade by halting imports of all but indispensable items from June 16 to October 16, causing shortages of raw materials in some industries. With the aid of the Alliance for Progress, the government also prepared a ten-year development plan for Uruguay.

Beltrán also called for constitutional reform to abolish the ineffective 9-man National Council and restore the presidential system. Most members of the National Council were agreed that the question should be decided by plebiscite before the scheduled National Council elections of November 1966.

State of Siege. The government declared a state of siege on October 7 to prevent a threatened strike by

Religious Faiths: Roman Catholics, 83% of population; others, 17%.

Education: Literacy rate (1963)—90% of population aged 15 and over. Total school enrollment (1959)—411,519 (primary, 313,891; secondary, 66,271; teacher-training, technical, 16,037; higher (1960), 15,320).

Finance (1965 est.): Revenues, \$218,000,000; expenditures, \$275,000,000; public debt (1964), \$103,000,000; monetary unit, peso (24 pesos equal U.S.\$1).

Gross National Product (1963): \$936,000,000.

National Income (1963): \$823,000,000; average annual income per person, \$323.

Economic Indexes (1964): Agricultural production (1956–57 = 100), 95; cost of living (1958 = 100), 454.

Manufacturing (metric tons): Cement (1964), 412,000; meat (1960), 324,000; gasoline (1963), 272,000; sugar (1964), 53,000.

Crops (metric tons, 1964–65 crop year): Wool (1963), 87,100 (ranks 7th among world producers); wheat, 690,000; grapes (1962–63), 180,000; maize (1963–64), 91,000; oats, 76,000; linseed, 64,000; citrus fruits, 60,000; sunflower seed, 58,000. **Minerals** (metric tons, 1963): Lime, 30,000; refractory clay, 3,217; talc, 1,715; quartz, 1,681; iron ore, 1,031.

Foreign Trade (1964): Exports, \$178,900,000 (chief exports: meat, \$74,300,000; wool, \$67,500,000; hides, \$16,600,000; linseed oil, \$2,200,000); imports, \$197,900,000 (chief imports, 1963: raw sugar, \$8,090,000; industrial plants and equipment, \$6,590,000; motor vehicle parts and accessories, \$6,500,000). Chief trading partners (1963): Britain (took 24% of exports, supplied 12% of imports); U.S. (took 12% of exports, supplied 15% of imports); West Germany (took 7% of exports, supplied 10% of imports).

Transportation: Roads (1964), 23,488 miles (970 paved); motor vehicles (1964), 195,300 (automobiles, 112,000); railways (1963), 1,866 miles; merchant vessels (1964), 18 (111,000 gross registered tons); state airline, PLUNA; principal airport, Montevideo.

Communications: Telephones (1964): 169,463; television stations (1964), 4; television sets (1964), 175,000; radios (1962), 900,000; newspapers (1962), 25 (daily circulation, 540,000).

180,000 employees of state-owned communications, utilities, and banks. The government decree established a modified form of martial law, suspended guarantees of individual liberties, and authorized troops to arrest anyone suspected of subversion. Employees of government-owned banks responded by calling for a 72-hour general strike on October 13, to enforce their demands for a 48% wage increase. Most workers, however, remained on their jobs. The government, encouraged by its victory in this test of strength with the powerful unions, took the first step in its economic reform program and put a 25% ceiling on wage increases for the year 1966.

Bank Scandals. The Transatlantic Bank of Uruguay, a private bank, went into bankruptcy on April 22. Subsequent investigation showed irregularities in the bank records. Soon after, two of the country's other private banks were closed by the government and their directors jailed for malpractice.

Strikes closed the government-owned Bank of the Republic and 62 private banks for three weeks in May. The directors of the Bank of the Republic resigned.

Foreign Relations. Uruguay withdrew its delegate to the UN Security Council, Dr. Carlos Maria Velázquez, on June 10. He was charged with exceeding and distorting his instructions in speeches opposing U.S. intervention in the Dominican Republic. His withdrawal was seen as an act of friendship toward the United States.

On January 7 the National Council voted to deny political asylum to two Brazilians who had served in the government of Brazil's ex-president João Goulart. The surprising decision, which was contrary to Uruguay's traditional respect for political sanctuary, helped ease strained relations between the two countries.

EDMUND STEPHEN URBANSKI

*Associate Professor, Latin American Civilization
Western Michigan University*

UTAH

In 1965, for the first time in 16 years, Utah had a Democratic governor, and Democrats held control of both houses of the Legislature. One of the most pressing problems facing the Legislature during its regular biennial session from January 11 to March 10 was the reapportionment of congressional and legislative districts.

Reapportionment. In accordance with the U.S. Supreme Court's ruling to equalize populations of congressional and legislative districts, the federal district court ordered Utah to draw up plans for more equitable apportionment. Two measures proposed by a Democratic caucus in the Legislature were passed by both the Senate and House after considerable debate by the Republican minority.

Under the redistricting plan for Utah's two congressional districts, the difference in population was reduced to less than 1.5%, as opposed to a former difference of 28.6%. In reapportioning the state Legislature—a somewhat more personal and difficult task for the legislators—the plan disregarded the state constitutional requirement that allocates each county at least one representative. Counties too small to justify a member were combined with others to make the combined population equal to one member. Under the new plan, the House will retain its 69 members, but the Senate will have one extra seat, bringing its membership to 28.

Other Legislation. A measure calling for a state

Area: 84,916 square miles.

Population: 1,008,000 (1965 est.).

Chief Cities (1965 est.): Salt Lake City, the capital (195,000); Ogden (74,500); Provo (39,500); Halladay (33,000); East Millcreek (23,000); Bountiful (25,500); Kearns (21,000); Logan (20,800).

Government: **Chief Officers**—governor, Calvin L. Rampton (Democrat); lt. gov., none; secy. of state, Clyde L. Miller (D); atty. gen., Phil L. Hansen (D); treas., Linn C. Baker; supt. of pub. instr., T.H. Bell; chief justice, F. Henri Hendroid. **Legislature** (convened Jan. 11, 1965)—Senate, 27 members (15 Democrats, 12 Republicans); House of Representatives, 69 members (39 D, 30 R).

Education: **School enrollment** (1964-65)—public elementary, 170,442 pupils (5,636 teachers); public secondary, 118,442 pupils (4,800 teachers); nonpublic schools, 7,100 pupils (300 teachers); college and university (fall 1964), 51,086 students. **Public school expenditures** (1964-65)—\$109,700,000 (\$407 per pupil); average teacher's salary, \$9,945.

Public Finance (fiscal year 1965): Revenues, \$364,342,550 (3.5% sales tax, \$39,423,862; motor fuel tax, \$23,527,517; federal funds, \$107,156,125). Expenditures, \$377,363,259 (education, \$137,729,473; health, welfare, and safety, \$39,760,262; highways, \$85,926,799). **State debt** (net), \$22,044,000 (fiscal year 1964).

Personal Income (1964): \$2,139,000,000; average annual income per person, \$2,156.

Public Assistance (fiscal year 1965): \$21,815,890 to 35,423 recipients (aged, \$3,969,733; dependent children, \$8,523,455).

Labor Force (employed persons, August 1964): **Agricultural**, 18,400; nonagricultural (wage and salary earners), 282,400 (15% manufacturing, 20% trade, 22% government). **Unemployed persons** (August 1964)—19,300.

Manufacturing (1963): Value added by manufacture, \$704,629,000 (transportation equipment, \$145,121,000; primary metals, \$212,169,000; nonelectrical machinery, \$34,118,000; electrical machinery, \$12,159,000; fabricated metals, \$30,259,000; food and products, \$99,375,000).

Agriculture (1964): **Cash farm income**, \$160,417,000 (livestock, \$116,452,000; crops, \$33,540,000; govt. payments, \$8,525,000). **Chief crops** (tons)—sweet potatoes, 432,000 (ranks 13th among the states); barley, 166,000 (rank, 13th); peaches, 9,100 (rank, 18th); hay, 1,378,000; wheat, 173,000; potatoes, 68,000; oats, 19,000.

Mining (1964): **Production value**, \$391,430,000 (ranks 16th among the states). **Chief minerals** (tons)—coal, 4,720,000 (rank, 10th); uranium, 761,180 (rank, 4th); salt, 371,000 (rank, 9th); copper, 199,588 (rank, 2nd); lead, 40,249 (rank, 3rd); gold, 287,674 troy ounces (rank, 2nd).

Transportation: **Roads** (1963), 34,884 miles (8,422 paved); motor vehicles (1964), 538,761; railroads (1964), 3,016 miles; airlines (1965), 5 (159 airports).

Communications: (1965): Telephones, 441,900; television stations, 8; radio stations, 34; newspapers, 5 (daily circulation, 259,649).

constitutional convention for constitutional revision was referred to the voters in the 1966 elections. A "Little Hoover Commission," consisting of 12 members, was set up to study the organization and operation of the state government. The commission hired a private firm to conduct the study and prepare a report, due on Jan. 15, 1966, for consideration by the Legislature. It was generally understood that a special session of the Legislature would be called early in the year 1966 to consider what action should be taken as a result of the report.

Airplane Crashes. On Nov. 11, 1965, a United Airlines 727 Boeing jet airliner crashed and burned at the Salt Lake City Municipal Airport, killing 43 of the 91 persons aboard. Two weeks later, a private charter plane taking some football fans from Salt Lake City to a Brigham Young University game at Albuquerque, N. Mex., crashed about 10 minutes after takeoff. All 13 persons aboard were killed. Five other private planes were lost in Utah during the year.

Demonstrations. Parades and demonstrations for and against U.S. policy in Vietnam were held at the University of Utah. At Brigham Young University a group of students circulated a petition supporting U.S. policy in Southeast Asia and sent it to President Lyndon B. Johnson.

VANCOUVER

During 1965, Vancouver, the third largest city in Canada (1965 est. pop.: city, 430,665; metropolitan area, 808,000), witnessed the opening of two new educational institutions, the closing of a daily newspaper, and the continued expansion of its port facilities.

Education. Simon Fraser University, located in the suburb of Burnaby, opened in 1965 with 2,300 students. Vancouver's city college also opened, with 4,789 students enrolled in first- and second-year university subjects and in many vocational courses. Enrollment at the University of British Columbia in 1965 totaled more than 16,000 in 19 faculties and schools.

Publishing. The Vancouver *Times*, the only daily newspaper established in a large Canadian city since World War II, ceased publication in 1965. The paper had lost more than \$2 million.

Port Facilities. The port of Vancouver operated at full capacity in 1965, with increased shipments of grains, potash, sulfur, lumber, pulp, and paper. The port is the largest shipper of dry cargo on the Pacific coast of North America, and is surpassed only in combined dry and wet tonnage by the port of Los Angeles.

The continued demands on shipping in the port led to a significant expansion of its facilities. Pacific Coast Terminals was spending \$11 million to expand its New Westminster wharfs and to double the capacity of its bulk-loading piers at Port Moody. Vancouver Wharfs was investing \$15 million to expand loading facilities in North Vancouver. The expansion will include a berth for ships of 40,000 tons capable of loading 45,000 tons of potash per hour. The Saskatchewan Wheat Pool began construction of a \$16 million elevator and deep-sea berth in North Vancouver.

The Canadian Pacific Railroad, the largest waterfront property holder in the port, planned an ambitious development project for its own harbor facilities.

Public Finance. Vancouver's total budget for 1964 was \$70,306,000, including \$21,210,209 for education. On Sept. 29, 1965, the electorate of Vancouver approved a \$43.2 million, five-year plan for civic development. The plan included proposals to spend \$5 million for hospital extensions, \$3.7 million for parks, \$2.8 million for a magistrates' court building, and \$10 million for a new Georgia Street viaduct.

VEGETABLES

Production of the 24 principal fresh-market vegetables and the three major types of melons grown in the United States in 1965 was 5% more than in 1964, and 3% above the 1959-63 average. New production highs were set for lettuce and onions. Potato production was up 21%, and sweet potatoes, 17%. The dry bean crop, however, was the smallest since 1957, and dry pea output dropped 15%.

Processed Vegetables. The output of the 10 principal processing crops totaled 8,338,830 tons in 1965. This was 3% more than the tonnage processed in 1964, and 5% more than the 1959-63 average, but 11% less than the record 1962 production. For most processing vegetables, production was up from the

previous year. Yields also were higher except for spinach, which was unchanged.

The 10 crops were harvested from 1,630,670 acres. Their value was \$400,846,000, well above the 1964 total of \$349,181,000, and the 1959-63 average of \$313,341,000. California produced 32.1% of the nation's processed vegetables in 1965. Wisconsin ranked in second place with 9.4%, followed by Ohio with 7%, and Minnesota and Illinois with 5% each.

Table 1—U.S. PRODUCTION OF VEGETABLES
FOR COMMERCIAL PROCESSING
(In tons)

Vegetables	Average 1959-63	1964	Preliminary 1965
Asparagus.....	128,690	126,200	119,150

Fresh Vegetables. Production of the 27 principal vegetables and melons for the fresh market in 1965 totaled 222,019,000 cwt (hundredweight), up from 214,068,000 cwt in 1964. The vegetables and melons contributing most to the increase were carrots, celery, sweet corn, honeydew melons, lettuce, onions, and watermelons. The 1965 production came from 1,810,040 acres, compared with 1,807,365 acres in the preceding year. The 27 crops were valued at \$1,021,766,000, compared with \$972,589,000 in 1964 and the 1959-63 average of \$870,807,000.

Potatoes. Production of potatoes in the United States (excluding Hawaii and Alaska) in 1965 was 288,927,000 cwt—21% more than in 1964 and the third largest crop on record, falling about 2% below the record crops of 1946 and 1961. The 1,403,400 acres harvested was the largest acreage since 1961, and 8% above that of 1964. Production by seasons

for 1965 was (in hundredweights): winter, 3,659,000; early spring, 4,898,000; late spring, 25,106,000; early summer, 11,926,000; late summer, 29,914,000; and fall, 213,424,000.

Idaho led with 61,695,000 cwt, followed by Maine (35,224,000); California (31,979,000); New York (19,425,000); and Washington (16,560,000).

Sweet Potatoes. The 1965 crop of 17,957,000 cwt was 17% more than in 1964, and 6% above the 1959-63 average. The yields of 89 cwt per acre exceeded both that of 1964 and the 5-year average. The crop was harvested from 202,200 acres, 11% more than in 1964, when harvested acreage was the smallest of record. Louisiana harvested the largest crop among the states—4,234,000 cwt. Other leading states were: North Carolina with 2,970,000 cwt; Virginia (2,000,000); Texas (1,280,000); New Jersey (1,208,000); and Mississippi (1,280,000).

Dry Beans. Production of 16,501,000 bags (100-pound clean basis) was well below the 1964 production of 17,800,000 bags and the 1959-63 average of 19,300,000. Farmers harvested the crop from 1,533,000 acres, up from the 1,452,000 acres harvested in 1964. The yield of 1,076 pounds per acre was the lowest since 1950, and sharply below the 1963 record yield of 1,456 pounds. Michigan again led the states, with 5,562,000 bags.

Table 3—U.S. PRODUCTION OF FROZEN VEGETABLES
(In pounds)

Product	1963	1964
Asparagus.....	30,315,453	31,054,122

Total.....	2,322,376,480	2,639,198,801

Source: National Association of Frozen Food Packers.

Dry Peas. Production of dry peas in 1965 totaled 4,050,000 bags (100-pound clean basis), 15% less than in 1964 and 6% below the 1959-63 average. The average yield of 1,746 pounds per acre was the highest on record, exceeding the previous high of 1964 by 13%. Washington, with 2,204,000 bags, produced the largest dry pea crop in 1965.

WILLIAM WHYTE
Office of Information
U.S. Department of Agriculture

VENEREAL DISEASES

In the fiscal year ended June 30, 1965, state health departments reported a total of 425,273 cases of venereal diseases to the U.S. Public Health Service. While the total number of syphilis cases

dropped slightly during this period, the number of primary and secondary infections increased. However, there was a sustained decrease in the syphilis death rate.

Syphilis. In the fiscal year 1965 there were 113,018 cases of syphilis reported in the United States, representing decreases of 5,229 from the 1964 total of 118,247, and of 15,432 from the 1963 total of 128,450. Cases in the infectious primary and secondary stages numbered 23,250, an increase of 2.3% over 1964, and the largest number reported in the United States since 1950. Reported cases of early infectious syphilis among persons between 15 and 19 years of age rose from 1,163 in 1956 to 3,595 in 1964, an increase of 209%.

The number of cases in the later stages of syphilis declined for the third consecutive year to 89,768 in the fiscal year 1965. The decrease in number lowers the reservoir of untreated cases, estimated at 1.2 million.

Deaths from syphilis continued to decrease. Data for 1963 show 2,666 deaths, as against more than 7,500 in 1950. In tax-supported mental institutions in the United States, the number of patients with psychoses due to syphilis remained at 18,680. Maintenance and care for these patients cost taxpayers nearly \$50 million a year.

Gonorrhea. Reported cases of gonorrhea in the United States have increased yearly, at a rate slightly greater than the population growth. The 310,155 cases of gonorrhea reported in fiscal year 1965 represented an increase of 43.3% over the 1957 figure. The 1965 total was the largest since 1950.

Other Venereal Diseases. Cases of chancroid and granuloma inguinale declined in incidence in the fiscal year 1965. There were 1,083 reported chancroid cases and 144 granuloma inguinale cases. Lymphogranuloma venereum cases increased to a total of 873, as compared with 543 cases reported in the fiscal year 1964.

Disease Control Activities. From the fiscal years 1955 to 1965 there has been an annual increase in the number of early infectious syphilis cases brought to treatment through syphilis epidemiology. In 1965, 8,800 cases, or 38% of the reported primary and secondary syphilis cases, were treated by health department services.

During the year, three states—Montana, West Virginia, and Wyoming—adopted laws or regulations requiring laboratories to report findings suggestive of syphilis to state health departments. Twenty-six states now have such regulations. In the fiscal year

1965, 653,475 reactive tests for syphilis were reported in the United States. From these tests, 79,972 cases of syphilis were identified.

Advances in immunology and serologic tests for syphilis, as well as improvements in anesthesia drugs for primates, have made it possible for researchers to use great apes in venereal disease experiments. The object of these experiments is to develop a method of immunizing humans against venereal disease.

WILLIAM J. BROWN

*Chief, Venereal Disease Branch
U.S. Public Health Service, Atlanta, Ga.*

VENEZUELA

N. AMERICA

S. AMERICA

The strong coalition government of President Raúl Leoni, which enjoyed the support of the armed forces, remained relatively stable during 1965, although it had to combat many outbreaks of leftist terrorist activity. The government worked hard to improve Venezuela's economy during the year.

Terrorist Activities. The Armed Forces for Liberation (FALN), a far-left, Castro-oriented organization, was responsible for sporadic antigovernment harassment. The FALN conducted guerrilla raids on government installations in the interior and was responsible for bombings, burnings, and murders in Caracas and other urban centers. Symptomatic of the uneasy political environment was the fatal shooting by Caracas police in February of a Peace Corps worker in the mistaken belief that he was a terrorist. In September, 10 policemen were murdered in as many days. During the same month the government arrested 11 FALN leaders. In addition to political agitation, Caracas suffered from a crime wave in 1965.

Communist Plot Charged. In April, Venezuelan authorities arrested an Italian doctor and two other persons, charging that they had brought \$330,000 into Venezuela to finance a Communist conspiracy against the government. Venezuela protested strongly to the Italian government and accused Moscow of complicity in the plot. In connection with the incident, 40 persons were arrested, including Miguel Capriles, publisher of three newspapers and a foe of the administration. Most of those arrested were later released.

Jimenez Tried. Former President Marcos Pérez Jiménez, who was overthrown in 1958, was tried in Caracas on the charge of embezzling \$9 million while he was in office. No verdict had been reached at year's end.

Government. The cabinet formed by President Leoni late in 1964 included three members of his own Democratic Action party; three from the Democratic National Front; and four independents. The Christian Socialist party, formerly a coalition partner and now Venezuela's second largest party, adopted an independent policy by supporting the govern-

VENEZUELA · Information Highlights

Area: 352,143 square miles.

Population: 8,722,000 (June 30, 1965, est.).

Chief Cities (1964 est.): Caracas, the capital, 1,589,411 (metropolitan area); Maracaibo, 502,693; Barquisimeto, 227,357; Valencia, 183,505.

Government: President—Raúl Leoni (took office March 11, 1964). Congress—Senate, 50 members; party seating (1965): Democratic Action (AD-GOB), 23; Christian Socialist (COPEI), 9; Republican Democratic Union (URD), 7; Democratic National Front (FND), 5; others, 6. Chamber of Deputies, 179 members; party seating (1965): AD-GOB, 65; COPEI, 40; URD, 29; FND, 22; others, 23.

Religious Faiths: Roman Catholics, 93% of population; others, 7%.

Education: Literacy rate (1961)—66% of population aged 15 and over. Total school enrollment (1962-63)—1,607,899 (primary, 1,346,751; secondary, 137,823; teacher-training, 29,018; technical, 59,651; university, 34,656).

Finance (1965 est.): Revenues, \$1,550,000,000; expenditures, \$1,513,000,000; public debt, \$503,000,000; monetary unit, bolivar (4.50 bolivars equal U.S.\$1).

Gross National Product (1964): \$7,068,000,000.

National Income (1964): \$5,893,000,000; average annual income per person, \$699.

Economic Indexes (1964): Industrial production, 139 (1958=100); agricultural production, 150 (1956-57=100); cost-of-living, 107 (1958=100).

Manufacturing (metric tons, 1964): Gasoline (1963), 6,085,000; cement, 1,867,000; sugar, 352,000; crude steel, 324,000; wheat flour, 303,600; beer (1963), 248,800; meat (1963), 177,000.

Crops (metric tons, 1964-65 crop year): Coffee, 48,000 (ranks 16th among world producers); cocoa beans, 21,000 (world rank, 9th); maize, 475,000; cassava (1963-64), 342,000; sweet potatoes and yams (1963-64), 96,000; sesame, 46,900; dry beans (1963-64), 38,000; cotton lint, 12,000.

Minerals (metric tons, 1964): Iron ore, 15,650,000 (ranks 9th among world producers); crude petroleum, 1,241,782,000 barrels (world rank, 3rd); natural gas, 250,902,000,000 cubic feet (world rank, 7th); gem diamonds, 58,000 carats (world rank, 14th); salt, 200,000; lime, 70,000; bituminous coal, 38,000.

Foreign Trade (1964): Exports, \$2,742,000,000 (chief exports, 1963: crude petroleum, \$1,288,000,000; petroleum products, \$525,000,000; iron ore, \$73,000,000; coffee, \$17,000,000); imports, \$1,272,000,000 (chief imports, 1963: nonelectrical machinery, \$156,000,000; iron and steel, \$60,800,000; electrical machinery, \$60,600,000). Chief trading partners (1963): U.S. (took 33% of exports, supplied 54% of imports); Netherlands Antilles (took 23% of exports, supplied 0.3% of imports); Britain (took 8% of exports, supplied 6% of imports).

Transportation: Roads (1964), 29,949 miles (8,215 paved); motor vehicles (1964), 394,495 (automobiles, 343,536); railways (1963), 220 miles; merchant vessels (1964), 35 (277,000 gross registered tons); national airlines, LAV, AVENSA; principal airport, Caracas.

Communications: Telephones (1964): 242,264; television stations (1964), 20; television sets (1964), 850,000; radios (1961), 1,300,000; newspapers (1963), 27.

ment on some issues, and on other issues taking the role of an opposition party.

Foreign Affairs. President Leoni was host in September to President Giuseppe Saragat of Italy. The two heads of state agreed in principle on a new treaty calling for the intensification of trade and technical aid between Venezuela and Italy. Poland and Venezuela entered into an agreement whereby

VENEZUELAN DEMONSTRATORS marching in Caracas in April, protest crime and corruption in the government.

Venezuela will purchase \$2.5 million worth of Polish agricultural machinery.

Venezuela's intention to join the Latin American Free Trade Association (LAFTA) was announced at the organization's meeting in Uruguay in November. Because Venezuela is heavily dependent on its oil revenue, it led a drive by the Organization of Oil Exporting Countries to establish petroleum production and marketing quotas in order to maintain satisfactory world prices.

Venezuela continued to press its claim to the Esequiba territory, a 60,000-square-mile, bauxite-rich area of British Guiana. Although both British Guiana and Britain rejected the claim, Britain indicated its willingness to continue discussions. Venezuela again appealed to the United Nations to support its claims to the territory.

Economic Developments. Venezuela's 3.5% annual increase in population continued to tax the government's ability to provide adequate housing, health facilities, and schools. In spite of a 20% increase in construction activity, 11% of the labor force was unemployed in 1965. In an effort to alleviate these problems, the government contracted for its third \$10 million loan from the Inter-American Development Bank. The loan will be used to finance the construction of low-cost housing.

The government also announced a new three-year plan for industrial development. The plan, to cost \$550 million, of which the government will supply \$308 million, will provide 20,000 new jobs.

Construction began in 1965 on the Guri Dam on the Caroní River. The dam will supply 6 million kilowatts of power to the Guayana industrial complex at the confluence of the Orinoco and Caroní rivers, where 80 separate industrial projects are in various stages of development. Reynolds Aluminum and the Venezuelan government agreed to invest \$10 million each in a new aluminum plant in Guayana with an annual capacity of 100,000 tons. The population of the new city of Guayana, now about 75,000, is expected to reach 250,000 by 1970.

Venezuela's \$40 million automotive industry showed considerable vigor in 1965, producing an estimated 50,000 completed units, as compared with 44,900 units in 1964.

The government claimed to have distributed land to over 80,000 families since the beginning of the agrarian reform program in 1959. It was hoped that the reform would be completed by 1970.

VERMONT

The 1965 "suicide legislature," under court order to reapportion itself and then adjourn for new elections, managed to meet the July 1 deadline for reapportionment that had been ordered by the Vermont Supreme Court in 1964. Democrats, expecting to gain seats in the newly reapportioned legislature, were stunned by a sweeping Republican victory in the November special election.

Reapportionment. The General Assembly presented three possible reapportionment plans to a three-member federal court on July 1. The court accepted a plan calling for a 150-member House of Representatives chosen from 71 districts, and a 30-member Senate chosen from 28 districts. Populous districts were subdivided to prevent any citizen from voting for more than two representatives. The court then

ordered a primary election on October 19, and a general election on November 23.

Elections. Democratic hopes were high before the special general election on November 23, and they contested more seats than they usually do in this traditionally Republican state. The voters, however, lived up to their reputation for independence, and handed the Republicans 115 of the 150 House seats, and 23 of the 30 Senate seats. Conceding a "horrendous" defeat, Democratic Gov. Philip H. Hoff rewrote proposed administration bills intended for a Democratic-controlled Assembly.

Legislation. The new General Assembly convened on Jan. 6, 1965. It accepted almost unchanged the executive budget of \$132,000,000 for 1965-66, but added \$8,000,000 for the second year of the biennium. Salaries of officials were increased, including the governor's salary, which was raised to \$20,000 per year.

Money was also provided to speed up a statewide effort to equalize town property assessment rates, a project undertaken in 1964 to provide a basis for allocation of state education grants. The 1965 Assembly, however, passed a bill providing that each town receive the same grant-in-aid that it had in 1964, and forbidding the reduction of these grants by future legislatures.

The Assembly authorized increased state bond issues, bringing the total of authorized and sold bonds to nearly \$100,000,000. It also authorized funds for a student loan program, and for a district state office building in Burlington. In other legisla-

VETERANS

Living veterans of U.S. military service totaled 21,834,000 at mid-1965. Of these, more than 14,900,000 served in World War II, including 1,150,000 who also served in the Korean War. Veterans who had served in the Korean War only totaled 4,568,000, and veterans of World War I totaled 2,100,000. In addition, 15,000 Spanish-American War veterans were still living. One of the last eight veterans of the Indian Wars died on July 5. There also were 161,000 veterans who served in peacetime.

Veterans affairs are to a large extent handled by the Veterans Administration (VA), an independent agency of the United States government, established to administer the benefits prescribed by law for veterans and their dependents.

Compensation and Pensions. A factor in maintaining the health of the U.S. economy was the more than \$4 billion paid in fiscal year 1965 to 3,216,920 living veterans and to dependents of 1,422,033 deceased veterans.

Insurance. The VA Insurance Service was administering 5,800,000 policies of GI insurance, with a total face value of more than \$39 billion at the close of fiscal year 1965. Veterans who held the policies paid more than \$570 million in premiums during the year and received \$222.7 million in dividends. These dividends are essentially a return to the policyholders of excess payments on their premiums. The excess of payments exists because the death rate of veterans continues to be lower than the rate used in the mortality tables upon which the law requires the amount of the premium to be calculated.

A new law enacted in the autumn of 1965 set up a servicemen's group life insurance program that provides a maximum of \$10,000 life insurance for servicemen. The new insurance is underwritten by private companies, and the extra hazard cost is paid by the U.S. government.

GI Loans. The GI bills of both World War II and the Korean War provide loan programs for veterans. Up to 60% of the total home loans veterans secure from private lenders is guaranteed by the VA, with a maximum guaranty of \$7,500. Other real estate loans may be guaranteed up to 50% of cost, with a maximum guaranty of \$4,000. Business loans are guaranteed up to 50%, with a \$2,000 guaranty ceiling. Direct loans are made by the VA in areas where ordinary lending facilities are not available. Although eligibility for World War II and Korean War veterans has begun to expire, 170,253 veterans received VA-guaranteed or VA-insured loans in the 1965 fiscal year. As of July 1, 1965, the total loans issued under this program amounted to 6,635,788, with a total face value of \$61.3 billion.

Eligibility for GI loans to World War II and Korean War veterans extends for a period of 10 years after the veteran's discharge from active duty,

plus an additional year for each three months of active wartime service. The deadline for all World War II veterans' eligibility is July 25, 1967, and for Korean veterans, Jan. 31, 1975.

Education and Training. All training under the Korean GI Bill was completed on Jan. 31, 1965. In addition to the approximately 7,800,000 World War II veterans who had received education and training under the GI Bill, some 2,400,000 Korean veterans also received training, bringing the total to more than 10,200,000.

Vocational Rehabilitation. Approximately 703,800 disabled veterans of World War II, the Korean War, and peacetime service have received rehabilitation training to help them to overcome handicaps resulting from injuries or diseases incurred in the service.

Medical and Hospital Care. In the fiscal year 1965 the VA Department of Medicine and Surgery had 136,759 employees and operated 168 hospitals, with a total capacity of 120,509 beds, 211 outpatient clinics, and 18 domiciliaries. During the year, 606,000 patients were discharged from VA hospitals. The average daily patient load was 109,183 in VA hospitals, and an additional 2,599 veterans were patients in private hospitals at the VA's expense. VA outpatient clinics received 5,987,225 visits.

A significant part of the nation's medical research is conducted in VA hospitals. Since mental illness accounts for half the veterans in VA hospitals, research in psychiatric treatment has been emphasized. The field of gerontology also receives special attention, with a view toward returning older patients to communities as independent, self-supporting, contributing members of society.

Veterans with compensable, service-connected injuries receive prosthetic appliances from the VA. Artificial limbs and eyes are fitted, and the veterans are trained in their use and care. Hearing aids are provided, as are braces, trusses, orthopedic shoes, special clothing, crutches, canes, wheelchairs, eyeglasses, and guide dogs and electronic equipment for the blind. Severely disabled veterans receive "wheelchair" home grants, and they also may receive grants toward the purchase of automobiles with special controls.

Guardianship. Guardianship service for incompetent veterans, minor dependents, and incompetent dependents is provided by the VA. In the fiscal year 1965, a total of 567,387 persons received guardianship care.

Education of Orphans. The Orphans Educational Assistance Program aids children of veterans who die of diseases or injuries incurred or aggravated in wartime service or in certain especially hazardous peacetime service. In 1965 a new law made children of completely disabled veterans eligible for aid. During the 1965 fiscal year, 11,600 children enrolled in the program for the first time, bringing the number who have benefited from this form of aid to 78,200. Most of the students receiving help are enrolled in institutions of higher learning. However, an eligible orphan may train in a technical or business school if he has the approval of his VA counselor. With few exceptions, students benefiting from the assistance program are between the ages of 18 and 23. They receive up to 36 months of training, and full-time trainees are allowed \$110 a month.

VIETNAMESE MOTHER AND CHILDREN, found after Communists overran their village, reflect the horror and anguish of the war.

VIETNAM

Broadening war, uncertainty over its future course, and repeated efforts to find a path to a negotiated settlement characterized the situation in Vietnam during 1965. The conflict intensified between American-backed forces of the government of South Vietnam (Republic of Vietnam) and insurgent forces supported by North Vietnam (Democratic Republic of Vietnam), the Soviet Union, and Communist China. By the year's end, it had become a major political issue in the United States, and it threatened to divide both the West and the Communist world.

SOUTH VIETNAM (REPUBLIC OF VIETNAM)

Developments in South Vietnam focused on (1) continued political instability; (2) heavy intensifica-

tion of the war between South Vietnamese government forces and Vietcong (Communist) guerrillas; and (3) increased involvement of U.S. and North Vietnamese forces in the conflict.

Political Instability. The government of Chief of State Phan Khắc Sửu and Premier Tran Van Huong failed to last through the first month of 1965. They had taken office in the fall of 1964, under a charter drawn up by the High National Council, a provisional legislature created by the military leaders in September. The disbanding of the High National Council by younger members of the Armed Forces Council, on December 20, indicated that the civilian government lacked support which it needed to stay in power. Although it managed to survive a few more weeks, it finally lost the backing of the armed forces leaders, who replaced it on January 27 with

JERRY ROSE—PIX

SOUTH VIETNAMESE AIRBASE near Danang is guarded by soldiers manning strategic hilltop position.

a new regime controlled by the military. Third Deputy Premier Nguyen Xuan Oanh was named acting premier, and Phan Khac Suu agreed to stay on as acting chief of state.

On February 16, with the approval of the military leaders, a civilian "unity" cabinet took office under Phan Huy Quat, a well-known political figure of North Vietnamese origin. The Quat government was South Vietnam's ninth in 16 months. Three days later a military revolt headed by Col. Pham Ngoc Thao, a fiery Catholic officer, jolted the regime and the Armed Forces Council. Thao's objective was to "end the dictatorship" of Lt. Gen. Nguyen Khanh, the council chairman and commander of the armed forces. The general, however, aided by the commander of the air force, Air Vice Marshal Nguyen Cao Ky, put down the revolt the same day. That night, 15 young generals met with Premier Quat at Bien Hoa Air Base near Saigon and voted to remove Khanh from both of his posts, thus ending his 13-month political and military dominance. Replaced by Lt. Gen. Tran Van Minh as acting commander in chief, Khanh left Vietnam to serve as an "ambassador at large" to the United Nations. The abortive coup had changed the composition of the military leadership, but had left the Quat regime intact and in charge of civil administration.

Popular morale in South Vietnam during the winter of 1964-65 was extremely low. A war-weary population was systematically terrorized by Vietcong forces to the point that fear and defeatism were spreading dangerously, while the Saigon government's zone of effective rule was being progressively whittled down by Communist military advances. Furthermore, the political maneuvering of ranking military leaders spread to junior officers, cutting deeply into army morale and hurting military effectiveness.

The Quat government proved a tonic, for the moment at least. Its first acts coincided with an upsurge in American military strength and power in South Vietnam, an intensification of the war against the Vietcong, and the bombing of North Vietnam.

The result was a discernible easing of tension in the south and a clear improvement in popular morale. The Armed Forces Council dissolved itself and turned over "full control of the nation" to the Quat cabinet on May 6. The council, announcing that it was leaving politics altogether, stated: "As the war becomes more decisive, the military leaders must concentrate all their efforts toward its prosecution. They cannot continue to carry out political tasks forced upon them in the past."

Political activities by military officers obviously had hampered the prosecution of the war. Some army officers still cherished political ambitions, but they were sensitive to growing public criticism and ridicule. The military situation, public opinion, and the apparent stability of the Quat government restrained these officers. In May the government held local elections in the areas it still controlled. Of the 4.5 million registered voters, roughly 3.5 million (73%) cast their ballots, in defiance of Communist efforts to sabotage the voting.

But political stability could not be maintained for long. Opposition groups, including militant Catholic refugees, attacked Premier Quat for having sponsored "discriminatory religious legislation," and for favoring a neutralist solution to the war. On June 12 his cabinet resigned, and the next day military leaders formed the National Leadership Committee to exercise executive and legislative powers.

The committee, headed by Maj. Gen. Nguyen Van Thieu, named one of its members to be the new premier—Air Vice Marshal Nguyen Cao Ky. He took office on June 19, and General Thieu replaced Phan Khac Suu as chief of state. Once again the armed forces had brushed aside civilian authority. But this time, as the war continued to grow increasingly intense, the likelihood of their again surrendering power to the politicians appeared dim. As the year ended, the military leadership seemed securely in control of the government, although civilian aspirants to power were clearly restive and unhappy.

A problem of considerable magnitude grew out of

MILITARY LEADERS OF SOUTH VIETNAM include Air Vice Marshal Nguyen Cao Ky (left), who became premier on June 19, and Brig. Gen. Nguyen Huu Co (right), who took the post of minister of war and defense in the new cabinet.

the flight of 700,000 peasants from inland villages and isolated farmsteads in central Vietnam to the coastal cities and towns. Victims of the war, the refugees preferred life in the difficult conditions of a refugee camp, protected by government forces, to taking their chances with the Vietcong in their native villages. The necessity of providing for them constituted a serious challenge to the Saigon regime. It equaled in political importance the problem presented by the influx of 860,000 refugees from North Vietnam in 1954.

Intensification of the War. What had been a guerrilla war, confined to South Vietnam, took on a different complexion in 1965. The war expanded in some areas of the south into large-scale assaults by uniformed North Vietnamese troops, who were equipped with massive quantities of weapons supplied by China and other Communist-bloc nations. Before the end of the year, responsible authorities in

SAIGON AND WASHINGTON claimed that as many as 12 North Vietnamese regular army regiments were operating within South Vietnam. They asserted that Communist infiltration over the Ho Chi Minh trail, which leads from North Vietnam into the south through the jungle of eastern Laos, approximated 4,500 men per month. Combined Vietcong and North Vietnamese troop strength in December was estimated at more than 100,000 regulars and as many irregulars (part-time guerrillas).

Battle casualties on both sides mounted during the year. U.S. combat deaths in 1965 totaled more than 1,350, as compared with 136 killed in combat in 1964. The number was still but a fraction of the 11,100 deaths suffered by South Vietnamese government troops, who continued to bear the brunt of the fighting. Governmental authority was surprisingly resilient, considering the large number of local and district civilian officials who had been killed or

MEMBERS OF U.S. 101st AIRBORNE BRIGADE cross river near Ben Khe, South Vietnam, in September. American forces in Vietnam were increased to 180,000 in 1965.

BRUNT OF THE FIGHTING is borne by South Vietnamese government troops, one of whom, wounded, is evacuated from the battlefield near Hiep Duc. Communists who had captured the village impaled local officials and their families on stakes as warning to Vietnamese loyal to Saigon.

UPI

kidnapped since 1959. During the first nine months of 1965, 1,100 South Vietnamese officials were eliminated by the Vietcong. According to Saigon, 34,585 Vietcong were killed in 1965.

United States Involvement. In reaction to increasing external support for the Vietcong, the United States stepped up its assistance to South Vietnam. The number of U.S. military and air force personnel in the Republic of Vietnam rose from about 20,000 in January 1965 to 190,000 on Jan. 12, 1966. An additional 50,000 U.S. servicemen patrolled the seas and skies of the Southeast Asian peninsula as part of the U.S. 7th Fleet. A corresponding augmentation of weapons and aircraft, plus the dispatch to Vietnam of the 1st Cavalry (Airmobile) Division, brought several thousand aircraft to that country and wrought another alteration in the style of warfare. Heightened mobility, gained especially through the increased use of helicopters, made possible almost instant response by American and South Vietnamese forces to many Vietcong attacks. To counter this temporary advantage, Communist guerrillas introduced antiaircraft machine guns and cannon into the war in the south.

Impacts of the enlarged U.S. participation in the war were felt throughout Vietnam. In South Vietnam, the influx of huge numbers of American servicemen stimulated inflation in the Vietnamese economy. At the same time, the Communists made a methodical effort to cut roads, canals, and other transport arteries and thus prevent peasants from bringing their rice and other produce to market, while tightening a blockade of urban centers dependent on those deliveries for their food supplies. The Communist campaign also had an inflationary effect.

To meet the resulting problems, the Vietnamese and U.S. governments instituted an air- and sealfight to carry shipments of food and other supplies from Saigon and abroad to Da Nang, Nha Trang, and

other coastal cities, and to towns in the interior. Indeed, over much of South Vietnam, air travel was often the only sure means of communication, and it was facilitated by a network of more than 175 airfields and airstrips across the Republic of Vietnam. Heavier logistical support required by the increasing numbers of armed men demanded in turn installations capable of sustaining them. It thus became necessary to build a base of logistical support for the U.S. forces. Major air installations at Saigon, Bien Hoa, Da Nang, and Soc Trang provided such facilities. Naval installations were developed at Cam Ranh Bay, Saigon, and Vung Tau.

The growth of American power in South Vietnam had important political ramifications in Saigon. There was an apparent tendency on the part of U.S. leaders to make decisions, and announce them, without first consulting their Vietnamese allies. The American inclination to "steer the boat" was especially evident in discussions of war and peace aims, in which consideration of Vietnamese ideas was often conspicuously absent. Ruffled feelings among the Vietnamese developed into serious friction during 1965, and brought threats of renewed "fence-sitting" from many non-Communist Vietnamese nationalists in the south. Their cooperation was needed in building a strong base of support for a non-Communist nationalist government in Saigon. Only through the existence of such a broadly supported government could the United States obtain its main objective in ultimate peace negotiations—continued independence for South Vietnam.

The question of continuing the war versus negotiating a settlement with the Communists became involved in domestic American politics, and was clearly a divisive element in international affairs as well. Within the Western bloc, heavy pressures were put on Washington to negotiate an end to the conflict, on the ground that no other kind of settle-

ment was possible unless the United States was willing to go to war against Communist China, North Vietnam's chief ally. Public opinion in non-Communist countries reportedly was strongly opposed to a broadening of the war and skeptical of Washington's assertions that it wanted to terminate the war. Continued political instability in South Vietnam also was a factor in creating doubts as to the viability of the Saigon regime, as well as to its claim to represent the people.

On April 7, President Johnson, in a major address at Johns Hopkins University, pledged American assistance totaling \$1 billion toward a \$2 billion program for development of Southeast Asia. Widely hailed as a forward step, the pledge was implemented shortly thereafter by an \$80 million congressional appropriation. Reaction in Western capitals and throughout non-Communist Asia was highly laudatory, but Communist response was negative.

OTHER VIETCONG SUSPECTS, a woman and a man, are ushered through a ruined village as U.S. Marines round up for search anyone who might be one of the "hidden enemy."

Initiatives toward finding a peaceful means of terminating the war were undertaken during 1965 by the Commonwealth of Nations; by 17 nonaligned chiefs of state, including Egypt's Nasser and Ghana's Nkrumah; by the Canadian government; and by the government of India. But Hanoi and Peking consistently refused these offers of "good offices" to bring about peaceful negotiations. In December, Foreign Minister Fanfani of Italy, serving as president of the UN General Assembly, brought to President Johnson's notice a potential peace initiative tendered via two Italian educators who had visited Hanoi. Premature newspaper disclosure of the conversations, however, aborted any possible results. Just before Christmas, in connection with a holiday cease-fire, President Johnson ordered a cessation to U.S. bombings of North Vietnamese targets (bombing was resumed on Jan. 31, 1966). At the end of the year he sent emissaries, including presidential adviser McGeorge Bundy, UN Ambassador Arthur Goldberg and Undersecretary of State W. Averell Harriman on a dramatic tour of world capitals to ask support in bringing the Communists to the negotiating table and to persuade world leaders of the U.S. government's sincerity. Initial results were disappointing, however. (See also FOREIGN POLICY, U.S.)

NORTH VIETNAM (DEMOCRATIC REPUBLIC OF VIETNAM)

The war brought destruction to North Vietnam for the first time since hostilities began in 1959.

Air Attacks. On Feb. 7, 1965, at President Johnson's order, 49 U.S. carrier-based planes bombed a Communist military staging base at Dong Hoi. This initial raid on North Vietnam came in reprisal for a Vietcong ground attack on two U.S. military barracks at Pleiku, South Vietnam, earlier the same day. On February 8, 24 South Vietnamese aircraft made their first attack on the Communist north, bombing military targets in retaliation for Hanoi's support of the Vietcong rebels. U.S. and South Vietnamese planes then bombed and strafed railroads, highways,

Minerals (metric tons, 1964): Anthracite coal, 3,400,000 (ranks 11th among world producers); apatite, 996,000; salt, 150,000; phosphate rock, 50,000.
Transportation: Railways (1960), 485 miles; airport, Hanoi.

HO CHI MINH, president of North Vietnam, stepped up his efforts to unify all of Vietnam by force in 1965. With Soviet and Chinese material aid, he infiltrated increasing numbers of North Vietnamese troops into South Vietnam to aid the Vietcong guerrillas in their war against the Saigon government and its military allies. Rejecting U.S. efforts to negotiate a settlement of the conflict, he vowed to fight another 20 years or more to achieve victory.

Ho was born in 1890 in central Vietnam, then a part of French Indochina. He joined the Communist party in Paris when he was a young man, and in the 1930's he led guerrilla attacks against the French in Indochina. He resumed the struggle against the French after World War II, finally driving them from Vietnam in 1954. Then, as president of the Democratic Republic of Vietnam (the Communist north), he unleashed the Vietcong guerrilla war in 1958 in an effort to overthrow the non-Communist government of South Vietnam and to bring the entire country under Communist rule.

PIX

bridges, and military staging centers in North Vietnam, although the large cities of Hanoi and Haiphong were spared. In the late fall, however, U.S. planes hit military objectives near both cities, including antiaircraft missile sites. By the year's end, Soviet-supplied SAM ground-to-air missiles and conventional antiaircraft guns had succeeded in downing more than 100 attacking planes.

Communist Regime. President Ho Chi Minh celebrated his 75th birthday in 1965, reportedly with undiminished vigor. The increasing strains of mounting military operations in South Vietnam slowed the already slackened pace of North Vietnam's economy, and civil defense measures prompted by the air attacks put further burdens on the population. The regime appeared to have moved closer to Peking in its international Communist alignment, and it continued to maintain forces in support of the Pathet Lao guerrillas in Laos. (See also ASIA.)

VIRGIN ISLANDS

The economy of the Virgin Islands received a substantial boost in 1965 when Congress allowed visitors returning to the United States from the islands and other American territories a special \$200 duty-free allowance on gifts bought in the territories. Americans returning from other areas of the world are permitted only a \$100 exemption.

Tourism. Territorial Governor Ralph M. Paiewonsky testified in 1965 before congressional committees on the adverse effect to the islands' economy of a 1964 cut in customs exemptions. Congress later revised the law to exempt the Virgin Islands and other U.S. territories from the \$100 duty-free limit. This revision, in effect, reinstated the previous \$200 limit that had expired in 1964.

Many of the islands' tourist hotels expanded their facilities for the 1965-66 winter season. Hotel rooms available for guests in 1965 totaled 1,744, as

against 1,323 guest rooms available in 1964. Six new hotels were being constructed and were expected to be completed in early 1966.

A program for training hotel employees, instituted in 1964, was continued in 1965. The program was financed in part under the Federal Manpower Development and Training Act, and includes classroom courses, as well as on-the-job training.

The Office of Public Relations and Information, established under the governor's office in 1963, was expanded in 1965. The staff was increased in number, and a new office was opened in St. Croix to supplement the St. Thomas operations. The office is responsible for publicizing and promoting tourism and economic development in the islands, and for providing local news media with information on actions of the governor's office.

Government. The territorial government used the bonding authority granted it by Congress in 1964 to issue \$5 million in general obligation bonds in 1965. The bonds, sold at a highly favorable interest rate, were used to finance a \$3 million "crash" program to build schools, to construct new health centers on St. Thomas and St. Croix, and to help finance a seawater desalination plant, dedicated in November by Vice President Hubert Humphrey.

Constitutional Convention. A constitutional convention held in 1965 recommended that the Virgin Islands Constitution be amended to allow islanders to elect their own governor, now appointed by the president of the United States. Delegates also expressed the desire of islanders to vote for president and vice president of the U.S., and to have a non-voting representative in the Congress.

RALPH M. PAIEWONSKY
Governor of the Virgin Islands

VIRGINIA

Developments in Virginia during 1965 produced major changes in the state's political complexion. In the November elections, Democratic Lt. Gov. Mills E. Godwin, Jr., won the governorship in a contest that produced a schism in the traditionally solid conservative ranks of the state's Democratic organization. Shortly after the election, Sen. Harry F. Byrd, Sr., longtime head of the so-called Democratic machine, resigned from the Senate, and the outgoing governor, Albert S. Harrison, appointed Harry F. Byrd, Jr., to succeed his father as senator. Also during the year, court-ordered reapportionment of the state's congressional districts gave greater political influence to urban areas.

Elections. An unusual three-way contest developed in the gubernatorial race. Early in the year, Lieutenant Governor Godwin tactfully amassed enough

Area: 133 square miles (St. Croix, 82 sq. mi.; St. Thomas, 32 sq. mi.; St. John, 19 sq. mi.).

Population: 50,000 (1965 est.).

Capital: Charlotte Amalie, St. Thomas, 12,880 (1960).

Government: Governor, Ralph M. Paiewonsky. Legislature—Territorial Legislature (11 members).

Education (1965): Public school enrollment, 9,399; parochial and private school enrollment, 4,042; College of the Virgin Islands, 652.

Finance (fiscal year 1965): Revenue, \$40,582,689; expenditures, \$34,984,807, up 18% over fiscal 1964 (health, \$5,304,707; education, \$4,943,996; public works, \$9,992,002).

Foreign Trade and Tourism (1964): Exports, \$27,066,951; imports, \$96,005,404; tourist spending (1964-65 fiscal year), \$54,000,000 (from 495,712 tourists).

support from both the conservative and liberal factions of the party to rule out the possibility of opposition in the Democratic primary. However, some conservative Democrats bucked party traces to form a Conservative party. They nominated William J. Story, Jr., an assistant school superintendent and a member of the John Birch Society, as their candidate. The Republicans held their convention in May and nominated a young Roanoke attorney, A. Linwood Holton, for the governorship.

Holton campaigned vigorously, labeling the Democratic state government as stagnant, machine-dominated, and unresponsive to vital state needs. Godwin charged the Republicans with lack of governmental experience, and staunchly defended the Democratic record of accomplishment for the state. Story called for a return to principles of constitutional government and liberty. Godwin won election on November 2, but received only 48% of the total vote. Holton won 38%—the usual percentage for a Republican gubernatorial candidate in Virginia—and Story garnered 13%.

The voters also chose a new General Assembly in the November elections. The Republicans increased their numbers from 11 to 12 in the 100-member House of Delegates, and retained 3 seats in the 40-member State Senate. (A later special election in-

creased their Senate seats to 4.) All told, 37 of the 140 elected representatives were freshmen—a result, in part, of legislative reapportionment.

Reapportionment. In 1965, Virginia faced another reapportionment order, this one from the Virginia Supreme Court. On January 18 the court ruled that the Virginia Constitution required congressional districts to be nearly equal in population. Consequently, the General Assembly met in special session on August 31, and redistricted the state to include portions of the populous Washington and Norfolk suburbs in two predominantly rural districts.

The Byrds. The most startling political news of the year came soon after the November elections. On November 11, Sen. Harry F. Byrd, Sr., resigned his seat in the U.S. Senate after serving 32 years. One day later, Governor Harrison appointed State Sen. Harry F. Byrd, Jr., to replace his father.

The elder Byrd's resignation, coupled with the Conservative defection from the Democratic party in the gubernatorial race and Godwin's apparent swing to the political center, prompted some analysts to conclude that the Byrd machine was either dead, dying, or in a process of transformation. Others detected more continuity in the changes, noting Godwin's close affiliation with important conservatives in the organization and the literal descent of power from Byrd, Sr., to Byrd, Jr. As the son closely resembled the father both in personal appearance and political ideology, the change in political leadership may be merely a matter of new wine in old bottles.

The real impact of the 1965 political developments seemed likely not to be apparent until 1966, when both Byrd, Jr., and veteran Sen. A. Willis Robertson, a conservative who announced his bid for reelection to the Senate the same day the elder Byrd resigned, probably will face stiff liberal opposition in the Democratic primary.

WALLACE, George. See biographical sketch under ALABAMA.

WALLACE, Henry Agard

Former secretary of agriculture and vice president of the United States: b. Adair County, Iowa, Oct. 7, 1888; d. Danbury, Conn., Nov. 18, 1965.

Henry A. Wallace was one of the most controversial public men of this century. He disdained the ways of a politician, yet he narrowly missed becoming president of the United States. He had a deep religious faith and felt compassion for the common man, yet he found much to approve in atheistic communism during one of its most brutal periods. He had a keen scientific mind, yet many persons thought that he was a mystic. The texts of his speeches and of his books reveal a prose of soaring eloquence, yet the harsh, flat delivery of his speeches often left his audiences unmoved.

Early Career. Wallace's grandfather founded *The Iowa Homestead* and *Wallace's Farmer*, publications that became influential in the Midwest. His father was secretary of agriculture from 1921 to 1924. Wallace accepted, for a time, the Republicanism and Presbyterianism of his forebears.

As a boy of 15, Wallace conducted experiments with corn that discredited the findings of an expert. In 1910 he completed his agricultural studies at Iowa State College. Wallace forecast the 1920 agricultural collapse after studying a corn-hog ratio chart that he had developed. By 1921, when he succeeded his father as editor of *Wallaces' Farmer*, he had developed a successful hybrid corn.

During the 1920's both Wallace and his father tried in vain to persuade Republican administrations to support measures to lift the incomes of farmers. After his father's death, Wallace looked to the Democratic party, and helped prepare the farm platform for Franklin D. Roosevelt during the latter's presidential campaign in 1932. After his election, Roosevelt appointed Wallace secretary of agriculture.

Secretary of Agriculture. The United States was gripped by a general depression in 1933 and farmers were desperate. Wallace won passage of the Agricultural Adjustment Act, which provided for the destruction of excess crops and pig litters. This expedient, though harsh, was effective, and farm income rose. Wallace originated a food stamp plan that permitted needy persons to obtain surplus government food, and he fought for soil conservation measures. Recalling the Biblical story of Joseph, Wallace introduced the "ever normal granary," and stored surplus food against the day when shortages might occur. His foresight was vindicated when war brought an increased demand for food.

Roosevelt sought a third term in 1940, and he wanted Wallace to be his vice presidential running mate. Roosevelt admired Wallace's intellectualism, his loyalty to the New Deal, and the vigorous way in which he had denounced the growing menace of Nazi Germany. However, many politicians regarded Wallace as an ultraliberal visionary. He seldom moved in political circles. He preferred to spend free time studying various religious and philosophical systems (he eventually turned to the Episcopal Church) and to propagating, in speeches and books, his ideas on a great variety of subjects. Roosevelt forced through Wallace's nomination for vice president, and they were elected.

Vice President. During World War II, Wallace articulated the ideals that he thought should guide the United States during both the conflict at hand and the peace that would follow. He spoke all over the country, telling the people that they must make great sacrifices. He believed that an Allied victory could lead to widespread social reform. "The object of this war," he said, half seriously, "is to make sure that everybody in the world has the privilege of drinking a quart of milk a day." And he asserted that "the century which will come out of this war—can be and must be the century of the common man."

The vice president spoke with admiration of the Soviet Union. Increasingly, he referred to "Fascists" within the ranks of American businessmen.

Wallace, unlike vice presidents before him, was active in the executive branch of the government. Roosevelt named him chairman of the Economic Defense Board (later the Board of Economic Warfare, or BEW). Wallace and his associates started to snap up strategic materials from foreign countries, and cost was no object. Secretary of Commerce Jesse Jones also had the task of procuring needed materials, and he was aghast at Wallace's free-wheeling tactics. After an acrimonious public row between the two men, Roosevelt rebuked both, dissolved the BEW, and ended Wallace's role in economic warfare.

WERNER WOLFF, FROM BLACK STAR

HENRY WALLACE, former vice president, spent his last years on his South Salem, N.Y., farm. He died November 18.

In July 1944, Roosevelt announced his candidacy for a fourth term, but did not insist that Wallace go on the ticket again. Although Wallace had wide support among labor and liberal groups, a coterie of big city "bosses" swung the vice presidential nomination to Senator Harry S. Truman of Missouri.

Later Career. Roosevelt had acceded reluctantly to the displacement of Wallace, whom he now appointed secretary of commerce. In April 1945, Roosevelt died, and was succeeded by Truman. Wallace soon began to criticize the new administration's "tough" policy toward the Soviet Union. Secretary of State James F. Byrnes complained to Truman, who ousted Wallace from the cabinet.

Wallace, who still wanted the United States to reach an accommodation with the USSR, accepted the Progressive party's presidential nomination in 1948. That party was heavily infiltrated by Communists, and Wallace exhibited great naiveté in espousing their views. He polled about one million votes, or 2.4% of the total cast. Later, he broke with the Progressive party.

Wallace retired to his farm in South Salem, N.Y. He conducted experiments aimed at increasing the yield or improving the quality of farm products. After a short illness, he succumbed to lateral sclerosis. He was survived by his widow and three children.

DONALD YOUNG
Assistant Editor, *ENCYCLOPEDIA AMERICANA*
Author, *"American Roulette: the History and Dilemma of the Vice Presidency"*

WASHINGTON

On the morning of April 29, 1965, much of the Washington Puget Sound region reeled under its second strongest earthquake in recorded history. Reaching an intensity of about 7 on the Richter Scale, and exceeded only by the April 13, 1949 temblor, the massive, three-wave quake caused eight deaths and property damage initially estimated at \$15 million. After closer inspection during the following months, many companies and public agencies discovered quake-associated damages which necessitated the abandonment and demolition of buildings, thus substantially increasing the estimated losses. Most of the damage occurred in Seattle, although Tacoma and Olympia suffered substantial losses.

Reapportionment Impasse. The 39th Washington Legislature reached an impasse on Jan. 12, 1965, the day after its regular session convened, when it could not reach agreement on legislative reapportionment. Earlier, a federal district court, ruling that the Legislature was not apportioned in compliance with the 14th Amendment to the U.S. Constitution, had enjoined the Legislature from passing any other measure until it enacted an apportionment law which complied with the U.S. Supreme Court's "one-man, one-vote" decision in 1964.

Redistricting Bills. The Democratic-controlled Legislature attempted to pass an apportionment measure and have it signed into law during the first two days of the 39th session, while Democratic Gov. Albert D. Rosellini was still in office. A Senate bill failed narrowly to muster enough support in the House, and the matter carried over into the new administration of Republican Gov. Daniel J. Evans, who took office on January 13. The first redistricting measure to reach the new governor's desk was vetoed. Finally, after 47 days of the 60-day regular session, an acceptable bill was signed by Governor Evans. Shortly thereafter, the federal court declared the redistricting measure constitutional. By this time, however, tempers in the Legislature were short, and political disagreement adversely affected consideration of many other bills, which had to be disposed of in a special session.

During the special session another redistricting bill, this one for congressional districts, was offered.

SEATTLE suffered eight deaths and wide property damage from earthquake which hit Puget Sound region on April 29.

Public Finance (fiscal year 1965): Revenues, \$1,136,298,963 (4% sales tax, \$246,911,808; motor fuel tax, \$83,452,004; federal funds, \$227,644,536). Expenditures, \$874,232,151 (education, \$346,388,271; health, welfare, and safety, \$202,221,991; roads and highways, \$154,577,222). State debt, \$386,211,000 (June 30, 1965).

Personal Income (1964): \$7,861,000,000; average annual income per person, \$2,635.

Public Assistance (fiscal year 1965): \$125,382,726 to 136,224 recipients (aged, \$33,882,604; dependent children, \$35,066,808).

Labor Force (employed persons, August 1965): Agricultural, 90,600; nonagricultural (wage and salary earners), 898,100 (25.7% manufacturing, 21.9% trade, 20.5% government). Unemployed persons (August 1965)—50,400.

Manufacturing (1963): Value added by manufacture, \$2,872,770,000 (transportation equipment, \$898,828,000; primary metals, \$202,461,000; nonelectrical machinery, \$73,093,000; electrical machinery, \$29,819,000; fabricated metals, \$77,288,000; food and products, \$363,218,000).

Agriculture (1964): Cash farm income, \$642,750,000 (live-stock, \$215,306,000; crops, \$394,654,000; govt. payments, \$32,790,000). Chief crops (tons)—wheat, 2,466,000 (ranks 5th among the states); sugar beets, 1,333,000 (rank, 6th); alfalfa, 1,280,000 (rank, 19th); apples, 624,000 (rank, 1st); potatoes, 605,000 (rank, 5th); barley, 538,000 (rank, 5th); rye, 48,000 (rank, 5th).

Mining (1964): Production value, \$80,977,000 (ranks 34th among the states). Chief minerals (tons)—uranium ore, 147,005 (rank, 5th); peat, 35,609 (rank, 4th); zinc, 24,296 (rank, 12th); lead, 5,731 (rank, 6th); copper, 35 (rank, 13th); sand and gravel, 31,920,000.

Fisheries (1964): Commercial catch, 101,150,088 pounds (\$15,599,923). Leading species—bottomfish, 38,579,423 pounds (\$2,550,847); salmon, 21,277,391 pounds (\$6,488,757); halibut, 12,092,428 pounds (\$3,031,211); oysters, 8,273,422 pounds (\$1,607,893).

Transportation: Roads (1965), 68,900 miles (32,520 surfaced); motor vehicles (1965), 1,633,499; railroads (1964), 5,945 miles; airports (1964), 215.

Communications (1965): Telephones, 1,423,300; television stations, 13; radio stations, 133; newspapers (Jan. 1, 1965); 24 (1964 daily circulation, 961,930).

The governor vetoed the bill, since, in his opinion, it failed to redistrict on an equitable bipartisan basis. An amendment then was passed which would place the measure before the voters in the general election of November 1966.

Taxation. The Legislature acted to raise nearly all of the estimated additional requirement of \$55 million by increases in retail sales and use taxes and by new taxes on liquor, beer, and tobacco products.

Economy. Washington's economy suffered a momentary setback when the Boeing Company, the region's largest industrial employer, was not awarded the contract to build the Air Force C-5A heavy logistics transport plane. The disappointment was short lived, however, and was tempered by continued high employment in the state and by a large backlog of orders at the Boeing plant.

An agreement finally was reached between Seattle and Century 21, Center, Inc., which managed facilities remaining after Seattle's 1962 World's Fair, to transfer full ownership and management of these facilities to the city. The agreement ended a long squabble over the operation of the facilities.

WASHINGTON (DISTRICT OF COLUMBIA)

Home rule proved to be the central issue for residents of Washington, D.C. in 1965. The home rule question brought into focus the city's complex and sometimes conflicting roles as the nation's capital, the center of a rapidly growing metropolitan area, a municipality, and the United States' largest city with a predominantly Negro population.

Home Rule. On September 29 the House of Representatives killed a Senate-approved bill that would have allowed residents of the District of Columbia to elect their own mayor and city council. The House instead passed a substitute bill to put the home rule issue before district voters in a referendum.

Two proposals emerged as major alternatives in congressional debate on the home rule question. The "Bible bill," introduced by Sen. Alan Bible (D, Nevada) and backed by President Lyndon Johnson, proposed an elected mayor, city council, and school board. After the bill was passed by the Senate but voted down by the House, the latter body approved a bill introduced by Rep. B.F. Sisk (D, California). This proposal called for a referendum by which voters would approve or disapprove the creation of a charter board to draft a plan for local government. The voters would also choose 15 board members from a list of nonpartisan candidates nominated by petition. If the creation of the charter board is approved, the board will submit its plan for local government to a second referendum. If the plan is approved, it will go to Congress, which may either veto or approve the plan, but cannot modify it. The "Sisk bill" could bring home rule to Washington within 15 months after its enactment.

Crime. Figures released in July revealed that the crime rate in the district had risen for 37 consecutive months. As part of an emergency effort to combat crime in the city, Congress approved pay increments and a generally intensified work schedule for district police. Police powers and procedures also received attention. In August, following congressional hearings, and on the recommendation of the Justice Department, the district police chief, John B. Layton, issued an executive order defining the length of time and conditions under which persons arrested on probable suspicion could be held for questioning.

Housing and Redevelopment. The city received long-sought congressional approval to use existing government redevelopment machinery in commercial areas. It also got a grant of \$1 million to develop plans for an extensive downtown urban renewal project. In addition, Congress authorized city enforcement of housing regulations. Refusal to make ordered repairs may result in city-conducted repair operations, to be paid by landlords. The city may charge interest on unpaid repair bills and, if costs are not paid within two years, it may sell the city-repaired properties.

Plans were made to establish an 11th code conservation area—a neighborhood designated for intensive inspection and enforcement of city housing codes. An intensified program of investigation and legal action against alleged violations of fair housing practices was also planned.

Public Construction. Congress approved \$75 million for a third building for the Library of Congress, to be named for President James Madison. It also appropriated \$100,000 to continue work on the Franklin D. Roosevelt Memorial.

NANCY PALMER PHOTO AGENCY

PICKETS EXPRESS APPROVAL of U.S. policy in Vietnam as marchers (background) converge on the nation's capital on November 27 to protest U.S. involvement in the war.

Transit. In 1965, Congress approved a \$431 million subway and surface rail transit system for the Washington area, appropriating about \$6 million to get the project under way. The system, scheduled for completion in 1972, will include single-rail extensions into nearby Maryland and Virginia.

Education. Washington's educational system, particularly the use of the "track system," which separates students into four different programs according to their ability, was challenged as being racially discriminatory. Congressional hearings and an investigation by local officials raised serious questions as to the quality of education available to children in the district's public schools, approximately 90% of whom are Negro.

Metropolitan Planning. In September the Washington Council of Governments received a federal grant to study metropolitan area government problems. The council began evaluating a study recommending the merger of related agencies in the Washington area and the establishment of some form of metropolitan government.

Government. The city continued to be governed in 1965 by Congress and administered by three commissioners appointed by the president. Two of the commissioners, Walter N. Tobriner, the commission president, and John B. Duncan, are civilians; the third, Brig. Gen. Charles M. Duke, is an officer of the U.S. Corps of Engineers.

Economy. Congress approved district government expenditures of \$360,228,500 for the fiscal year 1966. Assessed valuation of taxable property in the city was \$2,705,307,317 in June 1965. The tax rate was \$2.50 per \$100 assessed valuation.

Unemployment in the district proper was estimated in November at 4% of a work force of 410,250. At the same time, metropolitan area unemployment was estimated at only 2%.

NEWSWEEK—PHIL MACMULLAN

THE CRITICAL WATER SHORTAGE in the northeastern United States is evidenced by the nearly empty Croton Reservoir of the New York City water system.

WATER SUPPLY

The four-year drought that has afflicted the northeastern section of the United States in recent years dramatizes the dependence of industry, agriculture, and population on vast quantities of fresh water. Many parts of the world are faced with similar problems. In some Middle Eastern countries, such as Israel, Iran, Jordan, Lebanon, and Syria, the fight for water has led to intense international negotiation. In Asia, India and Pakistan dispute over division of the Indus River waters. All along the southern coast of the Mediterranean there is an insatiable demand for water, but only limited quantities of water are available except from the sea itself. Australia also has many water problems, as do South America and Africa.

There is no shortage of water; rather, the earth's water is poorly distributed. If civilizations continue to develop in water-short areas, water must be transported over long distances at great cost, as in southern California, or it must be obtained from saline sources. The United Nations, in an extensive 1964 report on "Water Desalination in Developing Countries," pointed out the relationship between economic growth and water, and observed that many areas will have to rely on desalinated water if development is to continue.

Of paramount importance is the problem of future water supplies for urban areas. It has been estimated that more than half of the world's population will be living in cities of 100,000 or more by the year 1990. Already such a situation exists in the United States, where in 1960 about 150 million people, or 80% of the population, lived in 22,000 communities. These communities were served by almost 20,000 water supply organizations, which furnished more than 20 billion gallons per day.

PROBLEMS OF WATER SUPPLY

There are two fundamental problems connected with water supply. The first is water shortage, especially as a result of drought. The second is the rising cost of supplying sufficient water for increasing needs.

Water Shortage. The water shortage in the Northeastern states typifies a basic problem that communities face. The water-supply systems in these states were designed on the basis of statistical averages of rainfall over long periods, and records indi-

cated that only two very dry years might occur in succession. On this basis, Boston, New York City, Jersey City, Newark, and many smaller cities built large reservoir systems to collect and store flood waters during the spring runoffs. However, in the 1960's a drought of four years' duration struck the area—a drought unprecedented in the recorded data used by engineers to predict stream flows.

The drought will compel more cities to construct larger reservoirs to take into account probable future extended dry periods. In this connection, New York City, preparing for water use beyond the year 2000, has constructed a new reservoir on the West Branch of the Delaware River. However, the reservoir was not completed in time to capture any of the spring flood runoff during 1964. If the reservoir had been nearly full by the spring of 1965, it would have relieved the city's water shortage considerably. The completed reservoir should provide more water for the city from winter rains and snows in 1966, but to be on the safe side if the drought continues, the city made provisions to pump 100 million gallons per day of inferior water from the Hudson River.

Boston's case was different. The Metropolitan District Commission had a large reservoir with several years' supply, but the transmission and distribution systems from the reservoir were not large enough to satisfy the growing demand for water by cities and towns in the metropolitan area.

From the experiences of New York City and Boston, two conclusions may be drawn. First, cities must provide enough storage to supply water in times of drought. Second, they must enlarge their distribution systems in order to satisfy any demands that customers may place upon them.

Costs. The theory of water marketing espoused by the American Water Works Association holds that a consumer is entitled to all the water he wants and needs, but that he should pay his fair share of the costs. Water is the cheapest commodity on earth, and people can afford to pay more for it—and will, as communities go farther afield for their supplies. (Water distributed in New York City costs the consumer only 5 cents a ton, or 20 cents per 1,000 gallons; elsewhere, expensive water may run as high as 25 cents a ton, or \$1 per 1,000 gallons.)

What is water worth? One of the many ways of pricing the value of water is to estimate the expected dollar return per acre-foot. (An acre-foot—

DIVERTED RAIN

DECLINE IN RAINFALL

SEVERE DROUGHT IN THE NORTHEAST is attributed to a change in its weather pattern. Southwesterly winds, laden with moist air, formerly penetrated to the Northeastern United States and delivered rain. But in recent years the northwesterly winds have moved farther south than usual and pushed the needed rain out into the Atlantic Ocean. As a consequence, reservoirs in some areas have dropped to record lows despite conservation drives.

one foot of water covering an acre of ground—equals 333,000 gallons). Nathaniel Wollman of the University of New Mexico has calculated that an acre-foot of water used for irrigation in the West will return \$45 to \$50 in agricultural products, whereas the same amount of water used for industrial purposes will bring a return of from \$3,000 to \$4,000. Another way of looking at the value of water is to consider its role in making a region habitable and thus producing income. For example, few people would live in Arizona if there were no water. But in 1960, water developments in the state yielded 7 billion acre-feet of water, and the state's residents received personal income of \$3.5 billion for the year. Thus, in terms of personal income, each acre-foot of water returned \$500.

Actual water costs in the United States run from \$20 to \$300 per acre-foot. Water charges, on the other hand, run from \$5 to \$100 per acre-foot. Hydroelectric power developments in connection with water resource projects help pay for water. This is particularly true on such gigantic projects as Hoover Dam and other Colorado River developments that utilize the water to generate power before it is taken out of the river to supply cities and farms in Arizona, Nevada, and California.

SOURCES AND USE OF WATER SUPPLY

Hydrology is the science dealing with rainfall, water runoff, evaporation, and groundwater sources. Total rainfall is plentiful on earth, averaging 280 trillion gallons per day—enough to supply 280,000 cities the size of New York. However, rain does not always fall in the places where it is needed or at a uniform rate. Unfortunately, only 25% of the rain falls on land surfaces, and about 70% of this amount is lost by evaporation. The remainder runs off the land in streams and seeps into the groundwater reservoirs.

People often choose to live in areas of scarcity and drought, rather than in places rich in water resources. Some great rivers, such as the Amazon and Orinoco in South America, the Yukon and Mackenzie in North America, and the Mekong in Southeast Asia, are virtually untapped resources, with great quantities of flood water spilling to the sea. But the waters of other rivers such as the Ohio, Rhine, Danube, Indus, Tigris, and Jordan, are used over and over again, and periods of scarcity frequently occur.

Hydrological Studies. The United Nations is sponsoring the International Hydrological Decade (1965–74) so that engineers and scientists from 70 countries may pool their research facilities, skills, and experience in learning more about the climatic and rainfall conditions of all parts of the world. Some of the goals will be to predict stream runoff, groundwater levels and yields, and stream capacities to receive waste waters and purify themselves. These predictions will serve to guide the development of future water supplies.

The U.S. Geological Survey has conducted extensive studies over many years on the sources, available quantities, and expected quality of water supplies in the United States. Quantity and quality are equally important, since man requires very close tolerances on the quality of the water he can use. If the salt content is higher than 0.1% (1,000 parts per million), the water is brackish and tastes bad. (The U.S. Public Health Service suggests that half this amount should be the maximum in most public water supplies.) The quality requirement obviously limits the use of the world's available water.

According to data compiled by the U.S. Geological Survey, 74.5% of the earth's surface is water or ice. The oceans hold over 97% of the earth's water, but the quality of ocean water is too poor for human consumption because it has an average total dissolved-solids content of 3.5%—70 times the maximum allowable concentration. The icecaps of the Arctic and Antarctica hold 2.2% of the earth's water—an amount that represents nearly all the earth's fresh-water supply. Surface waters on land areas constitute only 0.017% of the earth's water, and half of this is saline.

Groundwater, constituting 0.61% of the earth's water, is the greatest potential source of fresh water. Half of it is available at a depth up to half a mile below the surface. In some areas, such as Arizona, Illinois, Israel, Greece, and Australia, groundwater is pumped at a faster rate than it is replenished. This depletion can lead to shortages, and other sources of supply must be found.

Use and Consumption. Water consumption in the United States amounted to 61 billion gallons per day in 1960. This is not to be confused with water use, which amounted to 270 billion gallons per day. Use exceeds consumption because industry, particularly the power industry, returns a great

UPI PHOTOS

WATER SUPPLY problems beset many lands in 1965. East Africans (left) and Peruvians (center) carried water long distances; Indians (right) built new systems.

deal of water to the rivers virtually unchanged (except for an increase in temperature.) Of the water withdrawn from rivers and the ground, 40% is used by power plants, 50% by agriculture for irrigation, 8% for municipal water supplies, and 1% for rural water supplies.

Water that is consumed does not reappear. Much of it evaporates into the atmosphere or goes into products of industry and agriculture. Of the 61 billion gallons of water consumed per day in 1960, 5% went for industrial purposes, 85% for irrigation, 6% for public water supplies, and 4% for rural uses.

From the standpoint of water use, the highest priority goes to public water supplies, although these constitute only a small fraction of the total. The estimated U.S. public water supply use rate of 270 billion gallons a day in 1960 may increase to about 900 billion gallons a day by the year 2000, according to a report (1960) by the U.S. Senate Select Committee on National Water Resources. New York City consumed a little over one billion gallons per day in 1965, but may require twice that amount by the year 2000.

INCREASING THE WATER SUPPLY

To increase their water supplies, cities will have to go farther afield to tap untamed rivers. For instance, California is spending more than \$2 billion to bring water from the north coastal area of the state, where 80% of the rainfall occurs, to the heavily populated south, where 80% of the people and industries are situated.

California Project. In the California water project, large dams and tunnels in the north will collect and convey water to the Sacramento River. From there the water will flow to the river's delta, and then be pumped into canals and reservoirs to flow more than 400 miles south through the California Aqueduct to the Los Angeles-San Diego metropolitan complex. This water will cost from \$75 per acre-foot near San Francisco to \$85 far to the south in San Diego. The state water project will yield over 4 million acre-feet yearly, equivalent to an

average of 4 billion gallons daily. The distance between the northernmost dams and the southernmost point of use will exceed 700 miles.

The question might well be raised as to why southern Californians do not move north to the source of water supply. The answer is that the climate is less desirable in the north, and the region's mountainous terrain does not lend itself to development of industrial and residential urban centers. People choose to live in the better climate, and expect engineers to deliver the water they need for survival. They are willing to pay for water, and political, legal, and administrative organizations (such as the California Department of Water Resources and the Metropolitan Water District of Southern California) are created to satisfy their demands.

Needs in the East. The cities in the Boston-to-Washington megalopolis will have to institute similar engineering projects. Perhaps they will have to tap the St. Lawrence or the headwaters of other untamed rivers, such as the Susquehanna, the Delaware, and the Hudson, by building great dams or collection works. Those who prefer to see great quantities of water flowing to the sea in trout streams will have to bow to the welfare of the people as a whole and support the construction of reservoirs for high-priority drinking water. But fishing, boating, and other recreational demands will be satisfied by the new reservoirs, as in California, where recreational areas have been opened at large reservoirs.

Reclaiming Used Water. To make river water fit for use and reuse, tremendous quantities of waste waters must be treated to a standard acceptable for discharge into rivers. For instance, New York City proposes to pump Hudson River water from a location near Poughkeepsie, N.Y., even though the upper New York State communities north and west of Albany discharge sewage into branches of the Hudson. Gov. Nelson Rockefeller recognized that these waste waters must be treated, and in 1965 received approval from New York State voters for a \$1 billion bond issue to assist communities in removing wastes from rivers. With the aid of a broad public relations cam-

U.S. NAVY PHOTO

MUCH WATER IS USED but little is consumed. Electric power plants, for instance, use great quantities to condense steam, but return the water to streams.

paign in which many civic organizations and conservation groups took part, public opinion ran 5 to 1 in favor of the governor's pure water program.

The release of stored waters behind large dams can dilute the wastes to provide sufficient oxygen in the streams to support fish life and keep the esthetic environment at the level required for recreation. The Senate Select Committee on National Water Resources estimated that sewage treatment plants and reservoirs to provide dilution waters would require about \$100 billion in construction costs between 1960 and 2000. The program would provide for collecting and treating all sewage, and reclaiming sewage for reuse in rivers and for recharging groundwaters.

The philosophy of reclamation is based on the fact that sewage is once-used water, and that because sewage is 99.9% pure water, the contamination is relatively small. Contaminants can be taken out by physical, chemical, and biological processes that scientists and engineers have developed to a high degree of efficiency. At the present time, this water is thrown into the sea in Boston, New York, Phila-

delphia, San Francisco, Los Angeles, and Houston. But it can be collected, treated in waste-water reclamation plants, and reused even as pure drinking water. This is now being done on a large scale in Los Angeles County, and is being contemplated in Orange County, Calif., and Nassau County, N.Y., by replenishing groundwater resources with reusable waste waters.

Thus, the future of water supplies lies not only in the capture of flood waters, but also in the treatment and reuse of waste waters through scientific reclamation plants. (See also POLLUTION.)

Converting Saline Water. Desalination offers an opportunity to reclaim the brackish waters underlying vast parts of the midcontinent of the United States and many other areas of the world. Brackish water contains dissolved mineral solids that range from 1,000 to 10,000 parts per million—that is, up to 1% of the weight of the water. These minerals, dissolved from the rocks in the ground, add to the hardness of the water and affect its taste adversely. Many small towns cannot go far for water supplies because of the appreciable per capita cost of small

WIDE WORLD

SOUTH AFRICA suffered so prolonged a drought in 1965 that the River Groot Marico dried up. Sheep are shown foraging for blades of grass in the river bed, 150 miles from Johannesburg, and near the Bechuanaland border.

U.S. WATER REQUIREMENTS will increase sharply in the future, according to estimates of the U.S. Department of Commerce. Irrigation will continue as the No. 1 user.

pipelines. Whereas southern California can afford aqueducts 500 miles long, a city of 1,000 to 5,000 people can afford to pipe water only 10 miles or so because so few share the cost of the pipeline. Such a city must utilize the water in the ground.

Webster, S.Dak., and Buckeye, Ariz., have desalination plants that furnish about 250,000 gallons each per day. In a process known as electrodialysis, electric power is used to pull the salts out of the water through plastic membranes. This process is used in many parts of the world, and over 100 such plants have been installed, particularly along the south shore of the Mediterranean and in the Middle East. The cost of fresh water produced by this process ranges between 20 cents and 80 cents per 1,000 gallons (\$60 to \$240 per acre-foot). These costs will be reduced as a result of research and development conducted by the manufacturers of the membranes and the Office of Saline Water, U.S. Department of the Interior.

Distillation by vapor compression is also useful

CALIFORNIA AQUEDUCT will transfer water from the northern part of the state to the densely populated south.

ENGINEERING NEWS-RECORD

for purifying brackish waters, particularly water with a high mineral content. Carlsbad, N.Mex., has a vapor compression plant, as do many ships and land-based installations of the U.S. Navy.

The Office of Saline Water has experimented with many types of distillation units, but the most successful has been the flash-type, multiple-effect evaporator. The evaporator will desalinate water for about \$1 per 1,000 gallons at a volume of about one million gallons per day. Distillation is frequently used for installations on large ships; on many islands, including Aruba, Curaçao, and the Virgin Islands; and in arid regions, such as Kuwait.

The Metropolitan Water District of Southern California, together with the Office of Saline Water and the U.S. Atomic Energy Commission, conducted a study in 1965 to determine whether nuclear power can be utilized to produce fresh water from the sea by evaporation. The results indicated that it may be possible to desalinate water for as little as 20 cents per 1,000 gallons at a rate of 150 million gallons per day. Up to 750,000 kilowatts of electric power would be generated by the high-pressure steam coming from the nuclear reactor as it drives turbines connected to electric-power generators. The leftover low-pressure steam would be used to distill sea water. It is not known how great the demand will be for large plants of this type, but such large plants lower the cost of distillation.

An International Symposium on Water Desalination was held in Washington, D.C., in October 1965, with more than 70 countries represented. It was evident from the discussions that many countries are watching progress in saline water conversion, particularly because the water-short countries are also short of electric generating capacity. Since economic growth depends on adequate water and electricity, the future is bright if costs of power and water can be lowered to reasonable rates by producing them in conjunction. (See also **CHEMISTRY**.)

PROSPECTS FOR THE FUTURE

The water supply situation in the world will improve as engineers harness the flood waters from many of the world's small and great rivers. The potential of a river such as the Mekong in Southeast Asia is breathtaking. If its waters could be used for peaceful purposes, great economic development in the area might be realized through a build-up of agriculture, industry, and commerce to support exploding populations in developing nations. "Peace through water" could also well be the slogan for the future of West Pakistan and India, Israel and Jordan, and other troubled areas in Africa and Asia.

Water shortage and water pollution problems can be solved. Engineers know how to apply the principles of science to solve these problems. The major problem is communication between engineers and the public, so that the public becomes willing to pay for good water and demands that political leaders supply it.

Much good has come through the activities of such organizations as the League of Women Voters, the Isaak Walton League, the Sierra Club, and other conservation groups which put pressure on state and national legislative bodies to bring about an increase in water quality control measures. Water supplies for the future depend on the continued demand for good water and the public's willingness to pay for it.

Professor of Civil Engineering
Stanford University

WEATHER

The weather in 1965 showed more than the usual amount of irregularities. Storms and other disturbances led to disastrous losses in lives and property. In the United States, the Midwest was hit hard by tornadoes and floods; the Southern states were hard hit by hurricanes; and in the Northeast, continued drought seriously depleted the water supply. Weather anomalies in other countries brought cold, snow, floods, and violent storms.

Winter. The meteorological winter of December 1964 to February 1965 began with record-breaking amounts of rainfall in the Pacific Northwest that caused devastating floods in California, Oregon, Washington, Idaho, and Nevada. The death toll was 48 persons; property damage was \$1 billion.

Snowfall was heavy throughout the season in the western mountains of the United States. In the upper Mississippi drainage area, February snows were exceptionally heavy. Western Texas and most of Florida also had above-average precipitation.

Temperatures in areas between the Rockies and the Sierras were up to 4° F warmer than average. Most of the East had near-average temperatures. Unusual cold prevailed in Montana, North Dakota, and Alaska—5 to 10° below the mean.

Abroad, a tropical disturbance in December caused storm surges in India and Ceylon, resulting in about 1,800 deaths. Some 200 persons were drowned at Dhanushkodi, Madras, and 500 died on the island of Rameswaram.

Spring. The spring season (March–May 1965) was much delayed in most areas of the United States. Near-record cold prevailed in March from Montana to the Great Lakes. Snowfall and snow cover were much heavier than usual in Minnesota and Wisconsin. This led to severe floods in the upper Mississippi valley in April, with river stages up to four feet higher than any previously recorded. The central section of St. Paul was flooded, and more than 20,000 people were left homeless. The flood reached Iowa in April, and Missouri in May.

On April 11, the worst outbreak of tornadoes since 1925 hit Wisconsin, Illinois, Indiana, Michigan, and Ohio. The 37 recorded tornadoes caused 242 deaths, injured 2,500 persons, and resulted in damages estimated at \$250 million. May brought further devastating tornadoes to the Great Plains. On May 8 a one-day record of 40 tornadoes was set.

Abroad, a tropical cyclone from the Bay of Bengal hit the Dacca area of East Pakistan in May. More than 1,400 persons were reported killed, and a million others were made homeless. In Puerto Rico and the Virgin Islands, prolonged drought caused crop failures, cattle losses, and water shortages.

Summer. The summer (June–August 1965) was a cool season, with below-average temperatures in most parts of the United States. In the Northeast, from Maryland into New England, and in parts of Ontario, extended drought seriously depleted water resources. A four-year rainfall deficiency over the Delaware and Hudson River watersheds forced the federal government to declare the worst hit areas of Pennsylvania, New Jersey, New York, and Connecticut disaster areas. New York City had to order water conservation measures. (See **WATER SUPPLY**.)

In other parts of the world, about 120 persons were killed by floods and 142,000 were left homeless in Korea. Floods caused much damage in central Germany, and Danube floods affected Hungary. All of these weather anomalies were traced to displace-

ments in the usual patterns of westerly winds circling the middle latitudes. Wind changes also may have caused Argentina's coldest winter in 15 years, as well as two days of snow in South Africa.

Autumn. The autumn season (September–November 1965) was ushered in by severe weather catastrophes in widely separated areas. Hurricane Betsy, following an erratic path, dealt heavy blows to Nassau in the Bahamas, Miami and the Florida Keys, and finally to lower Louisiana and New Orleans, where 30,000 persons were left homeless. In all, the toll was over 90 deaths and \$500,000,000 in damage.

Heavy rains deluged southern California. In 10 days of heavy rain, the Los Angeles area received eight times as much rainfall as the average November amount. However, in the northeast from New York to Virginia, the drought intensified.

Over the United States the autumn season was somewhat warmer than average except in Montana and the Dakotas, which suffered early cold blasts.

Abroad, severe floods struck Italy, causing over 100 fatalities and heavy property damage. Typhoon Shirley caused havoc in Honshu and Hokkaido, Japan, killing 50 persons. Early winter weather hit northern and western Europe, and the cold caused power shortages in Great Britain.

Storms in 1964. Complete storm statistics for 1964 showed a record number of tornadoes. During the year, 713 observed tornadoes killed 73 persons. Other windstorms caused 64 deaths.

In the North Atlantic there was an above-average number of 12 tropical cyclones, of which six reached hurricane intensity. Four of the hurricanes and two other tropical storms affected the U.S. mainland—the highest number since 1933—and Florida alone suffered from three hurricanes. Casualties were moderate, with 49 deaths in the United States. However, 214 fatalities were caused in the Antilles by hurricane Cleo.

In the eastern North Pacific, six tropical cyclones

HURRICANE BETSY lashed Coast Guard Station (above) at Miami, Fla., in September 1965. Map (left) shows the twisting path of Betsy, which also hit New Orleans and caused heavy damage. Photograph of hurricane Betsy (right) was taken by Tiros 10 weather satellite when storm was 250 miles from Miami.

occurred, but no severe damage was reported. In the western North Pacific, 44 tropical disturbances were observed, including 26 of typhoon strength. Typhoon Opal had an unusually large radius of 650 miles. Six typhoons struck Vietnam.

Tropical Storm Research. Hurricanes often spawn tornadoes in their peripheral areas. Recent investigations show that such tornadoes form most frequently at 100 to 150 nautical miles from the hurricane center, and to the right of the hurricane with respect to the direction of its path. More than half of the tornadoes are in the right front quadrant of the hurricane, and another third are in the right rear quadrant.

Previously, the dissipation of hurricanes over land usually was attributed to increased surface friction. However, detailed analyses of the energy sources and energy dissipation have shown that a hurricane weakens because the heat source at the earth's surface is removed. This heat source is the warm subtropical ocean water that contributes both the sensible heat and the latent heat that maintain the storm.

Research in 1965 verified that tropical storms set a new 24-hour world record for rainfall in 1952, when 73.62 inches of rain fell at Cilaos on Réunion Island in the Indian Ocean. The old record was 45.99 inches at Baguio, the Philippines, in 1911.

Thunderstorms. Investigations of the propagating storm systems in the Great Plains have shown that they consist of individual convective cells with a lifetime of 20 to 30 minutes. New cells form to the right of existing cells. This leads to a movement of the whole system to the right of the paths of the individual cells. Radar echoes from these intense storms indicate that they occur at heights up to 65,000 feet. When the radar echo indicates a height above the level of the tropopause, hail is nearly always present.

In some of the most violent convective storms, a cloud-free vortex that reaches into the stratosphere is observed. The vortex can bring a large amount of

stratospheric air into the troposphere, and with it the remaining radioactive particles from atmospheric nuclear tests. The storm rains bring the particles to the ground, creating hot spots. Areas in the wake of heavy thunderstorms have been reported to contain high radioactivity and to receive occasional heavy soil contamination by strontium-90.

Slitless spectroscopy of lightning indicates temperatures of 24,000° Kelvin. In the stroke channel, the pressure has been calculated to be 30 to 50 atmospheres, and the electron densities are a million trillion electrons per cubic centimeter.

Cloud Physics. Four summers of observations of convective clouds in Missouri have shown that ice and snow pellets are present when the cloud tops reach a temperature of -10° centigrade. There seem to be enough naturally available pellets to start the precipitation process. This finding casts some doubt on the value of seeding convective clouds with ice nuclei to induce rain.

Observations of thunderstorms by vertically scanning radar indicate that intense radar echoes follow cloud-to-ground lightning discharges. The radar echoes are caused by the heavy gushes of rainfall after a discharge. Within 30 seconds of the discharge, the mass of some droplets increases 100-fold, probably because electrostatic forces lead to coalescence. Laboratory tests indicated that the collisions of droplets, in the presence of strong electrical fields, overcome their surface forces and lead to coalescence.

Several crystalline organic substances have shown high nucleating power for subcooled water. Among these are vanillin, *cis*-terpin, *cis*-terpin hydrate, and urea. Urea appeared to be as effective as dry ice in initiating shower formation. Promising results have been obtained in producing holes in the fog along the Pacific Coast by spraying saturated solutions of ammonium nitrate in water.

Systematic surveillance of noctilucent clouds in high latitudes has revealed a periodicity of these luminous phenomena at altitudes between 250,000

TORNADOES—THE PATTERN IN THE U.S.

WIDE WORLD

and 300,000 feet. These clouds are assumed to be formed from an accumulation of interplanetary particles on which water vapor freezes. Most of these cloud systems are 6,000 to 12,000 feet thick, and they may extend over 1,000 miles. (See also **ATMOSPHERE RESEARCH.**)

Radiation. Sharp decreases in solar radiation were observed at the South Pole station from November 1963 through 1964. The monthly radiation values ranged from 23 to 78 percent less than the values recorded in the previous five years. At Mauna Loa in Hawaii, reductions ranging from 3 to 14 percent have been noted in the same time interval. Both sites are unaffected by local disturbances. The changes were attributed to the ashes thrown into the air by eruptions of Mt. Agung on Bali in 1963.

These observations were corroborated by photoelectric measurements of starlight at the Cerro Tololo Observatory in Chile. The measurements showed less starlight than normal. On the basis of the measurements, it was estimated that about 100 particles of dust per liter are in the air at altitudes from 35,000 to 70,000 feet, for a total of about a million metric tons. At the end of 1964, two tenths of a star magnitude was blocked by the dust, and this condition is expected to persist for several years before a return to normal. These observations have revived the hypothesis that volcanic eruptions may cause major weather anomalies.

Satellite Meteorology. Satellites are becoming a major tool for weather analysis and forecasting. In 1965, four weather satellites furnished useful information. Tiros 9 was launched on Jan. 22, 1965, and Tiros 10 was launched July 1. They joined Tiros 7 and Tiros 8. On June 19, 1965, Tiros 7 completed two years of flawless operation.

During 1965 the Tiros satellites sent about 300,000 cloud pictures to earth. On Feb. 13, 1965, Tiros 9 enabled meteorologists to view the whole earth's cloud cover for the first time. A photomosaic of 450 individual pictures transmitted by the satellite marked a milestone in weather analysis.

Data sent from Tiros 7 have made it possible to estimate the heat budget of the whole earth. It was found that water vapor movements transport 40 trillion calories of latent heat from the Southern to the Northern Hemisphere each day. This transfer is

compensated for by an equivalent southward heat transport by ocean currents. During winter in the Northern Hemisphere, there is a large northward flow of heat in all latitudes from 20° S to the North Pole. In all other seasons, the heat flow is predominantly southward in all latitudes between 15° N and the South Pole.

The high-speed upper winds generally known as jet streams are often clearly indicated in the cloud-pattern pictures sent back from the satellites. Surface observations had given the impression that a polar-front jet stream and a subtropical jet stream meander separately around the hemisphere. The satellite pictures show that the two streams occasionally cross each other, with the subtropical jet overriding and even merging with the polar-front jet. This affects cloud patterns and rainfall.

On June 15, 1965, the world weather center at Suitland, Md., relayed to Paris, France, via the Early Bird satellite, a weather mosaic of the Northern Hemisphere obtained from Tiros 9. Regular weather analysis and computer-prepared forecast charts also were sent via satellite to Paris to be forwarded from there to other European weather centers. This development foreshadows a new era in meteorology with the linking of the three world weather centers in Moscow, Melbourne, and Suitland by satellite communications circuits, enabling the centers to distribute weather charts almost instantaneously to national and local forecast offices.

New Government Agency. In July 1965, President Johnson, with congressional concurrence, ordered a major organizational change in the nation's weather- and disaster-warning services by merging the Weather Bureau, the Coast and Geodetic Survey, and the Central Radio Propagation Laboratory. WEST VIRGINIA

Although there is agreement in West Virginia that the state constitution needs extensive revision, there was wide disagreement in 1965 on how to accomplish it. (Gov. Hulett C. Smith had made constitutional revision a prime aim in his campaign in 1964.) A legislative measure called for a referendum in November 1965 on the question of holding a constitutional convention. If the voters approved the convention, delegates would be elected in the spring of 1966, and the convention itself would be held in July of that year. By mid-session the measure apparently was headed for approval, and the legislators tabled several proposed amendments scheduled for voter ratification in 1966.

In the summer, however, the proposed apportionment of convention delegates was seriously questioned, and Governor Smith, as a friend of the court, instituted proceedings in the state Supreme Court to clarify the matter. The court unanimously agreed with the critics of the apportionment proposal, and the referendum was called off. Since the governor declined to convene a special session of the Legislature to settle the matter, it was expected that a new approach would be tried in the 30-day legislative session beginning Jan. 12, 1966.

Legislation. The 1965 Legislature was one of sub-

WEST VIRGINIA · Information Highlights

Area: 24,181 square miles.

Population: 1,797,000 (1965 est.).

Chief Cities (1965 est.): Charleston, the capital (85,000); Huntington (81,500); Wheeling (50,000); Parkersburg (46,500); Weirton (29,500); Fairmont (26,000); Clarksburg (25,000); Morgantown (21,000).

Government: Chief Officers—governor, Hulett C. Smith (Democrat); secy. of state, Robert D. Bailey (D); atty. gen., C. Donald Robertson (D); treas., John H. Kelly (D); supt. of pub. instr., Rex M. Smith; chief justice, Chauncey H. Browning. Legislature—West Virginia Legislature (convened Jan. 12, 1965); Senate, 34 members (27 Democrats, 7 Republicans); House of Delegates, 100 members (91 D, 9 R).

Education: School enrollment (1964-65)—public elementary, 255,000 pupils (8,240 teachers); public secondary, 192,000 pupils (6,760 teachers); nonpublic schools, 20,000 pupils (750 teachers); college and university (fall 1964), 39,719 students. Public school expenditures (1964-65)—\$129,000,000 (\$315 per pupil); average teacher's salary, \$4,590.

Public Finances (fiscal year 1964): Revenues, \$441,565,000 (3% sales tax, \$104,684,000; motor fuel tax, \$38,519,000; federal funds, \$92,289,000). Expenditures, \$411,624,000 (education, \$120,094,000; health, welfare, and safety, \$66,557,000; highways, \$97,073,000). State debt, \$54,154,000.

Personal Income (1964): \$3,531,000,000; average annual income per person, \$1,965.

Public Assistance (fiscal year 1965): \$42,043,200 to 137,132 recipients (aged, \$6,532,400; dependent children, \$31,624).

Labor Force (employed persons, July 1965): Agricultural, 35,100; nonagricultural (wage and salary earners), 478,600 (23.7% manufacturing, 15.0% trade, 16.1% government). Unemployed persons (July 1965)—44,900.

Manufacturing (1963): Value added by manufacture, \$1,834,458,000 (primary metals, \$390,295,000; nonelectrical machinery, \$36,073,000; electrical machinery, \$60,224,000; fabricated metals, \$77,954,000; food and products, \$71,572,000).

Agriculture (1964): Cash farm income, \$103,944,000 (live-stock, \$75,243,000; crops, \$24,716,000; govt. payments, \$3,985,000). Chief crops (tons)—apples, 127,200 (ranks 7th among the states); peaches, 18,000 (rank, 12th); hay, 808,000; corn for grain, 85,000; potatoes, 25,100; wheat, 16,200; oats, 11,500.

Mining (1964): Production value, \$822,691,000 (ranks 6th among the states). Chief minerals (tons)—coal, 141,409,000 (ranks 1st among the states); salt, 1,033,000 (rank, 7th); natural gas, 203,872,000 cubic feet (rank, 8th); stone, 7,481,000; sand and gravel, 5,472,000; petroleum, 3,370,000 barrels.

Transportation: Roads (1965), 36,524 miles (12,427 paved); motor vehicles (1965), 727,798; railroads (1964), 3,692 miles; aircraft (1964), 676 (53 airports).

Communications (1965): Telephones, 599,900; television stations (1964), 9; radio stations (1964), 69; newspapers (1965), 30 (daily circulation in 1964, 482,761).

stantial accomplishments. It adopted a three-year program—part of Governor Smith's kindergarten-through-adulthood approach to public education—upgrading the salaries and the status of public school teachers. In March it repealed the death penalty, making West Virginia the tenth state to take such a step. Other measures included permanently raising both the consumers' sales tax and the use tax to a 3% level, after a number of temporary increases from a 2% base; adopting a junior driver's license, which places 16-year-old drivers on probation for a two-year period; taking steps to control "dummy corporations" by calling for full details on officers and stockholders; and giving the governor more sweeping executive powers.

Economy. West Virginia continued its economic advance in 1965. A record number of building permits were issued—30% above the 1964 level. By mid-November the state Chamber of Commerce reported that "after ten months, we are ahead of 1964 in all respects."

Grants and Projects. Substantial future progress in the state was promised by several federal grants. These included the establishment of new mountain recreation areas and the beautifying of highways. (The latter grant was in addition to the state's allocation for the Interstate Highway System, in which West Virginia continued to trail behind some 40 other states in mileage completed.)

West Virginia University and the state's Medical Center at Morgantown will be the site of the National Environmental Health Center's Appalachian Branch, a \$4 million project to begin in 1966.

Deaths. William C. Marland, who became West Virginia's youngest governor in 1954, died late in November. A victim of alcoholism in the late 1950's, Marland had dropped from public view. In March 1965 he reappeared as a taxi driver in Chicago, fully recovered from his illness. He then returned to work in his native state during the summer, only to fall victim to cancer.

Joe Burdett, West Virginia's secretary of state since 1958, died on May 12. He was succeeded by Robert D. Bailey.

DONOVAN H. BOND

Director of Development and Professor of Journalism, West Virginia University

WESTERN SAMOA

Western Samoa, with aid from the United Nations Economic Commission for Asia and the Far East, embarked on a program of economic development in 1965. Some government officials expressed fear that the development of tourism, one goal of the plan, might introduce undesirable changes in the traditional life of the island republic.

Economic Development. H.L. Spence, Jr., UN regional representative for the Western Pacific, headed the staff of international experts that began work on the development plan early in 1965. He said that the goal of the plan was to strike a balance between the island's traditional way of life and economic progress.

An important feature of the economic development program is a \$3 million harbor development plan, which will include land reclamation in the harbor area, and the building of new wharves capable of berthing cruise liners.

One of the effects of the development program will be the diversification of Western Samoa's economy, now heavily dependent on cocoa beans, copra,

WESTERN SAMOA · Information Highlights

Area: 1,097 square miles.
 Population: 122,000 (July 1, 1964 est.).
 Chief Cities (1961 census): Apia, the capital, 21,699.
 Government: Head of State—Malietao Tanumafili II (took office April 5, 1963, for life); Prime Minister—Fiame Mata'afa Faumuina Molinua'u II. Parliament—Legislative Assembly, 47 members.
 Religious Faiths: Christian, 99.7% of population.
 Education: Literacy rate (1951)—86% of indigenous population aged 15 and over. Total school enrollment (1960)—27,430 (preschool and primary, 25,902; secondary, 922; teacher-training, 202; technical, 270; higher, 134).
 Finance (1964 est.): Revenues, \$5,589,000; expenditures, \$5,808,000; monetary unit, Samoan pound (0.3571 pound equals U.S.\$1).
 Crops (metric tons): Bananas (1963-64), 27,000; cocoa beans (1964-65), 3,800.
 Foreign Trade (1963): Exports, \$2,561,000 (chief exports: copra, \$2,439,000; cocoa beans, \$2,341,000; bananas, \$2,310,000); imports, \$3,007,000 (chief imports: meat and preparations, \$736,000; transport equipment, \$546,000; sugar, \$305,000).
 Chief trading partners: New Zealand (took 41% of exports, supplied 31% of imports); Britain (took 25% of exports, supplied 14% of imports).
 Transportation: Roads (1964), 450 miles; motor vehicles (1963), 1,364 (automobiles, 680); principal airport, Apia.
 Communications: Telephones (1964), 1,222; radios (1962), 5,800.

and bananas. A furniture industry is being developed to make use of native teak and mahogany.

Tourism. The tourist industry has never received much encouragement in Western Samoa, but it will be developed through the building of new hotels and other tourist facilities. New airstrips are planned to bring tourists from nearby American Samoa, a regular stop on some international airline routes.

Education. A College of Tropical Agriculture, built with United Nations help, opened in 1965.

WHOLESALE SELLING

The volume of merchant wholesalers' sales in the United States in the first half of 1965 continued the upward trend that started early in 1961. By mid-1965, sales totaled a record \$84.7 billion, or 8% higher than in the first half of 1964.

¹ Totals include data from some kinds of business not shown separately.
 Source: U.S. Department of Commerce.

Inventories. Merchant wholesalers' inventories totaled \$17.3 billion in June 1965, about \$1.4 billion higher than a year earlier. The accumulation in total inventories was about proportionate to the rise in sales, and the ratio of stock to sales was equivalent to 1.8 months of sales.

Durable Goods. In the first half of 1965, sales by merchant wholesalers of durable goods totaled \$36.5 billion. This was an increase of 10% over the same period of 1964. Dealers in iron and steel reported the largest gain, 29%. Suppliers of business machinery and equipment, electrical supplies and apparatus, and air-conditioning and refrigeration registered increases ranging from 11% to 14% over 1964, reflecting the boom in business investment in new plant and equipment. With little change in residential construction from 1964, sales improvements were restricted for dealers in lumber and construction materials, furniture and home furnishings, and electrical appliances.

Nondurable Goods. Merchant wholesalers of nondurable goods registered sales of \$48.2 billion in the first half of 1965, or 6% over the first six months of 1964. Distributors of chemicals, drygoods, and farm supplies showed increases of from 11% to 12%. Wholesalers of groceries, apparel, and paper products each had a 6% sales rise; dealers of farm products (raw materials), a 3% decline. This was the only group failing to register a sales improvement.

WILSON, Harold

Prime Minister of Great Britain: b. Huddersfield, Yorkshire, England, March 11, 1916.

Wilson, who became prime minister in October 1964, traveled much of the time during his first full year in office. He visited several European and African countries and, in April and again in December, the United States. During 1965 he was faced with two major crises. The first was the continuing problem of governing Britain with the Labour party having only a slim (from one to three seats) parliamentary majority (see GREAT BRITAIN). The other concerned the Rhodesian situation (see RHODESIA).

WILSON AND JOHNSON confer at White House during British prime minister's visit to United States in April.

PICTORIAL PARADE

KEYSTONE

WILSON AND NIGERIAN PRIME MINISTER Sir Abubakar Tafawa Balewa pause outside No. 10 Downing Street on Dec. 14, 1965. Balewa, then in London to discuss Nigerian political crisis, was killed during January 1966 army coup.

Travels. With Foreign Secretary Michael Stewart, Wilson visited West Germany on March 6-9 and France on April 2-3. In Bonn, Wilson and West German Chancellor Ludwig Erhard discussed German reunification, European security, disarmament, the Western alliance, possible ways of reducing the cost to Britain of its troops in West Germany, and the forthcoming visit of Queen Elizabeth II to West Germany. In Paris he talked with President Charles de Gaulle chiefly about world economic problems and Anglo-French cooperation on aviation. (See also EUROPE.)

In New York on April 14, Wilson met briefly with UN Secretary General U Thant, and later made a major speech on economic policy before the Economic Club of New York. On April 15, in Washington, D.C., he discussed British monetary policies with President Johnson.

Wilson went to Rome on April 28 for two days of talks with Italian Prime Minister Aldo Moro and Foreign Minister Amintore Fanfani. They discussed NATO, European unification, and international co-operation. On April 28, Wilson had an audience with Pope Paul VI at the Vatican.

Wilson visited the United States again from December 15 to 17. In an address to the United Nations on December 16, he urged UN support for British policies in Rhodesia. On December 16-17, he met with President Johnson in Washington, where the two leaders exchanged views on U.S. policy in Vietnam.

Rhodesia. On what was described as "one of the boldest political missions of his career," Wilson traveled to Salisbury, Rhodesia, on October 24. His purpose was to prevent a final break between Britain and Rhodesia over the question of Rhodesian independence. After five days of inconclusive meetings with Rhodesian Prime Minister Ian Smith, Wilson returned home. (See AFRICA.)

Career. (James) Harold Wilson attended Oxford on a scholarship and graduated in 1937 with first-class honors. He remained at Oxford as a lecturer

in economics and a fellow of University College, where he came under the influence of Lord Beveridge, the architect of the British welfare state. Wilson served in the War Cabinet Secretariat (1940-41) and in the Ministry of Fuel and Power (1942-45), then was elected to Parliament (1945). In the Labour government of 1945-51, he held various important posts. He was elected leader of the Labour party on Feb. 14, 1963, succeeding Hugh Gaitskell, who had died.

WINE

World production of wine increased to 7.098 billion gallons in 1964, from 6.064 billion gallons in 1963. U.S. production in 1964 amounted to 188,746,800 gallons, of which 162,057,000 gallons, or 85.9%, came from California.

Distribution. Of the 185,614,584 gallons of wine entering distribution channels in the United States in 1964, California shipped 143,484,000 gallons, representing 77.3% of the market. The other states contributed 14.3%, and foreign countries, 8.4%. The total wine movement in the United States, which had a per capita consumption of 1.0 gallons, consisted of 70,345,001 gallons of table wines, 85,562,172 gallons of dessert wines, 23,164,736 gallons of vermouth and other special natural wines, and 6,542,675 gallons of sparkling wines.

Consumption. In 1956 the U.S. consumption pattern, which had remained nearly constant since the repeal of prohibition in 1933, showed a trend from dessert wines to table wines. This trend continued, until by 1964 the consumption of dessert wines, including vermouth and other flavored wines, had declined 15.9%. In the meantime, the consumption of table wines had increased 32.5%, and that of sparkling wines, 150%.

Continued general prosperity and great demand maintained high prices for the premium wines of France and West Germany. Five years of short crops and an increasing demand for premium California table wines resulted in their prices approaching those of some of the European wines. The 1964 vintage in western Europe was generally fine except where the harvest was damaged by rain.

New Developments. One of the most important recent developments in wine technology was the replacement of wood and concrete fermentation tanks with tanks of stainless steel. The new tanks greatly reduce sterilization problems and increase fermentation control. Of almost equal importance was the

WISCONSIN

Republican Gov. Warren P. Knowles, inaugurated on Jan. 4, 1965, faced a divided Wisconsin Legislature, with a Republican-dominated Senate and a Democratic-controlled House. The most significant legislation was in the field of education. The Legislature also reapportioned county board districts.

Legislation. The Wisconsin Legislature met in continuous session from January 13 to July 30 and, after a recess, from October 4 to November 4.

The Coordinating Committee for Higher Education was reorganized to give a majority to citizen members, rather than to university and college representatives. The Legislature also established two new public colleges to be under the jurisdiction of the State University, with overall control of programs vested in the Coordinating Committee.

Two legislative acts provided grants to students at higher educational institutions. One act provides direct grants on the basis of need. The second will subsidize Wisconsin students at public out-of-state, or private in-state schools if the students study certain courses not offered at public higher institutions in the state.

The mounting highway death toll prompted the enactment of an omnibus highway safety bill. The act provides for an increase in traffic patrol police, from 250 to 300; for highway construction to correct certain hazardous spots; and for a driver safety program. A \$2 increase in vehicle license fees was approved to finance the highway program.

Other legislation allows certain prison inmates to leave prison daily to work at regular jobs.

Reapportionment of County Boards. On January 5 the Wisconsin Supreme Court ruled that the state's county boards must be reapportioned to provide more equitable representation. In March the Legislature passed a redistricting bill ending rural domination of county boards. The first elections under the new plan are scheduled for 1966.

Economy. Governor Knowles, elected on a promise to prevent increases in government spending and taxes, made efforts to broaden the state's tax base to meet the rising cost of government. He set up a

WISCONSIN · Information Highlights

Area: 56,154 square miles.

Population: 4,166,000 (1965 est.).

Chief Cities (1965 est.): Madison, the capital (154,000); Milwaukee (765,000); Racine (94,500); Green Bay (82,500); Kenosha (76,000); West Allis (73,500); Wauwatosa (61,000).

Government: Chief Officers—governor, Warren P. Knowles (Republican); Lt. gov., Patrick J. Lucey (Democrat); secy. of state, Robert Zimmerman (R); atty. gen., Bronson La Follette (D); treas., Mrs. Dena A. Smith; sup. of pub. instr., Angus B. Rothwell; chief justice, George R. Currie. **Legislature** (convened Jan. 13, 1965): Senate, 33 members (20 Republicans, 13 Democrats); House of Representatives, 100 members (53 D, 47 R).

Education: School enrollment (1964–65)—public elementary, 504,503 pupils (19,437 teachers); public secondary, 326,912 pupils (16,718 teachers); nonpublic schools, 292,100 pupils (8,320 teachers); college and university (fall 1964), 112,484 students. **Public school expenditures** (1964–65)—\$394,000,000 (\$532 per pupil); average teacher's salary, \$6,125.

Public Finance (fiscal year 1965): Revenues, \$1,146,132,658 (selective sales tax, \$83,405,768; motor fuel tax, \$84,934,762; federal funds, \$161,734,578). **Expenditures**, \$1,030,815,369 (education, \$292,048,681; health, welfare, and safety, \$156,019,403; highways, \$188,830,767). **Net long-term state debt**, \$176,528,000 (fiscal year 1964).

Personal Income (1964): \$10,227,000,000; average annual income per person, \$2,490.

Public Assistance (fiscal year 1965): \$89,814,481 to 109,610 recipients (aged, \$37,332,427; dependent children, \$25,095,163).

Labor Force (employed persons, mid-July 1965): Agricultural, 224,000; nonagricultural (wage and salary earners), 1,332,600 (37% manufacturing, 20% trade, 15% government). **Unemployed persons** (mid-July)—55,300.

Manufacturing (1963): Value added by manufacture, \$5,344,282,000 (transportation equipment, \$733,739,000; primary metals, \$287,851,000; nonelectrical machinery, \$981,227,000; electrical machinery, \$592,727,000; fabricated metals, \$373,900,000; food and products, \$769,381,000; dairies, 244,592,000).

Agriculture (1964): **Cash farm income**, \$1,199,077,000 (livestock, \$990,067,000; crops, \$161,218,000; govt. payments, \$47,792,000.). **Chief crops** (tons)—hay, 8,329,000 (ranks 1st among the states); alfalfa, 6,926,000 (rank, 1st); corn for grain, 2,944,000 (rank, 8th); oats, 1,694,000 (rank, 3rd); potatoes, 534,000 (rank, 6th).

Mining (1964): **Production value**, \$70,007,000 (ranks 37th among the states). **Chief minerals** (tons)—iron ore, 587,000 (rank, 10th); zinc, 26,278 (rank, 10th); lead, 1,742 (rank, 11th); sand and gravel, 34,348,000.

Fisheries (1964): **Commercial catch**, 18,569,809 pounds. **Leading species**—alewives, 8,410,193 pounds; chubs, 4,135,617 pounds; yellow perch, 2,839,599 pounds.

Transportation: **Roads** (1963), 99,420 miles (92,450 paved); **motor vehicles** (1964–65), 6 (130 airports).

Communications (1965): **Telephones**, 1,805,400; **television stations**, 18; **radio stations**, 128; **newspapers**, 38 (daily circulation, 1,159,399).

Board of Economic Development and a Wisconsin Development Authority to encourage industrial expansion. At the end of the first quarter, 114 companies had expanded old plants or built new ones, and unemployment had fallen to 2.3%, the lowest rate since 1958. Personal income rose to \$297 million in March 1965, an increase of 12% over the previous year.

Budget. The governor's executive budget, however, was the highest in the state's history—\$820 million. To provide the additional \$70 million in revenues to meet the budget, the governor proposed an extension of the 3% selective sales tax.

Natural Disasters. Millions of dollars in property damage, but little loss of life, was caused in April by the flooding of the Mississippi River and by tornadoes.

Milwaukee Braves. The state and Milwaukee County tried to prevent the Milwaukee Braves National League baseball club from moving to Atlanta, Ga., and initiated legal proceedings against the team. (See MILWAUKEE.)

Apostle Islands. The U.S. Department of the Interior proposed in August that Wisconsin's Apostle Islands in Lake Superior be made a national lakeshore.

ANTON JACOBSON

Administrative Assistant

Office of the Attorney General of Wisconsin

WOOL

Two successive years of protracted drought and an unusually severe winter in parts of the Southern Hemisphere were expected to reduce the 1965-66 world wool clip to 5,654,000,000 pounds (greasy basis), compared with 5,768,000,000 pounds produced in 1963-64. U.S. production was expected to decline to an estimated 254,000,000 pounds in 1965.

Promotion and New Processes. A full-scale program using the new worldwide "wool mark"—a certification symbol for consumer protection awarded to quality-tested pure virgin wool apparel and carpets of pure wool pile—was featured in U.S. wool promotion in 1965. The wool textile industry continued to extend the processes for making all-wool products permanently creased and pleated, machine washable and dryable, and permanently mothproofed.

The U.S. Wool Textile Industry. During 1965 the wool textile industry in the United States experienced a dynamic recovery from the loss in consumption of the preceding year. Imports of apparel wool during the first eight months ran more than 70% ahead of the corresponding 1964 period, and industry consumption was 16% higher than in the previous year. In 1964, U.S. mills consumed 363,000,000 pounds of wool, or 11% of the world total, of which woven and knitted textiles used 232,500,000 pounds, and carpets, 122,500,000 pounds.

In general, the output of woven and knitted wool fabrics in the United States during 1965 was limited only by production capacity and by the supply of raw material.

World Consumption. In 1964, world wool consumption declined to 3,202,000,000 pounds from the 1963 peak of 3,332,000,000 pounds. However, the second quarter of 1965 provided signs that world wool consumption was increasing. A rise in raw wool prices during the 1963-64 season coincided with a shakeup in the economies of the Common Market countries, the United Kingdom, and Japan as their governments applied fiscal measures to stem inflation.

WORLD HEALTH ORGANIZATION

The World Health Organization, a specialized agency of the United Nations, is engaged in a worldwide effort to apply modern scientific and techno-

logical developments in medicine and public health.

Membership and Budget. Membership in WHO rose to 125 nations in 1965 when the newly independent Maldives Islands joined the organization. The World Health Assembly adopted a working budget of \$42,442,000 for 1966. The new budget, to be met by national contributions, represented an increase of \$2,935,000, or 7.43% over the 1965 budget.

Smallpox Eradication Campaign. The 1965 WHO theme "Smallpox—Constant Alert," was stressed on World Health Day, April 7. It was estimated that the eradication of smallpox throughout the world might be achieved within 10 years. The WHO campaign against the disease, begun in 1958, has eliminated smallpox in a number of countries. The disease remains endemic, however, in large areas of Asia and Africa.

1966 Theme. "Man and his Cities" was chosen as the WHO theme for 1966. The organization hopes to draw attention to increasing human needs, particularly mental health needs, in urban areas. In the past 100 years, during which time the population of the world has doubled, the population of the world's cities has increased by 500%.

Malaria. It was estimated that 813 million people, or 52% of the population of the formerly malarious areas of the world, have been freed of the disease. WHO urged countries where malaria eradication has been successful to maintain vigilance against the recurrence of the disease.

Cancer. In 1965 the World Health Assembly decided to establish an International Agency for Research on Cancer, with headquarters in Lyon, France. The agency will serve as a means through which participating states and WHO can cooperate in stimulating and supporting all phases of cancer research. Permanent activities of the agency will include the collection and dissemination of information on cancer epidemiology, and the training of research personnel. Participating countries are Australia, France, West Germany, Italy, Britain, the United States, and the Soviet Union.

Medical Research Reference Centers. A total of 91 WHO international and regional reference centers in 28 countries, together with over 200 collaborating laboratories in all parts of the world, form a network of science cooperation spanning the globe. The WHO centers provide final identification of unusual variants of disease-producing organisms, distribute standard substances for international yardsticks, encourage the use of uniform techniques, and help make the results of medical research internationally comparable. Most of them also provide specialized training.

Health Planning. Discussions in the assembly stressed the importance of health planning, especially in young nations. Health planning depends very largely upon the availability of statistics. In 1965 a WHO conference revised the 999 categories used in the International Classification of Diseases, Injuries, and Causes of Death. This classification helps assure internationally comparable morbidity and mortality statistics for research and health-planning programs.

WYOMING

In January 1965, Gov. Clifford P. Hansen asked the Wyoming State Legislature to enact more reform legislation than any governor had requested since the days of Gov. Joseph M. Carey (1911-15). The Legislature followed Governor Hansen's recommendations in repealing the ban on federal aid to education, passing an enabling act to allow urban-renewal projects, and raising the minimum wage to \$1.00 an hour. It also allowed higher workmen's compensation payments, provided for many capital improvements at the state university and other institutions, extended free-port privileges, repealed laws prohibiting interracial marriages, and increased support for public schools.

Finance. The Legislature appropriated \$50.5 million for the 1965-67 biennium—or about \$10 million more than had been appropriated for the 1963-65 biennium. To raise the necessary revenue, the sales tax was increased from 2% to 2.5%. Also, municipalities were authorized to levy an additional 0.5% on a city or county option basis.

Reapportionment. After the Legislature had adjourned without passing an apportionment measure, a panel of three federal judges issued a decree on October 8 reapportioning the State Senate. The number of Senators was increased from 25 to 30. In general, the reapportionment increased the representation of more populous counties at the expense of sparsely settled rural counties.

Economy. The year 1965 was not a good one for Wyoming's economy. Completion of the Minuteman Missile program brought a slowdown in military installation activity at Cheyenne, while transfers of 550 oil company personnel from Casper to Denver, Colo., and other cities hurt the state's economy. The state's nonfarm work force in August totaled 104,300, or 3,000 below that of August 1964.

Oil and gas production continued at about the same high rate as in 1964, when its total value was \$390 million. Uranium production in Wyoming declined because the Atomic Energy Commission again reduced the rate of production of enriched uranium.

Highway construction projects employed thousands of workers at many sites throughout the state. There was expansion in Sweetwater County's production of trona (a rare hydrous carbonate found in saline lake deposits) as two corporations increased their refining capacity and a third entered the field with a new plant.

Weather. Widespread floods in June caused two deaths and damage estimated at more than \$2 million. In September a leak in Fontenelle Dam on the Green River threatened flooding of communities below the dam. The crisis continued for 10 days until the dam was repaired.

Serious fighting in the civil war in Yemen ended in 1965, but the political struggle continued between the Royalists and the Republicans. The latter faction attempted to end the Egyptian intervention in the struggle and to move toward a compromise settlement with the Royalists.

Agreement. Yemen's civil war, which began in September 1962, was still unresolved at the beginning of 1966. Serious fighting, however, ended in the late summer of 1965 under a cease-fire arranged by President Gamal Abdel Nasser of the United Arab Republic (UAR) and King Faisal of Saudi Arabia at Jiddah, Saudi Arabia, on August 24.

The cease-fire agreement included provisions for the withdrawal of 50,000 Egyptian troops from Yemen within 13 months, a conference of 50 Yemeni leaders from both sides at Haradh in Yemen, and a national plebiscite, to be held no later than Nov. 23, 1966, to determine Yemen's form of government. A coalition government, including both Royalists and Republicans but excluding Republic President Abdallah al-Sallal and Royalist Imam Muhammad al-Badr, would be formed in the interim.

Reports from the conference at Haradh, which began in November, indicated that little progress was made between the two factions because of dis-

YEMENI CEASE-FIRE AGREEMENT was signed by President Nasser of the United Arab Republic (l.) and King Faisal of Saudi Arabia (r.) on August 24, 1965. UPI

agreement over the name of the proposed interim government. Republicans insisted upon including the word *Republic*; the Royalists demanded that it be called *The Government of the State of Yemen*.

Republicans. The Republicans experienced growing disunity during 1965. President Abdallah al-Sallal, who was in poor health and apparently lacked administrative ability, was unable to hold together the disparate Republican groups, particularly two Muslim sects, the Shafi'ites and the Zaidis.

Prime Minister Hasan al-Amri, a staunch supporter of UAR President Nasser, resigned from the cabinet in April 1965. He was replaced by Ahmad Muhammad Numan. The new prime minister formed a cabinet composed of nine Zaidis and nine Shafi'ites; only two military leaders were included. Numan set the stage for peace talks with Saudi Arabia and sent a peace mission to eight Arab capitals. In June, however, he was forced to resign because of political and constitutional differences with President al-Sallal, and al-Amri was reappointed prime minister. On August 18, Yemeni leaders met with Egyptian leaders in Cairo and accepted proposed truce terms after the Egyptian leaders promised to withdraw troops from Yemen.

Royalists. A group of princes, all relatives of Imam Muhammad al-Badr, rose to importance during 1965. Among them were Royalist Prime Minister Hasan ibn Yahya, Vice Premier Abd al-Rahman ibn Yahya, Prince Abdallah ibn Husayn, Prince Hasan ibn Husayn, and Prince Abdallah ibn Hasan.

In January 1965, Imam Muhammad al-Badr agreed to limit his authority and the royalist government proposed a constitution providing for a

state council and a legislature. In April the government proclaimed a national charter which declared that the civil war would continue until the Egyptian forces withdrew from Yemen and until Yemen was allowed freely to choose its own governmental system.

YOUTH CORPS. See ANTI-POVERTY PROGRAM.

YUGOSLAVIA

The most important developments in Yugoslavia during 1965 included two political events that appeared to demonstrate increasing autonomy on the part of the Federal Assembly, conflicts between the regime and the intellectuals, closer relations with the Soviet bloc (while maintaining intensive contacts with the West), and a sweeping economic reform.

Government. In the elections held in March and April to renew all the seats in the communal and half the seats in other assemblies, there were more candidates than seats—an unusual situation in Communist countries. (Approximately two candidates ran for each seat in the communal assemblies, and 359 candidates contested 300 seats in the Federal Assembly.) The electoral procedure, however, barred declared opponents of the regime.

Intellectual Life. The bimonthly publication *Praxis*, edited by a group of young philosophy professors at the University of Zagreb, became the center of social and intellectual criticism. Launched in September 1964, *Praxis* has a national edition in Serbo-Croatian and an international edition in several languages. The "angry young professors" who edit and contribute to the magazine, while expressing a fundamental attachment to humanitarian Marxism, criticized bureaucrats of the Communist League (Yugoslavia's official political party) and remnants of Stalinism. As a result, the magazine became a target of the league's dogmatists.

A more dramatic instance of intellectual unrest was the case of Mihajlo Mihajlov, a young assistant professor on the Zadar philosophical faculty of the University of Zagreb. His travel articles *Moscow Summer 1964*, published in the January and February issues of the Serbian literary review *Delo*, was judged—after Soviet protest—to be offensive to the Soviet Union. On February 11, President Tito himself censured Mihajlov for being a "reactionary." A month later, Mihajlov was arrested and, on April 30, was sentenced to nine months' imprisonment. On June 23 the Croatian Supreme Court reduced the sentence to five months and suspended it for two years.

Meanwhile, Mihajlov was dismissed from his professorial duties and was unable to secure a passport for a lecture trip to American universities. He was assailed by a Communist League leader as being "anti-Communist, reactionary, and God-seeking." Mihajlov sued the government for violating his constitutional rights.

Foreign Relations. Tito made a series of ostentatiously friendly visits in 1965 to nations of eastern Europe, indicating closer cooperation with the other Communist-bloc countries. He visited East Germany, Czechoslovakia, and the Soviet Union on June 2–30. A joint Soviet-Yugoslav statement issued on July 1 stressed their "identity and great similarity of views" on international issues. On September

Area: 75,290 square miles.

Population: 5,000,000 (mid-1964 est.).

Chief Cities (1963 est.): Sana, the capital, 100,000; Taiz, 80,000; Hodeida, 45,000.

Government: President—Abdallah al-Sallal (took office Oct. 31, 1962); Prime Minister—Hasan al-Amri (took office July 18, 1965).

Religious Faiths: Muslims, 99% of population; others, 1%.

Education: Literacy rate—5% of population. Total school enrollment (1962)—62,773 (primary, 61,353; secondary, 1,215; teacher-training, 170; technical, 35).

Finance (1964–65 budget): Budget balanced at \$27,300,000; monetary unit, riyal (1.1 riyals equal U.S.\$1).

Crops: Coffee (1964–65), 5,400 metric tons.

Minerals (metric tons, 1964): Salt, 35,000.

Foreign Trade: Chief exports: coffee, hides and skins; salt; gari (a narcotic shrub); chief imports: textiles, sugar, glass.

Transportation: Major roads (1960), 750 miles; civil airline, Yemeni Airline Co.; principal airport, Sana.

Communications: Telephones (1964): 900.

22-27, Tito made his first trip to Bulgaria in 18 years. He also received an informal visit from Hungarian Premier János Kádár in August and, on November 15-19, an official visit from the highest Polish Communist party and state officials, Władysław Gomułka and Joseph Cyrankiewicz. In addition, trade protocols between Yugoslavia and several countries of the Council for Mutual Economic Assistance (COMECON) provided for an expansion of trade relations with the Soviet bloc.

Ties with the nonaligned nations continued to be close. A conference of ambassadors from 17 non-aligned countries took place in Belgrade from March 13 to 15. The outcome of the meeting was an appeal, issued on April 1, to begin negotiations for a settlement of the war in Vietnam. Regarding individual nonaligned countries, Tito paid official visits to Algeria (April 15-22) and the United Arab Republic (April 26-30), and received visits from Tunisian President Habib Bourguiba (March 29-April 5), Indian Prime Minister Lal Bahadur Shastri (July 28-31), Guinean President Sékou Touré (August 2-4), and UAR President Gamal Abdel Nasser (September 1-5).

Tito also cultivated relations with western Europe. He paid an official visit to Norway on May 10-14, and was visited by Michael Stewart, the British foreign minister, on April 18-22. In June and July, several meetings were held to promote closer economic and technical cooperation with Britain, Italy, Austria, and Greece. But the decision of the European Economic Community (Common Market) to introduce protective tariffs on imports of fruit and vegetables from countries outside the Common Market was a blow to Yugoslavia's exports.

Yugoslav-American relations were hurt by consistent Yugoslav criticism of United States policies in Vietnam. These attacks reached their climax in Tito's Victory Day speech (May 10), in which he implicitly compared current United States policy to that of Hitler and Mussolini.

On March 16, an agreement was signed in Belgrade by which the United States sold Yugoslavia 700,000 tons of wheat worth \$53.4 million, to be

repaid in dollars over a period of 12 years. On December 14 the U.S. government granted Yugoslavia a credit of \$57 million for the purchase of machinery in the United States. U.S. economic aid to Yugoslavia in 1965 totaled \$175 million.

Economy. On July 24 the Federal Assembly inaugurated a general economic reform. The reform meant to spur economic activity and to eliminate weaknesses inherited from the past, such as price disparities in both domestic and foreign trade, subsidies to unproductive enterprises, an inadequate system of income distribution, and inequitable methods of taxation. The reform included a devaluation of the dinar and a 24% increase in the general price level. There also were tax reductions for industrial enterprises and incentives for agriculture. According to official estimates, these and similar measures (which Tito called the "necessary surgical cut" into the Yugoslav economy) would need two to three years to bear fruit.

In spite of the reform, the country went through a serious economic crisis during the second half of

Area: 98,766 square miles.

Population: 19,511,000 (June 30, 1965, est.).

Chief Cities (1961 census): Belgrade, the capital, 585,234; Zagreb, 430,802; Skopje, 165,529; Sarajevo, 143,117.

Government: President—Marshal Josip Broz Tito (elected 1953; reelected for life, 1963). Vice President—Aleksandar Ranković (elected 1963). Parliament—Federal Assembly, 670 members.

Religious Faiths: Serbian Orthodox Catholics, 41% of population; Roman Catholics, 32%; Muslims, 12%.

Education: Literacy rate (1961)—80% of population aged 10 and over. Total school enrollment (1961)—3,453,916 (primary, 2,895,694; secondary, 94,651; teacher-training, 30,335; technical, 275,226; higher, 158,010).

Finance (1964 est.): Revenues, \$1,533,000,000; expenditures, \$1,414,000,000; monetary unit, dinar (1,250 dinars equal U.S.\$1 as of July 1965).

Net Material Product (1964): \$6,960,000,000.

Economic Indexes (1964): Industrial production, 198 (1958=100); agricultural production, 152 (1956-57=100); cost of living, 157 (1958=100).

Manufacturing (metric tons, 1964): Cement, 3,039,000; wheat flour, 2,016,000; crude steel, 1,677,000; wine, 585,000; meat (1963), 499,000; sugar, 349,000; gasoline, 344,000.

Crops (metric tons, 1964): Maize, 6,960,000 (ranks 4th among world producers); wheat, 3,704,000 (rank, 14th); sugar beets, 2,830,000 (rank, 16th); potatoes, 2,820,000 (rank, 14th); grapes, 1,250,000 (rank, 9th); rye, 175,000 (rank, 16th); wool, greasy (1963), 12,700 (rank, 17th); barley, 534,000.

Minerals (metric tons, 1964): Bauxite, 1,293,000 (ranks 10th among world producers); lead, 101,594 (rank, 7th); zinc, 66,070 (rank, 16th); copper, 63,164 (rank, 11th); silver, 4,036,879 troy ounces (rank, 11th); gold, 93,687 troy ounces (rank, 19th); iron ore, 2,307,000.

Foreign Trade (1964): Exports, \$893,100,000 (chief exports, 1963: meat, \$27,000,000; ships and boats, \$22,000,000; lumber, \$16,500,000; iron and steel, \$13,000,000); imports, \$1,323,000,000 (chief imports, 1963: wheat and maslin, unmilled, \$43,000,000; iron and steel, \$35,000,000; raw cotton, \$18,000,000). Chief trading partners (1963): Italy (took 20% of exports, supplied 11% of imports); U.S. (took 6% of exports, supplied 18% of imports); West Germany (took 10% of exports, supplied 9% of imports).

Transportation: Roads (1964), 51,716 miles (6,338 paved); motor vehicles (1964), 158,989 (automobiles, 110,491); railways (1963), 7,368 miles; merchant vessels (1964), 168 (890,000 gross registered tons); national airline, Jugoslavenski Aero Transport; principal airports, Belgrade, Dubrovnik, Ljubljana, Sarajevo, Skopje, Titograd, Zagreb.

Communications: Telephones (1964), 330,400; television stations (1964), 15; television sets (1964), 245,000; radios (1963), 2,280,000; newspapers (1962), 19 (daily circulation, 1,424,000).

1965. In July, unemployment soared to 450,000. By the middle of September, prices had risen 51%, rather than 24% as forecast in the plan. Also, the rate of increase in industrial production was 7%, instead of the planned 11%, and agricultural production lagged seriously. Although the foreign trade balance improved, exports were still considerably smaller than imports, and \$289 million of the foreign debt was due before the end of the year.

YUKON TERRITORY

The Canadian government's plans for a vast road-building program in the Yukon and Northwest Territories, announced in 1965, promises a new era of development for the Yukon.

Roads. The Canadian Department of Northern Affairs will invest an average of \$10 million a year over the next 10 years for new roads in the Yukon and Northwest Territories. This will be the first phase of a 20-year highway program to bring all areas with exploitable resources within 200 miles of a year-around road. These highways will link existing communities, thereby reducing the Yukon's dependence on other forms of transportation. They will benefit the Yukon's economy by lowering the cost of living, reducing the need for large supply inventories, and increasing tourism.

Scheduled for completion in 1966 was a 220-mile road running north and west from Watson Lake to Ross River on the Canol Road. It will provide an alternate route through the southern Yukon and may be instrumental in bringing the area's marginal mining properties into production.

Economy. Cassiar Asbestos Corporation began work on its Clinton Creek property, northwest of Dawson, and expects to begin production of asbestos by 1967. Discovery Mine, a gold property lying 40 miles west of Carmacks, started production in 1965.

Income from tourism in the Yukon in the 1964-65 season increased 16% over the previous season, to an estimated volume of \$5 million.

Mount Kennedy. Early in 1965 the Canadian government announced that a mountain in the Yukon's St. Elias Range would be named in honor of the late U.S. President John F. Kennedy. In March, Senator Robert Kennedy and members of the National Geographic Society and the Boston Museum of Science made the first ascent of the

13,905-foot peak. (See GEOGRAPHY AND EXPLORATION.)

Visitors. A group of Russian scientists toured the Yukon in August to study permafrost conditions. The visit followed a tour of Siberia by Minister of Northern Affairs Arthur Laing and his party.

G.R. CAMERON
Commissioner, Yukon Territory

ZAMBIA

Zambia was one of the countries most immediately affected by Rhodesia's declaration of independence from Britain on Nov. 11, 1965. Because Zambia depends on Rhodesia for its rail outlet to the sea and for oil imports, the economic sanctions imposed on Rhodesia by Great Britain, the United States, and most African countries threatened Zambia's economic well-being.

State of Emergency. Zambia's President Kenneth Kaunda ordered a state of emergency in Zambia on November 11 when the white-controlled government of Rhodesia declared its independence. Noting reports of a buildup of Rhodesian troops along the Zambezi River separating his country from Rhodesia, President Kaunda said he would meet force with force, and he sped Zambian troops to patrol the border. He also called for British support to help protect the Kariba Dam hydroelectric complex, which straddles the Rhodesian-Zambian border. Britain, however, did not send troops to protect the dam.

Economic Plight. Zambia's economic well-being is linked with that of Rhodesia. Copper mined in

ZAMBIA · Information Highlights

Area: 288,129 square miles.
Population: 3,710,000 (June 30, 1965, est.).

Communications (1965): Telephones, 2,700; television stations, 1; radio stations, 1; newspapers, 2.

ZAMBIA, fearful that Rhodesia might destroy the strategic Kariba Dam after it declared its independence on November 11, called on the British to send troops to protect the dam. Britain sent a token support force, including these RAF personnel unloading a Firestreak rocket at Lusaka, the capital of Zambia.

WIDE WORLD

Zambia is normally carried by rail across Rhodesia to South Africa and the sea. This vital rail link might be cut off in retaliation if Zambia should aid the British-imposed economic sanctions against Rhodesia or if Rhodesian African nationalists who are refugees in Zambia should take military action against Rhodesia. Nor was it certain by the end of the year whether Zambia's copper could be shipped by an alternate route through Mozambique to the Indian Ocean.

Zambia also depended on Rhodesia for most of its oil, which it uses in copper mining and other vital industries. In December, after Britain instituted an oil embargo against Rhodesia, Britain and the United States began to transport oil into Zambia by air.

Rail Link with Tanzania. Controversy arose in 1965 over the surveying and financing of another proposed alternative route to the sea—the projected 1,320-mile railroad link between the copper belt in Zambia and Dar es Salaam, capital of Tanzania and a major Indian Ocean port. The project has been variously estimated to cost between \$2 million and \$4.5 million. The planned railroad would permit landlocked Zambia to ship its vital copper to world markets across African-controlled land, bypassing white-dominated areas. The proposed railroad would also open up Zambia's northeastern area and provide jobs for Zambia's unemployed workers.

President Kaunda urged speed in surveying the route and financing the railroad. A Chinese Communist team of experts reportedly surveyed Tanzania's part of the project in June, and President Julius K. Nyerere of Tanzania later confirmed that Communist China had offered to finance the railroad. But it was announced in September that a British-Canadian team would survey the entire route and that Western countries probably would help finance the project.

Copper Agreements. After attaining independence from Britain on Oct. 24, 1964, Zambia negotiated with the British South Africa Company on the amount of royalties to be paid for its copper. At the conclusion of negotiations on May 7, 1965, the company agreed to withdraw from Zambia and to sell its extensive real estate holdings to the government.

Copper price differences with Chile, with which Zambia competes as the world's second largest copper producer, were resolved in 1965. Chile's representative, Javier Larriague, visited Lusaka in June, and two representatives from Zambia conferred with Chilean officials in Santiago in October. Agreements reached in mid-October stabilized the price of copper at \$.38 per pound.

Lumpa Sect Ban Extended. The government's ban on the Lumpa religious sect, which had revolted in 1964, was extended for six months on April 21, 1965. The sect's leader and "prophetess," Alice Len-shina, had been granted protection on a government reservation on March 22 for herself and her followers.

Budget. Finance Minister Arthur Wina's proposed budget for fiscal year 1966, announced on July 15, 1965, projected government revenues at \$235 million and a budget surplus of \$47 million. The surplus would enable Zambia to finance its own development program and to increase its foreign exchange reserves in 1966.

FRANKLIN PARKER

KARIBA DAM, on the Zambezi River between Zambia and Rhodesia, supplies nearly 90% of Zambia's electric power.

ZOOLOGY

Among the many important advances in zoology in 1965 were findings on echo-location in fish-catching bats, heat regulation in newborn seals, natural control of sexual maturity in locusts, and annelid neurochemical characteristics in an onychophoran.

Fish-catching bats. Certain species of bats are known to catch small fish by dragging their feet through the water as they fly low over the surface. The prey are gaffed on long, forward-pointing claws and then transferred to the mouth. Fish-catching bats emit pulses of sound similar to those of bats that detect and capture insects by echo-location. It has seemed unlikely that they could detect submerged fish by echo-location, however, because sound is transferred from air to water so inefficiently. Recently, evidence has been produced that explains how the fishing bat, *Noctilio leporinus*, locates its prey.

Pieces of fish muscle or air-filled balloons were placed a few millimeters below the surface of a pool. These submerged objects were caught no more frequently than would be expected by chance, and the bats did not respond to fish sounds reproduced below the surface of the pool. However, pieces of fish that projected slightly above the surface of the water were readily caught. Also, small surface disturbances produced by artificial upwellings of water consistently caused a dipping response by the bats. Sensitivity to surface disturbances was revealed by training bats to recognize short lengths of fine wire marking the positions of submerged fish. Thus a randomly placed wire 0.21 millimeters in diameter extending only 1 millimeter vertically out of the water was discovered by hungry bats more often than they could have found it by chance. This was accomplished entirely by echo-location; neither visual nor olfactory senses were necessary.

Heat Regulation in Newborn Seals. The Greenland seal *Histiophoca groenlandica* is born on ice floes during the cold season and remains in the air unprotected from the elements for the first month to six weeks of its life. Recent studies reveal that this seal is born with a well-developed hairy coat which provides good heat insulation in air, but that it has almost no subcutaneous fat such as is found in the adult.

During its early life the animal is able to maintain constant body temperatures in extreme cold by intense chemical heat regulation (heat generated by cellular, biochemical processes) that is reflected in an unusually high metabolic rate. However, as the animal grows older physical heat regulation replaces chemical heat regulation, fat insulation develops, and changes in circulation take place. During the first 40 days, after birth the seal loses its hairy coat, and in the first 20 to 25 days its weight increases five to seven times as great amounts of subcutaneous fat are laid down. The fat is a better insulator than hair for an aquatic mode of life. As the fat layer builds up, less heat is transferred by the circulatory system to the peripheral tissues. Skin temperature approaches the temperature of the environment, and because of the reduced thermal gradient loss of heat to the environment is further reduced. The breathing of older seals is slower and more shallow

than that of newborn seals, and this also saves body heat.

Reproduction in Locusts. The time required for the African locust *Schistocerca gregaria* to become reproductively mature varies greatly. Under favorable conditions egg-laying may take place in less than four weeks following moult to the adult or fledging stage. On the other hand, eggs may not be laid until more than nine months after fledging, and during this period the adult insects retain the immature color and the ovaries remain relatively inactive.

Schistocerca spends a large part of its life in arid regions where the vegetation is green only for brief periods. During the dry season, when the locusts feed on withered and yellow vegetation, they do not breed. It has been demonstrated experimentally that young locusts fed old vegetation change to the mature color more slowly and start egg laying several weeks later than those fed green vegetation. Senescent leaves are deficient in plant growth-regulating gibberellins, and senescence in leaves can be retarded by gibberellin A₃. When the diet of senescent leaves was supplemented with gibberellin A₃, the locusts matured at the same rate as those fed green leaves.

These studies suggest that deficient diets during the dry season delay sexual maturity. Following the onset of rains, green vegetation furnishes the dietary essentials that permit sexual maturation and subsequent breeding. Thus, breeding is geared to the rains, assuring the young a favorable environment for development and growth.

Annelid Characteristics in an Onychophoran. The onychophorans are slug-like animals with many legs. They are usually found in damp humid situations in restricted tropical areas south of the Tropic of Cancer. This group of animals has morphological similarities to two phyla, the Annelida, which includes earthworms and leeches, and the Arthropoda, which includes crabs, spiders, and insects. Yet the onychophorans are considered to be more like arthropods than annelids, and they are commonly placed by authorities in the class Onychophora of the phylum Arthropoda. On the other hand, the classification of this group is still debated, for other authorities place it in a phylum of its own, the Onychophora.

The Chilean onychophoran *Opisthopatus costesi* has been shown to have neurochemical patterns resembling those of the annelids. In this animal, motor neurons (nerve cells that cause glands to secrete, capillaries to constrict, or muscles to contract) are cholinergic. This means that the motor neuron elaborates the chemical acetylcholine at its distal end so that adjacent muscle tissue contracts.

Associated with cholinergic motor neurons is cholinceptive muscle that contracts because of acetylcholine. Such muscle has high concentrations of the enzyme cholinesterase, and its response to acetylcholine is strengthened by the drug eserine. All these cholinergic characteristics of *Opisthopatus* are unknown in the arthropods (onychophorans excluded) and are generally present in the annelids.

NECROLOGY • 1965

Following is a selected list of more than four hundred prominent persons who died in 1965. Separate biographical articles on those persons whose names are preceded by an asterisk (*) may be found under their own headings within the main text.

Abdullah al-Salem al-Sabah (70), amir of Kuwait; b. Kuwait, Arabia, 1895; d. Kuwait, Nov. 24, 1965. One of the richest men in the world, Sheikh Abdullah used much of his wealth, derived from oil royalties, to modernize his country. He also introduced a form of representative government to Kuwait, obtained its complete independence from Britain in 1961, and involved it more deeply in Middle Eastern affairs. The son of Sheikh Salem al-Mubarak al-Sabah, Abdullah became ruler in 1950.

Albarda, Horatius (61), Dutch financier; was official of KLM Royal Dutch Airlines from 1946, and president since 1963; d. in plane crash in Switzerland (reported) May 17

Ammann, Othmar Hermann (86), U.S. bridge designer and engineer; b. Schaffhausen, Switzerland, March 26, 1879; d. New York, N.Y., Sept. 22, 1965. He designed some of the world's most notable bridges, mainly in the New York metropolitan area, including the George Washington Bridge (opened in 1931) and the Verrazano-Narrows Bridge (opened in 1964), which has the longest center suspension span in the world. A graduate of the Swiss Federal Institute of Technology, he went to the U.S. in 1904 and worked with bridge builder Gustav Lindenthal from 1912 until 1923, when he established his own firm. During the 1930's, he was chief engineer and director of engineering of the Port of New York Authority and chief engineer of the Triborough Bridge and Tunnel Authority. He directed the design and construction of such projects as the Lincoln Tunnel, the Goethals Bridge, and the Outerbridge Crossing. In 1939 he returned to private practice, and after 1946 he was senior partner in the firm of Ammann and Whitney.

Anastassy (Gribanovsky) (91), metropolitan of Russian Orthodox Church Outside of Russia (1936-64); d. New York, N.Y., May 22

Anderson, Maj. Gen. Orvil (70), U.S. Army officer; was a pioneer in high-altitude balloon flights; held altitude record from 1935 to 1951; d. Montgomery, Ala., Aug. 23

Andrea, Frank (77), U.S. manufacturer; was president and chairman of Andrea Radio Corporation from 1934; pioneered in precision-built radios; d. Manhasset, N.Y., Dec. 22

Anthony, Katherine (87), U.S. author; wrote biographies of Queen Elizabeth I and other famous women; campaigned for women's suffrage in 1917; d. New York, N.Y., Nov. 20

Appleton, Sir Edward Victor (72), British scientist; won 1947 Nobel Prize for physics for his discovery of upper atmosphere layers that reflect radio waves; d. Edinburgh, Scotland, April 21

Artzybasheff, Boris (66), Russian-born U.S. illustrator and caricaturist; noted for his drawings of grotesque humanized machines; d. Lyme, Conn., July 16

Audiberti, Jacques (66), French playwright, poet, and novelist; won 1964 Grand Prix National des Lettres; best-known play *Le mal court*; d. Paris, France, July 10

Avery, Milron Clark (71), U.S. painter; was a pioneer of abstract art; d. New York, N.Y., Jan. 3

Bailey, Cleveland M. (78), U.S. public official; was U.S. congressman (Democratic) from West Virginia from 1947 to 1962; d. Charleston, W. Va., July 13

Balokovic, Zlatko (70), Yugoslav violinist; appeared in concerts throughout Europe; owned collection of violins, including the legendary King Joseph; d. Venice, Italy, March 29

Barbour, Dave (53), U.S. musician; popular guitarist; was composer of *Manana* and *It's a Good Day*, with singer Peggy Lee, his former wife; d. Hollywood, Calif., Dec. 11

Barker, Shirley (54), U.S. author; was historical novelist and poet; her writings include *Peace, My Daughters* and *Rivers Parting*; d. Penacook, N.H., Nov. 18

***Baruch, Bernard M.** (94), U.S. financier and philanthropist; d. New York, N.Y., June 20

Batt, William L., Sr. (79), U.S. industrialist; was deputy director of War Production Board in World War II; chief of Marshall Plan mission to Great Britain (1950-52); president of SKF Industries, Inc. 1923-50; d. Delray Beach, Fla., Feb. 10

Beatty, Clyde (61), U.S. wild-animal trainer; was performer in vaudeville and circuses; d. Ventura, Calif., July 19

Boemer, Bruce (62), U.S. radio personality; was star of *The Lone Ranger* radio program, 1941-54; d. Oxford, Mich., March 1

Beer, Max (79), Austrian-born newspaper correspondent and author; was veteran reporter at League of Nations and United Nations; d. New York, N.Y., Oct. 27

Begley, Frank M. (53), U.S. administration officer to UN on Cyprus from July 1964; developed UN security force and headed it for 18 years; d. Nicosia, Cyprus, Jan. 26

Bennett, Constance (59), U.S. actress; b. New York, N.Y., Oct. 22, 1905; d. Fort Dix, N.J., July 24, 1965. Noted for her sophisticated glamour, she was one of the most popular film stars of the 1920's and 1930's. The daughter of the stage actor Richard Bennett, she was discovered at the age of 16 by film producer Samuel Goldwyn and appeared in her first motion picture, *Cytherea*, in 1924. Her films include *Code of the West* (1925), *The Goose Hangs High* (1925), *Sally, Irene and Mary* (1925), *Bed of Roses* (1933), *Our Betters* (1933), *The Affairs of Cellini* (1934), *Madame Spy* (1934), *Topper* (1937), and *Tailspin* (1939). She also starred in her own production, *Paris Underground* (1945). She made her stage debut in *Easy Virtue* (1940).

Bevilacqua, Giulio (84), Italian cardinal; was named prince of the Roman Catholic Church in February 1965; former teacher of Pope Paul VI; d. Brescia, Italy, May 6

Binkley, Wilfred Ellsworth (82), U.S. historian; published studies of presidential power and American political parties; his books include *The Power of the President* (1937) and *The Man in the White House* (1959); d. Ada, Ohio, Dec. 8

Blackmur, Richard P. (61), U.S. literary critic and poet; b. Springfield, Mass., Jan. 21, 1904; d. Princeton, N.J., Feb. 2, 1965. Although he never received a formal college education, he became known as one of the most original and penetrating American critics and as a poet of some note. He began his career as a freelance poet and critic in the 1920's and contributed widely to literary journals. A member of the Princeton University faculty from 1940, he

- played an important role in the development of the university's creative writing program. His critical volumes, covering a wide range, but stressing 19th and 20th century poetry and fiction, include *The Doubt Agent* (1935), *The Expense of Greatness* (1940), *Language as Gesture* (1952), and *The Lion and the Honeycomb* (1955). Among his volumes of verse are *From Jordan's Delight* (1937) and *The Good European* (1947).
- Blackstone, Harry** (80), U.S. magician: b. Chicago, Ill., Sept. 27, 1885; d. Hollywood, Calif., Nov. 16, 1965. Came to be one of the last great classical magicians, he specialized in illusionist and sleight-of-hand tricks, seldom using mirrors, wires, or other devices. Born Harry Boughton, Blackstone became interested in magic at an early age. He began his stage career in 1904 as part of a team, with his brother Peter, billed the Bouton Brothers. Harry later changed his stage name to Frederick the Great and then to Blackstone the Great. He retired in 1959.
- Blair, Floyd G.** (74), U.S. financier; president of American-Australian Association in New York; was president of the New York Philharmonic Symphony Society from 1950 to 1956; d. Melbourne, Australia, Oct. 28.
- Bliss, Maj. Gen. Raymond W.** (77), U.S. Army officer; was surgeon general from 1947 to 1951, and in charge of Army Medical Corps in Korean War (1950-51); d. Tucson, Ariz., Dec. 12.
- Blossom, Virgil Tracy** (58?), U.S. educator: b. Brookfield, Mo., 1906 (?); d. San Antonio, Texas, Jan. 15, 1965. As superintendent of schools of Little Rock, Ark., he formulated the 1957 "Blossom Plan" for integrating the city's public schools in accordance with the 1954 U.S. Supreme Court decision. His plan was vigorously opposed by segregationist forces and by Gov. Orval E. Faubus, who ordered the National Guard to prevent Negroes from entering the city's Central High School in 1957. Although integration was achieved that year through intervention of the federal government, Blossom was dismissed from his post in 1958. After his dismissal he was appointed superintendent of the Northeast Independent School District in San Antonio, Texas. He described his ordeal in the Little Rock integration struggle in the book *It Has Happened Here* (1959).
- Bol, Cornelis** (80), Dutch inventor; invented and perfected the mercury vapor lamp in 1939; d. Palo Alto, Calif., July 30.
- Boland, Mary** (83), U.S. actress; starred in stage plays and motion pictures; notable film roles were in *Ruggles of Red Gap*, and *The Women*; d. New York, N.Y., June 23.
- Bonner, Herbert C.** (70), U.S. politician; chairman of Carolina (Democratic) since 1940; chairman of Merchant Marine and Fisheries Committee from 1955; d. Washington, D.C., Nov. 7.
- Bosson, Lord Alfred** (83), British architect; designer and renovator of New York buildings; served as member of the House of Commons (1931-59); d. London, England, Sept. 4.
- Bow, Clara** (60), U.S. film actress: b. Brooklyn, N.Y., 1905; d. Los Angeles, Calif., Sept. 27, 1965. As the silent screen's "It" girl of the flapper era, she was one of the top box office attractions of the late 1920's, noted more for her physical charms than for her acting talent. A beauty contest winner at the age of 17, she had her first starring role in *Down to the Sea in Ships* (1925), and later appeared in such films as *The Plastic Age* (1925), *Dancing Mothers* (1926), *Kid Boots* (1926), *Mantrap* (1926), *It* (1927), *Rough House Rosie* (1927), *Wings* (1927), *The Fleet's In* (1928), and *Ladies of the Mob* (1928). In 1931 she married Rex Bell, a "western" star who became a political figure in Nevada in the 1950's.
- Breen, Joseph I.** (75), U.S. motion picture industry administrator; was director of Production Code Administration of the Motion Picture Association of America from 1943 until retirement in 1954; d. Hollywood, Calif., Dec. 5.
- Broadhurst, Lt. Gen. Edwin B.** (49), U.S. Air Force officer; from 1963, was chief of staff of the UN command and of U.S. forces in Korea; d. Seoul, Korea, April 4.
- Brokenshire, Norman Ernest** (66), U.S. radio announcer: b. Murcheson, Ont., June 5, 1898; d. Hauppauge, L.I., N.Y., May 4, 1965. The first radio announcer to be identified by name on the air, he became known for his informal manner and talent for ad-libbing. He covered such events as the 1924 Democratic national convention, the 1925 presidential inauguration, and the New York reception for Charles A. Lindbergh in 1927. In 1932 he was named "King of the Announcers."
- Brooks, Louise Cromwell** (75), U.S. socialite; was first wife of Gen. Douglas MacArthur; d. Washington, D.C., May 30.
- Brophy, John** (65), English author; was noted for novels based on his experiences in World War I; was father of novelist Brigid Brophy; d. London, England, Nov. 13.
- Brown, Clarence J.** (72), U.S. congressman from Ohio (Republican) since 1938; d. Washington, D.C., Aug. 23.
- Brown, David** (65), U.S. naval architect; was honorary chairman of board of ship managers of American Bureau of Shipping; chairman, 1957-64; d. East Orange, N.J., April 30.
- Browne, Irene** (69), English actress; appeared in American motion pictures; d. London, England, July 24.
- Browning, Lt. Gen. Sir Frederick** (68), British army officer; was authority on airborne troop movements; appointed treasurer of household of Queen Elizabeth II in 1952; husband of novelist Daphne du Maurier; d. London, England, March 14.
- Buber, Martin** (87), Jewish philosopher: b. Vienna, Austria, Feb. 8, 1878; d. Jerusalem, Israel, June 13, 1965. One of the foremost thinkers of the 20th century, he exercised a profound influence on modern thought, including Christian theology. Influenced by German idealism, the metaphysical Hasidic sect of Judaism, and the Zionism of Theodor Herzl, he developed a personalist "I-Thou" philosophy, which emphasizes an intimate relationship between man and God, and between individual men. He served as professor at the University of Frankfurt from 1923 to 1933, and at the Hebrew University in Jerusalem from 1938 until his retirement in 1951. His numerous works include a standard German translation of the Old Testament (with Franz Rosenzweig) and the books *Pointing the Way* (1957), *I and Thou* (1958), and *The Meaning and Origins of Hasidism* (1960). One of the most respected men of his time, he was, however, the subject of occasional controversy because of his rejection of some of the rituals of Orthodox Judaism.
- Bucher, Walter H.** (76), U.S. geologist; professor emeritus of geology, Columbia University; wrote *The Deformation of the Earth's Crust* (1933); d. Houston, Texas, Feb. 17.
- Buck, C. Douglass** (74), U.S. public official; was twice elected Republican governor of Delaware (1928-36); U.S. senator (1942-48); d. New Castle, Del., Jan. 28.
- Burkley, Robert J.** (84), U.S. public official; was U.S. congressman (Democratic) from Ohio (1911-15), and senator (1930-39); d. Cleveland, Ohio, July 21.
- Bunce, Alan** (60?), U.S. actor; starred in radio and television in the 1950's; appeared in plays, *Sunrise in Campobello* (1960) and *Mary, Mary* (1964); d. New York, N.Y., April 27.
- Burdick, Eugene** (46), U.S. author: b. Sheldon, Iowa, Dec. 12, 1918; d. San Diego, Calif., July 26, 1965. He was best known for the book *The Ugly American* (1958), a fictionalized indictment of the U.S. Foreign Service, which he wrote with William J. Lederer, and for *Fail-Safe* (1962), a novel about an accidental nuclear conflict, which he wrote with Harvey Wheeler. A Stanford University graduate and a Rhodes Scholar, Burdick joined the political science faculty of the University of California in 1952. His other books, also dealing with political themes, are *The Ninth Wave* (1956), *The 480* (1964), and *Nina's Book* (1965).
- Burgess, Thornton Waldo** (91), U.S. author of children's books: b. Sandwich, Mass., Jan. 14, 1874; d. Hampden, Mass., June 5, 1965. He was best known for his popular "Peter Rabbit" stories, which delighted millions of children and adults. Originally composed as bedtime stories for his own son, the Peter Rabbit tales convey gentle moral lessons and accurately depict nature. They were first published in book form as *Old Mother West Wind* (1910). Burgess began his literary career with the Phelps Publishing Co. as a writer and copy editor for *Good Housekeeping* magazine. Until his retirement in 1960, he wrote some 15,000 stories that appeared in daily syndicated newspaper columns and in 70 books that sold some 7,500,000 copies. A naturalist and conservationist, he lectured widely about nature. His autobiography, *Now I Remember*, appeared in 1960.
- Burnstine, David** (65), U.S. bridge expert; was member of *Four Aces* championship team in 1930's; d. Los Angeles, Calif., Aug. 26.
- Burroughs, Alan** (67), U.S. author; pioneered in analysis of paintings by X-ray; lectured on fine arts at Harvard University (1932-42); research fellow at Fogg Art Museum (1936-47); d. Little Compton, R.I., May 2.
- Cesar, Orville S.** (73), U.S. transportation official; was president (1946-55) and chairman (1955-59) of Greyhound Corporation; d. Elgin, Ill., May 19.
- Compa, Ciguse Angelo** (83), Cuban diplomat; was Cuban ambassador to the U.S. (1955-58); d. Miami, Fla., Aug. 20.
- Cardon, Philip Vincent** (76), U.S. agronomist; was chief agronomist for the Department of Agriculture (1935-39), and director of UN Food and Agriculture Organization (1954 to 1956); d. Salt Lake City, Utah, Oct. 13.
- Carnahan, Paul H.** (61), U.S. industrialist; was 1965 winner of Horatio Alger Award; president of National Steel Corporation since 1961; d. Grosse Ile, Mich., Dec. 26.
- Carroll, Nancy** (60), U.S. actress; appeared in stage plays, *The Passing Show* (1923) and *For Heavens Sake, Mother* (1948), and in many films; d. New York, N.Y., Aug. 6.
- Case, Charles** (71), U.S. businessman; retired official of Eastman Kodak Company; developed microfilm process used in "V" mail during World War II; d. Avon, N.Y., Sept. 7.
- Case, James Herbert, Jr.** (58); U.S. educator; was president of Washington and Jefferson College, 1950-59; d. New York, N.Y., July 1.
- Chapelle, Dickie** (47), U.S. newspaper correspondent, photographer, and parachutist; d. Danang, South Vietnam, Nov. 4.
- Chaplin, Sydney** (80), Anglo-American actor; half-brother of actor Charles Chaplin; d. Nice, France, April 15.
- Chase, Joseph Cummings** (86), U.S. artist and teacher; was official artist for American Expeditionary Forces in World War I; painted portraits of five presidents including the two Roosevelts; d. Milwaukee, Wis., Jan. 15.
- Chen, Cheng** (67), Nationalist Chinese government official; was premier (1950-54; 1957-60) and vice president (from 1960); d. Taipei, Taiwan, March 5.
- Cherry, Francis A.** (56), U.S. public official; was governor of Arkansas (Democratic), 1952-54; chairman of Subversive Activities Control Board since 1963; d. Washington, D.C., July 15.
- Chester, Colby M.** (88), U.S. industrialist; was president (1924-35) and chairman of the board (1935-43) of Postum and General Foods Corporation; d. Greenwich, Conn., Sept. 26.
- Chu Shi-ming** (63), Chinese Nationalist army general; aide to Chiang Kai-shek (1945-47); was a signer of Japanese surrender document in 1945; d. Tokyo, Japan, Oct. 26.
- *Churchill, Sir Winston** (90), British statesman; d. London, England, Jan. 24.
- Chuter-Ede, Lord James** (83), British government official; was home secretary in Labour government from 1945 to 1951; d. Surrey, England, Nov. 11.
- Colby, Charles C.** (80), U.S. geographer; taught at University of Chicago from 1916 to 1949; d. La Crosse, Wis., July 16.

- Cole, Nat King** (45), U.S. jazz musician: b. Montgomery, Ala., Mar. 17, 1919; d. Santa Monica, Calif., Feb. 15, 1965. Noted for the easy, relaxed style of his singing and piano playing, he was one of the most popular Negro entertainers in the U.S. Originally named Nathaniel Adams Coles, he was a minister's son. He sang in his father's church, later organized a jazz band, and then worked as a solo pianist. In 1937 he organized the King Cole Trio, an instrumental group with soon began to feature his vocalizations. He made many night club and concert appearances, had his own radio and television programs, and appeared in several films, including *St. Louis Blues*.
- Cole, Willard G.** (58), U.S. editor and publisher; won 1953 Pulitzer Prize for his campaign against Ku Klux Klan: d. Lumberton, N.C., May 28
- Coleman, Emil** (72), U.S. orchestra leader; his orchestra was notable in U.S. and abroad: d. New York, N.Y., Jan. 26
- Collins, Ray** (75), U.S. actor; appeared in over 75 film roles; played part of Lieut. Tragg in television series, *Perry Mason*: d. Santa Monica, Calif., July 11
- Collins, Russell** (65), U.S. actor; played character roles on stage, in films, and in television: d. Hollywood, Calif., Nov. 14
- Collip, Dr. James Bertram** (72), Canadian scientist; developed insulin, with Sir Frederick Banting, and pioneered in hormone research: d. London, Ont., June 19
- Cooper, Earl** (79), U.S. auto racer; won national championships in 1913, 1915, and 1917: d. Atwater, Calif., Oct. 22
- Cooper, Kent** (84), U.S. journalist: b. Columbus, Ind., Mar. 22, 1880; d. West Palm Beach, Fla., Jan. 31, 1965. As head of the Associated Press, he was a pioneer in world-wide journalism, revolutionizing methods for gathering and distributing news. A former Indianapolis newspaper reporter, he established his own press agency and later joined the Associated Press, which he served as general manager from 1925 to 1948 and as executive director from 1948 until his retirement in 1951. His innovations include the transmission of photographs by wire, and the establishment of a worldwide system of news correspondence.
- Cosgrave, William T.** (85), Irish parliamentarian; was a leading figure in Irish revolution; sentenced to death for his activities in 1916 Easter Rebellion but freed in amnesty of 1917; president of Irish Free State from 1922 to 1932: d. Dublin, Ireland, Nov. 16
- Costain, Thomas Bertram** (80), U.S. author: b. Brantford, Ont., Canada, May 8, 1885; d. New York, N.Y., Oct. 8, 1965. He was noted for his carefully researched historical novels, including the swashbuckling 13th century romance, *The Black Rose*, published in 1945, which attained great popularity as a book and was made into a successful film, and *The Silver Chalice*, set against a background of early Christianity, which became the best-selling novel of 1952. He began his career as a newspaper reporter in his home town and later worked as editor of the *Guelph* (Ont.) *Daily Mercury* and *MacLean's Magazine*. After he went to the U.S. in 1910, he was an associate editor of the *Saturday Evening Post* for 14 years. In 1939 he joined Doubleday & Co. as a part-time advisory editor. His first novel, *For My Great Folly*, was published in 1942, when he was 57. Among his 25 books are the four-volume *Pageant of England* (1949-62), a history of the Plantagenets; *The White and the Gold* (1954), a history of French Canada; and *Chord of Steel* (1960), a biography of Alexander Graham Bell.
- Cowell, Henry** (68), U.S. composer; developed a theory of tone clusters; used unorthodox sounds in his symphonies: d. Shady, N.J., Dec. 10
- Cowen, Joshua Daniel** (85), U.S. inventor and businessman; built model trains; founder and chairman of Lionel Corporation from 1945; invented magnesium flash powder used in photography: d. Palm Beach, Fla., Sept. 8
- Cowen, Myron** (67), U.S. lawyer and diplomat; was U.S. ambassador to Australia (1948-49), the Philippine Republic (1949-51), and Belgium (1952-53): d. Washington, D.C., Nov. 1
- Cowling, Donald J.** (85), U.S. educator; was president of Carleton College (Northfield, Minn.) from 1909 to 1945: d. Minneapolis, Minn., Nov. 27
- Crerar, Henry Duncan Graham** (76), Canadian army officer: b. Hamilton, Ont., April 26, 1888; d. Ottawa, Ont., April 1, 1965. As commander of the First Canadian Army in World War II, he was his country's first general to lead an army in battle. During World War I he served with the Canadian field artillery. In July 1942, while commanding the 2nd Canadian Division, he directed an abortive raid on Dieppe to test German strength in Europe. The fury with which the Germans repulsed the raid convinced the Allies to invade North Africa and delay an invasion of the continent. After taking command of the First Army in 1944, he led campaigns in France, Holland, and Belgium.
- Curris, Margaret** (82), U.S. golfer; member of Sports Hall of Fame; won U.S. women's amateur golf championship in 1907, 1911, and 1912: d. Boston, Mass., Dec. 24
- Dabrowska, Maria** (75), Polish author; one of Poland's best known writers, she wrote the saga *Nights and Days*, which was widely translated: d. Warsaw, Poland, May 19
- Dandridge, Dorothy** (41), U.S. actress and singer: b. Cleveland, Ohio, 1924; d. Hollywood, Calif., Sept. 8, 1965. One of the most popular American Negro actresses, she attained motion picture stardom with her down-to-earth performance in the title role of *Carmen Jones* (1954), and in *Island in the Sun* (1957), *Porgy and Bess* (1959), and *Tamango* (1959).
- Dane, Clemence** (77), English author; wrote novels, plays, and scenarios; her best-known play, *A Bill of Divorcement* (1921), was also a successful film (1932): d. London, England, March 28
- Daniel-Rops, Henri** (65), French author; wrote many books on religious subjects, including *History of the Church of Christ*; was a member of French Academy: d. Paris, France, July 27
- Darnell, Linda** (43), U.S. film actress: b. Dallas, Texas, Oct. 16, 1921; d. Chicago, Ill., April 10, 1965. One of Hollywood's most beautiful and talented actresses, she appeared in over 50 films after her discovery at the age of 14 by a talent scout. Her films include *Star Dust* (1940), *Brigham Young* (1940), *Blood and Sand* (1941), *Summer Storm* (1944), *Hangover Square* (1945), *Anna and the King of Siam* (1946), *Forever Amber* (1947), *A Letter to Three Wives* (1948), and *No Way Out* (1950).
- Davidson, Carter** (60), U.S. educator and author; was president of Association of American Colleges from 1964: d. Washington, D.C., Oct. 20
- Davis, Arthur C.** (71), vice-adm. (ret.) U.S. Navy; was pioneer in technique of dive bombing; developer of Norden bombsight: d. Bethesda, Md., Feb. 10
- Debenham, Frank** (82), Australian explorer; a survivor of Scott Antarctic expedition of 1910; wrote *The Way of Illala* (1956), and *Antarctica* (1960): d. Cambridge, England, Nov. 23
- de Havilland, Sir Geoffrey** (82), British aviation pioneer: b. July 27, 1882; d. London, England, May 21, 1965. An aircraft designer for more than 50 years, he built his first successful airplane in 1910. In 1924 he developed the low-cost, lightweight Moth, a two-seater plane, with which he attained the world altitude record of 21,000 feet in 1928. During World War II he built jet fighters and developed the Mosquito, a long-range reconnaissance bomber that was then the fastest aircraft in the world. His design, in 1952, of the Comet, the world's first four-jet airliner, enabled the British aircraft industry to hold its own against U.S. competition. After serving as a Royal Flying Corps officer and test pilot in World War I, he founded the de Havilland Aircraft Co. in 1920, serving as its technical director until 1955. He was knighted in 1944.
- Delgado, Humberto** (59), Portuguese general and politician; was opposition leader; headed 1964 conspiracy against Salazar regime: d. (body found), Villaneuva del Fresno, Badajoz, Spain, April 24
- DeMarco, Tony** (67), U.S. dancer; starred in vaudeville, night-clubs, and motion pictures for 40 years: d. West Palm Beach, Fla., Nov. 15
- Deramus, W.N.** (77), U.S. railroad executive; was president of Kansas City Southern Railroad from 1941 to 1961: d. Kansas City, Kans., Dec. 2
- DeVane, William Clyde** (67), was dean of Yale College at Yale University from 1938 to 1963: d. Greensboro, Vt., Aug. 16
- Diller, Burgoyne** (59), U.S. painter; was one of first American painters to use geometric abstraction: d. New York, N.Y., Jan. 30
- Dimbleby, Richard** (52), British television commentator; won international recognition for authoritative presentation of news, public events, and royal ceremonies: d. London, England, Dec. 22
- Divine, Father** (83?), U.S. religious cult leader: b. near Savannah, Ga., 1882 (?); d. Philadelphia, Pa., Sept. 10, 1965. As founder of the Peace Mission cult, or Kingdom of Peace, he was regarded by his followers as the incarnation of God. His movement practices a primitive type of communism, stressing peace, asceticism, celibacy, and communal living. It is basically nonsectarian, international, and interracial although most of its members are American Negroes. Little is known about the early life of Father Divine. (It is believed his original name was George Baker.) He was said to have preached in the South for a number of years before going to the North about 1914, setting up headquarters in New York City and moving later to Philadelphia. He acquired much of his mass following in the 1930's and 1940's, when he spoke frequently in public, and his periodical, *New Day*, had a wide circulation.

Felix Frankfurter, U.S. Supreme Court justice.

NOEL CLARK—BLACK STAR

- Dixon, Frank (73), U.S. public official; was governor of Alabama from 1939 to 1943; d. Birmingham, Ala., Oct. 11
- Dixon, Sir Pierson John (60), British diplomat; b. Englefield Green, Surrey, England, Nov. 13, 1904; d. Egham Hill, Surrey, April 21, 1965. One of Britain's most skilled diplomats he served as permanent representative to the United Nations from 1954 to 1960. After entering the foreign service in 1929, he held diplomatic posts at Madrid, Ankara, and Rome. During World War II he accompanied Foreign Minister Anthony Eden to the Middle East, Greece, and Turkey, and later was adviser to Harold Macmillan at Allied forces headquarters in Algiers. From 1943 to 1945 he was Eden's principal private secretary, and continued in this post until 1947 under the new foreign minister, Ernest Bevin. Later he served as ambassador to Czechoslovakia, deputy undersecretary of state, and delegate to the NATO Council. Before his retirement in 1965, he was British ambassador in Paris. A classical scholar, he wrote *The Iberians of Spain* (1940) and *Farewell, Catullus* (1953).
- Dodd, Edward H. (96), U.S. publisher; was president (1916-28) and chairman (1928-38) of Dodd, Mead and Co.; d. Litchfield, Conn., June 19
- Douglass, Jesse (68), U.S. mathematician; won 1936 Fields Medal of the International Congress of Mathematicians at Oslo, Norway; d. New York, N.Y., Oct. 7
- Dow, Warren A. (60), U.S. fencer; was member of U.S. fencing team at 1936 Berlin Olympics; national champion in 1942 and 1943; captain of U.S. team at Olympics in London, 1948; d. Westwood, N.J., Nov. 22
- Dresser, Louise (84), U.S. actress; performed in vaudeville and silent films; co-starred with Will Rogers in *State Fair* and *David Harum*; d. Woodland Hills, Calif., April 24
- Drew, Elizabeth (77), U.S. educator; professor of English literature at Smith College (1946-61); wrote *The Literature of Gossip* (1964); d. Northampton, Mass., April 7
- Dryden, Hugh L. (67), U.S. aerodynamics expert; was deputy administrator of the National Aeronautics and Space Administration (NASA) from its inception in 1958; d. Washington, D.C., Dec. 2
- Du Mont, Allen B. (64), U.S. inventor; b. Brooklyn, N.Y., Jan. 29, 1901; d. New York, N.Y., Nov. 15, 1965. A pioneer in television technology, he simplified and improved the cathode-ray tube (picture tube). After receiving an electrical engineering degree from Rensselaer Polytechnic Institute in 1924, he founded Du Mont Laboratories in 1931 and served as its president for 25 years. In 1939 his company became the first to market a home television receiver. In 1946 he established the Du Mont television network. Although by 1960 control of the Du Mont broadcasting and manufacturing interests had passed to others, Du Mont stayed on as a senior technical consultant. The holder of more than 30 patents on cathode-ray tubes and other television equipment, he invented the "magic eye."
- Dumont, Margaret (75), U.S. stage and motion picture comedienne; was leading lady with Marx Brothers on the stage and in films; d. Los Angeles, Calif., March 6
- Dundee, Johnny (74), U.S. boxer; former world featherweight champion (1923-24); d. East Orange, N.J., April 22
- du Pont, William, Jr. (69), U.S. banker and sportsman; was president of Delaware Trust Company; director of E.I. du Pont de Nemours & Co. from 1930; architect of horse racing courses; d. Wilmington, Del., Dec. 31
- Duque, Tomas (75), Panamanian newspaper publisher; was Panama's first vice president; served as president for 23 days in 1928; d. Panama, April 1
- Eisenhart, Luther P. (89), U.S. educator; internationally known mathematician; was dean of Princeton University Graduate School (1933-1945); d. Princeton, N.J., Oct. 28
- El-Rifai, Samir (66), Jordanian diplomat; was premier of Jordan six times between 1944 and 1963; d. Amman, Jordan, Oct. 12
- *Eliot, T.S. (76), expatriate American poet; d. London, England, Jan. 4
- Elisabeth (89), dowager queen of Belgium; b. Bavaria, Germany, July 7, 1876; d. Brussels, Belgium, Nov. 23, 1965. Eulogized at her death as "... the queen without frontiers," she was a doctor of medicine, a violinist, an Egyptian scholar, and a campaigner for women's suffrage. The daughter of Duke Karl Theodor and Marie Theresie of Braganza, she married Albert, heir to the Belgian throne, on Oct. 2, 1900. The couple ascended the throne in 1909. Always deeply concerned with the welfare of her adopted homeland, she remained in Belgium during World War I, nursing the wounded and donating her jewels for the benefit of the homeless. After King Albert was killed in 1934, their son became king as Leopold III. During World War II, Queen Elisabeth refused to be moved from Belgium by the Germans.
- Elizalde, Joaquin Miguel (68), Philippine government official; former foreign secretary; ambassador to UN from 1956; d. Washington, D.C., Feb. 9
- Elliott, William (62), U.S. actor; starred in Western motion pictures and on television; appeared in *Wild Bill Hickok* and *Red Ryder* serials; d. Las Vegas, Nev., Nov. 26
- Emmons, Gen. Delos C. (76), U.S. Army officer; was military governor of Hawaii during World War II; d. San Francisco, Calif., Oct. 5
- Erkko, Elias (69), Finnish statesman and publisher; was foreign minister in 1939 at outbreak of war with Russia; owned Finland's largest newspaper; d. Helsinki, Finland, Feb. 20
- Erlanger, Joseph (91), U.S. physiologist; shared 1944 Nobel Prize in medicine and physiology for work in analyzing nerve impulses; d. St. Louis, Mo., Dec. 5
- Erskine, Sir George (66), British army officer; commanded "desert rats" in North African campaign of World War II; d. Somersetshire, England, Aug. 28
- Esposito, Vincent (65), U.S. Army officer; military historian; was chief editor of *The West Point Atlas of American Wars*; prepared *A Concise History of World War I* and *A Concise History of World War II*, published in the *ENCYCLOPEDIA AMERICANA*, of which he was advisory editor; d. Washington, D.C., June 10
- Estes, Wayne (31), U.S. athlete; was basketball star at University of Utah; and leading candidate for All-America honors; d. (in accident) Logan, Utah, Feb. 9
- Evatt, Herbert Vere (71), Australian statesman; b. East Maitland, Australia, April 30, 1894; d. Canberra, Australia, Nov. 2, 1965. He served as Australia's foreign minister and attorney general from 1941 to 1949, and as head of the Labour party from 1951 to 1960. He earned his doctorate in law from Sydney University, and at the age of 36 became the youngest man to be named judge of the High Court of Australia. He left the bench in 1940 to enter politics. While serving as foreign minister, he played a key role in drafting the UN Charter at San Francisco in 1945 and was president of the UN General Assembly in 1948-49.
- Fahnestock, Sheridan (52), U.S. explorer and publisher; headed a number of expeditions to the South Seas; published *Lexington Park Enterprise*; d. Park Hall, St. Mary's County, Md., Aug. 27
- Farouk I (45), former king of Egypt; b. Cairo, Egypt, Feb. 11, 1920; d. Rome, Italy, March 18, 1965. Noted for his fondness for luxurious living, he did little to solve Egypt's national problems or enhance its status on the world scene. Educated at the Royal Military Academy in England, he succeeded his father, King Fuad, in April 1936. In the beginning of his reign, he exercised considerable power under the constitution and promised major social reforms. After World War II, during which Egypt held to a nonbelligerent status, he sponsored the Arab League. In 1951 he abrogated a treaty of alliance with Britain and sponsored self-government for the Sudan under Egyptian suzerainty. In July 1952 he abdicated after a coup d'état led by Maj. Gen. Mohammed Naguib and Lt. Col. Gamal Abdel Nasser.
- Field, Marshall, Jr. (49), U.S. newspaper publisher; b. Chicago, Ill., June 15, 1916; d. Chicago, Sept. 18, 1965. He was editor and publisher of the Chicago *Sun-Times* and, after 1959, of the Chicago *Daily News*. The great-grandson of the founder of the Chicago department store Marshall Field and Co., he graduated from Harvard and from the University of Virginia law school. After military service in World War II, he began his newspaper career with the Chicago *Sun*, which had been founded by his father, working in various departments and as a reporter. He was chairman of the board of Field Enterprises.
- Fiene, Ernest (70), German-American painter; was noted for his realistic oils and lithographs; d. Paris, France, Aug. 10
- Figl, Leopold (62), Austrian statesman; b. Rust, Austria, Oct. 2, 1902; d. Vienna, Austria, May 9, 1965. A chancellor of Austria from 1945 to 1953, he was largely responsible for obtaining Austria's military neutrality and independence in 1955 from the four-power military occupation after World War II. Becoming director of the Peasants Union of Lower Austria in 1933, he voiced opposition to the proposed tariff and customs union between Austria and Germany during the 1930's. As a result, he was arrested by the Nazis when they occupied Austria in 1938 and was held in concentration camps until 1943. After his release, he joined the farmers' underground movement and was arrested again in 1944. Saved by the invasion of Allied troops in 1945, he turned to organizing the People's party. He later served as foreign minister (1953-59) and president of Parliament (1952-62).
- Fisher, Henry Johnson (91), U.S. publisher and philanthropist; was vice president of Crowell Publishing Co. (1906-10); chairman of Popular Science Publishing Co. and McCall Corporation (1917-45); d. Greenwich, Conn., June 25
- Flynn, John A. (64), U.S. clergyman; president of St. John's University (New York City), from 1947 to 1961; d. New York, N.Y., July 22
- Fossati, Maurilio (88), Italian cardinal; was archbishop of Turin from 1930; d. Rome, Italy, March 30
- Foster, Claud H. (92), U.S. inventor and philanthropist; invented the Gabriel Snubber, a shock absorber, widely used in the United States and Europe; d. Bellevue, Ohio, June 21
- Frankfurter, Alfred M. (69), U.S. writer and editor; was editor of *Art News* and an international authority on art; d. Jerusalem (Israeli sector), May 12
- Frankfurter, Felix (82), U.S. Supreme Court justice; b. Vienna, Austria, Nov. 15, 1882; d. Washington, D.C., Feb. 22, 1965. One of the most influential American jurists, he served as associate justice of the U.S. Supreme Court from his appointment by President Franklin D. Roosevelt in 1939 until his retirement in 1962. A graduate of Harvard law school, he became a member of the Harvard law faculty in 1914, serving concurrently in various federal government posts, including work with the War and Labor departments during World War I. In 1919 he supported Zionism at the Versailles Peace Conference. An early champion of constitutional liberties and a founder of the American Civil Liberties Union, he opposed the Palmer raids against alleged subversives after World War I and was critical of the convictions in the Tom Mooney and the Sacco-Vanzetti cases. During the early years of the New Deal he served as an adviser to the Roosevelt administration. On the Supreme Court he represented a position of judicial restraint, emphasizing the limited function of the judiciary in a democracy and seeking to maintain a balance between individual rights and the public interest. He supported the 1951 conviction of Communist leaders under the Smith Act and played an important part in the formulation of the 1954 public school desegregation decision. His books include *Mr. Justice Holmes and the Supreme Court* (1938).

PICTORIAL PARADE

H.V. Kaltenborn, news analyst.

Freed, Alan (43), U.S. disk jockey; coined the term "rock 'n roll" and was credited with making that type of music popular in 1950's: d. Palm Springs, Calif., Jan. 20

Fuld, Leonhard Felix (82), U.S. philanthropist; was a lawyer, an economist, and an expert in police administration: d. Trenton, N.J., Aug. 31

Funk, Wilfred John (82), U.S. book publisher: b. Brooklyn, N.Y., March 20, 1883; d. Montclair, N.J., June 1, 1965. The son of the founder of the dictionary and encyclopedia publishing firm, Funk & Wagnalls, he served as its president from 1925 until 1940, when he founded, and became president of, his own publishing concern, Wilfred Funk, Inc. An authority on popular etymology, he was coauthor with Norman Lewis of *30 Days to a More Powerful Vocabulary* (1942) and wrote several other books in this field, as well as the monthly *Reader's Digest* feature "It Pays to Increase Your Word Power." His books of light verse include *Love, Life and Laughter* (1942)

Furman, N. Howell (73), U.S. chemist and educator; participated in development of atomic bomb; was responsible for analytical separation of uranium: d. Burlington, Vt., Aug. 2

Gans, Oscar (62), Cuban diplomat; signed UN Charter in 1945 as Cuban representative; was Cuba's last constitutional premier (1951, 1952): d. (in exile) Mexico City, Mexico, Dec. 7

Gatto, Victor Joseph (71), U.S. painter; won recognition as authentic primitive artist: d. Miami, Fla., May 25

Gavrilovic, Stoyan (70), Yugoslav government official; was first chairman of UN Site Commission: d. New York, N.Y., Feb. 2

Gaylani, Rashid Ali (73), Iraqi statesman; was premier four times from 1933 to 1941; sentenced to death in absentia (1942) and returned from exile in 1958: d. Beirut, Lebanon, Aug. 28

Gerlier, Pierre (85), French cardinal (1937); was also archbishop of Lyon: d. Lyon, France, Jan. 17

Gheorghiu-Dej, Gheorghe (63), Rumanian Communist leader: b. Barlad, Rumania, Nov. 8, 1901; d. Bucharest, Rumania, March 19, 1965. As first secretary of the Central Committee of the Rumanian Workers (Communist) party after World War II and chief of state from 1961, he guided Rumania along the road of industrial development and toward increased independence from the USSR. A member of the Rumanian Communist party from 1930, he was imprisoned for years for his role in organizing a major strike. In 1945 he was named party chief by Soviet Premier Stalin, and in 1954 he became premier. In a governmental reorganization in 1961, he was elected president of the Council of Ministers.

Giannattasio, Luis (70), Uruguayan public official; was president of Uruguay's national government council from 1964: d. Montevideo, Uruguay, Feb. 7

Giao, Phan Van (65), Vietnamese general; was adviser to Emperor Bao Dai; minister of state and governor of Annam (1948-55): d. Saint-Hilaire-Saint Florent, France, Nov. 13

Gildersleeve, Virginia C (Crocheron) (87), U.S. educator: b. New York, N.Y., Oct. 3, 1877; d. Centerville, Mass., July 7, 1965. One of the leading educators in the U.S., she was dean of Barnard College (Columbia University) from 1910 until her retirement in 1947. Her approach to education was progressive, based on common sense rather than tradition, and she was responsible for many innovations in the field. A graduate of Barnard, she began her career as an English teacher there in 1900, and later obtained doctorates at Columbia and Rutgers universities. During World War II she headed the Advisory Council for the Women's Naval Reserve, which established the WAVES, and after the war she helped to set up a new educational system in Japan. For many years interested in international affairs, she was the only U.S. woman delegate to the UN Conference at San Francisco in 1945, and she helped to establish UNESCO. Her books include an autobiography, *Many a Good Crusade* (1954).

Girdler, Tom Mercer (87), U.S. executive; was president and board chairman of Republic Steel Corp.; former president of Jones & Laughlin Steel Corp.: d. Easton, Md., Feb. 4

Gitolow, Benjamin (73), U.S. politician; founder of Communist party of U.S.; was his party's candidate for vice president in 1924 and 1928; convicted of criminal anarchy; pardoned in 1925: d. Crompton, N.Y., July 19

Gomes, Azevedo (79), Portuguese political leader; was active in opposition to Salazar; president of Social Democratic opposition since 1952; d. Lisbon, Portugal, Dec. 12

Gomez, Laureano (76), Colombian political leader: b. Bogotá, Colombia, Feb. 20, 1889; d. Bogotá, July 13, 1965. As president of Colombia (1950-53), he instituted a right-wing dictatorship, suspended civil liberties, and suppressed the Liberal party. He began his political career in 1911 as a member of the lower house of Congress, later serving as minister of public works, minister to Germany, and senator. In the 1930's he headed Colombia's Conservative party, and during World War II he openly sided with the Axis. After the overthrow of his dictatorship by Lt. Gen. Gustavo Rojas Pinilla in 1953, he went into exile in Spain. He resumed leadership of the Conservative party in 1957.

Gonzales, Luis A. (65), Guatemalan government official; was provisional president for 3 months in 1957: d. Guatemala, Nov. 11

Graf, Sonja (51), U.S. women's chess champion; won U.S. women's open championship four times during the 1950's: d. New York, N.Y., March 6

Graham, Frank (71), U.S. sportswriter; covered baseball, boxing, and racing; wrote the column, *Graham's Corner*, for N.Y. *Journal American*: d. New York, N.Y., March 9

Graham, Gwethalyn (52), Canadian author; wrote *Swiss Sonata* (1938) and *Earth and High Heaven* (1944): d. Montreal, Que., Nov. 24

Grant, Vice Adm. Harold T. (66), Canadian naval officer; was former chief of naval staff (1947-50); as captain of cruiser *Enterprise* in World War II, defeated fleet of 11 German destroyers in Bay of Biscay: d. Ottawa, Ont., May 8

Graves, Alvin C. (55), U.S. physicist; developed first U.S. atomic pile in 1942; directed atomic testing at Los Alamos from 1942: d. Del Norte, Colo., July 29

Green, Charles C. (83), U.S. businessman; managing director, Advertising Club of New York, from 1940; was known as "patron saint" of advertising: d. Forest Hills, N.Y., July 16

Greenberg, Henry Clay (68), U.S. judge; was justice of New York State Supreme Court from 1946; made many important legal decisions: d. New York, N.Y., March 9

Grawi, Joseph Clark (84), U.S. diplomat: b. Boston, Mass., May 27, 1880; d. Manchester, Mass., May 25, 1965. As U.S. ambassador to Japan from 1931 to 1941, he warned of Japanese plans for an attack on Pearl Harbor. A career diplomat, he joined the U.S. Foreign Service in 1905 and was counselor of the embassy in Berlin in 1916-17. Later, he served as acting chief of the State Department's Division of Western European Affairs, secretary at the Versailles Peace Conference, chairman of the Division of Foreign Service Personnel, and ambassador to Turkey. Before his retirement in 1945 he served as special assistant to the secretary of state, as director of the Office of Eastern Affairs, and as undersecretary of state.

Gruenberg, Benjamin C. (89), Russian-born American educator and author; was leader in science education, and wrote textbooks on sex education: d. New York, N.Y., July 1

Hall, Viscount (George Henry Hall) (83), British government official; was first lord of the admiralty in Labour government from 1946 to 1951: d. London, England, Nov. 8

Hambro, John Henry (61), English banker; was chairman of Hambro's Bank from 1963: d. London, England, Dec. 4

Hammond, John H., Jr. (76), U.S. inventor; his electronic patents contributed to development of radio, television, and radar: d. New York, N.Y., Feb. 12

Hancher, Virgil M. (68), U.S. educator: b. Rolfe, Iowa, Sept. 4, 1896; d. New Delhi, India, Jan. 30, 1965. A Rhodes Scholar and former lawyer, he served as president of the University of Iowa from 1940 until his retirement in 1964. He was a former chairman of the American Council on Education and the Education Policies Commission, and acted as U.S. educational representative at the UN.

Hansberry, Lorraine Vivian (34), U.S. playwright: b. Chicago, Ill., May 19, 1930; d. New York, N.Y., Jan. 11, 1965. One of the most promising young Negro writers in the United States, she was best known for her play *A Raisin in the Sun*, which dealt with the aspirations and frustrations of a Chicago Negro family. The play won the New York Drama Critics Circle Award as the best American play of the 1959 season, and it was later made into a film. Her second play, *The Sign in Sidney Brustein's Window*, the story of an idealistic Jewish intellectual in Greenwich Village, was produced on Broadway in 1964.

Harkavy, Harold J. (50), U.S. bridge instructor; was winner of Vanderbilt and Spingold team championships (1963): d. San Francisco, Calif., Nov. 29

Harrington, Pat, Sr. (64), U.S. actor; was a nightclub singer and musical comedy star: d. Islip, N.Y., Sept. 2

Hausermann, John (87), U.S. mining financier; was known as Philippine "gold king": d. Cincinnati, Ohio, July 11

Hawley, Gen. Paul R. (74), U.S. Army officer; was chief surgeon of European Theater of Operations in World War II; chief medical director of Veterans Administration (1945-48); and chief executive officer of Blue Cross and Blue Shield Commission (1948-50): d. Washington, D.C., Nov. 25

Heintzelman, Arthur W. (74), U.S. painter and etcher; his works, stressing religious themes and rural American life, are widely exhibited in U.S. and Europe: d. Rockport, Mass., April 4

Heintzelman, B. Frank (77), U.S. public official; was governor of Alaska, 1953-57: d. Juneau, Alaska, June 24

- Hench, Philip Showalter** (69), U.S. medical researcher; b. Pittsburgh, Pa., Feb. 28, 1896; d. Ochos Rios, Jamaica, March 30, 1965. A specialist in arthritic diseases, he shared the 1955 Nobel Prize in medicine for his research on hormones that led to the successful treatment of rheumatoid arthritis with cortisone. After graduating from the University of Pittsburgh School of Medicine in 1920, he became a fellow of the Mayo Foundation. From 1923 until his retirement in 1957, he was associated with the Mayo Clinic, becoming director of its department of rheumatoid diseases in 1926, and later heading its division of medicine. As a colonel in the Army Medical Corps during World War II, he directed the Army's rheumatism center.
- Hess, Dame Myra** (75), English musician; was one of world's leading pianists; d. London, England, Nov. 25.
- Earl Alexander of Hillsborough (Albert Victor)** (79), British government official; was first lord of the admiralty (1929-31; 1940-45; 1945-46); d. London, England, Jan. 11.
- Hives, Lord Ernest Walter** (79), British engineer and industrialist; was chairman of Rolls-Royce, Ltd. (1950-57); d. London, England, April 24.
- Hohner, Ernst** (79), German manufacturer; headed House of Hohner, makers of musical instruments; d. Trossingen, Germany, Oct. 15.
- Holcomb, Gen. Thomas** (85), U.S. Marine Corps officer; commandant of corps (1936-44); served in Philippines and China in World War I; was minister to South Africa (1944-48); d. New Castle, Del., May 24.
- Holliday, Judy (Judith Tuvim)** (42), U.S. actress; b. New York, N.Y., June 21, 1922; d. New York, June 7, 1965. One of the most intelligent comedienne of stage and screen, she was best known for her role as Billie Dawn in Carson Kanim's Broadway hit *Born Yesterday* (1946). When she recreated the role on the screen, she won the 1950 Academy Award as best actress. She began her show business career in a Greenwich Village revue with Adolph Green and Betty Comden, and made her Broadway debut in the comedy *Kiss Them for Me*, which won her the Derwent Prize as best supporting actress of 1945. For her performance as a telephone operator in the Broadway musical *The Bells Are Ringing* (1956), she received an Antoinette Perry Award. She later repeated this role on the screen. Her other motion pictures include *Adam's Rib* (1949), *The Marrying Kind* (1952), *Phfft* (1954), and *The Solid Gold Cadillac* (1955).
- Howard, Eugene** (84), U.S. actor; was comedy star in theater and vaudeville with his brother Willie; d. New York, N.Y., Aug. 1.
- Howard, Peter D.** (56), English journalist; leader of moral re-armament movement; wrote plays on that theme, including *Voice of the Hurricane*, and published a collection of speeches, *Design for Dedication* (1964); d. Lima, Peru, Feb. 25.
- Huddelson, I. Forest** (71), U.S. bacteriologist; an authority on brucellosis; d. Lansing, Mich., May 26.
- Hylton, Jack** (72), British play producer; his latest play was *Camelot*; d. London, England, Jan. 29.
- Hylton-Foster, Sir Harry** (60), British statesman; was member of Parliament (from 1950) and speaker of House of Commons under Conservative and Labour governments (from 1959); d. London, England, Sept. 2.
- Ikeeda, Hayato** (65), Japanese public official; b. Hiroshima Prefecture, Japan, Dec. 3, 1899; d. Tokyo, Japan, Aug. 13, 1965. One of Japan's most skilled economists, he served as finance minister during the 1950's and as premier from 1960 to 1964. After graduating from Kyoto Imperial University, he became a tax official with the finance ministry. Following World War II, he was elected to the House of Representatives in 1946 and became vice minister of finance. Between 1949 and 1960, he alternately served as finance minister and as head of the Economic Planning Board and minister of International Trade and Industry. In these posts he was responsible for anti-inflationary reforms that brought Japan to the height of prosperity. As successor to Premier Nobusuke Kishi, he was noted for his skill as a conciliator, and he worked toward scaling down foreign trade barriers against Japanese goods. His policies, like those of his postwar predecessors, were generally pro-American.
- Ingelbrecht, Désiré Emile** (84), French composer and conductor; founded Orchestre National de la Radiodiffusion Française in 1934; d. Paris, France, Feb. 14.
- Inman, Samuel G.** (77), U.S. educator and authority on Latin-American affairs; helped Pres. Franklin D. Roosevelt draw up Good Neighbor policy; served as an adviser to Latin-American governments; was a contributor to *ENCYCLOPEDIA AMERICANA*; d. Bronxville, N.Y., Feb. 19.
- Ismay, Lord (Gen. Sir Hastings Lionel Inlay)** (78), British soldier and statesman; b. Naini Tal, India, June 21, 1887; d. Stanton, England, Dec. 17, 1965. A professional soldier, he was adviser to Sir Winston Churchill in World War II, and later served as secretary general of NATO (1952-57). The son of the chief judge of the Mysore (India) Chief Court, he attended Sandhurst military school and was commissioned in 1905. His first service was with the 21st Cavalry in India and Somaliland. From 1926 to 1939 he served in various positions on the Imperial Defense Committee. In 1940 he was appointed by Prime Minister Winston Churchill to head his personal staff and to serve as military secretary to the War Cabinet. He also served in Churchill's postwar cabinet as secretary for Commonwealth relations (1951). Ismay was knighted in 1940, elevated to the peerage (1947), and made knight of the Garter (1957).
- Jackson, Shirley** (45), U.S. author; b. San Francisco, Calif., Dec. 14, 1919; d. North Bennington, Vt., Aug. 8, 1965. She was best known for her books and stories dealing with insanity, witchcraft, and the supernatural. Her short story "The Lottery," first published in the *New Yorker* in 1948, came to be regarded as a classic horror story. A graduate of Syracuse University (1940), she contributed widely to magazines. Her books in a macabre vein include *Hangamans* (1951), *The Bird's Nest* (1954), *The Sundial* (1958), *The Haunting of Hill House* (1959), and *We Have Always Lived in the Castle* (1962). In a lighter vein, she wrote *Life Among the Savages* (1953) and *Raising Demons* (1957), about her own family life.
- Jarrell, Randall** (51), U.S. poet; b. Nashville, Tenn., May 6, 1914; d. Chapel Hill, N.C., Oct. 14, 1965. Regarded as one of the most skilled of the younger generation of poets, he won the 1960 National Book Award for poetry for his collection *The Woman at the Washington Zoo*. A graduate of Vanderbilt University, he contributed widely to literary journals and worked as a literary editor and critic. His books include *Blood of a Stranger* (1942), *Little Friend, Little Friend* (1945), *Losses* (1948), *The Seven-League Crutches* (1951), *Poetry and the Age* (1953), *Pictures from an Institution* (1954), *Selected Poems* (1955), *The Anchor Book of Stories* (1958) and *A Sad Heart at the Supermarket* (1962).
- Jeffries, Zay** (77), U.S. metallurgist; worked on Manhattan Project for development of atomic bomb; was vice president, General Electric Co. (1945-49); d. Pittsfield, Mass., May 21.
- Jennings, Sir Ivor** (62), English lawyer and educator; was international authority on constitutional law; helped draft constitutions of Pakistan and Malaya; also advised them, and India, on their respective university systems; d. Cambridge, England, Dec. 19.
- Johnson, Oscar** (79), U.S. clergyman; was president of World Baptist Alliance (1947-50); d. Oakland, Calif., Nov. 24.
- Johnson, Luther A.** (89), U.S. congressman (Democratic) from Texas, 1923-46; was federal tax court judge (1946-58); d. Corsicana, Texas, June 6.
- Johnson, Rita** (52), U.S. actress; appeared in the film, *My Friend Flicka* (1943); also acted on stage, radio, and television; d. Hollywood, Calif., Oct. 31.
- Johnson, Roy W.** (59), U.S. businessman and government official; was vice-president of General Electric Company from 1944; first administrator of U.S. space program (1958-59); d. Stamford, Conn., July 22.
- Johnson, W. Maclean** (49), U.S. publisher; was vice president of McGraw-Hill's Webster Publishing Division in St. Louis; d. Vienna, Austria, Nov. 5.
- Johnson, Wendell** (59), U.S. speech therapist; was founder and chairman of American Speech and Hearing Foundation; wrote extensively on speech problems; d. Iowa City, Iowa, Aug. 29.
- Johnston, Olin DeWitt** (68), U.S. senator; b. Anderson County, S.C., Nov. 18, 1896; d. Columbia, S.C., April 18, 1965. As Democratic senator from South Carolina from 1945, he generally represented a liberal viewpoint and supported the Truman, Kennedy, and Johnson administrations. On issues involving civil rights, however, he upheld the white supremacist position. A law graduate of the University of South Carolina, he served in the state legislature and was governor of South Carolina from 1935 to 1939 and from 1943 to 1945. In the Senate he served on the Agricultural and Judiciary committees. As chairman of the Senate Post Office and Civil Service committee, he was noted for his concern for the interests of federal employees.
- Johnston, Thomas** (83), Scottish statesman; was secretary of state for Scotland (1941-45) and chancellor of Aberdeen University from 1951; d. Milngavie, Scotland, Sept. 5.
- Jones, Edgar A.** (79), U.S. congressman (Republican) from Illinois from 1949 to 1954; d. Chicago, Ill., Nov. 15.
- Jones, Eleanor Dwight** (84), U.S. pioneer in birth control movement; was president of American Birth Control League from 1929 to 1935; d. Riverhead, N.Y., July 29.
- Jones, Spike (Lindley Armstrong)** (53), U.S. bandleader; b. Long Beach, Calif., Dec. 14, 1911; d. Los Angeles, Calif., May 1, 1965. A master of musical burlesque, he was noted for zany takeoffs on popular music. His band, the City Slickers, used such instruments as washboards, cowbells, and automobile horns. After playing as a drummer with John Scott Trotter's band, he organized his own group, which had its first success in 1942 with a recording of the anti-Nazi burlesque *Der Fuehrer's Face*.
- Jones, Paul** (84), U.S. jurist; was U.S. district judge in Ohio from 1923; d. Shaker Heights, Ohio, Aug. 4.
- Jordan, Bobby** (42), U.S. actor; played role of "Angel" in stage and film versions of the play *Dead End* and in *Dead End Kid* series; d. Sepulveda, Calif., Sept. 10.
- Jud, Mrs. Herman H.** (62); was the former Princess Xenia of Russia; d. Glen Cove, N.Y., Sept. 17.
- Kalmus, Natalie M.** (87), U.S. film technician; was codeveloper of technicolor process; d. Boston, Mass., Nov. 15.
- Kaltenborn, H(ans) V(on)** (86), U.S. news commentator; b. Milwaukee, Wis., July 9, 1878; d. New York, N.Y., June 14, 1965. One of the leading American news analysts for some 30 years, he was noted for his frank, often controversial commentaries and for his incisive analyses of such events as the Munich crisis of 1938. An honor graduate of Harvard, he worked for a number of years as a newspaper reporter. He gave his first radio news analysis in 1922, while on the staff of the *Brooklyn Eagle*, and later analyzed the news in regular broadcasts for the Columbia Broadcasting System from 1929 to 1940, and for the National Broadcasting Company from 1940 to 1955. His writings include the autobiography *Fifty Fabulous Years* (1950).
- Kawakami, Jotaro** (76), Japanese political leader; was chairman of Socialist party from 1961 until March 1965; d. Nirayama, Japan, Dec. 3.

- Kerr, Sophie** (84), U.S. author; was formerly managing editor of *Woman's Home Companion*: d. New York, N.Y., Feb. 6.
- Kilgallen, Dorothy Mae** (52), U.S. newspaper columnist: b. Chicago, Ill., July 3, 1913; d. New York, N.Y., Nov. 8, 1965. She was best known as a regular panelist (from 1949) on the television show *What's My Line?*, for her gossip column "The Voice of Broadway" (begun in 1938), and for her appearances with her husband, Broadway producer Richard Kollmar, on the radio show *Breakfast with Dorothy and Dick* (1945-63). The daughter of a newspaper reporter, she began her career as a cub reporter for the New York *Evening Journal*. She first gained national recognition by her coverage of an around-the-world commercial air race in 1936.
- Kilpatrick, William Heard** (93), U.S. philosopher and educator: b. White Plains, Ga., Nov. 20, 1871; d. New York, N.Y., Feb. 13, 1965. A pioneer in progressive education and a close associate of John Dewey, he was a member of the faculty of Columbia University Teachers College from 1909 until 1937. At the time of his retirement he held the post of professor of the philosophy of education. Early in his career he stirred considerable controversy by his unorthodox teaching methods. Rejecting philosophical absolutes, he stressed the empirical approach and helped revolutionize American education.
- King, Alexander** (66), U.S. author and television personality: b. Vienna, Austria, Nov. 13, 1899; d. New York, N.Y., Nov. 16, 1965. An acerbic commentator on contemporary life, he achieved his widest popularity from his appearances on the Jack Paar *Tonight* show on television. Going to the U.S. shortly before World War I, he had a successful career as an illustrator and magazine editor before he fell victim to drug addiction. Recovering from this illness, he gained national prominence with his book *Mine Enemy Grows Older* (1958). His other books include *May This House Be Safe from Tigers* (1960), *I Should Have Kissed Her More* (1961), *Is There a Life After Birth?* (1963), and *Rich Man, Poor Man, Freud and Fruit* (1965).
- Kirkland, Weymouth** (87), U.S. attorney; senior member of Kirkland, Ellis, Hodson, Chaffetz, and Masters; counsel for Chicago *Tribune* and New York *Daily News*: d. Chicago, Ill., Feb. 3.
- Klaestad, Helge** (79), Norwegian statesman; served in Norwegian State Department (1921); appointed judge of the Norwegian Supreme Court (1932): d. Oslo, Norway, May 23.
- Knappertsbusch, Hans** (77), German opera conductor; was a leading interpreter of Wagnerian opera: d. Munich, Germany, Oct. 25.
- Kohr, Halvdan** (92), Norwegian historian; wrote *The American Spirit in Europe: A Study of Transatlantic Influences* (1949); was foreign minister in Labor government from 1935 to 1940: d. Oslo, Norway, Dec. 12.
- Kono, Ichiro** (67), Japanese government official; was minister in charge of 1964 Olympic Games: d. Tokyo, Japan, July 8.
- Kopman, Benjamin** (77), Russian-born American painter; his graphic art and illustrations are among collections of major U.S. museums: d. Teaneck, N.J., Dec. 3.
- Kozlov, Frol Romanovich** (56), Soviet Communist leader: b. Loshchinino, Russia, Aug. 1, 1908; d. Moscow, USSR, Jan. 30, 1965. A leading political figure under Nikita S. Khrushchev, he was once regarded as a likely successor to Khrushchev in the post of premier. He joined the Communist party in 1926. After graduating in 1936 from the Leningrad Mining Institute as a metallurgical engineer, he was placed in charge of a steel-rolling mill in Izhevsk. He moved to Moscow in 1944 as an official of the Communist party Central Committee. In 1949 he was transferred to Leningrad, where he became first secretary of the local party organization in 1953, after Khrushchev came to power. As a candidate member of the party Presidium in 1957, he supported Khrushchev in his struggle with the "antiparty" faction, and in late 1957 he was appointed premier of the Russian Republic. In the following year he became first deputy premier of the USSR, resigning this position in 1960 to become a secretary in the Communist party. After Khrushchev's ouster as premier and party chief in 1964, Kozlov was removed from the Presidium.
- LaFollette, Philip F.** (68), U.S. public official: b. Madison, Wis., May 8, 1897; d. Madison, Aug. 18, 1965. The son of Robert M. LaFollette, the noted Progressive party governor, senator, and presidential candidate, he served as governor of Wisconsin from 1931 to 1933 and from 1935 to 1939. A law graduate of the University of Wisconsin, he was elected district attorney of Dane County in 1925. As governor, he instituted an elaborate reform program that included a securities act and the nation's first state unemployment law. Opposing President Franklin D. Roosevelt's New Deal, he founded the short-lived National Progressives of America in 1938. Although he had been a strong opponent of United States entry into World War II, he served with distinction during the war on Gen. Douglas MacArthur's staff.
- Lambeau, Curly (Earl)** (67?), U.S. football coach: b. Green Bay, Wis., 1898 (?); d. Sturgeon Bay, Wis., June 1, 1965. One of the founders of the Green Bay (Wisconsin) Packers professional football team in 1919, he served as its coach until 1950, leading it to six National Football League victories (1929-31, 1936, 1939, and 1944) and seven divisional championships, and producing a number of football stars. From 1919 to 1928 he also distinguished himself as quarterback of the team. In 1921 he helped to found the National Football League. After leaving the Packers in 1950 he coached the Chicago Cardinal for two years, and he ended his professional career as coach of the Washington Redskins in 1954.
- Lange, Dorothea** (70), U.S. photographer; was noted for her photographic studies of "Oakies" and "Dust Bowl" of the Southwest in 1930's: d. San Francisco, Calif., Oct. 11.
- Lange, Oscar** (61), Polish diplomat; was Polish ambassador to the UN, and ambassador to the U.S. from 1946 to 1949; served as Communist deputy premier of Poland in 1956: d. London, England, Oct. 2.
- Lanham, Fritz D.** (84), U.S. public official; was congressman (Democratic) from Texas, 1919 to 1947; and sponsor of the Lanham Act (trademark law): d. Austin, Texas, July 31.
- Laurel, Stan (Arthur Stanley Jefferson)** (74), U.S. film comedian: b. Ulverston, Lancashire, England, June 16, 1890; d. Santa Monica, Calif., Feb. 23, 1965. As the simple-minded, sad-faced fall guy of the Laurel and Hardy comedy team, he appeared in more than 200 films with his corpulent, self-assured partner, Oliver Hardy. A master of pantomime, Laurel was the creator of most of the team's comedy techniques. He began his career as a music hall performer at the age of 16 and went to the United States in 1910 with Fred Karno's troupe, acting occasionally as understudy for Charlie Chaplin. After appearing in several comedy films and in vaudeville, he joined Hal Roach's studio in Hollywood in 1917 as writer, producer, and director of comedy shorts. He teamed up with Hardy in 1926, and together they appeared in such Hal Roach comedies as *Putting the Pants on Philip*, *Men of War*, and *The Chimp*. They made an easy transition from silent to sound films, beginning with *Unaccustomed As We Are* (1931). For their short film *The Music Box*, they received an Academy Award in 1933. Their full-length features include *Pardon Us* (1931), *Pack Up Your Troubles* (1932), *Babes in Toyland* (1934), *The Bohemian Girl* (1936), *Swiss Miss* (1938), *Blockheads* (1938), *A Chump at Oxford* (1940), and *Saps at Sea* (1940).
- Leche, Richard W.** (66), U.S. public official; was governor of Louisiana (1936-39); was later convicted on charges of corruption and sentenced to prison for using mails to defraud; was pardoned in 1953 by President Truman: d. New Orleans, La., Feb. 22.
- Le Corbusier (Charles-Edouard Jeanneret-Gris)** (77), Swiss-French architect: b. La Chaux-de-Fonds, Switzerland, Oct. 6, 1887; d. Roquebrune Cap-Martin, France, Aug. 27, 1965. Ranked, along with Frank Lloyd Wright and Ludwig Mies van der Rohe, as one of the great architects of the 20th century, he evoked considerable controversy with his revolutionary ideas that a house is "a machine for living," that architecture "must put men under the rules of the sun," and that urban man should live in "sun, space, and silence." His most important works include apartment houses in Marseille and Berlin, the Visual Arts Center at Harvard University, the Ronchamp chapel at Vosges (France), an office building in Moscow, a Salvation Army center in Paris, and government buildings in Rio de Janeiro and Chandigarh (India). Several buildings in New York City, including the UN headquarters, reflect his influence. As a city planner, he drew up blueprints for Paris, Buenos Aires, Antwerp, Algiers, and Montevideo. He settled in Paris in 1917 and became a partner in an architectural firm there in 1924. Proficient as a painter, representing the Purist school, he was cofounder of the magazine *L'esprit nouveau*, in which he expounded his views on art and architecture. He was the author of several books reflecting his humanistic modernism.
- Lee, Roger I.** (84), U.S. physician; former president of American Medical Association (1945-46); opposed federal hospitalization and health insurance programs, and workers' retirement pension plans: d. Brookline, Mass., Oct. 28.
- Leonty (Leonid Turkevich)** (88), metropolitan of Russian Orthodox Greek Catholic Church (from 1950): d. Syosset, N.Y., May 4.

Le Corbusier, French architect.

- Long, Oren Ethelbert** (76), U.S. senator; b. Altoona, Kans., March 4, 1889; d. Honolulu, Haw., May 6, 1965. A liberal Democrat, he represented Hawaii in the U.S. Senate from 1959 to 1962. He went to Hawaii as a social worker in 1917 and later served as a teacher and high school principal. As deputy superintendent of public instruction of the Territory of Hawaii (1925-34) and superintendent (1934-46), he did much to improve education in the islands. After five years as secretary of Hawaii, he was appointed territorial governor by President Harry S. Truman in 1951 and remained in this post until 1956. He then entered the territorial Senate and in 1959 was elected to the U.S. Senate.
- Long, Perrin H.** (66), U.S. physician; helped to introduce use of sulfa drugs in U.S.; headed department of preventive medicine at Johns Hopkins University from 1940 to 1951; d. Edgartown, Mass., Dec. 17.
- Louise** (75), queen of Sweden; as wife of King Gustaf VI Adolf, was queen from 1950; d. Stockholm, March 7.
- Lovelace, W. Randolph, 2nd** (57), U.S. physician; was medical director of National Aeronautics and Space Administration, from April 1964; d. near Aspen, Colo., Dec. 12.
- Lowenstein, Otto** (75), German-born neurologist; developed pupillography; d. New York, N.Y., March 25.
- Macbeth, Madge** (82), Canadian author; was first woman president of Canadian Authors Association; d. Ottawa, Ont., Sept. 20.
- McCormack, Emmet J.** (84), U.S. industrialist; cofounder and chairman of the board of Moore-McCormack (Steamship) Lines; d. West Palm Beach, Fla., Feb. 24.
- McCormick, Mrs. Chauncey (Marion Doering)** (78), U.S. socialite; was prominent in cultural, charitable, and social activities; noted for philanthropies; d. Chicago, Ill., Jan. 13.
- MacDonald, Jeanette Anna** (57), U.S. singer and actress; b. Philadelphia, Pa., June 18, 1907; d. Houston, Texas, Jan. 14, 1965. Noted for her lyric soprano voice and wholesome charm, she was best known as costar with baritone Nelson Eddy in the film versions of such operettas as *Naughty Marietta* (1935), *Rose Marie* (1936), *Maytime* (1937), *The Girl of the Golden West* (1938), *Sweethearts* (1938), *New Moon* (1940), *Bittersweet* (1940), and *I Married an Angel* (1942). She began her career as a chorus girl in a Broadway musical in 1921 and later starred in several Broadway productions, including *Yes, Yes, Yvette* (1927), *Sunny Days* (1928), and *Angela* (1928), before her discovery by film director Ernst Lubitsch. Her first films, with Maurice Chevalier, were *The Love Parade* (1929), *One Hour With You* (1931), *Love Me Tonight* (1932), and *The Merry Widow* (1934). Her other films include *The Cat and the Fiddle* (1934), *San Francisco* (1936), *The Firefly* (1937), and *Smilin' Through* (1941). After her retirement from films in 1942, she appeared in grand opera. She was married to actor Gene Raymond.
- McDonald, Marie** (42), U.S. actress; known as "The Body"; appeared in motion pictures and had starring role in *Living in a Big Way* (1947); d. Hollywood, Calif., Oct. 21.
- McKechnie, William "Bill"** (78), U.S. baseball manager; elected to Baseball Hall of Fame (1962); won National League pennants with Pittsburgh Pirates (1925), St. Louis Cardinals (1928), and Cincinnati Reds (1939 and 1940); d. Bradenton, Fla., Oct. 29.
- McLaughlin, Dean B.** (64), U.S. astronomer; was an authority on the planet Mars, and on behavior of novae; d. Ann Arbor, Mich., Dec. 8.
- Maguire, William G.** (79), U.S. industrialist; was a pioneer in natural gas industry; president and board chairman of Panhandle Eastern Pipe Line Co.; d. New York, N.Y., Sept. 28.
- Malcolm X** (39), U.S. black nationalist leader; b. Omaha, Neb., May 19, 1925; d. (assassinated) New York, N.Y., Feb. 21, 1965. In 1964, after several years as the most articulate spokesman for the militant Black Muslim sect, he formed his own black nationalist movement, the Organization for Afro-American Unity. A feud developed between the two groups, and at a rally of his followers, Malcolm X was assassinated. A minister's son, originally named Malcolm Little, he acquired a hatred of whites early in life as a result of childhood experiences. In his teens he went to New York and drifted into Harlem's underworld of dope peddlers, procurers, and gamblers, and before he was 21 he was arrested for burglary in Boston. In prison he learned of the Black Muslim sect, which taught the superiority of the Negro, and he accepted its militant and ascetic doctrines. At Black Muslim headquarters in Chicago, following his release, he greatly impressed the sect's leader, Elijah Muhammad, who sent him on speaking tours and placed him in charge of Mosque No. 7 in New York. A speech in which he had made light of President John F. Kennedy's assassination led to his suspension by Elijah Muhammad, and subsequently Malcolm X established his rival organization in Harlem.
- Mansour, Hassan Ali** (41), premier of Iran; was former minister of labor and of commerce, and deputy premier; d. Teheran, Iran, Jan. 26.
- Mera, Jack** (57), U.S. sportsman; president of New York Giants football team (1936-65); d. New York, N.Y., June 29.
- Margesson, Viscount David** (75), British government official; was secretary of war in Churchill cabinet (1940-42); d. Nassau, Bahamas, Dec. 24.
- Marshall, Verna** (75), U.S. editor; won 1936 Pulitzer Prize for Cedar Rapids (Iowa) Gazette; d. Des Moines, Iowa, March 25.
- Martin, Pepper (John Leonard)** (61), U.S. baseball player; member of St. Louis Cardinals teams that won National League pennants (1928, 1931, 1934, 1944); d. McAlester, Okla., March 5.
- Mary (Victoria Alexandra Alice)** (67); princess royal of Great Britain; was only daughter of King George V and Queen Mary, and aunt of Queen Elizabeth II; d. Harewood House, Leeds, Eng., March 28.
- Mason, Noah** (82), U.S. public official; was U.S. congressman (Republican) from Illinois (1937-63); d. Joliet, Ill., March 29.
- Maugham, (William) Somerset** (91), English author; b. Paris, France, Jan. 25, 1874; d. St.-Jean-Cap-Ferrat, France, Dec. 16, 1965. He was a prolific and versatile writer, whose clear, concise style and imaginative plots made his works perennial favorites. Orphaned in France at the age of 10, Maugham was taken to England where he attended King's School, Canterbury. He later studied at Heidelberg University and interned in medicine at St. Thomas's Hospital, London. In World War I he served with the Red Cross and as an intelligence officer. *Liza of Lambeth* (1897), his first novel, was based on personal experiences, as was *Of Human Bondage* (1915), his best-known work. Other major successes were *The Moon and Sixpence* (1919), *Cakes and Ale* (1930), and *The Razor's Edge* (1944). Maugham's first play, *Schiffbruchig* (1901), was produced in Germany. His other plays, mostly Edwardian comedies of manners, included *Lady Frederick* (1907), *The Circle* (1921), and *The Constant Wife* (1927). Of his many stories, "Miss Thompson," from his first collection, *The Trembling of a Leaf* (1921), excited the greatest interest and was the basis of the play *Rain*. Two autobiographies, *The Summing Up* (1938) and *A Writer's Notebook* (1949), incorporate his agnostic views and awareness of human fallibility.
- Melachrinio, George** (56), British musician; orchestra leader of band known as Melachrinio Strings; was three-time winner of golden disk; d. London, England, June 18.
- Meyer, Albert (Gregory) Cardinal** (62), U.S. Roman Catholic prelate; b. Milwaukee, Wis., March 9, 1903; d. Chicago, Ill., April 9, 1965. Archbishop of Chicago from 1958 and a cardinal from 1959, he championed racial integration and religious brotherhood, and was regarded as a leading progressive and modernizer in the Roman Catholic Church. A graduate of the North American College in Rome, he served as rector of St. Francis Seminary in Milwaukee. Designated monsignor in 1938 and bishop in 1946, he was archbishop of Milwaukee from 1953 to 1958.
- Micaro, Clemente** (85), Italian cardinal; was a leading member of the Curia and the pope's vicar for the city of Rome; d. Rome, Italy, March 11.
- Mich, Daniel D.** (60), U.S. editor; edited *Look* magazine from 1964; was 1963 winner of Richard L. Neuberger Award; d. New York, N.Y., Nov. 22.
- Mills, Freddie** (46), U.S. boxer; was world light heavyweight champion in 1948; d. London, England, July 25.
- Minton, Sherman** (74), U.S. Supreme Court justice; b. Georgetown, Ind., Oct. 20, 1890; d. New Albany, Ind., April 9, 1965. Appointed associate justice of the U.S. Supreme Court by President Harry S. Truman in 1949, he generally represented a conservative position on the bench. An honor graduate of Indiana University Law College, he engaged in private law practice and served as counselor of Indiana's Public Service Commission before his election on the Democratic ticket to the U.S. Senate. As a senator (1935-41), he was a strong supporter of liberal New Deal policies. In 1941, after a few months as a White House administrative assistant, he was appointed by President Franklin D. Roosevelt to the U.S. Court of Appeals in Chicago, serving until 1949. He retired in 1956.
- Mize, Sidney C.** (77), U.S. district judge from 1937; signed order breaking color barrier in Mississippi schools after reversal by Fifth Circuit Court of Appeals; d. Gulfport, Miss., April 26.
- Monckton, Viscount, of Brencley** (73), British government official; guided King Edward VIII through 1936 constitutional crisis over abdication; d. Falkington, England, Jan. 9.
- Morey, Lloyd** (79), U.S. educator; president of University of Illinois (1954-55); d. Champaign, Ill., Sept. 29.
- Morrison, Herbert Stanley** (77), British public official; b. London, England, Jan. 3, 1888; d. Sidcup, Kent, England, March 6, 1965. Labour member of Parliament for 27 years, he coordinated British defense efforts and headed

- London's civil defense as home secretary and minister of home security in Winston Churchill's World War II coalition cabinet (1940-45). In the postwar Labour government of Clement Attlee, he was deputy prime minister from 1945 until 1951, when he served for several months as foreign secretary. Largely self-educated, he was a conscientious objector during World War I and held various Labour party posts before entering the House of Commons in 1922. From 1929 to 1931 he was minister of transport in Ramsay MacDonald's Labour government. A skillful politician and a member of the right wing of the Labour party, he was created Lord Morrison of Lambeth in 1959.
- Motley, Willard** (52), U.S. novelist; wrote *Knock on Any Door* (1947), *We Fished All Night* (1951), and *Let No Man Write My Epitaph* (1960); d. Mexico City, Mexico, March 4
- Müller, Paul Hermann** (66), Swiss chemist; b. Olten, Switzerland, Jan. 12, 1899; d. Basel, Switzerland, Oct. 12, 1965. He received the Nobel Prize for medicine or physiology in 1948 for his synthesis of the insecticide dichloro-diphenyl-trichloromethane (DDT). Although DDT originally was discovered in 1874 by Othmar Zeidler in Germany, its potentialities were not realized at the time. Müller received his doctorate at the University of Basel in 1925 and joined the tanning-research laboratory of the I.B. Cieci G., in Basel, where he began his research on insecticides about 1935. Within a few years he developed two substances containing DDT—Gesarol and Neocid—which were used effectively by U.S. forces in World War II to combat disease.
- Murray, Mae** (75), U.S. actress; as queen of silent films was best known for her role in *Merry Widow*; started her career in Ziegfeld Follies; d. Woodland Hills, Calif., March 23
- Murrow, Edward R.** (57), U.S. reporter and government official; d. Pawling, N.Y., April 27
- Muxzey, David Saville** (94), U.S. historian; wrote textbook, *An American History* (1911); biographer of Thomas Jefferson and James G. Blaine; d. New York, N.Y., April 14
- Nadi, Aldo** (86), Italian-born fencer; was three-medal winner in 1920 Olympics; d. Los Angeles, Calif., Nov. 10
- Nehas, Mustafa** (86), Egyptian political leader; was premier five times between 1927 and 1952; d. Cairo, Egypt, Aug. 23
- Neville, Glean** (59), U.S. newspaper editor; was editor in chief of New York *Mirror* from 1953 until 1963, when paper ended publication; d. Keene Valley, N.Y., June 1
- Newton, Eric** (71), English author and art critic; wrote *European Painting and Sculpture* (1941), and *Introduction to European Painting* (1949); d. London, England, March 10
- Nichols, (Red) Ernest Loring** (80), U.S. musician; led popular jazz group, *Red Nichols and His Five Pennies*; recorded extensively in 1930's; d. Las Vegas, Nev., June 28
- Noli, Fan Stylian** (82), Albanian Greek Orthodox bishop in U.S.; was premier of Albania (1924); d. Fort Lauderdale, Fla., March 13
- Norden, Carl Lukas** (85), U.S. inventor; b. Semarang, Java, April 23, 1880; d. Zurich, Switzerland, June 14, 1965. A mechanical engineer, he invented, with Frederick I. Entwistle, the Norden bombsight, which increased the effectiveness of U.S. bombing raids on Germany and Japan during World War II by automatically pinpointing ground targets. As a consulting engineer during World War I, he designed a number of precision devices for military use. In 1928 he and Theodore H. Barth established Carl L. Norden, Inc., which specialized in bombsights and other military aviation equipment. Norden turned over to the U.S. government the patent rights of his inventions.
- Nugent, Frank S.** (57), U.S. writer; wrote film scripts for *The Quiet Man* and *Mister Roberts*; was New York *Times* motion picture critic (1936-40); d. Los Angeles, Calif., Dec. 29
- Offner, Richard** (76), Austrian-American art historian; was professor of art history, New York University (1927-57); wrote *The Corpus of Florentine Painting*; d. Ronta, Italy, Aug. 26
- Okazaki, Katsuo** (68), Japanese diplomat; was former foreign minister and a key figure in Japan's surrender to the Allied powers in 1945; d. Tokyo, Japan, Oct. 10
- O'Rourke, John J.** (65), was 5th vice president of International Brotherhood of Teamsters; president of Teamsters Local 282 since 1950; d. New York, N.Y., Dec. 6
- Otero, Caroline** (97), Spanish-born French dancer and celebrated courtesan; d. Nice, France, April 10
- Paige, Raymond** (65), U.S. musician; was music director of Radio City Music Hall and conductor of its symphony orchestra from 1950; d. Larchmont, N.Y., Aug. 7
- Paielek, Antoni** (72), Polish government official; was Socialist premier of the Polish government-in-exile from 1955 to 1965; d. London, England, Nov. 26
- Palacios, Alfredo Lorenzo** (84), Argentine public official; was first Socialist elected to a South American legislature, winning seat in Argentine Chamber of Deputies in 1904; d. Buenos Aires, Argentina, April 20
- Parpart, Arthur Kemble** (61), U.S. educator; was chairman of Biology Department of Princeton University from 1948; d. Woods Hole, Mass., Sept. 17
- Parrish, Carl** (61), U.S. musicologist; was professor of music at Vassar College from 1953; d. Valhalla, N.Y., Nov. 26
- Pate, Maurice** (70), U.S. public official; directed UNICEF from its founding in 1946; assisted Herbert Hoover on Belgian Relief Commission in 1920's; d. New York, N.Y., Jan. 19
- Patrici, Angelo** (89), Italian-American educator; pioneered in liberal teaching; was authority on child guidance; d. Danbury, Conn., Sept. 12
- Pavlovsky, Yevgeny N.** (81), Soviet zoologist; was an authority on parasitic diseases; d. Moscow, USSR, May 27
- Perkins, Frances** (83), U.S. public official; b. Boston, Mass., April 10, 1882; d. New York, N.Y., May 14, 1965. The first woman cabinet member and an expert in industrial relations, she served as secretary of labor in Franklin D. Roosevelt's administration from 1933 to 1945. In this post she was instrumental in the adoption of a number of New Deal reforms, including unemployment relief programs, fair labor standards laws, and social security legislation. A graduate of Mount Holyoke College, she later obtained a master's degree from Columbia University and was a social worker for several years. As executive secretary of the Consumers' League of New York (1910-12), she helped bring about reforms in factory conditions in the state. Later she served on the State Industrial Commission, the Council on Immigrant Education, and the State Industrial Board, and was state industrial commissioner from 1929 to 1933. During her tenure as labor secretary, the department's social service, research, and administrative functions were considerably expanded. From 1945 to 1952 she was a member of the U.S. Civil Service Commission. Her books include *The Roosevelt I Knew* (1946).
- Persons, Gordon** (63), U.S. public official; was governor of Alabama (1951-55); d. Montgomery, Ala., May 29
- Pfost, Gracie** (59), U.S. public official; was U.S. congresswoman (Democratic) from Idaho (1952-62); d. Baltimore, Md., Aug. 11
- Phillips, H.I. ("Hi")** (75), U.S. journalist; conducted column, *The Sun Dial*, in New York *Sun*; wrote several books about "Mr. Purkey"; d. Milford, Conn., March 15
- Pickett, Clarence E.** (80), U.S. clergyman; was executive secretary of American Friends Service Committee (1929-50); d. Boise, Idaho, March 17
- Ping-Sheung, Foo** (69), Nationalist Chinese legal authority; was ambassador to Soviet Union from 1943 until 1949; d. Taipei, Taiwan, July 29
- Poleman, Horace** (60), U.S. etymologist; chief of Orientalia Division, Library of Congress; d. Washington, D.C., Nov. 6
- Posner, John Jacob** (76), U.S. oral surgeon; perfected use of novocaine in dentistry; d. New York, N.Y., Feb. 20
- Poussette-Dart, Nathaniel** (79), U.S. artist; was a writer, teacher, and consultant; edited magazine *Art and Artists of Today*; d. Valhalla, N.Y., Oct. 17
- Powell, Dawn** (67), U.S. author; satirical novelist; her first work was *She Walks in Beauty* (1928), and her last, *The Golden Spur* (1962); d. New York, N.Y., Nov. 14
- Pratt, Ruth Baker** (88), U.S. public official; was U.S. representative (Republican) from New York, 1928-32; d. Glen Cove, N.Y., Aug. 23
- Purdy, Ray Foote** (67), U.S. politician; was board chairman of Moral Re-Armament movement in U.S.; d. Atlanta, Ga., Oct. 30
- Rado, Tibor** (70), Hungarian-American mathematician; was a contributor to development of mathematical theory and computers; d. Daytona Beach, Fla., Dec. 29
- Rajchman, Ludwig J.** (84), Polish scientist; was a leader in establishing UNICEF (1947); d. Genua, France, July 13
- Ralston, Oliver C.** (81), U.S. scientist; was an authority on mineral sciences and chief metallurgist with Bureau of Mines (1949-53); d. Washington, D.C., June 21
- Redfield, Edward** (96), U.S. painter; was noted for landscapes and seashore scenes; d. Center Bridge, Pa., Oct. 19
- Renison, Patrick** (54), British government official; served for 30 years in colonial service; was governor of British Guiana (1955) and of Kenya (1959); d. London, England, Nov. 11
- Repetto, Nicolas** (94), Argentine Socialist; a leader of Socialist movement, and critic of Peronism; was Socialist deputy from 1913 to 1943; d. Buenos Aires, Argentina, Nov. 29
- Reynolds, Quentin** (62), U.S. journalist; b. New York, N.Y., April 11, 1902; d. Travis Air Force Base, Calif., March 17, 1965. As war correspondent for *Collier's* magazine during World War II, he was noted for his colorful, down-to-earth reports from the various combat theaters. A graduate of Brown University, he obtained a law degree at Brooklyn
- W. Somerset Maugham, English novelist.

PAUL PIETZSCH—BLACK STAR

- Law School in 1930 and began his journalism career as a reporter and sports writer for the *New York Evening World*. He later worked for the *New York World-Telegram* and served as a correspondent for the International News Service before joining *Collier's* as an associate editor in 1934. His books include *The Wounded Don't Cry* (1941), *London Diary* (1941), *Convoy* (1942), *Only the Stars Are Neutral* (1942), *Dress Rehearsal* (1943), *The Curtain Rises* (1944), *Officially Dead* (1945), and the autobiography *By Quentin Reynolds* (1963).
- Rhee, Syngman** (90), Korean statesman: b. Whanghai Province, Korea, March 26, 1875; d. Honolulu, Hawaii, July 19, 1965. A lifelong fighter for Korean independence, he founded the Republic of Korea (South Korea) in 1948, serving as its first president until 1960. In the Korean War (1950-53) he obtained the support of UN forces in preventing Communist North Korea from overrunning the South, but he strongly opposed the UN-supervised truce of 1953, which fell far short of his goal of national unification. Educated in the classical Chinese tradition, he later studied in the United States and obtained a Ph.D. degree in international law from Princeton University in 1910. He joined the Korean independence movement against Chinese domination in the 1890's, spending several years in prison, and continued his independence activities after Japan took over the country in 1910. From 1919 to 1941 he served as president of the Korean provisional government in exile, and during World War II he was chairman of the Korean Commission in Washington, D.C. During his last years as president of South Korea, his authoritarianism led to increasing opposition, especially from student groups, and in 1960 he resigned and went into exile in Hawaii, where he spent the remainder of his life.
- Ribadu, Muhammadu** (55), Nigerian government official; was defense minister from 1959 and had served as acting head of government: d. Lagos, Nigeria, May 2
- Rickey, Branch Wesley** (83), U.S. baseball executive: b. Stockdale, Ohio, Dec. 20, 1881; d. Columbia, Mo., Dec. 9, 1965. An astute front-office man, he created the "farm system" for developing professional baseball players and broke the color barrier by introducing Negro players to the major leagues. A graduate of Ohio Wesleyan University and the University of Michigan law school, Rickey practiced law only briefly. From 1904 to 1907 he was a catcher with the Cincinnati Reds, St. Louis Browns, and New York Yankees. Between 1916 and 1942 he was, respectively, field manager, business manager, secretary, and president of the St. Louis Cardinals, and directed the club to six National League titles and four world championships. In 1919 he inaugurated the farm system by buying an interest for the Cardinals in the Houston club of the Texas League. He became president and general manager of the Brooklyn Dodgers in 1942 and led them to two pennants. In 1945 he selected Jackie Robinson as the first Negro to play in the major leagues. Rickey also served as general manager of the Pittsburgh Pirates from 1950 to 1955, and as board chairman from 1955 to 1959.
- Riser-Larsen, Hjalmar** (75), Norwegian aviator and explorer; led unsuccessful air search for Roald Amundsen in 1928 polar expedition: d. Copenhagen, Denmark, June 3
- Ringle, Dave** (70), U.S. music publisher; was lyricist and composer of popular songs: d. Brooksville, Fla., June 20
- Ritz, Al** (62), U.S. comedian; oldest member of Ritz Brothers comedy trio; had appeared in several motion pictures; made television debut in 1952: d. New Orleans, La., Dec. 22
- Robertson, A.W.** (85), U.S. industrialist; was board chairman of Westinghouse Electric Corporation from 1929 to 1951: d. Pittsburgh, Pa., Dec. 18
- Robeson, Eslanda Goode** (68), U.S. anthropologist; was wife of singer Paul Robeson: d. New York, N.Y., Dec. 14
- Rodia, Simon** (90), U.S. builder, his controversial Watts Towers in Los Angeles, finished in 1954, were named an historical cultural monument by the Los Angeles Cultural Heritage Board in 1963: d. Martinez, Calif., July 16
- Rogers, Walter S.** (87), U.S. educator and journalist; was director of Institute of Current World Affairs from 1926 to 1959: d. South Dartmouth, Mass., Oct. 23
- Ronai, Sándor** (73), Hungarian government official; former president of Hungarian Parliament; d. Budapest, Hungary, Sept. 28
- Ruark, Robert Chester** (49), U.S. newspaper columnist and author: b. Westminster, N.C., Dec. 29, 1915; d. London, England, June 30, 1965. Inspired by Ernest Hemingway, he was noted for the hardboiled, masculine quality of his writings. His best-known novel, *Something of Value* (1955), describing in vivid detail the errors of the Mau Mau rebellion in Kenya, caused considerable controversy. A graduate of the University of North Carolina, he worked as a WPA accountant and a merchant seaman before joining the *Washington News* as a copy boy. Within a short time he was the paper's leading sports writer. After service in the Navy during World War II, he became a regular columnist for the Scripps-Howard Newspaper Alliance. His other books include *Grenadine Etching* (1947), *Horn for the Hunter* (1953), *The Old Man and the Boy* (1957), *Poor No More* (1959), and *Uhuru* (1962).
- Rubinstein, Helena** (94), U.S. cosmetics executive: b. Cracow, Poland, 1870 (?); d. New York, N.Y., April 1, 1965. A leading authority on beauty culture, and one of the world's wealthiest women, she was founder and president of the cosmetics firm of Helena Rubinstein, Inc., and the owner of an international chain of beauty salons. She began her cosmetics business in Australia in the 1890's, importing skin cream from Europe, and later studied with leading European dermatologists. In 1908 she opened an elaborate beauty salon in London, and in 1914 she moved to the U.S. to lay the groundwork for her worldwide, multimillion-dollar beauty empire.
- Rubirosa, Porfirio** (56), Dominican diplomat and sportsman; was ambassador to Argentina, France, Italy, Cuba, and Belgium: d. Paris, France, July 5
- Russell, Robert Price** (66), U.S. chemist; as president of Standard Oil Development Company during World War II, directed research vital to defense: d. Lisbon, N.H., May 28
- Sachs, Paul J.** (86), U.S. art critic; was professor of fine arts at Harvard University, and renowned authority on prints and drawings: d. Cambridge, Mass., Feb. 18
- Sackville-West, Edward (Baron Sackville)** (63), English author; well-known novelist and music critic: d. Dublin, Ireland, (reported) July 5
- Salote** (65), queen of Tonga; had been ruler of the Pacific Island protectorate since 1918: d. Auckland, N.Z., Dec. 15
- Sanders, Joe** (68), U.S. song writer and band leader; his nationally known dance band, the Nighthawks, was formed in 1922: d. Kansas City, Mo., May 15
- Sansom, Sir George Bailey** (82), British government official; served in British embassy in Tokyo, 1905-40; was professor of Japanese at Stanford University from 1955 and an authority on Far Eastern affairs: d. Tucson, Ariz., Mar. 8
- Schärf, Adolf** (74), Austrian public official: b. Nikolsburg, Austria, April 20, 1890; d. Vienna, Austria, Feb. 28, 1965. A moderate Socialist and a champion of Austrian neutrality, he was president of Austria from 1957 until his death. In this capacity he sought to preserve the coalition between the country's two leading parties, the conservative People's party and the Socialists, by skillfully mediating disputes between them. He began his Socialist activities as a student, and in the post-World War I Austrian Republic he was a civil servant. He became a member of the upper house of Parliament in 1933. Before and during the German occupation of Austria he was imprisoned several times, and during World War II he led the Socialists in underground activities. In the postwar coalition government he served as vice chancellor from 1945 to 1957.
- Schipa, Tito** (76), Italian singer: b. Lecce, Italy, Jan. 2, 1889; d. New York, N.Y., Dec. 16, 1965. A refined lyric tenor of the *bel canto* school of singing, he sang with leading opera companies and as a concert artist for more than 50 years. Beginning his musical study at an early age, he made his operatic debut in 1911 in Vercelli, Italy. He sang several seasons with the Chicago and San Francisco opera companies before joining New York's Metropolitan Opera in 1932. During World War II, he was accused of being a Fascist, but later regained his popularity.
- Schlesinger, Arthur M., Sr.** (77), U.S. historian: b. Xenia, Ohio, Feb. 27, 1888; d. Boston, Mass., Oct. 30, 1965. One of the first scholars to emphasize social history, he was Higginson professor of history at Harvard University from 1939 to 1954. He received his B.A. from Ohio State University in 1910 and his Ph.D. from Columbia University in 1918. He taught at Ohio State University and the State University of Iowa before going to Harvard in 1924. His books include *The Colonial Merchants and the American Revolution* (1918), *New Viewpoints in American History* (1922), and *Rise of the City* (1933). He also edited M.L. Hansen's *The American Migration*, which won the Pulitzer Prize for history in 1941, and coedited, with Dixon Ryan Fox, the *History of American Life* (13 vols., 1927-48).
- Schwab, Dutch** (70), U.S. football player; named to National Football Foundation's Hall of Fame in 1958: d. Spangler, Pa., Dec. 11
- Schwartzman, Gregory** (69), Russian-born American scientist; had international reputation as microbiologist: d. Philadelphia, Pa., July 21
- Schweitzer, Albert** (90), Alsatian doctor, musician, and theologian: d. Lambarene, Gabon, Sept. 4
- Scott, Zachary** (51), U.S. actor; played in more than 30 motion pictures: d. Austin, Texas, Oct. 3
- Seeger, Gordon S.** (68), U.S. medical missionary: b. Rangoon, Burma, March 18, 1897; d. Rangoon, March 28, 1965. For more than 40 years he ministered to the medical needs of the Burmese people, building hospitals, training nurses, and practicing medicine in the jungle areas of the country. Descended from three generations of Baptist missionaries, he returned to Burma in 1922 after obtaining his M.D. degree at Johns Hopkins University, and began the construction of a 22-building, 250-bed hospital at Namkham, near the Chinese border. During World War II he placed his facilities at the disposal of the forces of Gen. Joseph V. Stilwell and, as an officer in the U.S. Army Medical Corps, established field hospitals behind the lines. After the war he rebuilt the Namkham hospital, which had been largely destroyed. Arrested in 1950 by the Burmese government for aiding rebel tribesmen, he was later cleared. He was the author of an autobiography, *Burma Surgeon* (1943).
- Selznick, David Oliver** (63), U.S. film producer: b. Pittsburgh, Pa., May 10, 1902; d. Hollywood, Calif., June 22, 1965. One of Hollywood's leading motion picture executives, he was the producer of the film *Gone With the Wind* (1939), which is regarded as the most lucrative production in motion picture history. He began his career in the film industry as an assistant story editor with Metro-Goldwyn-Mayer, and later became a producer at Paramount and vice president in charge of production at RKO-Radio. In 1935 he established his own firm, Selznick International Pictures. By using the services of the best writers and top stars, and sparing no expense, he produced such notable films as *The Prisoner of Zenda* (1937), *A Star Is Born* (1937), *Intermezzo* (1939), *Rebecca* (1940), *Since You Went Away* (1944), *Duel in the Sun* (1946), and *A Farewell to Arms* (1958).
- Sewall, Sumner** (87), U.S. public official; was Republican governor of Maine (1941-45): d. Bath, Me., Jan. 25

- Sharet, Moshe** (70), Israeli statesman; b. Kherson, Ukraine, Russia, Oct. 15, 1894; d. Jerusalem, Israel, July 7, 1965. One of the founders of the state of Israel, he served as its foreign minister from 1948 to 1956 and as premier from 1953 to 1955. He went to Palestine at the age of 12 and became active in Zionist affairs during his youth. As head of the political department of the Jewish Agency for Palestine from 1933 to 1948, he directed the foreign policy of the embryo Jewish nation.
- Sheeler, Charles** (81), U.S. artist; was considered leading American artist of precisionist school, and had wide reputation as photographer; won Award of Merit of American Academy of Arts and Letters (1962); d. Dobbs Ferry, N.Y., May 7
- Shone, Terence** (71), British diplomat; from 1946 to 1948 was commissioner ambassador to India; permanent representative to UN (1948-52); d. London, England, Oct. 29
- Shotwell, James Thomson** (90), U.S. historian; b. Strathroy, Ont., Aug. 6, 1874; d. New York, N.Y., July 15, 1965. One of the most noted historians in the United States, he taught history at Columbia University from 1900 to 1942 and was the author or editor of more than 500 books. He participated in the establishment of the League of Nations, the UN, and other international organizations, and was instrumental in drafting a number of international treaties, including the UN Charter. From 1949 to 1950 he was head of the Carnegie Endowment for International Peace.
- Slater, William E. (Bill)** (62), U.S. radio and television sports announcer; broadcast World Series baseball games and football contests; d. New Rochelle, N.Y., Jan. 25
- Sloane, Everett** (55), U.S. character actor; his films included *Citizen Kane* and *The Men*; appeared in stage plays *A Bell for Adano* (1944), and *The Big Knife* (1949); starred in television play *Patterns*; d. Hollywood, Calif., Aug. 6
- Small, Alex** (70), U.S. journalist; as foreign correspondent reported Spanish Civil War and World War II, edited feature *100 Years Ago* for *Chicago Tribune*; d. St. Charles, Mo., May 18
- Smith, Mrs. Earl E.T.** (45), U.S. columnist and television personality; was wife of former ambassador to Cuba; d. New York, N.Y., Nov. 9
- Smith, Joan Merriam** (28), U.S. aviatrix; made solo flight around the world in 1964; d. Big Pines, Calif., Feb. 17
- Sokoloff, Nikolai G.** (79), U.S. conductor; b. Kiev, Russia, May 28, 1886; d. La Jolla, Calif., Sept. 24, 1965. He organized (1918) and was conductor of the Cleveland Orchestra until 1932. Going to the U.S. at the age of 12, he began studying at the Yale University School of Music when he was 13. At 17, he joined the Boston Symphony Orchestra as a violinist and was its youngest member. He also served as conductor of the San Francisco and San Diego symphonies and, from 1935 to 1939, was director of the WPA music project.
- Sorensen, Carl C.** (71), Danish-born U.S. paleontologist; was an expert in preserving and mounting fossilized remains of prehistoric animals; d. New York, N.Y., May 7
- Sorensen, Royal** (83), U.S. educator and inventor; was professor of electrical engineering at California Institute of Technology, 1910-1952; invented vacuum switch for high potential electric circuit; d. Pasadena, Calif., Oct. 27
- Spaeth, Sigmund** (80), U.S. musicologist; popularized classical music; was known as *Tune Detective*; d. New York, N.Y., Nov. 11
- Spangler, Harrison E.** (86), U.S. lawyer and political leader; was national chairman of the Republican party, 1943-1944; d. Portland, Ore., July 28
- Speare, Florence Lewis** (78), U.S. playwright; wrote *Let's Go A-Gardening* (1913); d. Washington, D.C., May 3
- Spring, Howard** (75), English novelist; his books included *My Son! My Son!* (1938), *Fame Is the Spur* (1940), and *Winds of the Day* (1964); d. London, England, May 3
- Strachel, Jacob A.** (65), U.S. Communist official; was convicted in 1949 under the Smith Act and served five years in prison; d. New York, N.Y., Dec. 31
- Stagg, (Amos) Alonzo** (102), U.S. football coach; b. West Orange, N.J., Aug. 16, 1862; d. Stockton, Calif., March 17, 1965. Known as the "grand old man of football," he coached college football teams for more than 60 years. He led his teams to six Big Ten Conference titles, inspired a number of star football players and coaches, helped devise football rules, and pioneered in the development of such tactics as the T-formation and the forward pass. A star pitcher on the Yale University baseball team while attending the Yale Divinity School, he began his coaching career at the YMCA training school at Springfield, Mass., in 1890. He coached the football teams of the University of Chicago for 41 years (1892-1933), of the College of the Pacific for 14 years (1933-47), and of Susquehanna University for six years (1947-53).
- Staudinger, Hermann** (84), German chemist; won 1953 Nobel Prize in chemistry for discoveries in the field of synthetics; d. Freiburg, Germany, Sept. 9
- *Stevenson, Adlai E.** (65), U.S. public official and statesman; d. London, England, July 14
- Stewart, Kilian** (62), U.S. anthropologist; studied among many primitive peoples and devised the now-language intelligence test named after him; d. New York, N.Y., May 18
- Stoddard, Alexander J.** (86), U.S. educator; pioneer in educational television; was with U.S. mission to Japan after World War II; d. Los Angeles, Calif., Oct. 18
- Stourton, William Marmaduke (Lord Mowbray and Stourton)** (70), English premier baron; was responsible for decision to give remains of Lady Anne Mowbray "a decent burial"; d. London, England, May 7
- Stribling, Thomas Sigismund** (84), U.S. author; won 1933 Pulitzer Prize for fiction with novel *The Store*; wrote chiefly of Southern country life; d. Florence, Ala., July 8
- Stuhldreher, Harry A.** (63), U.S. football coach; b. Massillon, Ohio, Oct. 14, 1901; d. Pittsburgh, Pa., Jan. 26, 1965. He played college football, beginning in 1922, at Notre Dame and was the quarterback of its famous backfield designated by sportswriter Grantland Rice as the "Four Horsemen," at the 1924 Army-Notre Dame game. After graduating from Notre Dame, he served as football coach at Villanova University for 11 years (1924-35) and made its team famous. From 1936 to 1948 he was football coach at the University of Wisconsin, serving concurrently, from 1936 to 1949, as athletic director there.
- Sweeney, Walter C., Jr.** (56), U.S. Army general; was significant figure in developing jet-powered strategic and tactical air forces, and commanded Tactical Air Command from 1961 to 1965; d. Homestead, Fla., Dec. 22
- Szakasits, Arpad** (77), Hungarian government official; was president from 1948 to 1950; reportedly was imprisoned on espionage charges and released in 1956; became member of central committee in 1959; d. Budapest, Hungary, May 3
- Countess Laszlo Szechenyi (Gladys Vanderbilt)** (78), U.S.-born socialite; daughter of Cornelius Vanderbilt 2nd; d. Washington, D.C., Jan. 29
- Taber, John** (85), U.S. public official; was U.S. congressman (Republican) from New York for 20 consecutive terms (1923 to 1962); d. Auburn, N.Y., Nov. 22
- Tanizaki, Junichiro** (79), Japanese author; a leading novelist in Japan, his works have been published in the U.S. since 1955; d. Yagawara, Japan, July 30
- Taube, Mortimer** (54), U.S. author and librarian; founded Documentation, Inc.; was deputy chief of technical information for AEC; d. Annapolis, Md., Sept. 3
- Thimayya, Kodendera Subayya** (59), Indian army general; had been commander of UN peace force in Cyprus since 1964; named chairman of Neutral Nations Repatriation Commission in Korea in 1953; d. Nicosia, Cyprus, Dec. 18
- Thomas, Elmer** (89), U.S. public official; Democratic senator from Oklahoma (1927-1950); d. Lawton, Okla., Sept. 19
- Thompson, Robert** (50), U.S. Communist party leader; chairman, New York State Communist party; indicted by federal grand jury for Smith Act violation (1948); d. New York, N.Y., Oct. 15
- Thompson, T. Ashton** (49), U.S. representative (Democrat) from Louisiana since 1952; d. Gastonia, N.C., July 2
- Thorndike, Lynn** (83), U.S. educator; medieval history and science scholar; was author of 10-vol. *A History of Magic and Experimental Science*; d. New York, N.Y., Dec. 28
- Thyssen, Mrs. Fritz** (87), German industrialist; widow of Fritz Thyssen; established foundation to advance German science; d. Puchhof, Lower Bavaria, Germany, Aug. 25
- Tierney, Harry** (74), U.S. composer; wrote music for Ziegfeld Follies; his most popular songs were *Rio Rita* and *Alice Blue Gown*; d. New York, N.Y., March 22
- Tillich, Paul Johannes** (79), German-U.S. theologian and philosopher; b. Starsiedel, Germany, Aug. 20, 1886; d. Chicago, Ill., Oct. 22, 1965. One of the world's most influential Christian theologians, he rejected Protestant orthodoxy, maintaining that the Christian message must be interpreted anew by each generation, and that "faith comprises both itself and the doubt of itself." His varied interests encompassed virtually every field of human endeavor, including art, literature, and political theory. His most important work is the three-volume *Systematic Theology*, completed in 1963. After receiving doctor of philosophy degree from the University of Breslau and the licentiate of theology at Halle University, he was ordained in 1912 in the Evangelical Lutheran Church and served as a chaplain in the Germany army during World War I. He taught at the universities of Berlin, Marburg, Dresden, and Leipzig, and

- was a member of the university senate in Frankfurt when Hitler came to power in 1933. Dismissed from his academic post because of his openly anti-Nazi stand, he went to the U.S. and, at the invitation of Reinhold Niebuhr, accepted a teaching post at Union Theological Seminary (1934-55) in New York City. Later he taught at Harvard University (1955-62) and the University of Chicago (from 1962).
- Truman, J. Vivian** (79), U.S. public official; brother of former U.S. President Harry S. Truman: d. Grandview, Mo., July 8.
- Truscott, Lucian King, Jr.** (70), U.S. Army officer: b. Chatfield, Texas, Jan. 9, 1895; d. Washington, D.C., Sept. 13, 1965. During World War II he founded the first U.S. Ranger unit and became noted for his rigid training methods. Later he commanded the Third Division of the U.S. Army, which landed in Sicily in 1943 and was the first Allied unit to reach Rome, and the Fifth Army, which fought alongside British forces in the liberation of northern Italy. After the war he served as Third Army commander and military governor of Bavaria. He retired from active duty in 1949 and was promoted to four-star general in 1954. He recounted his war experiences in his book *Command Missions: A Personal Story* (1954).
- Tsiang, Tingfu Fuller** (69), Chinese diplomat: b. Pao-Ch'ing, China, 1895; d. New York, N.Y., Oct. 9, 1965. He served as Nationalist China's permanent representative to the United Nations from 1947 to 1962 and as ambassador to the United States from 1962 to 1965. After early schooling in China, he went to the United States in 1911, earning his B.A. from Oberlin College in 1918 and his Ph.D. from Columbia University in 1923. Returning to China to teach at Tientsin and Peking universities, he later joined President Chiang Kai-shek's government. He also was ambassador to the USSR in 1936-38.
- Uhde, Hermann** (51), German operatic baritone; sang in opera at Kiel, Hamburg, and Munich: d. Copenhagen, Denmark, Oct. 10.
- Vailland, Roger** (57), French author: won important literary prizes for his novels *Playing for Keeps* (1945) and *The Law* (1957); d. Meillonas, France, May 11.
- Van Hoogstraaten, Willem** (81), Dutch-born musician; was guest conductor of summer concerts of New York Philharmonic, and regular conductor of Portland (Ore.) Symphony Orchestra, 1922 to 1938; d. Tutzing, Germany, Sept. 11.
- van Mook, Hubertus J.** (70), Dutch government official; as former lieutenant-governor general of Dutch East Indies, had key role in negotiating Indonesian independence: d. Avignon, France, May 10.
- Vanderbilt, Gloria Morgan** (80), U.S. socialite; lost famous custody fight for daughter (Gloria) in 1936: d. Los Angeles, Calif., Feb. 13.
- van Eck, J.C.** (84), Dutch industrialist; founded Shell Oil Company in U.S. (1912); was president of Shell Union Oil Corp. (1923-36), and managing director of Royal Dutch-Shell Group (1936-47); d. Santa Barbara, Calif., Feb. 16.
- Van Winkle, Julian** (90), U.S. distiller; president of Stitzel-Weller Distillery (1934-64); d. Louisville, Ky., Feb. 16.
- Varèse, Edgar** (81), U.S. composer: b. Paris, France, Dec. 22, 1883; d. New York, N.Y., Nov. 6, 1965. A controversial modernist, best known as the "father of electronic music," Varèse was also a talented conductor. His compositions, using nonmusical devices for instruments, were dubbed "organized noise" by some critics. With the development of such electronic instruments as the theremin, Varèse's musical ideas became more generally accepted, and he was able to fulfill his lifelong ambition of bringing composers and scientists together to solve musical problems. Varèse began his study of music at the age of 17 when he entered the Schola Cantorum in Paris. He went to the U.S. for the first time in 1917, and became a U.S. citizen in 1926. After holding a series of conducting posts, he devoted most of his time to composition. His most famous works are *Tonisation*, *Arcana*, *Density 21.5*, and *Poème électronique*.
- von Wettberg, Niles W.** (52), U.S. editor; associated with *Newsweek* magazine from 1934; had been a senior editor since 1952; d. Suffern, N.Y., Nov. 29.
- Voorhees, Stephen Francis** (86), U.S. architect; former president of American Institute of Architects; was chief architect of 1939 New York World's Fair: d. New York, N.Y., Jan. 25.
- Walker, Paul A.** (84), U.S. attorney; was a member of the Federal Communications Commission from 1934 to 1953; and its chairman, 1952-53; d. Norman, Okla., Nov. 2.
- *Wallace, Henry A.** (77), vice president of the U.S. from 1941 to 1945; d. Danbury, Conn., Nov. 18.
- Waner, Paul (Big Poison)** (82), U.S. athlete; was member of Baseball's Hall of Fame (1952); d. Sarasota, Fla., Aug. 29.
- Warburg, Paul** (61), U.S. financier and philanthropist; was a founder of the Greater New York Fund and member of National Council, Boy Scouts of America: d. New York, N.Y., Oct. 8.
- Warren, Ethel (du Pont)** (49), U.S. socialite; was heiress to du Pont fortune, and formerly was wife of Franklin D. Roosevelt, Jr.: d. Grosse Pointe Farms, Mich., May 25.
- Weygand, Gen. Maxime** (98), French army officer: b. Brussels, Belgium, Jan. 21, 1867; d. Paris, France, Jan. 28, 1965. As commander of the French army in the Battle of France at the beginning of World War II, he counseled surrender to German forces in 1940. A graduate of St. Cyr military academy, he was chief of staff to Marshal Ferdinand Foch during World War I. In 1920 he fought against Bolshevik forces in Poland, and later served as high commissioner to Syria, vice president of the Superior War Council, and inspector general of the French army. After the fall of France he served for a time as war minister and governor general of Algeria under the Vichy regime, but he was later placed under arrest by German authorities. At the end of the war he was imprisoned on charges of collaboration with the Germans, but was subsequently rehabilitated. An adherent of right-wing causes, he was strongly critical of Gen. Charles de Gaulle.
- White, Hugh Lawson** (84), U.S. public official; was Democratic governor of Mississippi from 1936 to 1940 and from 1952 to 1956; d. Jackson, Miss., Sept. 20.
- White, Thomas D.** (64), U.S. Army general; was chief of staff of the Air Force (1957-61); contributing editor to *Newsweek* magazine since 1961; d. Washington, D.C., Dec. 22.
- Whitney, H.L.** (81), U.S. engineer and sportsman; was instrumental in developing steel alloys: d. East Hampton, N.Y., Oct. 30.
- Whittemore, Lewis** (80), U.S. clergyman; was Episcopal bishop of Western Michigan, 1937-53; d. Martha's Vineyard, Mass., Dec. 5.
- Wilhelm, prince of Sweden** (80), younger brother of King Gustaf VI Adolf; was explorer and big-game hunter: d. Stockholm, Sweden, June 5.
- Williams, Clarence** (7), U.S. jazz musician; composed music for *Baby Won't You Please Come Home* and *Shout, Sister, Shout*: d. New York, N.Y., Nov. 6.
- Williams, Robert R.** (79), U.S. chemist; b. Nellore, India, Feb. 16, 1886; d. Summit, N.J., Oct. 2, 1965. He isolated thiamin (vitamin B₁), determined its structure and synthesis, and discovered that it is an anti-beriberi factor. He studied at the University of Chicago (B.S., 1907; M.S., 1908) and then went to teach in the Philippines. There he became aware of the incidence of beriberi, and spent the next nine years working on the problem with the Bureau of Science in Manila and the Bureau of Chemistry in Washington, D.C. He identified the anti-beriberi factor as thiamin in the 1930's and turned the patent rights over to the Research Corporation, a foundation in New York City, to insure that the vitamin would be developed in the public interest. He also was chemical director of the Bell Telephone Laboratories (1925-45) and served as a consultant to the Research Corporation (1946-60).
- Williamson, Charles C.** (87), U.S. librarian; from 1926 to 1943 headed Columbia University's School of Library Service and was director of the university's libraries: d. Greenwich, Conn., Jan. 12.
- Willis, Simeon S.** (85), U.S. public official; was Republican governor of Kentucky from 1943 to 1947; d. Frankfort, Ky., April 2.
- Woodward, Stanley** (71), U.S. sports journalist; was sports editor of New York *Herald Tribune* from 1959 until retirement in 1962; d. White Plains, N.Y., Nov. 29.
- Wszelaki, Jan** (70), Polish diplomat; former minister plenipotentiary in Washington of the Polish government-in-exile: d. Washington, D.C., July 2.
- Yamada, Kosaku** (79), Japanese composer and conductor; founded Tokyo Philharmonic Orchestra in 1928 and Japanese Symphonic Orchestra in 1930; d. Tokyo, Japan, Dec. 31.
- Yermilov, Vladimir V.** (61), Soviet literary critic; edited literary journal *Crasnaya* (1932-38) and the literary newspaper *Literaturnaya Gazeta* (1946-50); d. Moscow, USSR, Nov. 19.
- Yoshizawa, Kenkichi** (90), Japanese diplomat; headed delegation that left League of Nations (1933) after Japan invaded Manchuria in 1931; d. Tokyo, Japan, Jan. 5.
- Zhebrak, Anton** (84), Russian plant geneticist; was president of the Academy of Sciences of the Byelorussian Republic before being dismissed in Stalinist purge (1948); d. Moscow, USSR, May 20.
- Zogbaum, Wilfred M.** (49), U.S. sculptor; a widely respected avant-garde sculptor, he exhibited work in numerous international shows: d. Upton, N.Y., Jan. 7.

INDEX

Main article headings appear in this Index as bold-faced capitals; subjects within articles appear as lower-case entries. Main article page numbers and general references are listed first under each entry; the sub-entries which follow them on separate lines direct the reader to related topics appearing elsewhere. Both the general references and the subentries should be consulted for maximum usefulness of this Index. Illustrations are indexed herein. Cross references are to the entries in this Index.
